ACCREDEDATION

Stanford University is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges (WASC), 985 Atlantic Avenue, Suite 100, Alameda, CA 94501; (510) 748-9001. In addition, certain programs of the University have specialized accreditation. For information, contact the Office of the University Registrar.

STATEMENT OF NONDISCRIMINATORY POLICY

Stanford University admits students of either sex and any race, color, religion, sexual orientation, or national and ethnic origin to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. It prohibits discrimination, including harassment, against students on the basis of sex, race, age, color, disability, religion, sexual orientation, national and ethnic origin, and any other characteristic protected by applicable law in the administration of its educational policies, admissions policies, scholarships and loan programs, and athletic and other University-administered programs. The following person has been designated to handle inquiries regarding this policy: the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax).

ADDITIONAL INFORMATION

Additional information on Stanford University can be obtained through Stanford’s web site at http://www.stanford.edu.

Every effort is made to ensure that the course information, applicable policies, and other materials contained in this bulletin are accurate and current at the time the bulletin goes to press. The University reserves the right to make changes at any time without prior notice. The bulletin is also available on the University’s web site at: http://bulletin.stanford.edu; check the online version for the currently applicable policies and information.
The Stanford Bulletin is a publication of the Office of the University Registrar, Stanford University.

Address:
Office of the University Registrar
630 Serra Street
Suite 120
Stanford University
Stanford, California 94305-6032

The Stanford Bulletin may be purchased from the Stanford Bookstore. To receive the Bulletin via UPS Ground (U.S. only), send a check or money order to the address below that includes $8.00 for the Bulletin and $5.95 for shipping and your respective state’s sales tax. California residents send a check or money order for $14.61 (includes state sales tax). For international and credit card purchases, call (800) 533-2670 or go to http://stanfordbookstore.com, click on the “Apparel and Gifts” link in the left hand red speed bar, then click on “Gifts & Accessories”, then click on “Books & Publications”. Prices are subject to change. Check or money order in U.S. funds, payable to Stanford Bookstore.

AUTUMN QUARTER
Aug 21 (Mon) Axess opens for course enrollment
Sep 15 (Fri) Course enrollment deadline to receive stipend or refund check on first day of term
19 (Tue) New undergraduates arrive; Convocation
25 (Mon) First day of quarter; instruction begins
28 (Thu) Conferral of degrees, Summer Quarter
Oct 8 (Sun) Study list deadline
15 (Sun) Add deadline (courses or units)
22 (Sun) Drop deadline (courses or units); last day for tuition reassessment for dropped courses or units
Nov 5 (Sun) Change of grading basis deadline
14 (Tue) Term withdrawal deadline; last day to withdraw from the University with a partial refund
19 (Sun) Course withdrawal deadline; application deadline for Autumn Quarter degree conferral
Dec 3-9 (Sun-Sat) Last opportunity to arrange Incomplete in a course, at last class
4-10 (Mon-Sun) End-Quarter Period
8 (Fri) Last day of classes (unless class meets on Saturday)
11-15 (Mon-Fri) End-Quarter examinations
15 (Fri) Last day to submit University thesis, D.M.A. final project, or Ph.D. dissertation

WINTER QUARTER
Nov 20 (Mon) Axess opens for course enrollment
Dec 15 (Fri) Course enrollment deadline to receive stipend or refund check on first day of term
Jan 8 (Mon) Last day to file Leave of Absence; last day to receive full refund for Winter Quarter
9 (Tue) First day of quarter; instruction begins
11 (Thu) Conferral of degrees, Autumn Quarter
15 (Mon) Martin Luther King, Jr., Day (holiday, no classes)
21 (Sun) Study list deadline
28 (Sun) Add deadline (courses or units)
Feb 4 (Sun) Drop deadline (courses or units); last day for tuition reassessment for dropped courses or units
19 (Mon) Presidents’ Day (holiday, no classes except Law); change of grading basis deadline
21 (Wed) Term withdrawal deadline; last day to withdraw from the University with a partial refund
Mar 4 (Sun) Course withdrawal deadline; application deadline for Winter Quarter degree conferral
11-17 (Sun-Sat) Last opportunity to arrange Incomplete in a course, at last class
12-18 (Mon-Sun) End-Quarter Period
16 (Fri) Last day of classes (unless class meets on Saturday)
19-23 (Mon-Fri) End-Quarter examinations
23 (Fri) Last day to submit University thesis, D.M.A. final project, or Ph.D. dissertation

SPRING QUARTER
Mar 12 (Mon) Axess opens for course enrollment
23 (Fri) Course enrollment deadline to receive stipend or refund check on first day of term
Apr 2 (Mon) Last day to file Leave of Absence; last day to receive full refund for Spring Quarter
3 (Tue) First day of quarter; instruction begins
5 (Thu) Conferral of degrees, Winter Quarter
15 (Sun) Study list deadline; application deadline for Spring Quarter degree conferral
16 (Mon) Matriculated undergraduate financial aid application, deadline to file
22 (Sun) Add deadline (courses or units)
29 (Sun) Drop deadline (courses or units); last day for tuition reassessment for dropped courses or units
May 13 (Sun) Change of grading basis deadline
15 (Tue) Term withdrawal deadline; last day to withdraw from the University with a partial refund
28 (Mon) Memorial Day (holiday, no classes); course withdrawal deadline
May 31-June 6 (Thu-Wed) Last opportunity to arrange Incomplete in a course, at last class
June 1-7 (Fri-Thu) End-Quarter Period
6 (Wed) Last day of classes
7 (Thu) Day before finals, no classes
8 (Fri) Last day to submit University thesis, D.M.A. final project, or Ph.D. dissertation
8-13 (Fri-Wed) End-Quarter examinations
16 (Sat) Senior Class Day; Baccalaureate Saturday
17 (Sun) Commencement

SUMMER QUARTER
Apr 16 (Mon) Axess opens for course enrollment
June 15 (Fri) Course enrollment deadline to receive stipend or refund check on first day of term
25 (Mon) Last day to file Leave of Absence; last day to receive full refund for Summer Quarter
26 (Tue) First day of quarter; instruction begins
July 1 (Sun) Study list deadline
4 (Wed) Independence Day (holiday, no classes)
8 (Sun) Add deadline (courses or units)
15 (Sun) Drop deadline (courses or units); last day for tuition reassessment for dropped courses or units
28 (Sat) Term withdrawal deadline; last day to withdraw from the University with a partial refund for 8- and 10-week sessions
29 (Sun) Change of grading basis deadline
Aug 5 (Sun) Course withdrawal deadline; application deadline for Summer Quarter degree conferral
10-16 (Fri-Thu) Last opportunity to arrange Incomplete in a course, at last class
11-16 (Sat-Thu) End-Quarter Period
16 (Thu) Last day of classes
17-18 (Fri-Sat) Eight-week session examinations
18 (Sat) Eight-week session closes
Sept 4 (Tue) Summer Quarter closes
21 (Fri) Last day to submit University thesis, D.M.A. final project, or Ph.D. dissertation

WELCOME TO STANFORD

On October 1, 1891, more than 500 enthusiastic young men and women were on hand for opening day ceremonies at Leland Stanford Junior University. They came from all over: many from California, some who followed professors hired from other colleges and universities, and some simply seeking adventure in the West. They came to seize a special opportunity, to be part of the pioneer class in a brand new university. They stayed to help turn an ambitious dream into a thriving reality. As a pioneer faculty member recalled, “Hope was in every heart, and the presiding spirit of freedom prompted us to dare greatly.”

For Leland and Jane Stanford on that day, the University was the realization of a dream and a fitting tribute to the memory of their only son, who died of typhoid fever weeks before his 16th birthday, at an age when many young men and women were planning their college education.

From the beginning, it was clear that Stanford would be different. It was coeducational at a time when single-sex colleges were the norm. It was non-sectarian when most private colleges were still affiliated with a church. And it offered a broad, flexible program of study while most schools insisted on a rigid curriculum of classical studies. Though there were many difficulties during the first months (housing was inadequate, microscopes and books were late in arriving from the East) the first year foretold great success. As Jane Stanford wrote in the summer of 1892, “Even our fondest hopes have been realized.”

What manner of people were this man and this woman who had the intelligence, the means, the faith, and the daring to plan a major university in Pacific soil, far from the nation’s center of culture?

ABOUT LEELAND AND JANE STANFORD

Although he was trained as a lawyer, Leland Stanford came to California in 1852 to join his five brothers in their mercantile business in the gold fields; Jane Stanford followed in 1855. They established large-scale operations in Sacramento, where Mr. Stanford became a leading figure in California business and politics. One of the “Big Four” who built the western link of the first transcontinental railroad, he was elected Governor of California and later United States Senator. One of the founders of the Republican Party in California, he was an ardent follower of Abraham Lincoln and is credited with keeping California in the Union during the Civil War.

THE CASE FOR A LIBERAL EDUCATION

Despite the enormous success they achieved in their lives, Governor and Mrs. Stanford had come from families of modest means and rose to prominence and wealth through a life of hard work. So it was natural that their first thoughts were to establish an institution where young men and women could “grapple successfully with the practicalities of life.” As their thoughts matured, however, these ideas of “practical education” enlarged to the concept of producing cultured and useful citizens who were well prepared for professional success. In a statement of the case for liberal education that was remarkable for its time, Leland Stanford wrote, “I attach great importance to general literature for the enlargement of the mind and for giving business capacity. I think I have noticed that technically educated boys do not make the most successful businessmen. The imagination needs to be cultivated and developed to assure success in life. A man will never construct anything he cannot conceive.”

STANFORD LANDS AND ARCHITECTURE

The campus occupies what was once Leland Stanford’s Palo Alto Stock Farm and the favorite residence of the Stanford family. The Stanfords purchased an existing estate in 1876 and later acquired much of the land in the local watershed for their stock farm, orchards, and vineyards.

The name of the farm came from the tree El Palo Alto, a coast redwood (Sequoia sempervirens) that still stands near the northwest corner of the property on the edge of San Francisquito Creek. Many years ago, one of the winter floods that periodically rushed down the arroyo tore off one of its twin trunks, but half of the venerable old tree lives on, a gaunt and time-scarred monument. Named in 1769 by Spanish explorers, El Palo Alto has been the University’s symbol and the centerpiece of its official seal.

The Stanfords gave their farm to the University in the Founding Grant of 1885. They personally financed the entire cost of the construction and operation of the University until 1903, when surviving founder Jane Stanford, who performed heroically in keeping the University functioning during difficult times following Leland Senior’s death in 1893, turned over control to the Board of Trustees. The founding gift has been estimated at $25 million, not including the land and buildings.

The general concept for the University’s grounds and buildings was conceived by Frederick Law Olmsted, the designer of Central Park in New York. A brilliant young Boston architect, Charles Allerton Coolidge, further developed the concept in the style of his late mentor, Henry Hobson Richardson. The style, called Richardsonian Romanesque, is a blend of Romanesque and Mission Revival architecture. It is characterized by rectilinear sandstone buildings joined by covered arcades formed of successive half-circle arches, the latter supported by short columns with decorated capitals.

More than one hundred years later, the University still enjoys 8,180 acres (almost 13 square miles) of grassy fields, eucalyptus groves, and rolling hills that were the Stanfords’ generous legacy, as well as the Quadrangle of “long corridors with their stately pillars” at the center of campus. It is still true, as the philosopher William James said, during his stint as a visiting professor, that the climate is “so friendly . . . that every morning wakes one fresh for new amounts of work.”

CURRENT PERSPECTIVES

In other ways, the University has changed tremendously on its way to recognition as one of the world’s great universities. At the hub of a vital and diverse Bay Area, Stanford is an hour’s drive south of San Francisco and just a few miles north of the Silicon Valley, an area dotted with computer and high technology firms largely spawned by the University’s faculty and graduates. On campus, students and faculty enjoy new libraries, modern laboratories, sports facilities, and comfortable residences. Contemporary sculpture, as well as pieces from the Iris and B. Gerald Cantor Center for Visual Arts at Stanford University’s extensive collection of sculpture by Auguste Rodin, is placed throughout the campus, providing unexpected pleasures at many turns.

The Iris and B. Gerald Cantor Center for Visual Arts at Stanford University opened in January 1999. The center includes the historic Leland Stanford Junior Museum building, the Rodin Sculpture Garden and a new wing with spacious galleries, auditorium, cafe, and bookshop. At the Stanford Medical Center, world-renowned for its research, teaching, and patient care, scientists and physicians are searching for answers to fundamental questions about health and disease. Ninety miles down the coast, at Stanford’s Hopkins Marine Station on the Monterey Bay, scientists are working to better understand the mechanisms of evolution, human development, and ecological systems.

The University is organized into seven schools: Earth Sciences, Education, Engineering, the Graduate School of Business, Humanities and Sciences, Law, and Medicine. In addition, there are more than 30 interdisciplinary centers, programs, and research laboratories (including the Hoover Institution on War, Revolution and Peace; the Freeman Spogli Institute for International Studies; the Stanford Linear Accelerator Center; and the Bio-X Scientific Leadership Council) where faculty from many fields bring different perspectives to bear on issues and problems. Stanford’s Bing Overseas Studies Program offers students in all fields remarkable opportunities for study abroad, with campuses in Australia, Beijing, Berlin, Florence, Kyoto, Moscow, Oxford, Paris, and Santiago.
STANFORD PEOPLE

By any measure, Stanford’s faculty, which numbers approximately 1,800, is one of the most distinguished in the nation. It includes 15 Nobel laureates, 4 Pulitzer Prize winners, 21 National Medal of Science winners, 134 members of the National Academy of Sciences, 223 members of the American Academy of Arts and Sciences, 82 members of the National Academy of Engineering, and 26 members of the National Academy of Education. Yet beyond their array of honors, what truly distinguishes Stanford faculty is their commitment to sharing knowledge with their students. The great majority of professors teach undergraduates both in introductory lecture classes and in small freshman, sophomore, and advanced seminars.

Enrollment in Autumn Quarter 2005 totaled 14,881, of whom 6,705 were undergraduates and 8,176 were graduate students. Like the faculty, the Stanford student body is distinguished. Approximately 12 people apply to Stanford for every student who enters the freshman class. 86 Stanford students have been named Rhodes Scholars and 74 have been named Marshall Scholars. The six-year graduation rate for students who entered Stanford University full-time in 1999 was 94 percent. Stanford awarded 4,913 degrees in 2006, of which 1,812 were baccalaureate and 3,101 were advanced degrees.

Stanford students also shine in an array of activities outside the classroom, from student government to music, theater, and journalism. Through the Haas Center for Public Service, students participate in dozens of community service activities, such as tutoring programs for children in nearby East Palo Alto, the Hunger Project, and the Arbor Free Clinic.

In the athletic arena, Stanford students have enjoyed tremendous success as well. Stanford fields teams in 35 Division I varsity sports. Of Stanford’s 92 NCAA team titles, 75 have been captured since 1980, placing Stanford at the top among the nation’s most title-winning schools during that time. In 2005-06, Stanford won 2 NCAA team titles in women’s cross country and women’s tennis, and won the Director’s Cup, emblematic of the top overall athletic program in the country, for the 12th consecutive year. In 1999-2000, Stanford became the first school in Pac-10 history to win conference championships in football, men’s basketball, and baseball in the same year. Athletic success has reached beyond The Farm, as well, with 43 Stanford athletes and coaches taking part in the 2004 Olympics in Athens. The Cardinal affiliates won 17 medals in Greece with three gold, seven silver and seven bronze. Over the last four summer Olympiads, Stanford athletes and coaches have won a combined 64 medals. Intramural and club sports are also popular; over 1,000 students take part in the club sports program, while participation in the intramural program has reached 9,000 with many active in more than one sport.

Stanford graduates can be found in an extraordinary variety of places: in space (Sally Ride, ’73, Ph.D. ’78, was the first American woman in space); on the news (Ted Koppel, M.A. ’62, created the successful program Nightline); off-Broadway (David Henry Hwang, ’79, received a Tony Award for his celebrated work, M. Butterfly); at the helm of major corporations (Scott McNealy, ’80, founded Sun Microsystems, and Chih-yuan (Jerry) Yang, ’94, and David Filo, ’90, founded Yahoo); and on the U.S. Supreme Court (two Stanford graduates, Anthony Kennedy, ’58 and Stephen Breyer, ’59, currently sit on the high court; Sandra Day O’Connor, ’50, J.D. ’52, recently retired from the high court and William Rehnquist, ’48, J.D. ’52 served until his death in 2005).

LOOKING AHEAD

In her address to the Board of Trustees in July 1904, Jane Stanford said, “Let us not be afraid to outgrow old thoughts and ways, and dare to think on new lines as to the future of the work under our care.” Her thoughts echo in the words of Stanford President John Hennessy, who said in his message in the 2002 Annual Report, “Our bold entrepreneurial spirit has its roots in the founders and our location in the pioneering West. In 1904, Jane Stanford defined the challenge for the young University ... Each generation at Stanford has taken this to heart and boldly launched new efforts, from the classroom to the laboratory ... We will continue to innovate and invest in the future ... The pioneering spirit that led the founders and early leaders to ‘dare to think on new lines’ continues to guide us.”

ADMINISTRATIVE ORGANIZATION

EXECUTIVE OFFICERS, 2006-07

President: John L. Hennessy
Provost: John Etchemendy
Vice President for Business Affairs and Chief Financial Officer: Randall S. Livingston
Senior Vice President for University Resources: John B. Ford
Vice President for Development: Martin Shell
Vice President for Public Affairs: David F. Demarest
Vice President and General Counsel: Debra Zumwalt
Vice President for Land, Buildings, and Real Estate: Robert Reidy
Vice Provost and Dean of Research: Ann Arvin
Vice Provost for Faculty Development: Patricia P. Jones
Vice Provost for Budget and Auxiliaries Management: Tim Warner
Vice Provost for Undergraduate Education: John C. Bravman
Vice Provost of Student Affairs: Gregory Boardman
Chief Executive Officer, Stanford Management Company: John Powers
President of Stanford Alumni Association: Howard E. Wolf
University Librarian and Director of Academic Information Resources: Michael A. Keller
Dean of Graduate School of Business: Robert Joss
Dean of Continuing Studies Program: Charles Junkerman
Dean of Religious Life: William McLennan, Jr.
Dean of School of Earth Sciences: Pamela Matson
Dean of School of Education: Debra J. Stipek
Dean of School of Engineering: James D. Plummer
Dean of School of Humanities and Sciences: Sharon R. Long
Dean of School of Law: Larry D. Kramer
Dean of School of Medicine: Philip A. Pizzo
Director of Hoover Institution: John Raisian
Director of Stanford Linear Accelerator Center: Jonathan Dorfan

BOARD OF TRUSTEES

Powers and Duties — The Board of Trustees is custodian of the endowment and all properties of the University. The Board administers the invested funds, sets the annual budget, and determines policies for the operation and control of the University. The powers and duties of the Board of Trustees derive from the Founding Grant, amendments, legislation, and court decrees. In addition, the Board operates under its own bylaws and a series of resolutions on major policy.

Membership — Board membership is set at 35, including the President of the University who serves ex officio and with vote. Trustees serve a five-year term and are eligible for appointment to one additional five-year term. At the conclusion of that term, a Trustee is not eligible for reelection until after a lapse of one year. Eight of the Trustees are elected or appointed in accordance with the Rules Governing the Election or Appointment of Alumni Nominated Trustees. They serve a five-year term.

Officers of the Board — The officers of the board are a chair, one or more vice chairs, a secretary, and an associate secretary. Officers are elected to one-year terms at the annual meeting in June, with the exception of the chair, who serves a two-year term. Their terms of office begin July 1.

Committees — Standing committees of the Board are Academic Policy, Planning, and Management; Alumni and External Affairs; Audit and Compliance; Development; Finance; Land and Buildings; the Medical Center; and Trusteeship. Special committees include Athletics, Compensation, Investment Responsibility, and Litigation.

Meetings — The Board generally meets five times each year.
THE PRESIDENT
The Founding Grant prescribes that the Board of Trustees shall appoint the President of the University and that the Board shall give to the President the following powers:
To prescribe the duties of the professors and teachers.
To prescribe and enforce the course of study and the mode and manner of teaching.
Such other powers as will enable the President to control the educational part of the University to such an extent that the President may justly be held responsible for the course of study therein and for the good conduct and capacity of the professors and teachers.
The President is also responsible for the management of financial and business affairs of the University, including operation of the physical plant.
The President appoints the following, subject to confirmation by the Board: Provost, Vice President for Business Affairs and Chief Financial Officer, Chief Executive Officer of Stanford Management Company, Vice President for Alumni Affairs and President of Stanford Alumni Association, Vice President for Development, Vice President for Public Affairs, Vice President and General Counsel, and Vice President for Land, Buildings, and Real Estate.

COMMITTEES AND PANELS
University Committees are appointed by and are primarily responsible to the President. Such committees deal with matters on which the responsibility for recommendation or action is clearly diffused among different constituencies of the University. In accordance with the Report on the Committee Structure of the University, Academic Council members are appointed to University Committees on nomination of the Senate Committee on Committees and student members on nomination of the Associated Students of Stanford University (ASSU) Committee on Nominations. The President takes the initiative in the appointment of staff members to such committees. Although immediately responsible to the President, University Committees may be called upon to report to the Senate of the Academic Council or the ASSU. Charges to such committees are set by the President on recommendation of the Committee on Committees and others. There are five University Committees, as follows:
Advisory Panel on Investment Responsibility and Licensing (AP-IRL)
Committee on Athletics, Physical Education, and Recreation (C-APER)
Committee on Environmental Health and Safety (C-EH&S)
Committee on Faculty Staff Human Resources (C-FSHR)
Panel on Outdoor Art (P-OA)
Additionally there are nine standing administrative panels which are appointed by the Vice Provost and Dean of Research and Graduate Policy, and which report through him to the President:
Administrative Panel on Biosafety
Administrative Panel on Human Subjects in Medical Research-01
Administrative Panel on Human Subjects in Medical Research-02
Administrative Panel on Human Subjects in Medical Research-03
Administrative Panel on Human Subjects in Medical Research-04
Administrative Panel on Human Subjects in Medical Research-05
Administrative Panel on Human Subjects in Medical Research-06
Administrative Panel on Human Subjects in Non-Medical Research-01
Administrative Panel on Laboratory Animal Care
Administrative Panel on Radiological Safety

PROVOST
The Provost, as the chief academic and budget officer, administers the academic program (instruction and research in schools and other academic units) and University services in support of the academic program (including budgeting and planning, land and buildings, libraries and information resources, and student affairs). In the absence or inability of the President to act, the Provost becomes the Acting President of the University. The Provost shares with the President conduct of the University’s relations with other educational institutions, groups, and associations.
Schools of the University — The program of instruction in the University is organized into seven schools: Graduate School of Business, School of Earth Sciences, School of Education, School of Engineering, School of Humanities and Sciences, School of Law, School of Medicine.
The deans of the schools report to the Provost.

THE ACADEMIC COUNCIL
According to the Articles of Organization of the Faculty, originally adopted by the Board of Trustees in 1904 and revised in 1977, the powers and authority of the faculty are vested in the Academic Council consisting of: (1) the President of the University; (2) tenure-line faculty: Assistant, Associate, and Full Professor; (3) nontenure-line faculty: Associate and Full Professor followed by the parenthetical notation (Teaching), (Performance), (Applied Research), or (Clinical); (4) nontenure-line research faculty: Assistant Professor (Research), Associate Professor (Research), Professor (Research); (5) Senior Fellows in specified policy centers and institutes; and (6) certain specified officers of academic administration.
In the Spring of 1968, the Academic Council approved the charter for a Senate to be composed of 55 representatives elected by the Hare System of Proportional Representation and, as ex officio nonvoting members, deans of the academic schools and certain major officers of academic administration.
In the allocation of representation, each school constitutes a major constituency. The Senate may create from time to time other major constituencies as conditions warrant. Approximately one-half of the representatives are allocated to constituencies on the basis of the number of students in those constituencies and the remainder on the basis of the number of members of the Academic Council from each constituency.

COMMITTEES
Committees of the Academic Council are created by and responsible to the Senate of the Academic Council and are appointed by the Committee on Committees of the Senate. Such committees deal with academic policy matters on which the primary responsibility for action and decision lies with the Academic Council or, by delegation, the Senate. Pursuant to the Senate’s acceptance on September 25, 1969 of the Report from the Committee on Committees on the Committee Structure of the University and subsequent Senate action, the Senate has established seven standing Committees of the Academic Council, as follows:
Committee on Academic Computing and Information Systems (C-ACIS)
Committee on Graduate Studies (C-GS)
Committee on Libraries (C-Lib)
Committee on Review of Undergraduate Majors (C-RUM)
Committee on Undergraduate Admissions and Financial Aid (C-UAF)
Committee on Undergraduate Standards and Policy (C-USP)
The Senate has also created a Planning and Policy Board of the Senate to consider long-range strategic issues of concern to the faculty. Information regarding charges to these committees is available from the Office of the Academic Secretary to the University.

ASSOCIATED STUDENTS OF STANFORD UNIVERSITY (ASSU)
Web Site: http://assu.stanford.edu
All registered students are members of the ASSU. They are governed by the ASSU Constitution and Bylaws, which was last revised and approved by student vote in April 1999.
Executive — The President and Vice President serve as the chief executives and representatives of the Association. The Financial Manager acts as business manager of the ASSU, CEO of Stanford Student Enterprises (SSE), and controller of the Students’ Organizations Fund in which ASSU and student organization funds are deposited.
Legislative — There are two legislative bodies, an Undergraduate Senate and a Graduate Student Council, that work together to determine the Association’s budgetary, financial, investment, business, and operating policies. In addition, each entity provides funding for student organizations, participates in recommending student appointments to University Committees and advocates on behalf of its constituents. Each body has 15 elected representatives and an elected chair. Both meet regularly to conduct Association business and discuss and act on issues pertinent to student life at Stanford.
Admission and Financial Aid

ADMISSION

UNDERGRADUATE MATRICULATED STUDY

Stanford’s undergraduate community is drawn from throughout the United States and the world. It includes students whose abilities, intellectual interests, and personal qualities will allow them to benefit from and contribute to the University’s wide range of teaching and research programs in the humanities, natural sciences, social sciences, and engineering. The University admits students who derive pleasure from learning for its own sake; who exhibit energy, creativity, and curiosity; and who have distinguished themselves in and out of the classroom.

Stanford welcomes a diverse community that cuts across many dimensions. The University does not use quotas of any kind in its admission process: it does not favor particular schools or types of schools, nor any geographic region, nor does it have any racial, religious, ethnic, or gender-related targets. The University believes that a student body that is both highly qualified and diverse in terms of culture, socioeconomic status, race, ethnicity, gender, work and life experiences, skills, and interests is essential to the educational process. Applications are encouraged from those who would take the initiative and responsibility for their own education and who would provide additional dimensions to the University and its programs.

In order to preserve the residential character of the University and to maintain a favorable student-faculty ratio, Stanford has a limited undergraduate enrollment. The anticipated size of the freshman class is 1,600 students. Some 50-80 transfer students, entering either the sophomore or junior class, are also admitted for Autumn enrollment. Each year, the University receives many more applications from qualified students than there are places available.

Stanford is committed to meeting the University-computed financial need of each admitted student, and admission decisions are made without regard to the applicant’s financial status, except in the case of international students (students who are neither U.S. citizens nor permanent residents).

Application procedures, requirements, and deadlines vary from year to year. See the Undergraduate Admission web site at http://admission.stanford.edu for the most recent information and to request application materials; or call the Office of Undergraduate Admission at (650) 723-2091.

NONMATRICULATED STUDY

Permission to enroll at Stanford as a nonmatriculated student during Autumn, Winter, and Spring quarters is not routinely approved except under extenuating circumstances. Nonmatriculated students authorized to enroll at Stanford University are not admitted to any Stanford degree program and are permitted to register for a specific period, usually one, two, or three quarters. Financial assistance from Stanford University is not available. Permission to enroll as a nonmatriculated student does not imply subsequent admission as a matriculated student. Students interested in nonmatriculated status during the Autumn, Winter, and Spring quarters should contact the Office of the University Registrar, not the Office of Undergraduate Admission.

High School Nonmatriculated Students — Local high school students are eligible to be considered to attend Stanford as nonmatriculated students on a limited basis when they have exhausted all of the courses in a given discipline offered by their high school. Nonmatriculated high school students are permitted to enroll in one course per quarter and are required to pay the applicable tuition. Permission from the academic department and the Registrar is required.

Summer Session — Students wishing to enroll as nonmatriculated students during Summer Quarter should contact the Summer Session Office for more information about the Summer Visitor Program. Admission to the Summer Visitor Program does not imply regular admission to Stanford for subsequent quarters or to one of Stanford’s regular degree programs.

GRADUATE MATRICULATED STUDY

Applicants from colleges and universities of recognized standing who hold a U.S. bachelor’s degree or its equivalent are eligible to be considered for admission for graduate study. Details regarding degrees offered in specific departments are given in the Guide to Graduate Admission or at http://gradadmissions.stanford.edu. The number of applicants who can be admitted for work in a particular field of study at any time is limited by the facilities and programs of the school or department and by the number of matriculated students who continue their work in that field.

As with its undergraduate program, Stanford believes that a graduate student body that is both highly qualified and diverse in terms of culture, socioeconomic status, race, ethnicity, gender, work and life experience, skills, and interests is essential to the graduate educational process. It particularly welcomes applications from African Americans, Latinos, and Native Americans, as well as from others whose backgrounds and experiences would add additional dimensions to the University’s educational programs.

The Coterminal Degree Program — This program permits matriculated Stanford undergraduates to study for bachelor’s and master’s degrees simultaneously in the same or different departments. Application policies and procedures are established by each master’s department. Applicants must have earned a minimum of 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript. This includes allowable Advanced Placement (AP) and transfer credit. Applicants must submit their application no later than the quarter prior to the expected completion of their undergraduate degree. This is normally the Winter Quarter prior to Spring Quarter graduation. Students who decide to apply for admission to master’s programs after these deadlines are not eligible for the coterminal program and must apply through the regular graduate admission process.

APPLICATION PROCESS

Specific information regarding test requirements, other application procedures and requirements, and closing dates for filing applications and supporting credentials for admission and financial aid are listed in the Guide to Graduate Admission.

Graduate fellowship funds and assistantships are generally committed in March for the entire period comprising Autumn, Winter, and Spring quarters of the next academic year. Awards are seldom made to students who enter the University in Winter, Spring, and Summer quarters; such applicants must meet the same financial aid application requirements as those entering in Autumn Quarter.

Applications are to be submitted electronically for graduate programs in the schools of Earth Sciences, Education, Engineering, Humanities and Sciences, and the Biosciences (non-M.D. programs in Medicine). Application instructions may be found at http://gradadmissions.stanford.edu.

The Guide to Graduate Admission may be obtained from Graduate Admissions, Office of the University Registrar, 630 Serra Street, Suite 120, Stanford University, Stanford, California 94305-6032; or at the Guide to Graduate Admission web site at http://gradadmissions.stanford.edu.

The Coterminal Degree Program is designed for students who are admitted to master’s programs after these deadlines are not eligible for the coterminal program and must apply through the regular graduate admission process.

Specific information regarding test requirements, other application procedures and requirements, and closing dates for filing applications and supporting credentials for admission and financial aid are listed in the Guide to Graduate Admission.

**Business** — Applicants should write to Director of Admissions of the M.B.A., Ph.D., or Sloan program, Graduate School of Business, Stanford University, Stanford, CA 94305-5015 for information and application forms.

**Law** — Applicants should write to Director of Admissions, School of Law, Stanford University, Stanford, CA 94305-8610. The Law School Admissions Test is required.

**M.D. Program** — Applicants should see the M.D. admissions web site at http://med.stanford.edu/md/admissions/ or, for additional information about the M.D. program, write to Stanford University School of Medicine, Office of M.D. Admissions, 251 Campus Drive, MSOB X3C01, Stanford, CA 94305-5404. The American Medical College Application Service (AMCAS) application is available at http://www.aamc.org. Applications and transcripts must be received by AMCAS by October 15. The Medical College Admissions Test is required.

**Coterminal Master’s Program** — Interested Stanford undergraduates should contact directly the department in which they wish to pursue a master’s degree and must adhere to the application deadlines described in the “Coterminal Degree Program” above.

**NONMATRICULATED STUDY**

Eligibility for consideration for nonmatriculated status is restricted to two groups of applicants:

1. Stanford alumni who wish to return to Stanford to take courses that are prerequisites for Medical School admission, such as undergraduate Biology or Chemistry courses, are eligible to apply for nonmatriculated status. An application form, application fee, statement of purpose, and three letters of recommendation are required. The decision to admit or deny is made by the Director of Graduate Admissions on the basis of relevant factors, including a 3.0 GPA and positive letters of recommendation.

   Applicants who graduated from other universities are not eligible to take the prerequisites for Medical School at Stanford.

2. Individuals who hold a bachelor’s degree or equivalent and wish to take courses in a specific department that allows non-degree students are eligible to apply for nonmatriculated status. An application form, application fee, statement of purpose, original transcripts, and three letters of recommendation are required. The decision to admit or deny is made by the chair of the department in which they wish to take courses and conveyed in writing to the Graduate Admissions Office.

   Applicants are notified of the decision by Graduate Admissions in the Office of the University Registrar.

   Students who are granted nonmatriculated status may register for a maximum of one academic year. Nonmatriculated status is a privilege and not a right; the nonmatriculated status may be revoked at the University’s discretion (and after consideration of such factors as the University considers relevant in the particular case) at the end of any quarter of enrollment.

   Nonmatriculated students are not permitted to enroll in certain courses, such as those in the following departments or programs: film and broadcasting courses in Communication; graduate-level courses in Psychology; all courses in Computer Science, Economics, Electrical Engineering, International Policy Studies, and the School of Medicine. Nonmatriculated students receive academic credit for courses satisfactorily completed and may obtain an official transcript. They may use University facilities and services. In classes of limited enrollment, students in degree programs have priority. Nonmatriculated students may apply for housing but will have a low priority for assignment. No fellowships, assistantships, or Stanford loans are available for nonmatriculated students.

   Nonmatriculated students who later apply for admission to a degree program must meet the standard admission requirements and should not anticipate special priority because of work completed as a nonmatriculated student. Students who are admitted to a degree program may apply a maximum of 15 units of nonmatriculated study toward the residency requirement for a master’s degree and 30 units for the Engineer or Ph.D. degree.

   Application forms for nonmatriculated status during the regular academic year are available from Graduate Admissions, Office of the University Registrar, 630 Serra Street, Suite 120, Stanford, CA 94305-6032. Deadlines for applying are included with the forms and are generally required two months before the start of the quarter.

   Applicants interested in nonmatriculated student status for the Summer Quarter only should contact the Summer Session Office, 482 Galvez Mall, Stanford, CA 94305-3005.

**POSTDOCTORAL SCHOLARS**

Postdoctoral scholars are trainees in residence at Stanford University pursuing advanced studies beyond the doctoral level in preparation for an independent career. Postdoctoral scholars are appointed for a limited period of time and may participate on Stanford research projects and/or may be supported by external awards or fellowships. In all cases, their appointment at Stanford is for the purpose of advanced studies and training under the sponsorship of a Stanford faculty member.

Postdoctoral appointments require initial full-time engagement in the designated research or study and are generally restricted to those who have earned their Ph.D. within the last three years or their M.D. within the last six years. Requests for exceptions for individuals who are beyond these limits, or have not been actively engaged in research as their primary effort, must include a written statement from the sponsoring faculty member indicating what additional training outside the primary area of effort the individual plans to receive, and the reasons for which the exception is requested. Postdoctoral scholars are appointed at Stanford for fixed terms, typically that may eventually total up to four years, and are subject to a strict five-year rule with the total postdoctoral appointment period not to exceed a total of five years of postdoctoral research experience at all institutions combined. In cases of combined training, only the years of active research at the postdoctoral level are counted for salary and other purposes. Postdoctoral scholars who begin a second postdoctoral appointment in a new field may have training extended to a maximum of up to six years. Postdoctoral scholars may request temporary reductions in effort and pay due to temporary family or other conditions.

All postdoctoral scholars appointed at Stanford must be supported by Stanford grants and contracts, training grants, departmental or school fellowship funds, or external fellowships, or by a combination of these sources. Scholars may not be self-supporting. In addition, all postdoctoral scholars are eligible for a benefits package including medical, dental, life, and disability insurance. Postdoctoral scholars are normally appointed for 100% time.

All postdoctoral scholars must be registered at Stanford during every academic quarter of their appointment. Registration entails payment of a quarterly postdoctoral fee, which is paid by the academic department or school appointing the scholar.

Prospective postdoctoral scholars should write directly to the department in which they wish to study or check for postdoctoral openings at http://postdocs.stanford.edu/prospects/index.htm. For more information, see http://postdocs.stanford.edu/.

**VISITING RESEARCHERS**

In limited instances, it is to the benefit of Stanford faculty to permit persons who have not yet obtained a Ph.D. (or its foreign equivalent) or who are not recognized experts in their fields to engage in research on the Stanford campus using Stanford research facilities. Such instances include students at other universities who are engaged in graduate-level research in a field of interest to the faculty member, a person doing a laboratory rotation as part of a larger research study or grant, or employees of companies who are conducting research which requires specialized equipment available only at Stanford.

In these instances, since these individuals are not eligible for Visiting Scholar status, they may be eligible to apply to register as nonmatriculated graduate students in the Visiting Researcher category for one year. Invited persons must be qualified to conduct research at a level comparable to that of other Stanford graduate students, and the research must be of benefit to Stanford as well as to the visitor. Application for Admission forms for visiting researchers are submitted to the Registrar’s Office by the department issuing the invitation.

Visiting researchers are charged the TGR (Terminal Graduate Registration) tuition rate quarterly and may waive the University’s student
medical insurance plan only if they have comparable coverage with another carrier and submit proof of the comparable coverage prior to the term start date. They may not enroll in or audit any courses, but in quarters they are registered are eligible for the usual student benefits of nonmatriculated student status. Visiting researchers may apply for housing, but will have a low priority for assignments. No fellowships, assistantships, or Stanford loans are available for visiting researchers. Stanford cannot certify visiting researchers for deferment of U.S. educational loans. Citizens of other countries who enter the United States to be visiting researchers at Stanford must have a DS 2019 Certificate (to apply for a J-1 visa) issued by the Bechtel International Center and must register each quarter, including Summer Quarter, to maintain their visa status.

VISAS FOR FOREIGN STUDENTS

Stanford is authorized under federal law to enroll nonimmigrant students. All students who are not U.S. citizens or permanent residents must obtain visas for their stay in the United States. The types of student visas sponsored by Stanford include the following:

1. Student Visa (F-1), obtained with an I-20 Certificate of Eligibility issued by Stanford University. The graduate student on an F-1 visa must enroll in a full course of study. The accompanying spouse or child enters on an F-2 visa. F-2 visa holders may not work.

2. Exchange Visitor Visa (J-1), obtained with a DS-2019 Certificate of Eligibility issued by Stanford University or a sponsoring agency. This visa is required for graduate students sponsored by certain agencies, foundations, and governments. In some cases, Exchange Visitors must leave the United States at the conclusion of their programs, may not change visa status, and may not apply for permanent residency in the United States until they have returned to their home countries for at least two years. The spouse of an Exchange Visitor enters on a J-2 visa and may, in some cases, obtain permission to work.

The certificate of eligibility is issued to a student accepted for admission only upon receipt of evidence of satisfactory proficiency in the English language and certification of adequate financial support. A student transferring from another U.S. school must obtain a new visa with a Stanford certificate of eligibility.

Information on visas is sent to admitted graduate students from the Graduate Admissions Office. Information on visas for postdoctoral scholars and visiting researchers may be obtained from the Bechtel International Center.

The University requires that all students who are not U.S. citizens or permanent residents maintain a visa status that allows registration as students.

FINANCIAL AID

UNDERGRADUATE

The University has a comprehensive need-based financial aid program for its undergraduate students (except some international students) who meet various conditions set by federal and state governments, the University, and other outside agencies.

In awarding its own funds, the University assumes that students and their parents accept the first and primary responsibility for meeting educational costs. Stanford’s policy generally is to exclude undergraduates from being considered financially independent of their parents for University-administered scholarship aid unless a student is an orphan, a ward of the court, or at least 25 years of age. Spouses of married undergraduate students share in the responsibility to meet educational costs.

Stanford expects financial aid applicants to apply for and use resources from state, federal, and private funding sources, contribute from their earnings during nonenrollment periods (for example, summer), and use student loans and earnings from part-time employment during the academic year to meet educational expenses. If Stanford determines that an applicant and his or her family cannot meet these expenses, the University may offer financial aid funds to help meet these costs.

In awarding financial aid funds to meet computed need (that is, any gap remaining after subtracting the calculated family contribution and government grants from the standard student budget), Stanford first offers “self-help,” which consists of student loans and/or an academic-year earnings expectation. If computed need is greater than the self-help expectation, Stanford awards institutional scholarship to meet the remaining need.

Scholarships from outside sources may change the University’s financial aid award. When a student receives outside scholarships, these funds reduce or eliminate the student’s self-help expectation. If the total in outside scholarships exceeds the self-help expectation, the University then reduces institutional scholarship, dollar for dollar, by any additional amount.

Students are considered for University scholarship eligibility during their first four years of undergraduate enrollment. The Financial Aid Office (FAO) considers applicants for University scholarship eligibility beyond the twelfth quarter only if enrollment is essential in order to complete the minimum requirements for the first baccalaureate degree or major. Students who enroll for a fifth year in pursuit of a coterminal program, a minor, a second major, a second degree, or the B.A.S. degree are not eligible for University scholarship consideration but may apply for student loans and federal grants. Eligibility for undergraduate federal student aid is limited to a student’s first five years (fifteen quarters) of enrollment.

APPLICATION AND AWARD NOTIFICATION PROCESS

PRIORITY FILING DEADLINES

Prospective freshmen
- Single-Choice Early Action, November 1, 2006
- Regular Review, February 1, 2007
Prospective transfers
- March 15, 2007
Returning students
- April 15, 2007

APPLICANT DOCUMENTS

U.S. citizens and permanent residents who wish to be considered for all available funding administered by Stanford should submit the following documents:

1. Free Application for Student Aid (FAFSA): file online at http://fafsa.ed.gov. California residents must file the FAFSA and submit a GPA Verification Form to the California Student Aid Commission (CSAC) by March 2, 2007, for Cal Grant consideration.
3. Copies of parents’ 2006 W-2 forms. Continuing students should submit copies directly to the FAO. New applicants should submit signed copies of their parents’ 2006 federal tax returns and W-2 forms to the CSS IDOC service.
4. International students (except Canadians) should complete and submit the International Student Financial Aid Application and Certification of Finances directly to the FAO. Canadians should file the CSS PROFILE and submit tax documents as listed above.
5. Students whose application materials are filed after the priority filing deadlines, who have not borrowed or worked in prior years, or who have not secured all external funds such as Pell and Cal Grants, can expect higher levels of self-help in their financial aid packages.

Applicants and their parents are required to submit accurate and complete information on all application documents. The University participates in the U.S. Department of Education’s Quality Assurance Program to evaluate the accuracy of aid application data. As part of this program, the FAO may request additional documentation to verify reported data. Students who fail to submit the requested documentation will have their financial aid funds withheld or canceled and their future registration placed on hold. Financial aid awards may change as a result of the verification process.
NOTIFICATION DATES

In December, the FAO notifies Single-Choice Early Action applicants who apply by the November filing date of their financial aid award. The FAO notifies freshman applicants who apply by the February 1 filing date in early April. Transfer applicants who apply by the March 15 filing date are normally notified of their financial aid award within five days of their notice of admission.

The FAO begins mailing award notices to continuing and returning applicants in early August. Applicants who file after the priority filing date may not have a financial aid award or funds secured for disbursement by the Autumn Quarter payment due date.

FINANCING OPTIONS

The federal Parent Loan for Undergraduate Students (PLUS) program is available to help parents cover all or part of the expected family contribution through a low-interest, long-term loan. PLUS loans are available to all parents who meet credit requirements regardless of their computed financial need. See the Financial Aid Office web site at http://financialaid.stanford.edu for details on the PLUS program. Parents should also contact their employers for information about programs that may be available to them as employees’ benefits to help meet college costs.

GRADUATE

Graduate students at Stanford receive funding from a variety of sources. University fellowships, research assistantships, and teaching assistantships are offered primarily to doctoral students. In some cases, master’s students also may receive fellowships and assistantships. In addition, outside agencies provide fellowships to many graduate students at Stanford. Students without fellowships or assistantships, and those whose funding does not cover all of their costs, may need to use student loans, savings, other personal assets, a spouse’s earnings, or parental support to meet their educational expenses.

FELLOWSHIPS AND ASSISTANTSHIPS

Fellowships, research assistantships, and teaching assistantships are important parts of the educational program for graduate students at Stanford. Schools and/or departments determine eligibility for University fellowships and assistantships on the basis of academic merit, program, and the availability of funds. Some departments admit only those students to whom they can offer support or who have guaranteed funds from outside sources. Other departments may offer admission without being able to provide fellowship or assistantship funding.

Fellowship and assistantship funding is provided so that students may focus on their studies; concurrent employment is therefore limited. Students with full assistantships are limited to eight additional hours per week. Students on full fellowships may be paid for up to eight additional hours per week, or may hold a supplemental assistantship appointment up to a maximum of 25% with no additional hourly employment. International students who have Stanford assistantships may not have a financial aid award or funds secured for disbursement by the Autumn Quarter payment due date.

OUTSIDE FELLOWSHIPS

Many graduate students hold fellowships won in national competition from outside agencies such as the National Science Foundation. Information on application procedures and terms of such fellowship programs may be obtained from the applicant’s current academic institution or the national office of the agency administering the program. A student who receives support from an outside source must notify his or her Stanford academic department immediately; Stanford funding may be adjusted.

STUDENT LOANS

Graduate students can apply for federal and private student loans through the University’s Financial Aid Office (FAO). Available programs include federal Stafford loans, federal Perkins loans, federal graduate/professional PLUS loans, Guaranteed Access to Education (GATE) loans available to continuing borrowers, and the Stanford NAPL. Information on these loan programs is available at http://financialaid.stanford.edu or by calling the FAO at (888) 326-3773 or (650) 723-3058. International students who are not permanent U.S. residents are not eligible for these student loans.

Application—Students in the Schools of Business, Law, and Medicine (M.D. program) should consult their schools for loan application instructions. The following loan application requirements apply to graduate students in the Schools of Earth Sciences, Education, Engineering, Humanities and Sciences, and Medicine (Ph.D. only):

1. Free Application for Federal Student Aid (FAFSA); file online at http://fafsa.ed.gov.

Students should complete the application process at least two months prior to the beginning of the quarter in which they need the funds. The FAO will determine eligibility for student loans based on a review of FAFSA and application data, satisfactory academic progress, level of indebtedness, credit history, and availability of funds. Student loan eligibility is affected by fellowship, assistantship, and other funding; total funding, including student loans, may not exceed the standard expense budget as determined by the FAO.

Emergency funds—Students may request a cash advance from Student Financial Services. Cash advances may not be used to pay University bills.

COTERMINAL STUDENTS

Coterminal students, who are concurrently pursuing bachelor’s and masters degrees, may receive University fellowships and assistantships only after completing 180 units. Most private and federal graduate fellowships are awarded only to students who have received their bachelor’s degrees. Stanford undergraduate scholarships and grants are reserved for students in their first four years of undergraduate study.

HONORS COOPERATIVE PROGRAM

The Honors Cooperative Program (HCP) is the only part-time graduate program offered by Stanford University. It allows working professionals, who may be eligible for tuition support through their employer, an opportunity to earn a graduate degree in any of the engineering programs, applied physics, statistics, or biomedical informatics, on a part-time basis.

Prospective HCP students apply to the department in which they would like to pursue a graduate degree through the normal graduate admissions process, and compete with all other applicants for admission to the program. Once admitted, HCP students arrange their part-time status and tuition payment options through the Stanford Center for Professional Development (SCPD). Courses are delivered online and broadcast locally. HCP students are also welcome to attend classes on campus, and some on-campus attendance may be required depending on the degree track.

To participate, industry students must have the support of their employer as a participating company of the Stanford Center for Professional Development. For more information, see http://scpd.stanford.edu, or phone (650) 725-3000.
**VETERANS’ BENEFITS**

Liaison between the University, its students, and the various federal, state, and local agencies concerned with veterans’ benefits is provided by the Office of the University Registrar. All students eligible to receive veterans’ benefits while attending the University are urged to complete arrangements with the appropriate agency well in advance of enrollment. In addition, students must have their department approve their study lists as meeting graduation requirements before the Office of the University Registrar can certify the courses for Veterans Affairs.

To comply with federal regulations concerning credit for previous training (38 CFR 21.4253), Stanford University is required to evaluate all previous education and training completed elsewhere to determine what credit, if any, should be granted to students eligible to receive Veterans Administration (VA) educational benefits. Stanford is required to complete an evaluation; credit is granted when appropriate. Credit is evaluated toward the degree program registered with Veterans Affairs as determined by the Office of the University Registrar in conjunction with the relevant academic department(s) or program(s). All relevant University policies regarding transfer credit apply. In addition, this evaluation occurs again each time a student’s degree program is changed.

Subject to current federal and University guidelines, students eligible for receipt of VA educational benefits have their prior education and training evaluated up to the credit limits outlined in the “Residency Policy for Graduate Students” section of this bulletin. As an exception to that policy, students in master’s programs in the schools of Earth Sciences, Education, Engineering, Humanities and Sciences, Law, Medicine, and Graduate Business are allowed a maximum of 6 transfer (quarter) units.

Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student’s degree program or courses beyond those required for a specific degree program are not certified.

---

**Tuition, Fees, and Housing**

**ASSESSMENTS**

**TUITION**

Regular tuition for the 2006-07 academic year, payable Autumn, Winter, and Spring quarters, is as follows:

- All departments and schools (except those below) $10,998
- Graduate Division in Engineering 11,728
- Graduate School of Business, first year 14,460
- Graduate School of Business, second year 13,780
- School of Medicine (M.D. Program) 13,280
- School of Law (payable Autumn and Spring semesters) 18,720
- J.D./M.B.A. Program (payable Autumn and Spring semesters) 19,340

Regular tuition fees apply to the undergraduate Overseas Studies and Stanford in Washington programs. For Summer Quarter tuition rates and policies, see http://summer.stanford.edu/ or the Summer Quarter Time Schedule.

A coterminal student is subject to graduate tuition assessment and adjustment policies once graduate standing is reached. Coterminal students should see the student policies and procedures for tuition assessment, as described under Residency and Unit Requirements in Coterminal Programs in the “Graduate Degrees” section of this bulletin.

Eligibility for registration at reduced tuition rates is described below. Tuition exceptions may also be made for illness, disability, pregnancy, new-parent relief, or other instances at the discretion of the University Registrar. No reduction in tuition charges is made after the first two weeks of the quarter.

All students are strongly advised, before registering at less than the regular full-tuition rate, to consider the effects of that registration on their degree progress and on their eligibility for financial aid and awards, visas, deferment of student loans, and residency requirements.

The University reserves the right to change at any time, without prior notice, tuition, room fees, board fees, or other charges.

**UNDERGRADUATES**

During Autumn, Winter, and Spring quarters, undergraduates are expected to register at the regular full-tuition rate. Undergraduates who have completed at least twelve full-time quarters may petition to register at a reduced tuition rate for their final quarter, but must register for at least eight units. Undergraduate dual degree students must complete at least fifteen full-time quarters before petitioning for reduced tuition in their final quarter.

Permit to Attend status can be granted for one quarter on a one-time basis to those for whom it is academically appropriate. The Permit to Attend rate is $2,760 per quarter in 2006-07. Undergraduates in the terminal quarter who are completing honors theses or clearing incomplete grades may petition, on a one-time basis, for Permit to Attend for Services Only (PSO) registration. That rate is $2,760 per quarter in 2006-07 and does not permit any course enrollment or auditing. Further information about the Permit to Attend status is available from the Office of the University Registrar.

During Summer Quarter, all Stanford undergraduates may register on a unit-basis (minimum 3 units).

**GRADUATE STUDENTS**

Matriculated graduate students are expected to enroll for at least eight units. Schools and departments may set a higher minimum.

The following reduced-tuition categories can be requested by matriculated graduate students in the final stages of their degree programs:

1. **Terminal Graduate Registration (TGR):** doctoral students who have been admitted to candidacy, completed all required courses and degree requirements other than the University oral exam and dissertation, completed 135 units or 10.5 quarters of residency (if under the old residency policy), and submitted a Doctoral Dissertation Reading
Committee form may request Terminal Graduate Registration status to complete their dissertations. Students pursuing Engineer degrees may apply for TGR status after admission to candidacy, completion of all required courses, and completion of 90 units or six quarters of residency (if under the old residency policy). Students enrolled in master’s programs with a required project or thesis may apply for TGR status upon completion of all required courses and completion of 45 units.

TGR status may also be granted for one quarter only to a graduate student who is returning after a leave of absence or after reinstatement, or to graduate students who register for one final term to take a University Oral Examination, submit a thesis or dissertation, or file an Application to Graduate. Doctoral students applying for one quarter TGR status must also meet the doctoral criteria above except that they need only nine quarters of residency. Requirements for one quarter TGR for master’s and Engineer students are as above.

Each quarter, all TGR students must enroll in the 801 (for master’s and Engineer students) or 802 (for doctoral students) course in their department for zero units, in the appropriate section for their adviser. TGR students register at a special tuition rate: $2,760 in 2006-07. Within certain restrictions, TGR students may enroll in additional courses, at the appropriate unit rate.

2. **Graduate Final Requirement Registration:** graduate students who need only a few remaining units to complete degree requirements or to qualify for TGR status, may register for one quarter on a unit basis (3 to 7 units) to cover the deficiency. This status may be used only once during a degree program.

Additional information on these registration categories is available from the Office of the University Registrar at 630 Serra Street, Suite 120.

Matriculated graduate students who have Stanford fellowships or assistantships that require less than full-tuition registration may register at the TGR rate. Within certain restrictions, TGR students may enroll in additional courses, at the appropriate unit rate.

**Fees**

**APPLICATION FEE**

Contact the Undergraduate Admission Office for information about the undergraduate application fee and the Graduate Admission section of the Office of the University Registrar for the current graduate application fee. Application fees for the School of Law, the School of Medicine, and the Graduate School of Business vary by program. Fees are payable at the time of application and are not refundable.

**ASSU FEES**

The Associated Students of Stanford University (ASSU) fees are established by student vote in Spring Quarter. Fees directly fund activities of student organizations and not operations of ASSU. The 2006-07 fees are:

- Undergraduates — Autumn, $90; Winter, $90; Spring, $90
- Graduates — Autumn, $30; Winter, $31; Spring, $31
- Law — Autumn, $30; Spring, $62

Fees are assessed each term. All fees are refundable. Refunds can be requested during the first three weeks of each quarter on the ASSU website at http://assu.stanford.edu. Those eligible are mailed refund checks by the eighth week of the quarter.

**DOCUMENT FEE**

Stanford charges a one-time Document Fee to all students admitted to new degree or non-degree programs in 1993 or later. The fee is paid only once, regardless of the number of degrees a student may ultimately pursue. It covers the cost of a variety of University administrative services such as enrollment and degree certification, course drops and adds done before published deadlines, diplomas, official transcripts and their production, and credential files maintained by the Career Development Center.

**HEALTH INSURANCE FEE**

The University requires all registered students to carry medical insurance to provide coverage for services not provided by Vaden Health Center. Students are enrolled in and charged for the Stanford student health insurance plan, unless they have completed waiver procedures by the second day of instruction. Those who carry medical insurance through an alternate carrier are generally eligible for waiver of the health insurance fee.

**SPECIAL FEES**

- **New Student Orientation Fee** — A fee is charged to all entering undergraduates for the costs of orientation, including room and board, and for the cost of class dues to provide funds for later activities of the class.
- **School of Law Course Materials Fee** — A fee is charged each semester to School of Law students for supplementary course materials.
- **Graduate School of Business M.B.A. Course Reader Fee** — A fee is charged each quarter to M.B.A. students in the Graduate School of Business to cover the cost of in-class handouts and copyrights.
- **Late Fees** — Charges are imposed for late submission of study lists and any changes to the study list after published deadlines. Amounts are listed in the quarterly Time Schedule.
- **Laboratory Fee** — Students in chemistry laboratory courses are charged a nonrefundable fee.
- **Music Practice; Athletics, Physical Education, Recreation; and Dance** — Courses for which special fees are charged are indicated in the Time Schedule.
- **Dissertation Fee** — Each Ph.D. and D.M.A. candidate is charged a fee to cover the cost of microfilming and binding the dissertation and the cost of publishing the abstract.
- **International Scholar Service Fee** — A one-time fee for visa authorization documents is charged to international postdoctoral and visiting scholars.

**INTERNATIONAL STUDENTS**

F-1 or J-1 visas are required by the U.S. Department of Homeland Security. International students must be registered as full-time students during the academic year. Summer Quarter registration is not required. International graduate students comply with immigration regulations while enrolled for partial tuition if their Stanford fellowships or assistantships require part-time enrollment, if they are in TGR status, or if they are in the final quarter of a degree program. Nonmatriculated international students must register for at least 8 units.
HOUSING

Bulletins with further information on housing rates are School of Law for Law School and Overseas Studies for Overseas Centers. See http://summer.stanford.edu for Summer Session rates. Campus housing rates are generally below local area market rents. The approximate room rates for the 2006-07 academic year are as follows:

<table>

19 Meals/week Meal Plan

16 Meals/week Meal Plan

14 Meals/week Meal Plan

Yost/Murray: 11 meals/week and Open Kitchen

—Students on this meal plan are able to partake of every meal that Stanford Dining serves. Students enter the dining hall and swipe their ID cards once. During this visit, they may make unlimited trips through the food service lines, and eat as much as they want.

—Students begin each week on Sunday with 14 all-you-care-to-eat meals available to them. Each quarter, a set amount of Cardinal Dollars is added to their ID card.

—Students begin each week on Sunday with 10 all-you-care-to-eat meals available to them. Each quarter, a set amount of Cardinal Dollars is added to their ID card.

Open Kitchen —Yost and Murray residents have 10 meals/week cooked and served in their house, one meal that can be used in another dining hall, and each resident is given a set amount of Cardinal Dollars every quarter.

Each house also has a discretionary budget to purchase snacks or other food items as agreed upon by the house, available to residents in the open kitchen. Students at Yost and Murray houses are responsible for the cleanliness of the kitchens outside Stanford Dining’s hours of operation.

A complete description of each plan can be found at http://dining.stanford.edu.

CARDINAL DOLLARS

Cardinal Dollars are added to the Stanford ID card, and can be used in any Stanford Dining location, in all the residence dining halls to purchase guest meals in addition to the five guest meals each quarter, for additional meals over the weekly amount provided in the meal plan, and in Stanford Dining’s ten cafés and late night locations (CoHo, Subway, Peet’s Coffee, and Union Square at Tresidder; Olives at Building 160; the Café at the Alumni Center; Linx and Peet’s Coffee in the Clark Center; Late Night at Lakeside; and Stern’s Cyber Café).

Cardinal Dollars purchased as part of a meal plan must be used within each quarter; no more than 50 unused Cardinal Dollars carry over to the following quarter. All Cardinal Dollars expire in June, at the end of the academic year.

Cardinal Dollars that are purchased in addition to a meal plan carry over from quarter to quarter, and from year to year.

Adding Cardinal Dollars to a Stanford ID reduces the need to carry cash and offers the security and convenience of a card. Cardinal Dollars are available ($20 minimum purchase) at Stanford Dining’s Meal Plan Office on the second floor of Tresidder Memorial Union, at the Stanford Dining Central Office on Pampas Lane, or by email. Stanford Dining offers special bonuses on some Cardinal Dollars purchases.

For further information on Cardinal Dollars or Stanford Dining’s meal plans, contact Stanford Dining’s Meal Plan Offices (650-723-4751, 650-725-1508, diningplans@stanford.edu) or see http://dining.stanford.edu.

Meal plans are billed on a quarterly basis, and the cost is pro-rated according to the number of days in each quarter. Cardinal Dollars provided as part of the 14 meal/week and 10 meal/week plans also vary, depending on the number of days in each quarter.

Meal plans are available ($20 minimum purchase) at Stanford Dining’s Meal Plan Office on the second floor of Tresidder Memorial Union, at the Stanford Dining Central Office on Pampas Lane, or by email. Stanford Dining offers special bonuses on some Cardinal Dollars purchases.

For further information on Cardinal Dollars or Stanford Dining’s meal plans, contact Stanford Dining’s Meal Plan Offices (650-723-4751, 650-725-1508, diningplans@stanford.edu) or see http://dining.stanford.edu.

MEAL PLANS

Meals play a key role in Residential Education’s mission of community building, leading, and learning. Therefore, residents of University-managed housing with an attached Stanford Dining facility (Bannerm, Florence Moore, Lakeside, Manzanita, Murray, Ricker, Stern, Wilbur, and Yost) are required to participate in a meal plan. Stanford Dining provides meal plans that offer maximum flexibility in dining locations.

Stanford Dining serves 19 meals each week: breakfast, lunch and dinner, Monday thru Friday, and brunch and dinner on the weekends. There are three meal plans to choose from: 19 meals/week; 14 meals/week plus Cardinal Dollars; and 10 meals/week plus Cardinal Dollars. Each meal plan provides 5 bonus guest meals/quarter. Residents of Yost and Murray houses have a unique meal plan that includes an open kitchen.
PAYMENTS

All charges and credits from offices within the University are aggregated in a student’s individual account and presented on the University Bill. Student Financial Services sends the University Bill to students monthly. Students may view their account online 24 hours a day, seven days a week, via Stanford ePay at http://axess.stanford.edu. Payments can be made online through Stanford ePay or the bill and a payment stub may be printed.

Term fees, such as tuition, fees, room, board, and health insurance, are due and must be received (not postmarked) by 5:00 p.m. on the 15th of the month. Because the total amount due may change between issuance of the pre-term bill and the start of the academic term due to student-initiated actions or adjustments to financial aid or graduate support, students should check their bill in Stanford ePay on or before the fee-payment deadline and remit payment for any remaining balance due.

After the start of the term, adding units may result in additional tuition charges. Other fees, such as room damage repair charges, petition fees, late fees, lab fees, and other miscellaneous fees, are due after they are billed. Fees may be paid: via Stanford ePay; by mail at 632 Serra Street, Room 150, Stanford, CA 94309-6036; in person at the Cashier’s Office, Maude Modular, 632 Serra Street, Room 150; or at the 24-hour secure drop box on the wall outside the staff entrance to Maude. The Cashier’s Office is open from 8:00 a.m. to 5:00 p.m., Monday through Friday, excluding University holidays and the second Tuesday of the month. Payments received in the drop box after 5:00 p.m. are processed the following business day.

ACCOUNT PENALTIES

Late Fees—At the time of press, the current late fee policy is under review. For details, see http://sfs.stanford.edu/.

Holds—Accounts past due more than 30 days are placed on hold. Holds block transcripts, diplomas, and enrollment eligibility.

Nonsufficient Funds—An administrative fee of $25 is assessed for each nonsufficient-funds return by the bank. Checks returned NSF are automatically re-presented to the bank for payment. Repeated incidents of NSF returns for a customer may result in suspension of check writing privileges and possible collection actions taken.

FORMS OF PAYMENT

Stanford accepts the following forms of payment: personal check, cashier’s check, money order, travelers checks in U.S. funds drawn on U.S. banks, cash, wire transfer (recommended for foreign students), and scholarship or loan proceeds endorsed to Stanford University. Stanford does not accept postdated checks. Payment by credit or debit card is accepted through Stanford ePay. See http://sfs.stanford.edu/wiretransfer for wire transfer instructions.

REFUNDS

TUITION

Students who withdraw from the University before the end of a term may be eligible to receive refunds of portions of their tuition as described below.

ANNULLED REGISTRATION

Students who take a leave of absence from the University voluntarily before the first day of instruction may have their registrations annulled. Tuition is refunded in full. Such students are not included in University records as having registered for the term and new students will not secure any privileges for admission for any subsequent quarter as returning students. An annulment does not automatically cancel health coverage unless the annulment is granted before the first day of instruction. Financial aid recipients should be aware that a proportion of any refund is returned to the various sources of aid.

CANCELLATION OF REGISTRATION OR SUSPENSION FOR CAUSE

Students who have their registrations canceled or are suspended from the University for cause receive refunds on the same basis as those receiving leaves of absence unless otherwise specified in the disciplinary action taken. A student whose registration is canceled less than one week after the first day of instruction for an offense committed during a preceding quarter receives a full refund of tuition fees.

INSTITUTIONAL INTERRUPTION OF INSTRUCTION

It is the University’s intention to do everything reasonably possible to avoid taking the actions described in this paragraph. However, should the University determine that continuation of some or all academic and other campus activities is impracticable, or that their continuation involves a high degree of physical danger to persons or property, activities may be curtailed and students requested or required to leave the campus. In such an event, arrangements will be made as soon as possible to offer students the opportunity to complete their courses, or substantially equivalent work, so that appropriate credit may be given. Alternatively, the University may determine that students will receive refunds on the same basis as those receiving leaves of absence, or on some other appropriate basis.

LEAVE OF ABSENCE

A student in good standing who desires to take a leave of absence from the University after the first day of instruction, but before the end of the first 60 percent of the quarter, may file a petition for a leave of absence and tuition refund with the Office of the University Registrar. A leave of absence after the first 60 percent of the quarter is only granted for approved health and emergency reasons. Students granted a leave of absence are shown on the University transcript as having registered for the term. Courses in which the student was enrolled after the drop deadline will appear on the student’s record and will show the symbol “W” (withdrew). Undergraduates who take an approved leave (for a maximum of two years) while in good standing may enroll in the University for a subsequent quarter with the privileges of a returning student. Graduate students are subject to special registration requirements (see Leave of Absence in the “Graduate Degrees” section of this bulletin).

TUITION REFUND SCHEDULE

Students who take an approved leave of absence are eligible for a tuition refund during the first 60 percent of the quarter. Refunds are calculated on a per diem basis (including weekends and University holidays) starting the first day of instruction of each quarter. Tuition will be charged on a daily basis (including weekends and holidays) through the first 60 percent of the quarter. After the first 60 percent of the quarter, students are liable for the full amount of tuition that they were charged. Health insurance charges are not refundable after the first day of instruction.
For example: an undergraduate, who was charged the tuition rate of $10,998 for Autumn Quarter, becomes ill and informs the Registrar’s Office on the 17th day of the quarter that he or she wants to take a leave of absence. If the petition is approved, the student is charged for 17 days of tuition (17 days x $134.12 per day) or $2,280.04. If the petition is approved, the student is charged for 17 days of tuition (17 days x $134.12 per day) or $2,280.04. 

Separate schedules exist for students paying the medical, law, graduate business, or summer session rates. These schedules are available at the Office of the University Registrar.

Tuition refunds are calculated based on the date that the student last attended classes. Students may not be entitled to any financial aid credits such as federal loans or University scholarships or grants that were previously placed on their accounts. The Financial Aid Office can confirm any amounts that may have been withdrawn from a student’s account as a result of not being enrolled.

The amount refundable based on the criteria outlined above, an overpayment of fees, or financial aid awards in excess of fees is presented on the University Bill in Axess. Refunds are processed routinely throughout the term, but students may also request immediate processing of a refund by filing a request through HelpSU, the University’s help request system at http://helpsu.stanford.edu. Tuition payments made to the University under certain specific tax benefit programs, prohibit tuition refunds to the student or donor. For more information about these programs, contact Student Financial Services.

A student can receive a refund by direct deposit. Students are advised to maintain up-to-date direct deposit details in Axess. Students who have not established direct deposit receive a check mailed to the mailing address as recorded in Axess. Checks for those without a mailing address are sent to the permanent home address.

Services regarding refunds may also be requested in person at Student Financial Services, Maude Module, 632 Serra Street, or by phone at (650) 723-2181, Monday through Friday, 8 a.m. to 5 p.m., except University holidays.

**ROOM AND MEAL PLAN REFUNDS**

Students assigned to a University residence are subject to the conditions of the University Residence Agreement. Under this agreement, single students and couples without children are required to live somewhere in the University residence system for the entire academic year. Students with children may give notice of termination of occupancy for the end of each academic term. Room refunds are made only when students move out of the residence system and withdraw from the University. Students in all-male fraternities or all-female sororities are billed directly by the fraternity or sorority, and refunds are arranged between the student and the fraternity or sorority. A meal plan refund is based on the date when a student moves out of his or her University residence. If a student uses the meal plan after that date, an additional daily charge will incur.

Any decision to refund prepaid room and meal plan charges or to waive liability for deferred charges shall ultimately be made at the sole discretion of the University. Students with questions about refunds should contact Housing Assignments (for room refunds) or the central office of Stanford Dining (for meal plan refunds).

**HOUSING**

University housing is available to enrolled Stanford students. Planning of educational programs, counseling and crisis intervention by residence deans, and administration of residence offices is coordinated for undergraduates by the department of Residential Education (see http://www.stanford.edu/dept/resedu/, or phone 650-725-2800), and for graduate students by the Graduate Life Office (see http://www.stanford.edu/group/glo/, or phone 650-723-1171).

Dining services, custodial services and maintenance are provided by Residential and Dining Enterprises (see http://www.stanford.edu/dept/hds/, or phone 650-723-2287).

Information on University housing assignments, options, policies, application procedures, and deadlines may be obtained from Housing Assignments, 630 Serra Street, Suite 110, Stanford University, Stanford, CA 94305-6034, or telephone (650) 725-2810. Information regarding off-campus housing, as well as the off-campus subsidized housing program may be obtained from Community Housing, 630 Serra Street, Suite 110, Stanford University, Stanford, CA 94305-6034, or telephone (650) 723-3906.

