CS107, Lecture 16
Wrap-Up / What’s Next?
Our CS107 Journey
CS107 Learning Goals

The goals for CS107 are for students to gain **mastery** of

- writing C programs with complex use of memory and pointers
- an accurate model of the address space and compile/runtime behavior of C programs

to achieve **competence** in

- translating C to/from assembly
- writing programs that respect the limitations of computer arithmetic
- identifying bottlenecks and improving runtime performance
- working effectively in a Unix development environment

and have **exposure** to

- a working understanding of the basics of computer architecture
Plan For Today

• Larger Applications
• What’s Next?
• Q&A
Plan For Today

• Larger Applications
  • CS107 Tools and Techniques
  • CS107 Concepts

• What’s Next?

• Q&A
Tools and Techniques

- Unix and the command line
- Coding Style
- Debugging (GDB)
- Testing (Sanity Check)
- Memory Checking (Valgrind)
- Profiling (Callgrind)
Unix and command line tools are extremely popular tools outside of CS107 for:

• Running programs (web servers, python programs, remote programs…)
• Accessing remote servers (Amazon Web Services, Microsoft Azure, Heroku…)
• Programming embedded devices (Raspberry Pi, etc.)

Our goal for CS107 was to help you become proficient in navigating Unix
Coding Style

• Writing clean, readable code is crucial for any computer science project
• Unfortunately, a fair amount of existing code is poorly-designed/documentated

Our goal for CS107 was to help you write with good coding style, and read/understand/comment provided code.
• Debugging is a crucial skill for any computer scientist

• Our goal for CS107 was to help you become a better debugger
  • narrow in on bugs
  • diagnose the issue
  • implement a fix

• Practically every project you work on will have debugging facilities
  • Python: “PDB”
  • IDEs: built-in debuggers (e.g. QT Creator, Eclipse)
  • Web development: in-browser debugger
Testing (Sanity Check)

• Testing is a crucial skill for any computer scientist
• Our goal for CS107 was to help you become a better tester
  • Writing targeted tests to validate correctness
  • Use tests to prevent regressions
  • Use tests to develop incrementally
Memory Checking and Profiling

• Memory checking and profiling are crucial for any computer scientist to analyze program performance and increase efficiency.

• Many projects you work on will have profiling and memory analysis facilities:
  • Mobile development: integrated tools (XCode Instruments, Android Profiler, etc.)
  • Web development: in-browser tools
You’ll see manifestations of these tools throughout projects you work on. We hope you can use your CS107 knowledge to take advantage of them!
Concepts

• C Language
• Bit-Level Representations
• Arrays and Pointers
• Memory Management
• Generics
• Assembly
How is an operating system implemented? (take CS140!)
• Threads
• User Programs
• Virtual Memory
• Filesystem

How is a compiler implemented? (take CS143!)
• Lexical analysis
• Parsing
• Semantic Analysis
• Code Generation

How can applications communicate over a network? (take CS110/CS144!)
• How can we weigh different tradeoffs of network architecture design?
• How can we effectively transmit bits across a network?
How can we write programs that execute multiple tasks simultaneously? (take CS110!)

- Threads of execution
- "Locks" to prevent simultaneous access
Can we speed up machine learning training with reduced precision computation?

How can we implement performant machine learning libraries?

• Popular tools such as TensorFlow and PyTorch are implemented using C!
• https://pytorch.org/blog/a-tour-of-pytorch-internals-1/
• https://www.tensorflow.org/guide/extend/architecture
How can we efficiently translate Javascript code to machine code?

• The Chrome V8 JavaScript engine converts Javascript into machine code for computers to execute: https://medium.freecodecamp.org/understanding-the-core-of-nodejs-the-powerful-chrome-v8-engine-79e7eb8af964
• The popular Node.js web server tool is built on Chrome V8

How can we compile programs into an efficient binary instruction format that runs in a web browser?

• WebAssembly is an emerging standard instruction format that runs in browsers: https://webassembly.org
• You can compile C/C++/other languages into WebAssembly for web execution
How can programming languages and runtimes efficiently manage memory?
• Manual memory management (C/C++)
• Reference Counting (Swift)
• Garbage Collection (Java)

How can we design programming languages to reduce the potential for programmer error?
• Haskell/Swift "Optionals"

How can we design portable programming languages?
• Java Bytecode: [https://en.wikipedia.org/wiki/Java.bytecode](https://en.wikipedia.org/wiki/Java.bytecode)
How can compilers output efficient machine code instructions for programs?

- Languages can be represented as regular expressions and context-free grammars
- We can model programs as control-flow graphs for additional optimization
Security

How can we find / fix vulnerabilities at various levels in our programs?

• Understand machine-level representation and data manipulation
• Understand how a computer executes programs
• macOS High Sierra Root Login Bug: https://objective-see.com/blog/blog_0x24.html
Plan For Today

• Larger Applications
• What’s Next?
• Q&A
What’s Next?

• After CS107, you are prepared to take a variety of classes in various areas. What are some options?
Where Are We?

CS 106B/X
Programming Abstractions

CS 107/E
Computer Organization and Systems

CS 110
Principles of Computer Systems

We are here

CS 103
Mathematical Foundations of Computing

CS 109
Intro to Probability for Computer Scientists

CS 161
Design and Analysis of Algorithms

Systems

Theory
• How can we implement multithreading in our programs?
• How can multiple programs communicate with each other?
• How can we implement distributed software systems to do things like process petabytes of data?
• How can we maximally take advantage of the hardware and operating system software available to us?
Other Courses

• **CS140**: Operating Systems
• **CS143**: Compilers
• **CS144**: Networking
• **CS145**: Databases
• **CS166**: Data Structures
• **CS221**: Artificial Intelligence
• **CS246**: Mining Massive Datasets
• **EE108**: Digital Systems Design
• **EE180**: Digital Systems Architecture
Plan For Today

• Larger Applications
• What’s Next?
• Q&A
Thank you!
We hope you can take the time to fill out the end-quarter CS 107 course evaluation. We sincerely appreciate any feedback you have about the course and read every piece of feedback we receive. We are always looking for ways to improve!

Thank you!
