Index
Preface

The Oracle Database Vault Installation Guide explains how to prepare for, install, and configure Oracle Database Vault with specific instructions for the operating system and Oracle software technology components that Database Vault requires.

Audience

This document is intended for Oracle DBAs as well as System Administrators who are involved in the installation of Oracle Database Vault and its related components.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at

http://www.oracle.com/accessibility/

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, seven days a week. For TTY support, call 800.446.2398.
Related Documents

For more information, refer to the following documents:

- Oracle Database Vault Release Notes for Solaris Operating System (SPARC 64-Bit)
- Oracle Database Vault Administrator’s Guide
- Oracle Database Installation Guide
- Oracle Database Oracle Clusterware and Oracle Real Application Clusters Installation Guide for Solaris Operating System
- Oracle Database Oracle Clusterware and Oracle Real Application Clusters Administration and Deployment Guide

Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>boldface</td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td>italic</td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td>monospace</td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Part I introduces you to Oracle Database Vault installation concepts, requirements, and steps. This part contains the following chapters:

- Chapter 1, "Oracle Database Vault Installation Overview"
- Chapter 2, "Installing Oracle Database Vault as an Option"
Oracle Database Vault enables you to secure business data in ways that were not possible before. Database Vault uses a multifactored and multilayered approach to implementing database security.

This chapter provides an overview of the Database Vault installation process. This chapter includes the following sections:

- Database Vault Installation Environment
- Database Vault Accounts
- Installation Considerations

### Database Vault Installation Environment

Oracle Database Vault can be installed as an option to the following:

- Oracle Database 10g Release 2 (10.2.0.3) standalone installation
- Oracle Database 10g Release 2 (10.2.0.3) with Oracle Real Application Clusters (RAC)

### Database Vault Accounts

Database Vault prompts for two accounts that you can create during installation. These are the Database Vault Owner and the Database Vault Account Manager accounts. You must supply an account name and password for the Database Vault Owner during installation. Creating a Database Vault Account Manager is optional.

### Database Vault Owner

The Database Vault Owner account is granted the `DV_OWNER` role. This account can manage Database Vault roles and configuration.

The Database Vault Owner user name can be a minimum of 2, and a maximum of 30 characters long. The account password can be a minimum of 8, and a maximum of 30 characters.

The password that you choose for the Database Vault Owner account must be a secure one. The following password restrictions are enforced:

- The password must include at least one alphabet, one digit, and one nonalphanumeric character (symbol).
- The password cannot be the same as the account name.
The password cannot contain any consecutive repeating characters.

Database Vault Account Manager

The Database Vault Account Manager is granted the DV_ACCTMGR role. This account is used to manage database user accounts. The Database Vault Account Manager is created to facilitate separation of duties. If you do not opt to create the Database Vault Account Manager account, then the DV_ACCTMGR role is granted to the Database Vault Owner account by default.

The Database Vault Account Manager user name can be a minimum of 2, and a maximum of 30 characters long. The account password can be a minimum of 8, and a maximum of 30 characters.

The same password restrictions that apply to Database Vault Owner are applicable to Database Vault Account Manager as well.

Default Audit Policy and Initialization Parameters

Oracle Database Vault installs a baseline database auditing policy. This policy covers the access control configuration information stored in Database Vault database tables, information stored in Oracle Catalog (rollback segments, tablespaces, and so on), the use of system privileges, and Oracle Label Security configuration.

See Also: Oracle Database Vault Administrator’s Guide for more information on the database audit policy

When you install Oracle Database Vault, the security specific database initialization parameters are initialized with default values. These security specific initialization parameters are listed in Appendix E

Installation Considerations

This section contains information that you should consider before deciding how to install this product. It contains the following sections:

- Hardware and Software Certification
- Multiple Oracle Homes

Hardware and Software Certification

The platform-specific hardware and software requirements included in this installation guide were current at the time this guide was published. However, because new platforms and operating system software versions might be certified after this guide is published, review the certification matrix on the OracleMetaLink Web site for the most up-to-date list of certified hardware platforms and operating system versions. The OracleMetaLink Web site is available at the following URL:

http://metalink.oracle.com

If you do not have a current Oracle Support Services contract, then you can access the same information at the following Web site:

http://www.oracle.com/technology/support/metalink/content.html
Multiple Oracle Homes

This product supports multiple Oracle homes. This means that you can install this release or previous releases of the software more than once on the same system, in different Oracle home directories.
Installing Oracle Database Vault as an Option

This chapter includes an overview of the major steps required to install Oracle Database Vault into an existing Oracle Database 10g release 2 (10.2.0.3) database. These procedures transform an existing Oracle Database system (including associated applications) into an Oracle Database Vault system. Databases upgraded using the procedures described in this chapter can work almost in the same manner as in earlier releases and, optionally, can leverage new Oracle Database Vault functionality. For a list of changes that Database Vault makes, refer to Appendix E, "Initialization Parameters" and the Oracle Database Vault Administrator’s Guide.

**Note:** In order to upgrade a pre-10g release 2 Oracle Database to Oracle Database Vault, you first need to upgrade the database to a 10g release 2 (10.2.0.3) database.

**See Also:** Oracle Database Upgrade Guide, 10g Release 2 (10.2) for information about upgrading your Oracle Database to Oracle Database 10g release 2.

This chapter covers the following topics:

- Preinstallation and Installation Tasks
- Postinstallation Tasks
- Removing Oracle Software

**Preinstallation and Installation Tasks**

This section covers the following topics:

- Become Familiar with the Features of Oracle Database Vault
- Check the Hardware Requirements
- Check the Operating System Requirements
- Check Kernel Parameters
- Check the Database Requirements
- Prepare a Backup Strategy
- Verify That Oracle Clusterware Is Running (RAC Only)
- Stop Existing Oracle Processes
- Configure the Oracle User’s Environment
Preinstallation and Installation Tasks

- **Run Oracle Universal Installer to Install**

**Become Familiar with the Features of Oracle Database Vault**

Before you plan the upgrade process, become familiar with the features of Oracle Database Vault. The *Oracle Database Vault Administrator's Guide* discusses the basic features of Oracle Database Vault.

**Check the Hardware Requirements**

The system must meet the following minimum hardware requirements:

- At least 1024 MB of physical RAM
- The following table describes the relationship between installed RAM and the configured swap space requirement.

<table>
<thead>
<tr>
<th>RAM</th>
<th>Swap Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>Between 1024 MB and 2048 MB</td>
<td>1.5 times the size of RAM</td>
</tr>
<tr>
<td>Between 2049 MB and 8192 MB</td>
<td>Equal to the size of RAM</td>
</tr>
<tr>
<td>More than 8192 MB</td>
<td>0.75 times the size of RAM</td>
</tr>
</tbody>
</table>

- 400 MB of disk space in the `/tmp` directory
- Between 1.5 GB and 3.5 GB of disk space for the Oracle software, depending on the installation type
- 1.2 GB of disk space for a preconfigured database that uses file system storage (optional)

---

**Note:** The disk space requirement for databases that use Automatic Storage Management or raw device storage is described later in this chapter.

Additional disk space, either on a file system or in an Automatic Storage Management disk group, is required for the flash recovery area if you choose to configure automated backups.

To ensure that the system meets these requirements:

1. To determine the physical RAM size, enter the following command:
   
   ```
   # /usr/sbin/prtconf | grep "Memory size"
   ```

   If the size of the physical RAM is less than the required size, then you must install more memory before continuing.

2. To determine the size of the configured swap space, enter the following command:
   
   ```
   # /usr/sbin/swap -s
   ```

   If necessary, refer to the operating system documentation for information about how to configure additional swap space.