**UNDERGRADUATE STUDENT RESIDENCES**

**RESIDENTIAL EDUCATION PROGRAM**

The program in Residential Education provides for undergraduates certain dimensions of a college experience within a large research university. The essential conviction behind the Stanford residence program is that formal teaching, informal learning, and personal support in residences play an important role in a Stanford education. Residential Education programs extend the classroom into the residences and complement the academic curriculum with activities and experiences that contribute to students’ preparation for a life of leadership, intellectual engagement, citizenship, and service.

**ASSIGNMENT TO UNDERGRADUATE RESIDENCES**

Approximately 95 percent of undergraduates live in University housing (excluding students studying abroad during the academic year). All freshmen and transfers are required to live in University residences for educational reasons and are automatically assigned housing following admission. Residence assignments for continuing undergraduates are made on the basis of an annual lottery (called the Draw) and quarterly waiting lists. Undergraduates who enter Stanford as freshmen are guaranteed four years of University housing if they apply by the appropriate Draw deadlines and are willing to live anywhere on campus. Transfer students are guaranteed two or three years of housing, based on their entering class standing. For further information concerning housing eligibility, contact Housing Assignments, (650) 725-2810.

Undergraduate residences include traditional residence halls, language and culture residences, cross-cultural theme houses, student-managed and cooperative houses, apartments, suites, fraternities, and sororities.

**GRADUATE STUDENT RESIDENCES**

**RESIDENCE PROGRAM**

The University’s philosophy of graduate student housing is based on the premise that supporting high quality graduate scholarship and research is central to the mission of the University. By providing affordable housing in proximity to academic resources, the University creates an environment conducive to research and intellectual dialogue among students, their peers, and faculty members.

**Per Diem Tuition Charges for Students Who Take a Leave of Absence**

For example: an undergraduate, who was charged the tuition rate of $10,998 for Autumn Quarter, becomes ill and informs the Registrar’s Office on the 17th day of the quarter that he or she wants to take a leave of absence. If the petition is approved, the student is charged for 17 days of tuition (17 days x $134.12 per day) or $2,280.04.
ASSIGNMENT TO GRADUATE RESIDENCES

Approximately 60 percent of matriculated graduate students at the home campus live in University housing, and another five percent live in off-campus housing subsidized by the University. Residence assignments are made on the basis of an annual lottery and quarterly waiting lists. New matriculated single students and couples without children who apply for housing by the Lottery deadline and are willing to live in any residence for which they are eligible are guaranteed housing their first year at Stanford. New matriculated master’s students with children who apply by the Lottery deadline are assured two years of University housing while enrolled, and new matriculated doctoral students with children who apply by the Lottery deadline are assured six years of University housing while enrolled. At Stanford University, new matriculated students are students who are in a graduate program for the first time. Students starting a second graduate degree are not considered new students and therefore are not guaranteed housing.

Single graduate students may request assignment to graduate apartments and residence halls, or to spaces in six undergraduate cooperative houses.

One-, two-, and three-bedroom apartments are provided for couples without children and students with children, both graduate and undergraduate, based on student status and the number of dependents. Couple housing is available to students who are married and to students who have a same-sex or opposite-sex domestic partner. At Stanford University, a domestic partnership is defined as an established, long-term partnership with an exclusive mutual commitment in which the partners share the necessities of life and ongoing responsibility for their common welfare. Housing for students with children is available to married couples, domestic partners, and single parents who have dependent children living with them. Housing is not provided for extended families, including the parents and siblings of students, or live-in day care staff.

COMMUNITY HOUSING

Community Housing maintains computerized listings of private rooms, houses, and apartments in surrounding communities that are available to students desiring to live off-campus. Students must make rental arrangements directly with landlords. Information and publications on community housing may be obtained from Community Housing, 630 Serra Street, Suite 110, Stanford University, Stanford, CA 94305-6034, or telephone (650) 723-3906. During early September, temporary accommodations are available in student residence halls at a modest charge for students searching for off-campus housing for Autumn Quarter. Contact Summer Conference Services for more information at (650) 725-1429.

RESIDENCE DEANS

Residence Deans provide assistance to on- and off-campus students. They can advise students about academic and personal matters, occasionally intervene directly in behavioral problems/mental health concerns, and assist with personal emergencies. Advice is also available on issues of academic probation or suspension, leaves of absence, special concerns of women or minorities, and administrative matters. Residence Deans work closely with the Dean of Students and other University offices. They are assigned to specific residences and to off-campus students; for further information, undergraduates should call Residential Education at (650) 725-2800, and graduate students should call the Graduate Life Office at (650) 723-1171.
Undergraduate Degrees and Programs

DEGREE PROGRAMS

BACHELOR OF ARTS (B.A.), BACHELOR OF SCIENCE (B.S.)

Stanford University confers the degree of Bachelor of Arts (B.A.) or the degree of Bachelor of Science (B.S.) on those candidates who have been recommended by the Committee on Undergraduate Standards and Policy (C-USP), who have applied in advance for conferral of the degree, and who have fulfilled the following requirements:

1. A minimum of 180 units of allowable University work. (As described below, units above the allowable limits for activity courses and for courses taken on a satisfactory/no credit and credit/no credit basis cannot be counted towards the 180-unit minimum.)
2. The Writing, General Education, and Language Requirements (see below).
3. Curricular requirements of at least one major department or program and the recommendation of the department(s). (Descriptions of curricular and special degree requirements are included in each department’s section of this bulletin.)
4. Students admitted as freshmen Autumn 2001 and thereafter — A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 90 units in resident work and who have completed the General Education, Writing, and Language Requirements, as well as all major/minor requirements, may petition for a waiver of the last quarter-in-residence requirement.
5. Students admitted as freshmen prior to Autumn 2001 and students admitted as transfers — A minimum of 90 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 90 units in resident work and who have completed the General Education, Writing, and Language Requirements, as well as all major/minor requirements, may petition for a waiver of the last quarter-in-residence requirement.

Stanford confers the Bachelor of Science degree on candidates who fulfill these requirements in the School of Earth Sciences, in the School of Engineering, or in the departments of Applied Physics, Biological Sciences, Chemistry, Mathematics, or Physics in the School of Humanities and Sciences. The University also awards B.S. degrees to candidates in the Program in Science, Technology, and Society; in the Program in Mathematical and Computational Science; in the Program in Symbolic Systems; and, when appropriate, in the Program for Individually Designed Majors. Candidates who fulfill these requirements in other schools or departments receive the Bachelor of Arts degree.

Students who complete the requirements for two or more majors, which ordinarily would lead to the same degree (B.A. or B.S.), should review “The Major” section of this bulletin to ensure that they have an understanding of the requirements for multiple or secondary majors.

BACHELOR OF ARTS AND SCIENCE (B.A.S.)

The University confers the degree of Bachelor of Arts and Science (B.A.S.) on candidates who have completed, with no overlapping courses, the curricular requirements of two majors which ordinarily would lead to different bachelor’s degrees (that is, a Bachelor of Arts degree and a Bachelor of Science). These students must have applied in advance for graduation with the B.A.S. degree instead of the B.A. or B.S. degree, been recommended by the C-USP, and have fulfilled requirements 1, 2, and 4/5 above in addition to the requirements for multiple majors.

Students who cannot meet the requirements for both majors without overlapping courses are not eligible for the B.A.S., but may apply to have a secondary major recorded on their transcripts. (See “The Major” section below.)

DUAL BACHELOR’S DEGREES (CONCURRENT B.A. AND B.S.)

A Stanford undergraduate may work concurrently toward both a B.A. and a B.S. degree. To qualify for both degrees, a student must complete:

1. A minimum of 225 units of University work. (As described below, units above the allowable limits for activity courses and for courses taken on a satisfactory/no credit and credit/no credit basis cannot be counted towards the 225 minimum.)
3. The curricular requirements of two majors (one of which leads to a Bachelor of Arts degree and the other to a Bachelor of Science degree).
4. Students admitted as freshmen Autumn Quarter 2001 and thereafter — A minimum of 180 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 180 units in resident work and who have completed the General Education, Writing, and Language Requirements, as well as all major/minor requirements, may petition for a waiver of the last quarter-in-residence requirement.
5. Students admitted as freshmen prior to Autumn Quarter 2001 and students admitted as transfers — A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 135 units in resident work and who have completed the General Education, Writing, and Language Requirements, as well as all major/minor requirements, may petition for a waiver of the last quarter-in-residence requirement.

A student interested in dual bachelor’s degrees should file a “Statement of Intention to Declare Dual Degrees” with the University Registrar’s Office no later than two quarters in advance of completing the program. The statement is submitted on a standard petition form along with recommendations of appropriate representatives of the two departments whose major requirements the student is expecting to fulfill.

Students who do not meet the higher unit and residence requirements of the dual degree option may be eligible instead for the B.A.S. degree as described above.

SECOND BACHELOR’S DEGREE

Stanford does not award a second Bachelor of Arts degree to an individual who already holds a Bachelor of Arts, nor a Bachelor of Science degree to an individual who already holds a Bachelor of Science degree. However, the holder of a Bachelor of Arts degree from Stanford may apply to the Subcommittee on Academic Standing for admission to candidacy for a Bachelor of Science degree, and the holder of a Bachelor of Science degree from Stanford may apply for candidacy for a Bachelor of Arts degree. The Subcommittee on Academic Standing may determine whether the application for a second degree will be approved and/or the conditions a student must meet in order to be allowed to earn a second degree. A recommendation of the major department for the second bachelor’s degree must accompany the application.

Generally, a holder of a B.A. or B.S. degree may not apply for the Bachelor of Arts and Sciences degree, although a student may submit a petition for exception. The Office of the University Registrar’s Degree Progress section reviews these petitions. A student approved for this program may register as an undergraduate and is subject to the current rules and regulations affecting undergraduates. Requirements for a second Stanford bachelor’s degree are the same as those described above for dual bachelor’s degrees.

COTERMINAL BACHELOR’S AND MASTER’S DEGREES

The coterminal degree program allows undergraduates to study for a master’s degree while completing their bachelor’s degree(s) in the same or a different department. Undergraduates with strong academic records may apply for admission to a coterminal master’s program upon completion of 120 units, but no later than the quarter prior to the expected completion
of the undergraduate degree. Full-time enrollment during Summer Quarters, as well as allowable undergraduate transfer credit, are also counted towards quarters of under graduate study. Students who wish to apply for a master’s program after these deadlines must apply through the regular graduate admissions process.

To apply for admission to a coterminal master’s program, students must submit to the prospective graduate department the following: coterminal application, statement of purpose, preliminary program proposal, two letters of recommendation from Stanford professors, and a current Stanford transcript. Graduate Record Examination (GRE) scores or other requirements may be specified by the prospective department.

For coterminal students, the quarter following completion of 12 full-tuition undergraduate quarters is identified as the first graduate quarter for tuition assessment. Beginning with this quarter, coterminal students are subject to graduate student policies and procedures (including those described in the “Graduate Degrees” section of this bulletin) in addition to undergraduate minimum progress standards. These policies include continuous registration or leaves of absence for quarters not enrolled and minimal progress guidelines.

In the first graduate quarter, a coterminal student is assigned an adviser in the master’s department for assistance in planning a program of study to meet the requirements for the master’s degree. The plan is outlined on the Program Proposal for a Master’s Degree, which is approved by the master’s department by the end of the first graduate quarter. Authorizations for master’s programs expire three calendar years from the first graduate quarter. An extension requires review of academic performance by the department.

The specific University residency, unit requirement, and additional policies for a bachelor’s/master’s program are described under Residency and Unit Requirements in Coterminal Programs in the “Graduate Degrees” section of this bulletin.

Conferment of each degree is applied for separately by the deadlines given in the University Time Schedule. The master’s degree must be conferred simultaneously with, or after, the bachelor’s degree.

DEGREE REQUIREMENTS

A LIBERAL EDUCATION

As do all major universities, Stanford provides the means for its undergraduates to acquire a liberal education, an education that broadens the student’s knowledge and awareness in each of the major areas of human knowledge, that significantly deepens understanding of one or two of these areas, and that prepares him or her for a lifetime of continual learning and application of knowledge to career and personal life.

The undergraduate curriculum at Stanford allows considerable flexibility. It permits each student to plan an individual program of study that takes into account personal educational goals consistent with particular interests, prior experience, and future aims. All programs of study should achieve some balance between depth of knowledge acquired in specialization and breadth of knowledge acquired through exploration. Guidance as to the limits within which that balance ought to be struck is provided by the University’s General Education Requirements and by the requirements set for major fields of study.

These educational goals are achieved through study in individual courses that bring together groups of students examining a topic or subject under the supervision of scholars. Courses are assigned credit units. To earn a bachelor’s degree, the student must complete at least 180 allowable units and, in so doing, also complete the Writing Requirement, the General Education Requirements, the Language Requirement, and the requirements of a major.

The purpose of the Writing Requirement is to promote effective communication by ensuring that every undergraduate can write clear and effective English prose. Words are the vehicles for thought, and clear thinking requires facility in writing and speech.

The Language Requirement ensures that every student gains a basic familiarity with a foreign language. Foreign language study extends the student’s range of knowledge and expression in significant ways, providing access to materials and cultures that otherwise would be out of reach.

The General Education Requirements provide guidance toward the attainment of breadth and stipulate that a significant share of a student’s work must lie outside an area of specialization. These requirements ensure that every student is exposed to different ideas and different ways of thinking. They enable the student to approach and to understand the important “ways of knowing” to assess their strengths and limitations, their uniqueness, and, no less important, what they have in common with others.

Depth, the intensive study of one subject or area, is provided through specialization in a major field. The major relates more specifically to a student’s personal goals and interests than do the general requirements outlined above. Stanford’s curriculum provides a wide range of standard majors through its discipline-oriented departments, a number of interdisciplinary majors in addition to department offerings, and the opportunity for students to design their own major programs.

Elective courses, which are not taken to satisfy requirements, play a special role in tailoring the student’s program to individual needs. For most students, such courses form a large portion of the work offered for a degree. Within the limitations of requirements, students may freely choose any course for which previous studies have prepared them.

Following are more detailed descriptions of these various requirements and the rationales upon which they are based.

THE GENERAL EDUCATION REQUIREMENTS

PURPOSE

The General Education Requirements are an integral part of undergraduate education at Stanford. Their purpose is: 1) to introduce students to a broad range of fields and areas of study within the humanities, social sciences, natural sciences, applied sciences, and technology; and 2) to help students prepare to become responsible members of society. Whereas the concentration of courses in the major is expected to provide depth, the General Education Requirements have the complementary purpose of providing breadth to a student’s undergraduate program. These requirements are also intended to introduce students to the major social, historical, cultural, and intellectual forces that shape the contemporary world.

Fulfillment of the General Education Requirements in itself does not provide a student with an adequately broad education any more than acquiring the necessary number of units in the major qualifies the student as a specialist in the field. The major and the General Education Requirements are meant to serve as the nucleus around which the student is expected to build a coherent course of study by drawing on the options available among the required and elective courses.

Information regarding courses that have been certified to fulfill the General Education Requirements, and regarding a student’s status in meeting these requirements, is available at the Office of the University Registrar. Course planning and advising questions related to the General Education Requirements should be directed to Undergraduate Advising and Research.

It is the responsibility of each student to ensure that he or she has fulfilled the requirements by checking in Axess within the Undergraduate Progress function or by checking with the Office of the University Registrar. This should be done at least two quarters before graduation.

Students should be very careful to note which set of General Education Requirements apply to them. The date of matriculation at Stanford determines which requirements apply to an individual student.

During Autumn Quarter 2004-05, the Academic Senate approved modifications to undergraduate General Education Requirements that become effective Autumn Quarter 2005-06 for all matriculated undergraduates who entered Stanford in Autumn Quarter 1996 and thereafter. The purpose of these modifications was 1) to give students a fuller and more articulate understanding of the purposes of the requirements and of a liberal arts education that these requirements embody; 2) to make a place in the curriculum for ethical reasoning to help make students aware of how pervasive ethical reasoning and value judgments are throughout the curriculum, and 3) to provide some greater freedom of choice by reducing the GERs by one course.
AREA REQUIREMENTS

The following structure for General Education Requirements became effective with the 2005-06 entering freshman and transfer class:

Introduction to the Humanities — one quarter introductory courses followed by two quarter thematic sequences.

Introduction to the Humanities builds an intellectual foundation in the study of human thought, values, beliefs, creativity, and culture. Courses introduce students to methods of inquiry in the humanities: interdisciplinary methods in Autumn Quarter and discipline-based methods in Winter and Spring quarters.

Disciplinary Breadth — requirement satisfied by completing five courses of which one course must be taken in each subject area.

Disciplinary Breadth gives students educational breadth by providing experience in the areas of Engineering and Applied Sciences, Humanities, Mathematics, Natural Sciences, and the Social Sciences.

Education for Citizenship — requirement satisfied by completing two courses in different subject areas; or completing two Disciplinary Breadth courses which also satisfy different Education for Citizenship subject areas.

Education for Citizenship provides students with some of the skills and knowledge that are necessary for citizenship in contemporary national cultures and participation in the global cultures of the 21st century. Education for Citizenship is divided into four subject areas: Ethical Reasoning, the Global Community, American Cultures, and Gender Studies.

Ethical Reasoning — Courses introduce students to the pervasiveness, complexity, and diversity of normative concepts and judgments in human lives, discuss skeptical concerns that arise about normative practices, review ways in which people have engaged in ethical reflection, and consider ethical problems in light of diverse ethical perspectives.

The Global Community — Courses address the problems of the emerging global situation. They may compare several societies in time and space or deal in depth with a single society, either contemporary or historical, outside the U.S. Challenges of note: economic globalization and technology transfer; migration and immigration; economic development, health, environmental exploitation and preservation; ethnic and cultural identity; and international forms of justice and mediation.

American Cultures — Courses address topics pertaining to the history, significance, and consequences of racial, ethnic, or religious diversity in the culture and society of the U.S. Challenges of note: equity in education; employment and health; parity in legal and social forms of justice; preserving identity and freedom within and across communities.

Gender Studies — Courses address gender conceptions, roles, and relations, and sexual identity in a contemporary or historical context; they critically examine interpretations of gender differences and relations between men and women. Challenges of note: changing sexual and physiological realities in contemporary and historical perspective.

Courses certified as meeting the General Education Requirements must be taken for a letter grade and a minimum of 3 units of credit. A course may be certified as fulfilling only one subject area within the General Education Requirements; the one exception is that a course may be certified to fulfill an Education for Citizenship subject area in addition to a Disciplinary Breadth subject area.

Courses that have been certified as meeting the requirements are identified throughout this bulletin with the notational symbols listed below. A comprehensive list of certified courses also appears in the Time Schedule of Classes for that quarter.

Introduction to the Humanities
- IHUM-1 (formerly GER:1a): first-quarter course
- IHUM-2 (formerly GER:1b): second-quarter course
- IHUM-3 (formerly GER:1c): third-quarter course

Disciplinary Breadth
- DB-EngrAppSci (formerly GER:2b): Engineering and Applied Sciences
- DB-Hum (formerly GER:3a): Humanities
- DB-Math (formerly GER:2c): Mathematics
- DB-NatSci (formerly GER:2a): Natural Sciences
- DB-SocSci (formerly GER:3b): Social Sciences

Education for Citizenship
- EC-AmerCul (formerly GER:4b): American Cultures
- EC-GlobalCom (formerly GER:4a): Global Community
- EC-Gender (formerly GER:4c): Gender Studies
- EC-EthicReas (GER:4d): Ethical Reasoning

Continuing undergraduates who entered Stanford prior to Autumn 1996 may elect to complete either the set of Distribution Requirements in effect when they entered or the set of General Education Requirements effective Autumn 1996, revised Autumn 2005, and described above. Note: students will not, however, be permitted to mix the requirements of the two systems or to change from one system to the other after they have elected the system under which they wish to be monitored for graduation.

If the 1996 (revised 2005) program of General Education Requirements is chosen, only certified courses passed with a letter grade and taken for 3 or more units can fulfill the requirements.

CREDIT TRANSFER

Students may propose that work taken at another college or university be accepted in fulfillment of a General Education Requirement. In such cases, the Office of the University Registrar’s External Credit Evaluation staff determines, after appropriate faculty consultation, whether the work is comparable to any of the specifically certified courses or course sequences.

THE WRITING AND RHETORIC REQUIREMENT

All instructors at Stanford University expect students to express themselves effectively in writing and speech. The Writing and Rhetoric requirement helps students meet those high expectations.

All candidates for the bachelor’s degree, regardless of the date of matriculation, must satisfy the Writing and Rhetoric requirement. Transfer students are individually advised at the time of matriculation by the Office of the University Registrar’s External Credit Evaluation section and, if necessary, the Program in Writing and Rhetoric (PWR) as to their status with regard to the requirement.

The current Writing and Rhetoric requirement, effective beginning 2003, includes courses at three levels. The first two levels are described in more detail below. Writing-intensive courses that fulfill the third level, the Writing in the Major (WIM) requirement, are designated under individual department listings.

All undergraduates must satisfy the first-level Writing and Rhetoric requirement (WR 1) in one of three ways:
1. PWR 1: a course emphasizing writing and research-based argument.
2. SLE: writing instruction in connection with the Structured Liberal Education program.
3. Transfer credit approved by the Registrar’s External Credit Evaluation office for this purpose.

All undergraduates must satisfy the second-level Writing and Rhetoric Requirement (WR 2) in one of four ways:
1. PWR 2, a course emphasizing writing, research, and oral presentation.
2. SLE: writing instruction in connection with the Structured Liberal Education program.
3. A course offered through a department or program certified as meeting the WR 2 requirement by the Writing and Rhetoric Governance Board. These courses will be designated as DWR 2.
4. Transfer credit approved by the Office of the University Registrar’s External Credit Evaluation section for this purpose.

A complete listing of PWR 1 courses is available each quarter on the PWR web site at http://pwr.stanford.edu, and at the PWR office in Building 460, Room 223. Complete listings of PWR 2 and DWR 2 courses are available to students on the PWR web site the quarter before they are scheduled to complete the WR 2 requirement.

For a full description of the Program in Writing and Rhetoric (PWR), see the “Writing and Rhetoric, Program in” section of this bulletin under the School of Humanities and Sciences.

Students who matriculated prior to Autumn 2003 should consult previous issues of the Stanford Bulletin and the “Writing and Rhetoric, Program in” section of this bulletin under the School of Humanities and Sciences to determine what requirements apply.
THE LANGUAGE REQUIREMENT

To fulfill the Language Requirement, undergraduates who entered Stanford in Autumn 1996 and thereafter are required to complete one year of college-level study in a foreign language. Students may fulfill the requirement in any one of the following ways:

1. Complete three quarters of a first-year, 4-5 units language course at Stanford or the equivalent at another recognized post-secondary institution subject to current University transfer credit policies.

2. Score 4 or 5 on the Language Advanced Placement (AP) test in one of the following languages: Chinese, French, German, Japanese, Latin, or Spanish. Advanced Placement (AP) tests in foreign literature do not fulfill the requirement.

3. Achieve a satisfactory score on the SAT II Subject Tests in the following languages taken prior to college matriculation:
   - Chinese 630
   - Italian 630
   - French 640
   - Japanese 620
   - German 630
   - Korean 630
   - Latin 630
   - Hebrew 540
   - Spanish 630

4. Take a diagnostic test in a particular language which either:
   - a) Places them out of the requirement, or
   - b) Diagnoses them as needing one, two, or three additional quarters of college-level study. In this case, the requirement can then be fulfilled by passing the required number of quarters of college-level language study at Stanford or the equivalent elsewhere, or by retaking the diagnostic test at a later date and placing out of the requirement.

Written placements are offered online throughout the summer in Chinese, French, German, Italian, Japanese, Russian, Spanish, and Spanish for home background speakers.

For a full description of Language Center offerings, see the “Language Center” section of this bulletin under the school of Humanities and Sciences.

CREDIT

ADVANCED PLACEMENT

Stanford University allows up to 45 units of external credit toward graduation including work completed in high school as part of the College Entrance Examination Board (CEEB) Advanced Placement curriculum. The awarding of such credit is based on CEEB Advanced Placement test scores and is subject to University and department approval.

The faculty of a given department determine whether any credit toward the 180-unit requirement can be based on achievement in the CEEB Advanced Placement Program in their discipline. Stanford departments electing to accept the Advanced Placement (AP) credit are bound by these University policies:

1. Credit is usually granted for an AP score of 4 or 5. Usually, 10 quarter units are awarded (but occasionally fewer than 10). No more than 10 quarter units may be given for performance in a single examination.

2. Whether credit is to be given for an AP score of 3 is a matter for departmental discretion; up to 10 units may be awarded.

3. No credit may be authorized for an AP score lower than 3.

Performance on an AP exam can indicate the appropriate placement for continuing course work in that subject at Stanford. Students may not retake the diagnostic test at a later date and placing out of the requirement.

</table>

1. Chinese (Language and Culture) and Japanese (Language and Culture) will receive credit effective with students matriculating Autumn 2007-08 and thereafter.
2. A minimum score of 4 on both tests receive 5 quarter units. Credit for Economics will not be awarded effective with students matriculating Autumn 2007-08 and thereafter.
3. Physics C, Mechanics, will receive 4 units for a score of 3 or 5 effective with students matriculating Autumn 2007-08 and thereafter.
4. Physics C, both Mechanics and E&M, will receive 9 units for a score of 4 or 5 effective with students matriculating Autumn 2007-08 and thereafter.

Stanford University awards advanced placement credit for certain international advanced placement subject examinations. The international test subjects must match the content of the College Entrance Examination Board (CEEB) Advanced Placement test subjects that receive advanced placement credit.

ACTIVITY COURSES

For undergraduates who entered Autumn 1996 and thereafter, a maximum of 8 units of credit earned in activity courses, regardless of the offering department or if accepted as transfer units, count towards the 180 (225 if dual degrees are being pursued) units required for the bachelor’s degree. All activity courses are offered on a satisfactory/no credit basis.

COURSES TAKEN ON SATISFACTORY/NO CREDIT OR CREDIT/NO CREDIT BASIS

For undergraduates who entered Autumn 1996 and thereafter, a maximum of 36 units of credit (including activity courses) taken at Stanford or its overseas campuses for a “CR” or “S” grade may be applied towards the 180 (225 if dual degrees are being pursued) units required for the bachelor’s degree. For those who entered Stanford as transfer students in Autumn 1996 and thereafter, the maximum is 27 units.

Departments may also limit the number of satisfactory or credit courses
UNIVERSITY. The following policies apply to Concurrent Enrollment:

INTERNSHIP GUIDELINES
Undergraduate internships should not by themselves carry any credit. However, an individual student may arrange with a faculty member for a research or other academic project to be based on the internship. Arrangements between students and faculty regarding credit are expected to be made well in advance of the internship. Credit should be arranged within departmental rules for directed reading or independent study and should meet the usual department standards. No transfer credit is awarded for internships.

TRANSFER WORK
Academic credit for work done elsewhere will be allowed toward a Stanford bachelor’s degree under the following rules and conditions:
1. Credit may be granted for work completed at institutions in the U.S. only if the institutions are accredited.
2. Study in institutions outside the U.S., when validated by examination results, tutorial reports, or other official evidence of satisfactory work, may be credited toward a Stanford bachelor’s degree, subject to the approval of the credit evaluator and the appropriate departments.
3. Credit is officially allowed only after the student has been unconditionally admitted to Stanford.
4. Credit is allowed for work completed at institutions in the U.S. only on the basis of an official transcript received by the Registrar at Stanford directly from the institution where the credit was earned.
5. Credit from another institution will be transferred for courses which are substantially equivalent to those offered at Stanford University on the undergraduate level, subject to the approval of the credit evaluator. A maximum of 20 quarter units may represent courses which do not parallel specific courses at Stanford, again, subject to the approval of the credit evaluator as to quality and suitability.
6. The credit allowed at Stanford for one quarter’s work may not exceed the number of units that would have been permissible for one quarter if the work had been done at Stanford; for work done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence.
7. Credit is allowed at Stanford for work graded ‘A,’ ‘B,’ ‘C,’ or ‘Pass’ (where ‘Pass’ is equivalent to a letter grade of ‘C’ or above), but not for work graded ‘D’ or below.
8. No more than 45 (90 for transfer students) quarter units of credit for work done elsewhere may be counted toward a bachelor’s degree at Stanford.
9. Credit earned in military training and service is not transferable to Stanford, unless offered by an accredited college or university in the U.S. and evaluated as above by the credit evaluator.

CONCURRENT ENROLLMENT
Students may enroll concurrently at Stanford and at another college or university. The following policies apply to Concurrent Enrollment:
1. Students may not exceed 20 quarter units between both schools. This is the same unit maximum for undergraduate students at Stanford. (One semester credit or hour generally equals 1.5 quarter units.)
2. Satisfactory academic progress is determined only by Stanford courses and units. Transfer work completed at other institutions is not considered in this calculation.
3. Students are expected to consult with Transfer/External Credit Evaluation (630 Serra Street, Suite 120) if planning to transfer the work back to Stanford. Consultations should be completed prior to enrolling in the transfer institution.

THE MAJOR
The primary purpose of the major is to encourage each student to explore a subject area in considerable depth. This in-depth study complements the breadth of study promoted by the General Education Requirements and, in many cases, by a student’s choice of electives. Work in depth permits practice in critical analysis and the solving of problems. Because of its depth, such study also provides a sense of how knowledge grows and is shaped by time and circumstances. The structure of a major should be a coherent reflection of the logic of the discipline it represents. Ideally, the student should be introduced to the subject area through a course providing a general overview, and upper-division courses should build upon lower-division courses. The course of study should, if feasible, give the student the opportunity and responsibility of doing original, creative work in the major subject. Benefits of the major program are greatest when it includes a culminating and synthesizing experience such as a senior seminar, an undergraduate thesis, or a senior project.

REQUIREMENTS
Undergraduates must select a major by the end of their sophomore year. All undergraduate major programs listed in this bulletin, except for certain honors degree programs that require application and admission in advance, are open to all students. Students may use Axess to declare, drop, or exchange a major at any time. In some departments or programs, though, a late change could easily result in extending the period of undergraduate study. Students who have applied to graduate, wish to declare an individually designed major or pursue a dual B.A./B.S. degree, and coterminal students must use printed forms to select or change a major. Students requiring assistance should contact the Office of the University Registrar.
Check individual department or program listings in this bulletin for the undergraduate degrees offered and for specific major requirements. If an area of study has no baccalaureate degree, that discipline is not available as a regular undergraduate major.
Faculty set the minimum requirements for the major in each department. These requirements usually allow latitude for tailoring a major program to a student’s specific educational goals. The responsibility for developing a major program within department or program requirements lies ultimately with the individual student working in consultation with the major adviser.

MULTIPLE MAJORS
Although most students declare only one major, a student may formally declare more than one major within a single bachelor’s degree (B.A., B.S., or B.A.S.) program. The student may do that either at the time of initial major declaration or, as may be more advisable given the planning required to complete more than one major, by amending the original declaration. The student’s major departments or programs will have access routinely to all information pertinent to that student’s academic record (for example, course and grade information), and each is expected to provide advising and other assistance. Students may pick up appropriate information regarding major declarations from the Office of the University Registrar. To be awarded a bachelor’s degree with multiple majors, the student must fulfill the following requirements:
1. Formally declare all majors to the Office of the University Registrar.
2. Satisfy the requirements of each major without applying any course toward the requirements of more than one major or any minor unless:
   a) overlapping courses constitute introductory skill requirements (for example, introductory math or a foreign language);
   b) overlapping courses enable the student to meet school requirements (for example, for two majors within the School of Engineering). Currently, only the School of Engineering has school requirements for its undergraduate majors.

**LIMITS OF THE MAJOR**

In order to achieve the values of study in depth, a well-structured major should constitute at least one-third of a student’s program (55-65 units). To ensure the values of breadth, a major should comprise no more than two-thirds of a student’s program (115-125 units). And, to avoid intellectual parochialism, a major program should not require a student to take more than about one-third of his or her courses from within a single department.

Major requirements in cognate subjects essential to the structure of a given major should be counted as part of the major program in applying these guidelines. Department or school requirements designed to provide extra disciplinary breadth should not be counted.

For a limited number of qualified students, many departments and programs offer special programs leading to degrees with honors. A student may apply to the major department or program for acceptance into the honors program. Demands on the student may vary, but all honors programs encourage creative, independent work at an advanced level in addition to the major requirements.

The guidelines set forth here are deliberately general; implementation must take into account the specific needs of a student’s program and the nature of the discipline or disciplines involved. The exercise of responsibility in achieving the desired educational balance belongs first with the student, who, after all, has the strongest interest in the value of his or her education. It belongs secondarily to departments and major programs, which must set the requirements of competence in the many majors offered.

**SECONDARY MAJOR**

In some cases, students may complete course requirements for more than one major, but they may not meet the requirements outlined for the multiple major option. For example, the student may develop a course plan in which courses requisite for one major overlap with requirements for another. In these cases, the student may declare a secondary major which will result in the transcript bearing an annotation that the course requirements for that major have also been met. Secondary majors are not listed on the diploma.
DEGREES, HONORS, AND MINORS

CONFERRAL OF DEGREES

Upon recommendation to the Senate of the Academic Council by the faculty of the relevant departments or schools and the Committee on Undergraduate Standards and Policy, degrees are awarded four times each year, at the conclusion of Autumn, Winter, Spring, and Summer quarters. All diplomas, however, are prepared and awarded in Spring Quarter. Stanford University awards no honorary degrees.

Students must apply for conferral of an undergraduate or graduate degree by filing an Application to Graduate by the deadline for each term. The deadlines are published in the Time Schedule of Classes. A separate application must be filed for each degree program and for each conferral term. Applications are filed through Axess, the online service which allows students to update their administrative/academic records.

Requests for conferral are reviewed by the Office of the University Registrar and the student’s department, to verify completion of degree requirements. Course enrollment is required in the conferral term or the term immediately preceding. Students with unmet financial obligations resulting in the placement of a hold on their registration will not receive a transcript, statement of completion, degree certificate, or diploma until the hold is released by Student Financial Services.

Students are typically expected to apply to graduate during the term in which they expect to complete all of the requirements for a degree except the student’s thesis or internship. Courses taken in an independent study or research course approved by the department or program in the term immediately preceding conferral are acceptable toward degree requirements. Students who wish to withdraw a request for conferral or make changes to the Application to Graduate should notify the Office of the University Registrar in writing. Students who withdraw their graduation applications or fail to meet degree requirements must reapply to graduate in a subsequent term.

THE UNDERGRADUATE MINOR

Students completing a bachelor’s degree may elect to complete one or more minors in addition to the major. Minors must be officially declared by students no later than the deadline for their application(s) to graduate, according to declaration procedures developed and monitored by the Registrar. Earlier deadlines for declaration of the minor may be set by the offering school or department. Satisfactory completion of declared minors is noted on the students’ transcripts after degree conferral.

A minor is a coherent program of study defined by the department or degree program. It may be a limited version of a major concentration or a specialized subset of a field. A minor consists of no fewer than six courses of 3 or more units to a maximum of 36 units of letter-graded work, except where letter grades are not offered. Departments and degree programs establish the structure and requirements of each minor in accordance with the policy above and within specific guidelines developed by the deans of schools. Programs which do not offer undergraduate degrees may also make proposals to their cognizant deans to establish a minor. Requirements for each minor are described in the individual department or program listings in this bulletin.

Students may not overlap (double-count) courses for completing major and minor requirements, unless:
1. Overlapping courses constitute introductory skill requirements (for example, introductory math or a foreign language), or
2. Overlapping courses enable the student to meet school requirements (for example, for a major within the School of Engineering and a minor). Currently, only the School of Engineering has school requirements for its undergraduate majors.

Undergraduates use Axess to declare or drop a minor.

Students with questions about declaring minors or double-counting courses towards combinations of majors and/or minors should consult with the departments or programs involved or the Office of the University Registrar, 630 Serra Street, Suite 120.

BACCALAUREATE HONORS

With Distinction—In recognition of high scholastic attainment, the University, upon recommendation of a major department or program, awards the Bachelor’s Degree with Distinction. Distinction is awarded to 15% of the graduating class based on cumulative grade point averages. Distinction is calculated at the end of the Winter Quarter for each graduating class.

Students are also urged to consider the departmental honors programs that may give depth to their major study and to consider, as well, how the interdisciplinary honors programs might contribute to the quality of their undergraduate education.

Departmental Honors Programs—In recognition of successful completion of special advanced work, departments may recommend their students for honors in the major. Departmental honors programs demand independent creative work at an advanced level in addition to major requirements.

Interdisciplinary Honors Programs—In recognition of successful completion of honors program requirements, the following interdisciplinary programs can recommend students majoring in any field for honors in their program:

- Education
- Environmental Science, Technology, and Policy
- Ethics in Society
- Feminist Studies
- International Security Studies
- Humanities
- Latin American Studies
- Science, Technology, and Society

The interdisciplinary honors programs are designed to complement study in a department major. The requirements for these honors programs are described in the department sections of this bulletin.

Foreign Language Proficiency—The notation “proficiency in (language)” appears on the official transcripts of those students whose levels of achievement are found by procedures established by the language department to be roughly equivalent to knowledge an excellent student can be expected to demonstrate late in the third quarter of the third year of study in that language.
Graduate Degrees

GENERAL REQUIREMENTS

For each Stanford advanced degree, there is an approved course of study which meets University and department requirements. The University’s general requirements, applicable to all graduate degrees at Stanford, are described below. University requirements pertaining to only a subset of advanced degrees are described in the “Degree-Specific Requirements” section.

See the “Graduate Programs” section of each department’s listing for specific department degree requirements. Additional information on professional school programs is available in the bulletins of the Graduate School of Business, the School of Law, and the School of Medicine.

ENROLLMENT REQUIREMENTS

Graduate students must enroll in courses for all terms of each academic year (Autumn, Winter, and Spring quarters or, for Law students, Autumn and Spring semesters) from the admission term until conferment of the degree. The only exception to this requirement occurs when the student is granted an official leave of absence. Failure to enroll in courses for a term during the academic year without taking a leave of absence results in denial of further enrollment privileges unless and until reinstatement to the degree program is granted and the reinstatement fee paid. Registration in Summer Quarter is not required and does not substitute for registration during the academic year. Students possessing an F1 or J1 student visa may be subject to additional course enrollment requirements in order to retain their student visas.

In addition to the above requirement for continuous registration during the academic year, graduate students are required by the University to be registered:

1. In each term during which any official department or University requirement is fulfilled, including qualifying exams or the University oral exam.
2. In any term in which a University dissertation/thesis is submitted or at the end of which a graduate degree is conferred, unless the student was registered the prior term.
3. Normally, in any term in which the student receives financial support from the University.
4. In any term for which the student needs to use University facilities.
5. For international students, in any term of the academic year (summer may be excluded) for which they have non-immigrant status (i.e., a J-1 or F-1 visa).

Individual students may also find themselves subject to the registration requirements of other agencies (for example, external funding sources such as federal financial aid). Course work and research are expected to be done on campus unless the department gives prior approval for study in absentia.

LEAVES OF ABSENCE

Graduate students who do not meet the requirement for continuous registration during the academic year must obtain an approved leave of absence, in advance, for the term(s) they will not be registered. The leave of absence must be reviewed for approval by the chair or director of graduate studies of the student’s major department and, if the student is in the United States on a foreign student visa, by the Bechtel International Center. The granting of a leave of absence is at the discretion of the department and subject to review by the Office of the University Registrar.

New graduate students and approved coterminal students may not take a leave of absence during their first quarter. Coterminal students are required to register their first graduate quarter. However, new Stanford students may request a deferment from the department.

Leaves of absence are granted for a maximum of one calendar year. Leaves requested for a longer period are approved only in exceptional circumstances (for example, mandatory military service). An extension of leave (a maximum of one year) for students in master’s programs or for doctoral students is approved only in unusual circumstances. Extension requests must be made before the expiration of the original leave of absence. Leaves of absence may not exceed a cumulative total of two years.

Students on leave of absence are not registered at Stanford and, therefore, do not have the rights and privileges of registered students. They cannot fulfill any official department or University requirements during the leave period.

Students on leave may complete course work for which an Incomplete grade was awarded in a prior term and are expected to comply with the maximum one-year time limit for resolving incompletes; a leave of absence does not stop the clock on the time limit for resolving incompletes.

REINSTATEMENT

Students who fail to be either enrolled by the study list deadline or approved for a leave of absence by the start of a term are required to apply for reinstatement through the Graduate Admissions Office before they can return to the same degree program. The decision to approve or deny reinstatement is made by the student’s department or program. Departments are not obliged to approve reinstatements of students. Reinstatement decisions are made in the discretion of the department or the program and may be based on the applicant’s academic status when last enrolled, activities while away from campus, the length of the absence, the perceived potential for successful completion of the program, and the ability of the department to support the student both academically and financially, as well as any other factors or considerations regarded as relevant by the department or program.

Reinstatement information is available from the Graduate Admissions Office. A fee is required. Reinstatement applications must be submitted prior to the first day of the term for which reenrollment is requested if the student is registering for courses.

RESIDENCY POLICY FOR GRADUATE STUDENTS

Each type of graduate degree offered at Stanford (for example, Master of Science, Doctor of Philosophy) has a residency requirement based on the number of academic units required for the degree. These residency requirements and the maximum allowable transfer units for each degree type are listed below.

The unit requirements for degrees can represent solely course work required for the degree or a combination of course work, research, and a thesis or dissertation. Academic departments and schools offering degrees may establish unit requirements that are higher than the minimum University residency requirement, but they may not have a residency requirement that is lower than the University standard. In addition to the University’s residency requirement based on a minimum number of units for each degree, the School of Medicine and the Graduate School of Business may establish residency requirements based on the number of quarters of full-time registration in which students are enrolled to earn a degree. However, in no case may a student earn fewer units than the University minimum for each degree. All residency requirements are published in the Stanford Bulletin. Students should consult the Stanford Bulletin or their academic department to determine if their degree program has residency requirements that exceed the minimum.

Students eligible for Veterans Affairs educational benefits should refer to the Veterans Benefits section of “Admissions and Financial Aid” above.

It continues to be Stanford University’s general policy that units are applicable toward only one degree. Units may not normally be duplicated or double-counted toward the residency requirement for more than one degree. Exceptions to this general policy for specified combinations of degree types may be approved by agreement of the Vice Provost and Dean of Research and Graduate Policy and the deans of the schools affected, with review by the Committee on Graduate Studies.

Only completed course units are counted toward the residency requirement. Courses with missing, incomplete, in progress, or failing grades do not count toward the residency requirement.

Terminal Graduate Registration (TGR) is available to graduate students who have met all of the following criteria: (1) completion of the
University’s residency requirement; (2) completion of all course work required for the degree with grades recorded in all courses; (3) completion of any qualifying examinations or research work required by the school or department; (4) establishment of a reading committee for the dissertation; and (5) completion of any other requirements stipulated by the students’ academic department.

This policy is effective for students who enter graduate programs beginning in the Autumn Quarter of the 2001-02 academic year. (For information about the residency policy in effect for students who entered prior to Autumn Quarter 2001, see the Stanford Bulletin 2000-01.)

* Units completed at Stanford toward a master’s degree or accepted as transfer credit in an engineering discipline may be used toward the 90-unit residency requirement for the Engineer degree.
† Students in the Ph.D. programs in the Biomedical Sciences usually require substantially more than 135 units.
‡‡ Up to 45 units completed at Stanford toward a master’s degree or accepted as transfer credit may be used toward the 135 required for the doctoral degree. At least 90 units of work at Stanford are necessary to complete the 135 units.
†† Students eligible for Veterans Affairs educational benefits should refer to the Veterans Benefits section of “Admissions and Financial Aid” above.

### RESIDENCY REQUIREMENT IN COTERMINAL PROGRAMS

The University minimum requirements for the coterminal bachelor’s/master’s program are 180 units for the bachelor’s degree plus 45 (or higher departmental requirement, as determined by each graduate department) unduplicated units for the master’s degree. The requirements for the coterminal program with dual undergraduate degrees are 225 units for the two bachelor’s degrees, and 45 units for the master’s degree. For the 45-unit University minimum for the master’s degree, all courses must be at or above the 100 level and 50 percent must be courses designated primarily for graduate students (typically at least the 200 level). Department requirements may be higher. Units for a given course may not be counted to meet the requirements of more than one degree, that is, no units may be double-counted. No courses taken more than two quarters prior to admission to the coterminal master’s program may be used to meet the 45-unit University minimum requirement for the master’s degree.

**Tuition Rate for Graduate Engineering** — The tuition rate for graduate Engineering is higher than for undergraduate programs. Students enrolled in a coterminal program in the School of Engineering begin to pay the higher graduate Engineering tuition rate after 12 full-tuition undergraduate quarters.

Coterminal students in the School of Engineering, with two undergraduate degrees, are assessed the graduate Engineering tuition rate in the quarter after they have been enrolled for 15 full-tuition quarters. Engineering coterminal students would also start paying the graduate Engineering tuition rate if any undergraduate degree is conferred or if they are granted any graduate aid. Once charged under the graduate Engineering tuition schedule, the tuition will not revert thereafter to the undergraduate rate.

For additional information on the coterminal bachelor’s/master program, see Coterminal Bachelor’s and Master’s Degrees in the “Undergraduate Degrees” section of this bulletin.

### TRANSFER CREDIT FOR GRADUATE WORK DONE ELSEWHERE

After at least one quarter of enrollment, students pursuing an Engineer, D.M.A., or Ph.D. may apply for transfer credit for graduate work done at another institution. Engineer candidates who also earned their master’s at Stanford are not eligible for transfer residency credit, nor are any master’s degree students.

Students enrolled at Stanford who are going to study elsewhere during their degree program should obtain prior approval of any transfer credit sought before their departure. (One semester unit or hour equals 15 quarter units.)

The following criteria are used by the department in determining whether, in its discretion, it will award transfer credit for graduate-level work done at another institution:

1. Courses should have comparable Stanford counterparts that are approved by the student’s department. A maximum of 12 units of courses with no Stanford counterparts and/or research units may be granted transfer credit.
2. The student must have been enrolled in a student category which yields graduate credit. The maximum amount of credit given for extension and nonmatriculated (non-degree) courses is one quarter. No transfer credit is given for correspondence work.
3. Courses must have been taken after the conferral of the bachelor’s degree. The only exception is for work taken through programs structured like the Stanford coterminal bachelor’s/master’s program.
4. Courses must have been completed with a grade point average (GPA) of 3.0 (B) or better. Pass grades are accepted only for courses for which letter grades were not an option and for which the standard of passing is ‘B’ quality work.
5. Courses must have been taken at a regionally accredited institution in the U.S. or at an officially recognized institution in a foreign country. Courses taken at foreign universities must be at the level of study comparable to a U.S. graduate program.

The Application for Transfer Credit for Graduate Work Done Elsewhere is reviewed by the department and the Office of the University Registrar.

### GRADUATE UNITS REQUIREMENTS

The University’s expectation is that the units counted towards all graduate degrees are primarily in graduate courses. All units must be in courses at or above the 100 level and at least 50 percent of those must be courses designated primarily for graduate students (typically at least the 200 level). Units earned in courses below the 100 level may not be counted towards the minimum unit requirement for the master’s degree. Department specifications for the level of course work accepted for a particular master’s degree program may be higher than the University’s specifications.

### POLICY ON MINIMUM PROGRESS REQUIREMENTS FOR GRADUATE STUDENTS

The academic requirements for graduate students include timely completion of University, department, and program requirements, such as admission to candidacy, successful completion of qualifying exams, and so on. Graduate students must also meet the following standards of minimum progress as indicated by units and grades. (These standards apply to all advanced degree programs except the School of Business Ph.D., and the M.B.A., J.D., L.L.M., J.S.M., J.S.D., M.D., and M.L.A., which apply to all advanced degree programs except the School of Business Ph.D.)

Graduate students enrolled for 11 or more units must pass at least 8 units per term by the end of each term. Those registered for fewer than 11 units must pass at least 6 units per term by the end of each term, unless other requirements are specified in a particular case or for a particular program. In addition, graduate students must maintain a 3.0 (B) grade point average overall in courses applicable to the degree.

Department requirements for minimum progress that set a higher standard for units to be completed, or a higher or lower standard for grade point average to be maintained, take precedence over the University policy; any such different standards must be published in the Stanford Bulletin.

Students identified as not meeting the requirements for minimum
progress are reviewed by their departments to determine whether the problem lies with administrative matters such as reporting of grades or with academic performance. Students have the opportunity to explain any special circumstances. Approval for continuation in the degree program is contingent on agreement by the student and department to a suitable plan to maintain appropriate progress in subsequent quarters. Dismissal of graduate students is addressed in separate guidelines.

Graduate students who have been granted Terminal Graduate Registration (TGR) status must enroll each term in the TGR course (801 for master’s and Engineer programs or 802 for doctoral programs) in their department in the section appropriate for the adviser. An ‘N’ grade signifying satisfactory progress must be received each quarter to maintain registration privileges. An ‘N-’ grade indicates unsatisfactory progress. The first ‘N-’ grade constitutes a warning. A second consecutive ‘N-’ grade will normally cause the department to deny the student further registration until a written plan for completion of degree requirements has been approved by the department. Subsequent ‘N-’ grades are grounds for dismissal from the program.

The Childbirth Policy—Women graduate students, including students in professional schools, anticipating or experiencing a birth are eligible for an academic accommodation period of up to two consecutive academic quarters (in total) before and after the birth, during which the student may postpone course assignments, examinations, and other academic requirements. During this period, they are eligible for full-time enrollment and retain access to Stanford facilities, Cardinal Care, and Stanford housing. Women graduate students supported by fellowships, teaching assistantships, and/or research assistantships are excused from regular TA or RA duties for a period of six weeks during which they continue to receive support. Students do not receive a stipend or salary if none was received previously, but are eligible for the academic accommodation period and the one quarter extension of academic milestones. For more information and a complete statement of the policy, see http://www Stanford.edu/dept/DoR/GSH/childbirth.html.

GUIDELINES FOR DISMISSAL OF GRADUATE STUDENTS FOR ACADEMIC REASONS

Admission to graduate programs at Stanford is highly selective. It is anticipated that every admitted student will be able to fulfill the requirements for the advanced degree. This document provides guidelines to be used in the unusual circumstance that a department must consider dismissal of a graduate student for academic reasons. These guidelines apply to all advanced degree programs except those in the schools of Law and Business and the M.D. program in the School of Medicine, which follow guidelines issued by the respective schools.

The principal conditions for continued registration of a graduate student are the timely completion of the University, department, and program requirements for the degree, and fulfillment of minimum progress requirements. The guidelines that follow specify procedures for dismissal of graduate students who are not meeting these conditions. In such cases, a departmental committee (hereafter “the committee”), whether the department’s committee of the faculty or other committee authorized to act on the department’s behalf such as the departmental graduate studies committee, will:

1. Where possible and as early as possible, warn the student, in writing, of the situation and deficiency. A detailed explanation of the reason for the warning should be provided.
2. Consider extenuating circumstances communicated by the student.
3. Decide the question of dismissal by majority vote of the committee (with at least three faculty members participating in the committee’s deliberation), and communicate the decision to the student in writing.
4. Place a summary of department discussions, votes, and decisions in the student’s file.
5. Provide students the opportunity to examine their department files, if requested.
6. Provide students with information on their rights to appeal under the Student Academic Grievance Procedures. (These are included in the Stanford Bulletin.)

Careful records of department decisions safeguard the rights of both students and faculty.

ADDITIONAL SPECIFICS FOR DEGREES WITH CANDIDACY

Before Candidacy—The committee may vote to dismiss a student who is not making minimum progress or completing requirements in a timely way before review for admission to candidacy. Before considering dismissal, the committee should communicate with the student (which may include a meeting with the student) concerning his or her academic performance and how to correct deficiencies, where such deficiencies are deemed correctable.

In a review for admission to candidacy, if the committee votes not to recommend the student for admission to candidacy, the vote will result in the dismissal of the student from the program. The department chair, or Director of Graduate Studies, or the student’s adviser shall communicate the department’s decision to the student in writing and orally. The student may submit a written request for reconsideration. The committee shall respond in writing to the request for reconsideration; it may decline to reconsider its decision.

During Candidacy—When a student admitted to candidacy is not making minimum progress or not completing University, department, or program requirements in a timely manner, the student’s adviser, the Director of Graduate Studies, or department chair, and other relevant faculty should meet with the student. A written summary of these discussions shall be sent to the student and the adviser and added to the student’s department file. The summary should specify the student’s academic deficiencies, the steps necessary to correct them (if deemed correctable), and the period of time that is allowed for their correction (normally one academic quarter). At the end of the warning period, the committee should review the student’s progress and notify the student of its proposed actions. If the student has corrected the deficiencies, he or she should be notified in writing that the warning has been lifted.

If the deficiencies are not deemed correctable by the committee (for example, failure of a required course or examination, or a pattern of unsatisfactory performance) or if, at the end of the warning period, the student has not in the view of the committee corrected the deficiencies, the committee may initiate proceedings for dismissal. The student shall be notified, in writing, that the case of dismissal will be considered at an impending committee meeting. The student has the right to be invited to attend a portion of the scheduled meeting to present his or her own case; a student may also make this case to the committee in writing.

After full discussion at the committee meeting, the committee, without the student present, shall review the case and vote on the issue of dismissal. The student shall be sent a written summary of the discussion, including the committee’s decision and the reasons for it. The student may submit a written request for reconsideration. The committee’s response to the request for reconsideration shall be made in writing; it may decline to reconsider its decision.

CONFERRAL OF DEGREES

Upon recommendation to the Senate of the Academic Council by the faculty of the relevant departments or schools and the Committee on Graduate Studies, degrees are awarded four times each year, at the conclusion of Autumn, Winter, Spring, and Summer terms. All diplomas, however, are prepared and awarded in Spring Quarter. Stanford University awards no honorary degrees.

Students must apply for conferral of a graduate degree by filing an Application to Graduate by the deadline for each term. The deadlines are published in the Time Schedule of Classes. A separate application must be filed for each degree program and for each conferral term. Applications are filed through Axess, the online service which allows students to update their administrative/academic records.

Requests for conferral are reviewed by the Office of the University Registrar and the student’s department to verify completion of degree requirements. Students must either be registered or on graduation quarter in the term of degree conferral; see “Graduation Quarter” below in this section of this bulletin. Students with unmet financial obligations resulting
in the placement of a hold on their registration will not receive a transcript, statement of completion, degree certificate, or diploma until the hold is released by the Office of Student Financial Services.

Students are typically expected to apply to graduate during the term in which they expect to be awarded a degree. The University, however, reserves the right to confer a degree on a student who has completed all of the requirements for a degree even though the student has not applied to graduate; such an individual would then be subject to the University’s usual rules and restrictions regarding future enrollment or registration.

Students who wish to withdraw a request for conferral or make changes to the Application to Graduate should notify the Office of the University Registrar. Students who withdraw their graduation applications or fail to meet degree requirements must reapply to graduate in a subsequent term.

## CHANGES OF DEGREE PROGRAMS

Graduate students are admitted to Stanford for a specific degree program. Students who have attended Stanford for at least one term and who are currently enrolled on an approved leave of absence may submit a Graduate Program Authorization Petition to make one of the following changes: (1) change to a new degree program in the same department; (2) change to a new degree program in a different department; (3) add a new degree program in the same or a different department to be pursued with the existing program. Coterminal students must have the bachelor’s degree conferred before adding a second advanced degree program.

It is important that the attempt to add or change degree programs be made while enrolled. Otherwise, a new Application for Graduate Admission must be submitted and an application fee paid. The Graduate Program Authorization Petition is submitted directly to the department in which admission is requested. If applying for a higher degree program, students may also be required to submit other application materials such as GRE Subject Test scores, a statement of purpose, or new letters of recommendation. Decisions on the petitions are made by the programs or departments to which they are directed, and are at the discretion of those programs or departments.

International students changing departments or degree programs must also obtain the approval of the Foreign Student Adviser at the Bechtel International Center. If the requested change lengthens their stay, they also are required to submit verification of sufficient funding to complete the new degree program.

Students who wish to terminate study in a graduate program should submit a properly endorsed Request to Permanently Withdraw from Degree Program form to the Office of the University Registrar. To return to graduate study thereafter, the student is required to apply for reinstatement (if returning to the same degree program) or admission (if applying to a different program). Both applications require payment of a fee.

## DEGREE-SPECIFIC REQUIREMENTS

### MASTER OF ARTS AND MASTER OF SCIENCE

In addition to completing the general requirements for advanced degrees and the requirements specified by their department, candidates for a Master of Arts (M.A.) or Master of Science (M.S.) degree must complete their degree requirements within the time limit specified below and must outline an acceptable program of study on the Master’s Degree Program Proposal.

#### MASTER’S PROGRAM PROPOSAL

Students pursuing an M.A., M.F.A., M.A.T., or M.S. are required to submit an acceptable program proposal to their department during the first quarter of enrollment. Coterminal students must submit the proposal during the first quarter after admission to the coterminal program. The program proposal establishes a student’s individual program of study to meet University and department degree requirements. Students must amend the proposal formally if their plans for meeting degree requirements change.

In reviewing the program proposal or any subsequent amendment to it, the department confirms that the course of study proposed by the student fulfills all department course requirements (for example, requirements specifying total number of units, course levels, particular courses, sequences, or substitutes). The department confirms that all other department requirements (for example, required projects, foreign language proficiency, or qualifying exams) are listed on the form and that all general University requirements (minimum units, residency, and so on) for the master’s degree will be met through the proposed program of study.

### TIME LIMIT FOR COMPLETION OF THE MASTER’S DEGREE

All requirements for a master’s degree must be completed within three years after the student’s first term of enrollment in the master’s program (five years for Honors Cooperative students). Students pursuing a coterminal master’s degree must complete their requirements within three years of their first quarter of graduate standing.

The time limit is not automatically extended by a student’s leave of absence. All requests for extension, whether prompted by a leave or some other circumstance, must be filed by the student before the conclusion of the program’s time limit. Departments are not obliged to grant an extension. The maximum extension is one additional year. Extensions require review of academic progress and any other factors regarded as relevant by the department, and approval by the department; such approval is at the department’s discretion.

### MASTER OF BUSINESS ADMINISTRATION

The degree of Master of Business Administration (M.B.A.) is conferred on candidates who have satisfied the requirements established by the faculty of the Graduate School of Business and the general requirements for advanced degrees. Full particulars concerning the school requirements are found in the *Graduate School of Business M.B.A. Handbook*. The M.B.A. must be completed within the time limit for completion of the master’s degree.

### MASTER OF FINE ARTS

In addition to completing the general requirements for advanced degrees and the program requirements specified in the “Art and Art History” section of this bulletin, candidates for the degree of Master of Fine Arts (M.F.A.) must fulfill the requirements for a master’s program proposal and complete their degrees within the time limit for completion of the master’s degree, as specified above.

### ENGINEER

In addition to completing the general requirements for advanced degrees and the requirements specified by their department, candidates for the degree of Engineer must be admitted to candidacy and must complete a thesis per the specifications below.

#### CANDIDACY

The Application for Candidacy for Degree of Engineer is an agreement between the student and the department on a specific program of study to fulfill degree requirements. Students must apply for candidacy by the end of the second quarter of the program. Honors Cooperative students must apply by the end of the fourth quarter of the program. Candidacy is valid for five calendar years.

### THESIS

A University thesis is required for the Engineer degree. Standards for professional presentation of the thesis have been established by the Committee on Graduate Studies and are detailed in *Directions for Preparing Theses for Engineer Degrees*, available from the Office of the University Registrar, 630 Serra Street, Suite 120.

The deadline for submission of theses for degree conferral in each term is specified by the University calendar. Three copies of the thesis, bearing the approval of the adviser under whose supervision it was prepared, must be submitted to the Office of the University Registrar before the quarterly deadline listed on the University calendar. A fee is charged for binding copies of the thesis.

In reviewing the program proposal or any subsequent amendment to it, the department confirms that the course of study proposed by the student fulfills all department course requirements (for example, requirements specifying total number of units, course levels, particular courses, sequences, or substitutes). The department confirms that all other department requirements (for example, required projects, foreign language proficiency, or qualifying exams) are listed on the form and that all general University requirements (minimum units, residency, and so on) for the master’s degree will be met through the proposed program of study.

### TIME LIMIT FOR COMPLETION OF THE MASTER’S DEGREE

All requirements for a master’s degree must be completed within three years after the student’s first term of enrollment in the master’s program (five years for Honors Cooperative students). Students pursuing a coterminal master’s degree must complete their requirements within three years of their first quarter of graduate standing.

The time limit is not automatically extended by a student’s leave of absence. All requests for extension, whether prompted by a leave or some other circumstance, must be filed by the student before the conclusion of the program’s time limit. Departments are not obliged to grant an extension. The maximum extension is one additional year. Extensions require review of academic progress and any other factors regarded as relevant by the department, and approval by the department; such approval is at the department’s discretion.

### MASTER OF BUSINESS ADMINISTRATION

The degree of Master of Business Administration (M.B.A.) is conferred on candidates who have satisfied the requirements established by the faculty of the Graduate School of Business and the general requirements for advanced degrees. Full particulars concerning the school requirements are found in the *Graduate School of Business M.B.A. Handbook*. The M.B.A. must be completed within the time limit for completion of the master’s degree.

### MASTER OF FINE ARTS

In addition to completing the general requirements for advanced degrees and the program requirements specified in the “Art and Art History” section of this bulletin, candidates for the degree of Master of Fine Arts (M.F.A.) must fulfill the requirements for a master’s program proposal and complete their degrees within the time limit for completion of the master’s degree, as specified above.

### ENGINEER

In addition to completing the general requirements for advanced degrees and the requirements specified by their department, candidates for the degree of Engineer must be admitted to candidacy and must complete a thesis per the specifications below.

#### CANDIDACY

The Application for Candidacy for Degree of Engineer is an agreement between the student and the department on a specific program of study to fulfill degree requirements. Students must apply for candidacy by the end of the second quarter of the program. Honors Cooperative students must apply by the end of the fourth quarter of the program. Candidacy is valid for five calendar years.

### THESIS

A University thesis is required for the Engineer degree. Standards for professional presentation of the thesis have been established by the Committee on Graduate Studies and are detailed in *Directions for Preparing Theses for Engineer Degrees*, available from the Office of the University Registrar, 630 Serra Street, Suite 120.

The deadline for submission of theses for degree conferral in each term is specified by the University calendar. Three copies of the thesis, bearing the approval of the adviser under whose supervision it was prepared, must be submitted to the Office of the University Registrar before the quarterly deadline listed on the University calendar. A fee is charged for binding copies of the thesis.
Course enrollment is required for the term, or the immediately preceding term, in which the thesis is submitted. The period between the last day of final exams of one term and the first day of the subsequent term is considered an extension of the earlier term. Students submitting a thesis during this period would meet the registration requirement but would be eligible for degree conferral only in the subsequent term.

**MASTER OF LEGAL STUDIES**

Admission to study for the Master of Legal Studies degree (M.L.S.), a nonprofessional degree, is granted to students who hold the Doctor of Philosophy (Ph.D.) or other nonlaw doctoral degree, or who have been admitted to a nonlaw doctoral program and have completed a program of study amounting to at least 45 quarter units or 30 term units of work toward the doctorate, and who meet an admission standard equivalent to that required of candidates for the Doctor of Jurisprudence degree.

The M.L.S. degree is conferred upon candidates who, in not fewer than two academic terms in residence and in not more than two consecutive academic years, successfully complete 30 term units of work in the School of Law, including three first-year courses in the first Autumn term and at least one course or seminar requiring a research paper. All work shall conform to the rules and regulations of the University and the School of Law.

**DOCTOR OF JURISPRUDENCE**

The degree of Doctor of Jurisprudence (J.D.) is conferred on candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the School of Law over not less than three academic years and who otherwise have satisfied the requirements of the University and the School of Law.

**MASTER OF LAWS**

The degree of Master of Laws (L.L.M.) is conferred upon candidates who have completed one academic year (26 semester units) in residence in accordance with the rules of the University and the School of Law. The degree is designed for foreign graduate students trained in law and is available only to students with a primary law degree earned outside the United States. The L.L.M. program offers students a choice of two areas of specialization: Corporate Governance and Practice, or Law, Science, and Technology.

**MASTER OF THE SCIENCE OF LAW**

The degree of Master of the Science of Law (J.S.M.) is conferred upon candidates who have completed one academic year (26 term units) with distinction in accordance with the rules of the University and the School of Law.

The degree is primarily designated for those qualified students who hold a J.D. or its equivalent and who are at the Stanford School of Law for independent reasons (for example, as teaching fellows) and who wish to combine work toward the degree with their primary academic activities. Specially qualified lawyers, public officials, academics, and other professionals who have worked outside the United States may apply for the degree through the Stanford Program in International Legal Studies (SPILS). Full particulars concerning requirements may be found in the Stanford University bulletin School of Law.

**DOCTOR OF THE SCIENCE OF LAW**

The degree of the Doctor of the Science of Law (J.S.D.) is conferred upon candidates who hold a J.D. or its equivalent, who complete one academic year in residence, and who, as a result of independent legal research, present a dissertation that is, in the opinion of the faculty of the School of Law, a contribution to knowledge. Such work and dissertation shall conform to the rules of the School of Law and the University, as described below in the “Doctor of Philosophy” section.

Candidacy is limited to students of exceptional distinction and promise. Full particulars concerning requirements may be found in the Stanford University bulletin School of Law.

**DOCTOR OF MUSICAL ARTS**

The degree of Doctor of Musical Arts (D.M.A.) is conferred on candidates who have satisfied the general requirements for advanced degrees, the program requirements specified in the “Music” section of this bulletin, and the candidacy requirement as described below in the “Doctor of Philosophy” section.

**DOCTOR OF MEDICINE**

Candidates for the degree of Doctor of Medicine (M.D.) must satisfactorily complete the required curriculum in medicine. The requirements for the M.D. degree are detailed online at http://med.stanford.edu/.

**DOCTOR OF PHILOSOPHY**

The degree of Doctor of Philosophy (Ph.D.) is conferred on candidates who have demonstrated to the satisfaction of their department or school substantial scholarship, high attainment in a particular field of knowledge, and ability to do independent investigation and present the results of such research. They must satisfy the general requirements for advanced degrees, the program requirements specified by their departments, and the doctoral requirements described below. The option for a Ph.D. minor is also described below, though it is not a Ph.D. requirement.

**CANDIDACY**

Admission to a doctoral degree program is preliminary to, and distinct from, admission to candidacy. Admission to candidacy for the doctoral degree is a judgment by the faculty of the student’s potential to successfully complete the requirements of the degree program. Students are expected to complete department qualifying procedures and apply for candidacy by the end of their second year in the Ph.D. program. Honors Cooperative students must apply by the end of their fourth year.

The Application for Candidacy specifies a departmentally approved program of study to fulfill degree requirements, including required course work, language requirements, teaching requirements, dissertation (final project and public lecture-demonstration for D.M.A.), and University oral examination (for Ph.D. and Ed.D.). At least 3 units of work must be taken with each of four Stanford faculty members.

If the Ph.D. student is pursuing a minor, approval by the department awarding the minor is also required on the Application for Candidacy.

**TIME LIMIT FOR COMPLETION OF A DEGREE WITH CANDIDACY**

All requirements for the degree must be completed before candidacy expires. Candidacy is valid for five years unless terminated by the department (for example, for unsatisfactory progress). The time limit is not automatically extended by a student’s leave of absence. All requests for extension, whether prompted by a leave or some other circumstance, must be filed by the student before the conclusion of the program’s time limit. Departments are not obligated to grant an extension. Students may receive a maximum of one additional year of candidacy per extension. Extensions require review by the department of a dissertation progress report, a timetable for completion of the dissertation, any other factors regarded as relevant by the department, and approval by the department; such approval is at the department’s discretion.

**TEACHING AND RESEARCH REQUIREMENTS**

A number of departments require their students to teach (serving as a teaching assistant) or assist a faculty member in research (serving as a research assistant) for one or more quarters as part of their doctoral programs. Detailed information is included in the department sections of this bulletin.

**FOREIGN LANGUAGE REQUIREMENT**

Some departments require a reading knowledge of one or more foreign languages as indicated in department sections of this bulletin. Fulfillment of language requirements must be endorsed by the chair of the major department.
UNIVERSITY ORAL EXAMINATION

Passing a University oral examination is a requirement of the Ph.D. degree. The purpose of the examination is to test the candidate’s command of the field of study and to confirm fitness for scholarly pursuits. Departments determine when, after admission to candidacy, the oral examination is taken and whether the exam will be a test of knowledge of the field, a review of a dissertation proposal, or a defense of the dissertation.

Students must be registered in the term in which the University oral examination is taken. The period between the last day of final exams of one term and the day prior to the first day of the following term is considered an extension of the earlier term. Candidacy must also be valid.

The University Oral Examination Committee consists of at least five Stanford faculty members: four examiners and the committee chair from another department. All members are normally on the Stanford Academic Council, and the chair must be a member. Emeritus faculty are also eligible to serve as examiners or chair of the committee. (A petition for appointment of an examining committee member who is not on the Academic Council may be approved if that person contributes an area of expertise that is not readily available from the faculty.) The chair of the examining committee may not have a full or joint appointment in the adviser’s or student’s department, but may have a courtesy appointment in the department. The chair may be from the same department as any other member(s) of the examination committee and can be from the student’s minor department provided that the student’s adviser does not have a full or joint appointment in the minor department.

The University Oral Examination form must be submitted to the department graduate studies administrator at least two weeks prior to the proposed examination date. The examination is conducted according to the major department’s adopted practice, but it should not exceed three hours in length, and it must include a period of private questioning by the examining committee.

Responsibility for monitoring appointment of the oral examination chair rests with the candidate’s major department. Although the department cannot require the candidate to approach faculty members to serve as chair, many departments invite students and their advisors to participate in the process of selecting and contacting potential chairs.

