Preface

The Oracle Database Vault Installation Guide explains how to prepare for, install, and configure Oracle Database Vault with specific instructions for the operating system and Oracle software technology components that Database Vault requires.

Audience

This document is intended for Oracle DBAs as well as System Administrators who are involved in the installation of Oracle Database Vault and its related components.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at http://www.oracle.com/accessibility/

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, 7 days a week. For TTY support, call 800.446.2398. Outside the United States, call +1.407.458.2479.
Related Documents

For more information, refer to the following documents:

- *Oracle Database Oracle Real Application Clusters Installation Guide for Microsoft Windows*
- *Oracle Database Oracle Clusterware and Oracle Real Application Clusters Administration and Deployment Guide*

Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong></td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td><strong>monospace</strong></td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Part I introduces you to Oracle Database Vault installation concepts, requirements, and steps. This part contains the following chapters:

- Chapter 1, "Oracle Database Vault Installation Overview"
- Chapter 2, "Installing Oracle Database Vault as an Option"
Oracle Database Vault Installation Overview

Oracle Database Vault enables you to secure business data in ways that were not possible before. Database Vault uses a multifactored and multilayered approach to implementing database security.

This chapter provides an overview of the Database Vault installation process. This chapter includes the following sections:

■ Database Vault Installation Environment
■ Database Vault Accounts
■ Installation Considerations

Database Vault Installation Environment

Oracle Database Vault can be installed as an option to the following:

■ Oracle Database 10g Release 2 (10.2.0.4) standalone installation
■ Oracle Database 10g Release 2 (10.2.0.4) with Oracle Real Application Clusters (RAC)

Database Vault Accounts

Database Vault prompts for two accounts that you can create during installation. These are the Database Vault Owner and the Database Vault Account Manager accounts. You must supply an account name and password for the Database Vault Owner during installation. Creating a Database Vault Account Manager is optional.

Database Vault Owner

The Database Vault Owner account is granted the DV_OWNER role. This account can manage Database Vault roles and configuration.

The Database Vault Owner user name can be a minimum of 2, and a maximum of 30 characters long. The account password can be a minimum of 8, and a maximum of 30 characters.

The password that you choose for the Database Vault Owner account must be a secure one. The following password restrictions are enforced:

■ The password must include at least one alphabet, one digit, and one nonalphanumeric character (symbol).
■ The password cannot be the same as the account name.
The password cannot contain any consecutive repeating characters.

**Database Vault Account Manager**

The Database Vault Account Manager is granted the `DV_ACCTMGR` role. This account is used to manage database user accounts. The Database Vault Account Manager is created to facilitate separation of duties. If you do not opt to create the Database Vault Account Manager account, then the `DV_ACCTMGR` role is granted to the Database Vault Owner account by default.

The Database Vault Account Manager user name can be a minimum of 2, and a maximum of 30 characters long. The account password can be a minimum of 8, and a maximum of 30 characters.

The same password restrictions that apply to Database Vault Owner are applicable to Database Vault Account Manager as well.

**Default Audit Policy and Initialization Parameters**

Oracle Database Vault installs a baseline database auditing policy. This policy covers the access control configuration information stored in Database Vault database tables, information stored in Oracle Catalog (rollback segments, tablespaces, and so on), the use of system privileges, and Oracle Label Security configuration.

**See Also:** Oracle Database Vault Administrator’s Guide for more information on the database audit policy

When you install Oracle Database Vault, the security specific database initialization parameters are initialized with default values. These security specific initialization parameters are listed in Appendix F.

**Installation Considerations**

This section contains information that you should consider before deciding how to install this product. It contains the following sections:

- Hardware and Software Certification
- Multiple Oracle Homes

**Hardware and Software Certification**

The platform-specific hardware and software requirements included in this installation guide were current at the time this guide was published. However, because new platforms and operating system software versions might be certified after this guide is published, review the certification matrix on the Oracle MetaLink Web site for the most up-to-date list of certified hardware platforms and operating system versions. The Oracle MetaLink Web site is available at the following URL:

http://metalink.oracle.com

If you do not have a current Oracle Support Services contract, then you can access the same information at the following Web site:

http://www.oracle.com/technology/support/metalink/content.html
Multiple Oracle Homes

This product supports multiple Oracle homes. This means that you can install this release or previous releases of the software more than once on the same system, in different Oracle home directories.
This chapter includes an overview of the major steps required to install Oracle Database Vault into an existing Oracle Database 10g release 2 (10.2.0.4) database. These procedures transform an existing Oracle Database system (including associated applications) into an Oracle Database Vault system. Databases upgraded using the procedures described in this chapter can work almost in the same manner as in earlier releases and, optionally, can leverage new Oracle Database Vault functionality. For a list of changes that Database Vault makes, refer to Appendix E, "Initialization Parameters" and the Oracle Database Vault Administrator’s Guide.

**Note:** In order to upgrade a pre-10g release 2 Oracle Database to Oracle Database Vault, you first need to upgrade the database to a 10g release 2 (10.2.0.4) database.

**See Also:** Oracle Database Upgrade Guide, 10g Release2 (10.2) for information about upgrading your Oracle Database to Oracle Database 10g release 2.

This chapter covers the following topics:
- Preinstallation and Installation Tasks
- Postinstallation Tasks
- Removing Oracle Software

### Preinstallation and Installation Tasks

This section covers the following topics:
- Become Familiar with the Features of Oracle Database Vault
- Check the Hardware Requirements
- Check the Software Requirements
- Check the Database Requirements
- Prepare a Backup Strategy
- Disable Custom Profiles (If Any)
- Verify That Oracle Clusterware Is Running (RAC Only)
- Stop Existing Oracle Processes
- Run Oracle Universal Installer to Install
Become Familiar with the Features of Oracle Database Vault

Before you plan the upgrade process, become familiar with the features of Oracle Database Vault. The Oracle Database Vault Administrator’s Guide discusses the basic features of Oracle Database Vault.

Check the Hardware Requirements

Table 2–1 discusses the hardware requirements for Oracle Database Vault:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physical memory (RAM)</td>
<td>256 MB minimum; 512 MB recommended</td>
</tr>
<tr>
<td>Virtual memory</td>
<td>Double the amount of RAM</td>
</tr>
<tr>
<td>Disk space</td>
<td>270 MB of disk space for the Oracle Database Vault software</td>
</tr>
<tr>
<td></td>
<td>400 MB of space in the temp directory</td>
</tr>
<tr>
<td></td>
<td>10 MB of additional disk space for the database files</td>
</tr>
<tr>
<td>Video adapter</td>
<td>256 colors</td>
</tr>
<tr>
<td>Processor</td>
<td>550 MHz minimum</td>
</tr>
</tbody>
</table>

Table 2–1   Hardware Requirements

To ensure that the system meets these requirements, follow these steps:

1. Determine the physical RAM size. For a computer using Windows 2003, for example, double-click System in the Windows Control Panel and click the General tab. If the size of the physical RAM installed in the system is less than the required size, then you must install more memory before continuing.

2. Determine the size of the configured virtual memory (also known as paging file size). For a computer using Windows 2003, for example, double-click System in the Control Panel, click the Advanced tab, and click Settings in the Performance section. Then click the Advanced tab. The virtual memory is listed in the Virtual Memory section.

   If necessary, see your operating system documentation for information about how to configure additional virtual memory.

3. Determine the amount of free disk space on the system. For a computer using Windows 2003, for example, double-click My Computer, right-click the drive where the Oracle software is to be installed, and select Properties.

4. Determine the amount of disk space available in the temp directory. This is equivalent to the total amount of free disk space, minus what will be needed for the Oracle software to be installed.