3. To determine the amount of disk space available in the `/tmp` directory, enter the following command:
   
   ```
   # df -k /tmp
   ```
# df -h /tmp (on Solaris 10)

If there is less than 400 MB of free disk space available in the /tmp directory, then complete one of the following steps:

- Delete unnecessary files from the /tmp directory to meet the disk space requirement.
- Set the TMP and TMPDIR environment variables when setting the oracle user’s environment (described later).
- Extend the file system that contains the /tmp directory. If necessary, contact your system administrator for information about extending file systems.

4. To determine the amount of free disk space on the system, enter the following command:

```
# df -k
# df -h (on Solaris 10)
```

The following table shows the approximate disk space requirements for software files for each installation type:

<table>
<thead>
<tr>
<th>Installation Type</th>
<th>Requirement for Software Files (GB)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enterprise Edition</td>
<td>2.0</td>
</tr>
<tr>
<td>Standard Edition</td>
<td>1.5</td>
</tr>
<tr>
<td>Custom (maximum)</td>
<td>2.5</td>
</tr>
</tbody>
</table>

5. To determine whether the system architecture can run the software, enter the following command:

```
# /bin/isainfo -kv
```

**Note:** The following is the expected output of this command:

```
64-bit sparcv9 kernel modules
```

If you do not see the expected output, then you cannot install the software on this system.

---

**Check the Operating System Requirements**

Depending on the products that you intend to install, verify that the following software is installed on the system. The procedure following the table describes how to verify whether these requirements are addressed.

**Note:** Oracle Universal Installer performs checks on your system to verify that it meets the listed requirements. To ensure that these checks pass, verify the requirements before you start Oracle Universal Installer.
To ensure that the system meets these requirements:

1. To determine which version of Solaris is installed, enter the following command:

   ```
   # uname -r
   5.9
   ```

   In this example, the version shown is Solaris 9 (5.9). If necessary, refer to your operating system documentation for information about upgrading the operating system.

2. To determine whether the required packages are installed, enter a command similar to the following:

   ```
   # pkginfo -i SUNWarc SUNWbtool SUNWhea SUNWlibm SUNWlibms SUNWsprot
   SUNNttoo SUNWiloof SUNWllcs SUNWli5cs SUNWxxwfont SUNWsprox
   ```

   If a package is not installed, then install it. Refer to your operating system or software documentation for information about installing packages.

   In addition, you need to verify that the following patches are installed on the system. The procedure following the table describes how to check these requirements.

   **Note:** You may also require additional font packages for Java, depending on your locale. Refer to the following Web site for more information:

   [http://java.sun.com/j2se/1.4.2/font-requirements.html](http://java.sun.com/j2se/1.4.2/font-requirements.html)

   **Note:** There may be more recent versions of the patches listed installed on the system. If a listed patch is not installed, then determine whether a more recent version is installed before installing the version listed.
## Preinstallation and Installation Tasks

### Installing Oracle Database Vault as an Option

2-5

To ensure that the system meets these requirements:

<table>
<thead>
<tr>
<th>Installation Type or Product</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>All installations</td>
<td><strong>Patches for Solaris 8:</strong></td>
</tr>
<tr>
<td></td>
<td>All of the patches included in the J2SE Patch Cluster for Solaris 8:</td>
</tr>
<tr>
<td></td>
<td>■ 108528-23, SunOS 5.8: kernel update patch</td>
</tr>
<tr>
<td></td>
<td>■ 108652-66, X11 6.4.1: Xsun patch</td>
</tr>
<tr>
<td></td>
<td>■ 108773-18, SunOS 5.8: IIIM and X I/O Method patch</td>
</tr>
<tr>
<td></td>
<td>■ 108921-16, CDE 1.4: dtwm patch</td>
</tr>
<tr>
<td></td>
<td>■ 108940-53, Motif 1.2.7 and 2.1.1: Runtime lib. patch for Solaris 8</td>
</tr>
<tr>
<td></td>
<td>■ 108987-13, SunOS 5.8: Patch for patchadd and patchrm</td>
</tr>
<tr>
<td></td>
<td>■ 108989-02, /usr/kernel/sys/acctctl &amp; /.../exactsys patch</td>
</tr>
<tr>
<td></td>
<td>■ 108993-45, SunOS 5.8: LDAP2 client, libc, libthread and libnsl libraries patch</td>
</tr>
<tr>
<td></td>
<td>■ 109147-24, SunOS 5.8: linker patch</td>
</tr>
<tr>
<td></td>
<td>■ 110386-03, SunOS 5.8: RBAC Feature Patch</td>
</tr>
<tr>

<td>■ 111111-03, SunOS 5.8: /usr/bin/nawk patch</td>
</tr>
<tr>
<td></td>
<td>■ 111308-03, SunOS 5.8: /usr/lib/libm.so.1 patch</td>
</tr>
<tr>
<td></td>
<td>■ 111310-01, SunOS 5.8: /usr/lib/libdhcpcagent.so.1 patch</td>
</tr>
<tr>
<td></td>
<td>■ 112396-02, SunOS 5.8: /usr/bin/fgrep patch</td>
</tr>
<tr>
<td></td>
<td>The following additional patches:</td>
</tr>
<tr>
<td></td>
<td>■ 111721-04, SunOS 5.8: Math Library (libm) patch</td>
</tr>
<tr>
<td></td>
<td>■ 112003-03, SunOS 5.8: Unable to load fontset ... iso-1 or iso-15</td>
</tr>
<tr>
<td></td>
<td>■ 112138-01, SunOS 5.8: usr/bin/domainname patch</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>All installations</th>
<th><strong>Patches for Solaris 9:</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>■ 112233-11, SunOS 5.9: Kernel Patch</td>
</tr>
<tr>
<td></td>
<td>■ 111722-04, SunOS 5.9: Math Library (libm) patch</td>
</tr>
<tr>
<td></td>
<td>The following additional patches are required for Numa Systems:</td>
</tr>
<tr>
<td></td>
<td>■ 115675-01, SunOS 5.9: liblgrp API</td>
</tr>
<tr>
<td></td>
<td>■ 113471-08, SunOS 5.9: Miscellaneous SunOS Commands Patch</td>
</tr>
<tr>
<td></td>
<td>■ 115675-01, SunOS 5.9: /usr/lib/liblgrp.so Patch</td>
</tr>
</tbody>
</table>

**Note:** The following patches are not required for silent installations:

■ 108652-66, X11 6.4.1: Xsun patch

■ 108773-18, SunOS 5.8: IIIM and X I/O Method patch

■ 108921-16, CDE 1.4: dtwm patch

■ 108940-53, Motif 1.2.7 and 2.1.1: Runtime lib. patch for Solaris 8

For more information about silent installations, refer to Appendix A.
1. To determine whether an operating system patch is installed, enter a command similar to the following:

```
# /usr/sbin/patchadd -p | grep patch_number(without version number)
```

For example, to determine if any version of the 111713 patch is installed, use the following command:

```
# /usr/sbin/patchadd -p | grep 111713
```

If an operating system patch is not installed, then download it from the following Web site and install it:

http://sunsolve.sun.com

2. If you require a CSD or a SupportPac for WebSphere MQ, then refer to the following Web site for download and installation information:

**Check Kernel Parameters**

**Note:** The kernel parameter and shell limit values shown in the following section are recommended values only. For production database systems, Oracle recommends that you tune these values to optimize the performance of the system. Refer to your operating system documentation for more information about tuning kernel parameters.