The candidate passes the examination if the examining committee casts four favorable votes out of five or six, five favorable votes out of seven, or six favorable votes out of eight. Five members present and voting constitute a quorum. If the committee votes to fail a student, the committee chair sends within five days a written evaluation of the candidate’s performance to the major department and the student. Within 30 days and after review of the examining committee’s evaluation and recommendation, the chair of the student’s major department must send the student a written statement indicating the final action of the department.

DISSERTATION

An approved doctoral dissertation is required for the Ph.D. and J.S.D. degrees. The doctoral dissertation must be an original contribution to scholarship or scientific knowledge and must exemplify the highest standards of the discipline. If it is judged to meet this standard, the dissertation is approved for the school or department by the doctoral dissertation reading committee. Each member of the reading committee signs the signature page of the dissertation to certify that the work is of acceptable scope and quality. One reading committee member reads the dissertation in its final form and certifies on the Certificate of Final Reading that department and University specifications have been met.

Dissertations must be in English. Approval for writing the dissertation in another language is normally granted only in cases where the other language or literature in that language is also the subject of the discipline. Such approval is routinely granted for dissertations in the Division of Literature, Cultures, and Languages, in accordance with the policy of the individual department. Dissertations written in another language must include an extended summary in English.

Directions for preparation of the dissertation are available from the Office of the University Registrar, 630 Serra Street, Suite 120, or at http://registrar.stanford.edu/shared/publications.htm#GradStud. The signed dissertation copies and accompanying documents must be submitted to the Office of the University Registrar on or before the quarterly deadline indicated in the University’s academic calendar. A fee is charged for the microfilming and binding of the dissertation copies.

Students must either be registered or on graduation quarter in the term they submit the dissertation; see “Graduation Quarter” below in this section of this Bulletin. At the time the dissertation is submitted, an Application to Graduate must be on file, all of the department requirements must be complete, and candidacy must be valid through the term of degree conferral.

DOCTORAL DISSERTATION READING COMMITTEE

The doctoral dissertation reading committee consists of the principal dissertation adviser and two other readers. At least one member must be from the student’s major department. Normally, all members are on the Stanford Academic Council. The student’s department chair may, in some cases, approve the appointment of a reader who is not on the Academic Council, if that person is particularly well qualified to consult on the dissertation topic and holds a Ph.D. or equivalent foreign degree.

Former Stanford Academic Council members, emeritus professors, and non-Academic Council members may serve on a reading committee. If they are to serve as the principal dissertation adviser, however, the appointment of a co-adviser who is currently on the Academic Council is required.

The reading committee, as proposed by the student and agreed to by the prospective members, is endorsed by the chair of the major department on the Doctoral Dissertation Reading Committee form. This form must be submitted before approval of Terminal Graduate Registration (TGR) status or before scheduling a University oral examination that is a defense of the dissertation. The reading committee may be appointed earlier, according to the department timetable for doctoral programs. All subsequent changes to the reading committee must be approved by the chair of the major department.

PH.D. MINOR

Students pursuing a Ph.D. may pursue a single minor in another department or program to complement their Ph.D. program. This option is not available to students pursuing other graduate degrees. Ph.D. candidates cannot pursue a minor in their own major department or program.

Except for a Ph.D. minor in Applied Linguistics, only departments that offer a Ph.D. may offer a minor, and those departments are not required to do so. The minor should represent a program of graduate quality and depth, including core requirements and electives or examinations. The department offering the minor establishes the core and examination requirements. Elective courses are planned by the students in conjunction with their minor and Ph.D. departments.

The minimum University requirement for a Ph.D. minor is 20 units of course work at the graduate level (courses numbered 200 and above). If a minor department chooses to require those pursuing the minor to pass the Ph.D. qualifying or field examinations, the 20-unit minimum can be reduced. All of the course work for a minor must be done at Stanford.

Units taken for the minor can be counted as part of the overall requirement for the Ph.D. of 135 units of graduate course work done at Stanford. Courses used for a minor may not be used also to meet the requirements for a master’s degree.

A Ph.D. minor form outlining a program of study must be approved by the major and minor departments. This form is submitted at the time of admission to candidacy and specifies whether representation from the minor department on the University oral examination committee is required.

GRADUATION QUARTER

Registration is required for the term in which a student submits a dissertation or has a degree conferred. Students who meet the following conditions are eligible to be assessed a special tuition rate for the quarter in which they are receiving a degree:

1. All course work and residency requirements have been completed.
2. A graduate or professional student must have enrolled in the term immediately preceding the term chosen as the graduation quarter.
3. The student has formally applied to graduate.
4. The student has only to submit the dissertation or thesis or project by the
deadline for submission in the term designated as the graduation quar-
ter. Or, if enrolled in a joint degree program with another institution,
the student will complete all requirements for the joint non-Stanford
degree by the end of the term designated as the graduation quarter.
5. The student has filed all necessary forms regarding graduation quarter
before the first day of the term chosen as graduation quarter.
Students on graduation quarter are registered at Stanford and, therefore,
have the rights and privileges of registered students. Only one graduation
quarter may be requested for each degree program. There is a registration
fee of $100 for the graduation quarter.

ADVISING AND CREDENTIALS

ADVISING

By the start of their first term, students should be paired by the depart-
ment with faculty advisers who assist them in planning a program of study to
meet degree requirements. The department should also ensure that doctoral
students are informed in a timely fashion about procedures for selecting
a dissertation adviser, reading committee members, and orals committee
members. Departments should make every effort to assist doctoral stu-
dents who are not admitted to candidacy in finding an appropriate adviser.
Students are obliged to follow department procedures for identifying
advisers and committee members for their dissertation reading and orals
examinations.

Occasionally, a student’s research may diverge from the area of com-
petence of the adviser, or irreconcilable differences may occur between
the student and the faculty adviser. In such cases, the student or the faculty
adviser may request a change in assignment. If the department decides to
grant the request, every reasonable effort must be made to pair the student
with another suitable adviser. This may entail some modification of the
student’s research project.

In the rare case where a student’s dissertation research on an approved
project is in an advanced stage and the dissertation adviser is no longer
available, every reasonable effort must be made to appoint a new adviser,
usually from the student’s reading committee. This may also require that
a new member be added to the reading committee before the draft dis-
sertation is evaluated, to keep the reconstituted committee in compliance
with the University requirements for its composition.

PUBLIC SCHOOL CREDENTIALS

Stanford University is accredited by the California Commission on
Teacher Credentialing and the National Council for Accreditation of
Teacher Education and is authorized to recommend candidates for cre-
dentials. The University offers a complete training program for the Single
Subject Teaching Credential. The Multiple Subject Teaching Credential
is only available to Stanford undergraduates who are admitted to the co-
terminal program. Upon completion of a Stanford approved program, the
credentials will allow teachers to serve in California public schools.

Current Stanford undergraduates wishing to complete the requirements
for a teaching credential should apply to the coterminous program at the
School of Education. All other applicants should apply directly to the Stan-
ford Teacher Education Program (STEP) at the School of Education.
ACADEMIC POLICIES AND STATEMENTS

COMPLIANCE WITH UNIVERSITY POLICIES

Registration as a student constitutes a commitment by the student to abide by University policies, rules, and regulations, including those concerning registration, academic performance, student conduct, health and safety, use of the libraries and computing resources, operation of vehicles on campus, University facilities, and the payment of fees and assessments. Some of these are set forth in this bulletin while others are available in relevant University offices.

Students should take responsibility for informing themselves of applicable University policies, rules, and regulations. A collection is available on the Stanford University policy web site at http://www.stanford.edu/home/administration/policy.html. Many are also set forth in the Research Policy Handbook and the Graduate Student Handbook.

The University reserves the right to withhold registration privileges or to cancel the registration of any student who is not in compliance with its policies, rules, or regulations.

REGISTRATION AND RECORDS

REGISTRATION AND STUDY LISTS

As early as possible, but no later than the second Sunday of the quarter, students (including those with TGR status) must submit to the Office of the University Registrar, via Axess, a study list to enroll officially in classes for the quarter. Students may not enroll in more units than their tuition charge covers, nor enroll in courses for zero units unless those courses, like TGR, are defined as zero-unit courses. Undergraduates are subject to academic load limits described in the “Amount of Work” section below.

The University reserves the right to withhold registration from, and to cancel the advance registration or registration of, any student having unmet obligations to the University.

For full registration procedures, see the quarterly Time Schedule.

STUDY LIST CHANGES

Students may add courses or units to their study lists through the end of the third week of classes. (Individual faculty may choose to close their classes to new enrollments at an earlier date.) Courses or units may be added only if the revised program remains within the normal load limits.

Courses or units may be dropped by students through the end of the fourth week of classes, without any record of the course remaining on the student’s transcript. No drops are permitted after this point.

A student may withdraw from a course after the drop deadline through the end of the eighth week of each quarter. In this case, a grade notation of ‘W’ (withdrawal) is automatically recorded on the student’s transcript for that course. Students who do not officially withdraw from a class by the end of the eighth week are assigned the appropriate grade or notation by the instructor to reflect the work completed.

Through the end of the sixth week of classes, students may choose the grading option of their choice in courses where an option is offered. If the instructor allows a student to take an ‘I’ (Incomplete) in the course, the student must make the appropriate arrangements for that with the instructor by the last day of classes.

These policies reflect changes adopted by the Faculty Senate on June 2, 1994 which were effective Autumn Quarter 1995-96. The deadlines described above follow the same pattern each quarter but, due to the varying lengths of Stanford’s quarters, they may not always fall in exactly the week specified. Students should consult the Time Schedule for the deadline dates each term. Other deadlines may apply in Law, Graduate Business, Medicine, and Summer Session.

REPEATED COURSES

Students may not enroll in courses for credit for which they received either Advanced Placement or transfer credit.

Some Stanford courses may be repeated for credit; they are specially noted in this bulletin. Most courses may not be repeated for credit. Under the general University grading system, when a course which may not be repeated for credit is retaken by a student, the following special rules apply:

1. A student may retake any course on his or her transcript, regardless of grade earned, and have the original grade, for completed courses only, replaced by the notation ‘RP’ (repeated course). When retaking a course, the student must enroll in it for the same number of units originally taken. When the grade for the second enrollment in the course has been reported, the units and grade points for the second course count in the cumulative grade point average in place of the grade and units for the first enrollment in the course. Because the notation ‘RP’ can only replace grades for completed courses, the notation ‘W’ cannot be replaced by the notation ‘RP’ in any case.

2. A student may not retake the same course for a third time unless he or she received a ‘NC’ (no credit) or ‘NP’ (not passed) when it was taken and completed the second time. When a student completes a course for the third time, grades and units for both the second and third completions count in the cumulative grade point average. The notation ‘W’ is not counted toward the three-retake maximum.

These policies reflect changes adopted by the Faculty Senate on June 2, 1994.

AMOUNT OF WORK

The usual amount of work for undergraduate students is 15 units per quarter; 180 units (225 for dual degree students) are required for graduation. Registration for fewer than 12 units is rarely permitted and may cause the undergraduate to be ineligible for certification as a full-time student. The maximum is 20 units (21 if the program includes a 1-unit activity course). The maximum may be exceeded by seniors only once for compelling reasons. A past superior academic performance is not considered to be sufficient justification for exceeding the maximum. Petitions for programs of fewer than 12 or more than 20 units must be signed by the student’s adviser and submitted for consideration to the Office of the University Registrar. At least two faculty members from the student’s school or department must cosign the petition. Petitions for programs of fewer than 12 or more than 20 units must be approved by the department. Under certain circumstances, graduate students may register on a part-time basis. The usual amount of work for graduate students is 12 units per quarter; 180 units (225 for dual degree students) are required for graduation. Students must meet minimum and maximum unit requirements set by their college or school. Applications for programs of fewer than 12 units must be signed by the student’s adviser and submitted for consideration to the Office of the University Registrar, 630 Serra Street, Suite 120. For additional information regarding satisfactory academic progress, refer to the “Academic Standing” section of this bulletin (below).

Matriculated graduate students are expected to enroll for at least eight units; schools and departments may set a higher minimum. Petitions for programs of fewer than 8 must be signed by the student’s department and submitted for consideration to the Office of the University Registrar. Graduate students are normally expected to enroll in no more than 24 units; registration for more than 24 units must be approved by the department.

During the eight-week Summer Quarter, 16 units is the maximum for all students. For details, see http://summer.stanford.edu.

UNIT OF CREDIT

Every unit for which credit is given is understood to represent approximately three hours of actual work per week for the average student. Thus, in lecture or discussion work, for 1 unit of credit, one hour per week may be allotted to the lecture or discussion and two hours for preparation or subsequent reading and study. Where the time is wholly occupied with studio, field, or laboratory work, or in the classroom work of conversation classes, three full hours per week through one quarter are expected of the student for each unit of credit; but, where such work is supplemented by systematic outside reading or experiment under the direction of the instructor, a reduction may be made in the actual studio, field, laboratory, or classroom time as seems just to the department.
AUDITING
No person shall attend any class unless he or she is a fully registered student enrolled in the course or meets the criteria for auditors. Auditors are not permitted in courses that involve direct participation such as language or laboratory science courses, fieldwork, art courses with studio work, or other types of individualized instruction. Auditors are expected to be observers rather than active participants in the courses they attend, unless the instructors request attendance on a different basis. Stanford does not confer credit for auditing, nor is a permanent record kept of courses audited. Students who have been suspended are not permitted to audit.

In all cases of auditing, the instructor’s prior consent and the Office of the University Registrar’s prior approval are required. Further information is available from the Office of the University Registrar.

LEAVES OF ABSENCE AND REINSTATEMENT (UNDERGRADUATE)
Undergraduates are admitted to Stanford University with the expectation that they will complete their degree programs in a reasonable amount of time, usually within four years. Students have the option of taking a leave of absence for up to one year upon filing a petition to do so with the Office of the University Registrar and receiving approval. The leave may be extended for up to one additional year provided the student files (before the end of the initial one-year leave) a petition for the leave extension with the Office of the University Registrar and receives approval. Undergraduates who take an approved leave of absence while in good standing may enroll in the University for the subsequent quarter with the privileges of a returning student.

Students who wish to withdraw from the current quarter, or from a quarter for which they have registered in advance and do not wish to attend, must file a leave of absence petition with the Office of the University Registrar. More information is available in the “Refunds” section of this bulletin.

Students who have not enrolled at Stanford for more than two years must apply for reinstatement. The University is not obliged to approve reinstatements of students. Applications for reinstatement will be reviewed by the University Registrar and are subject to the approval of the Faculty Senate Committee on Undergraduate Standards and Policy or its designee. The Committee or its designees may determine whether the application for reinstatement will be approved or not, and/or the conditions a student must meet in order to be reinstated. Reinstatement decisions may be based on the applicant’s status when last enrolled, activities while away from campus, the length of the absence, the perceived potential for successful completion of the program, as well as any other factors or considerations regarded as relevant to the University Registrar or the Committee.

Applications for reinstatement must be submitted to the Office of the University Registrar no later than four weeks prior to the start of the term in which the student seeks to enroll in classes. Petition information and instructions may be obtained by contacting the Office of the University Registrar.

Leaves of absence for and reinstatements of graduate students are addressed in the “Graduate Degrees” section of this bulletin.

RECORDS
TRANSCRIPTS
Transcripts of Stanford records are issued by the Office of the University Registrar upon the student’s request when submitted in writing or via the online Axess system. There is no charge for official transcripts. The courses taken and grades given in one quarter will not appear on any student’s transcript until all grades received by the grade deadline have been recorded; generally, this is two weeks after final exams. The University reserves the right to withhold transcripts or records of students with unmet obligations to the University.

CERTIFICATION OF ENROLLMENT OR DEGREES
The Office of the University Registrar can provide oral or written confirmation of registration, enrollment, or degree status. The printed certification can be used whenever enrollment or degree verification is required for car insurance, loan deferments, medical coverage, scholarship purposes, and so on. Using Axess, students are able to order an official certification, at no charge, that can be picked up at the Office of the University Registrar on the next business day. Certification of full- or part-time enrollment cannot be provided until after the first day of the term and the study list is filed.

Degrees are conferred quarterly, but diplomas are issued at the Commencement exercises which are held only in June. After conferral, the degree awarded to a student can be verified by contacting the Office of the University Registrar for an official transcript, a certification form, or the National Student Clearinghouse. Requests for transcripts must be made by the student in writing or through Axess.

Full-time enrollment for undergraduates is considered to be enrollment in a minimum of 12 units of course work per quarter at Stanford. Work necessary to complete units from previous quarters will not count toward the 12 units necessary for full-time status in the current quarter. Enrollment in 8 to 11 units is considered half-time enrollment. Enrollment in 1 to 7 units is considered less-than-half-time, or part-time enrollment. During Summer Quarter, all graduate students who hold appointments as research or teaching assistants are considered to be enrolled on at least a half-time basis.

All undergraduates validly registered at Stanford are considered to be in good standing for the purposes of enrollment certification.

Stanford uses the following definitions (in units) to certify the enrollment status of graduate and professional students each quarter:

<table>
<thead>
<tr>
<th>Enrollment Category</th>
<th>Graduate</th>
<th>Business (M.B.A., Sloan)</th>
<th>Medicine (M.D.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full time</td>
<td>8 or more</td>
<td>11 or more</td>
<td>10 or more</td>
</tr>
<tr>
<td>Half time</td>
<td>6 or 7</td>
<td>6-10</td>
<td>6-9</td>
</tr>
<tr>
<td>Part time</td>
<td>5 or fewer</td>
<td>5 or fewer</td>
<td>5 or fewer</td>
</tr>
</tbody>
</table>

TGR students enrolled in a course numbered 801 or 802 are certified as full time.

Only information classified by the University as directory information (see below) can be confirmed to inquiries other than the student.

PRIVACY OF STUDENTS RECORDS
NOTIFICATION OF RIGHTS UNDER FERPA
The Family Educational Rights and Privacy Act of 1974 (FERPA) affords students certain rights with respect to their education records. They are:

1. The right to inspect and review the student’s education records within 45 days of the date the University receives a request for access.

The student should submit to the Registrar, Dean, chair of the department, or other appropriate University official, a written request that identifies the record(s) the student wishes to inspect. The University official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the University official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to request the amendment of the student’s education records that the student believes are inaccurate, misleading, or otherwise in violation of the student’s privacy rights under FERPA.

A student may ask the University to amend the record that he or she believes is inaccurate or misleading. The student should write the University official responsible for the record, clearly identify the part of the records he or she wants changed, and specify why it should be changed.

If the University decides not to amend the record as requested by the student, the University will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment.
ACADEMIC POLICIES AND STATEMENTS

University Registrar and other administrative offices. University ID card and on documents distributed by the Office of the academic record for unique identification. It is printed on the Stanford Stanford University id nUmber and University activities.

electronic reproductions, or audiotapes of such classes and other campus and University activities constitutes an agreement

sent to Use of PHOTOGraphic imAGeS should contact the Office of the University Registrar.

versity Assistant Registrar to discuss the ramifications of this action.

Primary email address

Current mailing address

Campus work address and phone number

Stanford Directory 

Name

Date of birth

Birth location

Directory INFORMATION

The University regards the following items of information as “directory information,” that is, information that the University may make available to any person upon specific request (and without student consent):

Name

Date of birth

Birth location

Campus work address and phone number

Current mailing address

Stanford Directory (local) address and phone number

Stanford student residence address

Primary email address

ID card photographs (for classroom use only)

Academic information, including class, degree(s), major(s), minor(s), prior institution, and active terms

Students may prohibit the release of any of the items listed above (except name) by designating which items should not be released on the Privacy function of Axess. Students may prohibit the release of their name (and consequently all other information) after an appointment with a University Assistant Registrar to discuss the ramifications of this action.

Students, faculty, and others with questions regarding student records should contact the Office of the University Registrar.

CONSENT TO USE OF PHOTOGRAPHIC IMAGES

Registration as a student and attendance at or participation in classes and other campus and University activities constitutes an agreement by the student to the University’s use and distribution (both now and in the future) of the student’s image or voice in photographs, videotapes, electronic reproductions, or audiotapes of such classes and other campus and University activities.

If any student in a class where such photographing or recording is to take place does not wish to have his or her image or voice so used, the student should raise the matter in advance with the instructor.

STANFORD UNIVERSITY ID NUMBER

The Stanford University ID is a number assigned to each student’s academic record for unique identification. It is printed on the Stanford University ID card and on documents distributed by the Office of the University Registrar and other administrative offices.

SUNET ID

The SUNet ID provides access to the Stanford University Network (SUNet) and its services, and identifies authorized users of these services. Each member of the Stanford electronic community creates a unique SUNet ID and password for him/herself.

SUNet IDs provide:

Axess services

Email service

Storage space within Stanford’s distributed file system

Usenet newsgroups

World wide web services, including serving of personal web pages on the Leland system and access to Stanford Web Resources

IDENTIFICATION CARDS

ID cards are available to registered students, faculty, and regular staff through the Stanford ID Card Office, 632 Serra Street. The ID card serves as an identification card, an electronic key, and a debit card, allowing cardholders to use services for which they have privileges, to enter facilities, and to make purchases.

Married students or students with a domestic partner (same or opposite sex) may obtain a courtesy identification card for their spouse/partner through the Stanford Card ID Office. The spouse/partner card enables use of some campus services during terms for which the student is registered.

Similar courtesy cards are also available to the spouses and same-sex partners of faculty and regular staff.

ID cards bear a photograph of the cardholder. This photograph is maintained in an online database and, as stated above in Directory Information, is available for classroom use upon specific request and without student consent unless the student has designated that the photograph not be released. Photographs can be designated as private using the Privacy function of Axess.

For more information, see http://campuscard.stanford.edu/.

PERSONAL IDENTIFICATION NUMBERS

Students eligible to use online services such as Axess, obtain a PIN through the Office of the University Registrar. The PIN, coupled with the assigned University identification number, uniquely identifies the student and serves in a place of a signature on electronic forms. The PIN and SUNet ID password must remain confidential. It is a violation of University policy to use another’s PIN or identification number to misrepresent yourself in any way. Use of another student’s PIN or SUNet ID password can result in loss of student privileges or other disciplinary action.
EXAMINATIONS

MIDTERMS

Classes that give midterm examinations outside of regular class hours must: (1) announce the date and time during the first week of the academic quarter, and (2) provide reasonable alternative times to those students for whom these announced times are not convenient. According to Honor Code interpretations and applications, different examinations may be given at these alternative times.

END-QUARTER POLICY STATEMENT

The End-Quarter Period is a time of reduced social and extracurricular activity preceding final examinations. Its purpose is to permit students to concentrate on academic work and to prepare for final examinations.

In Autumn, Winter, and Spring quarters, End-Quarter starts seven full days (to begin at 12:01 a.m.) prior to the first day of final exams. In Spring Quarter, final examinations begin on Friday; no classes are held on Thursday, the day before. In Summer Quarter, this consists of the weekend and the four class days preceding the final examinations, which take place on Friday and Saturday of the eighth week. (See the Time Schedule for dates.)

During the End-Quarter Period, classes are regularly scheduled and assignments made; this regular class time is used by instructors in whatever way seems best suited to the completion and summation of course material. Instructors should neither make extraordinary assignments nor announce additional course meetings in order to “catch up” in course presentations that have fallen behind. They are free, however, and even encouraged to conduct optional review sessions and to suggest other activities that might seem appropriate for students preparing for final examinations.

No graded homework assignments, mandatory quizzes, or examinations should be given during the End-Quarter Period except:

1. In classes where graded homework assignments or quizzes are routine parts of the instruction process.
2. In classes with laboratories where the final examination will not test the laboratory component. In such a case, the laboratory session(s) during the End-Quarter Period may be used to examine students on that aspect of the course.

Major papers or projects about which the student has had reasonable notice may be called due in the End-Quarter Period.

Take-home final examinations, given in place of the officially scheduled in-class examination, may be distributed in the End-Quarter Period. Although the instructor may ask students to return take-home examinations early in the final examination period, the instructor may not call them due until the end of the regularly scheduled examination time for that course. Such a policy respects the principle that students’ final examinations are to be scheduled over a period of several days.

End-quarter examinations may not be held during this period. This policy preserves the instruction time for courses and protects the students’ opportunities for extensive review and synthesis of their courses.

During the End-Quarter Period, no musical, dramatic, or athletic events involving compulsory student participation may be scheduled, unless approved as exceptions by the Committee on Undergraduate Standards and Policy (C-USP), nor may routine committee meetings be scheduled (such as those of the ASSU, the Senate of the Academic Council, or the committees of the President of the University) when such meetings normally would involve student participation.

Note — Students who believe that there are faculty who are violating End-Quarter policy should contact the Office of the University Registrar.

END-QUARTER EXAMINATIONS

Examinations are part of the process of education at the same time that they are a means to measure the student’s performance in course work. Their structure, content, frequency, and length are to be determined in accordance with the nature of the course and the material presented in it, subject only to the limitations contained herein.

Great flexibility is available regarding the types of examinations that an instructor may choose to employ. Examinations, including final examinations, may be, for example, in-class essay examinations, take-home essay examinations, objective examinations, oral examinations, or appropriate substitutes such as papers or projects. Instructors may use any type of examination, paper, or project, or any combination thereof, guided only by the appropriateness of the types of examinations, papers, or projects for the material upon which the student is being examined.

When the final examination is an in-class examination, the following regulations apply:

1. A three-hour period is reserved during examination week for the final examination in each course of more than 2 units. This examination period must be available for students, but not necessarily in its entirety, if an in-class examination is given. In courses with extraordinary meeting times, such that ambiguity might exist as regards the period reserved for the final examination, the schedule should be clarified and students informed no later than the end of the second week of the quarter.
2. Examinations in 1- or 2-unit courses must be completed by the end of the last class meeting before the End-Quarter Period, except in Summer Quarter when examinations must be completed during the last regularly scheduled class session.

When the final examination or its appropriate substitute is not an in-class examination (for example, when an instructor chooses to employ a take-home examination, paper, or project in lieu of an in-class examination), the following regulations apply:

1. The schedule and format of the final examination or its appropriate substitute shall be made known not later that the end of the second week of the quarter and, if changed subsequently, may be only an option of the plan originally announced by the instructor.
2. Although the instructor may ask students to return take-home examinations early in the final examination period, the instructor may not call them due until the end of the regularly scheduled examination time for that course.

In submitting official Study Lists, students commit to all course requirements, including the examination procedures chosen and announced by the course instructor. In selecting courses, students should take cognizance of the official schedule of final examinations announced in the quarterly Time Schedule. Students anticipating conflicts in final examination schedules should seek to resolve these with the instructors involved before submitting Study Lists at the end of the second week of the quarter. If accommodation cannot be made at that time, the student should revise his or her Study List in order to be able to meet the required final examination.

If unforeseen circumstances prevent the student from sitting for the regularly scheduled examination, instructors should make alternative arrangements on an individual basis. Such unforeseen circumstances include illness, personal emergency, or the student’s required participation in special events (for example, athletic championships) approved as exceptions by the Committee on Undergraduate Standards and Policy (C-USP).

STATEMENT CONCERNING EARLY EXAMINATIONS

Students are reminded that taking final examinations earlier than the scheduled time is a privilege, not a right. They should request this privilege only in the event of extraordinary circumstances.

Since the final examination schedule is published quarterly in the Time Schedule at the time of course selection and enrollment, students are expected to make their academic plans in light of known personal circumstances that may make certain examination times difficult for them.

In general, faculty members are discouraged from giving final examinations earlier than the published and announced times. If faculty nevertheless decide to administer early examinations, either the questions should be completely different from those on the regularly scheduled examination or the early examination should be administered in a highly controlled setting. An example of such a setting would be a campus seminar room where the examination questions would be collected along with students’ work and students would be reminded of their Honor Code obligations not
to share information about the examination contents. Giving students easy opportunities to abuse the integrity of an examination is unfair to honest students and inconsistent with the spirit of the Honor Code.

Academic fields differ in the degree to which early examination requests present dilemmas for faculty. If, for example, an examination format consists of a small number of essay questions, where students would be greatly advantaged by knowing the question topics, faculty should be especially reluctant to allow early examinations unless they are willing to offer totally different examinations or a different kind of academic task, for example, a final paper in lieu of an examination.

GRADING SYSTEMS

GENERAL UNIVERSITY

The general University grading system is applicable to all schools of Stanford University except the Graduate School of Business, the School of Law, and M.D. students in the School of Medicine. Note that the GPA (grade point average) and rank in class are not computed under the general University grading system. Stanford does use an internal-only GPA which is based on units completed up to the time of conferment of the first bachelor’s degree. This information is used for internal purposes only and is not displayed on the official transcript which is sent outside the University. Most courses are graded according to the general University grading system. However, courses offered through Law, Business, and Medicine are graded according to those schools’ grading systems, even in cases where students in other programs are enrolled in their classes. Note also that, as to graduate students, there may be departmental requirements as to grades that must be maintained for purposes of minimum academic progress.

DEFINITION AND EXPLANATION

The following reflects changes adopted by the Faculty Senate on June 2, 1994 and effective Autumn Quarter 1994-95. All grades/notations for courses taken in 1995-96 or later are to be visible on student transcripts.

A Excellent
B Good
C Satisfactory
D Minimal pass
(Plus (+) and minus (-) may be used as modifiers with the above letter grades)
NP Not Passed
NC No Credit (unsatisfactory performance, ‘D+’ or below equivalent, in a class taken on a satisfactory/no credit basis)
CR Credit (student-elected satisfactory; A, B, or C equivalent)
S No-option Satisfactory; A, B, or C equivalent
L Pass, letter grade to be reported
W Withdraw
N Continuing course
I Incomplete
RP Repeated Course
* No grade reported
NC The notation ‘NC’ represents unsatisfactory performance in courses taken on a satisfactory/no credit basis. Performance is equivalent to letter grade ‘D+’ or below.
NP The notation ‘NP’ is used by instructors in courses taken for a letter grade that are not passed.
CR In a course for which some students will receive letter grades, the ‘CR’ represents performance that is satisfactory or better when the student has elected the ‘CR’ grading option.

S For an activity course or a course in which the instructor elects to grade students only on a satisfactory/no credit basis, the ‘S’ represents performance that is satisfactory or better. For such a course, no letter grades may be assigned for satisfactorily completed work.

It should be noted that the Registrar is unable to record course grades submitted when the instructor has not observed the required distinction between ‘S’ and ‘CR.’

The “satisfactory” options are intended to relieve the pressure on students for achievement in grades. The “satisfactory” options in no way imply fewer or different course work requirements than those required of students who elect evaluation with a letter grade. A department may limit the number of “satisfactory” courses to count for a major program. For those students admitted as freshmen for Autumn Quarter 1996-97 or later, no more than 36 units of Stanford course work (including activity courses) in which a ‘CR’ or ‘S’ was awarded can be applied toward the 180 (225 if dual degrees are being pursued) units required for a bachelor’s degree. Students who enter Stanford as transfer students in 1996-97 or later are limited to 27 ‘CR’ or ‘S’ units applied to the 180/225 minimum.

L The ‘L’ is a temporary notation that represents creditable completion of a course for which the student will receive a permanent letter grade before the start of the next quarter. The ‘L’ is given when the instructor needs additional time to determine the specific grade to be recorded, but it is not appropriate if additional work is expected to be submitted by the student. A student receives unit credit for work graded ‘L.’

N The ‘N’ indicates satisfactory progress in a course that has not yet reached completion. Continuation courses need not continue at the same number of units, but the grade for all quarters of such a course must be the same.

N- The ‘N-’ grade indicates unsatisfactory progress in a continuing course. The first ‘N-’ grade constitutes a warning. The adviser, department chair, and students should discuss the deficiencies and agree on the steps necessary to correct them. A second consecutive ‘N-’ will normally cause the department to deny the student further registration until a written plan for the completion of the degree requirements has been submitted by the student and accepted by the department. Subsequent ‘N-’ grades are grounds for dismissal from the program.

I The ‘I’ is restricted to cases in which the student has satisfactorily completed a substantial part of the course work. No credit will be given until the course is completed and a passing grade received. When a final grade is received, all reference to the initial ‘I’ is removed.

In courses taken before 1994-95, satisfactory completion of the course work when an ‘I’ has been given is expected within a year from the date of the course’s final examination, but an alternate time limit may be set by the instructor. Students may petition that these courses with an ‘I’ grade be removed from their records.

In a course taken in 1994-95 or later, ‘I’ grades must be changed to a permanent notation or grade within a maximum of one year. If an incomplete grade is not cleared at the end of one year, it is changed automatically by the Office of the University Registrar to an ‘NP’ (not passed) or ‘NC’ (no credit) as appropriate for the grading method of the course. Students must request an incomplete grade by the last class meeting. Faculty may determine whether to grant the request or not. Faculty are free to determine the conditions under which the incomplete is made up, including setting a deadline of less than one year.

RP The notation ‘RP’ (meaning Repeated Course) replaces the original grade recorded for a course when a student retakes a course. (See the “Repeated Courses” section of this bulletin, above.)

W The notation ‘W’ (meaning Withdraw) is recorded when a student withdraws from a course.

* The ‘*’ symbol appears when no grade has been reported to the Registrar for courses taken prior to 2001-02. The ‘*’ symbol remains on the transcript until a grade has been reported.
REPORTING OF GRADES

All grades must be reported within 96 hours after the time and day reserved for the final examination, and in no case later than noon of the fourth day (including weekends) after the last day of the final examination period.

In the case of degree candidates in Spring Quarter, final grades must be reported by noon of the day following the end of the final examination period.

REVISION OF END-QUARTER GRADES

When duly filed with the Office of the University Registrar, end-quarter grades are final and not subject to change by reason of a revision of judgment on the instructor’s part; nor are passing grades to be revised on the basis of a second trial (for example, a new examination or additional work undertaken or completed after the end of the quarter). Changes may be made at any time to correct an actual error in computation or transcription, or where some part of the student’s work has been unintentionally overlooked; that is, if the new grade is the one that would have been entered on the original report had there been no mistake in computing and had all the pertinent data been before the instructor, the change is a proper one.

If a student questions an end-quarter grade based on the grading of part of a specific piece of work (for example, part of a test) on the basis of one of the allowable factors mentioned in the preceding paragraph (for example, an error in computation or transcription, or work unintentionally overlooked, but not matters of judgment as mentioned below), the instructor may review the entire piece of work in question (for example, the entire test) for the purpose of determining whether the end-quarter grade was a proper one. In general, changing an end-quarter grade is permitted on the basis of the allowable factors already mentioned whether an error is discovered by the student or the instructor; however, changing a grade is not permitted by reason of revision of judgment on the part of the instructor.

In the event that a student disputes an end-quarter grade, the established grievance procedure should be followed (see the “Statement on Student Academic Grievance Procedures” section of this bulletin).

GRADUATE SCHOOL OF BUSINESS

Effective September 2000, all courses offered by the Graduate School of Business will be graded according to the following five-level scheme:

H Honors. Work that is of truly superior quality.
HP High Pass. A passing performance, and one that falls approximately in the upper quarter of passing grades.
P Pass. A passing performance that falls in the center of the distribution of all passing grades.
LP Low Pass. A passing performance that falls approximately in the lower quarter of passing grades.
U Unsatisfactory. A failing performance. Work that does not satisfy the basic requirements of the course and is deficient in significant ways.

Students in some GSB courses may elect to take the course on a pass/fail basis, where any passing grade (H, HP, P, or LP) is converted to Pass, and U is converted to Fail. Students wishing to take a GSB course on a pass/fail basis should consult the GSB Registrar for rules and procedures. Prior to 2001-02, an asterisk (*) notation was placed when no grade has been reported.

SCHOOL OF LAW

The two grading systems previously employed at the School of Law were revised effective September 2001. Under the numerical system (with letter equivalents), the range of satisfactory grades runs from 4.3 to 2.5 as outlined in the following distribution. Below the grade of 2.5 is one level of restricted credit (2.2) and one level of failure (2.1). The number grades with letter equivalents are as follows:

<table>
<thead>
<tr>
<th>Number Grade</th>
<th>Letter Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.3, 4.2, 4.1</td>
<td>A+</td>
</tr>
<tr>
<td>3.4, 3.3, 3.2</td>
<td>A</td>
</tr>
<tr>
<td>3.1, 3.0, 2.9</td>
<td>B+</td>
</tr>
<tr>
<td>2.8, 2.7, 2.6, 2.5</td>
<td>B</td>
</tr>
<tr>
<td>2.2</td>
<td>Restricted Credit</td>
</tr>
<tr>
<td>2.1</td>
<td>Failure</td>
</tr>
</tbody>
</table>

Students may elect to take a limited number of courses on a credit/restricted credit/no credit system (K/RK/NK). ‘K’ will be awarded for work that is comparable to numerical grades 4.3 to 2.5, ‘RK’ for Restricted Credit-level work (2.2), and ‘NK’ for Failure-level work (2.1). A limited number of courses are offered on a mandatory credit (KM)/no credit (NK) basis. ‘N’ is a temporary notation used in a continuing course; it is replaced with a final grade upon completion of the course series. Prior to 2001-02 an asterisk (*) notation was placed when no grade has been reported.

SCHOOL OF MEDICINE

In general, the following grades are used in reporting on the performance of students in the M.D. program:

Pass (+) Indicates that the student has demonstrated to the satisfaction of the department or teaching group responsible for the course that he or she has mastered the material taught in the course.
Fail (-) Indicates that the student has not demonstrated to the satisfaction of the department or teaching group responsible for the course that he or she has mastered the material taught in the course.
Incomplete (I) Indicates that extenuating medical or personal circumstances have prevented the student from completing the course requirements. This grade shall be given when requested by the student with the prior approval of an Advising Dean in the School of Medicine.
Continuing (N) Indicates that the course has not concluded and the student is continuing the course.
Exempt Indicates a course that is exempted by examination. No units are awarded.

In general, a ‘Fail’ grade can be cleared by repeating and passing the particular course or by other arrangement prescribed by the department or teaching group. An ‘Incomplete’ grade can be made up in a manner specified by the department or teaching group within a reasonable time; if the deficiency is not made up within the specified time, the ‘Incomplete’ grade becomes a ‘Fail’ grade. The opportunity to clear a ‘Fail’ grade or an ‘Incomplete’ grade cannot be extended to individuals who are not registered or eligible to register as students in the M.D. program. For more specific information, see http://med.stanford.edu/md/curriculum/assessment-grading.
ACADEMIC STANDING

Undergraduates matriculating in Autumn 1999 and thereafter are required to adhere to the academic standards described below. The standards include maintaining a minimum 2.0 cumulative GPA and a quantitative unit requirement for good academic standing. In addition, a minimum 2.0 cumulative GPA is required for conferral of a baccalaureate degree.

Undergraduates matriculating prior to Autumn 1999 are required to adhere to the academic standards described below but are exempt from the minimum 2.0 cumulative GPA requirement for academic standing purposes. However, departments can elect to require a minimum GPA for course work applicable to the major and the minor. Refer to departmental literature for specific requirements.

Undergraduate students normally are expected to plan their academic programs so that they can complete 180 units in four years (twelve quarters), including the requirements for a major and the General Education, Writing, and Language Requirements. Satisfactory academic progress is, on average, 45 units per academic year for four years leading to at least 180 units, a cumulative grade point average of at least 2.0, and a baccalaureate degree.

While undergraduates are expected to register for a minimum of 12 units, they are required to complete at least 9 units each quarter (by the end of the final examination period) and at least 36 units in their most recent three quarters of Stanford enrollment (by the end of the third final examination period). In addition, students are expected to maintain a cumulative grade point average of at least 2.0. Transfer work completed at other institutions is not considered in this calculation.

A student earning fewer than 9 units per quarter or fewer than 36 units in three quarters, or earning less than a 2.0 cumulative grade point average, is placed on probation. Students on probation or provisional registration status (see definitions below) are required to complete a minimum of 12 units per quarter (by the end of the final quarter examination period for each quarter) for each quarter for three consecutive quarters, and maintain a cumulative grade point average of at least 2.0 to attain good academic standing (a Stanford Summer Session Quarter counts toward the three consecutive quarter requirement if 11 or more units are completed). The faculty Subcommittee on Academic Standing may stipulate otherwise by acting upon a petition for fewer units.

Full-time enrollment is considered to be enrollment in a minimum of 12 units of course work per quarter at Stanford. Under extenuating circumstances, students may petition to the faculty Subcommittee on Academic Standing to take fewer units. Work necessary to complete units from previous quarters does not count toward the 12 units necessary for full-time enrollment in the current quarter. All students registering for fewer than 12 units should consider the effects of that registration on their degree progress, visas, deferments of student loans, residency requirements, and their eligibility for financial aid and awards.

All undergraduate students validly registered at Stanford are considered to be in good standing for the purposes of enrollment certification and athletic participation.

Units are granted for courses completed with grades ‘A,’ ‘B,’ ‘C,’ ‘D,’ ‘Satisfactory’ (‘CR’ or ‘S’), and ‘L.’ Courses graded ‘N’ are counted provisionally as units completed, provided the student enrolls in the continuing segment of that course the following quarter. When the course is completed, the student receives the units for which he or she enrolled. No units are granted for a course in which the student receives an ‘I’ or an ‘I*’ until the course is completed satisfactorily and the final grade reported.

PROBATION

A student who fails to complete at least 36 units of work in his or her most recent three quarters of enrollment at the University, or who fails to complete by the end of the final examination period at least 9 quarter units of work in his or her most recent quarter of enrollment at the University, or who has a cumulative grade point average of less than 2.0, shall be placed on probation (warning status).

A student shall be removed from probation after three consecutive quarters of enrollment at the University if, in each quarter, he or she completes a minimum of 12 units of new course work by the end of the final examination period and maintains a cumulative grade point average of at least 2.0. A student may also be removed from probation at the discretion of the faculty Subcommittee on Academic Standing as a result of a review of individual records.

PROVISIONAL REGISTRATION

A student who, while on probation, fails in any quarter of registration to complete a minimum of 12 units of new course work by the end of the final examination period or fails to achieve a cumulative grade point average of at least 2.0, shall be placed on provisional registration status. Provisional registration requires that a student submit a properly endorsed petition to return to Stanford.

A student shall be removed from provisional registration after three consecutive subsequent quarters of enrollment at the University if, in each quarter, he or she completes a minimum of 12 units of new course work by the end of the final examination period and maintains a cumulative grade point average of at least 2.0. A student may also be removed from provisional registration at the discretion of the subcommittee as a result of a review of individual records.

SUSPENSION

A student who, while on provisional registration, fails to complete a minimum of 12 units of new course work by the end of the final examination period, or who fails to maintain a cumulative grade point average of at least 2.0, shall be suspended. In addition, and on occasion, a student may also be suspended directly from probation.

In general, students suspended for the first time are suspended for one year. Students suspended a subsequent time are suspended for three years.

Students suspended for one year are not eligible to enroll for four quarters (including Summer Quarter) following the quarter in which the suspension was issued. Students suspended for three years are not eligible to enroll for twelve quarters (including Summer Quarter) following the quarter in which the suspension was issued. Students are required to submit a properly endorsed petition for provisional registration to request reenrollment after the suspension period has been completed.

Return from Suspension—Students who have been suspended are required to petition for provisional registration to return after their suspension has been completed.

Appeal of Suspension—Students who have been suspended, and who believe they have a compelling reason to appeal their suspension, without a break in enrollment, are required to submit a petition for provisional registration.

Early Return from Suspension—Students who have been suspended and who believe they have a compelling reason to return early from their suspension are required to submit a petition for provisional registration.

PETITIONING

Instructions including deadlines for requesting provisional registration or an early return from suspension should be obtained from the Office of the University Registrar, 630 Serra Street, Suite 120. The Faculty Senate Subcommittee on Academic Standing, or those designated by the subcommittee, shall act upon all requests concerning academic standing, including requests for provisional registration. Questions concerning academic standing or the petitioning process should be directed to the Office of the University Registrar.

Late petitions to return from suspension, appeal a suspension, or return early from suspension are not considered. Students are encouraged to submit petitions as early as possible.

Students applying for financial aid and/or on-campus housing should be aware of the deadlines and procedures for those offices.

NOTIFICATION

Written notification that a student is on probation, provisional registration, or suspension is sent to the student and to the student’s academic adviser as soon as possible after the close of the quarter. Students also receive written notification of the outcome of their provisional registration petition.
STATEMENT ON STUDENT ACADEMIC GRIEVANCE PROCEDURES

The following policy was effective beginning in the 1999-2000 academic year and is subject to periodic review.

1. Coverage
   a) Any Stanford undergraduate or graduate student who believes that he or she has been subjected to an improper decision on an academic matter is entitled to file a grievance to obtain an independent review of the allegedly improper decision, followed by corrective action if appropriate. A grievance is a complaint in writing made to an administrative officer of the University concerning an academic decision, made by a person or group of persons acting in an official capacity, that directly and adversely affects the student as an individual in his or her academic capacity.
   b) Grievance procedures apply only in those cases involving a perceived academic impropriety arising from a decision taken by: (1) an individual instructor or researcher; (2) a school, department, or program; (3) a committee charged to administer academic policies of a particular school, department, or program; (4) the University Registrar or a Senate committee or subcommittee charged to administer academic policies of the Senate of the Academic Council. They do not pertain to complaints expressing dissatisfaction with a University policy of general application challenged on the grounds that the policy is unfair or inadvisable, nor do they pertain to individual school, department, or program academic policies, as long as those policies are not inconsistent with general University policy.
   c) Individuals should be aware that the University Ombudsperson’s Office is available to all Stanford students, faculty, and staff to discuss and advise on any matter of University concern and frequently helps expedite resolution of such matters. Although it has no decision-making authority, the Ombudsperson’s Office has wide powers of inquiry, including into student complaints against instructors.

2. Grievance and Appeal Procedures
   a) Informal Attempts at Resolution: the student first should discuss the matter, orally or in writing, with the individual(s) most directly responsible. If no resolution results, the student should then consult with the individual at the next administrative level, for example, the chair or director of the relevant department or program, or, for those cases in which there is none, with the school dean. At this stage, the department chair or program director, if any, may inform the dean that the consultation is taking place and may solicit his or her advice on how to ensure that adequate steps are taken to achieve a fair result. Efforts should be made to resolve the issues at an informal level without the complaint escalating to the status of a formal grievance.
   b) The Filing of the Grievance:
      1. If informal means of resolution prove unsatisfactory, the student should set forth in writing a statement of the decision that constitutes the subject matter of the dispute, the grounds on which it is being challenged, and the reasons why the grievant believes that the decision was improperly taken. The statement should also include a description of the remedy sought and the informal efforts taken to date to resolve the matter. It is at this point that the complaint becomes a formal grievance. The written grievance should specifically address the matters set forth in the Standards for Review, as stated in Section 4 below. The grievance should include an allegation of any adverse effects on the grievant, known to the grievant at the time of filing.

3. The grievant shall file his or her appeal at the earliest practicable date after the grievant’s receipt of the determination by the dean. Normally, no more than 60 days should elapse between the filing of a grievance and the disposition by the dean. In the absence of key persons from the campus or other circumstances or exigencies, the dean decides that prompt disposition is not possible, he or she shall inform the grievant (and the party against whose decision the grievance has been filed) in writing of any referral of the matter and shall specify the matters referred, the directions to the person or persons to whom the referral is made (including the time frame within which the person is to report back to the dean), and the name of that person.

4. Should attempts to resolve the matter informally not be successful, the dean shall decide the grievance, and shall notify the grievant (and the party against whose decision the grievance has been filed) in writing of the disposition made of the grievance and the grounds for the disposition at the earliest practicable date after his or her receipt of the grievance.

5. Normally, no more than 60 days should elapse between the filing of a grievance and the disposition by the dean. If, because of absence of key persons from the campus or other circumstances or exigencies, the dean decides that prompt disposition is not possible, he or she shall inform the grievant (and the party against whose decision the grievance has been filed) of that in writing, giving the grounds therefore and an estimate of when a disposition can be expected.

d) The Filing of an Appeal:
   1. If the grievant is dissatisfied with the disposition of the grievance at the decanal level, either on substantive or on procedural grounds, he or she may appeal in writing to the Provost.
   2. The appeal must specify the particular substantive or procedural bases of the appeal (that is, the appeal must be made on grounds other than general dissatisfaction with the disposition) and must be directed only to issues raised in the grievance as filed or to procedural errors in the grievance process itself, and not to new issues. The appeal shall contain the following:
      a. A copy of the original grievance and any other documents submitted by the grievant in connection therewith.
      b. A copy of the determination made by the dean on that grievance.
      c. A statement of why the reasons for the determination of the dean are not satisfactory to the grievant. This statement should specifically address the matters set forth in the Standards for Review in Section 4 below.
   3. The grievant shall file his or her appeal at the earliest practicable date after the grievant’s receipt of the determination by the dean. Normally, no more than 30 days should elapse between the transmittal of the dean’s decision on the grievance and the filing of the appeal. A delay in filing an appeal may, taking all circumstances into account, constitute grounds for rejection of the appeal.
e) **The Response to the Appeal:**

1. The Provost may attempt to resolve the matter informally, or refer the appeal, or any issue thereof, to any person (the “grievance appeal officer”) who shall consider the matter and report to the Provost as the latter directs. The Provost may also, in appropriate cases, remand the matter to a lower administrative level (including to the level at which the grievance arose) for further consideration.

2. The Provost shall inform the grievant (and the party against whose decision the grievance has been filed) in writing of any referral of the matter and shall specify the matters referred, the directions to the person to whom the referral is made (including the time frame within which the person is to report back to the Provost), and the name of that person.

3. Should attempts be made to resolve the matter informally not be successful, the Provost shall decide the appeal, and shall notify the grievant (and the party against whose decision the grievance has been filed) in writing of the disposition made of the grievance and the grounds for the disposition at the earliest practicable date after his or her receipt of the appeal. The decision of the Provost shall be final, unless the grievant requests a further appeal to the President pursuant to Section 2f below, and the President agrees to entertain this further appeal.

4. Normally no more than 45 days should elapse between the filing of the appeal and the disposition by the Provost. If, because of absence of key persons from the campus or other exigencies, the Provost judges that prompt disposition is not possible, he or she shall inform the grievant (and the party against whose decision the grievance has been filed) in writing of the disposition made of the grievance and the grounds for the disposition at the earliest practicable date.

f) **The Request to the President:** if the student is dissatisfied with the disposition of the appeal by the Provost, he or she may write to the President of the University giving reasons why he or she believes the grievance result to be wrong (following the general format set forth in Section 2d 2 above). No more than 30 days should elapse between the transmittal of the Provost’s disposition and the written statement to the President urging further appeal. In any case, the President may agree or decline to entertain this further appeal. If the President declines to entertain the further appeal, the decision of the Provost shall be final. If the President decides to entertain the further appeal, he or she shall follow the general procedures set forth in Section 2e above, and the decision of the President shall be final.

3. **Grievances Concerning Decisions of the University Registrar or of a Senate Committee or Subcommittee**

   a) For a grievance concerning a decision of the University Registrar or of a Senate committee or subcommittee, the grievant shall file his or her grievance with the Provost or the Provost shall handle that grievance in accordance with the procedures set forth in Section 2c above.

   b) There shall be no appeal of the Provost’s disposition of that grievance, except as may be available under Section 2f above.

4. **Standards for Review and Procedural Matters**

   a) The review of grievances or appeals shall usually be limited to the following considerations:

   1. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?

   2. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?

   3. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?

   b) The time frames set forth herein are guidelines. They may be extended by the relevant administrative officer in his or her discretion for good cause.

   c) Questions concerning the filing and appeal of grievances should be directed to the Office of the Provost.
COURSES OF INSTRUCTION

2006-07

Unless otherwise specified, courses numbered from 1 through 99 are primarily for first- and second-year undergraduates; courses numbered from 100 through 199 are for third- and fourth-year undergraduates; and those from 200 through 699 are for graduate students.

Amendments to course offerings announced in the Stanford Bulletin are found in the Time Schedule of Classes, issued quarterly.

Beginning in Autumn Quarter 2005, a modified and redefined set of undergraduate General Education Requirements, designated in this bulletin as GERs, went into effect. These requirements are described on pages 21-22 of this bulletin. All undergraduates who matriculated after Autumn Quarter 1996 are now subject to the set of GERs outlined in this bulletin. Undergraduates who matriculated prior to Autumn Quarter 1996 should consult the Office of the University Registrar for information about which requirement set applies to them. Graduate students should ignore GERs since these requirements do not apply to them.

SUMMER SESSION

Summer session courses are eight weeks in length, except in certain departments that offer ten-week courses.

This bulletin includes, for the Summer Session, only those courses that can be tentatively scheduled at publication time by each department. For the complete list of courses and faculty, refer to http://summer.stanford.edu, updated in February.

SUBJECT CODES

Throughout the bulletin, Axess subject codes have been printed wherever relevant. A complete list of subject codes is printed in the Appendix on the last page of this bulletin.

COGNATE COURSES

Beginning this year, many departments are publishing lists of cognate courses. Cognate courses refer to offerings in other departments and programs which may be used to fulfill some major, minor, or honors program requirement. Students must consult the degree requirements section of their department or program, or the department or program’s student services office, to determine the applicability of a given cognate course to a major, minor, or honors program.

LANGUAGE COURSES

All courses in language instruction, except classes in Latin, classical Greek, classical Chinese, and classical Japanese, are listed in the "Language Center" section of this bulletin. Foreign language literature and general interest courses are listed in the sections of the relevant department.

TIME SCHEDULE OF CLASSES

Each quarter, the Office of the University Registrar produces a printed Time Schedule of Classes. Changes to course listings made subsequent to the printing of this bulletin are reflected in this publication. Students should consult Axess at http://axess.stanford.edu for the most up-to-date class scheduling information.
Graduate School of Business

Dean: Robert L. Joss
Senior Associate Deans: Mary E. Barth, David M. Kreps, D. John Roberts, Daniel N. Rudolph, Kenneth J. Singleton
Associate Deans: Gale H. Bitter, Christina Christina, Sharon J. Hoffman, David Kennedy, Karen A. Wilson
Assistant Deans: Derrick Bolton, Andrew Chan, Robert Urstein, Randy Yee

Associate Professor (Teaching): James A. Phillips, Jr.
Senior Lecturers: David L. Bradford, R. Bruce McKern, Jeffrey H. Moore

Consulting Professors: H. Irving Grousbeck, Mark A. Wolfson
Visiting Professors: Terry L. Anderson, Christophe Crombez
Visiting Associate Professor: Viral Acharya

* Recalled to active duty.

The mission of the Graduate School of Business is to create ideas that deepen and advance the understanding of management and, with these ideas, develop innovative, principled, and insightful leaders.

The two-year Master of Business Administration (M.B.A.) degree program is for students who aspire to contribute to society through leadership in business, government, and the nonprofit sector. The general management curriculum rests on a foundation of social science principles and management functions layered with interdisciplinary themes of leadership, entrepreneurship, global management, and social responsibility. M.B.A. curricular options include: the Leadership Development Platform; certificates in Global Management, Public Management, and Product Creation and Innovative Manufacturing; and joint degrees with the Schools of Education (M.A./M.B.A.) and Law (J.D./M.B.A.). The primary criteria for admission are demonstrated leadership potential, intellectual vitality, and diversity among students. No specific undergraduate major or courses are required for admission, but experience with analytic and quantitative concepts is important. Some students enter directly following undergraduate study, but most obtain one or more years of work experience.

The Stanford Sloan Program is an intensive, one-year course of study for middle management executives leading to the degree of Master of Science in Management. Participants must have demonstrated superior achievement and are normally sponsored by their company.

Those interested in college teaching and research are served by the Doctor of Philosophy program.

For detailed information on programs, curricula, and faculty, see the School’s web site at http://www.gsb.stanford.edu.

46 | Stanford Bulletin, 2006-07
SCHOOL OF EARTH SCIENCES

Dean: Pamela A. Matson

The School of Earth Sciences includes the departments of Geological and Environmental Sciences, Geophysics, Energy Resources Engineering (formerly Petroleum Engineering), the interdisciplinary Earth Systems undergraduate program, the graduate-level Interdisciplinary Program in Environment and Resources (IPER), and the graduate-level Earth, Energy, and Environmental Sciences Graduate Program (EEES). The Earth Systems Program offers study of biophysical and social dimensions of the Earth system focusing on environment and resource issues.

The aims of the school are (1) to prepare students for careers in the fields of biogeochemistry, environment and sustainable resource studies, geology, geochemistry, geomechanics, geophysics, geostatistics, hydrogeology, petroleum engineering, and petroleum geology; (2) to conduct research in the Earth sciences; and (3) to provide opportunities for Stanford undergraduates to learn about the planet’s history, to understand the natural energy and resource base that supports humanity, and to appreciate the geological and geophysical hazards that affect human societies, as well as those factors that contribute to the quality of our environment.

To accomplish these objectives, the school offers a variety of programs adaptable to the needs of the individual student: four-year undergraduate programs leading to the degree of Bachelor of Science (B.S.); five-year programs leading to the coterminal Bachelor of Science and Master of Science (M.S.); and graduate programs offering the degrees of Master of Science, Engineer, and Doctor of Philosophy as described below. Details of individual degree programs are found in the section for each department or program.

UNDERGRADUATE PROGRAMS

Any undergraduate student admitted to the University may declare a major in one of the Earth Science departments or programs by contacting the appropriate department or program office.

Requirements for the B.S. degree are listed in each department or program section. Departmental academic advisers work with students to define a career or academic goal and assure that the student’s curricular choices are appropriate to the pursuit of that goal. Advisers can help devise a sensible and enjoyable course of study that meets degree requirements and provides the student with opportunities to experience advanced courses, seminars, and research projects. To maximize such opportunities, students are encouraged to complete basic science and mathematics courses in high school or during their freshman year.

Each department offers an honors program involving research during the senior year. Each department also offers an academic minor for those undergraduates majoring in compatible fields. The Earth Systems Program also offers an honors program in Environmental Science, Technology, and Policy through the Freeman Spogli Institute for International Studies.

COTERMINAL BACHELOR’S AND MASTER’S DEGREES

The Stanford coterminal degree plan enables an undergraduate to embark on an integrated program of study leading to the master’s degree before requirements for the bachelor’s degree have been completed. This may result in more expeditious progress towards the advanced degree than would otherwise be possible, making the program especially important to Earth scientists because the master’s degree provides an excellent basis for entry into the profession. The coterminal plan permits students to apply for admission to a master’s program after earning 120 units, but no later than the quarter prior to the expected completion of the undergraduate degree.

Under the plan, the student may meet the degree requirements in the more advantageous of the following two ways: by first completing the 180 units required for the B.S. degree and then completing the three quarters required for the M.S. degree; or by completing a total of 15 quarters during which the requirements for the two degrees are completed concurrently. In either case, the student has the option of receiving the B.S. degree upon meeting all the B.S. requirements or of receiving both degrees at the end of the coterminal program. Students earn degrees in the same department or program, in two different departments, or even in different schools; for example, a B.S. in Physics and an M.S. in Geological and Environmental Sciences. Students are encouraged to discuss the coterminal program with their advisers during their junior year. Additional information is available in the individual department offices.

GRADUATE PROGRAMS

Admission to the Graduate Program — A student who wishes to enroll for graduate work in the school must be qualified for graduate standing in the University and also must be accepted by one of the school’s three departments or the interdisciplinary Ph.D. program. One requirement for admission is submission of scores on the verbal and quantitative sections of the Graduate Record Exam. Admission to one department of the school does not guarantee admission to other departments.

Faculty Adviser — Upon entering a graduate program, the student should report to the head of the department or program who arranges with a member of the faculty to act as the student’s adviser, if that has not already been established through prior student-faculty discussions. The student, in consultation with the adviser, then arranges a course of study for the first quarter and ultimately develops a complete plan of study for the degree sought.

Financial Aid — Detailed information on fellowships, graduate assistantships, and research grants is available from the school’s individual departments and programs. Applications should be filed by the various dates listed in the application packet for awards that become effective in Autumn Quarter of the following academic year.

EARTH, ENERGY, AND ENVIRONMENTAL SCIENCES GRADUATE PROGRAM (EEES)

Director: Kevin R. Arrigo
Associate Director: Deana Fabbro-Johnston
Academic Oversight Committee: Kevin Arrigo (Geophysics), Biondo Biondi (Geophysics), Jef Caers (Energy Resources Engineering), Louis Durlofsky (Energy Resources Engineering), Scott Fendorf (Geological and Environmental Sciences), Adina Paytan (Geological and Environmental Sciences)

Program Offices: Mitchell Bldg., Rm. 138
Mail Code: 2210
Phone: (650) 725-3183
Email: deana@stanford.edu
Web Site: http://earthscl.stanford.edu/EEES/

The goal of the Earth, Energy, and Environmental Sciences (EEES) is to complement the disciplinary Earth Science and Engineering programs offered within the departments of the School of Earth Sciences and to train graduate students to integrate knowledge from these disciplines through tools and methods needed to evaluate the linkages among physical, chemical, and biological systems of the Earth, and understand the dynamics or evolution of these integrated systems and the resources they provide.

Students in EEES must make significant headway in, and combine insights from, more than one scientific discipline. For example, a student whose goal is to understand the structure of the Earth’s interior using computational methods might design a study plan that includes high-level mathematics, numerical modeling, and geophysical imaging techniques. A student interested in water management might integrate water flow analysis and modeling, geophysical imaging, geostatistics, and satellite remote sensing of changes in agricultural intensity and land use. A stu-
GRADUATE PROGRAMS

To ensure that students are appropriately placed in this program, a statement of purpose submitted with the application for admission must reflect the student’s reasoning for pursuit of a crossdisciplinary program of study in contrast to a more traditional disciplinary one readily provided by a department in the School of Earth Sciences. The University’s basic requirements for the M.S. and Ph.D. degrees are discussed in the “Graduate Degrees” section of this bulletin.

MASTER OF SCIENCE

The objective of the M.S. degree in Earth, Energy, and Environmental Sciences is to prepare the student either for a professional career or for doctoral studies. Students in the M.S. degree program must fulfill the following requirements:

1. Complete a 45-unit program of study, of which a minimum of 30 units must be course work, with the remainder consisting of no more than 15 research units.
2. Course work units must be divided among two or more scientific and/or engineering disciplines and can include the three core courses required for the Ph.D. degree.
3. The program of study must be approved by the research adviser and the academic oversight committee.
4. All students are required to complete a M.S. thesis, approved by the student’s thesis committee.

DOCTOR OF PHILOSOPHY

In addition to the University’s basic requirements for the doctorate, the Interdepartmental Program in Earth, Energy, and Environmental Sciences has the following requirements:

1. Prior to the formation of a thesis committee, the student works with research advisers and the academic oversight committee to design a course of study with depth in at least two areas of specialization and preparation in analytical methods and skills. Ph.D. students must take the three core courses: EEES 300, Earth Sciences Seminar; EEES 301, Earth Dynamics; and EEES 302, Challenges and Best Practices in Crossdisciplinary Research and Teaching. The research advisers and academic oversight committee have primary responsibility for the adequacy of the course of study.
2. Students must complete a minimum of 13 courses, including the three core courses and five courses from each of the two areas of specialization. At least half of the ten non-core classes must be at a 200 level or higher and all must be taken for a letter grade. Students obtaining their M.S. from within the program can apply all master’s units toward Ph.D. requirements. Students with an M.S. degree or other specialized training from outside EEES may be able to waive some of the non-core course requirements, depending on the nature of the prior courses or training. The number and distribution of courses to be taken by these students is determined with input from the research advisers and academic oversight committee.
3. During Spring Quarter of each year, students must undergo an annual review by their thesis committee to allow the committee to monitor the progress of the student and make recommendations, where necessary.
4. Prior to taking the oral qualifying examination at or before the end of their 6th academic quarter, the student must have completed 24 units of letter-graded course work, developed a written crossdisciplinary dissertation proposal suitable for submission to a funding organization, and selected a thesis committee.
5. To be admitted to candidacy for the Ph.D. degree, the student must pass an oral qualifying examination. At least two of the minimum four-member examining committee must be faculty within the School of Earth Sciences. During the exam, students present and defend their proposed thesis research work; the exam generally takes the form of a 20-30 minute presentation by the student, followed by 1-2 hours of questioning.
6. The research advisers and two other faculty members comprise the dissertation reading committee. Upon completion of the thesis, the student must pass a University Oral Examination in defense of the dissertation.

In addition to the three core courses, students can select other courses from departments of the School of Earth Sciences and other University departments as appropriate. All courses must be approved by the student’s thesis committee or by the academic oversight committee.

Additional information may be found in the Graduate Student Handbook at http://www.stanford.edu/dept/DoR/GSH/.

COURSES

Additional courses may be listed in the quarterly Time Schedule.

EEES 257. Introduction to Computational Earth Sciences—Techniques for mapping numerically intensive algorithms to modern high performance computers such as the Center for Computational Earth and Environmental Science’s (CEES) high productivity technical computing (HPTC). Earth science examples such as fluid flow, seismic and subsurface imaging, bio-oceanography, and crustal deformation illustrate real world applications of high performance computing. Topics include: concepts of parallel programming; efficient serial and parallel programs; converting Matlab to compiled code; OpenMP; and MPI. Exercises using SMP and cluster computers. See http://pangea.stanford.edu/research/cees/.

Recommended: familiarity with Matlab, C, or Fortran. May be repeated for credit.

1-2 units, Spr (Clapp, R; Harris, J)

EEES 300. Earth Sciences Seminar—(Same as GES 300, GEOPHYS 300, EARTHYS 300, IPER 300, PETENG 300.) Required EEES core course. Research questions, tools, and approaches of faculty members form all departments in the School of Earth Sciences. Goals are: to inform new graduate students about the school’s range of scientific interests and expertise; and to introduce them to each other across departments and research groups. Two faculty members present work at each meeting. Maybe repeated for credit.

1 unit, Aut (Matson, P; Graham, S)

EEES 301. Earth Dynamics—Required EEES core course. Features and dynamics characteristic of the atmosphere, ocean, and solid earth, and the physical, chemical, and biological connections that link them.

1 unit, Win (Staff)

EEES 302. Challenges and Practices in Crossdisciplinary Research and Teaching—Required EEES core course. Presentations by Earth Sciences faculty. Pedagogical tools to present interdisciplinary concepts to a non-specialist audience.

1 unit, Spr (Staff)

EEES 400. Research in Earth, Energy, and Environmental Sciences—May be repeated for credit.

1-15 units, Aut, Win, Spr, Sum (Staff)
systems students complete a 9-unit (270-hour) internship. The internship

education, or oceanography. Along with formal course requirements, Earth

economics and policy, geology, land management, education, or oceanography. Along with formal course requirements, Earth Systems students complete a 9-unit (270-hour) internship. The internship

serves a hands-on academic experience working on a supervised field, laboratory, government or private sector project of their choice.

The following is an outline of the sequential topics covered and skills developed in this major.

1. The fundamental components of the Earth Systems Program help students understand current environmental problems against the backdrop of natural change. Training in the fundamentals comes through introductory course work in geology, biology, and economics. Depending on the Earth Systems track chosen, training may also include introductions to the study of energy systems, microbiology, oceans, or soils. As students begin to question the role that humans play in affecting these systems, they find that many programs and departments at Stanford offer courses that address this question from different directions. Students are encouraged to come to the Earth Systems office for course selection advice or to pick up a current list of environmental courses at Stanford.

2. Focus is on the fundamental interactions among the physical, biological, and human components of the Earth System: the dynamics of the interplay between natural variation and human-imposed influences must be understood to achieve effective solutions to environmental problems.

Several Earth Systems courses introduce students to the dynamic and multiple interactions that characterize global change problems. They include the introductory course, EARTHSYS 10, Introduction to Earth Systems, and three core courses concerning, respectively, the geosphere, the biosphere and the anthrosphere: EARTHSYS 110, Geosphere, EARTHSYS 111, Biology and Global Change, and EARTHSYS 112, Environmental Economics and Policy.

Competence in understanding system-level interactions is critical to development as an Earth Systems thinker, so additional classes that meet this objective are excellent choices as electives. More information on such classes is available in the program office.

3. Development of skills to recognize, quantify, and report change in the environment: key analytical and computational tools and measurement systems are used for insight into global and regional environmental change, and in the development of solutions.

The test of an Earth Systems degree is the student’s ability to recognize, describe, quantify, and help solve complex problems that face our society. Through required foundation and breadth classes and specific track classes, students build skills in these areas. For example, training in satellite remote sensing and geographic information systems is either required or highly recommended for all tracks. Quantification of environmental problems requires solid training in calculus, linear algebra, chemistry, physics, programming, and statistics. These courses are required of all majors. Specialized training, such as in laboratory or field methods, may be necessary and is highly recommended.

Having the ability to effectively communicate ideas and results is critical. Indeed, workable solutions to our environmental problems begin with common understanding of the issues. Writing intensive courses (WIM) help students to communicate complex concepts to expert and non-expert audiences alike. Stanford requires that each student complete one WIM course in his or her major. The WIM requirement is met through completion of the Senior Seminar. Several Earth Systems courses focus on effective written and oral communication.

4. Work to design solutions to environmental problems that take into consideration natural processes as well as human needs: human needs must be met in sustainable ways that focus on ecosystem health, human prosperity, and long-term effectiveness.

Many courses at Stanford focus on solutions. A comprehensive list of environmental courses, and advice on those that focus on problem-solving, is available in the program office. Students can also review the quarterly Time Schedule for solution-based courses. Among others, the following departments and programs may provide subject areas that are a useful guide: Anthropological Sciences, Biological Sciences, Civil and Environmental Engineering, Earth Systems, Economics, Geological and Environmental Sciences, Geophysics, Human Biology, International Policy Studies, International Relations, Law, Energy Resources Engineering, Political
Science, Public Policy, and Urban Studies. Earth Systems emphasizes the importance of workable solutions in several ways, including a required 9-unit internship, knowledge synthesis in the senior seminar, an optional upper division course on environmental problem solving, or an honors project. Students interested in Earth Systems should come to the program office for current information on our curriculum, alumni career paths, environmental jobs and internships, and graduate honors options. The Earth Systems Program provides an advising network that includes faculty, staff, and student peer advisers.

