These Release Notes describe issues you may encounter with Oracle Database Vault 10g release 2 (10.2.0.3). The Oracle Database Vault installation is covered in detail in the Oracle Database Vault Installation Guide for IBM zSeries Based Linux.

This document may be updated after it is released. To check for updates to this document and to view other Oracle documentation, see the Documentation section on the Oracle Technology Network (OTN) Web site:

http://www.oracle.com/technology/documentation/

This document contains the following sections:

- Installation Issues and Recommendations
- Usage Issues and Recommendations
- Frequently Asked Questions on Installation
- Manually Deploying the DVA Application
- Miscellaneous Notes
- Documentation Accessibility

**Installation Issues and Recommendations**

This section describes the known issues pertaining to installation. It also provides the workarounds that you can use.

**Installing a Custom Database in an Existing Database Vault Home Fails**

Bug 5334101

When installing a new custom database in an existing Database Vault home using Database Configuration Assistant (DBCA), the installation fails with the following error:

```
ORA-00604: error occurred at recursive SQL level 1
ORA-01031: insufficient privileges
ORA-06512: at "XDB.DBMS_XDB", line 73
ORA-06512: at line 319
```

The workaround is to disable Database Vault before installing a custom database in an existing Database Vault home. Reenable Database Vault after installing the database.
DVCA Fails If the SID Is Longer than 8 Characters

Bug 5258820

Running Database Vault Configuration Assistant (DVCA) manually, after creating a new database in the Database Vault home, fails if the Oracle System Identifier (SID) for the database is longer than 8 characters.

The following steps reproduce the bug:

1. Use Database Configuration Assistant (DBCA) to create a new database in an existing Database Vault home.

2. Run DVCA on the newly created database:

   ```
   $ORACLE_HOME/bin/dvca -action option -oh oracle_home -jdbc_str jdbc_connection_string -sys_passwd SYS_password -owner_account DV_owner_account_name -owner_passwd DV_owner_account_password 
   [-acctmgr_account DV_account_manager_account_name] [-acctmgr_passwd DV_account_manager_password] 
   ```

The reason for the bug is that the Oracle Net service name in the tnsnames.ora (`$ORACLE_HOME/network/admin/tnsnames.ora`) file is truncated to 8 characters.

The workaround for the bug is to change the truncated Net service name in the tnsnames.ora file to its correct value. For example, say the SID for the database is ORACLEDB90, and the entry in tnsnames.ora appears as:

```
ORACLEDB = (DESCRIPTION = (ADDRESS = (PROTOCOL = TCP)(HOST ....
```

Replace the truncated entry in the tnsnames.ora file with the correct entry:

```
ORACLEDB90 = (DESCRIPTION = (ADDRESS = (PROTOCOL = TCP)(HOST ....
```

Special Characters Not Allowed In User Name

Bug 5590346

The Database Vault installer does not allow you to use special characters, like the underscore (_) character, for the Database Vault Owner and the Database Vault Account Manager user names.

The workaround is to use only alphanumeric characters for the Database Vault Owner and Account Manager user names.

Cannot Install Oracle Database Vault in a Data Guard Environment

Bug 5577503
The Database Vault installer fails to install Database Vault in an existing physical standby database.

You can create a new physical standby database by using the following steps:

1. Install Database Vault on the primary database.
2. Create a physical standby database using a hot backup of the primary database. This backup should include the Oracle home.
3. Set up communications between the primary and the physical standby database. Redo logs communicate changes from the primary database to the standby database.

See Also: Oracle Data Guard Concepts and Administration for more information on creating a physical standby database

Enterprise Manager Does Not Start Automatically
Bug 5613521
After installing Database Vault on a Real Application Clusters (RAC) database, and running the postinstallation steps on the nodes, you get an error when trying to access Enterprise Manager.

Also, when you try to check the status of dbconsole using the emctl status dbconsole command, you get a message saying that the EM daemon is not running even though the process is running.

The workaround is to manually restart the dbconsole process using the following commands:

$ORACLE_HOME/bin/emctl stop dbconsole
$ORACLE_HOME/bin/emctl start dbconsole

Enterprise Manager Does Not Start Automatically on the Remote Nodes
Bug 5654876
After installing Database Vault on a Real Applications Cluster (RAC) database, and running the dvca -action optionrac command on the remote nodes, Enterprise Manager does not start automatically on the remote nodes.

See Also: Oracle Database Vault Installation Guide for IBM zSeries Based Linux for more information on running the dvca -action optionrac command.

The workaround is to set the correct value for the ORACLE_SID variable in the $ORACLE_HOME/bin/dvca.bat file on the remote node. The ORACLE_SID variable needs to be changed from the local node SID to the remote node SID on the remote node. You can then run DVCA on the remote node.