Verify that the kernel parameters shown in the following table are set to values greater than or equal to the recommended value shown on Solaris 8 and Solaris 9 operating systems. The procedure following the table describes how to verify and set the values.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Recommended Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>noexec_user_stack</td>
<td>1</td>
</tr>
<tr>
<td>semsys:seminfo_semmni</td>
<td>100</td>
</tr>
<tr>
<td>semsys:seminfo_semmns</td>
<td>1024</td>
</tr>
<tr>
<td>semsys:seminfo_semmnl</td>
<td>256</td>
</tr>
<tr>
<td>semsys:seminfo_sevmnx</td>
<td>32767</td>
</tr>
<tr>
<td>shmsys:shminfo_shmmax</td>
<td>4294967295</td>
</tr>
<tr>
<td>shmsys:shminfo_shmmin</td>
<td>1</td>
</tr>
<tr>
<td>shmsys:shminfo_shmmni</td>
<td>100</td>
</tr>
<tr>
<td>shmsys:shminfo_shmseg</td>
<td>10</td>
</tr>
</tbody>
</table>

**Note:** The following parameters are obsolete in Solaris 9:

- shmsys:shminfo_shmmin
- shmsys:shminfo_shmseg
On Solaris 10, verify that the kernel parameters shown in the following table are set to values greater than or equal to the recommended value shown. The table also contains the resource controls that replace the `/etc/system` file for a specific kernel parameter.

**Note:** In Solaris 10, you are not required to make changes to the `/etc/system` file to implement the System V TPC. Solaris 10 uses the resource control facility for its implementation.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Replaced by Resource Control</th>
<th>Recommended Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>noexec_user_stack</td>
<td>NA</td>
<td>1</td>
</tr>
<tr>
<td>semsys:seminfo_semnni</td>
<td>project.max-sem-ids</td>
<td>100</td>
</tr>
<tr>
<td>semsys:seminfo_semmsl</td>
<td>process.max-sem-nsem</td>
<td>256</td>
</tr>
<tr>
<td>shmsys:shminfo_shmmax</td>
<td>project.max-shm-memory</td>
<td>4294967295</td>
</tr>
<tr>
<td>shmsys:shminfo_shmmni</td>
<td>project.max-shm-ids</td>
<td>100</td>
</tr>
</tbody>
</table>

On Solaris 8 and Solaris 9 operating systems, use the following procedure to view the current value specified for these kernel parameters, and to change them if necessary:

1. To view the current values of these parameters, enter the following commands:

   ```
   # grep noexec_user_stack /etc/system
   # /usr/sbin/sysdef | grep SEM
   # /usr/sbin/sysdef | grep SHM
   ```

2. If you must change any of the current values, then:

   a. Create a backup copy of the `/etc/system` file, for example:

      ```
      # cp /etc/system /etc/system.orig
      ```

   b. Open the `/etc/system` file in any text editor and, if necessary, add lines similar to the following (edit the lines if the file already contains them):

      ```
      set noexec_user_stack=1
      set semsys:seminfo_semnni=100
      set semsys:seminfo_semms=1024
      set semsys:seminfo_semmsl=256
      set semsys:seminfo_semvmx=32767
      set shmsys:shminfo_shmmax=4294967295
      set shmsys:shminfo_shmmni=1
      set shmsys:shminfo_shmmin=100
      set shmsys:shminfo_shmseg=10
      ```

   c. Enter the following command to restart the system:

      ```
      # /usr/sbin/reboot
      ```

   d. When the system restarts, log in and switch user to `root`.

On Solaris 10, use the following procedure to view the current value specified for resource controls, and to change them if necessary:

1. To view the current values of the resource control, enter the following commands:

   ```
   # id -p // to verify the project id
   uid=0(root) gid=0(root) projid=1 (user.root)
   ```
Preinstallation and Installation Tasks

# prctl -n project.max-shm-memory -i project user.root
# prctl -n project.max-sem-ids -i project user.root

2. If you must change any of the current values, then:

   a. To modify the value of max-shm-memory to 6 GB:
      
      # prctl -n project.max-shm-memory -v 6gb -r -i project user.root

   b. To modify the value of max-sem-ids to 256:
      
      # prctl -n project.max-sem-ids -v 256 -r -i project user.root

Check the Database Requirements

In order to install Oracle Database Vault, you must be running the Enterprise Edition of Oracle Database 10g release 2 (10.2.0.3). The database should also have Oracle Enterprise Manager Console DB 10.2.0.3.0 installed. In addition, the Database Vault installer requires write access to the files, oratab and oraInst.loc.

A listener must have been configured for the existing database. Oracle Net Configuration Assistant configures the listener when you first install the database. You can also use Oracle Enterprise Manager to administer listeners.

You must have an existing password file for the database. The password file authentication parameter, REMOTE_LOGIN_PASSWORDFILE must have been set to EXCLUSIVE or SHARED.

You can set the REMOTE_LOGIN_PASSWORDFILE parameter in the init.ora file. Use the orapwd utility to create and manage password files.

See Also: Oracle Database Administrator’s Guide for more information on creating and maintaining a password file

The following topics discuss applying the 10.2.0.3 patch set and installing the required components:

- Install Oracle Enterprise Manager Console DB
- Apply Oracle Database Release 10.2.0.3 Patch Set

Install Oracle Enterprise Manager Console DB

Before installing Oracle Database Vault, you should ensure that Oracle Enterprise Manager Console DB 10.2.0.3.0 is installed. Oracle Enterprise Manager Console DB is installed using the Oracle Universal Installer (OUI). The following steps summarize installing Oracle Enterprise Manager Console DB:

1. Run Oracle Universal Installer (OUI) and perform a custom installation to install Oracle Enterprise Manager Console DB 10.2.0.1.0. Add Oracle Enterprise Manager Console DB from the list of available product components.

2. Apply the Oracle Database release 10.2.0.3 patch set.

Note: You can configure the database to use Enterprise Manager Database Control by using Database Configuration Assistant (DBCA). However, configuring Enterprise Manager Database Control is not a prerequisite for installing Oracle Database Vault.
Apply Oracle Database Release 10.2.0.3 Patch Set

To install Oracle Database Vault, you need to upgrade the database to Oracle Database release 10.2.0.3. Oracle strongly recommends that you back up your database before performing any upgrade or installation.

See Also: Oracle Database Backup and Recovery User’s Guide for information on database backups

This section covers the following topics:

Patch Set Overview

You can apply the Oracle Database release 10.2.0.3 patch set to the following Oracle Database 10g release 2 installations:

- Oracle Database
- Oracle Real Application Clusters
- Oracle Database Client
- Oracle Database Companion CD
- Oracle Clusterware
- Oracle Database Vault

Oracle Universal Installer Version Requirements

This patch set includes Oracle Universal Installer release 10.2.0.3, which is also installed when you install this patch set. This is to ensure that your Oracle home can be patched in the future. You should not use the Installer from the earlier maintenance release media or Oracle home.

This is not a complete software distribution. You must install it in an existing Oracle Database 10g release 2 (10.2.0.1 or 10.2.0.2) installation.

Patch Set Documentation

There are two documents related to this release of the Oracle Database patch set:

- Oracle Database Patch Set Notes, 10g Release 2 (10.2.0.3) Patch Set for Solaris Operating System (SPARC 64-Bit)
- Oracle Database List of Bugs Fixed, 10g Release 2 (10.2.0.3) Patch Set

Both of these documents are included with the patch set. In addition, they are available on the Oracle Metalink Web site:

http://metalink.oracle.com

Prepare a Backup Strategy

Oracle strongly recommends that you back up your database before performing any upgrade or installation. The ultimate success of your upgrade depends heavily on the design and execution of an appropriate backup strategy. To develop a backup strategy, consider the following questions:

- How long can the production database remain inoperable before business consequences become intolerable?
- What backup strategy should be used to meet your availability requirements?
Preinstallation and Installation Tasks

- Are backups archived in a safe, offsite location?
- How quickly can backups be restored (including backups in offsite storage)?
- Have recovery procedures been tested successfully?