**UNDERGRADUATE PROGRAMS**

**BACHELOR OF SCIENCE**

The B.S. in Earth Systems (ESYS) requires the completion of at least 110 units that can be divided into three levels of courses. The student must complete a series of courses comprising a broad base of specialized study and must complete five required and three elective courses in that track. Finally, the student must carry out a senior-level research or internship project and participate in the senior seminar (WIM). Note: students interested in earning a California Teaching Credential for general high school science through the STEP Program should contact the program office for current information on our curriculum, alumni career paths, environmental jobs and internships, and undergraduate honors options.

The Education Track has State of California specific cognate requirements which vary from the other tracks. The Education Track 110 units that can be divided into three levels of courses. The student must require at least 9 units of upper division course on environmental problem solving, or an honors project. Students interested in Earth Systems should come to the program office for current information on our curriculum, alumni career paths, environmental jobs and internships, and undergraduate honors options. The Earth Systems Program provides an advising network that includes faculty, staff, and student peer advisers.

**REQUIRED FOUNDATION AND BREATH WIDTH COURSES**

**Biology** (any one course below):
- BIOSCI 41. Genetics, Biochemistry, and Molecular Biology 5
- or BIOSCI 43. Plant Biology, Evolution, and Ecology 5

**Chemistry**:
- CHEM 31A. Chemical Principles I 4
- CHEM 31B. Chemical Principles II 4
- or CHEM 31X. Chemical Principles 4
- CHEM 33. Organic Chemistry* 4

**Computer Programming**:
- CS 106. Programming Methodology 5
- or CS 138. Matlab and Maple for Science and Engineering Applications 5

**Economics**:
- ECON 1A. Elementary Microeconomics 5
- ECON 1B. Elementary Macroeconomics 5

**Geological and Environmental Sciences**:
- GES 1. Fundamentals of Geology 5

**Mathematics**:
- MATH 19. Calculus and Analytic Geometry 3
- MATH 20. Calculus and Analytic Geometry 3
- MATH 21. Calculus and Analytic Geometry 4
- or MATH 41. Calculus and Analytic Geometry 5
- MATH 42. Calculus and Analytic Geometry 5
- and MATH 51. Linear Equations and Differential Calculus 5

**Probability and Statistics** (any one course below):
- BIOSCI 141. Biostatistics 4
- ECON 102A. Introduction to Statistical Methods 5
- GES 160. Statistical Methods for Earth and Environmental Sciences 4
- GES 161. Geostatistics 4
- STATS 110. Statistical Methods in Engineering and Physical Sciences 4

**Physics**:
- PHYSICS 41. Mechanics 4
- PHYSICS 45. Light and Heat* 4

*Additional physics foundation course for Energy Track: PHYSICS 43. Electricity and Magnetism 3

---

More extensive work in mathematics and physics may be expected for those planning graduate study. Graduate study in ecology and evolutionary biology and in economics requires familiarity with differential equations, linear algebra, and stochastic processes. Graduate study in geology, oceanography, and geophysics may require more physics and chemistry. Check with your adviser about recommendations beyond the requirements specified above.

**TRACKS**

**GEOSPHERE**

**ADDITIONAL FOUNDATION AND BREATH WIDTH COURSES**:
- GES 90. Introduction to Geochemistry 3
- GES 102. Earth Materials 5

**Earth’s Surface and Fluid Envelopes**:
- Choose one from these three:
  - GES 8. The Oceans: An Introduction to the Marine Environment 3
  - GES 159. Marine Chemistry 4
  - GEOPHYS 130. Biological Oceanography 3

**Plus one of the two following groups of courses**:
- GEOPHYS 104. The Water Course 3
- and GES 175. Science of Soils 3
- or GES 130. Environmental Earth Science I: Soil Physics and Hydrology 3

**Human Society in the Geosphere**:
- CEE 173A. Energy Resources 4
- or PETENG 101. Energy and the Environment 3
- or one from the following list:
  - EARTHSYS 113. Earthquakes and Volcanoes 3
  - EARTHSYS 180. Fundamentals of Sustainable Agriculture 3

**Measuring and Observing the Earth** (choose two):
- GEOPHYS 140. Introduction to Remote Sensing 3
- GEOPHYS 141. Remote Sensing of the Ocean 3
- GES 142. Remote Sensing of Land Use and Land Cover Change 5
- EARTHSYS 189. Field Studies in Earth Systems 5

**BIO SPHERE**

**ADDITIONAL FOUNDATION AND BREATH WIDTH COURSES**:
- BIOSCI 41. Genetics, Biochemistry, and Molecular Biology 5
- BIOSCI 43. Plant Biology, Evolution, and Ecology 5

**Biogeochernistry** (choose one):
- BIOSCI 124. Plant Physiological Ecology 4
- BIOSCI 216. Terrestrial Biogeochemistry 4
- EARTHSYS 189. Field Studies in Earth Systems 2-4
- GES 159. Marine Chemistry 3-5
- GES 175. Science of Soils 3

**Conservation Biology** (choose one):
- HUMBIO 119. Conservation Biology 4
- or BIOSCI 125. Ecosystems of California 3

**Ecology** (choose two):
- BIOSCI 101. Ecology 4
- BIOSCI 125. Ecosystems of California 3
- BIOSCI 136. Evolutionary Paleobiology 4
- BIOSCI 145. Behavioral Ecology 4

**Ecosystems and Society** (choose one):
- ANTHSCI 124. Perspectives on Sustainable Development in Latin America 5
- ANTHSCI 160B. Conservation Anthropology 5
- ANTHSCI 162. Indigenous Peoples and Environmental Problems 3-5
- ANTHSCI 164A. Ethnoecology 5

**ANTHROC SPHERE**

**ADDITIONAL FOUNDATION AND BREATH WIDTH COURSES**:
- ECON 50. Economic Analysis I 5
- ECON 51. Economic Analysis II 5
- ECON 102B. Introduction to Econometrics 5
- ECON 106. The World Food Economy 5
- ECON 118. Economics of Development 5
- ECON 150. Economics and Public Policy 5

**Legal and Political Institutions and the Environment** (choose one):
- ECON 154. Economics of Legal Rules and Policy 5
- PUBLPOL 101. Politics and Public Policy 5
LAND SYSTEMS

ADDITIONAL FOUNDATION AND BREADTH COURSES:

GES 144. Fundamentals of GIS 4

or GES 142. Remote Sensing of Land Cover and Land Use 4

Choose six courses, with at least one from each grouping:

Land Systems:

BIOSCI 125. Ecosystems of California 3
BIOSCI 144. Conservation Biology 3

EARTHSYS 180. Fundamentals of Sustainable Agriculture 3
EARTHSYS 189. Field Studies in Earth Systems 5
ECON 106. World Food Economy 5
GES 175. Science of Soils 4

Water Systems:

CEE 101B. Mechanics of Fluids 4
CEE 166A. Watersheds and Wetlands 3

CEE 171. Environmental Planning Methods 4
CEE 265D. Water and Sanitation in Developing Countries 3
EARTHSYS 104. The Water Course 3
GES 130. Environmental Earth Sciences I: Soil Physics and Hydrology 3

Urban Systems:

CASA 123. Eurocities and the Anthropology of Urban Spaces: Life in the City 5
CEE 176A. Energy Efficient Building Design 4
GES 138. Urbanization, Global Change, and Sustainability 3
URBANST 110. Introduction to Urban Studies 4
URBANST 163. Land Use Control 4
URBANST 165. Sustainable Urban and Regional Transportation Planning 4-5

ENERGY SCIENCE AND TECHNOLOGY

CEE 173B. The Coming Energy Revolution 3
CEE 176A. Energy Efficient Buildings 4
CEE 176B. Electric Power: Generation and Conservation 4
EARTHSYS 101. Energy and the Environment 3
or EARTHSYS 103. Energy Resources 3
ENGR 30. Engineering Thermodynamics 3

OCEANS

GES 8. The Oceans: An Introduction to the Marine Environment 3

Physics of the Sea

CEE 164. Introduction to Physical Oceanography 4

Biological Oceanography

GEOPHYS 130. Biological Oceanography 4

Marine Chemistry

GES 159. Marine Chemistry 3

Remote Sensing of the Ocean

GEOPHYS 141. Remote Sensing of the Ocean 4

UPPER-DIVISION ELECTIVES

Three intermediate to advanced courses, 100 level or above, minimum of 3 units, consistent with the primary track are required of all majors and must be approved. Eligible upper-division electives are listed below. Additional courses may be selected; see the program office for the most current list.

GEOSPHERE TRACK

Only two electives are required for the Geosphere track.

BIOSCI 121. Biogeography 3
BIOSCI 216. Terrestrial Biogeography 3
EARTH SYS 103. Energy Resources 3
GES 110. Structural Geology and Tectonics 5-6
GES 111A. Fundamentals of Structural Geology 3
GES 164. Stable Isotopes 3
GES 185. Volcanology 4
PETENG 260. Groundwater Pollution and Oil Slicks: Environmental Problems in the Petroleum Industry 3

ANTHROSPHERE TRACK

ANTHSCI 172. Indigenous Forest Management 5
CEE 171. Environmental Planning Methods 4
ECON 158. Antitrust and Regulation 5
ECON 165. International Economics 5
ECON 243. Economics of the Environment 5
HISTORY 254. Popular Culture and American Nature 5
MS&E 243. Energy and Environmental Policy Analysis 2-3
PUBLPOL 103A. Introduction to Political Philosophy 3
URBANST 163. Land Use Control 4

LAND SYSTEMS TRACK

Only two electives are required for the Land Systems track.

ANTHSCI 162. Indigenous Peoples and Environmental Problems 3-5
CEE 166B. Floods and Droughts, Dams and Aqueducts 3
CEE 173A. Energy Resources 4-5
CEE 175A. California Coast: Science, Policy, and Law 3-4
GES 131. Environmental Earth Sciences II: Fluvial Systems and Landscape Evolution 3
HISTORY 164. American Spaces 5
INTNLREL 161A. Global Human Geography: Asia and Africa 5
INTNLREL 161B. Global Human Geography: Europe and Americas 5
URBANST 132. Concepts and Analytic Skills for the Social Sector 5

ENERGY SCIENCE AND TECHNOLOGY TRACK

ECON 158. Antitrust and Regulation 5
EE 293A. Fundamentals of Energy Processes 3
EE 293B. Fundamentals of Energy Processes 3
ME. 150 Internal Combustion Engines 3
ME 131A. Heat Transfer 3
PETENG 102. Renewable Energy Sources and Greener Energy Processes 3
PETENG 120. Fundamentals of Petroleum Engineering 3
PETENG 260. Groundwater Pollution and Oil Slicks: Environmental Problems in Petroleum Engineering 3
PETENG 269. Geothermal Reservoir Engineering 3
PSCI 140. The Political Economy of Development 3

OCEANS TRACK

BIOHOPK 161H. Invertebrate Zoology 5
BIOHOPK 163H. Principles of Oceanic Biology 4
BIOHOPK 164H. Marine Botany 4
GES 205. Advanced Oceanography 3
GES 225. Isotopes in Geological and Environmental Research 1-3

SUMMARY OF COURSE REQUIREMENTS AND UNITS

Earth Systems Introduction and Core 18-22
Required allied courses 47-50

Tracks:

Anthroposphere 20
Biosphere 20
Geosphere 26
Energy Science and Technology 23
Land Systems 23
Oceans 18
Upper-division electives 9-15
Senior project or internship 9
Senior seminar 4
Total units (depending on track, electives) ........................................... 110-140

HONORS

The Honors Program in Earth Systems provides students with an opportunity to pursue individual research within a specific area or between areas of Earth Systems, through a year-long mentored research project with an Earth Systems-affiliated faculty member that culminates in a written thesis.

To be admitted to the honors program, applicants must maintain a minimum GPA of 3.3 in Earth Systems course work. Potential honors students should complete the Geosphere, Biosphere, Anthroposphere sequence by the end of the junior year. Qualified students apply in Spring Quarter of the junior year, or the fourth quarter before graduation, by submitting a detailed research proposal and a brief statement of support from a faculty research adviser. Students who elect to do an honors thesis should begin planning no later than Winter Quarter of the junior year.

A maximum of 9 units is awarded for thesis research through EARTHSYS 199. Those 9 units may not substitute for any other required parts of the Earth Systems curriculum. All theses are evaluated for acceptance by the thesis faculty adviser and one additional member of the Earth Systems committee of the whole.

Stanford Bulletin, 2006-07 | 51
COTERMINAL B.S. AND M.S. DEGREES

The Stanford coterminal degree enables an undergraduate to embark on an integrated program of study leading to the master’s degree before requirements for the bachelor’s degree have been completed. An undergraduate majoring in Earth Systems may apply to work simultaneously toward B.S. and M.S. degrees. The M.S. degree in Earth Systems provides the student with enhanced tools to evaluate the primary literature of the discipline most closely associated with the student’s track and allows an increased specialization through additional course work that may include 9 units of thesis research. Integration of earth systems concepts is furthered by participation in the master’s seminar.

To apply, complete and return to the Earth Systems office an application that includes: a statement of purpose; a Stanford transcript; two letters of recommendation, one of which must be from the master’s adviser; and a list of courses that fulfill degree requirements signed by the Associate Director, Academics and the master’s adviser. Applications must be submitted by the quarter preceding the anticipated quarter of graduation. A $50 application fee is assessed by the Registrar’s Office for coterminal applications, effective Autumn Quarter 2004-05. Students may either (1) complete 180 units required for the B.S. degree and then complete the three quarters required for the M.S. degree, or (2) complete a total of 15 quarters during which the requirements of the degrees are fulfilled concurrently. The student has the option of receiving the B.S. degree after completing that degree’s requirements or receiving two degrees concurrently at the end of the master’s program.

Three levels of requirements must be fulfilled to receive an M.S. degree:

1. All requirements for the B.S. degree.
2. Further course work (and/or thesis research), all of which should be at the 100-level or above, including 22 units at the 200-level or above, leading to further focus within the student’s track.
3. Participation in the master’s seminar.

The program consists of a minimum of 45 units of course work and/or thesis research, at least 22 of which must be at the 200-level or above. The student must devise a program of study that shows a level of specialization appropriate to the master’s level, as determined in consultation with the adviser. At least 22 units must be at the 200-level or above. The program should demonstrate further specialization and focus within the student’s undergraduate track.

With the adviser’s approval, 9 units may be in the form of research. This may culminate in the preparation of a master’s thesis; however, a thesis is not required for the degree. Master’s students must take part in the Winter Quarter master’s seminar (EARTHSYS 290) and have additional responsibilities appropriate to the master’s level (thesis presentation, modeling problems, and so on), 2 units.

A more detailed description of the coterminal master’s degree program may be obtained from the program office. For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

COURSES

WIM indicates that the course satisfies Writing in the Major requirements.

UNDERGRADUATE

EARTHSYS 10. Introduction to Earth Systems — For non-majors and prospective Earth Systems majors. Multidisciplinary approach using the principles of geology, biology, engineering, and economics to describe how the Earth operates as an interconnected, integrated system. Goal is to understand global change on all time scales. Focus is on sciences, technological principles, and sociopolitical approaches applied to solid earth, oceans, water, energy, and food and population. Case studies: environmental degradation, loss of biodiversity, and resource sustainability. GER: DB-NatSci
4 units, Win (Ernst, G)

EARTHSYS 45N. Powering the Rim: Energy Issues for the Pacific—(Same as GES 45N.) Stanford Introductory Seminar. Preference to freshman. Geologic, economic, and policy issues shaping energy use and development throughout the Pacific Rim. Topics include the resource potential of fossil fuels, the curse of oil, energy security, global climate change, how efficiency and conservation can reduce demand, alternative energy resources, trade vulnerabilities, the geopolitics of energy use, and energy flow among the countries of the Pacific. Game simulation. Students develop an energy profile for a specific country.
3 units, Win (Howell, D; Graham, S)

3 units, not given this year

3 units, Win (Kovcsek, A; Durlofsky, L; Gerritsen, M)

EARTHSYS 102. Renewable Energy Sources and Greener Energy Processes—(Same as ENERGY 102.) The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible; but the rate at which energy can be drawn from them with today’s technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences. Recommended: 101, MATH 21 or 42. GER: DB-NatSci
3 units, Spr (Kovcsek, A; Horne, R)

EARTHSYS 103. Energy Resources—(Same as CEE 173A/207A.) Oil, natural gas, coal, nuclear, hydro, solar, geothermal, biomass, wind, and ocean energy resources in terms of supply, distribution, recovery and conversion, environmental impacts, economics, policy, and technology. The opportunities for energy efficiency, electric power basics, the changing role of electric utilities, transportation basics, and energy use in developing countries. Field trips. Recommended: CEE 70. GER: DB-EngrAppSci
4-5 units, Aut (Woodward, J)

EARTHSYS 104. The Water Course—(Same as GEOPHYS 104.) The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues. GER: DB-NatSci
3 units, not given this year
EARTHSYS 108/208. Coastal Wetlands — Ecological structure and function of wetlands emphasizing local, coastal wetlands. Topics include: wetland distribution, classification, and history; and interactions between biotic and abiotic components of wetland ecosystems. Labs and local field trips for exposure to landscape patterns, and common sampling equipment and methods. Recommended: 104 or CEE 166A.

3 units, Aut (Myers, L)

EARTHSYS 110. Geosphere — (Same as GEOPHYS 102.) Large-scale natural systems of the solid earth, oceans, and atmosphere, their variation through space and time, and the implications of how these systems impact and are being impacted by humankind. Topics include plate tectonics and its relationship to natural hazards and climate, large-scale ocean and atmospheric systems, energy systems, and the linkages among these topics. Prerequisites: EARTHSYS 10, GES 1. GER: DB-NatSci

3 units, Aut (Zoback, M; Tabazadeh, A)

EARTHSYS 111. Biology and Global Change — (Same as BIOSCI 117, GEOPHY 117.) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biological Sciences or Human Biology core or graduate standing. GER: DB-NatSci

3 units, Win (Vitousek, P; Arrigo, K)

5 units, Spr (Gouldier)

EARTHSYS 113. Earthquakes and Volcanoes — (Same as GEOPHY 113.) Earthquake location, magnitude and intensity scales, seismic waves, styles of eruptions and volcanic hazards, tsunami waves, types and global distribution of volcanoes, volcano forecasting. Plate tectonics as a framework for understanding earthquake and volcanic processes. Forecasting; earthquake resistant design; building codes; and probabilistic hazard assessment. For non-majors and potential earth scientists. GER: DB-EngrAppSci

3 units, Spr (Staff)

EARTHSYS 124/224. Environmental Justice — Focus is on whether minorities and low income citizens suffer disproportionate environmental and health impacts resulting from government and corporate decisionmaking in contexts such as the siting of industrial facilities and waste dumps, toxic chemical use and distribution, and the enforcement of environmental mandates and policies. The political economy of decision making. Case studies.

4 units, not given this year

EARTHSYS 130/230. Biological Oceanography — (Same as GEOPHY 130/231.) Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics: distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Possible local field trips on weekends. Prerequisites: BIOSCI 43 and GES 8 or equivalent. Corequisite: GES 159/259.

2-4 units, Spr (Arrigo, K)

EARTHSYS 141/241. Remote Sensing of the Oceans — (Same as GEOPHY 141/241.) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER: DB-NatSci

4 units, alternate years, not given this year

EARTHSYS 142/242. Remote Sensing of Land Use and Land Cover — (Same as GES 142.) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

4 units, Win (Seto, K)

EARTHSYS 145/245. Energy Flow and Policy: The Pacific Rim — (Same as GES 145/245.) Factors shaping energy use and development throughout the Pacific Rim. Topics include fossil and alternative energy resources, supply and trade vulnerabilities, the geopolitics of energy use, and the environmental and social impacts of waste streams. Class develops a game simulation based on critical energy issues, student-initiated energy projections, and assessment of the principal stakeholders.

3 units, alternate years, not given this year

EARTHSYS 147/247. Controlling Climate Change in the 21st Century — (Same as BIOSCI 147/247, HUMBIO 116.) The science, economics, and environmental diplomacy of global climate change. Topics: the science of climate change, climate change and global environmental law; global economic approaches to carbon abatement, taxes, and tradable permits; joint implementation, consensus, and division in the EU; gaining the support of China, other developing countries, and U.S. corporations; alternative energy and energy efficiencies for less carbon-intensive electric power and transport. GER: DB-NatSci

3 units, Win (Schneider, S; Mastrandrea, M)

EARTHSYS 164. Introduction to Physical Oceanography — (Same as CEE 164/262D.) The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). GER: DB-NatSci

4 units, Win (Hench, J)

EARTHSYS 167/267. Social Policy for Sustainable Resource Use — (Same as ANTHSCI 167/267.) The development of social policies that foster a positive human role in the ecosystem. Goal is to develop group skills in a team setting while researching case studies of forest peoples impacted by integration into the global economy. The case of voluntary forest product certification under the Forest Stewardship Council system. Local participation in policy development, the effectiveness of certification, tenure and institutional aspects of sustainability, indigenous rights and forest conservation, and the role of local communities and workers in sustaining forests over the long term. Prerequisite: consent of instructor. (HEF II, IV, V; DA-A) GER:DB-SocSci

5 units, not given this year

EARTHSYS 167C/267C. Managing the Commons: Evolving Theories for Sustainable Resource Use — (Same as ANTHSCI 167C/267C.) Development of common property theory since Hardin’s article on the tragedy of the commons. Interdisciplinary theorizing about sustainable management of common-pool resources such as grazing, forest, or marine resources; debates about sustainability of commons management within heterogeneous state and global systems; and new commons such as atmosphere or the information commons. Links among theory, methods, and policy. Prerequisite: 190 or consent of instructor. (HEF II, III, IV) GER:DB-SocSci

5 units, Spr (Irvine, D)

EARTHSYS 175/275. Law and Science of California Coastal Policy — (Same as ANTHSCI 175/275, LAW 514.) Interdisciplinary. The legal, science, and policy dimensions of managing California’s coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions.

3-4 units, Win (Caldwell, M; Boehm, A; Sivas, D)
EARTHSYS 180/280, Fundamentals of Sustainable Agriculture — (Same as BIOSCI 180/280.) Ecological, economic, and social dimensions of sustainable agriculture in the context of a growing world population. Focus is on management and technological approaches, and historical content of agricultural growth and change, organic agriculture, soil and water resource management, nutrient and pest management, biotechnology, ecosystem services, and climate change. GER: DB-NatSci 3 units, Spring (Naylor, R; Daily, G), alternate years, not given next year

EARTHSYS 189. Field Studies in Earth Systems — (Same as BIOSCI 206.) For advanced upper-division undergraduates and graduate students. Field-based, focusing on the components and processes by which terrestrial ecosystems function. Topics from biology, chemistry, ecology, geology, and soil science. Lecture, field, and lab studies emphasize standard field techniques, experimental design, analysis of data, and written and oral presentation. Small team projects test the original questions in functioning of natural ecosystems. Admission by application; see Time Schedule. Prerequisites: BIOSCI 141 or GES 160, or equivalent. GER: DB-NatSci 5 units, Spring (Chiarrello, N; Fendorf, S; Matson, P; Field, C; Dirzo, R), alternate years, not given next year

EARTHSYS 199. Honors Program in Earth Systems — Honors Program in Earth Systems 1-9 units, Autumn, Winter, Spring, Summer (Staff)

EARTHSYS 210. Senior Seminar — Oral and written communication skills. Each student presents results of the Earth Systems internship and leads discussion. Group project analyzing local environmental problems with Earth Systems approach. Peer reviews of internship papers. WIM 4 units, Autumn, Spring (Kennedy, J)

EARTHSYS 250. Directed Research — Independent research related to student’s primary track, carried out after the junior year, during the summer, and/or during the senior year. Student develops own project with faculty supervision. 10-15 page thesis. May be repeated for credit. 1-9 units, Autumn, Winter, Spring, Summer (Staff)

EARTHSYS 260. Internship — Supervised field, lab, private sector, or advocacy project, normally through an internship sponsored by government agencies or research institutions, or independently developed by the student with the written approval of the Associate Director of Academics. 10-15 page report. 1-9 units, Autumn, Winter, Spring, Summer (Staff)

EARTHSYS 290. Master’s Seminar — Open to Earth Systems master’s students only. Independent research, oral presentation of results, and preparation of an original proposal for innovative Earth Systems science/policy research. 2 units, Winter (Kennedy, J)

EARTHSYS 297. Directed Individual Study in Earth Systems — Under supervision of an Earth Systems faculty member on a subject of mutual interest. 1-9 units, Autumn, Winter, Spring, Summer (Staff)

EARTHSYS 298. Advanced Topics in Earth Systems — For Earth Systems master’s students only. Continuation of EARTHSYS 290. May be repeated for credit. 2 units, Spring (Kennedy, J)

EARTHSYS 299. M.S. Thesis 1-9 units, Autumn, Winter, Spring, Summer (Staff)

EARTHSYS 300. Earth Sciences Seminar — (Same as GES 300, GEOPHYS 300, IPER 300, EEES 300, ENERGY 300.) Required for incoming graduate students except coterm students. Research questions, tools, and approaches of faculty members from all departments in the School of Earth Sciences. Goals are: to inform new graduate students about the school’s range of scientific interests and expertise; and introduce them to each other across departments and research groups. Two faculty members present work at each meeting. May be repeated for credit. 1 unit, Autumn (Matson, P; Graham, S)

COGNATE COURSES

ANTHSCI 162/262. Indigenous Peoples and Environmental Problems 3-5 units, Autumn (Durham, W)

BIOHOPK 163H/263H. Oceanic Biology 4 units, Winter (Denny, M; Somero, G)

BIOHOPK 164H/264H. Marine Botany 5 units, Autumn (Connor, J), alternate years, not given next year

BIOSCI 141. Genetics, Biochemistry, and Molecular Biology 5 units, Autumn (Simoni, R; Bergmann, D)

BIOSCI 142. Cell Biology and Animal Physiology 5 units, Winter (Sapolsky, R; Jones, P; Cyert, M; Luo, L; Heller, C)

BIOSCI 143. Plant Biology, Evolution, and Ecology 5 units, Spring (Gordon, D; Petrov, D)

BIOSCI 101. Ecology 3 units, Autumn (Vitousek, P; Dirzo, R)

BIOSCI 125. Ecosystems of California 3 units, Spring (Mooney, H)

BIOSCI 139. Biology of Birds 3 units, Spring (Root, T)

BIOSCI 141. Biostatistics — (Same as STATS 141.) 4-5 units, Autumn (Rogosa, D), Winter (Feldman, M)

BIOSCI 145/245. Behavioral Ecology 4 units, Spring (Gordon, D)

BIOSCI 158/284. Principles and Practice of Biosystematics 4 units, not given this year

BIOSCI 215. Biochemical Evolution 3 units, Winter (Watt, W)

BIOSCI 216. Terrestrial Biogeochemistry 3 units, Spring (Vitousek, P)

CEE 63/263C. Weather and Storms 3 units, Autumn (Jacobson, M)

CEE 101B. Mechanics of Fluids 4 units, Spring (Koseff, J)

CEE 166A/266A. Watersheds and Wetlands 3 units, Autumn (Freyberg, D)

CEE 166B/266B. Floods and Droughts, Dams and Aqueducts 3 units, Winter (Staff)

CEE 171. Environmental Planning Methods 3 units, Winter (Oriolano, L)

CEE 176A. Energy Efficient Buildings 3-4 units, Winter (Masters, G)

CEE 176B. Electric Power: Renewables and Efficiency 3-4 units, Spring (Masters, G)

CEE 265D. Water and Sanitation in Developing Countries 3 units, Autumn (Davis, J)

CHEM 31A,B. Chemical Principles I/II 4 units, Autumn (Chidsey, C), Winter (Andersen, H)

CHEM 31X. Chemical Principles 4 units, Autumn (Waymouth, R; Fayer, M), Summer (Staff)

CHEM 33. Structure and Reactivity 4 units, Winter (Stack, T; Kohler, J), Spring (Wender, P), Summer (Staff)

CS 106A. Programming Methodology — (Same as ENGR 70A.) 3-5 units, Autumn (Young, P), Winter (Roberts, E), Spring (Young, P), Summer (Staff)

ENERGY RESOURCES ENGINEERING

Emeriti: (Professors) John W. Harbaugh, Sullivan S. Marsden, Jr.
Chair: Louis J. Durlofsky
Associate Professors: Jef Caers, Anthony R. Kovscek, Hamdi Tchelepi
Assistant Professor: Margot Gerritsen
Lecturer: Louis M. Castanier
Consulting Professor: Stephan A. Graham
Consulting Professors: Warren K. Kourt, Robert G. Lindblom, Kiran Pande
Consulting Assistant Professor: Marco R. Thiele
* Joint appointment with Geological and Environmental Sciences

Department Office: GESB 065
Mail Code: 94305-2220
Phone: (650) 723-4744
Email: peteng@pangea.stanford.edu
Web Site: http://ekofisk.stanford.edu

Courses given in Energy Resources Engineering have the subject code ENERGY. For a complete list of subject codes, see Appendix.

Energy Resources Engineering, known as Petroleum Engineering until its name change effective in academic year 2006-07, offers a B.S., M.S., Engineer, and Ph.D. in Petroleum Engineering.

Energy resource engineers are concerned with the design of processes for energy recovery. Included in the design process are characterizing the spatial distribution of hydrocarbon reservoir properties, drilling wells, designing and operating production facilities, selecting and implementing methods for enhancing fluid recovery, examining the environmental aspects of petroleum exploration and production, monitoring reservoirs, and predicting recovery process performance. The Energy Resources Engineering curriculum provides a sound background in basic sciences and their application to practical problems to address the complex and changing nature of the field. Course work includes the fundamentals of chemistry, computer science, engineering, geology, geophysics, mathematics, and physics. Applied courses cover most aspects of energy resources engineering and some related fields like geothermal engineering and geostatistics. The curriculum emphasizes the fundamental aspects of fluid flow in the subsurface. These principles apply equally well to optimizing oil recovery from petroleum reservoirs and remediating contaminated groundwater systems. The program also has a strong interest in related energy topics such as renewable energy, global climate change, and CO₂ sequestration.

Faculty and graduate students conduct research in areas including: enhanced oil recovery by thermal means, gas injection, and the use of chemicals; flow of fluids in pipes; geostatistical reservoir characterization and mathematical modeling; geothermal engineering; natural gas engineering; carbon sequestration optimization; properties of petroleum fluids; reservoir simulation using computer models; and well test analysis. Undergraduates are encouraged to participate in research projects. Graduate programs lead to the degrees of Master of Science (M.S.), Engineer, and Doctor of Philosophy (Ph.D.) in Petroleum Engineering.

M.S., Engineer, and Ph.D. degrees may be awarded with field designations for students who follow programs of study in the fields of geostatistics, geothermal, crustal fluids, or environmental specialties.

The department is housed in the Green Earth Sciences Building and it operates laboratories for research in enhanced oil recovery processes and geothermal engineering. Students have access to a variety of computers for research and course work. Computers available for instruction and research include ten multiprocessor NT servers within the department, as well as campus-wide computer clusters. Each graduate student office has one 3 GHz Pentium 4 computer per student.

PUBLPOL 104. Economic Policy Analysis — (Same as ECON 150.)
5 units, Spr (Kessler, D)

STATS 110. Statistical Methods in Engineering and the Physical Sciences
4-5 units, Aut, Sum (Staff)

STTS 101/201. Science, Technology, and Contemporary Society —
(Same as ENGR 130.)
4-5 units, Aut (McGinn, R)

URBANST 110. Introduction to Urban Studies
4 units, Aut, Win (Stout, F), Spr (Kahan, M)

URBANST 113. Introduction to Urban Design
5 units, Win (Staff)

URBANST 163. Land Use Control
4 units, Spr (Hall, R)

OVERSEAS STUDIES
Courses approved for the Earth Systems major and taught overseas can be found in the “Overseas Studies” section of this bulletin, or in the Overseas Studies office, 126 Sweet Hall.

AUSTRALIA
EARTHSYS 120X. Coral Reef Ecosystems — (Same as BIOSCI 109Z, CEE 168X, HUMBIO 111X) GER:DB-EngrAppSci
3 units, Aut (Ward, S; Fine, M; Anthony, K)

EARTHSYS 121X. Coastal Resource Management — (Same as BIOSCI 110Z, CEE 168Y, HUMBIO 112X) GER:DB-EngrAppSci
3 units, Aut (Johnstone, R; Chiffings, T)

EARTHSYS 122X. Coastal Forest Ecosystems — (Same as BIOSCI 111Z, CEE 168Z, HUMBIO 113X) GER:DB-EngrAppSci
3 units, Aut (Pole, M; Duke, N)

BEIJING
EARTHSYS 137X. China’s Environment and Prospects for Sustainability — (Same as GES 135, URBANST 159V)
4 units, Spr (Seto, K)

EARTHSYS 139X. Urbanization and Land-Use Change in China —
(Same as GES 136, URBANST 158V)
4 units, Spr (Seto, K)

SANTIAGO
EARTHSYS 110X. Living Chile: A Land of Extremes — (Same as LATINAM 58X) GER:DB-EngrAppSci
5 units, Aut (Poblete, V; Ginocchio, R), Spr (Poblete, V)
UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

The four-year program leading to the B.S. degree provides a foundation for careers in many facets of the energy industry. The curriculum includes basic science and engineering courses that provide sufficient depth for a wide spectrum of careers in the energy and environmental industries.

One of the goals of the program is to provide experience integrating the skills developed in individual courses to address a significant design problem. In ENERGY 180, taken in the senior year, student teams design facilities for a real petroleum reservoir to meet specific management objectives.

PROGRAM

The requirements for the B.S. degree in Petroleum Engineering are similar to those described in the “School of Engineering” section of this bulletin. Students must satisfy the University general education, writing, and language requirements. The normal Energy Resources Engineering undergraduate program automatically satisfies the University General Education Requirements (GERs) in the Disciplinary Breadth areas of Natural Sciences, Engineering and Applied Sciences, and Mathematics. Engineering fundamentals courses and Energy Resources Engineering depth and elective courses must be taken for a letter grade.

In brief, the unit and subject requirements are:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Minimum Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engineering fundamentals</td>
<td>25</td>
</tr>
<tr>
<td>General Education, writing, language, and electives</td>
<td>68-69</td>
</tr>
<tr>
<td>Mathematics</td>
<td>23</td>
</tr>
<tr>
<td>Energy Resources Engineering depth</td>
<td>39-40</td>
</tr>
<tr>
<td>Science</td>
<td>26</td>
</tr>
<tr>
<td>Total</td>
<td>181</td>
</tr>
</tbody>
</table>

The following courses constitute the normal program leading to a B.S. in Petroleum Engineering. The program may be modified to meet a particular student’s needs and interests with the adviser’s prior approval.

<td>3</td>
</tr>
<tr>
<td>or CHEMENG 180. Chemical Engineering Plant Design</td>
<td>3</td>
</tr>
</tbody>
</table>

A list of suggested electives and sample course programs is available in the department office, room 65, Green Earth Sciences Building. It is important to start mathematics courses in the first year and engineering and geology early in the second year. Computers are used extensively in most energy resources engineering courses. Students must develop programming skills through course work and self-study and are expected to achieve fluency in the use of FORTRAN, C, or C++ by their junior year.

MINORS

To be recommended for a B.S. degree with Petroleum Engineering as a minor subject, a student must take the following courses in addition to those required by the major department or program: ENERGY 120, 121, 130, 175, 180; GES 111A and 151. In some programs, GES 111A or 151 may also satisfy major requirements.

HONORS PROGRAM

A limited number of undergraduates may be admitted to the honors program at the beginning of their senior year.

To be admitted, the student must have a grade point average (GPA) of at least 3.0 in all course work in the University. In addition to the minimum requirements for the B.S. degree, the student must complete 6 units of advanced energy resources engineering courses and at least 3 units of research (ENERGY 193).

Students who wish to be admitted to the honors program should consult with their adviser before the start of their senior year. Those who do not meet all of the formal requirements may petition the department for admission. Those completing the program receive the B.S. degree in Petroleum Engineering with Honors. An overall 3.5 GPA is required in all energy resources engineering courses for graduation with honors.

COTERMINAL B.S. AND M.S. PROGRAM

The coterminal B.S./M.S. program offers an opportunity for Stanford University students to pursue a graduate experience while completing the B.S. degree in any relevant major. Energy Resources Engineering graduate students generally come from backgrounds such as chemical, civil, or mechanical engineering; geology or other earth sciences; or physics or chemistry. Students should have a background at least through MATH 51A and CS 106 before beginning graduate work in this program.

The two types of M.S. degrees, the course work only degree and the research degree, as well as the courses required to meet degree requirements, are described below in the M.S. section. Both degrees require 45 units and may take from one to two years to complete depending on circumstances unique to each student.

Requirements to enter the program are two letters of recommendation from faculty members or job supervisors, a statement of purpose, scores from the GRE general test, and a copy of Stanford University transcripts. While the department does not require any specific GPA or GRE score, potential applicants are expected to compete favorably with graduate student applicants.

A Petroleum Engineering master’s degree can be used as a terminal degree for obtaining a professional job in the petroleum or geothermal industry, or in any related industry where analyzing flow in porous media or computer simulation skills are required. It can also be a stepping stone to a Ph.D. degree, which usually leads to a professional research job or an academic position.

Students should apply to the program any time after they have completed 105 undergraduate units, and in time to take ENERGY 120, the basic introductory course in Autumn Quarter of the year they wish to begin the program. Contact the Department of Energy Resources Engineering to obtain additional information. For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.
GRADUATE PROGRAMS

The University’s basic requirements for M.S., Engineer, and Ph.D. degrees are discussed in the “Graduate Degrees” section of this bulletin.

The following are minimum requirements for an Energy Resources Engineering student to remain in good academic standing regarding course work:

1. no more than one incomplete grade at any time
2. a cumulative grade point average (GPA) of 3.0
3. a grade point average (GPA) of 2.7 each quarter.
4. a minimum of 15 units completed within each two quarter period (excluding Summer Quarter).

Unless otherwise stated by the instructor, incomplete grades in courses within the department are changed to ‘NP’ (not passed) at the end of the quarter after the one in which the course was given. This one quarter limit is a different constraint from the maximum one-year limit allowed by the University.

Academic performance is reviewed each quarter by a faculty committee. At the beginning of the next quarter, any student not in good academic standing receives a letter from the committee or department chair stating criteria that must be met for the student to return to good academic standing. If the situation is not corrected by the end of the quarter, possible consequences include termination of financial support, termination of departmental privileges, and termination from the University.

Students funded by research grants or fellowships from the department are expected to spend at least half of their time (a minimum of 20 hours per week) on research. Continued funding is contingent upon satisfactory research effort and progress as determined by the student’s adviser. After Autumn Quarter of the first year, students receive a letter from the department chair concerning their research performance. If problems are identified and they persist through the second quarter, a warning letter is sent. Problems persisting into a third quarter may lead to loss of departmental support including tuition and stipend. Similar procedures are applied in subsequent years.

A balanced master’s degree program including engineering course work and research requires a minimum of one maximum-tuition academic year beyond the baccalaureate to meet the University residence requirements. Most full-time students spend at least one additional summer to complete the research requirement. An alternative master’s degree program based only on course work is available, also requiring at least one full tuition academic year to meet University residence requirements.

M.S. students who anticipate continuing in the Ph.D. program should follow the research option. M.S. students receiving financial aid normally require two academic years to complete the degree. Such students must take the research option and are limited to an 8-10 unit course load per quarter.

The degree of Engineer requires a comprehensive maximum-tuition, two-year program of graduate study. This degree permits more extensive course work than the master’s degree, with an emphasis on professional practice. All Engineer degree students receiving financial aid are limited to an 8-10 unit course load per quarter and need at least ten quarters of work to complete the degree.

The Ph.D. degree is awarded primarily on the basis of completion of significant, original research. Extensive course work and a minimum of 90 units of graduate work beyond the master’s degree is required. Doctoral candidates planning theoretical work are encouraged to gain experimental research experience in the M.S. program. Ph.D. students receiving financial assistance are limited to 8-10 units per quarter and often require more than three years to complete the Ph.D.

In special cases, the M.S., Engineer, and Ph.D. degrees may be awarded with field designations for students who follow programs of study in the particular fields of (1) geostatistics, (2) geothermal, or (3) environment. For example, students may be awarded the degree Master of Science in Petroleum Engineering (Geothermal).

MASTER OF SCIENCE

The objective is to prepare the student for professional work in the energy industry through completion of fundamental courses in the major field and in related sciences as well as independent research.

Students entering the graduate program are expected to have an undergraduate-level energy resources engineering background. Competence in computer programming in a high-level language (CS 106X or the equivalent) and knowledge of energy resources engineering and geological fundamentals (ENERGY 120, 130, and GES 151) are prerequisites for taking most graduate courses.

The candidate must fulfill the following requirements:

1. Register as a graduate student for at least 45 units.
2. Submit a program proposal for the Master’s degree approved by the adviser during the first quarter of enrollment.
3. Complete 45 units with at least a grade point average (GPA) of 3.0. This requirement is satisfied by taking the core sequence, selecting one of the seven elective sequences, an appropriate number of additional courses from the list of technical electives, and completing 6 units of master’s level research. Students electing the course work only M.S. degree are strongly encouraged to select an additional elective sequence in place of the research requirement. Students interested in continuing for a Ph.D. are expected to choose the research option and enroll in 6 units of ENERGY 361. All courses must be taken for a letter grade.
4. Students entering without an undergraduate degree in Petroleum Engineering must make up deficiencies in previous training. Not more than 10 units of such work may be counted as part of the minimum total of 45 units toward the M.S. degree.

Research subjects include certain groundwater hydrology and environmental problems, energy industry management, flow of non-Newtonian fluids, geothermal energy, natural gas engineering, oil and gas recovery, pipeline transportation, production optimization, reservoir characterization and modeling, carbon sequestration, reservoir engineering, reservoir simulation, and transient well test analysis.

RECOMMENDED COURSES AND SEQUENCES

The following list is recommended for most students. With the prior special consent of the student’s adviser, courses listed under technical electives may be substituted based on interest or background.

**M.S. IN INTEGRATED RESERVOIR MODELING**

This M.S. degree requires a minimum of 45 units of which 39 should be course units. The following courses are suggested for this program.

**DOCTOR OF PHILOSOPHY**

The Ph.D. degree is conferred upon demonstration of high achievement in independent research and by presentation of the research results in a written dissertation and oral defense.

Basic requirements include a minimum of 135 units of satisfactorily completed graduate study. Students must take at least 90 units beyond the 45 units required for the master’s degree. The 90 units are composed of 54 units of research and 36 units of course work. The student’s record must indicate outstanding scholarship. The student must pass the department’s qualifying examination, submit an approved research proposal, fulfill the requirements of the minor department if a minor is elected, and pass the University oral examination, which is a defense of the dissertation. The student must prepare a dissertation based on independent research and makes a significant contribution to the field.

The specification of 36 units of course work is a minimum; in some cases the research adviser may specify additional requirements to strengthen the student’s expertise in particular areas. The 36 units of course work does not include teaching experience (ENERGY 359), which is a requirement for the Ph.D. degree, nor any units in research seminars, which students are required to attend. All courses must be taken for a letter grade, with an average grade point average (GPA) of at least 3.0 in courses taken for the degree of Engineer. A thesis based on 15 units of research must be submitted and approved by the adviser, another faculty member, and the University Committee on Graduate Studies.

COURSES

WIM indicates that the course satisfies the Writing in the Major requirements.

3 units, Win (Kovscek, A; Durlofsky, L; Gerritsen, M)

ENERGY 102. Renewable Energy Sources and Greener Energy Processes—(Same as EARTHSYS 102.) The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible; but the rate at which energy can be drawn from them with today’s technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences. Recommended: 101, MATH 21 or 42. GER:DB-EngrAppSci
3 units, Spr (Kovscek, A; Horne, R)

ENERGY 104. Technology in the Greenhouse—Technologies that might be employed to reduce emissions of greenhouse materials, such as carbon dioxide, methane, nitrous oxide, and black soot, produced by the generation and use of energy. Sources of greenhouse materials in the current energy mix and evidence for global geochemical and climate changes. Advantages and limitations of technologies to reduce emissions. Examples include renewable sources such as wind and solar energy, more efficient use of energy, hydrogen, capture and storage of carbon dioxide, and nuclear power.
3 units, Spr (Orr, F)

3 units, Aut (Horne, R)

3 units, Win (Tchelepi, H)

ENERGY 130. Well Log Analysis I—For earth scientists and engineers. Interdisciplinary, providing a practical understanding of the interpretation of well logs. Lectures, problem sets using real field examples: methods for evaluating the presence of hydrocarbons in rock formations penetrated by exploratory and development drilling. The fundamentals of all types of logs, including electric and non-electric logs.
3 units, Aut (Lindblom, R)

ENERGY 155. Undergraduate Report on Energy Industry Training—On-the-job practical training under the guidance of experienced, on-site supervisors. Required report detailing work activities, problems, assignments and key results. Prerequisite: written consent of instructor.
1-3 units, Aut, Win, Spr, Sum (Staff)
ENERGY 161. Statistical Methods for the Earth and Environmental Sciences: Geostatistics—(Same as GES 161.) Statistical analysis and graphical display of data, common distribution models, sampling, and regression. The variogram as a tool for modeling spatial correlation; variogram estimation and modeling; introduction to spatial mapping and prediction with kriging; introduction of spatial modeling and other ancillary information using co-kriging models; spatial uncertainty; introduction to geostatistical software applied to large environmental, climatological, and reservoir engineering databases; emphasis is on practical use of geostatistical tools. GER:DB-NatSci
3-4 units, Win (Caers, J)

ENERGY 167. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties—(Same as 267.) Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor. GER:DB-EngrSci
3 units, Win (Kourt, W; Pande, K)

3 units, Spr (Horne, R)

ENERGY 180. Oil and Gas Production Engineering—(Same as 280.) Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120. Recommended: 130. GER:DB-EngrSci, WIM
3 units, alternate years, not given this year

ENERGY 192. Undergraduate Teaching Experience—Leading field trips, preparing lecture notes, quizzes under supervision of the instructor. May be repeated for credit.
1-3 units, Aut, Win, Spr, Sum (Staff)

ENERGY 193. Undergraduate Research Problems—Original and guided research problems with comprehensive report. May be repeated for credit.
1-3 units, Aut, Win, Spr, Sum (Staff)

ENERGY 194. Special Topics in Energy and Mineral Fluids—May be repeated for credit.
1-3 units, Aut, Win, Spr, Sum (Staff)

ENERGY 211. Computer Programming in C++ for Earth Scientists and Engineers—(Same as CME 211.) Computer programming methodology emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and modularity. Fundamental data structures. Time and space complexity analysis. The basic facilities of the programming language C++. Numerical problems from various science and engineering applications.
3 units, Win (Staff)

ENERGY 221. Fundamentals of Multiphase Flow—(For graduate students; see 121.)
3 units, Win (Tchelepi, H)

3-4 units, Spr (Durlofsky, L; Gerritsen, M)

ENERGY 223. Reservoir Simulation—Fundamentals of petroleum reservoir simulation. Equations for multiphase flow between gridblocks comprising a petroleum reservoir. Relationships between black-oil and compositional models. Techniques for developing black-oil, compositional, thermal, and dual-porosity models. Practical considerations in the use of simulators for predicting reservoir performance. Class project. Prerequisite: 221 and 246, or consent of instructor. Recommended: CME 206 (formerly ME 300C).
3-4 units, Win (Durlofsky, L; Gerritsen, M)

ENERGY 224. Advanced Reservoir Simulation—Topics include modeling of complex wells, coupling of surface facilities, compositional modeling, dual porosity models, treatment of full tensor permeability and grid nonorthogonality, local grid refinement, higher order methods, streamline simulation, upscaling, algebraic multigrid solvers, unstructured grid solvers, history matching, other selected topics. Prerequisite: 223 or consent of instructor. May be repeated for credit.
3 units, Aut (Durlofsky, L; Tchelepi, H)

3 units, Win (Orr, F)

3 units, Spr (Castanier)

ENERGY 227. Enhanced Oil Recovery—The physics, theories, and methods of evaluating chemical, miscible, and thermal enhanced oil recovery projects. Existing methods and screening techniques, and analytical and simulation based means of evaluating project effectiveness. Dispersion-convection-adsorption equations, coupled heat, and mass balances and phase behavior provide requisite building blocks for evaluation.
3 units, Spr (Koseck, A) alternate years, not given next year

ENERGY 230. Advanced Topics in Well Logging—(Same as GEO-PHYS 230.) State of the art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Guest speakers on formation evaluation topics. Prerequisites: 130 or equivalent; basic well logging; and standard practice and application of electric well logs.
3 units, Spr (Lindblom, R)

ENERGY 240. Geostatistics for Spatial Phenomena—(Same as GES 240.) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Multiple-point geostatistics and training image-based stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB and SGEMS software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, STATIS 116, GES 161, or equivalent.
3-4 units, Win (Journel, A)

ENERGY 241. Practice of Geostatistics and Seismic Data Integration—(Same as GEO-PHYS 241.) Students build a synthetic 3D fluvial channel reservoir model with layer depths, channel geometry, and facies-specific petrophysical and seismic properties, stressing the physical significance of geophysical data. Reference data set is sparsely sampled, providing the sample data typically available for an actual reservoir assessment. Geostatistical reservoir modeling uses well and seismic data, with results checked against the reference database. Software provided (GSLIB and SRBtools). Prerequisite: 240. Recommended: experience with Unix, Matlab/C++/Fortran programming.
3-4 units, Spr (Caers, J; Mukerji, T)
ENERGY 242. Topics in Advanced Geostatistics — (Same as GES 242.)
Conditional expectation theory and projections in Hilbert spaces; para-
metric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point
statistics inference and reproduction; neural net geostatistics; Bayesian
methods for data integration; techniques for upscaling hydrodynamic
properties. May be repeated for credit. Prerequisites: 240, advanced
calculus, C++/Fortran.
3-4 units, alternate years, not given this year

ENERGY 244. Modeling of 3D Geological Objects with Gocad — Accu-
rate 3D modeling of subsurface structures as prerequisite for decision
making. Concepts and methods for modeling the complex geometries
and spatial distribution of geological objects. Building 3D models using
the Gocad software. The definition and placement of discrete curves and
surfaces. Integration of diverse types of data. Flexible volume modeling
algorithms used to conform the volume objects to both the structural
model and the data.
3 units, not given this year

ENERGY 245. Probability Theory — (Same as GEOPHY 245.)
Probabilistic formulations and solutions to inverse problems. Monte Carlo
methods for solving inverse problems. Metropolis algorithm. Determin-
istic solutions using maximum likelihood, gradient methods. Dealing
with prior probability and data uncertainty. Gaussian and non-Gaussian
model formulations. Application to Earth Science problems. Prerequisite:
introduction to probability theory course.
3 units, not given this year

ENERGY 246. Reservoir Characterization and Flow Modeling with
Outcrop Data — (Same as GES 246.) Project addresses a reservoir man-
agement problem by studying an outcrop analog, constructing geostatisti-
cal reservoir models, and performing flow simulation. How to use outcrop
observations in quantitative geological modeling and flow simulation.
Relationships between disciplines. Weekend field trip.
3 units, Aut (Graham, S; Jourael, A; Tchelepi, H)

ENERGY 247. Stochastic Simulation — Characterization and inference
of statistical properties of spatial random function models; how they av-
average over volumes, expected fluctuations, and implementation issues.
Models include point processes (Cox, Poisson), random sets (Boolean,
truncated Gaussian), and mixture of Gaussian random functions. Pre-
requisite: 240.
3 units, not given this year (Journel, A)

ENERGY 251. Thermodynamics of Equilibria — Lectures, problems.
The volumetric behavior of fluids at high pressure. Equation of state
representation of volumetric behavior. Thermodynamic functions and
conditions of equilibrium, Gibbs and Helmholtz energy, chemical poten-
tial, fugacity, Phase diagrams for binary and multicomponent systems.
Calculation of phase compositions from volumetric behavior for mul-
ticomponent mixtures. Experimental techniques for phase-equilibrium
measurements. May be repeated for credit.
3 units, Aut (Kovscek, A)

ENERGY 255. Master’s Report on Energy Industry Training — On-
the-job training for master’s degree students under the guidance of on-site
supervisors. Students submit a report detailing work activities, problems,
assignments, and key results. May be repeated for credit. Prerequisite:
consent of adviser.
1-3 units, Sum (Staff)

ENERGY 259. Presentation Skills — For teaching assistants in Energy
Resources Engineering. Five two-hour sessions in the first half of
the quarter. Awareness of different learning styles, grading philosophies,
fair and efficient grading, text design; presentation and teaching skills,
PowerPoint slide design; presentation practice in small groups. Taught in
collaboration with the Center for Teaching and Learning.
1 unit, Spr (Gerritsen, M)

ENERGY 260. Groundwater Pollution and Oil Slicks: Environmental
Problems in Petroleum Engineering — Sources and types of wastes in
petroleum operations. Partitioning of hydrocarbons in soil. Review of
single phase flow. Multiphase flow of oil, water, and air. Movement of
hydrocarbons in the vadose zone and in the groundwater. Remediation
and cleanup techniques: air stripping and sparging, bioremediation,
steam flooding, and solvent and surfactant injection. Drilling wastes. The
physical processes affecting the spread of oil slicks at sea. Methods for
containing and removing the spill and cleaning polluted beaches.
3 units, not given this year

ENERGY 267. Engineering Valuation and Appraisal of Oil and Gas
Wells, Facilities, and Properties — (For graduate students; see 167.)
3 units, Win (Kourt, W; Pande, K)

ENERGY 269. Geothermal Reservoir Engineering — Conceptual mod-
els of heat and mass flows within geothermal reservoirs. The fundamentals
of fluid/heat flow in porous media; convective/conductive regimes, dis-
persion of solutes, reactions in porous media, stability of fluid interfaces,
liquid and vapor flows. Interpretation of geochemical, geological, and
well data to determine reservoir properties/characteristics. Geothermal
plants and the integrated geothermal system.
3 units, alternate years, not given this year

ENERGY 273. Special Topics in Petroleum Engineering
1-3 units, Aut, Win, Spr, Sum (Staff)

ENERGY 280. Oil and Gas Production Engineering — (For graduate
students; see 180.)
3 units, alternate years, not given this year

ENERGY 281. Applied Mathematics in Reservoir Engineering — The
philosophy of the solution of engineering problems. Methods of solution
of partial differential equations: Laplace transforms, Fourier transforms,
wavelet transforms, Green’s functions, and boundary element methods.
Prerequisites: CME 204 or MATH 131, and consent of instructor.
3 units, Spr (Staff)

ENERGY 284. Optimization: Deterministic and Stochastic Ap-
proaches — Deterministic and stochastic methods for optimization in earth
sciences and engineering. Linear and nonlinear regression, classification
and pattern recognition using neural networks, simulated annealing and
genetic algorithms. Deterministic optimization using non-gradient-based
methods (simplex) and gradient-based methods (conjugated gradient,
steepest descent, Levenberg-Marquardt, Gauss-Newton), eigenvalue and
singular value decomposition. Applications in petroleum engineering, geo-
statistics, and geophysics. Prerequisite: CME 200 or consent of instructor.
3 units, Aut (Caers, J)

ENERGY 285. Research Seminars — Focused study in research areas
within the department. Graduate students may participate in advanced work
in areas of particular interest prior to making a final decision on a thesis
subject. May be repeated for credit. Prerequisite: consent of instructor.
ENERGY 285A. SUPRI-A Research Seminar: Enhanced Oil
Recovery
1 unit, Aut, Win, Spr (Staff)

ENERGY 285B. SUPRI-B Research Seminar: Reservoir Simulation
1 unit, Aut, Win, Spr (Staff)

ENERGY 285C. SUPRI-C Research Seminar: Gas Injection
Processes
1 unit, Aut, Win, Spr (Staff)

ENERGY 285D. SUPRI-D Research Seminar: Well Test Analysis
1 unit, Aut, Win, Spr (Staff)

ENERGY 285F. SCRF Research Seminar: Geostatistics and
Reservoir Forecasting — Stanford Center for Reservoir Forecasting.
1 unit, Aut, Win, Spr (Staff)

ENERGY 285G. Geothermal Reservoir Engineering Research
Seminar
1 unit, Aut, Win, Spr (Staff)

ENERGY 285H. SUPRI-HW Research Seminar: Horizontal Well
Technology
1 unit, Aut, Win, Spr (Staff)
ENERGY 290. Numerical Modeling of Fluid Flow in Heterogeneous Porous Media — How to mathematically model and solve elliptic partial differential equations with variable and discontinuous coefficients describing flow in highly heterogeneous porous media. Topics include finite difference and finite volume approaches on structured grids, efficient solvers for the resulting system of equations, Krylov space methods, preconditioning, multi-grid solvers, grid adaptivity and adaptivity criteria, multiscale approaches, and effects of anisotropy on solver efficiency and accuracy. MATLAB programming and application of commercial or public domain simulation packages. Prerequisite: CME 200, 201, and 202, or equivalents with consent of instructor.

3 units, not given this year

ENERGY 300. Earth Sciences Seminar — (Same as EARTHSYS 300, GES 300, GEOPHYS 300, IPER 300.) Required for incoming graduate students except coterm. Research questions, tools, and approaches of faculty members from all departments in the School of Earth Sciences. Goals are: to inform new graduate students about the school’s range of scientific interests and expertise; and introduce them to each other across departments and research groups. Two faculty members present work at each meeting. May be repeated for credit.

1 unit, Aut (Matson, P; Graham, S)

ENERGY 350. Doctoral Report on Energy Industry Training — On-the-job training for doctoral students under the guidance of on-site supervisors. Students submit a report on work activities, problems, assignments, and results. May be repeated for credit. Prerequisite: consent of advisor.

1-3 units, Sum (Staff)

ENERGY 359. Teaching Experience in Energy Resources Engineering — For TAs in Energy Resources Engineering. Course and lecture design and preparation; lecturing practice in small groups. Classroom teaching practice in an Energy Resources Engineering course for which the participant is the TA (may be in a later quarter). Taught in collaboration with the Center for Teaching and Learning.

1 unit, Aut (Gerritsen, M)

ENERGY 360. Advanced Research Work in Petroleum Engineering — Graduate-level work in experimental, computational, or theoretical research. Special research not included in graduate degree program. May be repeated for credit.

1-10 units, Aut, Win, Spr, Sum (Staff)

1-6 units, Aut, Win, Spr, Sum (Staff)

ENERGY 362. Engineer’s Degree Research in Petroleum Engineering — Graduate-level work in experimental, computational, or theoretical research for Engineer students. Advanced technical report writing. Limited to 15 units total, or 9 units total if 6 units of 361 were previously credited.

1-10 units, Aut, Win, Spr, Sum (Staff)

ENERGY 363. Doctoral Degree Research in Petroleum Engineering — Graduate-level work in experimental, computational, or theoretical research for Ph.D. students. Advanced technical report writing.

1-10 units, Aut, Win, Spr, Sum (Staff)

ENERGY 365. Special Research Topics in Petroleum Engineering — Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.

1-15 units, Aut, Win, Spr, Sum (Staff)

COGNATE COURSE

See department listing for course description.

EEES 257. Introduction to Computational Earth Sciences

2-4 units, Spr (Clapp, R; Harris, J)

GEOLOGICAL AND ENVIRONMENTAL SCIENCES

Chair: C. Page Chamberlain

Associate Chair: Scott Fenddorf

Associate Professor: Scott E. Fenddorf

Assistant Professor: Christopher Francis, George Hilley, Jonathan Payne, Adina Paytan, Karen Seto

Professors (Research): Atilla Aydin, J. Michael Moldowan

Lecturers: Anne E. Egger, Bob Jones

Courtesy Professors: Ronaldo I. Borja, Francisco Chavez, Peter Kitaniidis, James O. Leckie, Stephen Monismith, Charles Paul, Peter M. Vitousek

Courtesy Associate Professors: Kevin R. Arrigo, James P. Barry, David L. Freyberg, Elizabeth Hadly, Simon L. Klemperer, Anders Nilsson, Alfred M. Spormann

Courtesy Assistant Professor: Gregory P. Asner

Consulting Associate Professors: Marco Antonellini, Trevor Dumitru, Joseph Wooden, Robyn Wright-Dunbar

Consulting Assistant Professor: Isabelle Coutand

Visiting Professors: Franco Biasi, Donald Dingwell, Djordje Grujac, Neil Roberts, Minik Rosing, Jaime Toro, Derek Vance

Courses given in Geological and Environmental Sciences have the subject code GES. For a complete list of subject codes, see Appendix.

The geological and environmental sciences are naturally interdisciplinary, and include: the study of processes that shape the Earth’s surface; records of Earth’s history, including climate, as documented in rocks, sediments, and ice; changes in the oceans and atmosphere; chemical and physical properties of minerals, rocks, soils, sediments, water, and ice, and interactions among them; interactions between earth materials and microbes; sources of energy resources and economic minerals; contamination of natural waters and soils; biogeochemical cycles over multiple timescales; planetary geology and astrobiology; remote sensing and classification of land use and land cover; and natural hazards like volcanoes, earthquakes, and landslides.

Most students and faculty within the department spend time in the field; recent field sites include areas in California, Chile, Antarctica, Easter Island, Hawaii, the Kamchatka peninsula, Utah, Nevada, and S.E. Asia. Departmental facilities that model, simulate, or digitize field data and samples include laboratories that provide access to state-of-the-art techniques including stable isotope analysis, geochronology, thermochronology, electron and ion microprobe analysis, nuclear magnetic resonance,
scanning electron microscopy, and geographic information systems (GIS) analysis. Facilities at the Stanford Linear Accelerator Center (SLAC), the Stanford Synchrotron Radiation Laboratory (SSRL), and the U.S. Geological Survey in Menlo Park are available to researchers in the earth sciences.

UNDERGRADUATE PROGRAMS
BACHELOR OF SCIENCE

The undergraduate program leading to the Bachelor of Science (B.S.) degree in Geological and Environmental Sciences (GES) is designed to leverage the diversity of the field and provide background for a wide variety of careers. Students who complete the undergraduate GES major or minor have gone on to graduate school in the earth sciences and/or employment in geological consulting, environmental engineering, land use planning, law, public service, teaching and other professions in which an understanding of the earth and a background in science are important. Students interested in the GES major should consult with the undergraduate program coordinator for information about options within the curriculum and potential career paths.

The major requires at least 81 units; letter grades are required in all courses if available. Students complete a core sequence of GES courses that introduce earth processes and the properties of earth materials. With this foundation, they focus on a more specialized area within the geological and environmental sciences. The curriculum thus includes courses in chemistry, physics, biology, and mathematics. In addition, nearly all GES students conduct independent research projects, either over the summer or as part of a year-long honors thesis.

The study of earth processes in the natural laboratory of the field is a fundamental component of the major, and most GES courses include field trips. Students must complete at least six weeks of directed field research.

Near the end of the undergraduate program and to fulfill the Writing in the Major requirement, students take a writing-intensive senior seminar (GES 150), in which students share their knowledge with each other while addressing issues at the forefront of the earth sciences.

COURSE SEQUENCE (81-92 UNITS TOTAL)

CORE GEOLOGICAL AND ENVIRONMENTAL SCIENCES COURSES

Subject and Catalog Number | Units
--- | ---
GES 1. Dynamic Earth | 5
or GES 49N. Field Trip to Death Valley and Owens Valley | 3
GES 2. The History of Life on Earth | 2
GES 102. Earth Materials | 5
GES 103. Rocks in Thin Section | 3
GES 150. Senior Seminar: Issues in the Earth Sciences (WIM) | 3
GES 190, other field course, or field research (6 weeks) | 

Four of the following five groups of courses (others may count as electives):

- GES 90. Introduction to Geochemistry 3-4
- GES 110. Structural Geology and Tectonics 5
- GES 111A. Fundamentals of Structural Geology 3
- GES 151. Sedimentary Geology and Petrography 4
- GES 175. Science of Soils 4
- or GES 130. Environmental Earth Sciences I 3
- or GES 170. Environmental Geochemistry 3
- GES 180. Igneous Processes 3-5
- or GES 181. Metamorphic Processes 3-5

REQUIRED SUPPORTING MATHEMATICS

Choose one of the following equivalent series:

- MATH 19. Calculus 3
- MATH 20. Calculus 3
- MATH 21. Calculus 4
- or MATH 41. Calculus 5
- MATH 42. Calculus 5

Choose at least one of the following (the entire series is recommended for students who plan to pursue graduate studies in the sciences or engineering):

- MATH 51. Multivariate Mathematics 5
- MATH 52. Multivariate Mathematics 5
- MATH 53. Multivariate Mathematics 5

REQUIRED SUPPORTING COGNATE SCIENCES

Students must complete course sequences from two of the three fields of cognate science: chemistry, physics, and biological sciences. Advanced placement credit may be accepted for these courses as determined by the relevant departments.

Chemistry:

- CHEM 51A,B. Chemical Principles I/II 8
- or CHEM 31X. Chemical Principles 4
- CHEM 135. Physical Chemical Principles 3
- or CHEM 171. Physical Chemistry 3
- or GES 171. Geochemoal Thermodynamics 3

Physics (choose one of the following series):

- PHYSICS 22. Mechanics and Heat Lab 1
- PHYSICS 23. Electricity and Optics 3
- PHYSICS 24. Electricity and Optics Lab 1
- or PHYSICS 41 (formerly 53). Mechanics 4
- PHYSICS 43 (formerly 51). Light and Heat 4
- PHYSICS 46 (formerly 52). Light and Heat Lab 1
- or PHYSICS 41 (formerly 53). Mechanics 4
- PHYSICS 43 (formerly 55). Electricity and Magnetism 3
- PHYSICS 44 (formerly 56). Electricity and Magnetism 3

Biology:

- BIOSCI 45. Genetics, Biochemistry, and Molecular Biology 5
- BIOSCI 42. Cell Biology and Animal Physiology 5
- or BIOSCI 43. Plant Biology, Evolution, and Ecology 5
- or BIOSCI 101. Ecology 3

ELECTIVES (19 UNITS)

Majors must complete at least 19 units of upper-division electives. A majority (at least 10) of these units must be from courses within GES (excluding GES 7, introductory seminars (GES 30-60), and GES 201).

Many courses from departments other than GES are also approved electives; this list is available from the undergraduate program coordinator and at http://pangea.stanford.edu/GES/undergraduates. Additional courses may satisfy this requirement but require prior approval from the undergraduate program director. A maximum of 3 elective units may be fulfilled by GES 192, 198, or an upper-level seminar. Honors research (GES 199) may fulfill up to 6 elective units. Students should discuss their electives with an adviser.

FIELD RESEARCH (6 WEEKS)

Majors must complete six weeks of field research, preferably through departmental offerings (GES 190). Approved field schools offered by another university or other faculty-directed field research projects that involve learning and application of field techniques and the preparation of a written report may be used to fulfill the field research requirement.

ENGINEERING GEOLOGY AND HYDROGEOLOGY SPECIALIZED CURRICULUM

The Engineering Geology and Hydrogeology curriculum is intended for undergraduates interested in the application of geological and engineering data and principles to the study of rock, soil, and water to recognize and interpret geological and environmental factors affecting engineering structures and groundwater resources. Students learn to characterize and assess the risks associated with natural geological hazards, such as landslides and earthquakes, and with groundwater flow and contamination. The curriculum prepares students for graduate programs and professional careers in engineering, and environmental geology, geology, geotechnical engineering, and hydrogeology. Students interested in this curriculum should contact a faculty adviser: Professor Loague, Pollard, or Gorelick.

GES majors who elect the Engineering Geology and Hydrogeology curriculum are expected to complete a core course sequence and a set of courses in supporting sciences and mathematics. The core courses come from Earth Sciences and Engineering. Any substitutions for core courses must be approved by the faculty adviser and through a formal petition to
the undergraduate program director. In addition, four elective courses, consistent with the core curriculum and required of all majors, are to be selected with the advice and consent of the adviser. Typically, electives are selected from the list below. Letter grades are required if available.

**SUGGESTED ELECTIVES (11-20 UNITS)**

Choose four courses from the following list or, with faculty approval, four related courses:

- CEE 180. Structural Analysis
- CEE 270. Movement, Fate, and Effects of Contaminants in Surface Waters and Groundwater
- CEE 293. Foundation Engineering
- CEE 296. Experimental Soil Mechanics
- ENGR 30. Engineering Thermodynamics
- ENGR 50. Introductory Science of Materials
- GEOPHYS 150. General Geophysics
- GES 130. Environmental Earth Sciences I
- GES 131. Environmental Earth Sciences II
- GES 215A. Advanced Structural Geology and Rock Mechanics
- GES 217. Characterization and Hydraulics of Rock Fracture
- GES 231. Contaminant Hydrogeology
- GES 235. Role of Fluids in Geologic Processes
- GES 237. Surface and Near-Surface Hydrologic Response
- MATH 103. Matrix Theory and its Applications
- ME 80. Strength of Materials

**MINORS**

The minor in GES consists of a small set of required courses plus 12 elective units. A wide variety of courses may be used to satisfy these elective requirements.

**ELECTIVES (12 UNITS)**

Electives must include at least three courses from the list below:

- GES 8. The Oceans
- GES 90. Introduction to Geochemistry
- GES 103. Rocks in Thin Section
- GES 110. Structural Geology
- GES 111A. Fundamentals of Structural Geology

Students pursuing a minor in GES are encouraged to take one of the freshman or sophomore seminars (courses with numbers 38-59) and to participate in the senior seminar (GES 150) and in field research (GES 190). Up to 3 units of Stanford Introductory Seminars may be used in fulfilling the 12-unit requirement above.

**HONORS PROGRAM**

The honors program provides an opportunity for year-long independent study and research on a topic of special interest, culminating in a written thesis. Students select research topics in consultation with the faculty adviser of their choosing. Research undertaken for the honors program may be of a theoretical, field, or experimental nature, or a combination of these approaches. The honors program is open to students with a GPA of at least 3.5 in GES courses and 3.0 in all University course work. Modest financial support is available from several sources to help defray laboratory and field expenses incurred in conjunction with honors research. Interested students must submit an application, including a research proposal, to the department by the end of their junior year.