   If there is less than 400 MB of disk space available in the temp directory, then first delete all unnecessary files. If the temp disk space is still less than 400 MB, then set the TEMP or TMP environment variable to point to a different hard drive. For a computer using Windows 2003, for example, double-click System in the Control Panel, click the Advanced tab, and click Environment Variables.
Check the Software Requirements

Oracle Database Vault is installed in an existing Oracle home. All software requirements that were met while installing Oracle Database 10g release 2 are sufficient for Oracle Database Vault.

See Also: Oracle Database Installation Guide for Microsoft Windows for detailed information on the software requirements for installing Oracle Database

Table 2–2 lists the software requirements for Oracle Database Vault.

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Architecture</td>
<td>Processor: Intel (x86), AMD64, and Intel EM64T</td>
</tr>
<tr>
<td></td>
<td>The 32-bit Database Vault version, which this installation guide describes, runs on the 32-bit version of Windows on either x86 or x64 hardware. Oracle provides limited certification for 32-bit Oracle Database Vault on 64-bit Windows (x64). For additional information, visit OracleMetaLink at: <a href="http://metalink.oracle.com">http://metalink.oracle.com</a></td>
</tr>
<tr>
<td>Operating System</td>
<td>Oracle Database Vault for 32-bit Windows is supported on the following operating systems:</td>
</tr>
<tr>
<td></td>
<td>▪ Windows 2000 with Service Pack 1 or later. All editions, including Terminal Services and Microsoft Windows 2000 MultiLanguage Edition (MLE), are supported.</td>
</tr>
<tr>
<td></td>
<td>▪ Windows Server 2003 - all editions.</td>
</tr>
<tr>
<td></td>
<td>▪ Windows XP Professional - only standalone installation of Database Vault is supported</td>
</tr>
<tr>
<td></td>
<td>▪ Windows Vista (Business, Enterprise, and Ultimate editions) - only standalone installation of Database Vault is supported</td>
</tr>
<tr>
<td></td>
<td>▪ Windows Server 2008</td>
</tr>
<tr>
<td></td>
<td>Windows NT is not supported.</td>
</tr>
<tr>
<td></td>
<td>Windows Multilingual User Interface Pack is supported on Windows Server 2003 and Windows XP Professional.</td>
</tr>
<tr>
<td>Compiler</td>
<td>Pro*Cobol has been tested and certified with the following two compilers:</td>
</tr>
<tr>
<td></td>
<td>▪ ACUCOBOL-GT version 6.2</td>
</tr>
<tr>
<td></td>
<td>▪ Micro Focus Net Express 4.0</td>
</tr>
<tr>
<td></td>
<td>Object Oriented COBOL (OOCOBOL) specifications are not supported.</td>
</tr>
<tr>
<td></td>
<td>The following components are supported with the Microsoft Visual C++ .NET 2002 7.0 and Microsoft Visual C++ .NET 2003 7.1 compilers:</td>
</tr>
<tr>
<td></td>
<td>▪ Oracle C++ Call Interface</td>
</tr>
<tr>
<td></td>
<td>▪ Oracle Call Interface</td>
</tr>
<tr>

<td>▪ GNU Compiler Collection (GCC)</td>
</tr>
<tr>
<td></td>
<td>▪ External callouts</td>
</tr>
<tr>
<td></td>
<td>▪ PL/SQL native compilation</td>
</tr>
<tr>
<td></td>
<td>▪ XDK</td>
</tr>
</tbody>
</table>
Preinstallation and Installation Tasks

Check the Database Requirements

In order to install Oracle Database Vault, you must be running the Enterprise Edition of Oracle Database 10g release 2 (10.2.0.4). The database should also have Oracle Enterprise Manager Console DB 10.2.0.4.0 installed. In addition, the Database Vault installer requires write access to the files, `oratab` and `oraInst.loc`.

A listener must have been configured for the existing database. Oracle Net Configuration Assistant configures the listener when you first install the database. You can also use Oracle Enterprise Manager to administer listeners.

You must have an existing password file for the database. The password file authentication parameter, `REMOTE_LOGIN_PASSWORDFILE` must have been set to `EXCLUSIVE` or `SHARED`.

You can set the `REMOTE_LOGIN_PASSWORDFILE` parameter in the `init.ora` file. Use the `orapwd` utility to create and manage password files.

**See Also**: Oracle Database Administrator’s Guide for more information on creating and maintaining a password file.

The following topics discuss applying the 10.2.0.4 patch set and installing the required components:

- Install Oracle Enterprise Manager Console DB
- Apply Oracle Database Release 10.2.0.4 Patch Set
Install Oracle Enterprise Manager Console DB
Before installing Oracle Database Vault, you should ensure that Oracle Enterprise Manager Console DB 10.2.0.4.0 is installed. Oracle Enterprise Manager Console DB is installed using the Oracle Universal Installer (OUI). The following steps summarize installing Oracle Enterprise Manager Console DB:

1. Run Oracle Universal Installer (OUI) and perform a custom installation to install Oracle Enterprise Manager Console DB 10.2.0.1.0. Add Oracle Enterprise Manager Console DB from the list of available product components.

2. Apply the Oracle Database release 10.2.0.4 patch set.

---

**Note:** You can configure the database to use Enterprise Manager Database Control by using Database Configuration Assistant (DBCA). However, configuring Enterprise Manager Database Control is not a prerequisite for installing Oracle Database Vault.

---

Apply Oracle Database Release 10.2.0.4 Patch Set
To install Oracle Database Vault, you need to upgrade the database to Oracle Database release 10.2.0.4. Oracle strongly recommends that you back up your database before performing any upgrade or installation.

**See Also:** Oracle Database Backup and Recovery User’s Guide for information on database backups

This section covers the following topics:

Patch Set Overview
The patch set is not a complete software distribution. You must install it in an existing Oracle Database 10g release 2 installation. You can apply the Oracle Database release 10.2.0.4 patch set to the following Oracle Database 10g release 2 installations:

- Oracle Database
- Oracle Real Application Clusters
- Oracle Database Client
- Oracle Database Companion CD
- Oracle Clusterware

Oracle Universal Installer Version Requirements
This patch set includes Oracle Universal Installer release 10.2.0.4, which is also installed when you install this patch set. This is to ensure that your Oracle home can be patched in the future. You should not use the Installer from the earlier maintenance release media or Oracle home.

Patch Set Documentation
There are two documents related to this release of the Oracle Database patch set:

- Oracle Database Patch Set Notes, 10g Release 2 (10.2.0.4) Patch Set 2 for Microsoft Windows (32-Bit)
- Oracle Database List of Bugs Fixed, 10g Release 2 (10.2.0.4) Patch Set
Both of these documents are included with the patch set. In addition, they are available on the OracleMetalink Web site:

http://metalink.oracle.com

Prepare a Backup Strategy

Oracle strongly recommends that you back up your database before performing any upgrade or installation. The ultimate success of your upgrade depends heavily on the design and execution of an appropriate backup strategy. To develop a backup strategy, consider the following questions:

- How long can the production database remain inoperable before business consequences become intolerable?
- What backup strategy should be used to meet your availability requirements?
- Are backups archived in a safe, offsite location?
- How quickly can backups be restored (including backups in offsite storage)?
- Have recovery procedures been tested successfully?

Your backup strategy should answer all of these questions and include procedures for successfully backing up and recovering your database.

See Also: Oracle Database Backup and Recovery User’s Guide for information on database backups

Disable Custom Profiles (If Any)

If you have created custom profiles and password complexity checks in your existing database, then you need to disable these before performing the installation. You can reenable these after the installation is complete. Use the following steps to achieve this:

1. Extract the profile names and associated settings for each profile that is being used. You can use a script to accomplish this.