Your backup strategy should answer all of these questions and include procedures for successfully backing up and recovering your database.

See Also: Oracle Database Backup and Recovery User's Guide for information on database backups

Verify That Oracle Clusterware Is Running (RAC Only)

Oracle Clusterware should be running for the Database Vault installer to find the existing Real Application Clusters (RAC) databases. If you have stopped Oracle Clusterware, then you should restart it before running Oracle Universal Installer. Use the following command to start Oracle Clusterware:

```
$CRS_HOME/bin/crsctl start crs
```

Note:

- You must run the crsctl command as the root user. You need to run this command on all cluster nodes.
- The crsctl start crs command also starts the database. You will need to shut down the database before running Oracle Universal Installer.

Stop Existing Oracle Processes

Stop all processes running in the Oracle home. You must complete this task to enable Oracle Universal Installer to relink certain executables and libraries. For RAC databases, you need to stop the processes on all nodes.

Stop the processes in the following order:

1. Stop the Enterprise Manager Database Control Process
2. Stop the iSQL*Plus Process
3. Shut Down All Database Instances
4. Stop Existing Listeners

Stop the Enterprise Manager Database Control Process

Stop the Enterprise Manager Database Control process, if it is running. Use the following command:

```
$ORACLE_HOME/bin/emctl stop dbconsole
```

Stop the iSQL*Plus Process

Stop the iSQL*Plus process, using the following command:

```
$ORACLE_HOME/bin/isqlplusctl stop
```
Shut Down All Database Instances
Shut down all database instances running from the Oracle home directory into which Oracle Database Vault is to be installed.

sqlplus SYS ‘AS SYSDBA’
Enter password:
SQL> shutdown immediate

Stop Existing Listeners
Oracle Universal Installer configures and starts a default Oracle Net listener using TCP/IP port 1521. However, if an existing Oracle Net listener process is using the same port or key value, then Oracle Universal Installer can only configure the new listener, it cannot start it. To ensure that the new listener process starts during the installation, you must shut down any existing listeners before starting Oracle Universal Installer.

To determine whether an existing listener process is running and to shut it down if necessary:

1. Switch user to oracle:
   
   # su - oracle

2. Enter the following command to determine whether a listener process is running and to identify its name and the Oracle home directory in which it is installed:

   $ ps -ef | grep tnslsnr

   This command displays information about the Oracle Net listeners running on the system:

   ... oracle_home1/bin/tnslsnr LISTENER -inherit

   In this example, oracle_home1 is the Oracle home directory where the listener is installed and LISTENER is the listener name.

   **Note:** If no Oracle Net listeners are running, then refer to the "Configure the Oracle User’s Environment" section on page 2-12 to continue.

3. Set the ORACLE_HOME environment variable to specify the appropriate Oracle home directory for the listener:

   - Bourne, Bash, or Korn shell:
     
     $ ORACLE_HOME=oracle_home1
     $ export ORACLE_HOME

   - C or tcsh shell:
     
     % setenv ORACLE_HOME oracle_home1

4. Enter the following command to identify the TCP/IP port number and IPC key value that the listener is using:

   $ $ORACLE_HOME/bin/lsnrctl status listenername
5. Enter a command similar to the following to stop the listener process:

   $ $ORACLE_HOME/bin/lsnrctl stop listenername

6. Repeat this procedure to stop all listeners running on this system.

   **Note:** If you are installing Database Vault for Oracle Real Application Clusters (RAC), then you need to shut down all Oracle processes on all cluster nodes. See Appendix A, "How to Stop Processes in an Existing Oracle Real Application Clusters Database" for more details.

---

**Configure the Oracle User’s Environment**

Run Oracle Universal Installer (OUI) using the account that owns the Oracle software. This is usually the oracle account.

However, before you start Oracle Universal Installer you must configure the environment of the oracle user. To configure the environment, you must:

- Set the default file mode creation mask (umask) to 022 in the shell startup file.
- Set the DISPLAY environment variable.

**Note:** Ensure that the PATH variable contains $ORACLE_HOME/bin before /usr/X11R6/bin.

To set the oracle user’s environment:

1. Start a new terminal session, for example, an X terminal (xterm).

2. Enter the following command to ensure that X Window applications can display on this system:

   $ xhost fully_qualified_remote_host_name

   For example:

   $ xhost somehost.us.acme.com

3. If you are not already logged in to the system where you want to install the software, then log in to that system as the oracle user.

4. If you are not logged in as the oracle user, then switch user to oracle:

   $ su - oracle

5. To determine the default shell for the oracle user, enter the following command:

   $ echo $SHELL

6. Open the oracle user’s shell startup file in any text editor:

   - Bourne shell (sh), Bash shell (bash), or Korn shell (ksh):
     $ vi .bash_profile
Preinstallation and Installation Tasks

Installing Oracle Database Vault as an Option

2-13

- C shell (csh or tcsh):
  ```
  % vi .login
  ```

7. Enter or edit the following line, specifying a value of 022 for the default file mode creation mask:
   ```
   umask 022
   ```

8. If the ORACLE_SID, ORACLE_HOME, or ORACLE_BASE environment variable is set in the file, then remove the corresponding lines from the file.

9. Save the file, and exit from the editor.

10. To run the shell startup script, enter one of the following commands:
    - Bourne, Bash, or Korn shell:
      ```
      $ . ~/.profile
      ```
    - C shell:
      ```
      % source ~/.login
      ```

11. If you are not installing the software on the local system, then enter a command similar to the following to direct X applications to display on the local system:
    - Bourne, Bash, or Korn shell:
      ```
      $ DISPLAY=local_host:0.0 ; export DISPLAY
      ```
    - C shell:
      ```
      % setenv DISPLAY local_host:0.0
      ```

     In this example, local_host is the host name or IP address of the system that you want to use to display Oracle Universal Installer (your workstation or PC).

12. If you determined that the /tmp directory has less than 400 MB of free disk space, then identify a file system with at least 400 MB of free space and set the TEMP and TMPDIR environment variables to specify a temporary directory on this file system:
    a. Use the df –k command to identify a suitable file system with sufficient free space.
    b. If necessary, enter commands similar to the following to create a temporary directory on the file system that you identified, and set the appropriate permissions on the directory:
       ```
       $ su - root
       # mkdir /mount_point/tmp
       # chmod a+wr /mount_point/tmp
       # exit
       ```
    c. Enter commands similar to the following to set the TEMP and TMPDIR environment variables:
       ```
       $ TEMP=/mount_point/tmp
       $ TMPDIR=/mount_point/tmp
       $ export TEMP TMPDIR
       ```
13. Enter commands similar to the following to set the ORACLE_BASE and ORACLE_SID environment variables:

- Bourne, Bash, or Korn shell:
  
  ```bash
  $ ORACLE_BASE=/u01/app/oracle
  $ ORACLE_SID=sales
  $ export ORACLE_BASE ORACLE_SID
  ```

- C shell:
  
  ```csh
  % setenv ORACLE_BASE /u01/app/oracle
  % setenv ORACLE_SID sales
  ```

In these examples, /u01/app/oracle is the Oracle base directory that you created or identified earlier and sales is the name that you want to call the database (typically no more than five characters).