Upon approval of the research proposal and entrance to the program, course credit for the honors research project and thesis preparation is assigned by the student’s faculty adviser within the framework of GES 199; the student must complete a total of 9 units over the course of the senior year. Up to 6 units of GES 199 may be counted towards the elective requirement, but cannot be used as a substitute for regularly required courses.

Both a written and oral presentation of research results are required. The thesis must be read, approved, and signed by the student’s faculty adviser and a second member of the faculty. In addition, honors students must participate in the GES Honors Symposium in which they present their research to the broader community. Honors students in GES are also eligible for the Firestone medal, awarded by Undergraduate Advising and Research for exceptional theses.

**COTERMINAL B.S. AND M.S. DEGREES**

The coterminal B.S./M.S. program offers students the opportunity to pursue graduate research and an M.S. degree concurrently with or subsequent to their B.S. studies. The M.S. degree can serve as an entrance to a professional degree in subdisciplines within the earth sciences such as engineering geology and environmental geology, or to graduate course work and research as an intermediate step to pursuit of the Ph.D. Regardless of professional goals, coterminal B.S./M.S. students are treated as members of the graduate community and are expected to meet all of the standards set for regular M.S. students. Applicants must have earned no fewer than 120 units toward graduation, and must submit their application no later than the quarter prior to the expected completion of their undergraduate degree, normally the Winter Quarter prior to Spring Quarter graduation. The application includes a statement of purpose, a current Stanford transcript, official Graduate Record Examination (GRE) scores, letters of recommendation from two members of the Stanford faculty (at least one of whom must be in the GES department), and a list of courses in which they intend to enroll to fulfill the M.S. degree requirements. Specific research interests should be noted in the statement of purpose and discussed with a member of the GES faculty prior to submission of the application. Coterminal students must complete a thesis describing research results. For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

Students must meet all requirements for both the B.S. and M.S. degrees. Students may either (1) complete 180 units required for the B.S. degree and then complete three full-time quarters (45 units at the 100-level or above) for the M.S. degree, or (2) complete a total of fifteen quarters during
ing which the requirements of the two degrees are fulfilled concurrently. At least half of the courses used to satisfy the 45-unit requirement must be designated as being primarily for graduate students, normally at the 200-level or above. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement. Further information about this program may be obtained from the GES office.

GRADUATE PROGRAMS

Graduate studies in the Department of Geological and Environmental Sciences (GES) involve academic course work and independent research. Students are prepared for careers as professional scientists in research, education, or the application of the earth sciences to mineral, energy, and water resources. Programs lead to the M.S., Engineer, and Ph.D. degrees. Course programs in the areas of faculty interest are tailored to the student’s needs and interests with the aid of his or her research adviser. Students are encouraged to include in their program courses offered in other departments in the School of Earth Sciences as well as in other departments in the University. Diplomas designate degrees in Geological and Environmental Sciences and may also indicate the following specialized fields of study: Geostatistics and Hydrogeology.

Admission—For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores. Previously admitted students who wish to change their degree objective from M.S. to Ph.D. must petition the GES Admissions Committee.

FIELDS WITH DIPLOMA DESIGNATION

Hydrogeology—The Hydrogeology program, which leads to an M.S., Engineer, or Ph.D. degree in GES, balances research in the purely scientific and applied aspects of groundwater resources and near-surface processes. The program requires students to obtain a broad background in earth sciences and engineering. Students in the program must have a strong general scientific background in basic physics, chemistry, computer science, and mathematics, and a demonstrated aptitude for solving quantitative problems. They must complete a core curriculum involving courses in fluid mechanics, hydrogeology, hydrology, and water quality. A list of required and recommended courses is supplied upon request.

Geostatistics—The Geostatistics program leads to an M.S. or Ph.D. degree in GES. Strong interactions have been developed with faculty and students in the departments of Geophysics and Energy Resources Engineering. The program requires a geological background and a fair level of calculus and programming (Fortran and/or C++). Recent graduates have found jobs in the extractive (mining, oil) and environmental (EPA) fields.

MASTER OF SCIENCE

Objectives—The purpose of the master’s program in Geological and Environmental Sciences is to continue a student’s training in one of a broad range of earth science disciplines and to prepare students for either a professional career or doctoral studies.

Procedures—The graduate coordinator of the department appoints an academic adviser during registration with appropriate consideration of the student’s background, interests, and professional goals. In consultation with the adviser, the student plans a program of course work for the first year. The student should select a thesis adviser within the first year of residence and submit to the thesis adviser a proposal for thesis research as soon as possible. The academic adviser supervises completion of the department requirements for the M.S. program (as outlined below) until the research proposal has been accepted; responsibility then passes to the thesis adviser. The student may change either thesis or academic advisers by mutual agreement and after approval of the graduate coordinator.

Requirements—The University’s requirements for M.S. degrees are outlined in the “Graduate Degrees” section of this bulletin. Practical training (GES 385) may be required by some programs, with adviser approval, depending on the background of the student. Additional department requirements include the following:

1. A minimum of 45 units of course work at the 100 level or above.
   a. Half of the courses used to satisfy the 45-unit requirement must be intended as being primarily for graduate students, usually at the 200 level or above.
   b. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement.
   c. Some students may be required to make up background deficiencies in addition to these basic requirements.

2. By the end of Winter Quarter of their first year in residence, students must complete at least three courses taught by a minimum of two different GES faculty members.

3. Each student must have a research adviser who is a faculty member in the department and is within the student’s thesis topic area or specialized area of study.

4. Each student must complete a thesis describing his or her research. Thesis research should begin during the first year of study at Stanford and should be completed before the end of the second year of residence.

5. Early during the thesis research period, and after consultation with the student, the thesis adviser appoints a second reader for the thesis, who must be approved by the graduate coordinator; the thesis adviser is the first reader. The two readers jointly determine whether the thesis is acceptable for the M.S. degree in the department.

ENGINEER DEGREE

The Engineer degree is offered as an option for students in applied disciplines who wish to obtain a graduate education extending beyond that of an M.S., yet do not have the desire to conduct the research needed to obtain a Ph.D. A minimum of two years (six quarters) of graduate study is required. The candidate must complete 90 units of course work, no more than 10 of which may be applied to overcoming deficiencies in undergraduate training. The student must prepare a substantial thesis that meets the approval of the thesis adviser and the graduate coordinator.

DOCTOR OF PHILOSOPHY

Objectives—The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship, high attainment in a particular field of knowledge, and the ability to conduct independent research. To this end, the objectives of the doctoral program are to enable students to develop the skills needed to conduct original investigations in a particular discipline or set of disciplines in the earth sciences, to interpret the results, and to present the data and conclusions in a publishable manner.

Requirements—The University’s requirements for the Ph.D. degree are outlined in the “Graduate Degrees” section of this bulletin. Practical training (GES 385) may be required by some programs, with adviser approval, depending on the background of the student. A summary of additional department requirements is presented below:

1. Ph.D. students must complete the required courses in their individual program or in their specialized area of study with a grade point average (GPA) of 3.0 (B) or higher, or demonstrate that they have completed the equivalents elsewhere. Ph.D. students must complete a minimum of four letter-grade courses of at least 3 units each from four different faculty members on the Academic Council in the University. By the end of Winter Quarter of their first year in residence, students must complete at least three courses taught by a minimum of two different GES faculty members.

2. Each student must qualify for candidacy for the Ph.D. by the end of the sixth quarter in residence, excluding summers. Department procedures require selection of a faculty thesis adviser, preparation of a written research proposal, approval of this proposal by the thesis adviser, selection of a committee for the Ph.D. qualifying examination, and approval of the membership by the graduate coordinator and chair of the department. The research examination consists of three
parts: oral presentation of a research proposal, examination on the research proposal, and examination on subject matter relevant to the proposed research. The exam should be scheduled for prior to May 1, so that the outcome of the exam is known at the time of the annual spring evaluation of graduate students.

3. Upon qualifying for Ph.D. candidacy, the student and thesis adviser, who must be a department faculty member, choose a research committee that includes a minimum of two faculty members in the University in addition to the adviser. Annually, in the month of March or April, the candidate must organize a meeting of the research committee to present a brief progress report covering the past year.

4. Under the supervision of the research advisory committee, the candidate must prepare a doctoral dissertation that is a contribution to knowledge and is the result of independent research. The format of the dissertation must meet University guidelines. The student is strongly urged to prepare dissertation chapters that, in scientific content and format, are readily publishable.

5. The doctoral dissertation is defended in the University oral examination. The research adviser and two other members of the research committee are determined to be readers of the draft dissertation. The readers are charged to read the draft and to certify in writing to the department that it is adequate to serve as a basis for the University oral examination. Upon obtaining this written certification, the student is permitted to schedule the University oral examination.

**PH.D. MINOR**

Candidates for the Ph.D. degree in other departments who wish to obtain a minor in Geological and Environmental Sciences must complete, with a GPA of 3.0 (B) or better, 20 units in the geosciences in lecture courses intended for graduate students. The selection of courses must be approved by the student’s GES adviser and the department chair.

**COURSES**

WIM indicates that the course satisfies the Writing in the Major requirement. (AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

**UNDERGRADUATE**

GES 1. Dynamic Earth: Fundamentals of Earth Science — For non-majors or prospective majors in Geological and Environmental Sciences or Earth Systems. Activity-based; field trips. Processes that shape the earth’s landforms, produce minerals and rocks, create soils, deform its crust, and move continents; surficial processes involving water, wind, and ice, and their role in erosion and sediment production; processes within the earth’s interior with emphasis on global tectonics; determining the ages of rocks and geologic events; hazards including earthquakes, volcanoes, flooding, landslides, and their mitigation; and nonrenewable resources, energy, and environmental problems. Recommended: high school chemistry and physics. GER:DB-NatSci

5 units, Aut (Egger, A), Spr (Hilley, G)

GES 1X. Digging Deeper: Exploring the Literature of Geology — Additional meetings with instructors and guest scientists concerning primary literature and research studies that underpin concepts and readings in GES 1. Corequisite: GES 1.

1 unit, Aut (Egger, A), Spr (Hilley, G)

GES 2. The History of Life on Earth — How life evolved on Earth from the formation of the planet to the origin of humans. Includes the origin of life, the origin and impact of oxygenic photosynthesis, the evolution of multicellular life, and trends in biodiversity. Focus is on interactions between environmental change and biological evolution and how geological processes affect the fossil record. Required lab. GER:DB-NatSci

4 units, Win (Payne, J)

GES 7A. An Introduction to Wilderness Skills — Living, traveling, and working in the wilderness for those planning fieldwork in the backcountry. Local geology, environmental ethics, trip planning, first aid, and leadership techniques. Four weekend outings focus on backcountry travel, minimum impact camping, equipment use and maintenance, rock climbing, navigation, and telemark skiing. 7A emphasizes wilderness travel and climbing. 7B emphasizes winter camping skills and backcountry skiing. Food, group and major personal gear provided. Guest speakers. Fee. See http://www.stanford.edu/class/ges7, or email oep-teachers@lists.stanford.edu.

1 unit, Aut (Bird, D)

GES 7B. An Introduction to Wilderness Skills — Living, traveling, and working in the wilderness for those planning fieldwork in the backcountry. Local geology, environmental ethics, trip planning, first aid, and leadership techniques. Four weekend outings focus on backcountry travel, minimum impact camping, equipment use and maintenance, rock climbing, navigation, and telemark skiing. 7A emphasizes wilderness travel and climbing. 7B emphasizes winter camping skills and backcountry skiing. Food, group and major personal gear provided. Guest speakers. Fee. See http://www.stanford.edu/class/ges7, or email oep-teachers@lists.stanford.edu.

1 unit, Win (Bird, D)

GES 7C. Advanced Wilderness Skills — For students with prior backcountry experience. Backcountry skiing, mountaineering, climbing, first aid, and trip planning. Focus is on outdoor leadership experience and trip management techniques. Food, group, and major personal gear provided. Four mandatory weekend trips. Fee. See http://www.stanford.edu/class/ges7 for information or contact oep-teachers@lists.stanford.edu. Prerequisite: application.

1 unit, Spr (Bird, D)

GES 8. The Oceans: An Introduction to the Marine Environment — For non-majors and earth science and environmental majors. Topics: topography and geology of the sea floor; evolution of ocean basins; circulation of ocean and atmosphere; nature of sea water, waves, and tides; and the history of the major ocean basins. The interface between continents and ocean basins, emphasizing estuaries, beaches, and continental shelves with California margin examples. Relationships among the distribution of inorganic constituents, ocean circulation, biologic productivity, and marine environments from deep sea to the coast. One-day field trip to measure and analyze waves and currents. GER:DB-NatSci

3 units, Spr, Sum (Ingle, J)

GES 42N. Earthquakes, Faults, and Mountains of the Bay Area — Stanford Introductory Seminar. Active faulting and erosion in the Bay Area, and its effects upon landscapes. Earth science concepts and skills through investigation of the valley, mountain, and coastal areas around Stanford. Faulting associated with the San Andreas Fault, coastal processes along the San Mateo coast, uplift of the mountains by plate tectonic processes, and landsliding in urban and mountainous areas. Field excursions; student projects. 5 units, Aut (Hilley, G)

GES 43N. Environmental Problems — Stanford Introductory Seminar. Preference to freshmen. Components of multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, subsurface disposal of nuclear waste, pipelines, slope stability, and oil tanker spills. GER:DB-NatSci

3 units, Win (Loague, K)

GES 44N. A Transition to Sustainability: Development and Environment in the 21st Century — Preference to freshmen. What will it take to meet the needs of the human population while preserving Earth’s life support systems? Trends and transitions in population growth, resource consumption, and environmental conditions at regional and global scales. Approaches to move the world towards sustainability in energy, industry, urbanization, living resources, air, and water. Students prepare a case study of sustainable development in the area of their choice. GER:DB-NatSci

3 units, not given this year
GES 45N. Powering the Rim: Energy Issues for the Pacific — (Same as EARTHSYS 45N.) Stanford Introductory Seminar. Preference to freshman. Geologic, economic, and policy issues shaping energy use and development throughout the Pacific Rim. Topics include the resource potential of fossil fuels, the curse of oil, energy security, global climate change, how efficiency and conservation can reduce demand, alternative energy resources, trade vulnerabilities, the geopolitics of energy use, and energy flow among the countries of the Pacific. Game simulation. Students develop an energy profile for a specific country.

3 units, Win (Howell, D; Graham, S)

GES 49N. Field Trip to Death Valley and Owens Valley — Stanford Introductory Seminar. Preference to freshmen. California’s Death Valley and Owens Valley as natural laboratories for exploring a billion years of earth history: ancient ocean sediments, mountain building, earthquake faulting, glacial landscapes, volcanic eruptions, prehistoric climate changes, and historic human impacts. Six-day field trip to these areas during Spring Break. Term paper is written as a chapter for a field trip guidebook. Oral presentation on the outcrop at the field trip stop described in the guidebook chapter. The basics of plate tectonics and geology. Rock identification, reading topographic and geologic maps, and interpreting remote sensing imagery. Camping and moderate hiking required. GER:DB-NatSci WRITE-2

3 units, Win (Mahood, G)

GES 50Q. The Coastal Zone Environment — Stanford Introductory Seminar. Preference to sophomores. The oceanographic, geological, and biological character of coastal zone environments, including continental shelves, estuaries, and coastal wetlands, with emphasis on San Francisco Bay. Five required field trips examine estuarine and coastal environments, and agencies and facilities that manage these resources. Students present original research. Prerequisite: beginning course in Biology such as BIOSCI 51, Chemistry such as CHEM 30 or 31, Earth Sciences such as GES 1 or 2, or Earth Systems such as EARTHSYS 10. GER:DB-NatSci WRITE-2

3 units, Win (Ingle, J)

GES 54Q. California Landforms and Plate Tectonics — Stanford Introductory Seminar. Preference to sophomores. The forces of plate tectonics at work on the landscape of California. Faulting, folding and volcanism analyzed with satellite imagery and air photos. Principles of rock deformation introduced with laboratory experiments that produce structures similar to those forming in California. Field trips provide human perspective of large scale tectonic features. Final paper involves analyzing active deformation and earthquakes in a region of student’s choice. GER:DB-NatSci WRITE-2

3 units, Aut (Miller, E)

GES 55Q. The California Gold Rush: Geologic Background and Environmental Impact — Stanford Introductory Seminar. Preference to sophomores. Topics include: geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California; and environmental impact of the Gold Rush due to population increase, mining operations, and high concentrations of arsenic and mercury in sediments from hard rock mining and milling operations. Recommended: introductory geology. GER:DB-NatSci WRITE-2

3 units, Spr (Bird, D)

GES 57Q. How to Critically Read and Discuss Scientific Literature — Stanford Introductory Seminar. Preference to sophomores. Topics: how to approach the reading of scientific articles, and how to understand and evaluate the information contained in them through guided reading, and a review of such papers. GER:DB-NatSci WRITE-2

3 units, Win (Paytan, A)

GES 90. Introduction to Geochemistry — The chemistry of the solid earth and its atmosphere and oceans, emphasizing the processes that control the distribution of the elements in the earth over geological time and at present, and on the conceptual and analytical tools needed to explore these questions. The basics of geochemical thermodynamics and isotope geochemistry. The formation of the elements, crust, atmosphere and oceans, global geochemical cycles, and the interaction of geochemistry, biological evolution, and climate. Recommended: introductory chemistry. GER:DB-NatSci WRITE-2

3-4 units, Win (Stebbins, J)

GES 102. Earth Materials — The minerals, rocks, soils, and liquids that comprise the earth. How to identify, classify, and interpret rock-forming minerals and igneous, metamorphic, and sedimentary rock types. Emphasis is on information provided by common minerals and rocks about the earth’s major processes including magmatism, metamorphism, weathering, erosion, and deposition; the relationship of these processes to plate tectonics and earth cycles. Prerequisite: introductory geology course. Recommended: introductory chemistry. GER:DB-NatSci

5 units, Aut (Brown, G)

GES 103. Rocks in Thin Section — How to identify minerals and common mineral associations in igneous, metamorphic, and sedimentary rocks. How to describe typical crystallography and textures of igneous rocks, mineral growth and reaction relations in metamorphic rocks, and deformational textures and their relation to mineral growth. The petrographic microscope. Prerequisite: 102.

3 units, Win (Miller, E)

GES 110. Structural Geology and Tectonics — Techniques, principles, and theory to describe, measure, analyze, and interpret deformation-related structures in rocks and minerals. Techniques of structural data collection in the field; lab and computer analysis of structural data; theory and principles of brittle deformation, faulting, and folding; interpretation of geologic maps and principles of cross-section construction; strain measurement and the structural analysis of metamorphic rocks; evolution of fold and thrust belts, rift-related sedimentary basins, and strike-slip fault systems. Prerequisites: 1, calculus. Recommended: 102. GER:DB-NatSci

5 units, Spr (Miller, E)

GES 111A. Fundamentals of Structural Geology — (Same as CEE 195A.) Techniques for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurement and analysis of stress. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisites: GES 1, MATH 51, 52. GER:DB-NatSci

3 units, Aut (Pollard, D)

GES 111B. Fundamentals of Structural Geology — (Same as CEE 195B.) Continuation of GES 111A/CEE 195A. Conservation of mass and momentum in a deformable continuum; linear elastic deformation and plastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisite: GES 111A/CEE 195B.

3 units, Win (Pollard, D)

GES 112. Mapping the Geological Environment — Geological mapping tools and techniques. Field training with GPS and laser ranging tools. Data sets from modern surveying and mapping campaigns employing lab and field-based laser scanning, field-based total stations, airborne photography and laser swath mapping (ALSM), the satellite Global Positioning System (GPS), and 3D seismic reflection surveys. These data analyzed using elementary differential geometry. MATLAB introduced as the computational and graphics engine. Prerequisites: GES 1, MATH 51, 52. GER:DB-NatSci

3 units, Win (Pollard, D)

GES 115. Engineering Geology Practice — (Same as CEE 196.) The application of geologic fundamentals to the planning and design of civil engineering projects. Field exercises and case studies emphasize the impact of site geology on the planning, design, and construction of civil works such as buildings, foundations, transportation facilities, excavations, tunnels and underground storage space, and water supply facilities. Topics: Quaternary history and tectonics, formation and physical properties of surficial deposits, site investigation techniques, geologic hazards, and professional ethics. Prerequisite: GES 1 or consent of instructor. GER:DB-NatSci

3 units, alternate years, not given this year
GES 120. Planetary and Early Biological Evolution Seminar — (Graduate students register for 220.) Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.

2-3 units, Spr (Lowe, D)

GES 121. What Makes a Habitable Planet? — Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.

3 units, Aut (Lowe, D)

3 units, Aut (Loague, K)

3 units, Win (Staff)

GES 138. Urbanization, Global Change, and Sustainability — The relationship between urbanization and global change at local, regional, and global scales. Global environmental change as driver and outcome of human (economic, political, cultural, and social) and physical (urban structure, expansion, and land use) processes in urban areas. Urbanization as a demographic and biophysical phenomenon. Topics include the human and biophysical dimensions of global environmental change as relevant to the process of urbanization, environmental implications of urban processes and form, urban ecological services, and urban climate.

3 units, not given this year

GES 142. Remote Sensing of Land Use and Land Cover — (Same as EARTHSYS 142/242.) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

4 units, Win (Seto, K)

GES 144. Fundamentals of Geographic Information Science (GIS) — Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments.

GER:DB-NatSci

4 units, Win (Seto, K)

GES 145. Energy Flow and Policy: The Pacific Rim — (Graduate students register for 245; same as EARTHSYS 145/245.) Factors shaping energy use and development throughout the Pacific Rim. Topics include fossil and alternative energy resources, supply and trade vulnerabilities, the geopolitics of energy use, and the environmental and social impacts of waste streams. Class develops a game simulation based on critical energy issues, student-initiated energy projections, and assessment of the principal stakeholders.

3 units, alternate years, not given this year

GES 150. Senior Seminar: Issues in Earth Sciences — Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review. May be repeated for credit. WIM.

3 units, Win (Egger, A; Bird, D)

GES 151. Sedimentary Geology and Petrography: Depositional Systems — Topics: weathering, erosion and transportation, deposition, origins of sedimentary structures and textures, sediment composition, diagenesis, sedimentary facies, tectonics and sedimentation, and the characteristics of the major siliciclastic and carbonate depositional environments. Lab: methods of analysis of sediments in hand specimen and thin section. Field trips. Prerequisites: 1, 102, 103. GER:DB-NatSci

4 units, Win (Graham, S; Lowe, D)

GES 160. Statistical Methods for Earth and Environmental Sciences: General Introduction — Extracting information from data using statistical summaries and graphical visualization, statistical measures of association and correlation, distribution models, sampling, error estimation and confidence intervals, linear models and regression analysis, introduction to time-series and spatial data with geostatistics, applications including environmental monitoring, natural hazards, and experimental design. Either or both of 160 and 161 may be taken. GER:DB-NatSci

3 units, Spr (Switzer, P)

GES 161. Statistical Methods for the Earth and Environmental Sciences: Geostatistics — (Same as ENERGY 161.) Statistical analysis and graphical display of data, common distribution models, sampling, and regression. The variogram as a tool for modeling spatial correlation; variogram estimation and modeling; introduction to spatial mapping and prediction with kriging; integration of remote sensing and other ancillary information using co-kriging models; spatial uncertainty; introduction to geostatistical software applied to large environmental, climatological, and reservoir engineering databases; emphasis is on practical use of geostatistical tools. GER:DB-NatSci

3 units, Spr (Switzer, P)

GES 164. Stable Isotopes — (Graduate students register for 264.) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals. GER:DB-NatSci

3 units, alternate years, not given this year

GES 164L. Stable Isotopes Laboratory — Practical laboratory for 164.

2-3 units, Win (Chamberlain, P)

GES 165. Radiogenic Isotopes and Geochronology — Applications to geological and geophysical problems. Topics: nuclear structure, isotope systematics, decay schemes for the principal nuclides used in earth sciences, equilibrium and disequilibrium, diffusion and transport phenomena, blocking (closure) of isotopic and magnetic systems, creation and annealing of fission tracks, neutron activation, a review of geologic timescales, chronostratigraphy, magnetostratigraphy, and cosmogenic exposure ages. Alpha counting, mass spectrometry by gas source, solid source, ion probe and accelerator methods. Fundamentals of K-Ar, Ar-Ar, Rb-Sr, U-Pb fission track (U+Th)/He, and cosmogenic isotope methods. Recommended: undergraduate calculus, chemistry, geology, and physics.

GER:DB-NatSci

3 units, not given this year
GES 166. Soil Chemistry — (Graduate students register for 266.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in solid solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology. GER:DB-NatSci
3 units, alternate years, not given this year

GES 170. Environmental Geochemistry — Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. GER:DB-NatSci
4 units, Win (Brown, G)

GES 171. Geochemical Thermodynamics — Introduction to the application of chemical principles and concepts to geologic systems. The chemical behavior of fluids, minerals, and gases using simple equilibrium approaches to modeling the geochemical consequences of diagenetic, hydrothermal, metamorphic, and igneous processes. Topics: reversible thermodynamics, solution chemistry, mineral-solution equilibria, reaction kinetics, and the distribution and transport of elements by geologic processes. Prerequisite: 80. GER:DB-NatSci
3 units, Aut (Bird, D)

4 units, Spr (Fendorf, S)

GES 180. Igneous Processes — For juniors, seniors, and beginning graduate students in Earth Sciences. Structure and physical properties of magmas; use of phase equilibria and mineral barometers and thermometers to determine conditions of magmatic processes; melting and magmatic lineages as a function of tectonic setting; processes that control magma composition including fractional crystallization, partial melting, and assimilation; petrogenetic use of trace elements and isotopes. Labs emphasize identification of volcanic and plutonic rocks in thin section and interpretation of rock textures. May be taken for 3 units without lab. Prerequisite 102, 103, or consent of instructor.
3-5 units, Spr (Stebbins, J), alternate years, not given next year

GES 181. Metamorphic Processes — For juniors, seniors, and beginning graduate students in Earth Sciences. Thermodynamics and phase equilibria of multiple component systems; use of phase equilibria to determine pressure and temperature of metamorphic assemblages; use of the Gibbs method to reconstruct pressure-temperature paths of metamorphic rocks; metamorphic thermochronology; heat flow in the continental crust; links between tectonics and metamorphism; and the role of heat and mass transfer in the Earth’s crust. Labs emphasize identification of metamorphic rocks and minerals for common pelitic and basic rocks and interpretation of rock textures. May be taken for 3 units without lab. Prerequisites: 102, 103. GER:DB-NatSci
3-5 units, not given this year

GES 182. Field Seminar on Continental-Margin Volcanism — For juniors, seniors, and graduate students in the earth sciences and archeology. One weekend-long, and two one-day field trips to study Cenozoic volcanism associated with subduction and with passage of the Mendocino Triple Junction off the west coast of California: Mt. Lassen/Mt. Shasta/Modom plateau; Clear Lake/Sonoma volcanics; Pinnacles National Monument. Andesite and basalt lavas, cinder cones, mixed magmas, blast deposit, debris avalanches, volcanic mudflows, hydrologic controls of springs in volcanic terrains, hydrothermal alteration and modern geothermal systems, Hg mineralization, obsidian source. Prerequisite: 1, 80 or equivalent.
2 units, not given this year

GES 183. California Desert Geology — Field seminar. For upper division undergraduates and graduate students in the earth sciences and archaeology. Six-day field trip over Spring Break to Mojave Desert, Death Valley, and Owens Valley. Basin-and-range faulting, alluvial fans, playas, sand dunes, metamorphic rocks, granites of the Sierra Nevada, obsidian lava flows and the deposits of major explosive eruptions, hot springs and ore deposits, and desert landscapes. Camping and moderate hiking.
1 unit, not given this year

GES 185. Volcanology — For juniors, seniors, and beginning graduate students in Earth Sciences and Archaeology. How volcanic landforms and deposits relate to the composition and physical properties of magmas and the modes of emplacement. Labs emphasize recognizing types of lavas and products of explosive eruptions. Volcanic hazards and the effects of eruptions on climate and the atmosphere; volcanic-hosted geothermal systems and mineral resources. Required four-day field trip over Memorial Day weekend to study silicic and mafic volcanism associated with the western margin of the Basin and Range province. Prerequisite: 1, 102 or equivalent. GER:DB-NatSci
4 units, Spr (Mahood, G), alternate years, not given next year

GES 186. Geoarchaeology — (Graduate students register for 286; same as ARCHGLY 118/218.) For juniors, seniors, and beginning graduate students with interests in archaeology or geosciences. Geological concepts, techniques, and data in the study of artifacts and the interpretation of the archaeological record. Topics include: sediments and soils; sedimentary settings of site formation; postdepositional processes that disturb sites; paleoenvironmental reconstruction of past climates and landscapes using plant and animal remains and isotopic studies; raw materials (minerals, metals, stone, shells, clay, building materials) and methods used in sourcing; estimating age based on stratigraphic and radiometric techniques. Weekly lab; weekend field trip to local archaeological/geological site. GER:DB-NatSci
5 units, alternate years, not given this year

GES 188. Analytical Perspectives on Archaeological Pottery — (Graduate students register for 288.) Geoarchaeological analysis to understand pottery as an artifact that reflects the interactions of people with the geological components of their landscapes. Additional topics include: ceramic technology; organization of ceramic production and distribution; consumption and reuse; typological analysis; stylistic analysis; and the interpretation of pottery as markers of social identities and boundaries. Examination of objects in the Cantor Arts Center and the use of analytical laboratories in GES.
3-5 units, Aut (Carter, S)

GES 190. Field Research — (Graduate students register for 299.) Two-three week field research projects. Written report required. May be repeated three times.
2-4 units, Aut, Win, Spr, Sum (Staff)

GES 191. GES Field Trips — Field trips for teaching and research purposes. Trips average 5-10 days. Prerequisite: consent of instructor.
1 unit, Aut, Win, Spr, Sum (Staff)

GES 192. Undergraduate Research in Geological and Environmental Sciences — Field-, lab-, or literature-based. Faculty supervision. Written reports.
1-10 units, Aut, Win, Spr, Sum (Staff)

GES 197. Senior Thesis — For seniors who wish to write a thesis based on research in 192 or as a summer research fellow. May not be repeated for credit; may not be taken if enrolled in 199.
3-5 units, Aut, Win, Spr, Sum (Staff)
GES 198. Special Problems in Geological and Environmental Sciences — Reading and instruction under faculty supervision. Written reports. 1-10 units, Aut, Win, Spr, Sum (Staff)

GES 199. Honors Program — Research on a topic of special interest. See Undergraduate Honors Program above. 1-10 units, Aut, Win, Spr, Sum (Staff)

GRADUATE

GES 200. Professional Development in Geoscience Education — May be repeated for credit. 1 unit, Aut, Win, Spr (Staff)

GES 201. Science Course Design — (Same as CTL 201.) For students interested in an academic career who anticipate designing science courses at the undergraduate or graduate level. Goal is to apply research on science learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement. 2-3 units, Aut (Wright-Dunbar, R)

GES 205. Advanced Oceanography — For upper-division undergraduates and graduate students in the earth, biologic, and environmental sciences. Topical issues in marine science/oceanography. Topics vary each year following or anticipating research trends in oceanographic research. Focus is on links between the circulation and physics of the ocean with climate in the N. Pacific region, and marine ecologic responses. Participation by marine scientists from research groups and organizations including the Monterey Bay Aquarium Research Institute. 3 units, not given this year

GES 206. Antarctic Marine Geology — For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter. 3 units, Win (Dunbar, R)

GES 209. Microstructures — For upper-division undergraduates and graduate students. Structural and metamorphic fabrics, whose interpretation are essential to understand the thermo-mechanical behavior of the crust, produced by variations in temperature, pressure, and deformation. Topics include rheology of the crust, strain partitioning, the brittle ductile transition, development of foliations, lineations, relation to metamorphic mineral growth, preferred crystallographic orientations, shear zone deformation, and geochronologic methods of dating deformation. Lab involves study of deformed and metamorphosed rocks in thin section. By arrangement. 3-5 units, Win (Miller, E)

GES 210. Geologic Evolution of the Western U.S. Cordillera — For upper level undergraduates and graduates. From the Precambrian to contemporary strike-slip faulting and extension based on the rock record through time. Characteristic structures formed by crustal shortening, extension and strike slip, the origins of magmatism and batholiths, metamorphism and mountain building, and how this land-based geologic record is related to crustal-scale processes and plate tectonic motions. 2-3 units, Win (Miller, E)

GES 211. Topics in Regional Geology and Tectonics — May be repeated for credit. 2-3 units, Spr (Miller, E)

GES 212. Topics in Tectonic Geomorphology — For upper-division undergraduates and graduate students. Topics vary and may include coupling among erosional, tectonic, and chemical weathering processes at the scale of orogens; historical review of tectonic geomorphology; hillslope and fluvial process response to active uplift; measures of landscape form and their relationship to tectonic uplift and bedrock lithology. May be repeated for credit. 2 units, Aut (Hilley, G)

GES 214. Topics in Paleobiology — For upper division undergraduates and graduate students. Topics vary each year; focus is on paleontological, sedimentological, and geochemical approaches to the history of life. Topics may include: mass extinction events; evolutionary radiations; the history of global biodiversity; links between evolutionary histories of primary producers and consumers; and the quality of the fossil record. May be repeated for credit. 1 unit, alternate years, not given this year

GES 215A. Structural Geology and Rock Mechanics — (Same as CEE 297G.) Quantitative field and laboratory data integrated with solutions to initial and boundary-value problems of continuum mechanics introduce tectonic processes in Earth’s crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent. 3-5 units, Aut (Pollard, D)

GES 215B. Structural Geology and Rock Mechanics — (Same as CEE 297H.) Field equations for elastic solids and viscous fluids derived from conservation laws to develop mechanical models for tectonic processes and their structural products. Topics include: conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding, model development, and methodology. Models constructed and solutions visualized using MATLAB. Prerequisite: GES 215A. 3-5 units, Win (Pollard, D)

GES 216. Rock Fracture Mechanics — Principles and tools of elasticity theory and fracture mechanics are applied to the origins and physical behaviors of faults, dikes, joints, veins, solution surfaces, and other natural structures in rock. Field observations, engineering rock fracture mechanics, and the elastic theory of cracks. The role of natural fractures in brittle rock deformation, and fluid flow in the earth’s crust with applications to crustal deformation, structural geology, petroleum geology, engineering, and hydrogeology. Prerequisite: 215 or equivalent. 3-5 units, alternate years, not given this year

GES 217. Faults, Fractures, and Fluid Flow — Process-based approach to rock failure; the microstructures and overall architectures of the failure products including faults, joints, solution seams, and types of deformation bands. Fluid flow properties of these structures are characterized with emphasis on sealing and transmitting of faults and their role in hydrocarbon flow, migration, and entrapment. Case studies of fracture characterization experiments in aquifers, oil and gas reservoirs, and waste repository sites. Guest speakers: weekend field trip. Prerequisite: first-year graduate student in Earth Sciences. 3 units, alternate years, not given this year

GES 218. Communicating Science — For undergraduates and graduate students interested in teaching science in local schools. Inquiry-based science teaching methods. How to communicate scientific knowledge and improve presentations. Six weeks of supervised teaching in a local school classroom. Prerequisite: course in introductory biology, geology, chemistry, or marine sciences. 3 units, Aut (Saltzman, J)
GES 219. Paleoseismology — For upper-division undergraduates and graduate students. How can we learn about the chemistry, circulation, biology, and geology of past oceans and why is this of interest? Evidence for substantial changes in Earth’s climate and surficial environment in the sedimentary record. Fundamentals of gathering and interpreting this information in the context of how earth processes functioned in the past and their relevance for the future habitability of Earth.

1-3 units, alternate years, not given this year

GES 220. Planetary and Early Biological Evolution Seminar — (For graduate students; see 120.)

2-3 units, Spr (Lowe, D)

GES 222. Planetary Systems: Dynamics and Origins — For students with a background in astronomy, earth sciences, geophysics, or physics. Motions of planets, moons, and small bodies; energy transport in planetary systems; meteorites and the constraints they provide on the formation of the solar system; asteroids and Kuiper belt objects; comets; planetary rings; planet formation; and extrasolar planets. In-class presentation of student papers.

3-4 units, Aut (Staff)

GES 223. Planetary Systems: Atmospheres, Surfaces, and Interiors — Focus is on physical processes, such as radiation transport, atmospheric dynamics, thermal convection, and volcanism, shaping the interiors, surfaces, and atmospheres of the major planets in the solar system. How these processes manifest themselves under various conditions in the solar system. Case study of the surface and atmosphere of Mars. Application of comparative planetary science to extrasolar planets and brown dwarfs. In-class presentation of student papers.

3 units, Win (Staff)

GES 225. Isotopes in Geological and Environmental Research — For upper-division undergraduates and graduate students. The applications of isotopic systems in geological, oceanographic, and environmental studies at low temperature. The use of isotopes as tracers for weathering rate, biogeochemical cycling, food-web structures, ecology, paleochemistry, provenance, circulation, and anthropogenic and extraterrestrial inputs. Emphasis is on developing skills in reading and evaluation of scientific papers, manuscript reviews, and proposal preparation. Prerequisite: 163, 164, or consent of instructor.

1-3 units, not given this year

4 units, Aut (Gorelick, S)

GES 231. Contaminant Hydrogeology — (Same as CEE 260C.) For earth scientists and engineers. Environmental and water resource problems involving contaminated groundwater. The processes affecting contaminant migration through porous media including interactions between dissolved substances and solid media. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and optimal aquifer remediation. Prerequisite: GES 230 or CEE 260A or equivalent.

4 units, Spr (Staff)

3 units, alternate years, not given this year

GES 238. Soil Physics — Physical properties of the soil solid phase emphasizing the transport, retention, and transformation of water, heat, gases, and solutes in the unsaturated subsurface. Field experiments.

3 units, Aut (Loague, K)

GES 240. Geostatistics for Spatial Phenomena — (Same as ENERGY 240.) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Multiple-point geostatistics and training image-based stochastic imaging of reservoir field heterogeneities. Introduction to GSLIB and SGEMS software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, STATS 116, GES 161 or equivalent.

3-4 units, Win (Journel, A)

GES 242. Topics in Advanced Geostatistics — (Same as ENERGY 242.) Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran.

3-4 units, alternate years, not given this year

GES 245. Energy Flow and Policy: The Pacific Rim — (For graduate students; see 145; same as EARTH SYS 145/245.)

3 units, alternate years, not given this year

GES 246. Reservoir Characterization and Flow Modeling with Outcrop Data — (Same as ENERGY 246.) Project addresses a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

3 units, Aut (Graham, S; Journel, A; Tchelepi, H)

GES 249. Petroleum Geochemistry in Environmental and Earth Science — How molecular fossils in crude oils, oil spills, refinery products, and human artifacts identify their age, origin, and environment of formation. The origin and habitat of petroleum, technology for its analysis, and parameters for interpretation, including: origins of molecular fossils; function, biosynthesis, and precursors; tectonic history related to the evolution of life, mass extinctions, and molecular fossils; petroleum refinery processes and the kinds of molecular fossils that survive; environmental pollution from natural and anthropogenic sources including how to identify genetic relationships among crude oil or oil spill samples; applications of molecular fossils to archaeology; worldwide petroleum systems through geologic time.

3 units, Win (Staff)

GES 250. Sedimentation Mechanics — The mechanics of sediment transport and deposition and the origins of sedimentary structures and textures as applied to interpreting ancient rock sequences. Dimensional analysis, fluid flow, drag, boundary layers, open channel flow, particle settling, erosion, sediment transport, sediment gravity flows, soft sediment deformation, and fluid escape. Field trip required.

4 units, not given this year

GES 251. Sedimentary Basins — Analysis of the depositional framework and tectonic evolution of sedimentary basins. Topics: tectonic and environmental controls on facies relations, synthesis of basin development through time in terms of depositional systems and tectonic settings.

Weekend field trip required. Prerequisites: 110, 151.

3 units, alternate years, not given this year

GES 252. Sedimentary Petrography — Siliciclastic sediments and sedimentary rocks. Research in modern sedimentary mineralogy and petrography and the relationship between the composition and texture of sediments and their provenance, tectonic settings, and diagenetic histories. Topics vary yearly. Prerequisite: 151 or equivalent.

4 units, Aut (Lowe, D)

3 units, Aut (Graham, S)

GES 254. Carbonate Sedimentology — The formation and post-depositional alteration of carbonate sediments and sedimentary structures primarily formed by organisms. Emphasis is on interacting influences of carbonate producing environments and other ecological, physical, and chemical considerations. Carbonate deposit stratigraphy and the development of carbonate terrains in contrasting tectonic settings. The post-depositional history and petrographic development of carbonate structures and carbonate rocks. Paleoeocological aspects of carbonate sediments as proxies in broader geological context.

3 units, alternate years, not given this year

GES 255. Basin Modeling and 3-D Visualization — For advanced undergraduates or graduate students. Students use stratigraphy, subsurface maps, and basic well log, lithologic, paleontologic, and geochemical data to construct 1-D, 2-D, and 3-D models of petroleum systems that predict the extent of source-rock thermal maturity, petroleum migration paths, and the volumes and compositions of accumulations through time (4-D). Recent software such as PetroMod designed to reconstruct basin geohistory. Recommended: 251 or 253.

3 units, Win, Spr (Magoon, L; Peters, K)

GES 257. Clastic Sequence Stratigraphy — Sequence stratigraphy facilitates integration of all sources of geologic data, including seismic, log, core, and paleontological, into a time-stratigraphic model of sediment architecture. Tools applicable to regional and field scales. Emphasis is on practical applications and integration of seismic and well data to exploration and field reservoir problems. Examples from industry data; hands-on exercises.

3 units, Spr (Graham, S; McHargue, T)

GES 258. Introduction to Depositional Systems — The characteristics of the major sedimentary environments and their deposits in the geologic record, including alluvial fans, braided and meandering rivers, aeolian systems, deltas, open coasts, barred coasts, marine shelves, and deep-water systems. Emphasis is on subdivisions; morphology; the dynamics of modern systems; and the architectural organization and sedimentary structures, textures, and biological components of ancient deposits.

3 units, alternate years, not given this year

GES 260. Laboratory Methods in Organic Geochemistry — Knowledge of components in geochemical mixtures to understand geological and environmental samples. The presence and relative abundance of these compounds provides information on the biological source, depositional environment, burial history, biodegradation, and toxicity of organic materials. Laboratory methods to detect and quantify components of these mixtures. Methods for separation and analysis of organic compounds in geologic samples: extraction, liquid chromatography, absorption by zeolites, gas chromatography and gas chromatography-mass spectrometry. Student samples considered as material for analysis. Recommended: 249.

2-3 units, Spr (Moldovan, J)

GES 261. Physics and Chemistry of Minerals and Mineral Surfaces — The concepts of symmetry and periodicity in crystals; the physical properties of crystals and their relationship to atomic-level structure; basic structure types; crystal chemistry and bonding in solids and their relative stability; the interaction of x-rays with solids and liquids (scattering and spectroscopy); structural variations in silicate glasses and liquids; UV-visible spectroscopy and the color of minerals; review of the mineralogy, crystal chemistry, and structures of selected rock-forming silicates and oxides; mineral surface and interface geochemistry.

4 units, Spr (Brown, G)

GES 264. Stable Isotopes — (For graduate students; see 164.)

3 units, alternate years, not given this year

GES 265. Microbiologically Mediated Redox Processes — Chemical and biologically mediated oxidation and reduction processes within soils, sediments, and surface/subsurface waters. Emphasis is on reactions and processes at the solid-water interface. Topics include electron transfer processes, dissipative metal reduction, redox reaction rates, alterations in mineralogy, and modifications in chemical behavior with changes in redox state.

3 units, Win (Fendorf, S; Francis, C)

GES 266. Soil Chemistry — (For graduate students; see 166.)

4 units, alternate years, not given this year

3 units, Win (Bird, D)

GES 268. Geomicrobiology — How microorganisms shape the geochemistry of the Earth’s crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

3 units, not given this year

GES 269. Environmental Microbial Genomics — The application of molecular and environmental genomic approaches to the study of biogeochemically-important microorganisms in the environment without the need for cultivation. Emphasis is on genomic analysis of microorganisms by direct extraction and cloning of DNA from natural microbial assemblages. Topics include microbial energy generation and nutrient cycling, genome structure, gene function, physiology, phylogenetic and functional diversity, evolution, and population dynamics of uncultured communities.

1-3 units, not given this year

GES 270. Elkhorn Slough Microbiology — The microbial ecology and biogeochemistry of Elkhorn Slough, an agriculturally-impacted coastal estuary draining into Monterey Bay. The diversity of microbial lifestyles associated with estuarine physical/chemical gradients, and the influence of microbial activity on the geochemistry of the Slough, including the cycling of carbon, nitrogen, sulfur, and metals. Labs and field work. Location: Hopkins Marine Station.

3 units, Sum (Francis, C)

GES 275. Electron Probe Microanalytical Techniques — The practical and theoretical aspects of x-ray generation and detection, and the behavior of electron beams and x-rays in solids. The basic principles needed to quantitatively analyze chemically complex geological materials. Operation of the JEOL 733 electron microprobe and associated computer software for quantitatively analyzing materials. X-ray chemical mapping. Enrollment limited to 8.

2-3 units, Win (Jones, R)

Stanford Bulletin, 2006-07 | 73
GES 284. Field Seminar on Eastern Sierran Volcanism — For graduate students in the earth sciences and archaeology. Four-day trip over Memorial Day weekend to study silicic and mafic volcanism associated with the western margin of the Basin and Range province: basaltic lavas and cinder cones erupted along normal faults bounding Owens Valley, Long Valley caldera, postcaldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, volcanism of the Mono Basin with subaqueous basaltic eruptions, floating pumice blocks, and cryptodomes punching up lake sediments. If snow-level permits, silicic volcanism associated with the Bodie gold district. Prerequisite: 1, 102 or equivalent.
1 unit, (Mahood, G), alternate years, not given this year

GES 285. Petrogenesis of Crustal Magmatism — Radiogenic isotopes, stable isotopes, and trace elements applied to igneous processes; interaction of magmas with mantle and crust; convergent-margin magmatism; magmatism in extensional terrains; origins of rhyolites; residence times of magmas and magma chamber processes; granites as imperfect mirrors of their source regions; trace element modeling of igneous processes; trace element discriminant diagrams in tectonic analysis; sources of ore forming metals. Topics emphasize student interest. Prerequisite: 180 or equivalent.
3 units, Spr (Mahood, G), alternate years, not given next year

GES 286. Geoarchaeology — (For graduate students; see 186; same as ARCHLGY 118/218.)
5 units, alternate years, not given this year

GES 287. Tectonics, Topography, and Climate Change — For upper-division undergraduates and graduate students. The links between tectonics and climate change with emphasis on the Cenozoic era. Focus is on terrestrial climate records and how they relate to large-scale tectonics of mountain belts. Topics include stable isotope geochemistry, geochronology, chemical weathering, stratigraphy of terrestrial rocks, paleofauna and flora, climate proxies and records, and Cenozoic tectonics. Guest speakers, student presentations.
3 units, Spr (Chamberlain, P)

GES 288. Analytical Perspectives on Archaeological Pottery — (For graduate students; see 188.)
3-5 units, Aut (Carter, S)

GES 291. GES Field Trips — Field trips for teaching and research purposes. Trips average 5-10 days. Prerequisite: consent of instructor. (Staff)
1 unit, Aut, Win, Spr, Sum (Staff)

GES 299. Field Research — (For graduate students; see 190.)
2-4 units, Aut, Win, Spr, Sum (Staff)

GES 300. Earth Sciences Seminar — (Same as EARTHSYS 300, GEOPHYS 300, IPER 300, ENERGY 300.) Required for incoming graduate students except coterm. Research questions, tools, and approaches of faculty members from all departments in the School of Earth Sciences. Goals are: to inform new graduate students about the school’s range of scientific interests and expertise; and introduce them to each other across departments and research groups. Two faculty members present work at each meeting. May be repeated for credit.
1 unit, Aut (Matson, P; Graham, S)

GES 310. Climate Change, Climate Variability, and Landscape Development — The impact of long-term climate change on erosional processes and the evolution of Cenozoic landscapes. Climate data that highlight recurring climate variability on inter-annual to decadal timescales. The behavior of climate on multi-decadal to tectonic timescales over which significant changes in topography take place. The effects of climate change and variability on landscape development, sedimentary environments, and the deposits of these events.
1 unit, Aut (Hilley, G)

GES 314. Structural Geology and Geomechanics — Research seminar. May be repeated for credit.
1 unit, Aut, Win, Spr (Staff)

GES 322A,B,C. Seminar in Biogeochemistry — Current topics. May be repeated for credit.
1-2 units, not given this year

GES 323. Stanford at Sea — (Same as BIOHOPK 182H/323H, EARTHSYS 323.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA.
16 units, Spr (Block, B; Dunbar, R; Micheli, F), alternate years, not given next year

GES 324. Seminar in Oceanography — Current topics. May be repeated for credit.
1-2 units, Aut, Win, Spr (Paytan, A; Arrigo, K)

GES 325. The Evolution of Body Size — (Same as BIOSCI 325.) For upper division undergraduates and graduate students. The influence of organism size on evolutionary and ecological patterns and processes. Focus is on integration of theoretical principles, observations of living organisms, and data from the fossil record. What are the physiological and ecological correlates of body size? Is there an optimum size? Do organisms tend to evolve to larger size? Does productivity control the size distribution of consumers? Does size affect the likelihood of extinction or speciation? How does size scale from the genome to the phenotype? How is metabolic rate involved in evolution of body size? What is the influence of geographic area on maximum body size?
2 units, Aut (Hadly, E; Payne, J)

GES 326. Isotopes and Biogeochemical Tracers in the Hydrological Cycle — Practical applications of environmental isotopes. The systematics of isotope fractionations and the distributions of isotopes in natural systems. Focus is on applications of isotopes for tracing waters, solutes, and biogeochemical reactions in hydrologic systems. Hydrological topics include tracing sources of ground and surface water, isotope hydrograph separations, groundwater influence on coastal systems, rock-water interactions, recharge rate, and groundwater dating. Biogeochemical topics include sources of contaminants, biogeochemical reaction mechanisms, nutrient sources and pathways, and food web studies.
3 units, not given this year

GES 327. The Glacial World — (Same as GEOPHYS 327.) The environmental changes that took place on Earth between the last glacial maximum (LGM) and the present. Focus is on the cause of the low atmospheric CO2 concentrations characteristic of the LGM and what conditions explain these reduced CO2 levels. How changes in sea level, marine primary production, ocean circulation, and elemental cycling may have contributed to past global changes.
2-3 units, not given this year

1-3 units, Aut, Win (Logue, K)

GES 330. Advanced Topics in Hydrogeology — Topics: questioning classic explanations of physical processes; coupled physical, chemical, and biological processes affecting heat and solute transport. May be repeated for credit.
1-2 units, Aut, Win (Gorelick, S)

GES 332A. Seminar in Hydrogeology — Current topics. May be repeated for credit. Autumn Quarter has open enrollment. For Winter Quarter, consent of instructor is required.
1 unit, Aut (Gorelick, S)

**GEOPHYSICS**

*Emeriti:* Antony Fraser-Smith,** Robert Kovach,* George A. Thompson*

*Chair:* Rosemary J. Knight

*Associate Chair:* Gerald M. Mavko

*Professors:* Gregory Beroza, Jon F. Claerbout, Steven Gorelick,†† Jerry M. Harris, Simon Klemperer, Rosemary J. Knight, Marcia McNutt,*** Amos M. Nur, Joan Roughgarden,‡ Paul Segall, Norman H. Sleep, Howard Zebker,** Mark D. Zoback

*Associate Professors:* Kevin Arrigo, Azadeh Tabazadeh†††

*Professor (Research):* Gerald M. Mavko

*Associate Professor (Research):* Biando Biondi

*Consulting Professors:* Stephan A. Graham, David D. Pollard

*Consulting Professors:* James Berryman, William Ellsworth, Antoine Guitton, Walter Mooney, Louise Pellerin, Steven R. Pride, David Scholl

*Associate Professor:* Stewart Levin

*Visiting Professors:* Djordje Grujic, Hengshun Hu, Venkat Lakshmi, Minik Rosing, Allan Rubin

*Senior Research Scientists:* Jack Dvorkin

*Research Associates:* Gyn Mine Berg, Robert Clapp, Nigel Crook, Paul Hagin, Tapan Mukerji, Youli Quan, David Robinson, Tiziana Vanorio, Charley Weiland

**Objective:** To provide knowledge about the entire spectrum of geophysics from resource exploration to environmental geophysics to earthquake seismology and plate tectonics, built upon a solid background in the essentials of math, physics, and geology. Students are prepared for

**Objectives**—To provide knowledge about the entire spectrum of geophysics from resource exploration to environmental geophysics to earthquake seismology and plate tectonics, built upon a solid background in the essentials of math, physics, and geology. Students are prepared for...
either an immediate professional career in the resources and environmental sciences industries or future graduate study.

The following courses are required for the B.S. degree in Geophysics. A written report on original research or an honor’s thesis is also required through participation in three quarters of GEOPHYS 185, Research Seminar Series, during the senior year. The departmental program proposal form can be downloaded at http://geo.stanford.edu/GP/undergraduate/major.html. Seniors in Geophysics who expect to do graduate work should take the Graduate Record Examination (GRE) early in their final undergraduate year.

**CURRICULUM**

**FUNDAMENTAL GEOPHYSICS**

GEOPHYS 102/EARTHYSYS 110, Geosphere or GES 1, Fundamentals of Geology

GEOPHYS 150, General Geophysics or GEOPHYS 190, Environmental Geophysics

GEOPHYS 120. Frontiers of Geophysical Research

6 units of GEOPHYS 185, Research Seminar Series (includes WIM requirement)

**ADDITIONAL ELECTIVES**

3 approved upper-level (100 or higher) Geophysics lecture courses, typically chosen from the following:

- GEOPHYS 104. The Water Course
- GEOPHYS 106. Planetary Exploration
- GEOPHYS 130. Biological Oceanography
- GEOPHYS 141. Remote Sensing of the Oceans
- GEOPHYS 150. General Geophysics and Physics of the Earth
- GEOPHYS 160. Waves
- GEOPHYS 182. Reflection Seismology
- GEOPHYS 183. Reflection Seismology Interpretation
- GEOPHYS 190. Near-Surface Geophysics
- GEOPHYS 220. Tectonics
- GEOPHYS 262. Rock Physics

3 additional approved upper-level (100 or higher) Earth Sciences lecture courses, typically chosen from the above GEOPHYS electives or

GES 102. Earth Materials
GES 110. Structural Geology and Tectonics
GES 111A. Fundamentals of Structural Geology
GES 160. Statistical Methods for Earth and Environmental Sciences
ENERGY 120. Fundamentals of Petroleum Engineering

**PREREQUISITE COURSES**

MATH 19,20,21. Calculus, or equivalent, and MATH 53. Ordinary Differential Equations

PHYSICS 41 and 110. Mechanics and Intermediate Mechanics

EE 141. Engineering Electromagnetics or PHYSICS 120. Intermediate Electricity and Magnetism

CHEM 31A. Chemical Principles

**RECOMMENDED ELECTIVE**

CS 106A. Programming Methodology

**MINORS**

The Geophysics minor provides students with a general knowledge of geophysics in addition to a background in the related fields of physics, mathematics, and geology. The departmental program proposal form can be downloaded from http://geo.stanford.edu/GP/undergraduate/major.html.

**CURRICULUM**

GEOPHYS 102. Geosphere or GES 1, Fundamentals of Geology

GEOPHYS 120. Frontiers of Geophysical Research

GEOPHYS 150. General Geophysics or GEOPHYS 190, Environmental Geophysics

Two additional approved upper-level (100 or higher) Geophysics lectures courses, typically chosen from GEOPHYS 104, 106, 130, 141, 150, 160, 182, 183, 190, 220, 262.

MATH 19,20,21 or 41. Calculus

PHYSICS 41. Mechanics

**HONORS PROGRAM**

The department offers a program leading to the B.S. degree in Geophysics with honors. The guidelines are:

1. Select a research project, either theoretical, field, or experimental, that has the approval of an adviser.
2. Submit a proposal to the department, which will decide on its suitability as an honors project. Necessary forms are in the department office.
3. Course credit for the project is assigned by the adviser within the framework of GEOPHYS 205.
4. The decision whether a given independent study project does or does not merit an award of honors shall be made jointly by the department and the student’s adviser. This decision shall be based on the quality of both the honors work and the student’s other work in earth sciences.
5. The work done on the honors program should not be used as a substitute for regularly required courses.

**COTERMINAL B.S./M.S. PROGRAM**

The department offers a cotermination program. Interested individuals should check with a member of the department faculty for details. For University cotermination degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.html#Coterm.

**GRADUATE PROGRAMS**

University requirements for the M.S. and Ph.D. are described in the “Graduate Degrees” section of this bulletin. Lecture course units applied to graduate degree program requirements must be taken for a letter grade if the course is offered for letter grade.

Transfer credit—An incoming student with a relevant Master of Science degree may apply for a departmental waiver of up to 18 units of the 45 units required for the Ph.D. degree (see “Doctor of Philosophy” section below). Students without an M.S. degree may apply for waivers for individual courses taken in post-baccalaureate study at other institutions. Credit for courses generally requires that students identify an equivalent Stanford course and obtain the signature of the Stanford faculty responsible for such a course stating its equivalence.

Waiving of any course requirements or substitution of electives other than those listed below requires the written consent of the student’s faculty adviser and the Geophysics graduate coordinator.

**MASTER OF SCIENCE**

Objectives—To enhance the student’s training for professional work in geophysics through the completion of fundamental courses, both in the major fields and in related sciences, and to begin independent work and specialization.

Requirements for the Degree—The candidate must complete 45 units from the following groups of courses:

1. Complete 15 units of Geophysics lecture courses with at least 9 units numbered 200 or higher.
2. Complete six units numbered 100 or higher and three units of 200-level, non-Geophysics lecture courses in earth sciences.
3. Complete one to four electives selected from courses numbered 100 or higher from mathematics, chemistry, engineering, physics, relevant biology, computer science, ecology, hydrology, or earth science. At least one course must be numbered 200 or higher.
4. At least 9, but not more than 18, of the 45 units must be independent work on a research problem resulting in a written report accepted and archived by the candidate’s faculty adviser. Normally, this research is undertaken as part of the candidate’s participation in multiple quarters of research seminar (GEOPHYS 385 series). A summer internship is encouraged as a venue for research, but no academic credit is given.
5. Submit a program proposal for approval by a faculty adviser in the first quarter of enrollment.
6. Each candidate must present and defend the results of his or her research at a public oral presentation attended by at least two faculty members.

**DOCTOR OF PHILOSOPHY**

Objectives—The Ph.D. degree is conferred upon evidence of high attainment in Geophysics, and ability to conduct an independent investigation and present the results of such research.

Requirements for the Degree—A minimum of 135 units of graduate study at Stanford must be satisfactorily completed. An acceptable program normally consists of at least 45 lecture units in the areas listed following. Up
to 18 lecture units in categories 2, 4, and 6 may be satisfied by courses taken elsewhere if the previous course duplicates an existing Stanford course and the Stanford faculty member responsible for the course concurs.

1. ENGR 202W.
2. 12 units of Geophysics lecture courses numbered 100 or higher.
3. 12 units of Geophysics lecture courses numbered 200 or higher, taken from at least four faculty members with different research specializations.
4. One 3-unit lecture course numbered 100 or higher in mathematics, science, or engineering covering mathematical methods, continuum or fluid mechanics, or Fourier/spectral analysis.
5. 9 units of 200-level or higher courses in math, science, engineering, or other quantitative analysis.
6. 6 units of non-Geophysics lecture courses numbered 100 or higher in Earth or planetary sciences, ecology, hydrology, chemistry, or relevant biology.
7. One 3-unit non-Geophysics lecture course numbered 200 or higher in Earth or planetary science, ecology, hydrology, chemistry, or relevant biology.
8. Sufficient units of independent work on a research problem to meet the 135-unit University requirement. 12 units must be met by participation in the GEOPHYS 385 series. Students are encouraged to participate in the GEOPHYS 385 series from more than one faculty member or group.

2. Two quarters of quarter-time teaching experience.

The student’s record must indicate outstanding scholarship, and deficiencies in previous training must be removed. Experience as a teaching assistant (quarter-time for at least two academic quarters) is required for the Ph.D. degree. The student must pass the departmental oral examination by presenting and defending a written research paper or proposal by the end of the sixth academic quarter (third academic quarter for students with an M.S. degree); prepare under faculty supervision a dissertation that is a contribution to knowledge and the result of independent work expressed in satisfactory form; and pass the University oral examination. The Ph.D. dissertation must be submitted in its final form within five calendar years from the date of admission to candidacy.

Upon formal acceptance into a research group, the student and faculty adviser form a supervising committee consisting of at least three members who are responsible for overseeing satisfactory progress toward the Ph.D. degree. At least two committee members must be Geophysics faculty members. The committee conducts the department oral examination, and meets thereafter annually with the student to review degree progress. The Geophysics faculty monitors progress of all students who have not yet passed their department oral examination by carrying out an annual performance appraisal at a closed faculty meeting.

**Courses**

**GEOPHYS 5Q. Earthquakes and Archaeology** — Stanford Introductory Seminar. Preference to sophomores. The impact of destructive earthquakes on the abandonment, migration, and settlement of ancient cultures and society. Spring break field trip to archaeological sites in Mexico.

2 units, Win (Kovach, R)

3 units, Spr (Segall, P)

**GEOPHYS 25. The First New Science of the Late Renaissance: Hands-on Introduction to Astrobiology** — Are human beings alone; are microbes common in the universe? Historical development and modern status of topics such as: the vastness of space and time; star evolution; planetary climate; effects of geological processes and asteroid impacts on life; other habitable places in the solar system with updates on Mars; the Earth as a biological organism; maintenance of society for a geologically long time; and the search for intelligent extraterrestrials. Outdoor lab exercises designed to work in K-12 science classes. Non-science majors welcome.

3 units, Aut (Sleep, N)

**GEOPHYS 60Q. Man versus Nature: Coping with Disasters Using Space Technology** — (Same as EE 60Q.) Stanford Introductory Seminar. Preference to sophomores. Natural hazards (earthquakes, volcanoes, floods, hurricanes, and fires) affect thousands of people everyday. Disasters such as asteroid impacts periodically obliterate many species of life. Spaceborne imaging technology makes it possible to respond quickly to such threats to mitigate consequences. How these new tools are applied to natural disasters, and how remotely sensed data are manipulated and analyzed. Basic scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. GER: DB-EngrAppSci

3 units, Aut (Zebker, H)

**GEOPHYS 100. Directed Reading**

1-2 units, Aut, Win, Spr, Sum (Staff)

**GEOPHYS 101A. Research Preparation** — Structured mentoring of students enrolled in Geophysics Summer Research Program. Development of research proposals and preliminary readings.

1 unit, Spr (Klemperer, S)

**GEOPHYS 101B. Research Presentation** — Student participants from the Geophysics Summer Research Program prepare oral and poster presentations, culminating in formal presentations to the department and community.

1 unit, Aut (Klemperer, S)

**GEOPHYS 102. Geosphere** — (Same as EARTHSYS 110.) Large-scale natural systems of the solid earth, oceans, and atmosphere, their variation through space and time, and the implications of how these systems impact and are being impacted by humankind. Topics include plate tectonics and its relationship to natural hazards and climate, large-scale ocean and atmospheric systems, energy systems, and the linkages among these topics. Prerequisites: EARTHSYS 10, GES 1. GER:DB-NatSci

3 units, Aut (Brown, M; Tabazadeh, A)

**GEOPHYS 104. The Water Course** — (Same as EARTHSYS 104.) The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues. GER:DB-NatSci

3 units, not given this year (Knight, R)

**GEOPHYS 112. Exploring Geosciences with MATLAB** — Introduction to efficient use of Matlab as a tool for research in Engineering and Earth Sciences. Hands-on, computer-based exercises explore the 2-D and 3-D visualization features, numerical capabilities, and various Matlab toolboxes, addressing simple problems in widely applicable areas such as data analysis, statistics, regressions, least-squares, Fourier transforms and filtering in 1- and 2-D, simple spectral analysis, differential equations, and simulations.

1-3 units, Aut (Mukerji, T)

**GEOPHYS 113. Earthquakes and Volcanoes** — (Same as EARTHSYS 113.) Earthquake location, magnitude and intensity scales, seismic waves, styles of eruptions and volcanic hazards, tsunami waves, types and global distribution of volcanoes, volcano forecasting. Plate tectonics as a framework for understanding earthquake and volcanic processes. Forecasting; earthquake resistant design; building codes; and probabilistic hazard assessment. For non-majors and potential earth scientists. GER: DB-EngrAppSci

3 units, Spr (Beroza, G; Segall, P)
GEOPHYS 117. Biology and Global Change — (Same as BIOSCI 117, EARTHYSYS 111.) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, ocean, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biological Sciences or Human Biology core or graduate standing. GER: DB-NatSci
3 units, Win (Vitousek, P; Arrigo, K)

GEOPHYS 120. Frontiers of Geophysical Research at Stanford: Faculty Lectures — Required for new students entering the department. Second-year and other graduate students may attend either for credit or as auditors. Department and senior research staff lectures introduce the frontiers of research problems and the methods being employed or developed in the department and unique to department faculty and students: what the current research is, why the research is important, what methodologies and technologies are being used, and what the potential impact of the results might be.
1 unit, Aut (Segall, P)

GEOPHYS 130/231. Biological Oceanography — (Graduate students register for 231; same as EARTHYSYS 130/230.) Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics: distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Possible local field trips on weekends. Prerequisites: BIOSCI 43 and GES 8 or equivalent. Corequisite: GES 159/259.
2-4 units, Spr (Arrigo, K)

GEOPHYS 136/236. Physical Chemistry of Atmospheric Particles — (Graduate students register for 236; same as CEE 161T/261T.) Thermodynamic principles and their application to approximate the phase behavior and surface properties of multi-component solution droplets in the atmosphere. Topics: water and its phase transformations; equilibrium models of electrolyte solutions; aerosol water uptake; relative humidity conditions for particle efflorescence (crystallization) and deliquescence; mechanisms of colloid formation and organic matter precipitation in aqueous particles; aerosol and cloud surface characterization using bulk composition and adsorption isotherms; and the role of aerosol surface tension in cloud activation.
3 units, Spr (Tabazadeh, A)

GEOPHYS 137/237. Fundamentals of Ecological Modeling — (Graduate students register for 237.) The dynamics of complex systems through quantitative models that synthesize knowledge and forecast system behavior. Principles of ecological modeling including model conceptualization, construction, analysis, use, and abuse. Modeling exercises that culminate in the design, implementation, and evaluation of a process-based simulation model.
3 units, Aut (Arrigo, K)

GEOPHYS 140. Introduction to Remote Sensing — Global change science as viewed using space remote sensing technology. Global warming, ozone depletion, the hydrologic and carbon cycles, topographic mapping, and surface deformation. Physical concepts in remote sensing. EM waves and geophysical information. Sensors studied: optical, near and thermal IR, active and passive microwave. GER:DB-EngrAppSci
3 units, Aut (Zebker, H)

GEOPHYS 141/241. Remote Sensing of the Oceans — (Graduate students register for 241; same as EARTHYSYS 141/241.) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER:DB-NatSci
4 units, alternate years, not given this year (Arrigo, K)

GEOPHYS 150. General Geophysics and Physics of the Earth — Elementary study of gravitational, magnetic, seismic, and thermal properties of the Earth. Earth’s crust, mantle, core. Plate tectonics and mantle convection. Probing Earth structure with seismic waves. Measurements, interpretation, and applications to Earth structure and exploration. Prerequisites: calculus, first-year college physics. GER:DB-NatSci
3 units, Win (Klemperer, S; Sleep, N)

GEOPHYS 160. Waves — Topics: derivatives of wave equations and their solutions in 1-D, 2-D, and 3-D; amplitude, polarization, phase and group velocities, attenuation, and dispersion; reflection and transmission at single and multiple interfaces; ray theory. Applications from acoustics, elastodynamics, and electromagnetics. Prerequisites: differential/integral calculus and complex functions. GER:DB-NatSci
3 units, not given this year (Harris, J; Clearbout, J; Beroza, G)

GEOPHYS 162. Laboratory Methods in Geophysics — Lectures, laboratory experiments, and demonstrations explore principles and measurements of geophysical properties such as velocity, attenuation, porosity, permeability, electrical resistivity, and magnetic susceptibility. A foundation for conducting experiments and for assessing accuracy and variability in reported experimental data. No previous laboratory experience required.
1-3 units, Spr (Staff)

GEOPHYS 180. Geophysical Inverse Problems — Fundamental concepts of inverse theory, with application to geophysics. Inverses with discrete and continuous models, generalized matrix inverses, resolving kernels, regularization, use of prior information, singular value decomposition, nonlinear inverse problems, back-projection techniques, and linear programming. Application to seismic tomography, earthquake location, migration, and fault-slip estimation. Prerequisite: MATH 103. GER:DB-Math
3 units, Aut (Segall, P; Beroza, G)

GEOPHYS 182. Reflection Seismology — The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration. GER:DB-NatSci
3 units, Aut (Klemperer, S)

GEOPHYS 183. Reflection Seismology Interpretation — The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 182, or consent of instructor.
1-4 units, alternate years, not given this year (Klemperer, S; Graham, S)

GEOPHYS 184. Seismic Reflection Processing — Workshop in computer processing of seismic reflection data. Students individually process a commercial seismic reflection profile from field tapes to migrated stack, using interactive software on a workstation. Prerequisite: consent of instructor.
3 units, alternate years, not given this year (Klemperer, S)

GEOPHYS 185. Research Seminar Series — (Graduate students register for 385 series.) Limited to Geophysics undergraduates and coterminal master’s candidates. Undergraduates participate directly in an ongoing research project: experimental and computational work, joining in reading and study groups, giving seminar papers, and doing original research for the undergraduate thesis. Prerequisite: consent of instructor.

