Glossary

Index
This guide provides instructions on installing and configuring Oracle Database Client for Microsoft Windows (64-Bit) on Intel Itanium. The supported Windows operating system for this product is Windows Server 2003.

This preface contains these topics:

- **Audience**
- **Documentation Accessibility**
- **Related Documentation**
- **Conventions**

### Audience

*Oracle Database Client Installation Guide for Microsoft Windows (64-Bit) on Intel Itanium* is intended for anyone installing an Oracle Database Client.

To use this document, you need the following:

- A supported Microsoft Windows operating system installed and tested on your computer system
- Administrative privileges on the computer where you are installing Oracle Database Client
- Familiarity with object-relational database management concepts

**See Also:** *Oracle Database Client Quick Installation Guide for Microsoft Windows (64-Bit) on Intel Itanium* if you want to perform a quick installation using the default settings

### Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at

Accessibility of Code Examples in Documentation
Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation
This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services
Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, seven days a week. For TTY support, call 800.446.2398.

Related Documentation
For more information, see these Oracle resources:

- Oracle Database Release Notes for Microsoft Windows (64-Bit) on Intel Itanium
- Oracle Database Installation Guide for Microsoft Windows (64-Bit) on Intel Itanium
- Oracle Database Platform Guide for Microsoft Windows (64-Bit) on Intel Itanium
- Oracle Database 2 Day DBA

Many of the examples in this book use the sample schemas, which are installed by default when you select the Basic Installation option with an Oracle Database installation. Refer to Oracle Database Sample Schemas for information on how these schemas were created and how you can use them yourself.

Printed documentation is available for sale in the Oracle Store at

http://oraclestore.oracle.com/

To download free release notes, installation documentation, white papers, or other collateral, please visit the Oracle Technology Network (OTN). You must register online before using OTN; registration is free and can be done at

http://www.oracle.com/technology/membership/

If you already have a username and password for OTN, then you can go directly to the documentation section of the OTN Web site at

http://www.oracle.com/technology/documentation/

Conventions
The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong></td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td>Convention</td>
<td>Meaning</td>
</tr>
<tr>
<td>------------</td>
<td>---------</td>
</tr>
<tr>
<td>monospace</td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Oracle Database Client Installation Overview

Installation Overview

1. Read the release notes

http://www.oracle.com/technology/documentation

2. Plan your installation:

You may also want to refer to Appendix A, "Frequently Asked Questions about Installation," in Oracle Database Installation Guide. This appendix advises on the best way to install Oracle products depending on your site’s requirements.

3. Complete preinstallation tasks: Chapter 2 describes preinstallation tasks that you must complete before installing Oracle Database Client.

4. Install the software: Use the following sections to install Oracle Database Client:

   - Chapter 3 describes how to use the Oracle Universal Installer (OUI) GUI to install Oracle Database Client.
   - Appendix A describes how to perform a silent or noninteractive installation using response files.
   - "Installing and Using Oracle Components in Different Languages" on page B-1 describes how to install and use Oracle components in different languages.
   - Appendix C provides troubleshooting advice in case you encounter problems with the installation.
   - Chapter 5 describes how to remove Oracle Database Client.

5. Complete postinstallation tasks: Use the following sections to complete the postinstallation tasks:
Chapter 4 describes recommended and required postinstallation tasks.

Appendix B provides information on globalization support.

Oracle Database Client Installation Types

You can choose one of the following installation types when installing Oracle Database Client:

- Installs only the shared libraries required by Oracle Call Interface applications that use the Instant Client feature. This installation type requires much less disk space than the other Oracle Database Client installation types. Included in the Instant Client installation is Instant Client Light. You may want to use this version of Instant Client if your applications will generate error messages in American English only. The advantage of using Instant Client Light is that it has a much smaller footprint than regular Instant Client. Hence, your applications use less memory.

- Enables applications to connect to an Oracle database on the local system or on a remote system. It provides tools that let you administer an Oracle database.

- Enables applications to connect to an Oracle database on the local system or on a remote system.

- Enables you to select individual components from the list of Administrator and Runtime components.
Oracle Database Client Hardware Requirements

Table 2–1 lists the required hardware components for Oracle Database Client.

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Minimum Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physical memory (RAM)</td>
<td>1 GB minimum</td>
</tr>
<tr>
<td>Virtual memory</td>
<td>512 MB</td>
</tr>
<tr>
<td>Hard disk space</td>
<td>Total ranges from 280–855 MB. See Table 2–2 for details.</td>
</tr>
<tr>
<td>Video adapter</td>
<td>256 colors</td>
</tr>
<tr>
<td>Processor</td>
<td>Intel Itanium 2 or later</td>
</tr>
</tbody>
</table>

Hard Disk Space Requirements

required to install Java Runtime Environment (JRE) and Oracle Universal Installer on the partition where the operating system is installed. If sufficient space is not detected, then installation fails and an error message appears.