14. Enter the following commands to ensure that the ORACLE_HOME and TNS_ADMIN environment variables are not set:

- Bourne, Bash, or Korn shell:
  
  ```bash
  $ unset ORACLE_HOME
  $ unset TNS_ADMIN
  ```

- C shell:
  
  ```csh
  % unsetenv ORACLE_HOME
  % unsetenv TNS_ADMIN
  ```

15. To verify that the environment has been set correctly, enter the following commands:

  ```bash
  $ umask
  $ env | more
  ```

Verify that the `umask` command displays a value of 22, 022, or 0022 and the environment variables that you set in this section have the correct values.

### Run Oracle Universal Installer to Install

Run Oracle Universal Installer (OUI) to install Oracle Database Vault into an existing Oracle Database 10g release 2 (10.2.0.3) database. You should run the installer as the software owner account that owns the current ORACLE_HOME environment. This is normally the oracle account.

Log in as the oracle user. Alternatively, switch user to oracle using the `su` command. Change your current directory to the directory containing the installation files. Start Oracle Universal Installer.

```
./runInstaller
```

The following steps discuss the options you need to select:

1. In the Specify Installation Details screen, you need to specify the path to the Oracle home that contains the existing Oracle Database. The **Destination Path** box lists
the Oracle home paths of all Oracle Database release 2 (10.2.0.3) Enterprise Edition databases registered with the system.

Select the Oracle home corresponding to the database into which you want to install Oracle Database Vault.

---

### Note:

- If an Oracle home does not have an Enterprise Edition of Oracle Database release 10.2.0.3 installed, then it is not displayed. You must ensure that the Oracle home has an Enterprise Edition of Oracle Database release 10.2.0.3 installed.
- If an Oracle home does not have Oracle Enterprise Manager Console DB 10.2.0.3.0 installed, then it is not displayed. You must ensure that the Oracle home has Oracle Enterprise Manager Console DB 10.2.0.3.0 installed.
- If an Oracle home contains an Automatic Storage Management (ASM) instance, then it is not displayed. You cannot install Oracle Database Vault into an Oracle home that also contains an ASM instance.
- If an Oracle home already contains Oracle Database Vault, then it is not displayed. You cannot install Oracle Database Vault into an Oracle home more than once.

---

2. Enter a user name for the Database Vault Owner account in the **Database Vault Owner** field. The user name can be a minimum of 2 and maximum of 30 characters long.

3. Enter a password for the Database Vault Owner account in the **Database Vault Owner Password** field. The password can be a minimum of 8 and a maximum of 30 characters. The password must include at least one alphabet, one digit, and one nonalphanumeric character (symbol). It cannot be the same as the account names for either the Database Vault owner or the Database Vault account manager. It cannot contain any consecutive repeating characters.

4. Reenter the password in the **Confirm Password** field.

5. Select **Create a Separate Account Manager** if you want to create a separate Account Manager to manage Oracle Database Vault accounts.

6. In the **Database Vault Account Manager** field, enter a user name for the Database Vault Account Manager if you have chosen to select the **Create a Separate Account Manager** check box. The user name can be a minimum of 2 and a maximum of 30 characters.

7. Enter a password for the Database Vault Account Manager account in the **Account Manager Password** field. The password can be a minimum of 8 and a maximum of 30 characters. The password must include at least one alphabet, one digit, and one nonalphanumeric character (symbol). It cannot be the same as the account names for either the Database Vault owner or the Database Vault account manager. It cannot contain any consecutive repeating characters.

8. Reenter the password in the **Confirm Password** field. Click **Next**.

9. The Select Existing Database screen is displayed. A list of all databases running from the selected Oracle home is displayed. Select the database into which you wish to install Oracle Database Vault.
10. Enter the existing SYS user password for the selected database in the Existing Database SYS Password field.

11. Reenter the SYS password in the Confirm Password field. Click Next.

Note: At this point, the database requirements are validated.

12. You are prompted to shut down all Oracle processes running from the Oracle home before proceeding. Shut down the Oracle processes, if you have not already done so.

See Also: "Stop Existing Oracle Processes" on page 2-10 for more information on stopping existing Oracle processes

13. Product-specific prerequisite checks are performed. Confirm that all tests have passed. Click Next to continue.

14. The Summary screen is displayed with the installation details. Verify the details and click Install.

15. The Installation screen is displayed. After the installation completes, the Database Vault Configuration Assistant (DVCA) is run automatically. DVCA helps configure the Database Vault installation.

Postinstallation Tasks

This section lists the tasks to perform after you have completed an upgrade of your database. The following topics are discussed:

- Back Up the Database
- Update Environment Variables After the Upgrade (UNIX Systems Only)
- Change Passwords for Oracle-Supplied Accounts
- Enable or Disable Connections with the SYSDBA Privilege
- Start the Listener and Database on Other Nodes (RAC Only)
- Run DVCA to Set Instance Parameters and Lock Out SYSDBA Sessions (RAC Only)
Back Up the Database

Make sure you perform a full backup of the production database. See Oracle Database Backup and Recovery User’s Guide for details on backing up a database.

Update Environment Variables After the Upgrade (UNIX Systems Only)

Make sure that the following environment variables point to the correct Oracle Database Vault directories:

- ORACLE_HOME
- PATH
- ORA_NLS10

Note: The ORA_NLS10 environment variable replaces the ORA_NLS33 environment variable, so you may need to unset ORA_NLS33 and set ORA_NLS10.

- LD_LIBRARY_PATH

Change Passwords for Oracle-Supplied Accounts

Oracle strongly recommends that you change the password for each account after installation. This enables you to effectively implement the strong security provided by Oracle Database Vault.

Note: If you are creating a database using Database Configuration Assistant, you can unlock accounts after the database is created by clicking Password Management before you exit from Database Configuration Assistant.

Using SQL*Plus to Unlock Accounts and Reset Passwords

To unlock and reset user account passwords using SQL*Plus:

1. Start SQL*Plus and log in using the Database Vault Account Manager account. If you did not create the Database Vault Account Manager account during installation, then you will need to log in using the Database Vault Owner account.

2. Enter a command similar to the following, where account is the user account that you want to unlock and password is the new password:

   SQL> ALTER USER account [ IDENTIFIED BY password ] ACCOUNT UNLOCK;

In this example:

- The ACCOUNT UNLOCK clause unlocks the account.
- The IDENTIFIED BY password clause resets the password.

Note: If you unlock an account but do not reset the password, then the password remains expired. The first time someone connects as that user, they must change the user’s password.

To permit unauthenticated access to your data through HTTP, unlock the ANONYMOUS user account.
Enable or Disable Connections with the SYSDBA Privilege

In a default Database Vault installation, the operating system authentication to the database is disabled. In addition, connections to the database using the SYSDBA privilege (that is, those that use the AS SYSDBA clause) are disabled. This is a security feature and is implemented to prevent misuse of the SYSDBA privilege.

If a password file has been created using the orapwd utility with the nosysdba flag set to y (Yes) (the default action of a Database Vault installation), users will not be able to log in to an Oracle Database Vault instance using the SYS account or any account with SYSDBA privilege using the AS SYSDBA clause. You can reenable the ability to connect with the SYSDBA privilege by re-creating the password file with the nosysdba flag set to n (No). You might need to reenable the ability to connect with SYSDBA privileges, if certain products or utilities require its use.

When you re-create the password file, any accounts other than SYS that were granted the SYSDBA or SYSOPER privileges will have those privileges removed. You will need to regrant the privileges for these accounts after you have re-created the password file.