Alternatively, you can manually restart the dbconsole process using the following commands:

$ORACLE_HOME/bin/emctl stop dbconsole
$ORACLE_HOME/bin/emctl start dbconsole
Usage Issues and Recommendations

This section discusses usage issues that you may encounter with Database Vault. It also provides the workarounds for these issues.

Accounts with DV_OWNER, DV_ADMIN, or DV_SECANALYST Role Cannot Use the ALTER USER Command

Bug 5161953

Accounts with the DV_OWNER, DV_ADMIN, or DV_SECANALYST role cannot run the following command:

\texttt{ALTER USER user QUOTA UNLIMITED ON tablespace}

The workaround is to REVOKE the role from the account, run the ALTER USER command, and then GRANT back the role to the account. This works if the account is not the DV_OWNER account that was created during installation. If the account is the DV_OWNER account created during installation, then you would need to use the following steps:

1. Disable the Database Vault command rule for the ALTER USER command.
2. Run the ALTER USER command.
3. Re-enable the Database Vault command rule for the ALTER USER command.

Enabling a Realm Fails When a Realm Secured Object Is Invalid

Bug 5582720

Enabling a realm fails with the following error:

\texttt{ORA-00942: Table or view does not exist}

This might happen if you try to enable a realm on an invalid object. The workaround is to make sure that all objects protected by the realm are valid, before trying to enable the realm.

Error Updating a Command Rule for the SELECT Command

Bug 5508407

You get an error when trying to update or delete an existing command rule for the SELECT command. You can use the following workaround steps:

1. Login to SQL*Plus using the \texttt{SYSTEM} account. Run the following command:

\begin{verbatim}
SQL>ALTER SYSTEM FLUSH SHARED_POOL;
\end{verbatim}

2. Delete the command rule.
3. If you were trying to update the command rule, then re-create the command rule with the new parameters.
4. Repeat Step 1 for the new command rule to take effect.

CREATE SESSION Privilege Is Controlled by the Data Dictionary Realm

Use the following steps to grant the CREATE SESSION privilege:
1. Temporarily disable the data dictionary realm.
2. Log in as the SYSTEM user.
3. Grant the CREATE SESSION privilege.
4. Enable the data dictionary realm.

**Frequently Asked Questions on Installation**

This section covers some of the frequently asked questions related to Database Vault installation. Oracle Database Vault installation is covered in detail in the *Oracle Database Vault Installation Guide for IBM zSeries Based Linux*.

The installer does not detect my existing Oracle Database Enterprise Edition 10g Release 2 (10.2.0.3) instance. What should I do?

To allow the installer to find the database instance information, you should check the following:

- The database home has Oracle Enterprise Manager Console DB 10.2.0.3.0 installed.
- `/etc/oratab` has an entry for the database.
- All database names listed in `/etc/oratab` have unique system identifier (SID) names.
- The file, `/var/opt/oracle/oraInst.loc` exists.
- The oraInventory location is set in the `/var/opt/oracle/oraInst.loc` file.
- The oraInventory location set in `/var/opt/oracle/oraInst.loc` is the same as the 10.2.0.3 Enterprise Edition database's oraInventory location.
- The 10.2.0.3 database home does not have Oracle Database Vault in it.
- The 10.2.0.3 database home does not contain an Automatic Storage Management (ASM) instance.

I have installed Oracle Database Vault into an Oracle home that has multiple databases. How do I secure the other databases in the Oracle home?

You would need to run Database Vault Configuration Assistant (DVCA) manually on the other databases. Refer to the *Oracle Database Vault Installation Guide for IBM zSeries Based Linux* for detailed instructions.

I have installed Oracle Database Vault on a Real Application Clusters (RAC) database instance. How do I secure the other nodes in the cluster?

You need to run DVCA manually on the other RAC nodes. Refer to the *Oracle Database Vault Installation Guide for IBM zSeries Based Linux* for detailed instructions.