Example 2–1 shows a sample script that extracts the profile names and settings to create an output script called, myprofiles.sql. After the installation is complete, you can run myprofiles.sql to restore the profile settings.

**Example 2–1 Extracting Profiles**

```sql
set serverout on size 100000
spool myprofiles.sql

declare
l_last varchar2(30) := 'X';
l_count number := 0;
begin
for c in (select profile, resource_name , limit
from dba_profiles
order by profile, resource_name ) loop
if l_last <> c.profile then
l_last := c.profile;
if l_count > 0 then
    dbms_output.put_line(';');
end if;
```
Preinstallation and Installation Tasks

Installing Oracle Database Vault as an Option

```sql
l_count := l_count + 1;
dbms_output.put_line('create profile ' || c.profile || ' limit ');
else
dbms_output.put_line('    ' || c.resource_name || ' ' || c.limit);
end if;
end loop;
dbms_output.put_line(';');
end;
/
.
spool off

2. Disable the custom profiles and password complexity settings. For example:

   SQL> ALTER PROFILE SomeCustomProfile LIMIT
   PASSWORD_REUSE_MAX UNLIMITED -- The number of times a password can be reused
   PASSWORD_REUSE_TIME UNLIMITED -- The number of days between reuses of a password
   PASSWORD_VERIFY_FUNCTION NULL
   /

3. After the Oracle Database Vault installation is complete, reenable the profiles by running the script created in Step 1.

   SQL>@myprofiles.sql

Verify That Oracle Clusterware Is Running (RAC Only)

Oracle Clusterware should be running for the Database Vault installer to find the existing Real Application Clusters (RAC) databases. If you have stopped Oracle Clusterware, then you should restart it before running Oracle Universal Installer. Use the following command to start Oracle Clusterware:

   C:/> CRS_HOME/bin/crsctl start crs

Note:

- You need to run the crsctl start crs command on all nodes of the cluster.
- The crsctl start crs command also starts the database. You will need to shut down the database before running Oracle Universal Installer.

Stop Existing Oracle Processes

Stop all processes running in the Oracle home. You must complete this task to enable Oracle Universal Installer to relink certain executables and libraries. For RAC databases, you need to stop the processes on all nodes.

Stop the processes in the following order:

1. Stop the Enterprise Manager Database Control Process
2. Stop the iSQL*Plus Process
3. Shut Down All Database Instances
4. Stop Existing Listeners
5. Stop Oracle Services
Stop the Enterprise Manager Database Control Process
Stop the Enterprise Manager Database Control process, if it is running. Use the following command:

C:\> ORACLE_HOME\bin\emctl stop dbconsole

Stop the iSQL*Plus Process
Stop the iSQL*Plus process, using the following command:

C:\> ORACLE_HOME\bin\isqlplusctl stop

Shut Down All Database Instances
Shut down all database instances running from the Oracle home directory into which Oracle Database Vault is to be installed.

sqlplus SYS 'AS SYSOPER'
Enter password:
SQL> shutdown immediate

Stop Existing Listeners
Oracle Universal Installer configures and starts a default Oracle Net listener using TCP/IP port 1521. However, if an existing Oracle Net listener process is using the same port or key value, then Oracle Universal Installer can only configure the new listener, it cannot start it. To ensure that the new listener process starts during the installation, you must shut down any existing listeners before starting Oracle Universal Installer.

Use the following command to stop the listener process:

C:\> ORACLE_HOME\bin\lsnrctl stop listenername

Stop Oracle Services
Use the following steps to stop Oracle Database services from the Control Panel:

1. Access your Windows Services window.

   See Also: Your operating system documentation for instructions

2. Select OracleHOME_NAME\TNSListener. Click Stop to stop this service. You need to perform this step only if you haven’t shut down the listener process using the lsnrctl command.

3. Select OracleServiceSID and click Stop.

   Note: If you are installing Database Vault for Oracle Real Application Clusters (RAC), then you need to shut down all Oracle processes on all cluster nodes. See Appendix A, "How to Stop Processes in an Existing Oracle Real Application Clusters Database" for more details.

Run Oracle Universal Installer to Install
You can use the graphical user interface (GUI) provided by Oracle Universal Installer to install Oracle Database. The following steps discuss installing Database Vault using Oracle Universal Installer:
1. Log on as a member of the Administrators group.
   If you are installing on a Primary Domain Controller (PDC) or a Backup Domain Controller (BDC), log on as a member of the Domain Administrators group.

2. Insert Oracle Database Vault installation media and navigate to the database directory. Alternatively, navigate to the directory where you downloaded or copied the installation files.
   Use the same installation media to install Oracle Database Vault on all supported Windows platforms.

3. Double-click setup.exe to start Oracle Universal Installer.

4. In the Specify Installation Details screen, you need to specify the path to the Oracle home that contains the existing Oracle Database. The Destination Path box lists the Oracle home paths of all Oracle Database release 2 (10.2.0.4) Enterprise Edition databases registered with the system.
   Select the Oracle home corresponding to the database into which you want to install Oracle Database Vault.

   **Note:**
   - If an Oracle home does not have an Enterprise Edition of Oracle Database release 10.2.0.4 installed, then it is not displayed. You must ensure that the Oracle home has an Enterprise Edition of Oracle Database release 10.2.0.4 installed.
   - If an Oracle home does not have Oracle Enterprise Manager Console DB 10.2.0.4.0 installed, then it is not displayed. You must ensure that the Oracle home has Oracle Enterprise Manager Console DB 10.2.0.4.0 installed.
   - If an Oracle home contains an Automatic Storage Management (ASM) instance, then it is not displayed. You cannot install Oracle Database Vault into an Oracle home that also contains an ASM instance.
   - If an Oracle home already contains Oracle Database Vault, then it is not displayed. You cannot install Oracle Database Vault into an Oracle home more than once.
   - Oracle Clusterware should be running for the Database Vault installer to find the existing Real Application Clusters (RAC) databases. Ensure that Oracle Clusterware is running before installing Oracle Database Vault. You can use the crsctl command to start Oracle Clusterware.

5. Enter a user name for the Database Vault Owner account in the Database Vault Owner field. The user name can be a minimum of 2 and maximum of 30 characters long.

6. Enter a password for the Database Vault Owner account in the Database Vault Owner Password field. The password can be a minimum of 8 and a maximum of 30 characters. The password must include at least one alphabet, one digit, and one nonalphanumeric character (symbol). It cannot be the same as the account names for either the Database Vault owner or the Database Vault account manager. It cannot contain any consecutive repeating characters.
7. Reenter the password in the **Confirm Password** field.

8. Select **Create a Separate Account Manager** if you want to create a separate Account Manager to manage Oracle Database Vault accounts.

9. In the **Database Vault Account Manager** field, enter a user name for the Database Vault Account Manager if you have chosen to select the **Create a Separate Account Manager** check box. The user name can be a minimum of 2 and a maximum of 30 characters.

10. Enter a password for the Database Vault Account Manager account in the **Account Manager Password** field. The password can be a minimum of 8 and a maximum of 30 characters. The password must include at least one alphabet, one digit, and one nonalphanumeric character (symbol). It cannot be the same as the account names for either the Database Vault owner or the Database Vault account manager. It cannot contain any consecutive repeating characters.

11. Reenter the password in the **Confirm Password** field. Click **Next**.

12. The Select Existing Database screen is displayed. A list of all databases running from the selected Oracle home is displayed. Select the database into which you wish to install Oracle Database Vault.

   **Note:**
   - Oracle recommends that you install Oracle Database Vault into an Oracle home containing only a single database.
   - If a database is not listed, then check to make sure that you have followed the instructions under "Check the Database Requirements" on page 2-4.

13. Enter the existing **SYS** user password for the selected database in the **Existing Database SYS Password** field.

14. Reenter the SYS password in the **Confirm Password** field. Click **Next**.

   **Note:** At this point, the database requirements are validated.

15. You are prompted to shut down all Oracle processes running from the Oracle home before proceeding. Shut down the Oracle processes, if you have not already done so.

   **See Also:** "Stop Existing Oracle Processes" on page 2-7 for more information on stopping existing Oracle processes

16. Product-specific prerequisite checks are performed. Confirm that all tests have passed. Click **Next** to continue.

17. The Summary screen is displayed with the installation details. Verify the details and click **Install**.

18. The Installation screen is displayed. After the installation completes, the Database Vault Configuration Assistant (DVCA) is run automatically. DVCA helps configure the Database Vault installation.
Postinstallation Tasks

This section lists the tasks to perform after you have completed an upgrade of your database. The following topics are discussed:

- Back Up the Database
- Change Passwords for Oracle-Supplied Accounts
- Disable Remote SYSDBA Connections (Optional)
- Start the Listener and Database on Other Nodes (RAC Only)
- Run DVCA to Set Instance Parameters and Lock Out SYSDBA Sessions (RAC Only)
- Restart Enterprise Manager Database Control
- Setting the Timeout Value for DVA (Optional)

Back Up the Database

Make sure you perform a full backup of the production database. See Oracle Database Backup and Recovery User’s Guide for details on backing up a database.

Change Passwords for Oracle-Supplied Accounts

Oracle strongly recommends that you change the password for each account after installation. This enables you to effectively implement the strong security provided by Oracle Database Vault.

Note: If you are creating a database using Database Configuration Assistant, you can unlock accounts after the database is created by clicking Password Management before you exit from Database Configuration Assistant.

Using SQL*Plus to Unlock Accounts and Reset Passwords

To unlock and reset user account passwords using SQL*Plus:

1. Start SQL*Plus and log in using the Database Vault Account Manager account. If you did not create the Database Vault Account Manager account during installation, then you will need to log in using the Database Vault Owner account.

2. Enter a command similar to the following, where account is the user account that you want to unlock and password is the new password:

   SQL> ALTER USER account [ IDENTIFIED BY password ] ACCOUNT UNLOCK;

   In this example:

   - The ACCOUNT UNLOCK clause unlocks the account.
   - The IDENTIFIED BY password clause resets the password.

   Note: If you unlock an account but do not reset the password, then the password remains expired. The first time someone connects as that user, they must change the user’s password.

   To permit unauthenticated access to your data through HTTP, unlock the ANONYMOUS user account.
See Also: Oracle Database Administrator’s Guide for more information about:

- Unlocking and changing passwords after installation
- Oracle security procedures
- Best security practices

Disable Remote SYSDBA Connections (Optional)

Oracle Database Vault allows you to disable remote logins with SYSDBA privileges. This enables enhanced security for your database.

To disable remote SYSDBA connections, re-create the password file with the nosysdba flag set to y (Yes). A user can still log in as SYSDBA locally using Operating System (OS) authentication. However, remote connections as SYSDBA will fail.

Use the following syntax to re-create the password file:

```
C:\> ORACLE_HOME\bin\orapwd file=filename password=password [entries=users]
      force=y nosysdba=y
```

Where:

- `file`: Name of password file (mandatory)
- `password`: Password for SYS (mandatory). Enter at least six alphanumeric characters.
- `entries`: Maximum number of distinct DBA users
- `force`: Whether to overwrite the existing file
- `nosysdba`: Whether to enable or disable the SYS logon

The default is no, so if you omit this flag, the password file will be created enabling SYSDBA access for Oracle Database Vault instances.

For example:

```
C:\> oracle\product\10.2.0\db_1\bin\orapwd
      file=C:\oracle\product\10.2.0\db_1\dbs\orapwORCL password=5hjk99 force=y
      nosysdba=y
```

**Note:** Do not insert spaces around the equal (=) character.

See Also: Oracle Database Administrator’s Guide for more information on using the `orapwd` utility.

When you re-create the password file, any accounts other than SYS that were granted the SYSDBA or SYSOPER privileges will have those privileges removed. You will need to regrant the privileges for these accounts after you have re-created the password file.

You can reenable the ability to connect with the SYSDBA privilege by re-creating the password file with the nosysdba flag set to n (No). You might need to reenable the ability to connect with SYSDBA privileges, if certain products or utilities require it’s use.
Start the Listener and Database on Other Nodes (RAC Only)

You need to start the listener and database on all RAC nodes other than the one on which the installation is performed. Use the following commands to start the listener and the database:

```
C:\> ORACLE_HOME\bin\lsnrctl start ListenerName
C:\> ORACLE_HOME\bin\srvctl start instance -d sid -i InstanceName
```

**Note:** You need to connect as SYSDBA to run these commands.

**Note:** You must use the Server Control (srvctl) utility to start and stop Oracle Database Vault RAC instances. Do not use SQL*Plus to start and stop RAC instances. You need to enable SYSDBA connections before you can use the srvctl command.

Run DVCA to Set Instance Parameters and Lock Out SYSDBA Sessions (RAC Only)

After installing Database Vault for a Real Application Clusters (RAC) instance, you need to run Database Vault Configuration Assistant (DVCA) with the -action rac switch on all other RAC nodes.

**Note:**
- Before running DVCA on a remote node, you need to set the correct value for the ORACLE_SID variable in the ORACLE_HOME\bin\dvca.bat file on the remote node. The ORACLE_SID variable needs to be changed from the local node Oracle System Identifier (SID) to the remote node Oracle System Identifier (SID) on the remote node.
- Before running DVCA on a remote node, you need to correct the following Windows registry entry on the remote node:

```
HKEY_LOCAL_MACHINE\SOFTWARE\ORACLE\KEY_ORACLE_HOME_NAME\ORACLE_HOME\bin\dvca.bat\instance_name\PWFILE
```

The instance_name in the remote node registry should be the database instance name for the remote node, and not the database instance name for the local node.

The value for this key should be the complete path to the password file on the remote node. For example:

```
C:\ORACLE\PRODUCT\10.2.0\DB_1\dbs\orapwORCL2
```

**Note:** You need to run this command on all RAC nodes other than the node on which the Database Vault installation is performed. This step is required to enable the enhanced security features provided by Oracle Database Vault.

**Note:** The listener and database instance should be running on the nodes on which you run DVCA.

Use the following syntax to run DVCA:
Postinstallation Tasks

C:\> ORACLE_HOME\bin\dvca -action optionrac -racnode host_name -oh oracle_home -jdbc_str jdbc_connection_string -sys_passwd sys_password [-logfile ./dvca.log] [-silent] [-nodecrypt] [-lockout]

Where:

- **action**: The action to perform. `optionrac` performs the action of updating the instance parameters for the RAC instance and optionally disabling `SYSDBA` operating system access for the instance.
- **racnode**: The host name of the RAC node on which the action is being performed. Do not include the domain name with the host name.
- **oh**: The Oracle home for the RAC instance.
- **jdbc_str**: The JDBC connection string used to connect to the database. For example, "jdbc:oracle:oci:@orcl1".
- **sys_password**: The password for the `SYS` user.
- **logfile**: Optionally, specify a log file name and location. You can enter an absolute path or a path that is relative to the location of the `ORACLE_HOME\bin` directory.
- **silent**: Required if you are not running DVCA in an xterm window.
- **nodecrypt**: Reads plaintext passwords as passed on the command line.
- **lockout**: Used to disable `SYSDBA` operating system authentication.

---

**Note**: You can reenable `SYSDBA` access by re-creating the password file with the `nosysdba` flag set to `n` (No). The `orapwd` utility enables you to do this.

---

**Restart Enterprise Manager Database Control**

Restart Enterprise Manager Database Control by using the following commands:

C:\> ORACLE_HOME\bin\emctl stop dbconsole
C:\> ORACLE_HOME\bin\emctl start dbconsole

**Note**: Run the above commands on all cluster nodes for a RAC database.

---

**Setting the Timeout Value for DVA (Optional)**

Oracle Database Vault Administrator (DVA) is a browser-based graphical user interface console that you can use to manage Oracle Database Vault.

You can modify the length of time that DVA stays connected while inactive. By default, the connection duration is 35 minutes. Your session automatically gets expired after 35 minutes of inactivity.

To set the session time for Oracle Database Vault Administrator:

1. Back up the `web.xml` file, which by default is in the `ORACLE_HOME\dv\jlib\dva_webapp\dva_webapp\WEB-INF` directory.
2. In a text editor, open the `web.xml` file.
3. Search for the following setting:
<session-config>
  <session-timeout>35</session-timeout>
</session-config>

4. Change the <session-timeout> setting to the amount of time in minutes that you prefer.
5. Save and close the web.xml file.
6. Stop and restart the DVA application.
   You can use the following command to restart DVA:
   
   ```
   emctl stop dbconsole
   emctl start dbconsole
   ```

### Removing Oracle Software

Use Oracle Universal Installer (OUI) to remove Oracle software from an Oracle home. The following list summarizes the steps involved:

1. Log on as a member of the Administrators group.
2. Shut down all processes running in the Oracle home.
3. Start Oracle Universal Installer from the Start menu, select Programs, then ORACLE_HOME_NAME, then Oracle Installation Products, then Oracle Universal Installer. The Welcome screen for Oracle Universal Installer appears.
4. In the Welcome screen, select Deinstall Products. The Inventory screen appears. This screen lists all the Oracle homes on the system.
5. Select the Oracle home and the products that you wish to remove. Click Remove.

**See Also:** Refer to the Oracle Database Installation Guide for details on removing Oracle software

---

**Note:** You cannot remove or uninstall the Database Vault option. However, you can disable Oracle Database Vault. Refer to Oracle Database Vault Administrator’s Guide for more details.

You can also remove the entire Oracle home, as discussed earlier in this section.
Part II includes the appendixes. The contents of this part are:

- Appendix A, "How to Stop Processes in an Existing Oracle Real Application Clusters Database"
- Appendix B, "Using Response Files"
- Appendix C, "Running DVCA After Creating a Database Vault Database"
- Appendix E, "Database Listener Security Recommendations"
- Appendix F, "Initialization Parameters"
- Appendix G, "Enabling Oracle Database Vault Administrator Accessibility"
How to Stop Processes in an Existing Oracle Real Application Clusters Database

This appendix describes how to stop all processes in an Oracle Real Application Clusters (RAC) database, in preparation for installing Database Vault.

---

**Note:** Before you make any changes to the Oracle software, Oracle recommends that you create a backup of the Oracle Database installation.

---

To stop all processes in an Oracle Real Application Clusters (RAC) database, use the following steps:

---

**Note:** You must perform these steps in the order listed.

---

1. Make sure that the environment variables, `ORACLE_HOME`, `ORACLE_SID`, and `PATH` are correctly set.
2. Shut down any processes in the Oracle home on each node that can access a database. For example, you need to shut down Oracle Enterprise Manager Database Control.

   ```shell
   C:\> ORACLE_HOME\bin\emctl stop dbconsole
   ```

   **Note:** Before you shut down any processes that are monitored by Enterprise Manager Grid Control, set a blackout in Grid Control for the processes that you intend to shut down. This is necessary so that the availability records for these processes indicate that the shutdown was planned downtime, rather than an unplanned system outage.

3. Shut down all RAC instances on all nodes. To shut down all RAC instances for a database, enter the following command, where `db_name` is the name of the database:

   ```shell
   C:\> ORACLE_HOME\bin\srvctl stop database -d db_name
   ```

4. Stop the database listener.

   ```shell
   C:\> ORACLE_HOME\bin\lsnrctl stop listener_name
   ```
Here, \textit{listener\_name} is the name of the database listener on the node where the command is run.

\begin{quote}
\textbf{Note:} You must run the preceding command on all nodes.
\end{quote}

5. Stop the \texttt{OracleServiceSID} service on all nodes. You can access the Services window from the Control Panel.
This appendix describes how to install Oracle Database Vault using a response file. It includes the following topics:

- How Response Files Work
- Installing Database Vault Using a Response File
- Troubleshooting Silent Mode Installation

How Response Files Work

You can automate the installation and configuration of Oracle software by specifying a response file when you start Oracle Universal Installer. Oracle Universal Installer uses the values contained in the response file to provide answers to some or all of Oracle Universal Installer prompts.

Typically, Oracle Universal Installer runs in interactive mode, which means that it prompts you to provide information in graphical user interface (GUI) screens. When you use response files to provide this information, you run Oracle Universal Installer at a command prompt using the silent mode.

During a silent mode installation, Oracle Universal Installer does not display any screens. Instead, it displays progress information in the terminal that you used to start it.

You define the settings for a silent mode installation by entering values for the variables listed in the response file. For instance, to specify the Oracle home, you would supply the appropriate value for the ORACLE_HOME variable, as in the following example:

```
ORACLE_HOME = "C:\oracle\product\10.2.0\OraDBHome1"
```

Another way of specifying the response file's variable settings is to pass them as command line arguments when you run Oracle Universal Installer. For example:

```
SYSTEM_DRIVE:\setup.exe_location> setup -silent "ORACLE_HOME=C:\oracle\product\10.2.0\OraDBHome1" ...
```

This method is particularly useful if you do not want to embed sensitive information, such as passwords, in the response file. For example:

```
SYSTEM_DRIVE:\setup.exe_location> setup -silent "s_ownerPasswd=binks342" ...
```

Ensure that you enclose the variable and its setting in double quotation marks (" ").
See Also: Oracle Universal Installer and OPatch User’s Guide for more information about response file formats

General Procedure for Using Response Files
The following are the general steps to install and configure Oracle products using Oracle Universal Installer in silent mode:

---
**Note:** You must complete all required preinstallation tasks on a system before running Oracle Universal Installer in silent mode.
---

1. Prepare a response file.
2. Run Oracle Universal Installer in silent mode.

Installing Database Vault Using a Response File
Use the following steps to install Database Vault using a response file:

1. Prepare the Response File
2. Run Oracle Universal Installer Using the Response File

Prepare the Response File
Oracle Database Vault comes with a response file template (dv.rsp) that you can edit to customize your installation. You can use this response file for silent mode installations.

The dv.rsp file is located in the response directory on the installation media. Use the following steps to copy and modify the response file:

1. Copy the response file from the Disk1\response directory to a directory on your system.
2. Open the response file in a text editor.

The response file contains variables that store information required by Oracle Universal Installer. You need to set these variable values in the file. For example, you need to specify values for the Oracle home location, Database Vault owner name, and other such information required by Oracle Universal Installer.

The response file contains two parts. You should edit the variables only in the first part. The second part of the file contains preset variables, which must not be edited. This instruction is also provided in the response file.

Some of the variables are mandatory while others are optional. The mandatory variables must be supplied for a successful installation. Each variable is explained within the response file. Examples are also provided within the response file.

The following excerpt from the response file shows instructions related to setting the Oracle home variable:

```
#-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
--
#Name : ORACLE_HOME
#Datatype : String
#Description: Complete path of the existing 10.2.0.4.0 database Oracle Home into which Oracle Database Vault will be installed.
#
```
#Requirement: 1) Must have Oracle Database Enterprise Edition release
# 10.2.0.4.0 installed.
# 2) Must have Oracle Enterprise Manager Console DB version
# 10.2.0.4.0 installed.
# 3) Cannot contain an Automatic Storage Management(ASM) instance.
# 4) Cannot contain Oracle Database Vault.

#Example: ORACLE_HOME = 'C:\OHOME1'
#---------------------------------------------------------------
--
ORACLE_HOME=<Value Required>

Lines starting with a pound sign (#) are comment entries. If you wish to omit an
optional variable, you can comment it by adding a pound sign (#) at the beginning
of the line. You cannot comment lines containing mandatory variables, like
ORACLE_HOME.

Remember that you can specify sensitive information, such as passwords, at the
command line rather than within the response file. "How Response Files Work" on
page B-1 explains this method.

See Also: Oracle Universal Installer and OPatch User’s Guide for
detailed information on creating response files.

3. Follow the instructions in the file to edit it. Save and close the file.

---

Note: Oracle Universal Installer fails if you do not correctly
configure the response file. Refer to the "Troubleshooting Silent
Mode Installation" section on page B-4 for more information about
troubleshooting a failed silent mode installation.

---

Run Oracle Universal Installer Using the Response File

Now, you are ready to run Oracle Universal Installer at the command line, specifying
the response file you created, to perform the installation. The Oracle Universal
Installer executable, setup.exe, provides several options. For help information on
the full set of these options, run setup.exe with the -help option. For example:

SYSTEM_DRIVE:\setup.exe_location> setup -help

To run Oracle Universal using a response file:

1. Complete the preinstallation tasks listed in Chapter 2, "Installing Oracle Database
Vault as an Option".

   See Also: Frequently Asked Questions in the Database Vault Release
   Notes for a checklist of the preinstallation requirements

2. Log on as a member of the Administrators group.

3. To start Oracle Universal Installer in silent mode, enter a command similar to the
   following:

   Note: Do not specify a relative path to the response file. If you
   specify a relative path, Oracle Universal Installer fails.
SYSTEM_DRIVE:\setup.exe_location> setup -silent -responseFile responsefilename

In this example:
- `-silent` indicates that you want to run Oracle Universal Installer in silent mode.
- `responsefilename` is the full path and file name of the installation response file that you configured.

**Troubleshooting Silent Mode Installation**

A silent installation fails in the following conditions:
- You do not specify a response file
- You specify an incorrect or incomplete response file
- Oracle Universal Installer encounters an error, such as insufficient disk space
- The Database Vault installation prerequisites have not been met

Oracle Universal Installer or configuration assistant validates the response file at runtime. If the validation fails, the silent mode installation or configuration process ends. Oracle Universal Installer treats values for parameters that are of the wrong context, format, or type as if no value was specified in the file.
You should run Database Vault Configuration Assistant (DVCA) after creating a new Oracle Database Vault database, if any of the following conditions is true:

- Database Vault is installed into an Oracle home that has more than one database. You need to run DVCA on the other databases in the Oracle home. This enables Database Vault security for those databases. The databases should meet the prerequisites for installing Oracle Database Vault, as discussed in "Preinstallation and Installation Tasks" on page 2-1.

- Database Configuration Assistant (DBCA) is used to create a new Database Vault database in an Oracle home that already has a Database Vault database. DVCA loads the Database Vault schema objects into the new database, creates the DV_OWNER and optional DV_ACCTMGR accounts, and deploys the Database Vault Administrator application for the database.

Use the following syntax to run the DVCA utility:

```
C:\> ORACLE_HOME\bin\dvca -action option [-racnode host_name] -oh oracle_home
-jdbc_str jdbc_connection_string -sys_passwd SYS_password -owner_account
DV_owner_account_name -owner_passwd DV_owner_account_password [-acctmgr_account
DV_account_manager_account_name] [-acctmgr_passwd DV_account_manager_password]
[-logfile .\dvca.log] [-silent] [-nodecrypt]-lockout] [-languages
{"en"},{"de"},{"es"},{"fr"},{"it"},{"ja"},{"ko"},{"pt_BR"},{"zh_CN"},{"zh_TW"}]
```

Where:

- **action**: The action to perform. `option` creates the Database Vault schema objects, creates the DV_OWNER account and the optional DV_ACCTMGR account, and deploys the Database Vault Administrator application.

- **racnode**: The host name of the Real Application Clusters (RAC) node on which the action is being performed. Do not include the domain name with the host name. Use this option if this is a RAC database.

- **oh**: The Oracle home for the database.

- **jdbc_str**: The JDBC connection string used to connect to the database. For example, `jdbc:oracle:oci:@orcl1`, where `orcl1` is the net service name in the `tnsnames.ora` file (`ORACLE_HOME\network\admin\tnsnames.ora`).

- **sys_passwd**: Password for user SYS

- **owner_account**: Oracle Database Vault Owner account name

- **owner_passwd**: Oracle Database Vault owner account password
- acctmgr_account: (Optional) Oracle Database Vault Account Manager user
- acctmgr_passwd: Oracle Database Vault Account Manager password (if a user name has been specified)
- logfile: Optionally, specify a log file name and location. You can enter an absolute path or a path that is relative to the location of the ORACLE_HOME\bin directory
- silent: Required if you are not running DVCA in an xterm window
- nodecrypt: Reads plaintext passwords as passed on the command line. You must use this option if you are passing plaintext passwords to the command.
- lockout: Disables SYSDBA operating system authentication
- languages: Declares the language content to load, defaults to "en" (English). You can specify multiple languages. Include each language in quotation marks with commas separating different languages. Enclose the list of languages in braces. For example, languages {"en","fr","ja"}.

The following lists the language key:
- de: German
- en: English
- es: Spanish
- fr: French
- it: Italian
- ja: Japanese
- ko: Korean
- pt_BR: Brazilian Portuguese
- zh_CN: Simplified Chinese
- zh_TW: Traditional Chinese

**Note:**
- If the Oracle system identifier (SID) of the database is more than 8 characters, then you would need to update the Net service name in the tnsnames.ora file before running DVCA. See Oracle Database Vault Release Notes for more information.
- DVCA should also be run before and after installing database options like Spatial, Java, and Intermedia. See Oracle Database Vault Administrator's Guide for more details.

If you have used the lockout option with the dvca command, then to successfully lockout SYSDBA connections, you also need to add the following values to your Microsoft Windows registry under HKEY_LOCAL_MACHINE\SOFTWARE\ORACLE\KEY_ORACLE_HOME_NAME:
For a RAC database, you also need to run the `dvca -action optionrac` command on all nodes other than the node on which the installation is performed. Refer to "Run DVCA to Set Instance Parameters and Lock Out SYSDBA Sessions (RAC Only)" on page 2-13 for details.

---

### Table C–1 Registry Values to Be Added

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Data</th>
</tr>
</thead>
<tbody>
<tr>
<td>ORA_SID_PWFILE</td>
<td>REG_SZ</td>
<td><code>Path_to_the_password_file</code></td>
</tr>
<tr>
<td>For example,</td>
<td></td>
<td><strong>ORA_ORCL_PWFILE</strong></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Path_to_the_password_file</td>
</tr>
<tr>
<td></td>
<td></td>
<td>C:\ORACLE\PRODUCT\10.2.0\DB_1\dbs\</td>
</tr>
<tr>
<td></td>
<td></td>
<td>orapwORCL</td>
</tr>
</tbody>
</table>

**Note:**

- For a Real Application Clusters (RAC) database, replace `SID` with `instance_name`, which is the `SID` combined with the `instance_number`.
- For a RAC database, you need to add the registry values for all cluster nodes.
Upgrading from a Previous Version of Database Vault

If you have Oracle Database Vault 10g Release 2 (10.2.0.3) installed, then you can upgrade it to Oracle Database Vault 10g Release 2 (10.2.0.4) without uninstalling the existing instance.

**Note:** If you are upgrading Cluster Ready Services (CRS) only, then you should ensure that you disable Oracle Database Vault before upgrading Cluster Ready Services (CRS).

Use steps 1 to 5 to disable Oracle Database Vault. After the upgrade, use steps 14 to 18 to reenable Oracle Database Vault.

**Upgrading from a 10.2.0.x Version**

Use the following steps to upgrade an Oracle Database Vault 10.2.0.x installation to Oracle Database Vault 10g Release 2 (10.2.0.4):

1. Re-create the password file with the nosysdba=n and force=y flags, to allow the SYS user to connect AS SYSDBA. Use the following syntax:

   ```
   C:\> ORACLE_HOME\bin\orapwd file=ORACLE_HOME\dbs\orapw_SID password=password force=y nosysdba=n
   ```

   Here `SID` is the Oracle system identifier (SID) of the database and `password` is the password for the SYS account.

2. Shut down the database.

   To stop a single-instance database, use the following commands:

   ```
   sqlplus SYS "AS SYSDBA"
   Enter password:
   SQL> shutdown immediate
   ```

   For an Oracle Real Application Clusters (RAC) database, use the following command:

   ```
   C:\> ORACLE_HOME\bin\srvctl stop database -d db_name -c "SYS/password AS SYSDBA"
   ```

   Here `db_name` is the name of the database.
3. Stop Oracle services from the Services window. For an Oracle Real Application Clusters (RAC) database, you must repeat this step on all nodes.

   **See Also:** "Stop Oracle Services" on page 2-8 for more information on stopping Oracle Services

4. Under `ORACLE_HOME\bin`, rename the `oradv10.dll` file to another name.
   For example, you could rename `oradv10.dll` to `oradv10_backup.dll`.

   **Note:**
   - Ensure that Oracle services are not running before you try to rename the file.
   - Remember the name that you use, as you would be required to restore the file in a subsequent step.
   - For an Oracle Real Application Clusters (RAC) database, you must repeat this step on all nodes.

5. Start the database. For a single-instance database, use the following commands:

   ```
   sqlplus SYS “AS SYSDBA”
Enter password:
SQL> startup
   ```

   For an Oracle Real Application Clusters (RAC) database, use the following command:

   ```
   C:\> ORACLE_HOME\bin\srvctl start database -d db_name
   ```

6. Unlock the DVSYS account as the SYS user:

   ```
   sqlplus SYS “AS SYSDBA”
Enter password:
SQL> ALTER USER DVSYS ACCOUNT UNLOCK;
   ```

7. Run Oracle Database Vault Configuration Assistant (DVCA) by using the `dvca -action disable` option. This disables the Database Vault triggers. Use the following syntax:

   ```
   C:\> ORACLE_HOME\bin\dvca -action disable
   -service service_name
   -owner_account DV_owner_account_name
   [-logfile ./dvca.log]
   [-nodecrypt]
   ```

   Enter SYS password: sys_password
   Enter owner password: owner_password

   Here:
   - `-action` is the action to perform. In this case the action is disable.
   - `-service` is the database service name.
   - `-owner_account` is the Oracle Database Vault Owner account name.
- **logfile** is an optional flag to specify a log file name and location. You can enter an absolute path, or enter a path that is relative to the location of the `ORACLE_HOME/bin` directory.

- **-nodecrypt** is the option to read plaintext passwords.

8. Install the Oracle Database Release 10.2.0.4 Patch Set

   **See Also:** "Apply Oracle Database Release 10.2.0.4 Patch Set" on page 2-5 for more information about installing the patch set

9. Restart the database. For a single-instance database, use the following commands:

   `sqlplus SYS "AS SYSDBA"
   Enter password:
   SQL> shutdown immediate
   SQL> startup`

   For an Oracle Real Application Clusters (RAC) database, use the following commands:

   `C:\> ORACLE_HOME\bin\srvctl stop database -d db_name
   C:\> ORACLE_HOME\bin\srvctl start database -d db_name`

10. Connect AS SYSDBA and run the following SQL statements:

    ```sql
    SQL> DROP FUNCTION DVSYS.REALM_SDML_AUTHORIZED ;
    SQL> DROP PROCEDURE DVSYS.SYNCHRONIZE_POLICY_FOR_OBJECT;
    SQL> DECLARE
    CURSOR stmt IS
        select u.name, o.name, r.pname
        from user$ u, obj$ o, rls$ r
        where u.user# = o.owner#
        and r.obj# = o.obj#
        and bitand(r.stmt_type,65536) > 0;
    object_schema VARCHAR2(32) := NULL;
    object_name VARCHAR2(32) := NULL;
    policy_name VARCHAR2(32) := NULL;
    BEGIN
    OPEN stmt;
    LOOP
    FETCH stmt INTO object_schema, object_name,
    policy_name;
    EXIT WHEN stmt%NOTFOUND;
    dbms_rls.drop_policy('"'||object_schema||'"',
    '"'||object_name||'"',
    '"'||policy_name||'"');
    END LOOP;
    Close stmt;
    END;
    /
    ```

11. Run DVCA to reconfigure Database Vault. Use the following syntax:

    `C:\> ORACLE_HOME\bin\dvca -action option -oh oracle_home -jdbc_str
    jdbc_connection_string -owner_account DV_owner_account_name
    [-acctmgr_account DV_account_manager_account_name]
    [-logfile .\dvca.log] [-nodecrypt]`
Where:

- **action**: The action to perform. `option` creates the Database Vault schema objects, creates the `DV_OWNER` account and the optional `DV_ACCTMGR` account, and deploys the Database Vault Administrator application.
- **oh**: The Oracle home for the database.
- **jdbc_str**: The JDBC connection string used to connect to the database. For example, `jdbc:oracle:oci:@orcl1`, where `orcl1` is the net service name in the `tnsnames.ora` file (`ORACLE_HOME\network\admin\tnsnames.ora`).
- **owner_account**: Oracle Database Vault Owner account name
- **acctmgr_account**: (Optional) Oracle Database Vault Account Manager user
- **logfile**: Optionally, specify a log file name and location. You can enter an absolute path or a path that is relative to the location of the `ORACLE_HOME\bin` directory
- **nodecrypt**: Reads plaintext passwords as passed on the command line. You must use this option if you are passing plaintext passwords to the command.

**Note**: You are prompted to enter the `SYS`, Database Vault Owner, and Database Vault Account Manager passwords. The Database Vault Owner and Account Manager passwords must be your current Database Vault 10.2.0.x passwords.

**See Also**: Appendix C, “Running DVCA After Creating a Database Vault Database” for more options available with the `dvca -action` option command

12. Run Oracle Database Vault Configuration Assistant (DVCA) by using the `dvca -action enable` option. This enables the Database Vault triggers. Use the following syntax:

```
C:\> ORACLE_HOME\bin\dvca -action enable
   -service service_name
   -owner_account DV_owner_account_name
   [-logfile ./dvca.log]
   [-nodecrypt]
```

Enter `SYS` password: `sys_password`
Enter owner password: `owner_password`

See Step 7 for details of the options used in the command.

13. Lock the `DVSYS` account. Use the following SQL statements:

```
SQL> CONNECT SYS "AS SYSDBA"
Enter password:
SQL> ALTER USER DVSYS ACCOUNT LOCK;
```

14. Shut down the database.

To stop a single-instance database, use the following commands:

```
sqlplus SYS "AS SYSDBA"
Enter password:
```
SQL> shutdown immediate

For an Oracle Real Application Clusters (RAC) database, use the following command:

C:\> ORACLE_HOME\bin\srvctl stop database -d db_name

Here \textit{db\_name} is the name of the database.

\textbf{15.} Stop Oracle services from the Services window. For an Oracle Real Application Clusters (RAC) database, you must repeat this step on all nodes.

\textbf{See Also:} "Stop Oracle Services" on page 2-8 for more information on stopping Oracle Services

\textbf{16.} Under ORACLE\_HOME\bin, rename the backup of the oradv10.dll file to its original name. You had renamed this file in Step 4.

For example, if you renamed it oradv10\_backup.dll, then rename it back to oradv10.dll.

\textbf{Note:} For an Oracle Real Application Clusters (RAC) database, you must repeat this step on all nodes.

\textbf{17.} Start the database. For a single-instance database, use the following commands:

sqlplus SYS "AS SYSDBA"
Enter password:
SQL> startup

For an Oracle Real Application Clusters (RAC) database, use the following command:

C:\> ORACLE_HOME\bin\srvctl start database -d db_name

\textbf{18.} If you wish to disable connections with SYSDBA privileges, then re-create the password file with the nosysdba=y and force=y flags. Use the following syntax:

C:\> ORACLE_HOME\bin\orapwd file=ORACLE_HOME\dbs\orapwSID password=password force=y nosysdba=y

Here \textit{SID} is the Oracle system identifier (SID) of the database and \textit{password} is the password for the SYS account.
This appendix lists the security recommendations for protecting the database listener.

**Security Checklist for the Database Listener**

The following configuration guidelines help enhance the security for your database listener:

- The database listener configuration file, `listener.ora`, and the supporting OracleNet configuration file, `tnsnames.ora`, should have the `ADMIN_RESTRICTIONS_LISTENER_SID=ON` protection enabled.

- The database listener configuration file, `listener.ora`, and the supporting OracleNet configuration file, `tnsnames.ora`, should have the `PLSExtProc` listener disabled.

- The listener should be configured to listen on a non-standard port. This means that the default port (1521) should be changed.

- The listener should be password protected or leverage operating system (OS) authentication based on the organizational security policy.

- The listener should use a unique name, which should be different from the default name.

- The `listener.ora` file should have the following parameter set:
  ```
  INBOUND_CONNECT_TIMEOUT_ListenerName = 10
  ```

- The `sqlnet.ora` file should have the following parameters set:
  ```
  SQLNET.INBOUND_CONNECT_TIMEOUT   = 12
  SQLNET.EXPIRE_TIME   = 10
  ```

- The listener should have logging enabled as follows:
  ```
  LOGGING_LISTENER = ON
  LOG_STATUS = ON
  LOG_DIRECTORY_ListenerName = Directory_owned_by_Administrator
  LOG_FILE_ListenerName = File_owned_by_Administrator
  ```
The listener should have tracing enabled as follows:

```
TRACE_DIRECTORY_ListenerName = Directory_owned_by_Oracle_account
TRACE_FILE_ListenerName = File_owned_by_Oracle_account
TRACE_LEVEL = user
TRACE_FILELEN_ListenerName = 512
TRACE_FILENO_ListenerName = 1000
TRACE_TIMESTAMP_ListenerName = dd-mon-yyyy hh:mm:ss:mil
```

**Note:** Only the Administrators group should have permissions over the LOG_DIRECTORY.

Only the Administrators group should have read and write permissions over the LOG_FILE.

---

**Note:** Only the Administrators group should have permissions over the TRACE_DIRECTORY.

Only the Administrators group should have read and write permissions over the TRACE_FILE.
When you install Oracle Database Vault, the security specific database initialization parameters are initialized with default values. The following list shows the default values for these security specific initialization parameters:

REMOTE_LOGIN_PASSWORDFILE = default, EXCLUSIVE
AUDIT_SYS_OPERATIONS = TRUE
REMOTE_OS_AUTHENT = FALSE
REMOTE_OS_ROLES = FALSE
OS_ROLES = FALSE
OS_AUTHENT_PREFIX = ''
SQL92_SECURITY = TRUE
O7_DICTIONARY_ACCESSIBILITY = FALSE
Enabling Oracle Database Vault Administrator Accessibility

As part of the effort to make Oracle products, services, and supporting documentation accessible and usable to the disabled community, Oracle Database Vault Administrator offers several features that make management data available to users of assistive technology. To enable these features and provide for full accessibility, you must modify two configuration settings, which are described in the following sections:

- Enabling Oracle Database Vault Administrator Accessibility Mode
- Providing Textual Descriptions of Database Vault Administrator Charts

Enabling Oracle Database Vault Administrator Accessibility Mode

Oracle Database Vault Administrator takes advantage of user interface development technologies that improve the responsiveness of some user operations. For example, when you navigate to a new record set in a table, Oracle Database Vault Administrator does not redisplay the entire HTML page. However, this performance-improving technology is generally not supported by screen readers. To disable this feature, and as a result, make the Database Vault Administrator HTML pages more accessible for disabled users, use the following procedure.

To enable the display of an entire HTML page:

1. Locate the uix-config.xml configuration file.

   To locate the uix-config.xml file in an Oracle Database 10g installation, change directory to the following location in the Oracle home:

   \ORACLE_HOME\dv\jlib\dva_webapp\dva_webapp\WEB-INF

2. Open the uix-config.xml file using a text editor and locate the following entry:

   <!-- An alternate configuration that disables accessibility features -->
   <default-configuration>
     <accessibility-mode>inaccessible</accessibility-mode>
   </default-configuration>

3. Change the value of the accessibility-mode property from inaccessible to accessible.

4. Save and close the uix-config.xml file.

5. Restart Database Vault Administrator.

See Also: For more information on starting Oracle Database Vault Administrator, refer to Oracle Database Vault Administrator's Guide.
Providing Textual Descriptions of Database Vault Administrator Charts

In the Monitor page of the Database Vault Administrator, a chart is used to display security policy data. However, charts do not convey information in a manner that can be read by a screen reader. To remedy this problem, you can configure Database Vault Administrator to provide a complete textual representation of each chart. By default, support for the textual representation of charts is disabled. When textual description for charts is enabled, Database Vault Administrator displays a textual representation of the chart data.

To enable the textual representation of charts:

1. Locate the web.xml configuration file.

   To locate the web.xml file in a Oracle Database 10g installation, change directory to the following location in the Oracle home:
   ```
   ORACLE_HOME\dv\jlib\dva_webapp\dva_webapp\WEB-INF
   ```

2. Open the web.xml file with your favorite text editor and locate the following six lines of the file:

   ```
   <!-- Uncomment this to enable textual chart descriptions
   <context-param>
     <param-name>enableChartDescription</param-name>
     <param-value>true</param-value>
   </context-param>
   -->
   ```

3. Remove comments from this section by deleting the first line and the last line of this section so that the section consists of only these four lines:

   ```
   <context-param>
     <param-name>enableChartDescription</param-name>
     <param-value>true</param-value>
   </context-param>
   ```

4. Save and exit the web.xml file.

5. Restart Database Vault Administrator.