Use the following syntax to run orapwd:

```
orapwd file=filename password=password [entries=users] force=y/n nosysdba=y/n
```

Where:
- `file`: Name of password file (mandatory)
- `password`: Password for SYS (mandatory). Enter at least six alphanumeric characters.
- `entries`: Maximum number of distinct DBA users
- `force`: Whether to overwrite the existing file (optional). Enter y (for yes) or n (for no)
- `nosysdba`: Whether to enable or disable the SYS logon (optional for Oracle Database Vault only). Enter y (for yes) or n (for no)

The default is no, so if you omit this flag, the password file will be created enabling SYSDBA access for Oracle Database Vault instances.

For example:
```
orapwd file=$ORACLE_HOME/dbs/orapworcl password=5hjk99 force=y nosysdba=n
```

**Note:** Do not insert spaces around the equal (=) character.

**See Also:** Oracle Database Administrator’s Guide for more information on using the orapwd utility.

Enabling or Disabling Connecting with SYSDBA on Oracle Real Application Clusters Systems

Under a cluster file system and raw devices, the password file under $ORACLE_HOME is in a symbolic link that points to the shared storage location in the default configuration. In this case, the orapwd command you issue affects all nodes.
Enabling or Disabling Connecting with SYSDBA on Automatic Storage Management Systems

For Automatic Storage Management systems, you need to update each node to enable or disable the SYSDBA connection privilege by using the `orapwd` utility.

Start the Listener and Database on Other Nodes (RAC Only)

You need to start the listener and database on all RAC nodes other than the one on which the installation is performed. Use the following commands to start the listener and the database:

```bash
$ORACLE_HOME/bin/lsnrctl start LISTENER_nodename
srvctl start instance -d sid -i instance_name -c "SYS/password AS SYSDBA"
```

**Note:** You need to enable SYSDBA connections on all nodes before running these commands. See "Enable or Disable Connections with the SYSDBA Privilege" on page 2-18 for more information on enabling SYSDBA connections.

Run DVCA to Set Instance Parameters and Lock Out SYSDBA Sessions (RAC Only)

After installing Database Vault for a Real Application Clusters (RAC) instance, you need to run Database Vault Configuration Assistant (DVCA) with the `--action racswitch` switch on all other RAC nodes. This sets instance parameters and disables SYSDBA operating system authentication.

You need to run this command on all RAC nodes other than the node on which the Database Vault installation is performed. This step is required to enable the enhanced security features provided by Oracle Database Vault.

**Note:** The listener and database instance should be running on the nodes on which you run DVCA.

Use the following syntax to run DVCA:

```
# dvca --action racswitch --racnode host_name --oh oracle_home --jdbc_str jdbc_connection_string --sys_passwd sys_password \\  [-logfile ./*.dvca.log] [-silent] [-nodecrypt] [-lockout]
```

Where:

- **action**: The action to perform. `racswitch` performs the action of updating the instance parameters for the RAC instance and optionally disabling SYSDBA operating system access for the instance.
- **racnode**: The host name of the RAC node on which the action is being performed. Do not include the domain name with the host name.
- **oh**: The Oracle home for the RAC instance.
Removing Oracle Software

Use Oracle Universal Installer (OUI) to remove Oracle software from an Oracle home. The following list summarizes the steps involved:

1. Log in as the user that owns the Oracle software. This is usually the oracle user.
2. Shut down all processes running in the Oracle home.
3. Start Oracle Universal Installer as follows:
   
   
   `$ $ORACLE_HOME/oui/bin/runInstaller`

4. In the Welcome screen, select Deinstall Products. The Inventory screen appears. This screen lists all the Oracle homes on the system.
5. Select the Oracle home and the products that you wish to remove. Click Remove.

See Also: Refer to the Oracle Database Installation Guide for details on removing Oracle software.

Note: You can reenable SYSDBA access by re-creating the password file with the nosysdba flag set to n (No). The orapwd utility enables you to do this.

Removing Oracle Software

- jdbc_str: The JDBC connection string used to connect to the database. For example, "jdbc:oracle:oci:@orcl1".
- sys_password: The password for the SYS user.
- logfile: Optionally, specify a log file name and location. You can enter an absolute path or a path that is relative to the location of the $ORACLE_HOME/bin directory.
- silent: Required if you are not running DVCA in an xterm window.
- nodecrypt: Reads plaintext passwords as passed on the command line.
- lockout: Used to disable SYSDBA operating system authentication.

---

Note: You can remove or uninstall the Database Vault option. However, you can disable Oracle Database Vault. Refer to Oracle Database Vault Administrator’s Guide for more details.

You can also remove the entire Oracle home, as discussed earlier in this section.
Part II includes the appendixes. The contents of this part are:

- Appendix A, "How to Stop Processes in an Existing Oracle Real Application Clusters Database"
- Appendix B, "Using Response Files"
- Appendix C, "Running DVCA After Creating a Database Vault Database"
- Appendix D, "Database Listener Security Recommendations"
- Appendix E, "Initialization Parameters"
- Appendix F, "Enabling Oracle Database Vault Administrator Accessibility"
How to Stop Processes in an Existing Oracle Real Application Clusters Database

This appendix describes how to stop all processes in an Oracle Real Application Clusters (RAC) database, in preparation for installing Database Vault.

**Note:** Before you make any changes to the Oracle software, Oracle recommends that you create a backup of the Oracle Database installation.

Shut down the following Oracle Database services before modifying the Oracle Database software:

**Note:** You must perform these steps in the order listed.

1. Shut down any processes in the Oracle home on each node that can access a database. For example, you need to shut down Oracle Enterprise Manager Database Control.

   $ORACLE_HOME/bin/emctl stop dbconsole

   **Note:** Before you shut down any processes that are monitored by Enterprise Manager Grid Control, set a blackout in Grid Control for the processes that you intend to shut down. This is necessary so that the availability records for these processes indicate that the shutdown was planned downtime, rather than an unplanned system outage.

2. Shut down all RAC instances on all nodes. To shut down all RAC instances for a database, enter the following command, where *db_name* is the name of the database:

   $ oracle_home/bin/srvctl stop database -d db_name -c "SYS/password AS SYSDBA"

3. Stop all node applications on all nodes. To stop node applications running on a node, enter the following command, where *node* is the name of the node where the applications are running:

   $ oracle_home/bin/srvctl stop nodeapps -n node -c "SYS/password AS SYSDBA"
This appendix describes how to install Oracle Database Vault using a response file. It includes the following topics:

- How Response Files Work
- Installing Database Vault Using a Response File
- Troubleshooting Silent Mode Installation

**How Response Files Work**

You can automate the installation and configuration of Oracle software by specifying a response file when you start Oracle Universal Installer. Oracle Universal Installer uses the values contained in the response file to provide answers to some or all of Oracle Universal Installer prompts.

Typically, Oracle Universal Installer runs in interactive mode, which means that it prompts you to provide information in graphical user interface (GUI) screens. When you use response files to provide this information, you run Oracle Universal Installer at a command prompt using the silent mode.

During a silent mode installation, Oracle Universal Installer does not display any screens. Instead, it displays progress information in the terminal that you used to start it.

You define the settings for a silent mode installation by entering values for the variables listed in the response file. For instance, to specify the Oracle home, you would supply the appropriate value for the `ORACLE_HOME` variable, as in the following example:

```
ORACLE_HOME = '/home/Oracle/OraDBHome1'
```

Another way of specifying the response file’s variable settings is to pass them as command line arguments when you run Oracle Universal Installer. For example:

```
$ /directory_path/runInstaller -silent "ORACLE_HOME=/home/Oracle/OraDBHome1" ...
```

In this command, `directory_path` is the path to the database directory on the DVD or the path to the `Disk1` directory on the hard drive.