GEOPHYS 185A. Reflection Seismology — (Graduate students register for 385A.) Research in reflection seismology and petroleum prospecting. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut, Win, Spr, Sum (Biondi, B; Clearbout, J)

GEOPHYS 185B. Environmental Geophysics — (Graduate students register for 385B.) Research on the use of geophysical methods for near-surface environmental problems. May be repeated for credit.
1-3 units, Aut, Win, Spr, Sum (Knight, R)

GEOPHYS 185C. Topics in Biological Oceanography — (Graduate students register for 385C.) Research on biological processes of the world’s oceans. May be repeated for credit.
1-3 units, Aut, Win, Spr, Sum (Arrigo, K)
GEOPHYS 185E. Tectonics — (Graduate students register for 385E.) Research on the origin, major structures, and tectonic processes of the Earth’s crust. Emphasis is on use of deep seismic reflection and refraction data. May be repeated for credit.
1-3 units, Aut, Win, Spr, Sum (Klemperer, S; Sleep, N; Thompson, G)

GEOPHYS 185K. Crustal Mechanics — (Graduate students register for 385K.) Research in areas of petrophysics, seismology, in situ stress, and subjects related to characterization of the physical properties of rock in situ. May be repeated for credit.
1-3 units, Aut, Win, Spr (Zoback, M)

GEOPHYS 185L. Earthquake Seismology, Deformation, and Stress — (Graduate students register for 385L.) Research on seismic source processes, crustal stress, and deformation associated with faulting and volcanism. May be repeated for credit.
1-2 units, Aut, Win, Spr (Zoback, M; Segall, P; Beroza, G)

GEOPHYS 185S. Seismic Tomography — (Graduate students register for 385S.) Research in transmission and reflection tomography, including topics on forward modeling, inversion, and data acquisition. May be repeated for credit.
1-3 units, Aut, Win, Spr (Harris, J)

GEOPHYS 185V. Poroelasticity — (Graduate students register for 385V.) Research on the mechanical properties of porous rocks: dynamic problems of seismic velocity, dispersion, and attenuation; and quasi-static problems of faulting, fluid transport, crustal deformation, and loss of porosity. Participants define, investigate, and present an original problem of their own. May be repeated for credit.
1-3 units, Aut, Win, Spr (Mavko, G)

GEOPHYS 185Z. Radio Remote Sensing — (Graduate students register for 385Z.) Research applications, especially crustal deformation measurements. Recent instrumentation and system advancements. May be repeated for credit.
1-3 units, Aut, Win, Spr (Zebker, H)

GEOPHYS 190. Near-Surface Geophysics — Applications of geophysical methods for imaging and characterizing the top 100 meters of the Earth. Focus is on the use of electrical and seismic methods for environmental and engineering applications. Introduction to the link between electrical and elastic properties of rocks, soils, and sediments, and their physical, chemical, and biological properties. Surface and borehole methods used for data acquisition.
GER:DB-EngrAppSci
3 units, Aut (Knight, R)

GEOPHYS 200A. Oil and War: Oil Peaks and Oil Panics — For upper-division undergraduates and graduate students. Links between oil and future international conflicts. Guest speakers.
2-3 units, Spr (Nur, A)

GEOPHYS 202. Reservoir Geomechanics — Basic principles of rock mechanics and the state of stress and pore pressure in sedimentary basins related to exploitation of hydrocarbon and geothermal reservoirs. Mechanisms of hydrocarbon migration, exploitation of fractured reservoirs, reservoir compaction and subsidence, hydraulic fracturing, utilization of directional and horizontal drilling to optimize well stability.
3 units, alternate years, not given this year (Zoback, M)

GEOPHYS 205. Honors Program — Experimental, observational, or theoretical honors project and thesis in geophysics under supervision of a faculty member. Students who elect to do an honors thesis should begin planning it no later than Winter Quarter of the junior year. Prerequisites: department approval.
1-3 units, Aut, Win, Spr, Sum (Staff)

3-4 units, Aut (Claerbout, J; Clapp, R)

GEOPHYS 211. Environmental Soundings Image Estimation — Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoints, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See http://sep.stanford.edu/sep/prof/.
3 units, Win (Claerbout, J)

GEOPHYS 220. Tectonics — The architecture of the Earth’s crust; regional assembling of structural or deformational features and their relationship, origin and evolution. The plate-tectonic cycle: rifting, passive margins, sea-floor spreading, subduction zones, and collisions. Case studies.
3 units, alternate years, not given this year (Klemperer, S.)

GEOPHYS 230. Advanced Topics in Well Logging — (Same as ENERGY 230.) State of the art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Guest speakers on formation evaluation topics. Prerequisites: 130 or equivalent; basic well logging; and standard practice and application of electric well logs.
3 units, Spr (Lindblom, R)

GEOPHYS 241A. Practice of Geostatistics and Seismic Data Integration — (Same as ENERGY 241.) Students build a synthetic 3D fluvial channel reservoir model with layer depths, channel geometry, and facies-specific petrophysical and seismic properties, stressing the physical significance of geophysical data. Reference data set is sparsely sampled, providing the sample data typically available for an actual reservoir assessment. Geostatistical reservoir modeling uses well and seismic data, with results checked against the reference database. Software provided (GSLib and SRBtools). Prerequisite: ENERGY 240. Recommended: experience with Unix, Matlab/C++/Fortran programming.
3-4 units, Spr (Caers, J; Muserji, T)

GEOPHYS 255. Report on Energy Industry Training — On-the-job training for master’s and doctoral degree students under the guidance of on-site supervisors. Required report detailing work activities, problems, assignment, and key results. Prerequisite: written consent of adviser.
1-3 units, Aut, Win, Spr, Sum (Staff)

GEOPHYS 260. Rock Physics for Reservoir Characterization — How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios.
3 units, alternate years, not given this year (Dvorkin, J)

GEOPHYS 262. Rock Physics — Properties of and processes in rocks as related to geophysical exploration, crustal studies, and tectonic processes. Emphasis is on wave velocities and attenuation, hydraulic permeability, and electrical resistivity in rocks. Application to in situ problems, using lab data and theoretical results.
3 units, Aut (Mavko, G)

GEOPHYS 265. Imaging Radar and Applications — (Same as EE 355.) Topics include radar system elements, the radar equation and signal to noise ratio, signal and image processing, range/Doppler algorithms, interferometric measurements. Applications to crustal deformation, topographic mapping, velocities of ice sheets and glaciers, polarimetry and terrain analysis. Computational labs give hands-on-experience with real data.
3 units, Win (Zebker, H)

GEOPHYS 270. Electromagnetic Properties of Geological Materials — Laboratory observations and theoretical modeling of electromagnetic properties and nuclear magnetic resonance response of geological materials. Relationships between these properties and water-saturated materials properties such as composition, water content, surface area, and permeability.
2 units, not given this year (Knight, R)
GEOPHYS 280. 3-D Seismic Imaging — The principles of imaging complex structures in the Earth subsurface using 3-D reflection seismology. Emphasis is on processing methodologies and algorithms, with examples of applications to field data. Topics: acquisition geometrics of land and marine 3-D seismic surveys, time vs. depth imaging, migration by Kirchhoff methods and by wave-equation methods, migration velocity analysis, velocity model building, imaging irregularly sampled and aliased data. Computational labs involve some programming. Lab for 3 units.
2-3 units, Spr (Biondi, B)

GEOPHYS 287. Earthquake Seismology — Theorems in elastodynamics, Green’s functions, attenuation, wave propagation in layered media, ray theory, seismic moment tensors, finite-source effects, kinematics and dynamics of earthquakes, and engineering aspects of seismology.
3 units, Win (Beroza, G) alternate years, not given next year

GEOPHYS 288A. Crustal Deformation — Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Deformation, stress, and conservation laws. Dislocation models of strike slip and dip slip faults, in 2 and 3 dimensions. Crack models, including boundary element methods. Dislocations in layered and elastically heterogeneous earth models. Models of volcano deformation, including sills, dikes, and magma chambers.
3-5 units, not given this year (Segall, P)

GEOPHYS 288B. Crustal Deformation — Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Viscoelasticity, post-seismic rebound, and viscoelastic magma chambers. Effects of surface topography and earth curvature on surface deformation. Gravity changes induced by deformation and elastogravitational coupling. Poro-elasticity, coupled fluid flow and deformation. Earthquake nucleation and rate-state friction. Models of earthquake cycle at plate boundaries.
3-5 units, not given this year (Segall, P)

GEOPHYS 289. Global Positioning System in Earth Sciences — The basics of GPS, emphasizing monitoring crustal deformation with a precision of millimeters over baselines tens to thousands of kilometers long. Applications: mapping with GIS systems, airborne gravity and magnetic surveys, marine seismic and geophysical studies, mapping atmospheric temperature and water content, measuring contemporary plate motions, and deformation associated with active faulting and volcanism.
3-5 units, Win (Segall, P) alternate years, not given next year

GEOPHYS 290. Tectonophysics — The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere.
3 units, Win (Zoback, M) alternate years, not given next year

GEOPHYS 300. Earth Sciences Seminar — (Same as EARTHSYS 300, GES 300, IPER 300, ENERGY 300.) Required for incoming graduate students except coterm students. Research questions, tools, and approaches of faculty members from all departments in the School of Earth Sciences. Goals are: to inform new graduate students about the school’s range of scientific interests and expertise; and introduce them to each other across departments and research groups. Two faculty members present work at each meeting. May be repeated for credit.
1 unit, Aut (Matson, P; Graham, S)

GEOPHYS 327. The Glacial World — (Same as GES 327.) The environmental changes that took place on Earth between the last glacial maximum (LGM) and the present. Focus is on the cause of the low atmospheric CO₂ concentrations characteristic of the LGM and what conditions explain these reduced CO₂ levels. How changes in sea level, marine primary production, ocean circulation, and elemental cycling may have contributed to past global changes.
2-3 units, not given this year

GEOPHYS 385. Research Seminar Series — See 185 series for offerings and descriptions. Opportunity for advanced graduate students to frame and pursue research or thesis research in the context of an ongoing research project in the department, and present thesis research progress reports before a critical audience. Prerequisite: consent of instructor.

GEOPHYS 399. Teaching Experience in Geophysics — On-the-job training in the teaching of geophysics. An opportunity to develop problem sets and lab exercises, grade papers, and give occasional lectures under the supervision of the regular instructor of a geophysics course. Regular conferences with instructor and with students in the class provide the student teacher with feedback about effectiveness in teaching.
2-4 units, Aut, Win, Spr, Sum (Staff)

GEOPHYS 400. Research in Geophysics
1-15 units, Aut, Win, Spr, Sum (Staff)

COGNATE COURSES

See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

AA 272C. Global Positioning Systems
3 units, Win (Enge, P)

EE 106. Planetary Exploration
3 units, Spr (Fraser-Smith, A)

EEES 257. Introduction to Computational Earth Sciences
2-4 units, Spr (Clapp, R; Harris, J)

GES 144. Fundamentals of Geographic Information Science (GIS)
4 units, Win (Seto, K)

GES 215A, B. Structural Geology and Rock Mechanics — (Same as CEE 297G, H.)
3-5 units, A: Aut, B: Win (Pollard, D)

GES 222. Planetary Systems: Dynamics and Origins
3-4 units, Aut (Staff)

GES 223. Planetary Systems: Atmospheres, Surfaces, and Interiors
3 units, Win (Staff)
INTERDISCIPLINARY GRADUATE PROGRAM IN ENVIRONMENT AND RESOURCES (IPER)

Director: Gretchen C. Daily
Associate Director: Helen J. Doyle

Faculty: Kevin Arrigo (Geophysics), Kenneth J. Arrow (Economics), Emeritus), Gregory Asner (Carnegie Institute, Department of Global Ecology), Barbara Block (Biological Sciences), Alexandrea Boehm (Civil and Environmental Engineering), Carol Boggs (Biological Sciences), Jef Caers (Energy Resources Engineering), Margaret Caldwell (Law), Page Chamberlain (Geological and Environmental Sciences), Gretchen Daily (Civil and Environmental Engineering), Robert B. Dunbar (Geological and Environmental Sciences), William H. Durham (Anthropological Sciences), Anne Ehrlich (Biological Sciences), Paul Ehrlich (Biological Sciences), Gary Ernst (Geological and Environmental Sciences, emeritus), Walter Falcon (Freeman Spogli Institute for International Studies, Economics), Scott Fendorf (Geological and Environmental Sciences), Christopher B. Field (Biological Sciences, Carnegie Institution Department of Global Ecology), David Freyberg (Civil and Environmental Engineering), Oliver Fringer (Civil and Environmental Engineering), Steven Gorelick (Geological and Environmental Sciences, Geophysics), Lawrence Goulder (Economics, Freeman Spogli Institute for International Studies), Akhil Gupta (Cultural and Social Anthropology), Elizabeth Hadly (Biological Sciences), Ursula Heise (English), Henning Hillmann (Sociology), Dominique Irvine (Anthropological Sciences), Mark Jacobson (Civil and Environmental Engineering), Terry Karl (Political Science), David Kennedy (History), Donald Kennedy (Biological Sciences, Freeman Spogli Institute for International Studies, Emeritus), Rosemary Knight (Geophysics), Jeffrey Koseff (Civil and Environmental Engineering), Anthony Kovscek (Energy Resources Engineering), Richard Luthy (Civil and Environmental Engineering), Pamela Matson (Dean, School of Earth Sciences, Freeman Spogli Institute for International Studies), Fiorenza Micheli (Biological Sciences), Stephen Monismith (Civil and Environmental Engineering), Harold Mooney (Biological Sciences), Rosamond Naylor (Freeman Spogli Institute for International Studies), Franklin M. Orr, Jr. (Global Climate and Energy Project, Energy Resources Engineering), Leonard Ortolan (Civil and Environmental Engineering), Stephen Palumbi (Biological Sciences), Adina Paytan (Geological and Environmental Sciences), Erica Plamebeck (Graduate School of Business), Terry L. Root (Freeman Spogli Institute for International Studies, Biological Sciences), Stephen H. Schneider (Biological Sciences, Freeman Spogli Institute for International Studies), Richard Scott (Sociology), Karen Seto (Geological and Environmental Sciences, Freeman Spogli Institute for International Studies), Richard Shavelson (School of Education), James Sweeney (Management Science and Engineering), Barton Thompson (Law), Shripad Tuljapurkar (Biological Sciences), David Victor (Freeman Spogli Institute for International Studies), Peter Vitousek (Biological Sciences), John Weyant (Management Science and Engineering, Freeman Spogli Institute for International Studies, Mark Zoback (Geophysics)

Senior Lecturers: Julie Kennedy, Sara Haogland
Program Offices: 132 Mitchell Earth Sciences
Mail Code: 94305-2210
Phone: (650) 723-6117
Email: nelsondn@stanford.edu
Web Site: http://iper.stanford.edu

Courses given in IPER have the subject code IPER. For a complete list of subject codes, see Appendix.

Over the last 30 years, environmental and resource investigations have focused on problems with acute local impacts, such as urban air pollution, pesticide use, or groundwater depletion. These problems have been addressed principally at the national and local level through research and policies that address specific media such as air or water; threats such as toxic chemicals; or resources such as forests or wetlands. More global challenges such as climate change and biodiversity loss pose fundamental threats to the health of the planet and human societies. Solutions to these problems must be multifaceted, addressing the interactions among threats and resources, and engaging diverse actors, including academia, national governments, international institutions, business, and civil society. The research and understanding necessary to devise such solutions thus must be both multidisciplinary and interdisciplinary, integrating the analytical tools of diverse fields to yield new insights and promising responses.

The Interdisciplinary Graduate Program in Environment and Resources (IPER) responds to these challenges by leveraging Stanford’s faculty strengths in disciplines ranging from ecology and engineering to law and economics, all of which are increasingly directed toward interdisciplinary research and problem solving, and teaching that encompasses collaborative and synthetic courses that cross departmental boundaries.

Interdisciplinary work requires that individuals and groups become familiar with the concepts, methods, data, and analyses of several disciplines in order to focus research questions more sharply. It requires the integration of multidisciplinary knowledge in the formulation of research questions and hypotheses, and in the execution and analyses of results. Students in the IPER program learn through interactions with a cohort of students and a dedicated faculty who influence each other’s ways of thinking and questioning.

FOUNDATION AND FLEXIBILITY

IPER students construct an integrative graduate curriculum through shared foundational study and flexibility in a research course. Students in the program are expected to make significant progress in each of three intellectual areas:

1. The linkages between physical and biological systems, and understanding the potential environmental consequences associated with the dynamics or evolution of these joint systems.

2. The interplay between human activities and the Earth system, and how human influence on the environment, such as through methods of production or patterns of consumption, is affected by social and economic institutions, legal rules, and cultural values, and how resources and environment in turn affect human actions and decision making.

3. Skills for gauging the potential impacts of alternative public policy options for dealing with environmental problems, for evaluating such policy alternatives according to various normative criteria, and for integrating scientific research into policy formulation.

The program is flexible to enable students to focus on their areas of greatest interest. For example, a student with a strong interest in the relationship between commercial fishing and coral reef habitat might concentrate on biology, international relations, and economics; a student aiming to understand the environmental impacts from agricultural production decisions might focus on the interplay among economics, biogeochemistry, and hydrology; and a student interested in the design and evaluation of policies to curb emissions of greenhouse gases might learn about scientific, technological, and economic issues, as well as gain skills in policy analysis, evaluation, and implementation.

RESEARCH HIGHLIGHTS

Research is the cornerstone of IPER. Faculty and graduate students are engaged in interdisciplinary research projects such as studying the effects and constraints of agricultural intensification and urbanization in the Yaqui Valley of Sonora, Mexico, and spatial analysis of land use changes in Vietnam. Students in IPER have the opportunity to work on existing projects or develop their own research directions and topics.

Research projects by students in the program address issues such as the science and policy of global climate change, environmental quality, regional security, the mapping and valuation of ecosystem services, energy
development, agricultural intensification and variability, characterization and effects of land use change, conservation finance, and natural resource management. Examples of research projects include:

1. Investigating ecosystem services in the Hawaiian countryside, through study of the sustainable management of native hardwood on private lands by creating financial incentives to make biodiversity conservation economically attractive to landowners.
2. Evaluating electric power sector development in China and India, and the potential for international policy mechanisms to steer these countries toward less CO2-intensive growth paths.

For additional student research projects, see http://iper.stanford.edu/research. For more information about integrative environmental research at Stanford, see the Woods Institute for the Environment web site at http://environment.stanford.edu.

GRADUATE PROGRAMS

The University’s basic requirements for the M.S. and Ph.D. degrees are discussed in the “Graduate Degrees” section of this bulletin.

DUAL DEGREE MASTER OF SCIENCE

The Interdisciplinary Program in Environment and Resources offers a dual program of study leading to the Master of Science degree. It provides training in interdisciplinary environmental problem solving. Only students enrolled in a professional school (Law, Business, or Medicine) at the University are eligible for the dual M.S. program. IPER gives these graduate students the benefit of a rigorous interdisciplinary course of study, which complements their main degree program. Students interested in the dual M.S. program apply no later than the first year of their primary graduate program. To be admitted, a student needs the approval of both IPER and the principal school and/or department. Applicants to the dual M.S. program are required to submit a statement of purpose as part of the admissions process, clearly explaining the importance of interdisciplinary studies to the student’s research or career. Admission to the dual M.S. program depends both on the applicant’s ability to successfully complete a demanding program in interdisciplinary studies and the applicant’s justification for pursuing the dual M.S. program.

Students in the dual Master of Science program participate in a 45-unit program, to be completed over a period of three or more quarters. All students in the dual M.S. program take three core courses: IPER 310, Environmental Forum Seminar; IPER 320, Research Design and Techniques for Data Collection and Analysis; and either IPER 330, Research Approaches for Environmental Problem Solving, or one M.S.-level core course specific to the dual master of science degree programs (Law, Business, or Medicine).

In exceptional circumstances, the Interdisciplinary Graduate Program in Environment and Resources offers a Master of Science degree for students who have been admitted to the IPER Ph.D. program but who opt to complete their training with a M.S. degree and not pursue the Ph.D. degree. Admission directly to the stand-alone M.S. program is not allowed.

M.S. course work should total at least 45 units at or above the 100-level, of which 18 units should be at or above the 200-level. All students take the IPER core curriculum for dual degree M.S. students, comprising: IPER 310, Environmental Forum Seminar; IPER 320, Research Design and Techniques for Data Collection and Analysis; and either IPER 330, Research Approaches for Environmental Problem Solving, or one M.S.-level core course specific to the dual master of science degree programs (Law, Business, or Medicine).

In addition, students plan a sequence of courses with a focus in a particular area of study. Possible focal areas include culture and institutions; economics and policy analysis; engineering and technology; and natural sciences. These focal areas are not declared on Axess; they do not appear on the transcript or diploma.

A program proposal, signed by the student’s program adviser and approved by the chair of the student’s M.S. committee, must be filed within the first four weeks of the first quarter of enrollment. Students may take no more than 6 units credit/no credit and must maintain at least a ‘B’ average in all courses taken for the M.S. degree. The M.S. program does not have an M.S. with thesis option. Students may write a master’s thesis, but it is not formally recognized by the University.

DOCTOR OF PHILOSOPHY

1. The student works with a faculty advising team to design a course of study that allows the student to develop and exhibit: a) familiarity with analytical tools and research approaches for interdisciplinary problem solving, and mastery of those tools and approaches central to the student’s thesis work; b) interdisciplinary breadth in each of four focal areas: culture and institutions; economics and policy analysis; engineering and technology; and natural sciences; and c) depth in at least two distinct fields of inquiry. The advising team has primary responsibility for ensuring the adequacy of the course of study. The IPER faculty advising team is comprised minimally of two lead advisers, each representing a field of inquiry chosen by the student. At a minimum, the student meets with these advisers quarterly during the first year and annually thereafter. Depth in the fields of inquiry is monitored by a student’s two lead faculty advisers who must certify that a) the two fields of inquiry are sufficiently distinct such that work integrating the two is interdisciplinary; and b) the student’s course work and independent study has provided the substantial depth of understanding normally expected at the Ph.D. level.

Breadth requirements vary by concentration area and are normally satisfied through a sequence of courses, independent study, and/or demonstration of proficiency through prior course work and/or experience. Breadth fulfillment is certified by a student’s two lead faculty advisers, and the IPER faculty director. See below for a list of courses that satisfy each of the breadth areas. Additional information about breadth requirements, including any updates to the list of courses that satisfy the requirements, can be found at http://iper/study/requirements.html or obtained from the IPER office.

The three core courses to be taken by all Ph.D. students are IPER 310, Environmental Forum Seminar, IPER 320, Research Design and Techniques for Data Collection and Analysis, and IPER 330, Research Approaches for Environmental Problem Solving. All core courses must earn a letter grade of ‘B’ or higher. Normally, IPER Ph.D. students are expected to take all courses, apart from undergraduate prerequisites, for a letter grade unless their advisers recommend otherwise.

2. To be admitted to candidacy for the Ph.D. degree, a student must have successfully completed at least 25 graded units (not including research credits) of graduate courses (200 level and above) maintaining a ‘B’ average. In addition, the student must pass an oral qualifying exam that demonstrates command of two areas of specialization as well as interdisciplinary breadth. The student may not have any incompletes on the transcript.

3. By the end of the sixth quarter of study, students present a Ph.D. candidacy plan to their primary advisers, with a copy to the associate and assistant directors. This plan should include:
   a) the names of 4-5 proposed oral qualifying exam committee members.
   b) a list of courses or experiences used to fulfill the IPER breadth and depth requirements.
The following courses may be taken to satisfy the breadth area requirement:

**CULTURE AND INSTITUTIONS BREATH COURSES**

IPER 235. Global Environmental Ethics  
IPER 265. Central America: Environment, Development and Security  
ANTHSCI 153. The Population Question  
ANTHSCI 162. Indigenous Peoples and Environmental Problems  
ANTHSCI 164. Ecological Anthropology  
ANTHSCI 252. Political Ecology  
ECON 228. Institutions and Organizations in Historical Perspective  
HIST 281 A. Environmental History of the Americas  
LAW 280. Toxic Harms  
LAW 281. Natural Resources Law and Policy  
LAW 437. Water Law and Policy  
LAW 592. International Conflict  
LAW 594. International Institutions  
LAW 603. Environmental Law and Policy  
LAW 604. Environmental Workshop  
LAW 605. International Environmental Law and Policy  
LAW 667. Marine Resources  
POLISCI 351 A. Foundations of Political Economy  
POLISCI 362. New Economics of Organizations  
POLISCI 424. Introduction to Political Psychology  
POLISCI 435. Topics in the Philosophy of Social Science  
POLISCI 436. Rational Choices  
PUBLPOL 102. Organizations and Public Policy  
PUBLPOL 166. Organizational Theory and Design  
PUBLPOL 194. Technology Policy  
SOC 116. Globalization and Organizations  
SOC 260. Formal Organizations  
SOC 264. Firms, Markets, and States  
SOC 360. Foundations of Organizational Sociology  
SOC 362. Organization and Environment  
SOC 364. Organizations as Governance Structures  
SOC 367. Institutional Analysis of Organizations  
SOC 377. Comparing Institutional Forms: Public, Private, and Non-profit  
STS 110. Ethics and Public Policy  

**ECONOMICS AND POLICY ANALYSIS BREADTH COURSES**

Students taking IPER 243 are expected to have mastered the topics covered in any of the following course combinations or by equivalent courses previously taken elsewhere. Prior enrollment in one of these course combinations is encouraged.

ECON 50 and 51  
ECON 50 and 155  
ECON 150  
ECON 206  
ECON 202 N and 203 N  
MS& E 241  

Alternatively, students may satisfy the minimum breadth requirement by taking courses culminating in ECON 241 or 243.

**ENGINEERING AND TECHNOLOGY BREATH COURSES**

CEE 101 B. Mechanics of Fluids  
CEE 166 B. Floods and Droughts, Dams and Aqueducts  
CEE 172. Air Quality Management  
CEE 176 A. Energy Efficient Buildings  
CEE 176 B. Electric Power: Renewables and Efficiency  
CEE 177. Aquatic Chemistry and Biology  
CEE 270. Movement and Fate of Organic Contaminants in Surface Waters and Groundwater  
CEE 274 E. Pathogens in the Environment  
GES 230. Physical Hydrogeology  
MS& E 250 A. Engineering Risk Analysis  

**NATURAL SCIENCES BREADTH COURSES**

IPER 250. Ecological Principles for Environmental Problem Solving  
BIOSCI 101. Ecology  
BIOSCI 121. Biogeography  
BIOSCI 136. Evolutionary Paleobiology  
BIOSCI 139. Biology of Birds  
BIOSCI 143. Evolution  
BIOSCI 144. Conservation Biology  
BIOSCI 280. Fundamentals of Sustainable Agriculture  
BIOHOPK 263 H. Oceanic Biology  
BIOHOPK 265 H. Air and Water  

Stanford Bulletin, 2006-07
BIOHOPK 266H. Molecular Ecology
BIOHOPK 272H. Marine Ecology
CEE 164. Introduction to Physical Oceanography
CEE 274A,B. Environmental Microbiology I, II
ENERGY 260. Groundwater Pollution and Oil Slicks
GEOPHYS 104. The Water Course
GEOPHYS 130. Biological Oceanography
GES 140. Remote Sensing of Land Use and Land Cover
GES 170. Environmental Geochemistry
GES 175. Science of Soils
GES 205. Advanced Oceanography
GES 230. Physical Hydrogeology
GES 240. Geostatistics for Spatial Phenomena
GES 259. Marine Chemistry
GES 268. Geomicrobiology

COURSES

Additional courses may be listed in the quarterly Time Schedule.

IPER 210. Communication and Leadership Skills — (Same as BIOSCI 388.) Focus is on delivering information to policy makers and the lay public. How to speak to the media, Congress, and the general public; how to write op-eds and articles; how to package ideas including titles, abstracts, and CVs; how to survive peer review, the promotion process, and give a job talk; and how to be a responsible science advocate.
2 units, not given this year

IPER 220. Special Topics Seminar — See Time Schedule for information on courses offered each quarter. May be repeated for credit.
1-5 units, Aut, Win, Spr, Sum (Staff)

IPER 220A. Special Topics Seminar — See Time Schedule for information on courses offered each quarter. May be repeated for credit.
1-5 units, Aut, Win, Spr, Sum (Staff)

IPER 230. Environment and Resources Field Research — Contemporar y environment and resource challenges at sites around the world. Courses are offered on a variable schedule depending on the interests of IPER students and faculty. See Time Schedule for current offerings.
1-9 units, Aut, Win, Spr, Sun (Staff)

IPER 235. Global Environmental Ethics — Theories of environmental ethics and their evolution. Environmental treaties as a framework to analyze case studies of contemporary ethical issues raised by environmental problems that transcend national boundaries.
4-5 units, Win (Hoagland, S)

IPER 243. Energy and Environmental Policy Analysis — (Same as MS&E 243.) Concepts, methods, and applications. Energy/environmental policy issues such as automobile fuel economy regulation, global climate change, research and development policy, and environmental benefit assessment. Group project. Prerequisite: 241 or ECON 50, 51.
3 units, not given this year

IPER 250. Ecological Principles for Environmental Problem Solving — For students in Law, Business, or Medicine, or IPER students with limited biology background. Topics include field methods, climate, biogeography, biogeochemical cycles, physiology, population genetics, and environmental ethics.
3 units, Win (Root, T)

IPER 260. The Social Sciences and Environmental Problem Solving — For students with little background in the social sciences interested in incorporating them into their research. Focus is on the contribution that the social sciences of international relations, political science, anthropology, and sociology make to environmental problem solving. Case studies from international regime building, inter-agency politics, organizational behavior, and cultural dynamics.
2-3 units, not given this year

3-5 units, not given this year

IPER 270. Graduate Practicum in Environment and Resources — Opportunity for IPER students to pursue areas of specialization in an institutional setting such as a laboratory, clinic, research institute, governmental agency, non-governmental organization, or multilateral organization. Meets USCIS requirements for off-campus employment with endorsement from designated school official.
1-9 units, Aut, Win, Spr, Sum (Staff)

IPER 286. Interpersonal Influence and Leadership — (Same as MS&E 286.) How one’s actions affect influence upon others and the ability to work with them. Foundational skills such as the ability to work through difficult issues, give and receive feedback, and work in groups. How to work with different people. The art of learning from experience.
3 units, Win (Robin, C)

IPER 300. Earth Sciences Seminar — (Same as EARTHSYS 300, GES 300, GEOPHYS 300, ENERGY 300.) Required for incoming graduate students except coterm students. Research questions, tools, and approaches of faculty members from all departments in the School of Earth Sciences. Goals are: to inform new graduate students about the school’s range of scientific interests and expertise; and introduce them to each other across departments and research groups. Two faculty members present work at each meeting. May be repeated for credit.
1 unit, Aut (Matson, P; Graham, S)

IPER 310. Environmental Forum Seminar — Required IPER core course. Participants attend the Woods Institute’s forum series or other environmental seminar. Issues such as the conceptual framework of the topic, analytical approaches, validity of conclusions from an interdisciplinary perspective, and alternative approaches. May be repeated for credit.
1-2 units, Aut, Win (Staff)

IPER 320. Research Design and Techniques for Data Collection and Analysis — Required IPER core course. Alternative designs for environmental research projects. Primary data collection techniques versus mixed method approaches. Interpretation of data, including basic statistical methods. Analysis of environmental literature, and development of individual research design, data collection, and analysis strategies.
3 units, Win (Davis, J)

IPER 330. Research Approaches for Environmental Problem Solving — Required IPER core course. Analytical tools, models, and approaches central to interdisciplinary research on the world’s leading environmental issues. Topics include: observing systems and data sources; computation and modeling approaches to complex problems; translation and integration of alternative disciplinary approaches to research, analysis, and uncertainty; policy analysis; cost benefit analysis, risk benefit analysis, qualitative methods, and other decision analytic frameworks and valuation approaches; team building and leadership roles; review and proposal writing; speaking.
3 units, Spr (Matson, P; Daily, G)

IPER 333. Water Policy Colloquium — (Same as CEE 333, GES 333.) Student-organized interdisciplinary colloquium. Creation, implementation, and analysis of policy affecting the use and management of water resources. Weekly speakers from academia and local, state, national, and international agencies and organizations. Previous topics include water policy in California and developing countries.
1 unit, Spr (Freyberg, D)
IPER 398. Directed Individual Study in Environment and Resources — Under supervision of an IPER faculty member on a subject of mutual interest.
1-9 units, Aut, Win, Spr, Sum (Staff)

IPER 399. Directed Research in Environment and Resources — For advanced graduate students.
1-9 units, Aut, Win, Spr, Sum (Staff)

IPER 410. Ph.D. Qualifying Tutorial — For Ph.D. students only.
1 unit, Aut, Win, Spr, Sum (Staff)

IPER 460. Proposal Writing Tutorial — Practical training in grant writing methods. Students draft research proposals relevant to individual interests with supervision from IPER faculty.
1-2 units, Aut, Win, Spr (Staff)

IPER 480. Dissertation Writing Tutorial in Environment and Resources — For students who have completed the oral qualifying examination.
1-15 units, Aut, Win, Spr, Sum (Staff)

COGNATE COURSES

See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

ANTHSCI 162/262. Indigenous Peoples and Environmental Problems
3-5 units, Aut (Durham, W)

BIOHOPK 163H/263H. Oceanic Biology
4 units, Win (Denny, M; Somero, G)

BIOSCI 101. Ecology
3 units, Aut (Vitousek, P; Dirzo, R)

BIOSCI 139. Biology of Birds
3 units, Spr (Root, T)

BIOSCI 143/243. Evolution
3 units, Aut (Watt, W)

CEE 101B. Mechanics of Fluids
4 units, Spr (Koseff, J)

CEE 164/262D. Introduction to Physical Oceanography — (Same as EARTHSYS 164.)
4 units, Win (Hench, J)

CEE 166B. Floods and Droughts, Dams and Aqueducts
3 units, Win (Freyberg, D)

CEE 172. Air Quality Management
3 units, Win (Hildemann, L)

CEE 176A. Energy Efficient Buildings
3-4 units, Win (Masters, G)

CEE 176B. Electric Power: Renewables and Efficiency
3-4 units, Spr (Masters, G)

CEE 177. Aquatic Chemistry and Biology
4 units, Aut (Criddle, C)

CEE 270. Movement and Fate of Organic Contaminants in Waters
3 units, Aut (Lathyr, R; Sum (Robertson, A)

CEE 274A,B. Environmental Microbiology
3 units, A: Aut, Sum (Staff), B: Spr (Spormann, A)

EARTHSYS 130/230. Biological Oceanography — (Same as GEOPHYS 130/231.)
2-4 units, Spr (Arrigo, K)

EARTHSYS 180/280. Fundamentals of Sustainable Agriculture — (Same as BIOSCI 180/280.)
3 units, Spr (Naylor, R; Daily, G), alternate years, not given next year

ECON 50,51. Economic Analysis
5 units, 51: Aut (Abramitzky, R), Spr (Tendall, M), 52: Win, Sum (Staff)

ECON 155. Environmental Economics and Policy — (Same as EARTHSYS 112.)
5 units, Spr (Staff)

ECON 228. Institutions and Organizations in Historical Perspective
2-5 units, Aut (Greif, A)

ECON 243. Economics of Environment
2-5 units, Spr (Goulder, L)

ENERGY 240. Geostatistics for Spatial Phenomena — (Same as GES 240.)
3-4 units, Win (Journel, A)

GES 170. Environmental Geochemistry
4 units, Win (Brown, G)

GES 175. Science of Soils
4 units, Spr (Fendorf, S)

GES 230. Physical Hydrogeology — (Same as CEE 260A.)
4 units, Aut (Gorelick, S)

HUMBIO 112. Conservation Biology — (Same as BIOSCI 144.)
3-4 units, Win (Boggs, C; Launer, A)

HUMBIO 118. Ecological Anthropology — (Same as ANTHSCI 164/264.)
3-5 units, Win (Bird, R)

HUMBIO 230. Ethnography of Environment
5 units, Win (Bird, R)

MS&E 241. Economic Analysis
3-4 units, Win (Weber, T)

MS&E 250A. Engineering Risk Analysis
2-3 units, Win (Puté-Cornell, E)

OB 672. Organization and Environment — (Same as SOC 362.)
4 units, Win (Staff)

POLECON 680. Foundations of Political Economy — (Same as POLISCI 351A.)
4 units, Aut (Staff)

POLISCI 362. New Economics of Organization — (Same as OB 686.)
5 units, Spr (Weingast, B)

POLISCI 436. Rational Choice
5 units, Spr (Staff)

PUBLPOL 102. Organizations and Public Policy
5 units, Win (Bendor, J)

PUBLPOL 104. Economic Policy Analysis — (Same as ECON 150.)
5 units, Spr (Kessler, D)

PUBLPOL 194. Technology Policy
5 units, Win (Windham, P)

SOC 160/260. Formal Organizations
5 units, Spr (Staff)

SOC 367. Institutional Analysis of Organizations
3-5 units, Aut (Scott, W)

STS 110. Ethics and Public Policy — (Same as MS&E 197, PUBL-POL 103B.)
5 units, Win (McGinn, R)
The School of Education prepares scholars, teachers, teacher educators, policy analysts, evaluators, researchers, administrators, and other educational specialists. Two graduate degrees with specialization in education are granted by the University: Master of Arts and Doctor of Philosophy. No undergraduate degrees are offered, but the school offers many courses and programs that are appropriate for undergraduates as well. The School of Education offers a number of seminars, workshops, and conferences that are open to the public.

Courses given in the School of Education have the subject code EDUC. For a complete list of subject codes, see Appendix.

The School of Education is organized into three program area committees: Curriculum Studies and Teacher Education (C&TE); Psychological Studies in Education (PSE); and Social Sciences, Policy, and Educational Practice (SSPEP). In addition, several cross-area programs are sponsored by faculty from more than one area. These programs include the doctoral Learning Sciences and Technology Design Program (LSTD); two master’s level programs: the Stanford Teacher Education Program (STEP) and the Learning Design and Technology Program (LDT); and the undergraduate honors program.

These program area committees function as administrative units that act on admissions, plan course offerings, assign advisers, and determine program requirements. Various concentrations exist within most of these areas. Faculty members are affiliated primarily with one area but may participate in several programs. While there is a great deal of overlap and interdisciplinary emphasis across areas and programs, students are affiliated with one area committee or program and must meet its degree requirements.

Detailed information about admission and degree requirements, faculty members, and specializations related to these area committees and programs can be found in the publication School of Education Guide to Graduate Studies and at http://ed.stanford.edu.

The School of Education offers an eight-week summer session for admitted students only. The school offers no correspondence or extension courses, and in accordance with University policy, no part-time enrollment is allowed. Work in an approved internship or as a research assistant is accommodated within the full-time program of study.

**UNDERGRADUATE PROGRAMS**

The School of Education focuses on graduate education and research training and does not offer an undergraduate major. However, undergraduate education is of concern to the School, and courses and programs are available to those interested in the field of education. The following courses are appropriate for undergraduates:

- 101. Undergraduate Teaching Practicum
- 102. Culture, Class and Educational Opportunity
- 103A,B,C. Exploring Elementary Teaching
- 106. Interactive Media in Education
- 107. The Politics of International Cooperation in Education
- 110. Sociology of Education: The Social Organization of Schools
- 124. Collaborative Design and Research of Technology: Integrated Curriculum
- 130. Introduction to Counseling
- 131. Mediation for Dispute Resolution
- 134. Career and Personal Counseling
- 149. Theory and Issues in the Study of Bilingualism
- 156A. Understanding Racial and Ethnic Identity Development
- 165. History of Higher Education in the United States
- 178X. Latino Families, Languages, and Schools
- 179. Urban Youth and their Institutions: Research and Practice
- 193A. Listen Up! Core Peer Counseling Skills
- 197. Education and the Status of Women: Comparative Perspective
- 199A,B,C. Exploring Elementary Teaching
- 201. History of Education in the United States
- 201A. History of African American Education
- 201B. Education for Liberation
- 202. Introduction to Comparative and International Education
- 204. Introduction to Philosophy of Education
- 208B. Curriculum Construction
- 212X. Urban Education
- 214. Popper, Kuhn, and Lakatos
- 218. Topics in Cognition and Learning: Spatial Cognition
- 220B. Introduction to the Politics of Education
- 220D. History of School Reform: Origins, Policies, Outcomes, and Explanations
- 221A. Policy Analysis in Education
- 224. Information Technology in the Classroom
- 243. Writing Across Languages and Cultures: Research on Writing and Writing Instruction
- 247. Moral Education
- 251B. Statistical Analysis in Educational Research: Analysis of Variance
- 270A. Learning to Lead in Public Service Organizations
- 290. Leadership: Research, Policy, and Practice
- 298. Online Learning Communities
- 304. The Philosophical and Educational Thought of John Dewey
- 306D. World, Societal, and Educational Change: Comparative Perspectives
- 323A. Introduction to Education Policy Analysis
- 326. Legal Dilemmas and Administrative Decision Making in Schools
HONORS PROGRAM
An honors program is available to undergraduates to supplement their regular majors outside the school. This program permits interested undergraduates at Stanford to build on the training received in their major field of study by pursuing additional courses and a research or practicum project in a related area of education. Students apply for entry during the junior year. Applications are available at http://www.stanford.edu/dept/SUSE/honors.html#HonorsProgram. The current director of the program is Professor John Krumholtz. At least one course must be taken from each of the following areas:

2. Contemporary problem areas—courses include: EDUC 179, Urban Youth and Their Institutions: Research and Practice; EDUC 149, Theory and Issues in the Study of Bilingualism; EDUC 197, Education and the Status of Women: Comparative Perspectives; EDUC 239, Emerging Issues in Child and Adolescent Development.
3. Foundational disciplines—courses include: EDUC 220, Social Sciences and Educational Analysis; EDUC 110, Sociology of Education: Social Organizations of Schools; EDUC 204, Introduction to Philosophy of Education.

A directed reading course as well as directed research courses with a faculty member in Education are also required. Students in the program should enroll in 199A,B,C, Undergraduate Honors Seminar, during their senior year.

Near the end of Spring Quarter, successful candidates for honors orally present brief reports of their work and findings at a mini-conference. All honors students in Education are expected to attend this conference.

COTERMINAL BACHELOR’S AND MASTER’S PROGRAM

The School of Education admits a small number of students from undergraduate departments within the University into a coterminal bachelor’s and M.A. program. For information about the coterminal option through the Stanford Teacher Education Program (STEP), see the details under STEP below. Students in this program receive the bachelor’s degree in their undergraduate major and the master’s degree in Education. Approval of the student’s undergraduate department and admission to the School of Education M.A. program are required. Undergraduates may apply when they have completed at least 120 units, and must submit their application no later than the quarter prior to the expected completion of their undergraduate degree. The number of units required for the M.A. degree depends on the program requirements within the School of Education; the minimum is 45 units.

Applicants may obtain coterminal degree application materials from the School of Education’s Admissions Office in Cubberley, Room 140. For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

GRADUATE PROGRAMS

The School of Education offers several advanced degree programs described below. Requirements vary somewhat across programs. Both University and School of Education requirements must be met for each degree. The University requirements are detailed in the "Graduate Degrees" section of this bulletin. Students are urged to read this section carefully, noting residency, tuition, and registration requirements. A student who wishes to enroll for graduate work in the School of Education must be qualified and admitted to graduate standing by one of the school’s area committees and approval of the Associate Dean of Student Affairs.

Complete information about admissions procedures and requirements is available at http://gradadmissions.stanford.edu, or by writing Stanford University Graduate Admissions, 630 Serra Street, Suite 120, Stanford, CA 94305-6032, or at http://ed.stanford.edu/suse.html. All applicants, except coterminal applicants, must submit scores from the Graduate Record Examination General Test (verbal, quantitative, and analytical or analytical writing areas); TOEFL scores are also required from those whose first language is not English. Applicants to the Stanford Teacher Education Program are also required to submit specific test scores or acceptable equivalents as required by the California Commission on Teacher Credentialing; see the section on STEP below. Test information is available at http://ed.stanford.edu/suse/admissions/admissions-application-requirements.html#test-scores.

MASTER OF ARTS

The M.A. degree is conferred by the University upon recommendation of the faculty of the School of Education and the University Committee on Graduate Studies. The minimum unit requirement is 45 quarter units earned at Stanford as a graduate student. Students must maintain a grade point average (GPA) of 3.0 or better in courses applicable to the degree, and a minimum of 27 units must be taken in the School of Education. Students typically enroll in 15 to 18 units per quarter. They must enroll in at least 11 units of work each quarter unless their program makes special provision for a lower quarterly minimum. Master’s students should obtain detailed program requirements from the master’s coordinator, located in academic services in the School of Education. Most programs require a final project, scholarly paper, or monograph. Additional detailed information regarding program content, entrance, and degree requirements is available at http://ed.stanford.edu/step. Upon admission, each student is assigned a faculty adviser from the appropriate area committee to begin early planning of a coherent program.

Master of Arts degrees are offered for the following specializations: Curriculum and Teacher Education.* Students may specialize in English, Literacy, Mathematics, Science, or History.

International Comparative Education
International Educational Administration and Policy Analysis
Joint Degree Program with Graduate School of Business (MBA/MA)
Policy, Organization, and Leadership Studies
Learning, Design, and Technology
Social Sciences in Education. Students may specialize in anthropology, economics, educational linguistics, history, philosophy or sociology of education, or interdisciplinary studies.

* This program in CTE is not a credentialing program; see STEP below.

In addition, an M.A. degree with a teaching credential is offered in the Stanford Teacher Education Program.

STANFORD TEACHER EDUCATION PROGRAM (STEP)

STEP is a twelve-month, full-time program leading to a Master of Arts and a preliminary California teaching credential. STEP offers two Master of Arts programs to prepare college graduates for careers as teachers in single- or multiple-subject classrooms. STEP-Secondary prepares humanities and sciences students to become teachers of English, languages (French, German, Japanese, Spanish), mathematics, science (biology, chemistry, earth science, physics), and history/social science. STEP-Elementary prepares students to be teachers in California multiple-subject classrooms. STEP seeks to prepare and support teachers to work with diverse learners
to achieve high intellectual, academic, and social standards by creating equitable and successful schools and classrooms.

The 12-month STEP year begins in June (Secondary) or July (Elementary) with a Summer Quarter of intensive academic preparation and placement in a local summer school. During the academic year, students continue their course work and begin a year-long field placement under the guidance of expert teachers in local schools. The master’s degree and teaching credential require a minimum of 45 quarter units, taken during four quarters of continuous residency.

Stanford undergraduates who enroll in STEP through the coterminal program must have their B.A. conferred prior to commencing the four quarters of the STEP program. Students complete their undergraduate degree prior to beginning in the STEP Year which concludes in a master’s degree and a recommendation for a California teaching credential.

Applicants to the secondary program are required to pass the California Basic Educational Skills Test (CBEST) and must demonstrate subject matter competence in one of two ways: (1) by passing the California Subject Examination for Teachers (CSET) in their content area; or (2) by completing a California state-approved subject matter preparation program.

Applicants to the elementary program are required to pass the California Basic Educational Skills Test (CBEST), and must pass the Reading Instruction Competence Assessment Test (RICA) after admission to the program.

Further information regarding admission requirements, course work, and credential requirements is available at http://ed.stanford.edu and in the School of Education Guide to Graduate Studies.

DOCTORAL DEGREES

The School of Education offers the Doctor of Philosophy (Ph.D.) degree in all program area committees. The degree is conferred by the University upon recommendation by the faculty of the School of Education and the University Committee on Graduate Studies. The Ph.D. requires a minimum of 135 units of course work and research completed at Stanford beyond the baccalaureate degree. Students may transfer up to 45 units of graduate course work taken within the past seven years. Students must consult with the doctoral programs officer if they intend to transfer prior course work. Students must maintain a grade point average (GPA) of 3.0 (B) or better in courses applicable to the degree.

Students should note that admission to the doctoral program does not constitute admission to candidacy for the degree. Students must qualify and apply for candidacy by the end of their second year of study and should obtain information about procedures and requirements during their first year from the School’s doctoral programs office in Cubberley 135.

The Ph.D. degree is designed for students who are preparing for research work in public school systems, branches of government, or specialized institutions; teaching roles in education in colleges or universities, and research connected with such teaching; or other careers in educational scholarship and research.

Ph.D. students must complete a minor in another discipline taught outside the school, or hold an acceptable master’s degree outside the field of education, or complete an approved individually designed distributed minor that combines relevant advanced work taken in several disciplines outside the school.

Upon admission, the admitting area committee assigns an initial adviser from its faculty who works with the student to establish an appropriate and individualized course of study, a relevant minor, and project research plans. Other faculty members may also be consulted in this process. Details about administrative and academic requirements for each area committee and the School of Education, along with the expected timelines to complete program milestones, are given in the publication School of Education Doctoral Degree Handbook, available for download at http://ed.stanford.edu/suse/programs-degrees/; click on the publication link.

The following doctoral specializations, with their sponsoring area and concentration, are offered:

- Administration and Policy Analysis (SSPEP)
- Anthropology of Education (SSPEP)
- Child and Adolescent Development (PSE)
- Economics of Education (SSPEP)
- Educational Linguistics (SSPEP)
- Educational Psychology (PSE)
- English Education/Literacy Studies (C&TE)
- General Curriculum Studies (C&TE)
- Higher Education (SSPEP)
- History of Education (SSPEP)
- International Comparative Education (SSPEP)
- Learning Sciences and Technology Design (CTE, PSE, SSPEP)
- Mathematics Education (C&TE)
- Organization Studies (SSPEP)
- Philosophy of Education (SSPEP)
- Science Education (C&TE)
- Interdisciplinary Studies (SSPEP)
- History/Social Science Education (C&TE)
- Sociology of Education (SSPEP)
- Teacher Education (C&TE)

**PH.D. MINOR FOR STUDENTS OUTSIDE EDUCATION**

Candidates for the Ph.D. degree in other departments or schools of the University may elect to minor in Education. Requirements include a minimum of 20 quarter units of graduate course work in Education and a clear field of concentration. Students choosing to minor in education should meet with the Associate Dean for Student Affairs to determine a suitable course of study early in their program.

**COURSES**

**OTHER DIVISIONS OF THE UNIVERSITY**

Teachers, administrators, and researchers are expected to have substantial knowledge of a variety of academic fields outside the areas encompassed by professional education. Graduate students in the School of Education are, therefore, urged to consider the courses offered in other divisions of the University in planning their programs.

The numbering of courses in the School of Education identifies the approximate course level and its intended audience:

- **Below 100 level** — For undergraduates
- **100 level** — Primarily for undergraduates (graduate students may enroll)
- **200 and 300 level** — For M.A. and first- and second-year doctoral students, and qualified undergraduates
- **400 level** — Research seminars or similar courses primarily for third-year doctoral students and beyond

Course descriptions are in numerical order and indexed by program areas.

An ‘X’ suffix denotes a new experimental course. With faculty approval, after being taught twice, it can be offered as a regular course in the School of Education.

An ‘S’ suffix denotes a special course, given only once and usually taught by visiting faculty.

An ‘E’ suffix denotes a course that is part of the STEP-Elementary curriculum.

**EDUCATION COURSES**

5 units, Aut (Davis, S)

**EDUC 94Q. CATASTROPHIE CURRUCULUM: TEACHING AND REPRESENTING THE HOLOCAUST** — Stanford Introductory Seminar. Preference to sophomores. Theodore Adorno asked whether it was possible to write poetry after Auschwitz; whatever the answer, each year witnesses exponential growth in state-sponsored mandates to teach the Holocaust. How and to what end does catastrophe become curriculum? How to assess what students learn from these efforts. The Nazis’ efforts to teach for hate, and contemporary parallels. Historical and educational sources, especially films and memoirs.

1-2 units, Spr (Wineburg, S)
EDUC 98X. Service Learning Practicum — For Alternative Spring Break program leaders. The skills and philosophical framework to develop and lead an ASB experience.
1 unit, Aut (McConnell, J)

EDUC 101. Undergraduate Teaching Practicum — Students engage in real world teaching by observing and assisting teachers in the classroom, and being involved in structured interactions such as tutoring. Weekly meetings concerning field experiences, readings, and developing skills and knowledge. This course provides the opportunity to consider whether a teaching career is a good match.
3-5 units, Aut (Wolf, J)

EDUC 102. Culture, Class, and Educational Opportunity — Upward Bound and EPASPA counselors work with students from educationally disadvantaged backgrounds. Topics: language education, culture and family, class management, school finance, and community-school relations. Mandatory school visits and classroom observations. Enrollment limited to 15. (SSPEP)
2 units, not given this year

EDUC 103A. Exploring Elementary Teaching: Seeing a Child through Literacy — For undergraduates to engage in the real world of teaching; required of all STEP elementary credential candidates. Focus is on teaching struggling young readers. The role of instruction in literacy development; supervised tutoring of a child; seeing the worlds of school, print, and learning through the eyes of a child. Ravenswood Reads tutors encouraged to enroll.
3-4 units, Win (Ball, A)

EDUC 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices — (Graduate students register for 337.) Undergraduates engage in the real world of teaching. Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.
3-4 units, Win (Juel, C)

EDUC 103C. Educational Policy, Diversity, and English Learners — Undergraduates engage in the real world of teaching. Historical and legal foundations, and materials, methods, and strategies for English and primary language development. Students tutor an English learner.
3-4 units, Spr (Padilla, A)

EDUC 106. Interactive Media in Education — Workshop. (CTE)
3-5 units, not given this year

EDUC 107. The Politics of International Cooperation in Education — (Ph.D. students register for 307B; see 307B.) For undergraduates and master’s students. (SSPEP/ICE, APA)
3-4 units, not given this year

EDUC 110. Sociology of Education: The Social Organization of Schools — (Graduate students register for 310; same as SOC 132/332.) Topics and case studies that elaborate on the embeddedness of classrooms and schools in social environments, spanning school processes such as stratification, authority, moral and technical specialization, curricular differentiation, classroom instruction, voluntary associations, social crowds, and peer influence. (SSPEP) GER:DB-SocSci
4 units, Win (McFarland, D)

EDUC 115Q. Identities, Race, and Culture in Urban Schools — Stanford Introductory Seminar. Preference to sophomores. How urban youth come to a sense of themselves as students, members of cultural and racial groups, and young people in urban America. The nature and interaction of racial and academic identities; how identity takes shape; how it has been conceptualized. The relation between identities and learning. Urban schools as contexts for identity development. Theoretical perspectives include psychology, sociolinguistics, sociology, anthropology, and education. Students shadow a high school student in a public school and write a case study.
3 units, Spr (Nasir, N)

EDUC 116X. Service Learning as an Approach to Teaching — History, theory, and practice. Topics include: responsive community partnerships, cultural awareness, the role of reflection, and best practices in service learning.
3 units, Spr (Cotterman, K)

EDUC 117X. Research and Policy on Postsecondary Access — (Graduate students register for 417X.) The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access.
3 units, Win (Antonio, A)

EDUC 119X. Writing About Education — Workshop. How to communicate and think in a clear and memorable way. The elements of good writing, word choice, and editing. Choosing the right publication for work; pros and cons of writing for a non-specialist audience; ethics, law, and libel; and how to get published. Students write about their work and share their writing.
1-3 units, not given this year

EDUC 121X. Leadership and Civic Responsibility — How leaders from public and private occupations exemplify civic responsibility. Theories and attributes of leadership behavior that promote the public welfare, civic responsibility, and social justice. Relationships among leadership, civic responsibility, and education. Guest speakers.
2 units, not given this year

EDUC 124. Collaborative Design and Research of Technology: Integrated Curriculum — For education students interested in math and science curriculum development. Studio-based, hands-on approach to the research and development of technology tools and curriculum materials. Focus is on the role that technologies can play in teaching and learning in the content areas.
3-4 units, Win (Goldman, S)

EDUC 130. Introduction to Counseling — The theories and techniques of counseling, emphasizing clients’ individual and cultural differences, and construction of one’s own theory of the counseling process and outcome. Two psychotherapeutic theories, cognitive-behavioral and existential-humanistic, supplemented with a third theory of student’s choice. Experiential, problem-based focus on how to develop self-awareness and conceptual understandings of the counseling process in culturally diverse contexts. (PSE)
3 units, Win (Krumboz, J)

EDUC 131. Mediation for Dispute Resolution — (Same as PSYCH 152.) Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.
3 units, Aut (Krumboz, J)

EDUC 134. Career and Personal Counseling — (Graduate students register for 234; same as PSYCH 192.) Methods of integrating career and personal counseling with clients and counselors from differing backgrounds. Practice with assessment instruments. Case studies of bicultural conflict. Informal experience in counseling. (PSE)
3 units, Spr (Krumboz, J)

EDUC 136. World, Societal, and Educational Change: Comparative Perspectives — (Graduate students register for 306D; see 306D; same as SOC 231.)
4-5 units, Win (Wotipka, C)

EDUC 144X. STEP Elementary Child Development — How schools form a context for children’s social and cognitive development. Focus is on early and middle childhood. Transactional processes between children and learning opportunities in classroom contexts. Topics include: alternative theoretical perspectives on the nature of child development; early experience and fit with traditional school contexts; assessment practices and implications for developing identities as learners; psychological con-
3-4 units, Aut (Perez-Granados, D)

EDUC 148X. Critical Perspectives on Teaching and Tutoring English Language Learners — Theoretical foundation for volunteer tutors of English language learners in urban environments working with children in school-based programs or adults in community-based settings.
3 units, Aut (Moorthy, S)

EDUC 149. Theory and Issues in the Study of Bilingualism — (Graduate students register for 249; see 249; same as SPANLIT 207.) (SSPEP) GER: DB-Hum
5-5 units, Aut (Valdés, G)

EDUC 150. Introduction to Data Analysis and Interpretation — Primarily for master’s students with little or no experience. Focus is on reading literature and interpreting descriptive and inferential statistics, especially those commonly found in education. Topics: basic research design, instrument reliability and validity, description statistics, correlation, t-tests, one-way analysis of variance, and simple and multiple regression.
4 units, Aut, Win (Porteus, A)

EDUC 151. Introduction to Qualitative Research Methods — Primarily for master’s students. Issues, ideas, and methods.
3-4 units, Aut (Pope, D), Win (Wolf, J)

EDUC 153X. School Choice: The Role of Charter Schools — Is school choice, including vouchers, charter schools, contract schools, magnet schools, district options, and virtual schools, a threat or an opportunity for public education? Focus is on the charter school movement nationally and in California as reform strategy. Roles and responsibilities of charter schools emphasizing issues of governance, finance, curriculum, standards, and accountability.
3 units, not given this year

EDUC 156A. Understanding Racial and Ethnic Identity Development — African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and types of white racial consciousness.
3-5 units, not given this year

EDUC 156B. Historical and Contemporary Perspectives on Race in the U.S. — (Graduate students register for 156B.) For doctoral students with little or no prior statistics. Organization of data, descriptive statistics, elementary methods of inference, hypothesis testing, and confidence intervals. Computer package used. Students cannot also receive credit for PSYCH 60 or STATS 60/160. (all areas)
4 units, Aut (Shavelson, R)

EDUC 156C. Race in Education — (Graduate students register for 156C.) Focus on principles in understanding, assessing, and supporting the reading and writing processes, and the acquisition of content area literacies in secondary schools. Literacy demands within particular disciplines and how to use oral language, reading, and writing to teach content area materials more effectively to all students. (STEP)
3 units, Sam (Ball, A)

EDUC 156D. The Centrality of Literacies in Teaching and Learning — Focus is on principles in understanding, assessing, and supporting the reading and writing processes, and the acquisition of content area literacies in secondary schools. Literacy demands within particular disciplines and how to use oral language, reading, and writing to teach content area materials more effectively to all students. (STEP)
3 units, Sam (McDermott, R)

EDUC 157. Education of Immigrant Students: Psychological Perspectives — (Graduate students register for 277.) Historical and contemporary approaches to educating immigrant students. Case study approach focuses on urban centers to demonstrate how stressed urban educational agencies serve immigrants and native-born U.S. students when confronted with overcrowded classrooms, controversy over curriculum, current school reform movements, and government policies regarding equal educational opportunity. (SSPEP)
4 units, Win (Padilla, A)

EDUC 178X. Latino Families, Languages, and Schools — The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling. (SSPEP)
3-5 units, not given this year

EDUC 179. Urban Youth and Their Institutions: Research and Practice — (Graduate students register for 279.) The determinants and consequences of urban life for youth, emphasizing disciplinary and methodological approaches, and the gap between the perspectives of state and local organizations and those of youth and their communities. The diversity of urban youth experiences with respect to ethnicity, gender, and immigration histories. Case studies illustrate civic-level and grassroots institutions, their structures, networks, and philosophies; historical and contemporary realities of urban youth for policy makers, educators, and researchers. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)
4-5 units, Aut (McLaughlin, M)

EDUC 180. Directed Reading in Education — For undergraduates and master’s degree students. (all areas)
1-15 units, Aut, Win, Spr, Sum (Staff)

EDUC 185. Master’s Thesis — (all areas)
1-15 units, Aut, Win, Spr, Sum (Staff)

EDUC 190. Directed Research in Education — For undergraduates and master’s students. May be repeated for credit. (all areas)
1-15 units, Aut, Win, Spr, Sum (Staff)

EDUC 191X. Introduction to Survey Research — Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.
3-4 units, Win (Adams, J)

EDUC 193A. Listen Up! Core Peer Counseling Skills — Topics: verbal and non-verbal skills, open and closed questions, paraphrasing, working with feelings, summarization, and integration. Individual training, group exercises, role play practice with optional video feedback. Sections on relevance to crisis counseling and student life. Guest speakers from University and community agencies. Students develop and apply skills in University settings.
2 units, Aut, Win, Spr (Mendoza-Newman, M)

EDUC 193B. Peer Counseling in the Chicano/Latino Community — Topics: verbal and non-verbal attending and communication skills, open and closed questions, working with feelings, summarization, and integration. Salient counseling issues including Spanish-English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and Chicana/o student experience in University settings. Individual training, group exercises, role play, and videotape practice.
1 unit, Aut (Martinez, A)
EDUC 193C. Peer Counseling in the African American Community — Topics: the concept of culture, Black cultural attributes and their effect on reactions to counseling, verbal and non-verbal attending, open and closed questions, working with feelings, summarization, and integration. Reading assignments, guest speakers, role play, and videotaped practice. Students develop and apply skills in the Black community on campus or in other settings that the student chooses.

1 unit, Aut (Edwards, S)

EDUC 193F. Peer Counseling: Asian American Community — Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.

1 unit, Spr (Brown, N)

EDUC 193N. Peer Counseling in the Native American Community — Verbal and non-verbal communication, strategic use of questions, methods of dealing with strong feelings, and conflict resolution. How elements of counseling apply to Native Americans including client, counselor, and situational variables in counseling, non-verbal communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, the impact of family on personal development, gender roles, and the experience of Native American students in university settings. Individual skill development, group exercises, and role practice.

1 unit, Win (Simms, W)

EDUC 193P. Peer Counseling at the Bridge — For those who continue to study counseling methods while counseling students.

1 unit, Aut, Win, Spr (Mendoza-Newman, M)

EDUC 193S. Peer Counseling on Comprehensive Sexual Health — Factual information on sexually transmitted infections and diseases, and birth control methods. Topics related to sexual health such as communication, societal attitudes and pressures, pregnancy, abortion, and the range of sexual expression. Role-play and peer-education outreach projects. Required for those wishing to counsel at the Sexual Health Peer Resource Center (SHPRC).

1 unit, Aut, Win, Spr (Martinez, A)

EDUC 197. Education and the Status of Women: Comparative Perspective — Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of women and its uses to evaluate knowledge claims. (SSPEP/ICE)

GER:EC—Gender

4-5 units, Aut (Wotipka, C)

EDUC 198X. Tutoring with Adolescents: Ravenswood Writes — (Same as PWR 198X.) Strategies and approaches for teaching writing to students from diverse backgrounds and languages, and cultural and learning styles. Course prepares students to become tutors for Ravenswood Writes. Prerequisites: application and committee approval.

3 units, Spr (Ball, A; Lunsford, A; Tinker, J)

EDUC 199A,B,C. Undergraduate Honors Seminar — Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor.

1 unit, A: Aut; B: Win; C: Spr (Krumholtz, J)

EDUC 201. History of Education in the United States — How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WWII. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching. (SSPEP)

3-4 units, Win (Williamson, J)

EDUC 201A. History of African American Education — Pivotal points in African American educational history including literacy attempts during slavery, the establishment of historically Black colleges and universities, the debate between liberal and vocational education, Black student rebellions on campuses during the 20s, and the establishment of Black studies and cultural centers. (SSPEP)

3-4 units, not given this year

EDUC 201B. Education for Liberation — How ethnic, gender, and religious groups have employed education to advance group self-determination and autonomy throughout history. How reformers attempted to impose educational prescriptions on these groups.

3-4 units, Aut (Williamson, J)

EDUC 202. Introduction to Comparative and International Education — Contemporary theoretical debates about educational change and development, and the international dimension of issues in education. Emphasis is on the development of students' abilities to make cross-national and historical comparisons of educational phenomena. (SSPEP/ICE)

4-5 units, Aut (Staklis, S)

EDUC 202I. Education Policy Workshop in International and Comparative Education — For students in International and Comparative Education. Practical introduction to issues in educational policy making, educational planning, implementation, and the role of foreign expertise consultants in developing country contexts. (SSPEP/ICE)

3-4 units, Win (Staklis, S)

EDUC 204. Introduction to Philosophy of Education — How to think philosophically about educational problems. Recent influential scholarship in philosophy of education. No previous study in philosophy required. (SSPEP)

3 units, Aut (Callan, E)

EDUC 206A. Applied Research Methods in International and Comparative Education I: Introduction — Required of M.A. students in ICE and IEAPA; others by consent of instructor. Orientation to the M.A. program and research project; exploration of resources for study and research. (SSPEP/ICE)

1 unit, Aut (Staklis, S)

EDUC 206B. Applied Research Methods in International and Comparative Education II: Master’s Monograph Proposal — Required of M.A. students in ICE and IEAPA; others by consent of instructor. Development of research skills through theoretical and methodological issues in comparative and international education. Preparation of a research proposal for the M.A. monograph. (SSPEP/ICE)

1-3 units, Win (Staklis, S)

EDUC 206C. Applied Research Methods in International and Comparative Education III: Master’s Monograph Workshop — The conclusion of the four quarter M.A. program in ICE and IEAPA; others by consent of instructor. Students develop and shape their M.A. monograph as part of the program. (SSPEP/ICE)

3 units, Sum (Staklis, S)

EDUC 208B. Curriculum Construction — The theories and methods of curriculum development and improvement. Topics: curriculum ideologies, perspectives on design, strategies for diverse learners, and the politics of curriculum construction and implementation. Students develop curriculum plans for use in real settings. (CTE)

3-4 units, Win (Pope, D)

EDUC 211. Master’s Seminar in Social Sciences in Education — Limited to master’s students in SSE. Hands-on forum. The process of developing and shaping a research program, integrating it with academic and field experiences, and building relationships beyond the program. Students conceptualize their projects and focus on researchable topics: effective revising and editing, job searches, working with your adviser, what next? or a celebration of achievements so far. (SSPEP)

1-3 units, Aut, Win, Spr (Suarez, D)
EDUC 212X. Urban Education — Open to graduate students and undergraduates. Combination of historical and anthropological perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.
3-4 units, Spr (Staff)

EDUC 214. Popper, Kuhn, and Lakatos — (Same as PHIL 156.) These 20th-century philosophers of science raise fundamental issues dealing with the nature of scientific progress: the rationality of change of scientific belief, science versus non-science, role of induction in science, truth or verisimilitude as regulative ideals. Their impact in the social sciences and applied areas such as educational research. (SSPEP)
3 units, not given this year

EDUC 215X. International Human Rights and Education — Theory and practice. Focus is on how education may be seen as a human rights issue and a tool to educate citizens about their human rights. The history of human rights and the spread of the international human rights regime in terms of organizations and treaties. Issues include street and working children, language rights, and women’s right to education.
4-5 units, Spr (Wotipka, C)

EDUC 217. Philosophical and Methodological Issues in Educational Research — The role causation in educational phenomena, and how to determine causal factors. Is educational research based on a positivistic paradigm? Randomized controlled experimental designs. Criteria for judging the rigor of qualitative modes of inquiry. Do Popperian or Deweyan approaches hold the key to resolving contentious issues? Does a postpositivist perspective hold promise?
3 units, not given this year

EDUC 218. Topics in Cognition and Learning: Transfer — How people recruit perceptual mechanisms (such as for navigating, learning about spatial relations such as driving a car, or inferring the behavior of novel devices) to understand symbolic and conceptual domains. Do hands-on activities with physical objects promote the development of mathematical thinking? May be repeated for credit.
3 units, Aut (Schwartz, D)

EDUC 219E. Visual Arts in Elementary Education — For undergraduates in STEP Elementary Program and others interested in the arts or elementary teaching. Hands-on exploration of visual arts media and works of art.
3-4 units, Spr (Staff)

EDUC 220A,B,C,D,Y. The Social Sciences and Educational Analysis — Required of students in APA and open to all. Economics, political science, sociology, and history, and their applications to education in the U.S.

