(1) Our handout on conversational implicature includes a number of examples of implicature calculation. See if you can provide a similar sort of calculation for the following example, which is from Julia Hirschberg's corpus:

A: Do you belong to a gun club?

B: My husband belonged to one awhile back.

Conversational implicature: B does not belong to a gun club

Contextual assumptions:

Calculation:
(2) Apply our tests to these examples to determine whether the target meaning is a conversational implicature or not:

a. **Example:** Carol managed to win the race
   i. **Target meaning:** Carol won the race
   ii. **Cancellation:**
   iii. **Suspension:**
   iv. **Reinforcement:**

a. **Example:** Sam refuted the hypothesis that Jesse stole the cookies.
   i. **Target meaning:** Jesse didn't steal the cookies
   ii. **Cancellation:**
   iii. **Suspension:**
   iv. **Reinforcement:**