This method is particularly useful if you do not want to embed sensitive information, such as passwords, in the response file. For example:

```
$ /directory_path/runInstaller -silent "s_ownerPasswd=binks342" ...
```

Ensure that you enclose the variable and its setting in double quotation marks (" ").
See Also: Oracle Universal Installer and OPatch User’s Guide for more information about response file formats

General Procedure for Using Response Files

The following are the general steps to install and configure Oracle products using Oracle Universal Installer in silent mode:

Note: You must complete all required preinstallation tasks on a system before running Oracle Universal Installer in silent mode.

1. Verify that the oraInst.loc file exists in the /etc directory.
2. Prepare a response file.
3. Run Oracle Universal Installer in silent mode.

Installing Database Vault Using a Response File

Use the following steps to install Database Vault using a response file:

Note: The oraInst.loc file should already be present in the /etc directory, by default. This is because Oracle Database Vault is installed into an existing Oracle Database installation.

1. Prepare the Response File
2. Run Oracle Universal Installer Using the Response File

Prepare the Response File

Oracle Database Vault comes with a response file template (dv.rsp) that you can edit to customize your installation. You can use this response file for silent mode installations.

The dv.rsp file is located in the response directory on the installation media. Use the following steps to copy and modify the response file:

1. Copy the response file from the response directory to a directory on your system.
   
   $ cp /directory_path/response/dv.rsp local_directory

   In this example, directory_path is the path to the database directory on the installation media. local_directory is the path to a directory on your disk.

2. Open the response file in a text editor:
   
   $ vi local_directory/dv.rsp

   The response file contains variables that store information required by Oracle Universal Installer. You need to set these variable values in the file. For example, you need to specify values for the Oracle home location, Database Vault owner name, and other such information required by Oracle Universal Installer.
The response file contains two parts. You should edit the variables only in the first part. The second part of the file contains preset variables, which must not be edited. This instruction is also provided in the response file.

Some of the variables are mandatory while others are optional. The mandatory variables must be supplied for a successful installation. Each variable is explained within the response file. Examples are also provided within the response file.

The following excerpt from the response file shows instructions related to setting the Oracle home variable:

```bash
#-----------------------------------------------------------------------------
--
#Name       : ORACLE_HOME
#Datatype   : String
#Description: Complete path of the existing 10.2.0.3.0 database Oracle
#            Home into which Oracle Database Vault will be installed.
#
#Requirement: 1) Must have Oracle Database Enterprise Edition release
#              10.2.0.3.0 installed.
#              2) Must have Oracle Enterprise Manager Console DB version
#              10.2.0.3.0 installed.
#              3) Cannot contain an Automatic Storage Management(ASM) instance.
#              4) Cannot contain Oracle Database Vault.
#
#Example: ORACLE_HOME = 'C:\OHOME1'
#-----------------------------------------------------------------------------
```

ORACLE_HOME=<Value Required>

Lines starting with a pound sign (#) are comment entries. If you wish to omit an optional variable, you can comment it by adding a pound sign (#) at the beginning of the line. You cannot comment lines containing mandatory variables, like ORACLE_HOME.

Remember that you can specify sensitive information, such as passwords, at the command line rather than within the response file. "How Response Files Work" on page B-1 explains this method.

**See Also:** Oracle Universal Installer and OPatch User’s Guide for more information about response file formats

3. Follow the instructions in the file to edit it. Save and close the file.

```
Note:  Oracle Universal Installer fails if you do not correctly configure the response file. Refer to the "Troubleshooting Silent Mode Installation" section on page B-4 for more information about troubleshooting a failed silent mode installation.
```

4. Change the permissions on the file to 700:

```
$ chmod 700 /local_dir/response_file.rsp
```
Run Oracle Universal Installer Using the Response File

Now, you are ready to run Oracle Universal Installer at the command line, specifying the response file you created, to perform the installation. The Oracle Universal Installer executable, `runInstaller`, provides several options. For help information on the full set of these options, run `runInstaller` with the `-help` option. For example:

```
$ directory_path/runInstaller -help
```

To run Oracle Universal using a response file:

1. Complete the preinstallation tasks listed in Chapter 2, "Installing Oracle Database Vault as an Option".

   **See Also:** Frequently Asked Questions in the Oracle Database Vault Release Notes for Solaris Operating System (SPARC 64-Bit) for a checklist of the preinstallation requirements

2. Log in as the Oracle software owner user (typically `oracle`).

3. To start Oracle Universal Installer in silent mode, enter a command similar to the following:

   ```
   $ /directory_path/runInstaller -silent -responseFile responsefilename
   ```

   In this example:

   - `directory_path` is the path to the database directory on the DVD or the path to the `Disk1` directory on the hard disk.
   - `-silent` indicates that you want to run Oracle Universal Installer in silent mode.
   - `responsefilename` is the full path and file name of the installation response file that you configured.

   **Note:** Do not specify a relative path to the response file. If you specify a relative path, Oracle Universal Installer fails.

   ```
   $ /directory_path/runInstaller -silent -responseFile responsefilename
   ```

Troubleshooting Silent Mode Installation

To determine whether a silent mode installation succeeds or fails, refer to the following log file:
/oraInventory_location/logs/silentInstall_date_time.log

The `oraInventory_location` can be found in the `/etc/oraInst.loc` file. The `inventory_loc` parameter in the `oraInst.loc` file specifies the location of the `oraInventory` directory.

A silent installation fails in the following conditions:

- You do not specify a response file
- You specify an incorrect or incomplete response file
- Oracle Universal Installer encounters an error, such as insufficient disk space
- The Database Vault installation prerequisites have not been met

Oracle Universal Installer or configuration assistant validates the response file at run time. If the validation fails, the silent mode installation or configuration process ends. Oracle Universal Installer treats values for parameters that are of the wrong context, format, or type as if no value was specified in the file.
You should run Database Vault Configuration Assistant (DVCA) after creating a new Oracle Database Vault database, if any of the following conditions is true:

- Database Vault is installed into an Oracle home that has more than one database. You need to run DVCA on the other databases in the Oracle home. This enables Database Vault security for those databases. The databases should meet the prerequisites for installing Oracle Database Vault, as discussed in "Preinstallation and Installation Tasks" on page 2-1.

- Database Configuration Assistant (DBCA) is used to create a new Database Vault database in an Oracle home that already has a Database Vault database. DVCA loads the Database Vault schema objects into the new database, creates the `DV_OWNER` and optional `DV_ACCTMGR` accounts, and deploys the Database Vault Administrator application for the database.

Use the following syntax to run the DVCA utility:

```
$ORACLE_HOME/bin/dvca -action option [-racnode host_name] -oh oracle_home
-jdbc_str jdbc_connection_string -sys_passwd SYS_password \
-owner_account DV_owner_account_name -owner_passwd DV_owner_account_password
[-acctmgr_account DV_account_manager_account_name] \ 
[-acctmgr_passwd DV_account_manager_password] [-logfile ./dvca.log] [-silent]
[-nodecrypt|-lockout] [-languages [{"en"},{"de"}, \ 
{"es"},{"fr"},{"it"},{"ja"},{"ko"},{"pt_BR"},{"zh_CN"},{"zh_TW"}]}
```

Where:

- **action**: The action to perform. `option` creates the Database Vault schema objects, creates the `DV_OWNER` account and the optional `DV_ACCTMGR` account, and deploys the Database Vault Administrator application.

- **racnode**: The host name of the Real Application Clusters (RAC) node on which the action is being performed. Do not include the domain name with the host name. Use this option if this is a RAC database.

- **oh**: The Oracle home for the database.