EDUC 220A. Introduction to the Economics of Education — The relationship between education and economic analysis. Topics: labor markets for teachers, the economics of child care, the effects of education on earnings and employment, the effects of education on economic growth and distribution of income, and the financing of education. Students who lack training in microeconomics, register for 220Y for 1 additional unit of credit. (SSPEP/APA)
4 units, Spr (Loeb, S)

EDUC 220B. Introduction to the Politics of Education — (Same as GSBGEN 349.) The relationships between political analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, community power, the external environment of organizations, and the implementation of policy. Applications to policy analysis, implementation, and politics of reform. (APA)
4 units, Spr (Davis, S)

EDUC 220C. Education and Society — (Same as SOC 130/230.) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.
4-5 units, Aut (Suarez, D)

EDUC 220D. History of School Reform: Origins, Policies, Outcomes, and Explanations — Required of students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. (SSPEP/APA)
3-5 units, Aut (Labaree, D)

EDUC 220Y. Introduction to the Economics of Education: Economics Section — For those taking 220A who have not had microeconomics before or who need a refresher. Corequisite: 220A. (SSPEP/APA)
1-2 units, Spr (Loeb, S)

EDUC 221A. Policy Analysis in Education — Major concepts associated with the development, enactment, and execution of educational policy. Issues of policy implementation, agenda setting and problem formulation, politics, and intergovernmental relations. Case studies. Goal is to identify factors that affect how analysts and policy makers learn about and influence education. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)
4-5 units, Win (McLaughlin, M)

EDUC 222. Resource Allocation in Education — Problems of optimization and design, and evaluation of decision experience. Marginal analysis, educational production functions, cost effectiveness and cost-benefit analysis, constrained maximization, program evaluation. Introduction to linear models for large-scale data analysis. Implications to model assumptions. (SSPEP)
4-5 units, Spr (Carnoy, M)

EDUC 223. Good Schools: Research, Policy, and Practice — Recent studies of schools that exceed expectations in producing desired results. Research methodologies, findings of studies, and efforts to implement results. Components of good schools analyzed: effective teaching, principal leadership, organizational processes, parent involvement, cultures in schools, the role of the superintendent. Required project studies a school and determines goodness. (SSPEP/APA, CTE)
3-4 units, not given this year

EDUC 224. Information Technology in the Classroom — The use of information technology (computers, interactive video, telecommunications) in classroom teaching. Basic computer operations and terminology; applications of information technology (computers, interactive video, telecommunications) to classroom teaching. Basic computer operations and terminology; challenges of planning and teaching with technology; judging the merits of products for educational uses; uses made of technology in schools; and economic, social, and ethical issues emphasizing equity. (CTE)
3 units, not given this year

EDUC 226X. Empirical Analysis of Education Governance — Emphasis is on strategies for empirical evaluation. Topics include: school board, superintendent, and principal decision making; the state role in education policy and budgeting; the impact of teacher unionization; and the growing influence of private foundations and parent associations. Students participate in an original data collection effort for an ongoing research project.
3 units, not given this year

EDUC 228E. Becoming Literate in School I — First in a three course sequence. Introduction to reading and language arts theory and methodology for candidates in the elementary Multiple Subjects Credentialing program. Instructional methods, formats, and materials.
2 units, Sum (Juel, C)

EDUC 228F. Becoming Literate in School II — Second in a three-course required sequence of reading and language arts theory and methodology for candidates in the elementary Multiple Subjects Credentialing program. Theories for guiding instruction and curricular choices.
3 units, Aut (Juel, C)
EDUC 228G. Becoming Literate in School III — Third in a three-course required sequence of reading and language arts theory and methodology for candidates in the elementary Multiple Subjects Credentialing program. Theories for guiding instruction and curricular choices. 3 units, Win (Staff)

EDUC 229A, B, C, D. Learning Design and Technology Seminar — Four quarter seminar core of the LDT master’s program. Designs for learning with technology. Issues and processes relating to internships and careers. Major learning, design, and technology project. Students navigate design sequences in learning environments rooted in practical problems. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (all areas)
A: 3 units, Aut (Ryoo, K)
B: 3 units, Win (Ryoo, K)
C: 1-3 units, Spr (Ryoo, K)
D: 3-4 units, Sum (Ryoo, K)

EDUC 231X. Developing and Supporting Teaching — How do teachers learn to teach and what kinds of mentoring and coaching helps to develop their practice? A strong knowledge base and skills of reflective inquiry increase the odds that students are served in a teacher’s classroom. How is the development of successful teaching supported? What does effective mentoring look like? What are the dilemmas faced by mentors? The research on adult learning and teaching to develop, teaching skills such as giving productive feedback and co-planning. Methods: teaching videos, role play, and theory, research, and practice concerning mentoring.
3 units, Spr (Williamson, P)

EDUC 232A. The Study of Teaching — Second of three core courses in CTE. Theory and practice of teaching, past and present, K-12 and higher education. (CTE)
4 units, not given this year

EDUC 232B. Introduction to Curriculum — First of three core courses in CTE. What should American schools teach? How should school programs be organized? How can schools determine whether their goals have been achieved? What kind of school organization helps teachers improve their teaching? Historical and contemporary perspective on the curriculum of American schools. Interactions among curriculum, the organizational structure of schools, the conception of the teacher’s role, and teaching and student learning assessment. Text, video analysis of teaching, and small group discussions. (CTE)
4 units, not given this year

EDUC 232C. Introduction to Learning — Core course in CTE and PSE. Theoretical perspectives and research on learning, emphasizing principles that inform the design and study of learning environments. Historical background to current controversies. Issues: methods of assessment; learning by individuals and groups who differ in gender or in cultural and social backgrounds; the generality of learning outcomes; relations between the growth of conceptual understanding and cognitive skill; learning as becoming a more effective participant in social practices; and the development of influential conceptualizations of learning. (CTE, PSE)
4 units, not given this year

EDUC 233A. Counseling Interventions from a Multicultural Perspective — Students engage in an ongoing mentoring relationship with an adolescent from a youth-serving organization. The impact of culture on mentoring. Intervention with children and adolescents, forming positive connections, demonstrating empathy, learning culturally specific caring norms, participating in activities promoting positive youth development. Students are expected to maintain this relationship for at least one additional quarter.
3 units, Aut (LaFromboise, T)

EDUC 233B. Counseling Interventions from a Multicultural Perspective — Continuation of 233A. Topics include: developmental psychology and service learning; collaborating with the community; psychological research on altruism and prosocial behavior; volunteers’ motivations; attributions about poverty, and the problem of prejudice.
3 units, Win (LaFromboise, T)

EDUC 234. Career and Personal Counseling — (Undergraduates register for 134; see 134; same as PSYCH 192.) (PSE)
3 units, Spr (Krumholz, J)

EDUC 239. Emerging Issues in Child and Adolescent Development — Focus is on critical social and developmental issues that affect children and adolescents. Topics: divorce and single parenting, child care, poverty, sexuality, and mass media, emphasizing the impact of these conditions on normal development, education, and school-related social and cognitive performance. (PSE)
4 units, Spr (Padilla, A)

EDUC 240. Adolescent Development and Learning — How do adolescents develop their identities, manage their inner and outer worlds, and learn? Presuppositions: that fruitful instruction takes into account the developmental characteristics of learners and the task demands of specific curricula; and that teachers can promote learning and motivation by mediating among the characteristics of students, the curriculum, and the wider social context of the classroom. Prerequisite: STEP student or consent of instructor. (STEP)
3 units, Aut (LaFromboise, T; Padilla, A; Ramos-Beban, N)

EDUC 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction — Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.
3-4 units, not given this year

EDUC 244. Classroom Management — Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework.
1 unit, Aut (Hayesman, C)

EDUC 244E. Elementary Classroom Culture and Management — How to best manage a classroom. Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework.
1 unit, Sum (Costanzo, R)

EDUC 244F. Elementary Classroom Culture and Management — Skills for developing a positive classroom learning environment. Theoretical issues and opportunities to acquire strategies and make links with practice teaching class.
1 unit, Aut (Staff)

EDUC 246A, B, C, D. Secondary Teaching Seminar — Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.
A: 2 units, Sum (Lotan, R; Hayesman, C)
B: 1-3 units, Aut (Lotan, R)
C: 7-9 units, Win (Lotan, R)
D: 2-6 units, Spr (Lotan, R)

EDUC 246E, F, G, H. Elementary Teaching Seminar — Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.
E: 2 units, Sum (Geiser, K)
F: 2-3 units, Aut (Geiser, K)
G: 7 units, Win (Geiser, K)
H: 5 units, Spr (Geiser, K)
EDUC 247. Moral Education—Contemporary scholarship and educational practice related to the development of moral beliefs and conduct in young people. The psychology of moral development; major philosophical, sociological, and anthropological approaches. Topics include: natural capacities for moral awareness in the infant; peer and adult influences on moral growth during childhood and adolescence; extraordinary commitment during adulthood; cultural variation in moral judgment; feminist perspectives on morality; the education movement in today’s schools; and contending theories concerning the goals of moral education. (PSE)
3 units, Win (Damon, W)

EDUC 249. Theory and Issues in the Study of Bilingualism—(Undergraduates register for 149; same as SPANLIT 207.) Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. (SSPEP)
3-5 units, Aut (Valdés, G)

EDUC 250A. Inquiry and Measurement in Education—Part of doctoral research core. The logic of scientific inquiry in education, including identification of research questions, selection of qualitative or quantitative research methods, design of research studies, measurement, and collection, analysis and interpretation of evidence. Pre- or corequisite: 160.
4 units, Win (Reardon, S)

EDUC 250B. Statistical Analysis in Education: Regression—Primarily for doctoral students; part of doctoral research core; prerequisite for advanced statistical methods courses in School of Education. Basic regression, a widely used data-analytic procedure, including multiple and curvilinear regression, regression diagnostics, analysis of residuals and model selection, logistic regression. Proficiency with statistical computer packages. Prerequisite: 160 or equivalent. (all areas)
4 units, Win (Reardon, S)

EDUC 250C. Qualitative Analysis in Education—Primarily for doctoral students; part of doctoral research core. Methods for collecting and interpreting qualitative data including case study, ethnography, discourse analysis, observation, and interview.
4 units, Win (Barron, B; Goldman, S)

EDUC 251B. Statistical Analysis in Educational Research: Analysis of Variance—Primarily for doctoral students. ANOVA models as widely used data analytic procedures, especially in experimental, quasi-experimental, and criterion-group designs. Topics: single-factor ANOVA; factorial between and within subjects and mixed design ANOVA (fixed, random, and mixed models); analysis of covariance; and multiple comparison procedures. Prerequisite: 250A or equivalent. (all areas)
4 units, Spr (Shavelson, R)

1-4 units, Win (Olkin, I)

EDUC 252. Introduction to Test Theory—Concepts of reliability and validity; derivation and use of test scales and norms; mathematical models and procedures for test validation, scoring, and interpretation. Prerequisite: STATS 190 or equivalent. (PSE)
3-4 units, not given this year

EDUC 256. Psychological and Educational Resilience Among Children and Youth—Psychological and educational theories of resilience as they relate to children and youth. Emphasis is on family, school, and community assets as they relate to protective factors that create conditions of resilience. How protective factors can be used to create healthy communities that enhance the life qualities of at-risk children and youth.
3-4 units, not given this year

EDUC 257A. Statistical Methods for Behavioral and Social Sciences—For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.
3 units, Win (Rogosa, D)

EDUC 257B. Statistical Methods for Behavioral and Social Sciences—For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.
3 units, Spr (Rogosa, D)

EDUC 257C. Causal Inference in Quantitative Educational and Social Science Research—(Same as SOC 257.) Quantitative methods to make causal inferences in the absence of randomized experiment including the use of natural and quasi-experiments, instrumental variables, regression discontinuity, matching estimators, longitudinal methods, fixed effects estimators, and selection modeling. Assumptions implicit in these approaches, and appropriateness in research situations. Students develop research proposals relying on these methods. Prerequisites: exposure to quantitative research methods; multivariate regression.
3 units, Spr (Reardon, S)

EDUC 258X. Literacy Development and Instruction—Literacy acquisition as a developmental and educational process. Problems that may be encountered as children learn to read. How to disentangle home, community, and school instruction from development.
3 units, Win (Juel, C)

EDUC 259X. Application of Hierarchical Linear Models in Behavioral and Social Research—(Same as OB 682.) The measurement of change and the assessment of multi-level effects or the unit of analysis problem. The inadequacy of traditional statistical techniques for the modeling of hierarchy.
4 units, Win (Bryk, A)

EDUC 260X. Understanding Statistical Models and their Social Science Applications—(Same as STATS 209.) Information that statistical modeling can provide in experimental and non-experimental settings emphasizing misconceptions in social science applications such as causal modeling. Text is Statistical Models: Theory and Practice, by David Freedman. See http://www-stat.stanford.edu/~rag/stat209. Prerequisite: intermediate-level statistical methods including multiple regression, logistic regression, and log-linear models.
3 units, Spr (Rogosa, D)

EDUC 262A,B,C. Curriculum and Instruction in English—Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP)
A: 2 units, Sum (Grossman, P)
B: 3 units, Aut (Williamson, P; Igra, D)
C: 3 units, Win (Williamson, P; Igra, D)

EDUC 263A,B,C. Curriculum and Instruction in Mathematics—The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP)
A: 2 units, Sum (Staff)
B: 3 units, Aut (Dieckmann, J; Ronfeldt, M; Shahan, E)
C: 3 units, Win (Dieckmann, J; Ronfeldt, M; Shahan, E)

E: 2 units, Sum (Marata, A)
F: 3 units, Aut (Marata, A)
G: 4 units, Win (Marata, A)

EDUC 264A,B,C. Curriculum and Instruction in World Languages — Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)

A: 2 units, Sum (Valdés, G)
B: 3 units, Aut (Valdés, G)
C: 3 units, Win (Köhler, A; Phillipose, S)

EDUC 264E. Methods and Materials in Bilingual Classrooms — Restricted to STEP elementary teacher candidates in the BCLAD program. Theories, research, and methods related to instruction of Spanish-English bilingual children, grades K-8. Approaches to dual language instruction, and pedagogical and curricular strategies for the instruction of reading, language arts, science, history, social science, and math in Spanish. Assessment issues and practices with bilingual students. In Spanish.

1-3 units, Aut (Staff)

EDUC 265. History of Higher Education in the U.S. — (Undergraduates register for 165.) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP/APA)

3-4 units, Win (Williamson, J)

EDUC 266X. Workshop in Practical Quantitative Research on Educational Policy and Inequality — Conceptual and technical skills for analyzing data concerning educational policy and inequality. How to design analytic strategies using available data sources. Interpreting and presenting results. Prerequisite: 250A.

3 units, not given this year

EDUC 267A. Curriculum and Instruction in Science — Possible objectives of secondary science teaching and related methods; selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)

A: 2 units, Sum (Brown, B; Lythcott, J)
B: 3 units, Aut (Lythcott, J)
C: 3 units, Win (Lythcott, J)

EDUC 267E. Development of Scientific Reasoning and Knowledge — For STEP elementary teacher candidates. Theories and methods of teaching and learning science. How to develop curricula and criteria for critiquing curricula. Students design a science curriculum plan for a real setting. State and national science frameworks and content standards. Alternative teaching approaches; how to select approaches that are compatible with learner experience and lesson objectives. Focus is on the linguistic and cultural diversity of California public school students.

3 units, Spr (Staff)

EDUC 268A. Curriculum and Instruction in History and Social Science — The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

A: 2 units, Sum (Wineburg, S)
B: 3 units, Aut (Fogo, B; Martin, D; Reisman, A)
C: 3 units, Win (Fogo, B; Reisman, A)

EDUC 269. Analysis of Teaching — Student learning and the epistemology of school subjects as related to the planning and implementation of teaching, analysis of curriculum, and evaluation of performance and understanding. Readings and activities are coordinated with student teaching activities of participants. Prerequisite: STEP student or consent of instructor.

3 units, not given this year

EDUC 270A. Learning to Lead in Public Service Organizations — For Haas Center student service organization leaders.

3-5 units, Spr (Davis, S)

EDUC 271S. School-Based Strategies for Reform and Redesign — Seminar. Major redesign and reform strategies that schools are using to improve their performance. Preparation of a report for local school leaders analyzing school improvement resources and strategies.

3-5 units, not given this year

EDUC 273. Gender and Higher Education — Focus is on the U.S. The effects of interactions between gender and the structures of higher education; policies seeking changes in those structures. Topics: undergraduate and graduate education, faculty field of specialization, rewards and career patterns, sexual harassment, and the development of feminist scholarship and pedagogy.

4 units, not given this year

EDUC 276X. Educational Assessment — Reliability, validity, bias, fairness, and properties of test scores. Uses of tests to monitor, manage, and reform instruction. Testing and competition, meritocracy, achievement gaps, and explanations for group differences.

3 units, Win (Haertel, E)

EDUC 277. Education of Immigrant Students: Psychological Perspectives — (For graduate students; see 179.) (SSPEP)

4 units, Win (Padilla, A)

EDUC 278. Introduction to Issues in Evaluation — Open to master’s and doctoral students with priority to students from education. Focus is on the basic literature and major theoretical and practical issues in evaluation. Introduction to basic concepts and intellectual debates in the field: knowledge construction, purpose of evaluation, values in evaluation, knowledge utilization, professional standards of evaluation practice. Enrollment limited to 18. (SSPEP)

3 units, Win (Phillips, D)

EDUC 279. Urban Youth and Their Institutions: Research and Practice — (For graduate students; see 179.) (SSPEP/APA)

4-5 units, Aut (McLaughlin, M)

EDUC 284. Teaching and Learning in Heterogeneous Classrooms — Teaching in academically and linguistically heterogeneous classrooms requires a repertoire of pedagogical strategies. Focus is on how to provide access to intellectually challenging curriculum and equal-status interaction for students in diverse classrooms. Emphasis is on group work and its cognitive, social, and linguistic benefits for students. How to prepare for group work, equalize participation, and design learning tasks that support conceptual understanding, mastery of content and language growth. How to assess group products and individual contributions. (STEP)

3 units, Win (Lotan, R)

EDUC 285X. Supporting Students with Special Needs — For STEP teacher candidates. Needs of exceptional learners, identification of learning differences and disabilities, and adaptations in the regular inclusion classroom. Legal requirements of special education, testing procedures, development of individualized education plans, and support systems and services. Students follow a special needs learner to understand diagnosis, student needs, and types of services.

1-3 units, Spr (Fur, E)
EDUC 288X. Organizational Behavior and Analysis — (Same as SOC 366.) Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies.
4 units, Aut (McFarland, D)

EDUC 290. Leadership: Research, Policy, and Practice — Concepts of leadership that include the classroom, school, district office, and state capitol. The role of complexity; organizational leaders outside of schools past and present, and how that complexity permitted leadership to arise. Case studies. (SSPEP/APA)
4 units, Win (Davis, S)

EDUC 291. Learning Sciences and Technology Design Research Seminar and Colloquium — Students and faculty present and critique new and original research relevant to the Learning Sciences and Technology Design doctoral program. Goal is to develop a community of scholars who become familiar with each other’s work. Practice of the arts of presentation and scholarly dialogue while introducing seminal issues and fundamental works in the field.
1-3 units, Aut (Pea, R), Win (Schwartz, D)

EDUC 293X. American Philosophy of Education — A century of classical writers in American philosophy, focusing on work on education, democracy, learning, and culture. Texts by Emerson, Peirce, James, Dewey, and Mead.
3-4 units, Win (Callan, E; McDermott, R)

EDUC 295. Learning and Cognition in Activity — (Same as PSYCH 261A.) Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.
3 units, Win (Pea, R)

EDUC 298. Online Communities of Learning — Historical foundations, theoretical perspectives, underlying learning theories, case studies, and enabling technologies of online learning communities across and within K-12 schools, among teachers, in professional collaborations in the sciences, and across informal communities of interest in society.
3 units, Spr (Pea, R)

EDUC 301B. Theoretical Debates in the History of Education — How should we educate students? To what purpose should students be educated? What is the purpose of education in America? What is an appropriate curriculum? Do all students deserve or need the same curriculum?
3-4 units, Aut (Williamson, J)

EDUC 303X. Designing Learning Spaces — Project-based. How space shapes personal interactions and affords learning opportunities in formal and informal settings. How to integrate learning principles into the design of spaces and develop a rubric to assess the impact on learning.
3-4 units, not given this year

EDUC 304. The Philosophical and Educational Thought of John Dewey — (Same as PHIL 242.) Dewey’s pragmatic philosophy and educational thought; his debt to Darwin, Hegel, Peirce, and James; his educational writings including Democracy and Education; and his call for a revolution in philosophy in Reconstruction in Philosophy. (SSPEP)
4 units, Aut (Phillips, D)

EDUC 306A. Education and Economic Development — Case material considers development problems in the U.S. and abroad. Discussion sections on economic aspects of educational development. (SSPEP/ICE)
5 units, Aut (Carnoy, M)

EDUC 306B. Politics, Policy Making, and Schooling Around the World — Education policy, politics, and development. Topics include: politics, interests, institutions, policy, and civil society; how schools and school systems operate as political systems; how policy making occurs in educational systems; and theories of development.
3-4 units, Spr (Adams, J)

EDUC 306C. Political Economy of the Mind — Theories of political economy related to theories of the learning mind, emphasizing theories of genius. Readings from Pascal, Defoe, Smith, Balzac, Emerson, Marx, Veblen, Joyce, and Morrison. (SSPEP)
3-4 units, not given this year

EDUC 306D. World, Societal, and Educational Change: Comparative Perspectives — (Undergraduates register for 136; same as SOC 231.) Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.
4-5 units, Win (Wotipka, C)

EDUC 306Y. Economic Support Seminar for Education and Economic Development — Core economic concepts that address issues in education in developing and developed countries. Supply and demand, elasticity, discount rates, rate of return analysis, utility functions, and production functions. Corequisite: 306A.
1 unit, Aut (Carnoy, M)

EDUC 307B. The Politics of International Cooperation in Education — (Undergraduates and master’s students register for 107.) Analysis of policies and practices in international cooperation, assistance, and exchange. The role of international organizations (World Bank, UNESCO, OECD) and the politics of multilateral and bilateral assistance programs. (SSPEP/ICE, APA)
3-4 units, not given this year

EDUC 307X. Organizing for Diversity: Opportunities and Obstacles in Groups and Organizations — Obstacles in organizations and groups that prevent people from participating, working effectively, and developing relationships in the context of diversity. How to create conditions in which diversity enhances learning and effectiveness? Experiential exercises; students experiment with conceptual and analytic skills inside and outside of the classroom.
3-4 units, Spr (Meyerson, D)

EDUC 309X. Educational Issues in Contemporary China — Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality?
3-4 units, Spr (Adams, J)

EDUC 310. Sociology of Education: The Social Organization of Schools — (For graduate students; see 110; same as SOC 132/332.) Topics and case studies that elaborate on the embeddedness of classrooms and schools in social environments, spanning school processes such as stratification, authority, moral and technical specialization, curricular differentiation, classroom instruction, voluntary associations, social crowds, and peer influence. (SSPEP)
4 units, Win (McFarland, D)

EDUC 311X. First-Year Doctoral Seminar: Introduction to Research — Methods in current educational research focusing on logical and epistemological, design, and ethical issues. May be repeated for credit. (all areas)
2-3 units, Win, Spr (Stipek, D; Labaree, D)

EDUC 314. Workshop in Economics of Education — Research by students and faculty engaged in problems in the economics of education. Prerequisites: advanced graduate training in economics theory and methodology; current ongoing research. May be repeated for credit. (SSPEP)
1-2 units, not given this year
EDUC 315X. Issues in Science Education for Science Graduate Students—Recurring themes in debates about science education: why should science be taught in schools; what science should be taught; how and to whom; do schools present an accurate picture of science, and should they; how much do science teachers need to know; how do they know what students are learning; what is the role of scientists?
3 units, not given this year

EDUC 320X. Social Justice in Education—Recent work in political theory that addresses questions about social justice in educational policy and practice: equality in education, language rights, race and multiculturalism, educational choice.
3 units, Win (Callan, E)

EDUC 321A. Emerging Conceptions of Qualitative and Ethnographic Research—Issues of knowing via forms through which human beings have historically represented the world and how they care about it, including narrative, visual images, and poetry. How to see and represent the educational worlds. Sources include videotaped classrooms in action, film excerpts that reveal human relations, and literary forms that describe classroom situations. Materials and procedures used by researchers, film makers, and fiction writers.
4-5 units, not given this year

EDUC 321X. Leading Social Change: Cases in Educational and Social Entrepreneurship—(Same as GSBGEN 385.) Approaches to initiating and sustaining change in social sectors such as education. Challenges of effecting change, maintaining support, and gauging effectiveness of change efforts in the social sector. Case studies. Guest lecturers.
4 units, Win (Meyerson, D)

EDUC 322X. Discourse of Liberation and Equity in Schools and Society—Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques. Prerequisite: graduate status or consent of instructor. (SSPEP)
3-5 units, Win (Ball, A)

EDUC 323A. Introduction to Education Policy Analysis—The formulation and improvement of federal and state education and children policies. Key current policy issues and trends in politics. Topics: the federal role in education and child care. (SSPEP)
3 units, Spr (Loeb, S)

EDUC 326. Legal Dilemmas and Administrative Decision Making in Schools—Concepts and issues in school law and their influence on administrative decision making in public schools, skills in the application of legally defensible resolutions to complex educational problems, and theories, principles, and the evolution of education law.
4 units, Aut (Davis, S)

EDUC 327A.B.C. The Conduct of Qualitative Inquiry—Three quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll for both quarters.
A: 3-4 units, not given this year
B: 1-3 units, not given this year
C: 1-4 units, not given this year

EDUC 328X. Topics in Learning and Technology: Interactivity—Content changes each year. Interactivity including manipulation of an object, talking to another person, or clicking on a mouse. Proposals for the active learning ingredient of interactivity, and how different technologies capitalize on these ingredients.
3 units, not given this year

EDUC 331A. Introduction to Research Design in Administration and Policy Analysis—Required for first-year APA doctoral students; SSPEP first-year doctoral students with consent of instructor. How to conduct literature reviews. How to use literature to frame and formulate problem statements, research questions, and conceptual frameworks. (APA)
3-5 units, not given this year

EDUC 333A. Learning, Design and Technology: Analyzing Functions and Needs in Learning Environments—Advanced seminar. Theoretical approaches to learning used to analyze learning environments and develop goals for designing resources and activities to support effective learning practices.
3 units, Aut (Perez-Granados, D)

EDUC 336X. Language, Identity, and Classroom Learning—As contemporary research focuses on how people act and recognize each other, analyzing interaction while acknowledging identity allows for a dynamic examination of cultural interaction. Broad cultural categorization can be overly expansive in identifying the characteristics of large groups of individuals.
1-3 units, Aut (Brown, B)

EDUC 337. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices—(For graduate students; see 103B.)
3-4 units, Win (Ball, A)

EDUC 339X. Advanced Topics in Quantitative Policy Analysis—For doctoral students. How to develop a researchable question and research design, identify data sources, construct conceptual frameworks, and interpret empirical results. Presentation by student participants and scholars in the field. May be repeated for credit.
1-2 units, Aut, Win, Spr (Loeb, S)

EDUC 340. Psychology and American Indian Mental Health—Western medicine’s definition of health as the absence of sickness, disease, or pathology; Native American cultures’ definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.
3-5 units, Spr (LaFromboise, T)

EDUC 342. Child Development and New Technologies—Focus is on the experiences computing technologies afford children and how these experiences might influence development. Sociocultural theories of development as a conceptual framework for understanding how computing technologies interact with the social ecology of the child and how children actively use technology to meet their own goals. Emphasis is on influences of interactive technology on cognitive development, identity, and social development equity.
3-4 units, Spr (Barron, B; Perez-Granados, D)

EDUC 346. Research Seminar in Higher Education—Required for higher education students. Major issues, current structural features of the system, the historical context that shaped it, and theoretical frameworks. The purposes of higher education in light of interest groups including students, faculty, administrators, and external constituents. Issues such as diversity, stratification, decentralization, and changes that cut across these groups. (APA)
4 units, Aut (Antonio, A)

EDUC 347. Economics of Higher Education—(Same as GSBGEN 348.) Topics: the worth of college and graduate degrees, and the utilization of highly educated graduates; faculty labor markets, careers, and workload; costs and pricing; discounting, merit aid, and access to higher education; sponsored research; academic medical centers; and technology and productivity. Emphasis is on theoretical frameworks, policy matters, and the concept of higher education as a public good. Stratification by gender, race, and social class.
4 units, Spr (Strober, M)
EDUC 348X. Comparative Higher Education — Seminar. For students interested in higher, international, or comparative education. Comparative work on the politics of change in higher education. Emphasis is on reform projects in governance, financing, and curriculum. Internal and external political dynamics that facilitate or hinder change.

3 units, Aut (Lenhardt, G)

EDUC 349X. Accountability and Assessment in Higher Education — Organizational report cards and accountability mechanisms: demand for and problems with them. Report cards as policy instruments; how they address information asymmetries; as alternatives to direct regulation; and current policy conditions that support them such as education standards and reform. Politics including interested audiences and organizational responses. An attempt to redesign an education report card.

3 units, not given this year

EDUC 350A,B,C. Research Practicum in Psychological Studies in Education — Required of first-year doctoral students in Psychological Studies; others by consent of instructor. Introduction to the doctoral program in Psychological Studies in Education and to faculty and student research. (PSE)

A: 2 units, Aut (Barron, B)
B: 2-3 units, Win (Barron, B)
C: 1-2 units, Spr (Barron, B)

EDUC 351A. Design and Analysis of Longitudinal Research — The analysis of longitudinal data as central to empirical research on learning and development. Topics: growth models, measurement change, reciprocal effects, stability, analysis of durations including survival analysis, and experimental and non-experimental group comparisons. See http://www.stanford.edu/~rag/. Prerequisite: statistics at the level of 257. (PSE)

3 units, not given this year

EDUC 353A. Problems in Measurement: Item Response Theory — Alternative mathematical models used in test construction, analysis, and equating. Emphasis is on applications of item response theory (latent trait theory) to measurement problems, including estimation of item parameters and person abilities, test construction and scoring, tailored testing, mastery testing, vertical and horizontal test equating, and detection of item bias. Prerequisites: 252 and 257, or PSYCH 248 and 252, or equivalent. (PSE)

3 units, alternate years, not given this year

EDUC 353C. Problems in Measurement: Generalizability Theory — Application to analysis of educational achievement data, including performance assessments. Fundamental concepts, computer programs, and actual applications. (PSE)

3 units, Spr (Shavelson, R; Haertel, E)

EDUC 354X. School-Based Decision Making — Leadership and organizational issues. Emphasis is on building capacity for individual schools to make decisions, establishment of an inquiry process at the school level, use and availability of information, implementation and evaluation of decisions, parental involvement, and support of school-based decisions by districts. (SSPEP/APA)

4 units, Win (Davis, S)

EDUC 359C. Research in Science Education: Nature of Science and Science Epistemology — The changing debate over conceptions of the nature of science and the calls to broaden it. Themes, directions, limitations, and epistemological foundations of the body of research on the nature of science.

2-3 units, Win (Brown, B)

EDUC 359E. Research on Mathematics Education — Comparative and cultural perspectives on mathematics teaching and learning practices in the U.S. Mathematics education in the context of cultural and educational systems.

2-4 units, Aut (Murata, A)

EDUC 363X. Research and Practice on Organizing Urban Schools for Improvement — (Same as OB 367.) For masters’ and doctoral students in Education and GSB. Empirical research on urban school reform efforts, theoretical frameworks on student and adult learning, the sociology of work in schools, and social organization theory. How community context affects instructional coherence. Dynamics between school professionals and with parents. Authentic instruction and its effects. Case studies on reform implementation.

4 units, Spr (Bryk, A)

EDUC 364. Cognition and Learning — Cognitive psychology, the study of human thought. Topics include the nature of expertise, creativity, and memory. Emphasis is on learning. The role of cognitive psychology in helping people learn, and determining the most desirable type of learning and whether people have learned. Students design and conduct their own learning study.

3-4 units, Win (Schwartz, D)

EDUC 365. Social, Emotional, and Personality Development — Limited to doctoral students in PSE and those with a background in child and adolescent development. Developmental processes that account for psychological adaptation in social relationships, schools, and other interpersonal settings. Theoretical models of social, personality, and emotional development. Topics such as self-concept, empathy, motivation, aggression, and personality formation.

3 units, Aut (Damon, W)

EDUC 367. Cultural Psychology — (Formerly 292.) The relationship between culture and psychological processes; how culture becomes an integral part of cognitive, social, and moral development. Both historical and contemporary treatments of cultural psychology, including deficit models, crosscultural psychology, ecological niches, culturally specific versus universal development, sociocultural frameworks, and minority child development. The role of race and power in research on cultural psychology.

3 units, Spr (Nasir, N)

EDUC 368. Cognitive Development in Childhood and Adolescence — Traditional and current research in cognitive development: changes within the individual from infancy through adolescence. Theoretical and empirical perspectives on research processes that explain developmental changes affecting how a human being thinks about and experiences the world.

3-4 units, Spr (Barron, B; Perez-Granados, D)

EDUC 369. Human Cognitive Abilities — (Formerly 255; same as PSYCH 133.) Psychological theory and research on human cognitive abilities; their nature, development, and measurement; and their importance in society. Persistent controversies and new areas of research; recent perspectives on the nature-nurture debate and the roles of genetics, health and education in shaping HCAs. Prerequisite: PSYCH 1 or equivalent. (PSE)

3-4 units, Win (Shavelson, R)

EDUC 374A. Research Workshop: Philanthropy and Civil Society — (Same as SOC 374A.) Seminar. Open to Ph.D. students and undergraduates writing honors theses. Activities and institutions that define civil society, emphasizing the interactions between funding sources and nonprofit organizations. May be repeated for credit.

A: 1-3 units, Aut (Powell, W)
B: 2-3 units, Win (Powell, W)
C: 2-3 units, Spr (Powell, W)

EDUC 375A. Seminar on Organizational Theory — (Same as SOC 363A.) The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

5 units, Aut (Powell, W)

EDUC 375B. Seminar on Organizations: Institutional Analysis — (Same as SOC 363B.) Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments. 3-5 units, Win (Powell, W)
EDUC 376. State Theory and Educational Policy — The relationship between political system structures and educational change by analyzing theories and interpretations of how political systems function, and the implications of these theories for understanding education. Classical and Marxist interpretations. (SSPEP/ICE)
4 units, not given this year

EDUC 377. Comparing Institutional Forms: Public, Private, and Nonprofit — (Same as GSBGEN 346.) Seminar. For students interested in the nonprofit sector, and those in the joint Business and Education program. The missions, functions, and capabilities of nonprofit, public, and private organizations. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials. Advanced undergraduates may enroll with consent of instructor.
4 units, Win (Powell, W)

EDUC 377B. Strategic Management of Nonprofits — (Same as STRAMGT 368.) Strategic, governance, and management issues facing nonprofit organizations and their leaders in the era of venture philanthropy and social entrepreneurship. Development and fundraising, investment management, performance management, and nonprofit finance. Case studies include smaller, social entrepreneurial and larger, more traditional organizations, including education, social service, environment, health care, religion, NGOs, and performing arts.
4 units, Win (Meehan, W)

EDUC 377C. Strategic Issues in Philanthropy — (Same as GSBGEN 381.) Operational and strategic distinctions between traditional philanthropic entities, such as community, private, and corporate foundations, and contemporary models, such as funding intermediaries and venture philanthropy partnerships. Philanthropic strategies as they relate to foundation mission, grant making, evaluation, financial management, infrastructure, and board governance. Guest speakers.
4 units, Spr (Arrillaga, L)

EDUC 377D. Strategic Leadership of Nonprofits — (Same as STRAMGT 378.) Formulating, evaluating, and implementing mission and strategy. Case studies from nonprofits in social services, health care, education, and arts and culture. The interaction of strategy and mission, industry structure and evolution, strategic change, growth and replication, corporate strategy, governance, commercialization, alliances, capacity building, and leadership.
4 units, Aut (Philis)

EDUC 378X. Seminar on Social Change Processes and Organizations — Theories of social change and influence processes within and through organizations. Social change organizations. The interaction of philanthropic institutions and other social change organizations within civil society. Meso-level theories of change.
3-4 units, Win (Meyerson, D)

EDUC 380. Internship in Educational Administration
1-15 units, Aut, Win, Spr, Sum (Staff)

EDUC 382. Student Development and the Study of College Impact — The philosophies, theories, and methods that undergird most research in higher education. How college affects students. Student development theories, models of college impact, and issues surrounding data collection, national databases, and secondary data analysis.
4 units, Spr (Antonio, A)

EDUC 384. Advanced Topics in Higher Education — Topics vary each year and may include faculty development, legal issues, curricular change, knowledge production, professional socialization, management of organizational decline, leadership and innovation, authority and power, diversity and equity, and interactions with government and industry. May be repeated for credit. Prerequisites: 346, consent of instructor. (APA)
3-5 units, not given this year

EDUC 387A,B,C. Workshop: Comparative Studies of Educational and Political Systems — (Same as SOC 311A,B,C.) Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor. (SSPEP/ICE)
A: 1-5 units, Aut (Wotipka, C)
B: 1-5 units, Win (Wotipka, C)
C: 1-5 units, Spr (Wotipka, C)

EDUC 388A. Language Policies and Practices — For credential candidates and STEP candidates seeking to meet requirements for the English Learner Authorization on their preliminary credential. Historical, political and legal foundations of education programs for English learners. Theories of second language learning, and research on the effectiveness of bilingual education. Theory-based methods to facilitate and measure English learners’ growth in language and literacy acquisition, and create environments which promote English language development and content area learning through specially designed academic instruction in English. (STEP)
3-4 units, Win (Hakuta, K)

EDUC 391X. Web-Based Technologies in Teaching and Learning — Project-based. Overview of instructional design theories and educational technologies to evaluate and develop a web-based educational application or system. Web-based applications and technologies designed for online interactions and collaborations. Instructional systems strategies to develop online environments that support and facilitate interactive learning. Students create a small-scale, web-based learning system.
3 units, Aut (Kim, H)

EDUC 393. Proseminar on Research in Education — Overview of the field of education for joint degree (M.B.A./M.A.) students. (SSPEP)
4 units, Spr (Strober, M)

EDUC 395X. Scholarly Writing in Education and the Social Sciences — Focus is on producing articles for scholarly journals in education and the social sciences. Ethics and craft of scholarly publishing. Writing opinion articles for lay audiences on issues of educational and social import.
3-5 units, Spr (Wineburg, S)

EDUC 401A. Mini Courses in Methodology: Statistical Packages for the Social Sciences — Statistical analysis using SPSS, including generating descriptive statistics, drawing graphs, calculating correlation coefficients, conducting t-tests, analysis of variance, and linear regression. Building up datasets, preparing datasets for analysis, conducting statistical analysis, and interpreting results.
1 unit, Aut, Win (Yuan, K)

EDUC 401B. Mini Courses in Methodology: Stata — The computer as a research tool. Statistical software Stata for data analysis, including t-tests, correlation, ANOVA, and multivariate linear regression.
1 unit, Aut, Win (Gatlin, S)

EDUC 402. Research Workshop on Gender Issues — Presentations of research on gender issues by doctoral students, faculty, and visitors. May be repeated for credit. Prerequisite: consent of instructor; doctoral student.
1 unit, not given this year

EDUC 408. Research Workshop in International and Comparative Education — Limited to advanced doctoral students in ICE and SSPEP. Research workshop for the review of key issues in the methodology and epistemology of social research in education, research proposals, and findings by students and faculty. Prerequisites: 306A,B,C,D or equivalents. (SSPEP/ICE)
2-5 units, Win (Carney, M)

EDUC 417X. Research and Policy on Postsecondary Access — (Same as EDUC 117X.) The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access.
3 units, Win (Antonio, A)
EDUC 418. Foundations of Case Study Research — Rationales for case study research in academic organizations emphasizing colleges and universities; high schools and related organizational contexts. Methodological training in fieldwork through hands-on data collection and analysis from interviews and documents. For doctoral students developing qualifying papers or dissertation proposals; required for higher education doctoral students; APA, SSE, and C&TE students with consent of instructor. (APA) 3-5 units, Spr (Gumport, P)

EDUC 423A. Introduction to Research Design: Educational Administration and Policy Analysis — Preference to APA doctoral students working on their sixth-quarter qualifying paper. Issues in conceptualizing and designing research in the social sciences. (APA) 3-5 units, Win (Carnoy, M)

EDUC 424. Introduction to Research in Curriculum and Teacher Education — Limited to second-year doctoral students in CTE. How to conceptualize, design, and interpret research. How to read, interpret, and critique research; formulate meaningful research questions; evaluate and conduct a literature review; and conceptualize a study. Readings include studies from different research paradigms. Required literature review in an area students expect to explore for their qualifying paper. 3-5 units, Aut (Darling-Hammond, L)

EDUC 453. Doctoral Dissertation — For doctoral students only. (all areas) 1-15 units, Aut, Win, Spr, Sum (Staff)

EDUC 465. Seminar in the Pedagogy of Teacher Education — For doctoral students interested in working in teacher education. Pedagogical approaches, including the use of modeling, simulations, and hypermedia materials. Theoretical considerations of how teachers learn to teach. 2-3 units, not given this year

EDUC 470. Practicum — For advanced graduate students. (all areas) 1-15 units, Aut, Win, Spr, Sum (Staff)

EDUC 480. Directed Reading — For advanced graduate students. (all areas) 1-15 units, Aut, Win, Spr, Sum (Staff)

EDUC 490. Directed Research — For advanced graduate students. (all areas) 1-15 units, Aut, Win, Spr, Sum (Staff)

EDUC 493B. Topics in Quantitative Methods: Meta-Analysis — (Same as STATS 211.) Meta-analysis as a quantitative method for combining the results of independent studies enabling researchers to evaluate available evidence. Examples of meta-analysis in medicine, education, and social and behavioral sciences. Statistical methods include nonparametric methods, contingency tables, regression and analysis of variance, and Bayesian methods. Project involving an existing published meta-analysis. Prerequisite: basic sequence in statistics. 1-3 units, Win (Olkin, I)

EDUC 496. Research in History and Social Science Education — For doctoral students. Literature on historical learning and teaching and corresponding social sciences research designs, assessment, and curriculum evaluation. 3-5 units, Aut (Wineburg, S)
SCHOOL OF ENGINEERING

Dean: James D. Plummer
Senior Associate Deans: Hilary Beech (Administration), Laura L. Breyfogle (External Relations), Anthony J. DiPaolo (Stanford Center for Professional Development), Brad Osgood (Student Affairs), Channing Robertson (Academic and Faculty Affairs)
Associate Dean: Noel P. Lozano (Diversity Programs)
Assistant Dean: Sally Gressens (Graduate Student Affairs)

Faculty Teaching General Engineering Courses

Associate Professors: Samuel S. Chiu, Christopher Edwards, Paul McIntyre, Olav Solgaard, Benjamin Van Roy

Consulting Assistant Professors:

Consulting Associate Professor:

Consulting Professor:

Acting Assistant Professor:

Lecturers:

Senior Lecturer:

Professors (Teaching):

Assistant Dean:

Associate Dean:

Noé P. Lozano (Diversity Programs)

School of Engineering's new Institute of Design (http://dschool.stanford.edu) brings together faculty, staff, and students from the School of Engineering, Graduate School of Business, School of Humanities, School of Law, School of Medicine, Graduate School of Education, and School of Earth, Energy, and Environmental Sciences. The Institute of Design is a graduate-level interdisciplinary program where students are trained to think innovatively, apply distinct design tools and methods, and apply deconstructive and constructive thinking to understand the complexity of social systems and forces. A cross-disciplinary program, the Institute for Computational and Mathematical Engineering (ICME) is a graduate-level program across Stanford's engineering, computer science, and applied mathematics departments.

The School of Engineering offers undergraduate programs leading to the degree of Bachelor of Science (B.S.), programs leading to both B.S. and Master of Science (M.S.) degrees, other programs leading to a B.S. with a Bachelor of Arts (B.A.) in a field of the humanities or social sciences, dual-degree programs with certain other colleges, and graduate curricula leading to the degrees of M.S., Engineer, and Ph.D.

The school has nine academic departments: Aeronautics and Astronautics, Bioengineering, Chemical Engineering, Civil and Environmental Engineering, Computer Science, Electrical Engineering, Management Science and Engineering, Materials Science and Engineering, and Mechanical Engineering. These departments and one interdisciplinary program, the Institute for Computational and Mathematical Engineering, are responsible for graduate curricula, research activities, and the departmental components of the undergraduate curricula. In research where faculty interest and competence embrace both engineering and the supporting sciences, there are numerous programs within the school as well as several interschool activities, including the Alliance for Innovative Manufacturing at Stanford, Center for Integrated Systems, Center on Polymer Interfaces and Macromolecular Assemblies, Collaboratory for Research on Global Projects, Center for Position, Navigation, and Time, and the NIH Biotechnology Graduate Training Grant in Chemical Engineering. Energy Resources Engineering (formerly Petroleum Engineering) is offered through the School of Earth Sciences.

The School of Engineering’s new Institute of Design (http://dschool.stanford.edu) brings together students and faculty in engineering, business, education, medicine, and the humanities to learn design thinking and work together to solve big problems in a human-centered way.

The Woods Institute for the Environment at Stanford (http://environment.stanford.edu) brings together faculty, staff, and students from the seven schools, including Engineering, and other institutes and centers at Stanford to conduct interdisciplinary research, education, and outreach to promote an environmentally sound and sustainable world.

Instruction in engineering is offered primarily during the Autumn, Winter, and Spring quarters of the regular academic year. During the Summer Quarter, a small number of undergraduate and graduate courses are offered.

UNDERGRADUATE PROGRAMS

The principal goals of the undergraduate engineering curriculum are to provide opportunities for intellectual growth in the context of an engineering discipline, for the attainment of professional competence, and for the development of a sense of the social context of technology. The curriculum is flexible, with many decisions on individual courses left to the student and the adviser. For a student with well-defined educational goals, there is often a great deal of latitude.

In addition to the special requirements for engineering majors described below, all undergraduate engineering students are subject to the University general education, writing, and foreign language requirements outlined in the first pages of this bulletin. Depending on the program chosen, students have the equivalent of from one to three quarters of free electives to bring the total number of units to 180.

The School of Engineering’s Handbook for Undergraduate Engineering Programs is available online at http://ughb.stanford.edu and provides detailed descriptions of all undergraduate programs in the school, as well as additional information about extracurricular programs and services. A hard copy version is also available from the Office of Student Affairs in Terman Engineering Center, room 201. Because it is published in the summer, and updates are made to the web site on a continuing basis, the handbook reflects the most up-to-date information for the academic year and is the definitive reference for all undergraduate engineering programs.

Accreditation—The Accreditation Board for Engineering and Technology (ABET) accredits college engineering programs nationwide using criteria and standards developed and accepted by U.S. engineering communities. At Stanford, the following undergraduate programs are accredited: Chemical Engineering, Civil Engineering, Electrical Engineering, Environmental Engineering, and Mechanical Engineering. In ABET-accredited programs, students must meet specific requirements for engineering science, engineering design, mathematics, and science course work. Students are urged to consult the School of Engineering undergraduate handbook and their adviser.

Accreditation is important in certain areas of the engineering profession; students wishing more information about accreditation should consult their department office or the office of the Senior Associate Dean for Student Affairs in Terman 201.

Policy on Satisfactory/No Credit Grading and Minimum Grade Point Average—All courses taken to satisfy major requirements (including the requirements for mathematics, science, engineering fundamentals, Technology in Society, and engineering depth) for all engineering students (including both department and School of Engineering majors) must be taken for a letter grade if the instructor offers that option.

For departmental majors, the minimum combined GPA (grade point average) for all courses taken in fulfillment of the Engineering Fundamentals requirement and the Engineering Depth requirement is 2.0. For School of Engineering majors, the minimum GPA on all engineering courses taken in fulfillment of the major requirements is 2.0.

ADMISSION

Any students admitted to the University may declare an engineering major if they elect to do so; no additional courses or examinations are required for admission to the School of Engineering.

RECOMMENDED PREPARATION FRESHMEN

Students who plan to enter Stanford as freshmen and intend to major in engineering should take the highest level of mathematics offered in high school. (See the “Mathematics” section of this bulletin for information on
advanced placement in mathematics.) High school courses in physics and chemistry are strongly recommended, but not required. Additional elective course work in the humanities and social sciences is also recommended.

TRANSFER STUDENTS

Students who do the early part of their college work elsewhere and then transfer to Stanford to complete their engineering programs should follow an engineering or pre-engineering program at the first school, selecting as possible courses applicable to the requirements of the School of Engineering, that is, courses comparable to those described below under “Undergraduate Programs.” In addition, students should work toward completing the equivalent of Stanford’s foreign language requirement and as many of the University’s General Education Requirements (GERs) as possible before transferring. Some transfer students may require more than four years (in total) to obtain the B.S. degree. However, Stanford affords great flexibility in planning and scheduling individual programs, which makes it possible for transfer students, who have wide variations in preparation, to plan full programs for each quarter and to progress toward graduation without undue delay.

Transfer credit is given for courses taken elsewhere whenever the courses are equivalent or substantially similar to Stanford courses in scope and rigor. The policy of the School of Engineering is to study each transfer student’s preparation and make a reasonable evaluation of the courses taken prior to transfer by means of a petition process. Inquiries may be addressed to the Office of Student Affairs in 201 Terman. For more information, see the transfer credit section of the Handbook for Undergraduate Engineering Programs at http://ughb.stanford.edu.

DEGREE PROGRAM OPTIONS

For more information about the requirements for the following options, see the “Undergraduate Degrees and Programs” section of this bulletin. Five years are usually required for a dual or coterminal program or for a combination of these two multiple degree programs. For further information, see the School of Engineering’s student affairs office, Terman 201, or department contacts listed in the Handbook for Undergraduate Engineering Programs, available in hard copy or at http://ughb.stanford.edu.

BACHELOR OF ARTS AND SCIENCE (B.A.S.)

This degree is available to students who complete both the requirements for a B.S. degree in engineering and the requirements for a major or program ordinarily leading to the B.A. degree. For more information, see the “Undergraduate Degrees” section of this bulletin.

DUAL AND COTERMINAL DEGREE PROGRAMS

A Stanford undergraduate may work simultaneously toward two bachelor’s degrees or toward a bachelor’s and a master’s degree, that is, B.A. and M.S., B.A. and M.A., B.S. and M.S., or B.S. and M.A. The degrees may be granted simultaneously or at the conclusion of different quarters. Usually five years are needed for a combined program.

Dual B.A. and B.S. Degree Program—To qualify for both degrees, a student must (1) complete the stated University and department requirements for each degree, (2) complete 15 full-time quarters, or three full-time quarters after completing 180 units, and (3) complete a total of 225 units (180 units for the first bachelor’s degree plus 45 units for the second bachelor’s degree).

Coterminal Bachelor’s and Master’s Degree Program—A Stanford undergraduate may be admitted to graduate study for the purpose of working simultaneously toward a bachelor’s degree and a master’s degree, in the same or different disciplines. To qualify for both degrees, a student must (1) complete, in addition to the 180 units required for the bachelor’s degree, the number of units required by the graduate department for the master’s degree which in no event is fewer than the University minimum of 45 units, (2) complete the requirements for the bachelor’s degree (department, school, and University) and apply for conferral of the degree at the appropriate time, and (3) complete the department and University requirements for the master’s degree and apply for conferral of the degree at the appropriate time. A student may complete the bachelor’s degree before completing the master’s degree, or both degrees may be completed in the same quarter.

Admission to the coterminal program requires admission to graduate status by the pertinent department. Admission criteria vary from department to department.

Procedure for Applying for Admission to Coterminal Degree Programs—A Stanford undergraduate may apply to the pertinent graduate department using the University coterminal application form after completing 120 bachelor’s degree units. Application deadlines vary by department, but in all cases the student must apply early enough to allow a departmental decision at least one quarter in advance of the anticipated date of conferral of the bachelor’s degree.

Students should refer to the University Registrar’s Office or its web site for details about when courses begin to count toward the master’s degree requirements and when graduate tuition is assessed; this may affect the decision about when to apply for admission to graduate status.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm?Coterm.

BACHELOR OF SCIENCE

Departments within the School of Engineering offer programs leading to the B.S. degree in the following fields: Chemical Engineering, Civil Engineering, Computer Science, Electrical Engineering, Environmental Engineering, Management Science and Engineering, Materials Science and Engineering, and Mechanical Engineering. The School of Engineering itself offers interdisciplinary programs leading to the B.S. degree in Engineering with specializations in Aeronautics and Astronautics, Architectural Design, Biomechanical Engineering, Biomedical Computation, Computer Systems Engineering, Engineering Physics, and Product Design. In addition, students may elect a B.S. in an Individually Designed Major in Engineering.

The departments of Chemical Engineering, Civil and Environmental Engineering, Computer Science, Electrical Engineering, and Mechanical Engineering offer qualified majors opportunities to do independent study and research at an advanced level with a faculty mentor in order to receive a Bachelor of Science with honors.

Petroleum Engineering—Petroleum Engineering is offered by the Department of Energy Resource Engineering in the School of Earth Sciences. Consult the “Energy Resource Engineering” section of this bulletin for requirements. School of Engineering majors who anticipate summer jobs or career positions associated with the oil industry should consider enrolling in ENGR 120, Fundamentals of Petroleum Engineering.

Programs in Manufacturing—Programs in manufacturing are available at the undergraduate, master’s, and doctoral levels. The undergraduate programs of the departments of Civil and Environmental Engineering, Management Science and Engineering, and Mechanical Engineering provide general preparation for any student interested in manufacturing. More specific interests can be accommodated through Individually Designed Majors (IDMs).

SCHOOL OF ENGINEERING MAJORS

The School of Engineering offers two types of B.S. degrees: Bachelor of Science in Engineering and Bachelor of Science for Individually Designed Majors in Engineering (IDMs). There are seven Engineering B.S. majors that have been proposed by cognizant faculty groups and pre-approved by the Undergraduate Council: Aeronautics and Astronautics; Architectural Design; Biomechanical Engineering; Biomedical Computation; Computer Systems Engineering; Engineering Physics; and Product Design. The B.S. for Individually Designed Major in Engineering has also been approved by the council.

AERONAUTICS AND ASTRONAUTICS (AA)

Mathematics (24 units):
MATH 53 or CME 102/ENGR 155A
MATH electives

Science (18 units):
PHYSICS 41. Mechanics
PHYSICS 43. Electricity and Magnetism
One additional Physics course

102 | Stanford Bulletin, 2006-07
### School of Engineering

#### Engineering Fundamentals

- Technology in Society (one course required):  
- *See Basic Requirement 4*

#### Engineering Topics (Engineering Science and Design):

- ENGR 14, Statics  
- ENGR 30, Engineering Thermodynamics  
- ENGR 70A or X, Programming (recommended)  
- *See Basic Requirement 3*

#### Engineering Depth (39 units):

- **Technology in Society (one course required):**
- **Mathematics (21 units minimum):** *(See Basic Requirement 1)*
- **Biomechanical Engineering (BME):**
- **Technology in Society (one course required):**
- **Engineering Depth (39 units):**
- **Mathematics (21 units minimum):** *(See Basic Requirement 1)*

#### Additional Engineering Depth Requirements:

- **ME 80/81, Strength of Materials and Lab**
- **ME 389, Bioengineering and Biodesign Forum**

**Options to complete the ME depth sequence**

#### Architectural Design

- **Mathematics (20 units minimum):**
  - Required: one course in Statistics
  - Science (16 units minimum, from the recommended School of Engineering list or the courses listed below)
  - Required: PHYSICS 21 or 41, Mechanics
  - Recommended: EARTHSYS 101, 102, GES 1; CEE 63, 64, 70;
  - PHYSICS 23 or 43

- **Technology in Society (one course required):** *(See Basic Requirement 4)*

- **Engineering Fundamentals (three courses minimum; see Basic Requirement 3):**
  - ENGR 14, Applied Mechanics: Statics
  - ENGR 60, Engineering Economy
  - Fundamentals Elective

- **Engineering Depth:**
  - CEE 100, Managing Sustainable Building Projects (WIM)
  - CEE 101A, Mechanics of Materials
  - CEE 110 Building Information Modeling
  - CEE 31 or 31Q, Accessing Architecture Through Drawing
  - CEE 134A, Site and Space or CEE 137A, Forms and Structure
  - CEE 136, Green Architecture
  - CEE 156, Building Systems

- **ARCHITECTURAL DESIGN**

**SCHOOL OF ENGINEERING**

---

**Computer Systems Engineering (CSE)**

Mathematics (23 units minimum):
MATH 41, 42, 51, Calculus 15
MATH 52 or 53, Multivariable Math 5
STATS 116, Theory of Probability 5
or MSEE 120, Probabilistic Analysis 5
or CME 106, Probability and Statistics for Engineers 3-5

Science (12 units):
PHYSICS 41, Mechanics 4
PHYSICS 43, Electricity and Magnetism 4
PHYSICS 45, Light and Heat 4

Technology in Society (one course required):
(See Basic Requirement 4) 3-5

Engineering Fundamentals (13 units minimum; see Basic Requirement 3):
ENGR 40, Electronics 5
ENGR 70X, Programming Methodology and Abstractions or CS 106A and B 5
Fundamentals Elective 3-5

Writing in the Major (one course):
CS 191W, 194, 201, 294W 3-6

Computer Systems Engineering Core (32 units minimum):
CS 103X, Discrete Structures 4 or 6
or CS 103A and B, Discrete Mathematics and Structures 3
CS 107, Programming Paradigms 5
Technology in Society (one course): Mathematics and Science (maximum combined total of 45 units)

Behavioral Science: Science (22 units minimum):
- 15 units must be from School of Engineering approved list
- One year of PHYSICS 40 series (required)

Behavioral Science (7 units minimum)
- PSYCH 1. Introduction to Psychology (required)
- PSYCH elective from courses numbered 20-95

Mathematics and Science (maximum combined total of 45 units)
- Technology in Society (one course):
  - ME 120. History of Philosophy of Design (required)
  - Engineering Fundamentals (three courses minimum): 10-11

Electronics Lab:
- ENGR 40. Introductory Electronics
- or EE 122. Analog Circuits Laboratory
- or PHYSICS 105. Analog Electronics
- or APPPHYS 207. Laboratory Electronics

Writing Lab:
- EE 108A/ENGR 102E. Digital Systems I
- or ENGR 102M/EE 203. Manufacturing and Design
- or MATSCI 161. Nanomaterials Synthesis
- or PHYSICS 107. Experimental Techniques and Data Analysis

Quantum Mechanics:
- EE 222, 223. Applied Quantum Mechanics
- or PHYSICS 130, 131. Quantum Mechanics

Thermodynamics and Kinetic Theory:
- PHYSICS 170, 171. Thermodynamics, Kinetic Theory, Statistical Mech

Design Course: choose one of the following
- CS 108. Object-Oriented Systems Design
- EE 133. Analog Communications Design Laboratory
- EE 144. Wireless Electromagnetic Design Laboratory
- ME 203. Manufacturing and Design
- ME 210. Introduction to Mechanotics
- PHYSICS 108. Project Laboratory

Three courses from one specialty area:
- Solid State Physics:
  - APPLPHYS 272. Solid State Physics I
  - APPLPHYS 273. Solid State Physics II
- EE 116. Semiconductor Device Physics
- EE 216. Principles and Models of Semiconductor Devices
- MATSCI 199. Electronic and Optical Properties of Solids
- PHYSICS 172. Physics of Solids I
- PHYSICS 173. Magnetism and Long Range Order in Solids

Photronics:
- EE 216. Principles and Models of Semiconductor Devices
- EE 231. Introduction to Lasers
- EE 232. Laser Dynamics
- EE 234. Photonics Laboratory
- EE 243. Semiconductor Optoelectronic Devices
- EE 260. Introduction to Modern Optics
- MATSCI 199. Electronic and Optical Properties of Solids

Materials Science:
- MATSCI 151. Microstructure and Mechanical Properties
- MATSCI 152. Electronic Materials Engineering
- MATSCI 155. Nanomaterials Synthesis
- MATSCI 160. Nanomaterials Laboratory
- MATSCI 161. Nanomaterials Synthesis Laboratory
- MATSCI 162. X-Ray Diffraction Laboratory
- MATSCI 163. Mechanical Behavior Laboratory
- MATSCI 190. Organic Materials Laboratory
- MATSCI 194. Phase Equilibria
- PHYSICS 172. Physics of Solids I
- or MATSCI 199. Electronic and Optical Properties of Materials

Electromechanical System Design:
- ME 80/81. Strength of Material and Lab
- ME 112. Mechanical Engineering Design
- ME 210. Introduction to Mechatronics

Energy Systems:
- ME 131A. Heat Transfer
- ME 131B. Fluid Mechanics: Compressible Flow and Turbomachinery
- ME 140. Advanced Thermal Systems

These requirements are subject to change. The final requirements are published with sample programs in the Handbook for Undergraduate Engineering Programs.

PRODUCT DESIGN
Mathematics (20 units minimum):
- Recommended: one course in Statistics

Science (22 units minimum):
- 15 units must be from School of Engineering approved list
- One year of PHYSICS 40 series (required)

Behavioral Science (7 units minimum)
- PSYCH 1. Introduction to Psychology (required)
- PSYCH elective from courses numbered 20-95

Mathematics and Science (maximum combined total of 45 units)
- Technology in Society (one course):
  - ME 120. History of Philosophy of Design (required)
  - Engineering Fundamentals (three courses minimum): 10-11

- ENGR 40. 70A or X (required), plus one course from
- ENGR 10, 15, 20, 25, 30, 50, 60

Product Design Engineering Depth (48 units):
- ARTSTUDI 60. Design I: Fundamental Visual Language
- ARTSTUDI 160. Design II: The Bridge
- Art Studio courses (two courses; ARTSTUDI 70 recommended)
- ENGR 102M. Technical/Professional Writing for ME Majors
- ME 80. Strength of Materials
- ME 101. Visual Thinking
- ME 103D. Engineering Drawing
- ME 110A. Design Sketching
- ME 112. Mechanical Systems
- ME 115. Human Values in Design
- ME 116. Product Design: Formgiving
- ME 203. Manufacturing and Design
- ME 216A. Advanced Product Design
- ME 216B. Advanced Product Design

These requirements are subject to change. The final requirements are published with sample programs in the Handbook for Undergraduate Engineering Programs.

1 School of Engineering approved science list available at http://ughb.stanford.edu.
2 One quarter abroad may substitute for the PSYCH elective.
3 Must be taken concurrently to fulfill the Writing in the Major requirement.

INDIVIDUALLY DESIGNED MAJORS (IDMS)

The B.S. degree for IDMs is intended for undergraduates interested in pursuing engineering programs that, by virtue of their focus and intellectual content, cannot be accommodated by existing departmental majors or the pre-approved School of Engineering majors. IDM curricula are designed by students with the assistance of two faculty advisers of their choice and are submitted to the Undergraduate Council’s Subcommittee on Individually Designed Majors. The degree conferred is “Bachelor of Science with an Individually Designed Major in Engineering: (approved title).”

Students must submit written proposals to the IDM subcommittee detailing their course of study. Programs must meet the following requirements: mathematics (21 unit minimum, see Basic Requirement 1 below), science (17 units minimum, see Basic Requirement 2 below), Technology in Society (one approved course, see Basic Requirement 4 below), engineering (40 units minimum), and sufficient relevant additional course work to bring the total number of units to at least 90 and at most 107. Students may take additional courses pertinent to their IDM major, but the IDM proposal itself may not exceed 107 units. The student’s curriculum must include at least three Engineering Fundamentals courses (ENGR 10, 14, 15, 20, 25, 30, 40, 50/50M, 60, 62, 70A, 70B, 70X). Students are responsible for completing the prerequisites for all courses included in their majors.

Each proposal should begin with a statement describing the proposed major. In the statement, the student should make clear the motivation for and goal of the major, and indicate how it relates to her or his projected career plans. The statement should also specify how the various courses to be taken relate to and move the student toward realizing the major’s goal. A proposed title for the major should be included. The title approved by the IDM Subcommittee is listed on the student’s official University transcript.

The proposal statement should be followed by a completed Program Sheet listing all the courses comprising the student’s IDM curriculum, organized by the five categories printed on the sheet (mathematics, science, technology in society, additional courses, and engineering depth). Normally, the courses selected should comprise a well-coordinated sequence or sequences that provide mastery of important principles and techniques in a well-defined field. In some circumstances, especially if the proposal indicates that the goal of the major is to prepare the student for graduate work outside of engineering, a more general engineering program may be appropriate. A four-year study plan, showing courses to be taken each quarter, should also be included in the student’s IDM proposal.

The proposal must be signed by two faculty members whose signatures certify that they endorse the major as described in the proposal and that they agree to serve as the student’s permanent advisers. One of the faculty members, who must be from the School of Engineering, acts as the student’s primary adviser. The proposal must be accompanied by a statement from that person giving her or his appraisal of the academic value and viability of the proposed major.

STANFORD BULLETIN, 2006-07 | 105
Students proposing IDMs must have at least four quarters of undergraduate work remaining at Stanford after the quarter in which their proposals are first submitted. Any changes in a previously approved major must be endorsed by the advisers and re-approved by the IDM subcommittee. A request by a student to make changes in her or his approved curriculum must be made sufficiently far in advance so that, should the request be denied, adequate time remains to complete the original, approved curriculum. Proposals are reviewed and acted upon once a quarter. Forms may be obtained from the Handbook for Undergraduate Engineering Programs at http://ughb.stanford.edu. Completed proposals should be submitted to Bertha Love in the Office of Student Affairs, Terman 201.

DEPARTMENTAL MAJORS

Curricula for majors offered by the departments of Chemical Engineering, Civil and Environmental Engineering, Computer Science, Electrical Engineering, Management Science and Engineering, Materials Science and Engineering, and Mechanical Engineering have the following components: 36-45 units of mathematics and science (see Basic Requirements 1 and 2 at the end of this section); engineering fundamentals (three course minimum, at least one of which must be unspecified by the department, see Basic Requirement 3); Technology in Society (TIS) (one course minimum, see Basic Requirement 4); and experimentation (courses that total the number of units for Engineering Fundamentals and Engineering Depth is between 60 and 72. ABET accredited majors must meet a minimum number of Engineering Science and Engineering Design units; see Basic Requirement 5). Curricular requirements for departmental majors are being revised at the time of publication. Consult the 2006-07 Handbook for Undergraduate Engineering Programs at http://ughb.stanford.edu or from the department or school.

Experimentation—Departmental major programs, other than Computer Science and Management Science and Engineering, must include 8 units of experimentation. Lab courses taken in the sciences, as well as experimental work taken in courses within the School of Engineering, can be used in fulfillment of this requirement. By careful planning, the experimentation requirement should not necessitate additional course work beyond that required to meet the other components of an engineering major. A list of courses and their experimentation content (in units) can be found online at http://ughb.stanford.edu in the Handbook for Undergraduate Engineering Programs.

CHEMICAL ENGINEERING (CHE)

### ELECTRICAL ENGINEERING (EE)

#### Mathematics:
- MATH 41, 42  
  - 10
- MATH 51 and 52, or CME 100/ENGR 154 and CME 104/ENGR 155B  
  - 10
- MATH 53 or CME 102/ENGR 155A  
  - 5
- EE 178, STATS 116, MATH 151, or CME 106/ENGR 155C  
  - 3-5

#### Science:
- PHYSICS (41, 43) or (61, 63)  
  - 8
- Math or Science electives\(^1\):  
  - 7-9

#### Technology in Society (one course):
- (See Basic Requirement 4)  
  - 3-5

#### Technical Writing:
- ENGR 102E (WIM) corequisite for EE 108A  
  - 1
- EE 100. The Electrical Engineering Profession  
  - 1

#### Engineering Fundamentals (three courses minimum; see Basic Requirement 3):
- CS 106X or CS 106B  
  - 5
- At least two additional courses, at least one of which is not in EE or CS  
  - 6-10

#### Engineering Depth (minimum 68 Engineering Science and Design units; see Basic Requirement 5):
- Circuits: EE 101A, B  
  - 8
- Signals Processing and Linear Systems: EE 102A, B  
  - 8
- Digital Systems: EE 108A (Laboratory, WIM), 108B  
  - 8
- Physics in Electrical Engineering: EE 41 or EE 141  
  - 4-5
- Specialty courses\(^2\):
  - 9-12
- One course in Design\(^3\)  
  - 6-10
- Electrical Engineering Electives\(^4\):  
  - 9-20

These requirements are subject to change. The final requirements are published with sample programs in the *Handbook for Undergraduate Engineering Programs*.

1. A minimum of 12 science units must be taken.
2. A minimum of 45 math and science units combined must be taken.
3. Three courses from one of the specialty areas shown below (consultation with an adviser in the selection of these courses is especially important):
   - Computer Hardware: EE 109, 271 or 275, 275, 282; CS 107
   - Computer Software: CS 107, 108, 194, or 244A; EE 284
   - Controls: ENGR 105, 205, 206 207A, 207B, 209A, 209B, EE 263
   - Circuits and Devices: EE 116, 122, 133, 212, 214, 216, 271
   - Fields and Waves: EE 134, 141, 142, 144, 241, 246, 247, 252, 256
   - Communications and Signal Processing: EE 133, 168, 179, 261 263, (264 or 265), 276, 278, 279
   - The design course may be part of the specialty sequence. The following courses satisfy this requirement: EE 109, 133, 134, 144, 168, 256, 262, 265; CS 194, ENGR 206.
4. May include up to two additional Engineering Fundamentals. May include up to 10 units of EE 191. May include any CS 193 course.