Table 2–2 lists the space requirements for NTFS.
To ensure that the system meets these requirements, follow these steps:

1. Determine the physical RAM size. For a computer using Windows 2003, for example, open \Program Files\Oracle\Inventory in the Windows Control Panel and select the **tab. If the size of the physical RAM installed in the system is less than the required size, then you must install more memory before continuing.

2. Determine the size of the configured virtual memory (also known as paging file size). For a computer using Windows 2003, for example, open \Control Panel, select the **tab, and click **in the section. Then select the **tab. The virtual memory is listed in the section.

   If necessary, see your operating system documentation for information about how to configure additional virtual memory.

3. Determine the amount of free disk space on the system. For a computer using Windows 2003, for example, open , right-click the drive where the Oracle software is to be installed, and choose .

4. Determine the amount of disk space available in the directory. This is equivalent to the total amount of free disk space, minus what will be needed for the Oracle software to be installed.

   If there is less than 100 MB of disk space available in the directory, then first delete all unnecessary files. If the temp disk space is still less than 100 MB, then set the TEMP TMP

---

### Table 2–2 Disk Space Requirements for NTFS

</tr>
<tr>
<td></td>
<td>- TCP/IP</td>
</tr>
<tr>
<td></td>
<td>- TCP/IP with SSL</td>
</tr>
<tr>
<td></td>
<td>- Named Pipes</td>
</tr>
</tbody>
</table>
Instant Client Light Language and Character Set Requirements

In addition to the requirements described in the previous section, if you plan to use Instant Client Light, your applications must use the following languages and character sets:

- US English
- Any territory that is supported by Oracle
- Single byte
  - US7ASCII
  - WE8DEC
- Unicode
  - UTF8
  - AL16UTF16
  - AL32UTF8

The language, territory, and character sets are determined by the NLS_LANG parameter, which is stored in the registry under the HKEY_LOCAL_MACHINE\SOFTWARE\ORACLE\HOME ID subkey, where ID is the unique number identifying the Oracle home.

Caution: AL32UTF8 is the Oracle Database character set that is appropriate for XMLType data. It is equivalent to the IANA registered standard UTF-8 encoding, which supports all valid XML characters.

Do not confuse Oracle Database database character set UTF8 (no hyphen) with database character set AL32UTF8 or with character encoding UTF-8. Database character set UTF8 has been superseded by AL32UTF8. Do not use UTF8 for XML data. UTF8 supports only Unicode version 3.1 and earlier; it does not support all valid XML characters. AL32UTF8 has no such limitation.

Using database character set UTF8 for XML data could potentially cause a fatal error or affect security negatively. If a character that is not supported by the database character set appears in an input-document element name, a replacement character (usually "?") is substituted for it. This will terminate parsing and raise an exception.

See Also: Appendix B, "Configuring Oracle Database Client Globalization Support" for more information on
The platform-specific hardware and software requirements included in this installation guide were current at the time this guide was published. However, because new platforms and operating system software versions might be certified after this guide is published, review the certification matrix on the OracleMetaLink Web site for the most up-to-date list of certified hardware platforms and operating system versions. This Web site also provides compatible client and database versions, patches, and workaround information for bugs. The OracleMetaLink Web site is available at the following URL:

http://metalink.oracle.com/

You must register online before using OracleMetaLink. After logging in, select Certify & Availability from the left-hand column. From the Product Lifecycle page, select the Certifications button. Other Product Lifecycle options include Product Availability, Desupport Notices, and Alerts.

The following sections list the following certification information:

- Windows Telnet Services Support
- Windows Terminal Services and Remote Desktop Support
- Windows Support

**Windows Telnet Services Support**

Windows 2003 includes a Telnet Service that allows remote users to log on to the operating system and run console programs using the command line, in the same way that they do on UNIX. Oracle supports the use of command line utilities, such as SQL*Plus, Export, Import, and SQL*Loader, using this feature, but does not support their GUI tools.

---

**Note:** Make sure that the Telnet service is started on the Windows Services utility.

---

**Windows Terminal Services and Remote Desktop Support**

Oracle supports Terminal Services on Windows 2003. However, installation of Oracle components from a remote Terminal Services Client on to a 64-bit Windows server that is running a Terminal Server service is not supported. Start all configuration tools from the Terminal Server console and not from the Terminal Services Client.