- **jdbc_str**: The JDBC connection string used to connect to the database. For example, `jdbc:oracle:oci:@orcl1`, where `orcl1` is the net service name in the `tnsnames.ora` file ($ORACLE_HOME/network/admin/tnsnames.ora).

- **sys_passwd**: Password for user `SYS`

- **owner_account**: Oracle Database Vault Owner account name

- **owner_passwd**: Oracle Database Vault owner account password
- **acctmgr_account**: (Optional) Oracle Database Vault Account Manager user
- **acctmgr_passwd**: Oracle Database Vault Account Manager password (if a user name has been specified)
- **logfile**: Optionally, specify a log file name and location. You can enter an absolute path or a path that is relative to the location of the $ORACLE_HOME/bin directory
- **silent**: Required if you are not running DVCA in an xterm window
- **nodecrypt**: Reads plaintext passwords as passed on the command line. You must use this option if you are passing plaintext passwords to the command.
- **lockout**: Disables SYSDBA operating system authentication
- **languages**: Declares the language content to load, defaults to "en" (English). You can specify multiple languages. Include each language in quotation marks with commas separating different languages. Enclose the list of languages in braces. For example, -languages {"en","fr","ja"}.

The following lists the language key:
- de: German
- en: English
- es: Spanish
- fr: French
- it: Italian
- ja: Japanese
- ko: Korean
- pt_BR: Brazilian Portuguese
- zh_CN: Simplified Chinese
- zh_TW: Traditional Chinese

**Note:**
- If the Oracle system identifier (SID) of the database is more than 8 characters, then you would need to update the Net service name in the tnsnames.ora file before running DVCA. See Oracle Database Vault Release Notes for Solaris Operating System (SPARC 64-Bit) for more information.
- DVCA should also be run before and after installing database options like Spatial, Java, and Intermedia. See Oracle Database Vault Administrator’s Guide for more details.
This appendix lists the security recommendations for protecting the database listener.

Security Checklist for the Database Listener

The following configuration guidelines help enhance the security for your database listener:

- The database listener configuration file, `listener.ora`, and the supporting OracleNet configuration file, `tnsnames.ora`, should have the `ADMIN_RESTRICTIONS_LISTENER_SID=ON` protection enabled.

- The database listener configuration file, `listener.ora`, and the supporting OracleNet configuration file, `tnsnames.ora`, should have the PLSExtProc listener disabled.

- The listener should be configured to listen on a non-standard port. This means that the default port (1521) should be changed.

- The listener should be password protected or leverage operating system (OS) authentication based on the organizational security policy.

- The listener should use a unique name, which should be different from the default name.

- The `listener.ora` file should have the following parameter set:
  ```
  INBOUND_CONNECT_TIMEOUT_ListenerName = 10
  ```

- The `sqlnet.ora` file should have the following parameters set:
  ```
  SQLNET.INBOUND_CONNECT_TIMEOUT = 12
  SQLNET.EXPIRE_TIME = 10
  ```

- The listener should have logging enabled as follows:
  ```
  LOGGING_LISTENER = ON
  LOG_STATUS = ON
  LOG_DIRECTORY_ListenerName = Directory_owned_by_Oracle_account
  LOG_FILE_ListenerName = File_owned_by_Oracle_account
  ```
The listener should have tracing enabled as follows:

- `TRACE_DIRECTORY_ListenerName` = Directory_owned_by_Oracle_account
- `TRACE_FILE_ListenerName` = File_owned_by_Oracle_account
- `TRACE_LEVEL` = user
- `TRACE_FILELEN_ListenerName` = 512
- `TRACE_FILENO_ListenerName` = 1000
- `TRACE_TIMESTAMP_ListenerName` = dd-mon-yyyy hh:mm:ss:ms

**Note:** Only the owner and the DBA group should have permissions over the LOG_DIRECTORY. The owner should have read and write access to the LOG_DIRECTORY and the DBA group should have read access to it.

Only the owner and the DBA group should have read and write permissions over the LOG_FILE.

**Note:** Only the owner and the DBA group should have read and write permissions over the TRACE_DIRECTORY.

Only the owner and the DBA group should have read and write permissions over the TRACE_FILE.
When you install Oracle Database Vault, the security specific database initialization parameters are initialized with default values. The following list shows the default values for these security specific initialization parameters:

REMOTE_LOGIN_PASSWORDFILE = default, EXCLUSIVE
AUDIT_SYS_OPERATIONS = TRUE
REMOTE_OS_AUTHENT = FALSE
REMOTE_OS_ROLES = FALSE
OS_ROLES = FALSE
OS_AUTHENT_PREFIX = ‘’
SQL92_SECURITY = TRUE
O7_DICTIONARY_ACCESSIBILITY = FALSE
Enabling Oracle Database Vault Administrator Accessibility

As part of the effort to make Oracle products, services, and supporting documentation accessible and usable to the disabled community, Oracle Database Vault Administrator offers several features that make management data available to users of assistive technology. To enable these features and provide for full accessibility, you must modify two configuration settings, which are described in the following sections:

- Enabling Oracle Database Vault Administrator Accessibility Mode
- Providing Textual Descriptions of Database Vault Administrator Charts

Enabling Oracle Database Vault Administrator Accessibility Mode

Oracle Database Vault Administrator takes advantage of user interface development technologies that improve the responsiveness of some user operations. For example, when you navigate to a new record set in a table, Oracle Database Vault Administrator does not redisplay the entire HTML page. However, this performance-improving technology is generally not supported by screen readers. To disable this feature, and as a result, make the Database Vault Administrator HTML pages more accessible for disabled users, use the following procedure.

To enable the display of an entire HTML page:

1. Locate the `uix-config.xml` configuration file.

   To locate the `uix-config.xml` file in an Oracle Database 10g installation, change directory to the following location in the Oracle home:

   `$ORACLE_HOME/dv/jlib/dva_webapp/dva_webapp/WEB-INF/

2. Open the `uix-config.xml` file using a text editor and locate the following entry:

   ```xml
   <!-- An alternate configuration that disables accessibility features -->
   <default-configuration>
     <accessibility-mode>inaccessible</accessibility-mode>
   </default-configuration>
   ```

3. Change the value of the accessibility-mode property from `inaccessible` to `accessible`.

4. Save and close the `uix-config.xml` file.

5. Restart Database Vault Administrator.

   **See Also:** For more information on starting Oracle Database Vault Administrator, refer to Oracle Database Vault Administrator’s Guide.
Providing Textual Descriptions of Database Vault Administrator Charts

In the Monitor page of the Database Vault Administrator, a chart is used to display security policy data. However, charts do not convey information in a manner that can be read by a screen reader. To remedy this problem, you can configure Database Vault Administrator to provide a complete textual representation of each chart. By default, support for the textual representation of charts is disabled. When textual description for charts is enabled, Database Vault Administrator displays a textual representation of the chart data.

To enable the textual representation of charts:

1. Locate the web.xml configuration file.

   To locate the web.xml file in an Oracle Database 10g installation, change directory to the following location in the Oracle home:
   
   $ORACLE_HOME/dv/jlib/dva_webapp/dva_webapp/WEB-INF/

2. Open the web.xml file with your favorite text editor and locate the following six lines of the file:

   <!-- Uncomment this to enable textual chart descriptions
   <context-param>
   <param-name>enableChartDescription</param-name>
   <param-value>true</param-value>
   </context-param>
   -->

3. Remove comments from this section by deleting the first line and the last line of this section so that the section consists of only these four lines:

   <context-param>
   <param-name>enableChartDescription</param-name>
   <param-value>true</param-value>
   </context-param>

4. Save and exit the web.xml file.

5. Restart Database Vault Administrator.