**Manually Deploying the DVA Application**

You can manually deploy Database Vault Administrator (DVA) to the following Oracle Application Server Containers for J2EE (OC4J) home:

```
$ORACLE_HOME/oc4j/j2ee/home
```
Use the following steps to manually deploy the DVA application:

1. **Edit the file**, $ORACLE_HOME/oc4j/j2ee/home/config/server.xml. Enter the following line just before the last line that reads, </application-server>:

   ```xml
   <application name="dva" path="$ORACLE_HOME/dvlib/dva_webapp.ear" auto-start="true" />
   ``

   For example:

   ```xml
   <application name="dva" path="/u00/app/oracle/oracle/product/dv12/dvlib/dva_webapp.ear" auto-start="true" />
   ``

2. **Edit the file**, $ORACLE_HOME/oc4j/j2ee/home/config/http-web-site.xml. Enter the following line just above the last line that reads, </web-site>:

   ```xml
   <web-app application="dva" name="dva_webapp" root="/dva" />
   ``

3. **Edit the file**, $ORACLE_HOME/oc4j/j2ee/home/config/global-web-application.xml. Search for <servlet-class>oracle.jsp.runtimev2.JspServlet</servlet-class>. Uncomment the following lines after this:

   ```xml
   <init-param>
     <param-name>main_mode</param-name>
     <param-value>justrun</param-value>
   </init-param>
   ``

4. **Create the directory**, $ORACLE_HOME/dv/jlib/sysman/config.

   ```bash
   mkdir -p $ORACLE_HOME/dv/jlib/sysman/config
   ``

5. **Create the database connection configuration file**, emoms.properties, in the configuration directory that you just created. Add the following lines to the file:

   ```properties
   oracle.sysman.emSDK.svlt.ConsoleMode=standalone
   oracle.sysman.eml.mntr.emdRepRAC=FALSE
   oracle.sysman.eml.mntr.emdRepDBName=ORACLE_SID
   oracle.sysman.eml.mntr.emdRepConnectDescriptor=TNS_connection_string
   ```
Note:

- `oracle.sysman.eml.mntr.emdRepRAC` should be set to `TRUE` for a Real Application Clusters (RAC) database.
- For `oracle.sysman.eml.mntr.emdRepConnectDescriptor`, you can use an alias from `$ORACLE_HOME/network/admin/tnsnames.ora`. Alternatively, you can use the following syntax:

  ```
  oracle.sysman.eml.mntr.emdRepConnectDescriptor=(DESCRIPTION\=(ADDRESS\=(PROTOCOL\=TCP) \ 
  (HOST\=HOSTNAME) (PORT\=PORT)) (CONNECT_DATA\=(SERVICE_NAME\=ORA
  CLE_SID)))
  ```

6. Start OC4J. Before starting OC4J, ensure that the correct environment variables are set. For example:

   ```
   ORACLE_SID=orcl
   export ORACLE_SID
   ORACLE_HOME=/u00/app/oracle/product/10.2/dv
   export ORACLE_HOME
   LD_LIBRARY_PATH=$ORACLE_HOME/bin:$ORACLE_HOME/lib32:$ORACLE_HOME/jdbc/lib
   export LD_LIBRARY_PATH
   PATH=$ORACLE_HOME/bin:$ORACLE_HOME/jdk/bin:$PATH
   export PATH
   ```

   **Note:** `LD_LIBRARY_PATH` must be set to use the OCI-based JDBC libraries.

   Start OC4J using the following syntax:

   ```
   $ORACLE_HOME/jdk/bin/java -Djava.awt.headless=true
   -DEMDROOT=$ORACLE_HOME/dv/jlib -jar $ORACLE_HOME/oc4j/j2ee/home/oc4j.jar
   -userThreads -config $ORACLE_HOME/oc4j/j2ee/home/config/server.xml
   ```

7. You can now access the DVA application. The HTTP port defaults to 8888 for this environment. Use the following URL:

   ```
   http://hostname:8888/dva
   ```

**Miscellaneous Notes**

This section contains miscellaneous notes not covered in the Oracle Database Vault documentation.

**Snapshots and Materialized Views**

The keyword `SNAPSHOT` is supported in place of `MATERIALIZED VIEW` for backward compatibility.
JOB_QUEUE_PROCESSES Initialization Parameter

The JOB_QUEUE_PROCESSES initialization parameter specifies the maximum number of processes that can be created for the execution of jobs. It specifies the number of job queue processes per instance.

This parameter must have a non-zero value. The default value for JOB_QUEUE_PROCESSES is 10.

Language Support in Database Vault

Database Vault supports the following languages:

- de: German
- en: American English
- es: Spanish
- fr: French
- it: Italian
- ja: Japanese
- ko: Korean
- pt_BR: Brazilian Portuguese
- zh_CN: Simplified Chinese
- zh_TW: Traditional Chinese

Make sure that the NLS_LANG parameter in your database corresponds to one of these languages before installing Database Vault. If the language setting in the NLS_LANG parameter is not compatible, then the Database Vault Administrator (DVA) application interface is not displayed properly.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at http://www.oracle.com/accessibility/

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.
Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, 7 days a week. For TTY support, call 800.446.2398. Outside the United States, call +1.407.458.2479.