Oracle Connection Manager is not supported with Windows Terminal Services.

You can configure Windows 2003 to use Terminal Services in Remote Desktop for Administration Mode or Terminal Server Mode.

**See Also:**

- The Microsoft Web site for more information about terminal servers
  
  http://www.microsoft.com/
- The OracleMetaLink Web site for the latest Terminal Server certification information
  
  http://metalink.oracle.com/
Windows Support

The following components are not supported:

- GNU Compiler Collection (GCC)
- Oracle Database Extensions for .NET
- Oracle Procedural Gateway
- Oracle Transparent Gateway
- Business Components for Java (BC4J)
- DCE and CyberSafe Adapter Support
- Entrust PKI Support
- Generic Connectivity
- Java Server Pages
- nCipher Accelerator Support
- Oracle Data Provider for .NET
- Oracle Enterprise Manager Grid Control CD
  A 64-bit Windows version of Oracle Enterprise Manager Grid Control is not available in this release.
- Oracle Enterprise Manager Java Console
- Oracle Messaging Gateway
- Oracle Migration Workbench
  You can execute Oracle Migration Workbench from a 32-bit Windows environment to migrate third-party databases, as supported by release 9.2.0.2.1 or later, to an Oracle Database 10g Release 2 (10.2) database installed on a 64-bit Windows computer.
- Oracle Objects for OLE
- Oracle Workflow Builder
- Pro*COBOL
- Oracle Database Extensions for .NET
- Oracle Enterprise Integration Gateways, which include the following:
  - Oracle Procedural Gateway for APPC
  - Oracle Transparent Gateway for IBM DRDA
- Oracle Open Gateways, which include the following:
  - Oracle Transparent Gateway for Sybase
  - Oracle Transparent Gateway for Teradata
  - Oracle Transparent Gateway for Microsoft SQL Server

d:\install\client
Procedure for Installing Oracle Database Client

In the Specify Home Details window, do the following:

Enter the name of the Oracle home.

Install Oracle Database Client into a new Oracle home, even if you are installing onto a computer that has existing Oracle components installed.

Do not install Oracle Database Client 10 release 2 (10.2) software into an existing Oracle home that contains Oracle9 or earlier software. You can install Oracle Database Client into an existing Oracle home that contains Oracle Database Client 10 release 1 (10.1) software, so long as Oracle Database is not installed in the same home.
Enter the directory location for the Oracle home files. Do not include spaces in the path name.

Click .

If you selected in Step 5, in the Available Product Components window, select the components you want to install and click or .

Installing Oracle Database Client Using Response Files

How Response Files Work

Noninteractive (or suppressed) mode

ORACLE_HOME_NAME="OraDBHome1"

SYSTEM_DRIVE setup.exe_location
If you do not specify information required for a particular Installer screen in the response file, Oracle Universal Installer displays that screen. It suppresses screens for which you have provided all of the required information.
This section describes the methods that you can use to prepare a response file for use during silent-mode or noninteractive-mode installations:

- Editing a Response File Template
- Recording a Response File

Oracle provides response file templates for each product and installation type, and for each configuration tool. These files are located in the directory on the Oracle Database installation media.

Creating a response file using a response file template is most useful for the Enterprise Edition or Standard Edition installation types.

Table A–2 lists the available Oracle Database Client sample response files:

<table>
<thead>
<tr>
<th>Response File Name</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>netca.rsp</td>
<td></td>
</tr>
<tr>
<td>clientadmin.rsp</td>
<td></td>
</tr>
<tr>
<td>clientcustom.rsp</td>
<td></td>
</tr>
<tr>
<td>instantClient.rsp</td>
<td></td>
</tr>
<tr>
<td>clientruntime.rsp</td>
<td></td>
</tr>
</tbody>
</table>

To copy and modify a response file:

Copy the appropriate response files from the directory on the Oracle Database media to your hard drive.

Modify the response files with a text file editor.

In addition to editing settings specific to the Oracle Database Client installation, check that the path is correct and points to the file in the directory in the installation media. You may want to set this variable to point to an absolute path, for example:

FROM_LOCATION=\myserver\client\stage\products.xml
cd
  setup.exe
    setup.exe  client

\> setup -record -destinationFile response_file_name

response_file_name

SYSTEM_DRIVE:\setup.exe_location> setup -record -destinationFile c:\response_files\install_oracle10_2.rsp
FROM_LOCATION="\\myserver\client\response\stage\products.xml"

```
setup.exe
```

```
setup.exe -help
```

```
:\> setup -help
```

```
:\> setup [-silent] 'variable setting
   filename
```

```
filename
```

```
"variable=setting
```