### ENVIRONMENTAL ENGINEERING (in CEE)

#### Mathematics and Science:
- 45 units\(^1\)  
  - (See Basic Requirement 1 and 2)

#### Technology in Society\(^2\) (one course):
- (See Basic Requirement 4)

#### Engineering Fundamentals (three courses minimum; see Basic Requirement 3):
- CEE 50. Engineering Thermodynamics  
  - 3
- CEE 60. Engineering Economy  
  - 3
- Fundamentals Elective\(^3\)  
  - 3-5

#### Engineering Depth (minimum of 68 Engineering Science and Design units; see Basic Requirement 5):
- CEE 64. Air Pollution: From Urban Smog to Global Change  
  - 3
- CEE 70. Environmental Science and Technology  
  - 3
- CEE 100. Managing Civil Engineering Projects (WIM)  
  - 4
- CEE 101B. Mechanics of Fluids  
  - 4
- CEE 101D. MathLab Applications in CEE  
  - 4
- CEE 160. Mechanics of Fluids Laboratory  
  - 4
- CEE 161A. Rivers, Streams, and Canals  
  - 3
- CEE 166A. Watersheds and Wetlands  
  - 3
- CEE 166B. Floods and Droughts, Dams, and Aqueducts  
  - 3
- CEE 171. Environmental Planning Methods  
  - 3
- CEE 172. Air Quality Management  
  - 3
- CEE 173. Aquatic Ecology and Restoration  
  - 3
- CEE 177. Aquatic Chemistry and Biology  
  - 4
- CEE 179A. Aquatic Chemistry Laboratory  
  - 4
- Capstone design experience (either CEE 169 or 179B)  
  - 5
- CEE Breadth Electives\(^4\)  
  - 10

#### Other School of Engineering Electives
- 2-9

These requirements are subject to change. The final requirements are published with sample programs in the *Handbook for Undergraduate Engineering Programs*.

1. Math must include CME 102/ENGR 155A and a Statistics course. Science must include PHYSICS 41; CHEM 31B or X, 33; and GES 1.
2. Should choose a class that specifically includes an ethics component, such as STS 101, 110, 117, 170, or CS 201.

### MANAGEMENT SCIENCE AND ENGINEERING (MS&E)

#### Mathematics (32 units minimum)\(^5\):
- (See Basic Requirement 1)
- MATH 41. Calculus  
  - 5
- MATH 42. Calculus  
  - 5
- MATH 51. Linear Algebra and Differential Calculus of Several Variables  
  - 5
- MATH 53. Ordinary Differential Equations with Linear Algebra  
  - 5
- MS&E 120. Probabilistic Analysis  
  - 5
- MS&E 121. Introduction to Stochastic Modeling  
  - 4
- STATS 110 or 200. Statistical Methods/Inference  
  - 3-5

#### Science (11 units minimum)\(^5\):
- (See Basic Requirement 2)
- One of the following three sequences:
  - CHEM 31B or X, and 33  
    - 8
  - PHYSICS 21, 22, 23, and 24  
    - 8
  - PHYSICS 41 and 43 (formerly 53, 55)  
    - 8
- Science Elective  
  - 8

#### Technology in Society (one course)\(^5\):
- (See Basic Requirement 4)
- Engineering Fundamentals (three courses minimum; see Basic Requirement 3)
  - 3-5
- CSE 112B. Programming Methodology  
  - 3
- CSE 114 or 160. Investment Science or Production\(^6\)  
  - 3
- MS&E 180. Organizations: Theory and Management  
  - 3

#### Engineering Depth Concentration: choose one of the following five concentrations:
- 20-30

#### Financial and Decision Engineering Concentration:
- 27-29
- ECON 50. Economic Analysis I  
  - 5
- ECON 51. Economic Analysis II  
  - 5
- MS&E 140. Industrial Accounting  
  - 5
- MS&E 152. Introduction to Decision Analysis (WIM)  
  - 4
- MS&E 245G or 247G or 247S. Finance  
  - 3-4

#### Two of the following six courses:
- ENGR 145. High Tech Entrepreneurship\(^8\)  
  - 4
- MATH 238. Mathematical Finance  
  - 3
- MS&E 107. Interactive Management Science  
  - 3
- MS&E 160. Production and Operating Systems\(^6\)  
  - 4
- MS&E 223. Stimulation  
  - 3
- MS&E 250A. Engineering Risk Analysis  
  - 3
- Operations Research Concentration:
  - 24-27
  - MATH 113. Linear Algebra and Matrix Theory\(^8\)  
    - 3

---

\(^1\) 45 units

\(^2\) Technology in Society

\(^3\) Fundamentals Elective

\(^4\) CSE Breadth Electives

\(^5\) Management Science and Engineering (MS&E)

\(^6\) May include MS&E 160

\(^7\) May include MS&E 223

\(^8\) May include MS&E 250A

---

**Stanford Bulletin, 2006-07**

107
MATH 115. Functions of a Real Variable 3
MS&E 112. Network and Integer Optimization 3
MS&E 142 or 160. Investment Science or Production 3-4
MS&E 152. Introduction to Decision Analysis (WIM) 3-4
MS&E 241. Economic Analysis 3-4
MS&E 251. Stochastic Decision Models 3
STATS 202. Data Analysis 3
Organization, Technology, and Entrepreneurship Concentration 24-29
At least one of the following three courses:
ECON 50. Economic Analysis I 5
PSYCH 70. Introduction to Social Psychology 4
SOC 114. Economic Sociology 5
At least two of the following three courses:
ENGR 145. High Tech Entrepreneurship 4
MS&E 175. Innovation, Creativity, and Change 4
MS&E 181. Issues in Technology and Work 4
At least four of the following seven courses (may also include omitted courses from above: ENGR 145, MS&E 175, or MS&E 181):
Organizations and Technology:
MS&E 134. Organizations and Info Systems 4
CS 147. Intro Human-Computer Interaction 3-4
MS&E 169. Quality Engineering 4
MS&E 184. Technology and Work 3
Entrepreneurship and Innovation:
MS&E 140. Industrial Accounting 3-4
MS&E 266. Management of New Product Development 3-4
MS&E 267. Innovations in Manufacturing 3-4
Policy and Strategy Concentration 25-30
ECON 50. Economic Analysis I 5
ECON 51. Economic Analysis II 5
MS&E 70. Policy and Strategy Analysis 3
At least four of the following nine courses, including at least one course in policy and at least one course in strategy:
Policy:
MS&E 193. Technology and National Security 3
MS&E 197. Ethics and Public Policy (WIM) 5
MS&E 243. Energy and Environmental Policy Analysis 3
MS&E 248. Economics of Natural Resources 3-4
MS&E 292. Health Policy Modeling 3-4
Strategy:
ENGR 145. High-Tech Entrepreneurship 4
MS&E 175. Innovation, Creativity, and Change 3-4
MS&E 266. Mgmt of New Product Development 3-4
MS&E 267. Innovations in Manufacturing 3-4
Production and Operations Management Concentration 27-29
ECON 50. Economic Analysis I 5
ECON 51. Economic Analysis II 5
MS&E 140. Industrial Accounting 3-4
MS&E 152. Introduction to Decision Analysis (WIM) 4
Three of the following nine courses:
MS&E 142 or 245G. Investment Science/Finance 3-4
MS&E 169. Quality Engineering 4
MS&E 262. Supply Chain Management 3
MS&E 263. Internet-Enabled Supply Chains 3
MS&E 264. Manufacturing Systems Design 3
MS&E 265. Supply Chain Logistics 3
MS&E 266. Management of New Product Development 3-4
MS&E 267. Innovations in Manufacturing 3-4
MS&E 268. Operations Strategy 3

MATERIALS SCIENCE AND ENGINEERING (MATSCI)
Mathematics (20 units minimum): (See Basic Requirement 1)
MATH 51 and 52, or CRM 109, ENGR 154 and CME 104/ENGR 155B 10
MATH 53 or CME 102/ENGR 155A 5
Science (20 units minimum): (See Basic Requirement 2)
Must include a full year of physics or chemistry, with one quarter of study in the other subject.
Technology in Society (one course): 3-5
(See Basic Requirement 4)
Engineering Fundamentals (three courses minimum; see Basic Requirement 3)
ENGR 50. Intro to Materials Science, Nanotechnology 4
or ENGR 50M. Intro to Materials Science, Biomaterials 4
At least two additional courses 6-8
Engineering Depth:
Choose four of the following lab courses:
MATSCI 160. Nanomaterials Laboratory 4
MATSCI 161. Nanocharacterization Laboratory (WIM) 4
MATSCI 162. X-Ray Diffraction Laboratory 4
MATSCI 163. Mechanical Behavior Laboratory 4
MATSCI 164. Electronic and Photonic Materials and Devices Lab 4
Materials Science Fundamentals 24
Science and Engineering Options 10

These requirements are subject to change. The final requirements are published with sample programs in the Handbook for Undergraduate Engineering Programs.

SCHOOL OF ENGINEERING

SCIENCE AND ENGINEERING OPTIONS

Mathematics (24 units minimum): (See Basic Requirement 1)
Science (18 units minimum): 1
CHEM 31X or 31AB (required)
Technology in Society (one course): (See Basic Requirement 4)
Engineering Fundamentals (three courses minimum; see Basic Requirement 3)
Engineering Depth (minimum of 68 Engineering Science and Design units; see Basic Requirement 5):
ENGR 15. Dynamics 3
ENGR 30. Engineering Thermodynamics 3
ENGR 102M. Technical Writing (WIM corequisite for ME 203) 3
ME 70. Introductory Fluids Engineering 4
ME 80/81. Strength of Materials & Lab 4
ME 101. Visual Thinking 4
ME 103D. Engineering Drawing 1
ME 112. Mechanical Engineering Design 4
ME 113. Mechanical Engineering Design 4
ME 131A. Heat Transfer 4
ME 131B. Fluid Mechanics 4
ME 140. Advanced Thermal Systems 5
ME 161. Dynamic Systems 4
ME 203. Manufacturing and Design (WIM; take with ENGR 102M) 4
Options to complete the ME depth sequence (choose three courses):
ENGR 105. Feedback Control Design 3
ME 150. Internal Combustion Engines 3
ME 210. Introduction to Mechatronics 3
ME 220. Introduction to Sensors 3
ME 227. Vehicle Dynamics and Control 3
ME 280. Skeletal Development and Evolution 3
ME 281. Biomechanics of Movement 3
ME 284A. Cardiovascular Bioengineering 3

These requirements are subject to change. The final requirements are published with sample programs in the Handbook for Undergraduate Engineering Programs.

1 Math and Science must total at least a minimum of 45 units. Electives must come from the School of Engineering approved list, or PHYSICS 21, 22, 23, 24, 25, 26; PSYCH 55, 70. AP credit for Chemistry, Mathematics, Physics, and Statistics may be used.
2 Technology in Society course must be one of the following MS&E approved courses: CSE 169, CS 201, MS&E 181, MS&E 193 (WIM), STS 110/MS&E 197 (WIM), STS 115/ENGR 131, STS 170, STS 279.
3 AP credit for CS may be used.
4 Students may not count ENGR 60 or 62 for engineering fundamentals as those courses count toward engineering depth (core) and cannot be double counted.
5 Students may not count 134 for both core and the Organization, Technology, and Entrepreneurship concentration.
6 Students may not count 142 or 180 for both core and concentration. Students doing the Financial and Decision Engineering concentration must take 142, students doing the Operations Research concentration must take both 142 and 160, and students doing the Production and Operations Management concentration must take 160.
7 Engineering fundamentals, engineering depth (core), and engineering depth (concentration) must total a minimum of 60 units.
8 Courses used to satisfy the Math, Science, Technology in Society, or Engineering Fundamental requirement may not also be used to satisfy an engineering depth requirement.
**BASIC REQUIREMENTS**

**Basic Requirement 1 (Mathematics)—** Engineering students need a solid foundation in the calculus of continuous functions including differential equations, an introduction to discrete mathematics, and an understanding of statistics and probability theory. The minimum preparation should normally include calculus to the level of MATH 53. Knowledge of ordinary differential equations and matrices is important in many areas of engineering, and students are encouraged to select additional courses in these topics. To meet ABET accreditation criteria, a student’s program must include the study of differential equations.

Courses that satisfy the mathematics requirement are listed at [http://ughb.stanford.edu](http://ughb.stanford.edu) in the *Handbook for Undergraduate Engineering Programs*.

**Basic Requirement 2 (Science)—** A strong background in the basic concepts and principles of natural science in such fields as biology, chemistry, geology, and physics is essential for engineering. Most students include the study of physics and chemistry in their programs.

Courses that satisfy the science requirement are listed at [http://ughb.stanford.edu](http://ughb.stanford.edu) in the *Handbook for Undergraduate Engineering Programs*.

**Basic Requirement 3 (Engineering Fundamentals)—** The Engineering Fundamentals requirement is satisfied by a nucleus of technically rigorous introductory courses chosen from the various engineering disciplines. It is intended to serve several purposes. First, it provides students with a breadth of knowledge concerning the major fields of endeavor within engineering. Second, it allows the incoming engineering student an opportunity to explore a number of courses before embarking on a specific academic major. Third, the individual classes each offer a reasonably deep insight into a contemporary technological subject for the interested non-engineer.

The requirement is met by taking three courses from the following list, at least one of which must be selected by the student rather than by the department:

- ENGR 10. Introduction to Engineering Analysis
- ENGR 15. Dynamics
- ENGR 20/CHEMENG 20. Introduction to Chemical Engineering
- ENGR 25/CHEMENG 25. Biotechnology
- ENGR 30. Engineering Thermodynamics
- ENGR 40. Introductory Electronics
- ENGR 50/50M. Introductory Science of Materials
- ENGR 60. Engineering Economics
- ENGR 62/MS&E 111. Introduction to Optimization
- ENGR 70A,B/CS 106A,B or ENGR 70X/CS 106X. Introduction to Software Engineering

1 ENGR 40 and 50 may be taken on video at some of Stanford’s Overseas Centers.

**Basic Requirement 4 (Technology in Society)—** It is important for the student to obtain a broad understanding of engineering as a social activity. To foster this aspect of intellectual and professional development, all engineering majors must take one course devoted to exploring issues arising from the interplay of engineering, technology, and society. Courses that fulfill this requirement are listed online at [http://ughb.stanford.edu](http://ughb.stanford.edu) in the *Handbook for Undergraduate Engineering Programs*.

**Basic Requirement 5 (Science and Design)—** In order to satisfy ABET (Accreditation Board for Engineering and Technology) requirements, a student majoring in Chemical Engineering must complete one and a half years of Engineering topics, consisting of a minimum of 63 units of Engineering Science and Engineering Design. A student majoring in Civil, Electrical, Environmental, or Mechanical Engineering must complete one and a half years of Engineering topics, consisting of a minimum of 68 units of Engineering Science and Engineering Design appropriate to the student’s field of study. In most cases, students meet this requirement by completing the major program core and elective requirements in Fundamentals and Depth. For example, ENGR 40 is a 5-unit course; 3 of these 5 units are assigned to Engineering Science and the remaining 2 units are assigned to Engineering Design. A student may need to take additional courses in Depth in order to fulfill the minimum requirement. The science and design units assigned to each major’s depth courses are listed online at [http://ughb.stanford.edu](http://ughb.stanford.edu) in the *Handbook for Undergraduate Engineering Programs*.

**MINORS**

An undergraduate minor in Engineering may be pursued by interested students in many of the school’s departments; consult with a department’s undergraduate program representative, or the Office of Student Affairs, Terman Engineering Center, room 201. General requirements and policies for a minor in the School of Engineering are: (1) a set of courses totaling not less than 18 and not more than 36 units, with a minimum of six courses of at least 3 units each; (2) the set of courses should be sufficiently coherent as to present a body of knowledge within a discipline or subdiscipline; (3) prerequisite mathematics, statistics, or science courses, such as those normally used to satisfy the school’s requirements for a department major, may not be used to satisfy the requirements of the minor; conversely, engineering courses that serve as prerequisites for subsequent courses must be included in the unit total of the minor program; (4) departmentally based minor programs are structured at the discretion of the sponsoring department, subject only to requirements 1, 2, and 3 above. Interdisciplinary minor programs may be submitted to the Undergraduate Council for approval and sponsorship. A general Engineering minor is not offered.

**AERONAUTICS AND ASTRONAUTICS (AA)**

The Aero/Astro minor introduces undergraduates to the key elements of modern aerospace systems. Within the minor, students may focus on aircraft, spacecraft, or disciplines relevant to both. The course requirements for the minor are described in detail below. Courses cannot be double-counted within a major and a minor, or within multiple minors; if necessary, the Aero/Astro adviser can help select substitute courses to fulfill the AA minor core.

The following core courses fulfill the minor requirements:

<table>
<thead>
<tr>
<th>Subject and Catalog Number</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>AA 100. Introduction to Aeronautics and Astronautics</td>
<td>3</td>
</tr>
<tr>
<td>ENGR 14. Statics</td>
<td>3</td>
</tr>
<tr>
<td>ENGR 15. Dynamics</td>
<td>3</td>
</tr>
<tr>
<td>ENGR 30. Thermodynamics</td>
<td>3</td>
</tr>
<tr>
<td>ME 70. Introductory Fluids</td>
<td>4</td>
</tr>
<tr>
<td>ME 131A. Heat Transfer</td>
<td>4</td>
</tr>
<tr>
<td>Two courses from one of the upper-division elective areas below (min. 6 units) plus one course from a second area below (min. 3 units):</td>
<td>9-11</td>
</tr>
<tr>
<td>Aerospace Systems Synthesis/Design:</td>
<td></td>
</tr>
<tr>
<td>AA 236A.B. Spacecraft Design</td>
<td>8</td>

<td>4</td>
</tr>
<tr>
<td>CHEM 171. Physical Chemistry</td>
<td>3</td>
</tr>
</tbody>
</table>
CIVIL ENGINEERING (CEE)

The Civil Engineering minor is intended to give students an in-depth introduction to one or more areas of civil engineering. Departmental expertise and undergraduate course offerings are available in the areas of Construction Engineering and Management, Structural Engineering, Environmental Engineering, and Architectural Design. The minimum prerequisite for a Civil Engineering minor focusing on construction engineering and management or structural engineering is MATH 42 (or 21); however, many courses of interest require PHYSICS 41 and/or MATH 51 as prerequisites. The minimum prerequisite for a Civil Engineering minor focusing on architectural design is MATH 41 (or 19) and a course in Statistics. Students should recognize that a minor in Civil Engineering is not an ABET-accredited degree program.

Since civil engineering is a very broad field and undergraduates with widely varying backgrounds may be interested in obtaining a civil engineering minor, no single set of course requirements is appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below; this list must be officially approved by the Civil and Environmental Engineering (CEE) undergraduate minor adviser. Additional information on preparing a minor program, including example programs focusing on each of the areas of expertise listed above is available in the CEE office (Terman M-42). While each example program focuses on a different area of expertise within the department, other combinations of courses are also possible.

General guidelines are:

1. A Civil Engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each.
2. The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another.
3. Professor Kiremidjian (kiremidjian@stanford.edu) is the CEE undergraduate minor adviser. Additional information on preparing a minor program, including example programs focusing on each of the areas of expertise listed above is available in the CEE office (Terman M-42). While each example program focuses on a different area of expertise within the department, other combinations of courses are also possible.

Computer Science (CS)

The following core courses fulfill the minor requirements. Prerequisites include the standard mathematics sequence through MATH 51.

Introduction Programming:

- CS 106A/B. Programming Method/Abstractions 10
- or CS 106X. Programming Method/Abstractions (Accelerated) 5
  (AP Credit may be used to fulfill this requirement)

Core:

- CS 103A/B. Discrete Math/Structures 4-6
  - or CS 103X. Discrete Structures
- CS 107. Programming Paradigms 5
- CS 108. Object-Oriented Systems Design 4

Electives (choose two courses from different areas):

Artificial Intelligence:

- CS 121. Introduction to Artificial Intelligence 3
- CS 221. AI: Principles and Techniques 4

Human-Computer Interaction:

- CS 147. Introduction to Human-Computer Interaction Design 3-4

Systems:

- CS 140. Operating Systems 4
- CS 143. Compilers 4
- CS 145. Databases 4
- CS 148. Graphics 3

Theory:

- CS 154. Automata and Complexity Theory 4
- CS 157. Logic and Automated Reasoning 4
- CS 161. Design and Analysis of Algorithms 4

Note: for students with no programming background and who begin with CS 106A, the minor consists of seven or eight courses.

Electrical Engineering (EE)

Courses from any of the following three options, along with four graded EE courses of level 100 or higher (13-21 units), fulfill the minor requirements:

Option I:

- ENGR 40. Introductory Electronics 5
- EE 101A. Circuits I 4
- EE 101B. Circuits II 4

Four graded EE courses numbered 100 or higher

Option II:

- ENGR 40. Introductory Electronics 5
- EE 102A. Signal Processing and Linear Systems I 4
- EE 102B. Signal Processing and Linear Systems II 4

Four graded EE courses numbered 100 or higher

Option III:

- ENGR 40. Introductory Electronics 5
- EE 108A. Digital Systems I 4
- EE 108B. Digital Systems II 4

Four graded EE courses numbered 100 or higher

Environmental Engineering

The Environmental Engineering minor is intended to give students a broad introduction to one or more areas of Environmental Engineering. Departmental expertise and undergraduate course offerings are available in the areas of environmental engineering and science, environmental fluid mechanics and hydrology, and atmosphere/energy. The minimum prerequisite for an Environmental Engineering minor is MATH 42 (or 21); however, many courses of interest require PHYSICS 41 and/or MATH 51 as prerequisites. Students should recognize that a minor in Environmental Engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining an environmental engineering minor, no single set of course requirements is appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below; this list must be officially approved by the Civil and Environmental Engineering (CEE) undergraduate minor adviser. Additional information on preparing a minor program, including example programs focusing on each of the areas of expertise listed above, is available in the CEE office (Terman M-42). While each example program focuses on a different area of expertise within the department, other combinations of courses are also possible.

General guidelines are:

1. An Environmental Engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each.
2. The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another.
3. Professor Hildemann (hildemann@stanford.edu) is the CEE undergraduate minor adviser in Architectural Design. Students must consult one of these advisers in developing their minor program, and obtain approval of the finalized study list from her.

Management Science and Engineering (MS&E)

The following courses fulfill the minor requirements:

Background requirements:

- MATH 51. Calculus

Minor requirements:

- ENGR 60. Engineering Economy (prerequisite: MATH 41) 3
- MS&E 111. Introduction to Optimization 4
- MS&E 120. Probabilistic Analysis (prerequisite: MATH 51) 5
- MS&E 121. Introduction to Stochastic Modeling 4
- MS&E 131 or 134. Information 3-4
- MS&E 142 or 160. Investment Science or Production 3-4
- MS&E 180. Organizations: Theory and Management 4
  Elective (any 100- or 200-level MS&E course) 3-4

Materials Science and Engineering (MATSCL)

A minor in Materials Science and Engineering allows interested students to explore the role of materials in modern technology and to gain an understanding of the fundamental processes that govern materials behavior.

The following courses fulfill the minor requirements:
Fundamentals (choose one of the following):
ENGR 50. Introductory Science of Materials, Nanotechnology Emphasis 4
ENGR 50M. Introductory Science of Materials, Biomaterials Emphasis 4

Materials Science Fundamentals and Depth
(Choose 6 of the following): 24
MATSCI 151. Microstructure and Mechanical Properties 4
MATSCI 152. Electronic Materials Engineering 4
MATSCI 153. Nanostructure and Characterization 4
MATSCI 154. Solid State Thermodynamics 4
MATSCI 155. Nanomaterials Synthesis 4
MATSCI 160. Nanomaterials Laboratory 4
MATSCI 161. Nanomaterials Characterization Laboratory 4
MATSCI 162. X-Ray Diffraction Laboratory 4
MATSCI 163. Mechanical Behavior Laboratory 4
MATSCI 164. Electronic and Photonic Materials and Devices Laboratory 4
MATSCI 190. Organic Materials 4
MATSCI 192. Materials Chemistry 4
MATSCI 193. Atomic Arrangements in Solids 4
MATSCI 194. Phase Equilibria 4
MATSCI 195. Waves and Diffraction in Solids 4
MATSCI 196. Imperfections in Crystalline Solids 4
MATSCI 197. Rate Processes in Materials 4
MATSCI 198. Mechanical Properties of Materials 4
MATSCI 199. Electrical and Optical Properties of Solids 4

MECHANICAL ENGINEERING (ME)

The following courses fulfill the minor requirements:

**General Minor:** This minor aims to expose students to the breadth of ME in terms of topics and analytical and design activities. The minor consists of seven courses totaling 26-28 units. Prerequisites: MATH 41, 42, and PHYSICS 41.
ENGR 15. Dynamics 3
ENGR 30. Thermodynamics 3
ME 70. Introductory Fluids Engineering 4
ME 101. Visual Thinking 3

Plus two of the following:
ME 80/81. Strength of Materials and Lab 4
ME 131A. Heat Transfer 4
ME 161. Dynamic Systems 4
ME 203. Manufacturing and Design 4

**Thermosciences Minor:** This minor consists of seven courses totaling 26 units. Prerequisites: MATH 41, 42, 43, and PHYSICS 41.
ENGR 30. Thermodynamics 3
ME 70. Introductory Fluids Engineering 4
ME 131A. Heat Transfer 4
ME 131B. Fluid Mechanics 4
ME 140. Advanced Thermal Systems 4

**Mechanical Design:** This minor aims to expose students to design activities supported by analysis. This minor consists of seven courses totaling 24-26 units. Prerequisites: MATH 41, 42, and PHYSICS 41.
ENGR 15. Dynamics 3
ME 80/81. Strength of Materials and Lab 4
ME 101. Visual Thinking 3
ME 112. Mechanical Engineering Design 4
ME 203. Manufacturing and Design 4

Plus one of the following:
ME 113. Engineering Design 4
ME 210. Introduction to Mechatronics 4
ME 220. Introduction to Sensors 4

GRADUATE PROGRAMS

ADMISSION

Application for admission with graduate standing in the school should be made to the graduate admissions committee in the appropriate department or program. While most graduate students have undergraduate preparation in an engineering curriculum, it is feasible to enter from other programs, including chemistry, geology, mathematics, or physics.

**Fellowships and Assistantships**—Departments and divisions of the School of Engineering award graduate fellowships, research assistantships, and teaching assistantships each year. For further information and application instructions, see the department sections in this bulletin or http://gradadmissions.stanford.edu.

**Registration**—New graduate students should follow procedures for registration as listed in the University’s quarterly Time Schedule. Adviser assignments can be obtained from department offices.

THE HONORS COOPERATIVE PROGRAM

Industrial firms, government laboratories, and other organizations may participate in the Honors Cooperative Program (HCP), a program that permits qualified engineers, scientists, and technology professionals admitted to Stanford graduate degree programs to register for Stanford courses and obtain the degree on a part-time basis in 55 areas of concentration. In 23 of these areas of concentration, the master’s degree can be obtained entirely online.

Through this program, many graduate courses offered by the School of Engineering on campus are made available through the Stanford Center for Professional Development (SCPD). SCPD delivers more than 250 courses a year on television and online. For HCP employees who are not part of a graduate degree program at Stanford, courses and certificates are also available through a non-degree option and a non-credit professional education program. Non-credit short courses may be customized to meet a company’s needs. For a full description of educational services provided by SCPD: see http://scpd.stanford.edu; call (650) 725-3000; fax (650) 725-2868; write Durand Building, Room 300, Stanford, CA 94305-4036; or email scpd-registration@stanford.edu.

MANUFACTURING

Programs in manufacturing are available at the undergraduate, master’s, and Ph.D. level. Master’s programs are offered by the departments of Civil and Environmental Engineering, Management Science and Engineering (MS&E), and Mechanical Engineering. The Construction Engineering and Management program, offered by the Department of Civil and Environmental Engineering, is also a manufacturing program for students interested in facility and public works manufacturing. Doctoral programs related to manufacturing are available in a number of departments and involve research projects ranging from reliable manufacturing methods for nanofabricated devices to models of production scheduling and supply chain management.

Doctoral programs related to manufacturing are available in a number of departments and involve research projects ranging from machine tool design to the integration of databases into production software. For detailed information about the master’s and Ph.D. programs, see the sections of this bulletin pertaining to management science, mechanical, and civil and environmental engineering. For more information on manufacturing research and education in Engineering, see http://www.stanford.edu/group/AIM and the web sites of departments.

CURRICULA

For further details about the following programs, see the department sections in this bulletin.

Related aspects of particular areas of graduate study are commonly covered in the offerings of several departments and divisions. Graduate students are encouraged, with the approval of their department advisers, to select courses in departments other than their own to achieve a broader appreciation of their field of study. For example, most departments in the school offer courses concerned with nanoscience, and a student interested in an aspect of nanotechnology can often gain appreciable benefit from the related courses given by departments other than her or his own.

Departments and divisions of the school offer graduate curricula as follows.

AERONAUTICS AND ASTRONAUTICS

The current research and teaching activities cover a number of advanced fields, with special emphasis on:
Active Noise Control
Aerodynamic Noise
Aeroelasticity
Aircraft Design, Performance, and Control
Applied Aerodynamics
Biomedical Mechanics
Computational Aero-Acoustics
Computational Fluid Dynamics
Computational Mechanics and Dynamical Systems
Control of Robots, including Space and Deep-Underwater Robots
Conventional and Composite Structures/Materials
Direct and Large Eddy Simulation of Turbulence
Distributed Control of Networks
High-Lift Aerodynamics
Hybrid Propulsion
Hypersonic and Supersonic Flow
Inertial Instruments
Multidisciplinary Design Optimization
Navigation Systems (especially GPS)
Networked and Hybrid Control
Optimal Control, Estimation, System Identification
Physical Gas Dynamics
Spacecraft Design and Satellite Engineering
Turbulent Flow and Combustion

BIOENGINEERING
Biomedical Computation
Biomedical Devices
Biomedical Imaging
Cardiovascular Engineering
Cell and Molecular Engineering
Mechanobiology
Musculoskeletal Engineering
Neuroscience Engineering
Regenerative Medicine

CHEMICAL ENGINEERING
Applied Statistical Mechanics
Biocatalysis
Biochemical Engineering and Biophysics
Bioengineering
Computational Materials Science
Colloid Science
Dynamics of Complex Fluids
Functional Genomics
Hydrodynamic Stability
Kinetics and Catalysis
Microrheology
Molecular Assemblies
Newtonian and Non-Newtonian Fluid Mechanics
Polymer Physics
Protein Biotechnology
Semiconductor Processing
Surface and Interface Science
Transport Mechanics

CIVIL AND ENVIRONMENTAL ENGINEERING
Atmosphere/Energy
Construction Engineering and Management
Design/Construction Integration
Environmental and Water Studies
  Environmental Engineering and Science
  Environmental Fluid Mechanics and Hydrology
Structural Engineering and Geomechanics
  Geomechanics
  Structural Engineering

COMPUTER SCIENCE
Analysis of Algorithms
Artificial Intelligence
Automated Deduction
Autonomous Agents
Biomedical Computation
Compilers
Complexity Theory
Computational Biology
Computational Geometry
Computational Logic
Computational Physics
Computer Architecture
Computer Graphics
Computer Logic
Computer Security
Computer Vision
Cryptography
Database Systems
Design Automation
Digital Libraries
Distributed and Parallel Computation
Electronic Commerce
Enterprise Management
Formal Verification
Haptic Display of Virtual Environments
Human-Computer Interaction
Image Processing
Knowledge-Based and Expert Systems
Knowledge Representation and Logic
Machine Learning
Mathematical Theory of Computation
Multi-Agent Systems
Natural Language and Speech Processing
Networks, Internet Infrastructure, and Distributed Systems
Operating Systems
Programming Systems/Languages
Reasoning Under Uncertainty
Robotics
Robust System Design
Scientific Computing and Numerical Analysis
Sensor Networks
Ubiquitous and Pervasive Computing

ELECTRICAL ENGINEERING
Computer Hardware
Computer Software Systems
Control and Systems Engineering
Communication Systems
Dynamic Systems and Optimization

**MATERIALS SCIENCE AND ENGINEERING**

- Biomaterials
- Ceramics and Composites
- Computational Materials Science
- Electrical and Optical Behavior of Solids
- Electron Microscopy
- Fracture and Fatigue
- Imperfections in Crystals
- Kinetics
- Magnetic Behavior of Solids
- Magnetic Storage Materials
- Nanomaterials
- Photovoltaics
- Organic Materials
- Phase Transformations
- Physical Metallurgy
- Solid State Chemistry
- Structural Analysis
- Thermodynamics
- Thin Films
- X-Ray Diffraction

**MECHANICAL ENGINEERING**

- Biomechanics
- Combustion Science
- Computational Mechanics
- Controls
- Design of Mechanical Systems
- Dynamics
- Environmental Science
- Experimental Stress and Analysis
- Fatigue and Fracture Mechanics
- Finite Element Analysis
- Fluid Mechanics
- Heat Transfer
- High Temperature Gas Dynamics
- Kinematics
- Manufacturing
- Mechatronics
- Product Design
- Robotics
- Sensors
- Solids
- Thermodynamics
- Turbulence

**MASTER OF SCIENCE**

The M.S. degree is conferred on graduate students in engineering according to the University regulations stated in the “Graduate Degrees” section of this bulletin, and is described in the various department listings. A minimum of 45 units is usually required in M.S. programs in the School of Engineering. The presentation of a thesis is not a school requirement.

**MASTER OF SCIENCE IN ENGINEERING**

The M.S. in Engineering is available to students who wish to follow an interdisciplinary program of study that does not conform to a normal graduate program in a department.

There are three school requirements for the M.S. degree in Engineering: (1) the student’s program must be a coherent one with a well-defined objective and must be approved by a department within the school; (2) the student’s program must include at least 21 unit of courses within the School of Engineering with numbers 200 or above in which the student receives letter grades; and (3) the program must include a total of at least 45 units. Each student’s program is administered by the particular department in which it is lodged and must meet the standard of quality of that department.

Transfer into this program is possible from any program within the school by application to the appropriate department.

**ENGINEER**

The degree of Engineer is intended for students who want additional graduate training beyond that offered in an M.S. program. The program of study must satisfy the student’s department and must include at least 90 units beyond the B.S. degree. The presentation of a thesis is required. The University regulations for the Engineer degree are stated in the “Graduate Degrees” section of this bulletin, and further information is available in the individual departmental sections of this bulletin.

**DOCTOR OF PHILOSOPHY**

Programs leading to the Ph.D. degree are offered in each of the departments of the school. University regulations for the Ph.D. are given in the “Graduate Degrees” section of this bulletin. Further information is found in departmental listings.

**COURSES**

WIM indicates that the course satisfies the Writing in the Major requirements. (AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

The following Engineering courses deal with subject areas within engineering that are, in their essential nature, broader than the confines of any particular branch of engineering. These courses are taught by professors from several departments of the School of Engineering.

Of the courses described in this section, many are of general interest to both engineering and non-engineering students. In addition, certain departmental courses are of general interest and without prerequisites.

Students interested in the interactions between technology and society should also consult the “Science, Technology, and Society” section of this bulletin.

**PRIMARILY FOR UNDERGRADUATES**

ENGR 10. *Introduction to Engineering Analysis* — Integrated approach to the fundamental scientific principles that are the cornerstones of engineering analysis: conservation of mass, atomic species, charge, momentum, angular momentum, energy, production of entropy expressed in the form of balance equations on carefully defined systems, and incorporating simple physical models. Emphasis is on setting up analysis problems arising in engineering. Topics: simple analytical solutions, numerical solutions of linear algebraic equations, and laboratory experiences. Provides the foundation and tools for subsequent engineering courses. 4 units, Spr (Cappelli, M)

**ENGR 14. Applied Mechanics: Statics** — The mechanics of particles, rigid bodies, trusses, frames, and machines in static equilibrium emphasizing the use of free-body diagrams and the principle of virtual work. Frictional effects and internal forces in structural members. Lab in Autumn; no lab in Spring. Prerequisite: PHYSICS 41 or consent of instructor. GER: DB-EngrAppSci 3 units, Aut (Sheppard, S), Spr (Kiremidjian, A)

ENGR 15. *Dynamics* — The application of Newton’s Laws to solve static and dynamic problems, particle and rigid body dynamics, freebody diagrams, and writing equations of motion. 2-D and 3-D cases including gyroscopes, spacecraft, and rotating machinery. Solution of equations of motion and dynamic response of simple mechanical systems. Problem sessions. Prerequisites: MATH 23 or 43, PHYSICS 41. GER:DB-EngrAppSci 3 units, Aut (Niemeyer, G), Spr (Waldron, K)

ENGR 20. *Introduction to Chemical Engineering* — (Same as CHEMENG 20.) Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. GER:DB-EngrAppSci 3 units, Spr (Robertson, C)
ENGR 25. Biotechnology — (Same as CHEMENG 25.) The interplay between molecular and cellular biology and engineering principles in the design, development, manufacture, and formulation of new drugs and agrochemicals. Emphasis is on understanding the scope of engineering in modern biotechnology. Topics include biological fundamentals, genomics and bioinformatics, protein engineering, fermentation and downstream recovery of biomolecules, antibody technologies, plant biotechnology, vaccines, transgenic animals, and stem cell technologies. The role of intellectual property and venture capital in biotechnology. Recommended: prior exposure to chemistry and biology. GER:DB-EngrAppSci

3 units, Spr (Hwang, L)

ENGR 30. Engineering Thermodynamics — Concepts of energy and entropy from elementary considerations of the microscopic nature of matter. Use of basic thermodynamic concepts in the solution of engineering problems. Methods and problems in socially responsible economic generation and utilization of energy in central power stations, solar systems, gas turbine engines, refrigeration devices, and automobile engines. Prerequisites: MATH 19, 20, 21, or 41, 42, and PHYSICS 45 (formerly 51) or equivalent high school physics. GER:DB-EngrAppSci

3 units, Aut (Edwards, C), Win (Pitsch, H)

ENGR 31. Chemical Principles with Application to Nanoscale Science and Technology — Preparation for engineering disciplines emphasizing modern technological applications of solid state chemistry. Topics include: crystallography; chemical kinetics and equilibria; thermodynamics of phase changes and reaction; quantum mechanics of chemical bonding, molecular orbital theory, and electronic band structure of crystals; and the materials science of basic electronic and photonic devices. Prerequisite: high school or college chemistry background in stoichiometry, periodicity, Lewis and VSEPR structures, dissolution/precipitation and acid/base reactions, gas laws, and phase behavior. GER: DB-NatSci

4 units, Aut (Mclntyre, P)

ENGR 40. Introductory Electronics — Overview of electronic engineering. Electrical quantities and their measurement, including operation of the oscilloscope. The basic function of electronic components including ideal diodes and transistors. Digital logic circuits and their functions including the elementary microprocessor. Analog circuits including the operational amplifier and tuned circuits. Lab assignments. Enrollment limited to 200. Lab. Prerequisite: PHYSICS 23. GER:DB-EngrAppSci

5 units, Aut (Howe, R), Spr (Wong, S)

ENGR 50. Introduction to Materials Science, Nanotechnology Emphasis — The structure, bonding, and atomic arrangements in materials leading to their properties and applications. Topics include electronic and mechanical behavior, emphasizing nanotechnology, solid state devices, and advanced structural and composite materials.

4 units, Win (Melosh, N), Spr (Sinclair, R)

ENGR 50M. Introduction to Materials Science, Biomaterials Emphasis — Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents.

4 units, Aut (Heilshorn, S)

ENGR 60. Engineering Economy — Fundamentals of economic analysis. Interest rates, present value, and internal rate of return. Applications to personal and corporate financial decisions. Mortgage evaluation, insurance decision, hedging/risk reduction, project selection, capital budgeting, and investment valuation. Decisions under uncertainty and utility theory. Prerequisite: MATH 41 or equivalent. Recommended: sophomore or higher class standing; knowledge of elementary probability. GER:DB-EngrAppSci

3 units, Aut (Chiu, S), Win, Sum (Weber, T)

ENGR 62. Introduction to Optimization — (Same as MS&E 111.) Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Applications to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: MATH 51. GER:DB-EngrAppSci

4 units, Aut (Van Roy, B), Spr (Goel, A)

ENGR 70A. Programming Methodology — (Same as CS 106A.) Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. GER: DB-EngrAppSci

3-5 units, Aut (Young, P), Win (Roberts, E), Spr (Young, P), Sum (Staff)

ENGR 70B. Programming Abstractions — (Same as CS 106B.) Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or consent of instructor. GER:DB-EngrAppSci

3-5 units, Win (Zelenski, J), Spr (Staff)

ENGR 70X. Programming Methodology and Abstractions (Accelerated) — (Same as CS 106X.) Intensive: 106A, B in one quarter. Students who complete 106A should enroll in 106B; 106X may be taken after 106A only with consent of instructor. Uses the C++ programming language. How programming concepts are expressed in C++. Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees). Introduction to time and space complexity analysis. Prerequisite: substantial programming experience that allows ready understanding of concepts presented in 106A. GER: DB-EngrAppSci

3-5 units, Aut (Zelenski, J), Win (Cain, G), Sum (Staff)

ENGR 100. Teaching Public Speaking — The theory and practice of teaching public speaking and presentation development. Lectures/discussions on developing an instructional plan, using audiovisual equipment for instruction, devising tutoring techniques, and teaching delivery, organization, audience analysis, visual aids, and unique speaking situations. Weekly practice speaking. Students serve as apprentice speech tutors. Those completing course may become paid speech instructors in the Technical Communications Program. Prerequisite: consent of instructor.

5 units, Aut, Win, Spr (Lougee, D)

ENGR 102E. Technical/Professional Writing for Electrical Engineers — Required of Electrical Engineering majors. The process of writing technical/professional documents. Lectures, writing assignments, individual conferences. Prerequisite: freshman English. Corequisite for WIM: EE 108A.

1 unit, Aut, Win (Lougee, D)

ENGR 102M. Technical/Professional Writing for Mechanical Engineers — Required of Mechanical Engineering majors. The process of writing technical/professional documents. Lecture, writing assignments, individual conferences. Corequisite for WIM: ME 203, or consent of instructor.

1 unit, Aut, Win (Staff)

ENGR 103. Public Speaking — Priority to Engineering students. Introduction to speaking activities, from impromptu talks to carefully rehearsed formal professional presentations. How to organize and write speeches, analyze audiences, create and use visual aids, combat nervousness, and deliver informative and persuasive speeches effectively. Weekly class practice, rehearsals in one-on-one tutorials, videotaped feedback. Limited enrollment.

3 units, Aut, Win, Spr (Lougee, D)
ENGR 105. Feedback Control Design — Design of linear feedback control systems for command-following error, stability, and dynamic response specifications. Root-locus and frequency response design techniques. Examples from a variety of fields. Some use of computer-aided design with MATLAB. Prerequisite: EE 102, ME 161, or equivalent. GER:DB-EngrAppSci
3 units, Win, Summer (Enami-Naeini, A)

3 units, Autumn (Horne, R)

ENGR 130, Science, Technology, and Contemporary Society — (Same as STS 101/201.) Key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as sociotechnical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice; and the social shaping and management of contemporary science and technology. GER:DB-SocSci
4-5 units, Autumn (McGinn, R)

ENGR 131. Ethical Issues in Engineering — (Same as STS 115.) Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; the ethics of whistle blowing; ethical conflicts of engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations; ethical issues arising from engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies, guest practitioners, and field research. Limited enrollment. GER:DB-Hum
4 units, Spring (McGinn, R)

ENGR 140A. Management of Technology Ventures — First of three-part sequence for students selected to the Mayfield Fellows Program. Management and leadership within high technology startups, focusing on entrepreneurial skills related to product and market strategy, venture financing and cash flow management, team recruiting and organizational development, and the challenges of managing growth and handling adversity in emerging ventures. Other engineering faculty, founders, and venture capitalists participate as appropriate. Recommended: accounting or finance course (MS&E 140, ECON 90, or ENGR 60).
3-4 units, Spring (Byers, T)

ENGR 140B. Management of Technology Ventures — Open to Mayfield Fellows only; taken during the summer internship at a technology startup. Students exchange experiences and continue the formal learning process. Activities journal. Credit given following quarter.
1 unit, Autumn (Byers, T)

ENGR 140C. Management of Technology Ventures — Open to Mayfield Fellows only. Capstone to the 140 sequence. Students, faculty, employers, and venture capitalists share recent internship experiences and analytical frameworks. Students develop living case studies and integrative project reports.
3 units, Autumn (Byers, T)

ENGR 145. High Technology Entrepreneurship — For juniors, seniors, and co-terminal students of all majors who seek to understand the formation and growth of a technology-based enterprise. The entrepreneurial process, and the role of the individual. Case studies; projects. GER:DB-SocSci
4 units, Win (Byers, T; Komisar, R)

ENGR 150. Social Innovation and Entrepreneurship — (Graduate students register for 250.) The art of innovation and entrepreneurship for social benefit. Project team develops, tests, and iteratively improves technology-based social innovation and business plan to deploy it. Feedback and coaching from domain experts, product designers, and successful social entrepreneurs. Limited enrollment; application required. See http://sie.stanford.edu.
1-6 units, Win, Spring (Behrman, W)

ENGR 154. Vector Calculus for Engineers — (Same as CME 100.) Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green’s, divergence, and Stokes’ theorems. Examples and applications drawn from various engineering fields. Prerequisites: MATH 41 and 42, or 10 units AP credit. GER:DB-Math
5 units, Win, Summer (Behrman, W)

ENGR 155A. Ordinary Differential Equations for Engineers — (Same as CME 102.) Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: solution of initial and boundary value problems, series solutions, Laplace transforms, and non-linear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: CME 100/ENGR 154 or MATH 51. GER:DB-Math
5 units, Win (Darve, E; Moin, P)

5 units, Spring (Khayms, V)

ENGR 155C. Introduction to Probability and Statistics for Engineers — (Same as CME 106.) Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR 154 or MATH 51. GER:DB-Math
5 units, Win (Khayms, V)

3 units, Spring (Sinclair, R)

ENGR 192. Engineering Public Service Project — Volunteer work on a public service project with a technical engineering component. Project requires a faculty sponsor and a community partner such as a nonprofit organization, school, or individual. Required report. See http://soe.stanford.edu/publicservice. May be repeated for credit. Prerequisite: consent of instructor.
1-2 units, Win, Spring, Summer (Staff)
ENGR 199W. Writing of Original Research for Engineers — Technical writing in science and engineering. Students produce a substantial document describing their research, methods, and results. Prerequisite: completion of freshman writing requirements; prior or concurrent enrollment in 2 units of research in the major department; and consent of instructor. WIM for BioMedical Computation requires consent of BMC coordinator.
1-3 units, Aut, Win, Spr (Staff)

PRIMARILY FOR GRADUATE STUDENTS

ENGR 202S. Writing: Special Projects — Structured writing instruction for students working on non-course related materials including theses, dissertations, and journal articles. Weekly individual conferences.
1-5 units, Aut, Win, Spr (Loungee, D)

ENGR 202W. Technical and Professional Writing — The process of writing technical and professional documents. Analyzing audiences; defining purpose; generating and selecting appropriate report materials; structuring, designing, and drafting clear and convincing reports; and clear, concise, emphatic, and mechanically and grammatically clean editing. Weekly writing assignments and individual conferences.
3 units, Aut, Win, Spr (Staff)

3 units, Aut (Rock, S)

ENGR 206. Control System Design — Design and construction of a control system and working plant. Topics include: linearity, actuator saturation, sensor placement, controller and model order; linearization by differential actuation and sensing; analog op-amp circuit implementation. Emphasis is on qualitative aspects of analysis and synthesis, generation of candidate design, and engineering tradeoffs in system selection. Large team-based project. Limited enrollment. Prerequisite: 105.
4 units, Spr (Niemeyer, G)

ENGR 207A. Modern Control Design I — Design and analysis of controllers for discrete-time systems. Frequency domain techniques using z-transforms, and time-domain techniques using state-space linear dynamical systems. Introduction to ideas of linear estimation, linear state-feedback control, and optimal control. Simple laboratory experiments on mechanical systems. Prerequisites: 205 or EE 263, and familiarity with basic linear algebra.
3 units, Win (Lall, S)

ENGR 207B. Modern Control Design II — Design of optimal controllers and optimal estimators for linear dynamical systems. Deterministic linear estimation via least-squares methods, and stochastic minimum variance estimators. The effects of noise on linear systems using frequency-domain and state-space methods. Recursive filtering and smoothing, and the Kalman filter. Prerequisites: 207A and basic probability.
3 units, Spr (Lall, S)

3 units, Win (Rock, S)

3 units, not given this year

3 units, not given this year

ENGR 210B. Advanced Topics in Computation for Control — Recent developments in computational methods. The use of convex programming to find exact and approximate solutions to optimization problems: formulation of physical and logical problems as optimization problems involving polynomial equations and inequalities, use of duality and algebraic methods to find feasible points and certificates of infeasibility, and solution of polynomial optimization problems using semidefinite programming. Applications include feedback control methods for multivehicle systems and communications networks. Prerequisites: EE 364 or equivalent course on convex optimization; and 207B or EE 363 or equivalent course on control.
3 units, not given this year
ENGR 310A. Tools for Team-Based Design—(Same as ME 310A.) For graduate students; open to limited SITN/global enrollment. Project-based, exposing students to the tools and methodologies for forming and managing an effective engineering design team in a business environment, including product development teams that may be spread around the world. Topics: personality profiles for creating teams with balanced diversity; computational tools for project coordination and management; real time electronic documentation as a critical design process variable; and methods for refining project requirements to ensure that the team addresses the right problem with the right solution. Computer-aided tools for supporting geographically distributed teams. Final project analyzes industry-sponsored design projects for consideration in 310B,C. Investigation includes benchmarking and meetings with industrial clients. Deliverable is a detailed document with project specifications and optimal design team for subsequent quarters. Limited enrollment.

3-4 units, Aut (Cutkosky, M; Leifer, L)

ENGR 310B,C. Design Project Experience with Corporate Partners—(Same as ME 310B,C.) Two quarter project for graduate students with design experience who want involvement in an entrepreneurial design team with real world industrial partners. Products developed are part of the student’s portfolio. Each team functions as a small startup company with a technical advisory board of the instructional staff and a coach. Computer-aided tools for project management, communication, and documentation; budget provided for direct expenses including technical assistants and conducting tests. Corporate liaisons via site visits, video conferencing, email, fax, and phone. Hardware demonstrations, peer reviews, scheduled documentation releases, and a team environment provide the mechanisms and culture for design information sharing. Enrollment by consent of instructor; depends on a pre-enrollment survey in December and recommendations by project definition teams in 310A. For some projects, 217 and 218 may be prerequisites or corequisites; see http://me310.stanford.edu for admission guidelines.

B: 3-5 units, Win (Cutkosky, M; Leifer, L),
C: 3-4 units, Spr (Cutkosky, M; Leifer, L)

ENGR 310X. Tools for Team-Based Design Global Teaming Lab—(Same as ME 310X.) Participation in a global design team with students in Sweden or Japan. Limited enrollment. May be repeated for credit. Prerequisite: consent of instructor. Corequisite: ENGR 310A,B,C.

1-5 units, Aut, Win, Spr, Sum (Cutkosky, M; Leifer, L)

ENGR 311A. Women’s Perspective: Choose Your Own Adventure—Master’s and Ph.D. seminar series driven by student interests. Possible topics: time management, career choices, health and family, diversity, professional development, and personal values. Graduate students share experiences and examine scientific research in these areas. Guests speakers from academia and industry, student presentations with an emphasis on group discussion. May be repeated for credit.

1 unit, Win (Sheppard, S)

ENGR 311B. Design the Engineer—The nature of engineering work; how to integrate this work into students’ future. Prerequisite: 311A or consent of instructor.

1 unit, Spr (Sheppard, S)

3-5 units, Spr (Solgaard, O; Pruitt, B)

OVERSEAS STUDIES

These courses are approved for the School of Engineering and offered on video overseas at the location indicated. Students should discuss with their major department adviser which courses would best meet individual needs. Descriptions are in the “Overseas Studies” section of this bulletin.

BERLIN
ENGR 40B. Introductory Electronics—GER:DB-EngrAppSci
5 units, Aut, Win (Khuri-Yakub, B), Spr (Howe, R)

KYOTO
ENGR 40K. Introductory Electronics—GER:DB-EngrAppSci
5 units, Spr (Howe, R)

PARIS
ENGR 40P. Introductory Electronics—GER:DB-EngrAppSci
5 units, Aut (Khuri-Yakub, B), Spr (Howe, R)
AERONAUTICS AND ASTRONAUTICS

Chair: Brian J. Cantwell
Professors: Brian J. Cantwell, Fu-Kuo Chang, Per Enge, Antony Jameson, Ilan Kroo, Sanjiva Lele, Robert W. MacCormack, Stephen Rock, George S. Springer
Associate Professors: Juan Alonso, Claire Tomlin
Assistant Professors: Sanjay Lall, Matthew West
Professor (Research): Richard Christensen
Courtesy Professors: Ronald K. Hanson, Lambertus Hesselink
Consulting Professors: Arif Karabeyoglu, Cynthia H. Null, Robert Twiggs, Stanley Weiss, Gregory Zilliac
Consulting Associate Professor: Jonathan P. How
Consulting Assistant Professors: James Cutler, Steven Murray
Lecturer: Thomas H. Pulliam

Courses given in Aeronautics and Astronautics have the subject code AA. For a complete list of subject codes, see Appendix.

The Department of Aeronautics and Astronautics prepares students for professional positions in industry, government, and academia by offering a comprehensive program of graduate teaching and research. In this broad program, students have the opportunity to learn and integrate multiple engineering disciplines. The program emphasizes structural, aerodynamic, guidance and control, and propulsion problems of aircraft and spacecraft. Courses in the teaching program lead to the degrees of Master of Science, Engineer, and Doctor of Philosophy. Undergraduates and doctoral students in other departments may also elect a minor in Aeronautics and Astronautics.

Requirements for all degrees include courses on basic topics in Aeronautics and Astronautics, as well as in mathematics, and related fields in engineering and the sciences.

The current research and teaching activities cover a number of advanced fields, with emphasis on:

- Active Noise Control
- Aerodynamic Noise
- Aeroelasticity and Flow Simulation
- Aircraft Design, Performance, and Control
- Applied Aerodynamics
- Biomedical Mechanics
- Computational Aero-Acoustics
- Computational Fluid Dynamics
- Computational Mechanics and Dynamical Systems
- Control of Robots, including Space and Deep-Underwater Robots
- Conventional and Composite Materials and Structures
- Direct and Large-Eddy Simulation of Turbulence
- High-Lift Aerodynamics
- Hybrid Propulsion
- Hypersonic and Supersonic Flow
- Inertial Instruments
- Multidisciplinary Design Optimization
- Navigation Systems (especially GPS)
- Networked and Hybrid Control
- Optimal Control, Estimation, System Identification
- Physical Gas Dynamics
- Spacecraft Design and Satellite Engineering
- Turbulent Flow and Combustion

INSTRUCTION AND RESEARCH FACILITIES

The work of the department is centered in the William F. Durand Building for Space Engineering and Science. This 120,000 square foot building houses advanced research and teaching facilities and concentrates in one complex the Department of Aeronautics and Astronautics as well as some of the activities of the Mechanical Engineering Department.

The Durand Building also houses faculty and staff offices and several conference rooms. Attached to the building is a modern classroom building equipped for televising lectures; it contains a lecture auditorium.

Through the department’s close relations with nearby NASA-Ames Research Center, students and faculty have access to one of the best and most extensive collections of experimental aeronautical research facilities in the world, as well as the latest generation of supercomputers.

GENERAL INFORMATION

Further information about the facilities and programs of the department is available at http://aa.stanford.edu, or from the department’s student services office.

The department has a student branch of the American Institute of Aeronautics and Astronautics, which sponsors programs and speakers covering aerospace topics and social events. It also conducts visits to nearby research, government, and industrial facilities, and sponsors a Young Astronauts Program in the local schools.

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

Although primarily a graduate-level department, Aeronautics and Astronautics offers both an undergraduate minor and an interdisciplinary program in Aeronautics and Astronautics (AA) leading to the B.S. degree in Engineering. For detailed information, see the “School of Engineering” section of this bulletin and the Handbook for Undergraduate Engineering Programs, available from the Office of the Dean of Engineering or at http://ughb.stanford.edu.

Undergraduates interested in aerospace are encouraged to combine either a minor or a coterminal M.S. in Aeronautics and Astronautics with a major in a related discipline (such as Mechanical or Electrical Engineering). Students considering these options are encouraged to contact the department’s student services office.

COTERMINAL DEGREES PROGRAM

This special program allows Stanford undergraduates an opportunity to work simultaneously toward a B.S. in another field and an M.S. in Aeronautics and Astronautics. General requirements for this program and admissions procedures are described in the “School of Engineering” section of this bulletin. Admission is granted or denied through the departmental faculty Admissions and Awards Committee. A coterminal student must meet the course and scholarship requirements detailed for the M.S. below.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

GRADUATE PROGRAMS

Admission—To be eligible to apply for admission to the department, a student must have a bachelor’s degree in engineering, physical science, mathematics, or an acceptable equivalent. Students who have not yet received a master’s degree in a closely allied discipline will be admitted to the master’s program; eligibility for the Ph.D. program is considered after the master’s year (see “Doctor of Philosophy” below). Applications for admission with financial aid (fellowships or assistantships) or without financial aid must be received and completed by December 5 for the next Autumn Quarter.

Information about admission to the Honors Cooperative Program is included in the “School of Engineering” section of this bulletin. The
AERONAUTICS AND ASTRONAUTICS

The master’s program (45 units) in Aeronautics and Astronautics (AA) is designed to provide a solid grounding in the basic disciplines. All candidates for this degree are expected to meet the basic course requirements in experimentation in aeronautics and astronautics, fluid mechanics, guidance and control, propulsion, and structural mechanics (category A below), in addition to work in applied mathematics (category B) and technical electives (category C).

1. **Basic Courses** — Candidates choose eight courses as follows:
   - One course in each basic area of Aeronautics and Astronautics:
     - Experimentation: 241X, 236A, 255, 257, 284B, or 290; or ENGR 205, 206, or 207A
     - Fluids: one of 200A, 200B, 210A
     - Guidance and Control: ENGR 105
     - Propulsion: 283
     - Structures: 240A

2. **Technical Electives** — Candidates, in consultation with their advisors, select at least four courses (totaling at least 12 units) in either the major or peripheral fields, for each basic course that is waived. Normally, one course (3 units) in this category may be directed research. Courses taken in satisfaction of the other master’s requirements (categories A, B, and D) may not also be counted as technical electives.

**Other Electives** — It is recommended that all candidates enroll in at least one humanities or social science course. Language classes qualify in this category, but practicing courses in, for example, art, music, and physical education do not qualify.

When planning their programs, candidates should check course descriptions carefully to ensure that all prerequisites have been satisfied. A course that is taken to satisfy a prerequisite for courses in category A (basic courses) or B (mathematics) cannot be counted as a technical elective, but can count toward the M.S. degree in category D (other electives).
and how the program is coherent, contains depth, and fulfills a well-defined career objective. The proposed program must include at least 12 units of graduate-level work in the department and meet rigorous standards of technical breadth and depth comparable to the regular AA Master of Science program. The grade and unit requirements are the same as for the M.S. degree in Aeronautics and Astronautics.

**ENGINEER**

The degree of Engineer represents an additional year (or more) of study beyond the M.S. degree and includes a research thesis. The program is designed for students who wish to do professional engineering work upon graduation and who want to engage in more specialized study than is afforded by the master’s degree alone. It is expected that full-time students will be able to complete the degree within two years of study after the master’s degree.

The University’s basic requirements for the degree of Engineer are outlined in the “Graduate Degrees” section of this bulletin. The following are department requirements.

The candidate’s prior study program should have fulfilled the department’s requirements for the master’s degree or a substantial equivalent. Beyond the master’s degree, a total of 45 units of work is required, including a thesis and a minimum of 30 units of courses chosen as follows:

1. 24 units of approved technical electives, of which 9 are in mathematics or applied mathematics. (A list of courses approved for the mathematics requirement is available in the departmental student services office.) The remaining 15 units are chosen in consultation with the advisor, and represent a coherent field of study related to the thesis topic. Suggested fields include: (a) acoustics, (b) aerospace structures, (c) aerospace systems synthesis and design, (d) analytical and experimental methods in solid and fluid mechanics, (e) computational fluid dynamics, and (f) guidance and control.
2. 6 units of free electives.
3. The remaining 15 units may be thesis, research, technical courses, or free electives.

Candidates for the degree of Engineer are expected to have a minimum grade point average (GPA) of 3.0 for work in courses beyond those required for the master’s degree. All courses except seminars and directed research should be taken for a grade.

**DOCTOR OF PHILOSOPHY**

The University’s basic requirements for the Ph.D. degree are outlined in the “Graduate Degrees” section of this bulletin. Department requirements are stated below.

Qualifications for candidacy for the doctoral degree are contingent on:

1. Having fulfilled department requirements for the master’s degree or its substantial equivalent.
2. Maintaining a high scholastic record for graduate course work.
3. Completing 3 units of a directed research problem (AA 290 or an approved alternative).
4. In the first year of doctoral study, passing an oral Ph.D. qualifying examination given by the department during Autumn and Spring Quarters.

Detailed information about the deadlines, nature, and scope of the Ph.D. qualifying examination can be obtained from the department. Research on the doctoral dissertation may not be formally started before passing this examination.

Beyond the master’s degree, a total of 90 additional units of work is required, including a minimum of 36 units of approved formal course work (excluding research, directed study, and seminars). The courses should consist primarily of graduate courses in engineering and related sciences, and should form a strong and coherent doctoral program. At least 12 units must be from graduate-level courses in mathematics or applied mathematics (a list of approved courses is available from the department student services office). University requirements for continuous registration apply to doctoral students for the duration of the degree.

*Dissertation Reading Committee*—Each Ph.D. candidate is required to establish a reading committee for the doctoral dissertation within six months after passing the department’s Ph.D. Qualifying exams. Thereafter, the student should consult frequently with all members of the committee about the direction and progress of the dissertation research.

A dissertation reading committee consists of the principal dissertation adviser and at least two other readers. Reading committees in Aeronautics and Astronautics often include faculty from another department. It is expected that at least two members of the AA faculty be on each reading committee. If the principal research adviser is not within the AA department, then the student’s AA academic adviser should be one of those members. The initial committee, and any subsequent changes, must be officially approved by the department Chair.

*University Oral and Dissertation*—The Ph.D. candidate is required to take the University oral examination after the dissertation is substantially completed (with the dissertation draft in writing), but before final approval. The examination consists of a public presentation of dissertation research, followed by substantive private questioning on the dissertation and related fields by the University oral committee (four selected faculty members, plus a chair from another department). Once the oral has been passed, the student finalizes the dissertation for reading committee review and final approval. Forms for the University oral scheduling and a one-page dissertation abstract should be submitted to the department student services office at least three weeks prior to the date of the oral for departmental review and approval.

**PH.D. MINOR**

A student who wishes to obtain a Ph.D. minor in Aeronautics and Astronautics should consult the department office for designation of a minor adviser. A minor in Aeronautics and Astronautics may be obtained by completing 20 units of graduate-level courses in the Department of Aeronautics and Astronautics, following a program (and performance) approved by the student’s candidacy chair.

The student’s Ph.D. reading committee and University oral committee must each include at least one faculty member from Aeronautics and Astronautics.

**COURSES**

WIM indicates that the course satisfies the Writing in the Major requirement. (AU) indicates that the course is subject to the University Activity Unit limitations for undergraduates (8 units maximum).

**AA 100. Introduction to Aeronautics and Astronautics**—The principles of fluid flow, flight, and propulsion; the creation of lift and drag, aerodynamic performance including take-off, climb, range, and landing performance, structural concepts, propulsion systems, trajectories, and orbits. The history of aeronautics and astronautics. Prerequisites: MATH 41, 42; elementary physics. GER:DB-EngrAppSci
3 units, Aut (MacCormack, R)

**AA 113N. Structures: Why Things Don’t (and Sometimes Do) Fall Down—Stanford Introductory Seminar. Preference to sophomores. How structures created by nature or built by human beings keep things up and keep things in. Topics: nature’s structures from microorganisms to large vertebrates; buildings from ancient dwellings to modern skyscrapers; spacecraft and airplanes; boats from ancient times to America’s Cup sailboats, and how they win or break; sports equipment from Odysseus’s bow to modern skis; and biomedical devices including bone replacements and cardiovascular stents. How composite materials are used to make a structure light and strong. GER:DB-EngrAppSci
3 units, Win (Springer, G)

**AA 115N. The Global Positioning System: Where on Earth are We, and What Time is It?—Stanford Introductory Seminar. Preference to freshmen. Why people want to know where they are: answers include cross-Pacific trips of Polynesians, missile guidance, and distraught callers. How people determine where they are: navigation technology from dead-reckoning, sextants, and satellite navigation (GPS). Hands-on experience. How GPS works; when it does not work; possibilities for improving performance. GER:DB-EngrAppSci
3 units, Spr (Enge, P)**
AA 190. Directed Research and Writing in Aero/Astro — For undergraduates. Experimental or theoretical work under faculty direction, and emphasizing development of research and communication skills. Written report(s) and letter grade required; if this is not appropriate, enroll in 199. Consult faculty in area of interest for appropriate topics, involving one of the graduate research groups or other special projects. Prerequisite: consent of student services manager and instructor. WIM
3-5 units, Aut, Win, Spr, Sum (Staff)

AA 199. Independent Study in Aero/Astro — Directed reading, lab, or theoretical work for undergraduate students. Consult faculty in area of interest for appropriate topics involving one of the graduate research groups or other special projects. Prerequisite: consent of instructor. 1-5 units, Aut, Win, Spr, Sum (Staff)

AA 200A. Applied Aerodynamics — Fundamental equations of fluid dynamics and the physical assumptions on which they are based; overview of appropriate methods for solving these equations including nonlinear CFD, linear panel and vortex methods; estimation of pressure distributions and resultant airloads on 2-D airfoils, finite wings, slender bodies, and lifting systems; compressibility effects; boundary layer analysis and prediction of drag, separation, and displacement effects. Application to airfoil and wing design. Prerequisite: undergraduate aeronautics course. Recommended: 210A.
3 units, Win (MacCormack, R)

AA 200B. Applied Aerodynamics II — Analytical and numerical techniques for the aerodynamic analysis of aircraft, focusing on finite wing theory, far-field and Trefftz-plane analysis, two-dimensional laminar and turbulent boundary layers in airfoil analysis, similarity rules, aerodynamic stability derivatives. Bi-weekly assignments assign MATLAB or a suitable programming language. Prerequisite: 200A or equivalent. Recommended: 210A.
3 units, not given this year

AA 201A. Fundamentals of Acoustics — Acoustic equations for a stationary homogeneous fluid; wave equation; plane, spherical, and cylindrical waves; harmonic (monochromatic) waves; simple sound radiators; reflection and transmission of sound at interfaces between different media; multipole analysis of sound radiation; Kirchoff integral representation; scattering and diffraction of sound; propagation through ducts (dispersion, attenuation, group velocity); sound in enclosed regions (reverberation, absorption, and dispersion); radiation from moving sources; propagation in the atmosphere and underwater. Prerequisite: first-year graduate standing in engineering, mathematics, sciences; or consent of instructor.
3 units, not given this year

AA 201B. Topics in Aeroacoustics — Acoustic equations for moving medium, simple sources, Kirchhoff formula, and multipole representation; radiation from moving sources; acoustic analogy approach to sound generation in compact flows; theories of Lighthill, Powell, and Mohring; acoustic radiation from moving surfaces; theories of Curl, Williams, and Hawking; application of acoustic theories to the noise from propulsive jets, airframe noise and rotor noise; computational methods for acoustics. Prerequisite: 201A or consent of instructor.
3 units, not given this year

AA 206. Bio-Aerodynamics — The fundamental ideas behind the aerodynamics of biological systems. Flapping flight, low Reynolds number aerodynamics, wing design, flocks, swarms, and dynamic soaring. Readings from current and historical literature dealing with theoretical and observational studies. Applications in aircraft design, and simulation-based problem sets. Prerequisites: course in aerodynamics such as 100, 200A, or 241A.
3 units, not given this year

AA 210A. Fundamentals of Compressible Flow — Introduction to compressible flow. Topics: development of the three-dimensional, nonsteady, field equations for describing the motion of a viscous, compressible fluid; differential and integral forms of the equations; constitutive equations for a compressible fluid; the entropy equation; compressible boundary layers; area-averaged equations for one-dimensional steady flow; shock waves; channel flow with heat addition and friction; flow in nozzles and inlets; oblique shock waves; Prandtl-Meyer expansion; unsteady one-dimensional flow; the shock tube; small disturbance theory; acoustics in one-dimension; steady flow in two-dimensions; potential flow; linearized potential flow; lift and drag of thin airfoils. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.
3 units, Aut (Cantwell, B)

AA 210B. Fundamentals of Compressible Flow — Continuation of 210A with emphasis on more general flow geometry. Use of exact solutions to explore the hypersonic limit. Identification of similarity parameters. Solution methods for the linearized potential equation with applications to wings and bodies in steady flow; their relation to physical acoustics and wave motion in nonsteady flow. Nonlinear solutions for nonsteady constant area flow and introduction to Riemann invariants. Elements of the theory of characteristics; nozzle design; extension to nonsentropic flow. Real gas effects in compressible flow. Flows in various gas dynamic testing facilities. Prerequisite: 210A.
3 units, not given this year

AA 214A. Numerical Methods in Fluid Mechanics — The basic principles underlying the Navier-Stokes equations. Relations between time-accurate and relaxation methods. Implicit and explicit methods combined with flux splitting and space factorization. Considerations of accuracy, stability of numerical methods, and programming complexity. Prerequisites: knowledge of linear algebra and CME 200, 204 (formerly ME 300A,B), or equivalent approved by instructor.
3 units, Aut (Pulliam, T)

3 units, Win (MacCormack, R)

3 units, Spr (MacCormack, R)

AA 215A. Advanced Computational Fluid Dynamics — High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier-Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.
3 units, A: Win, B: Spr (Jameson, A)
AA 218. Introduction to Symmetry Analysis — Methods of symmetry analysis and their use in the reduction and simplification of physical problems. Topics: dimensional analysis, phase-space analysis of autonomous systems of ordinary differential equations, use of Lie groups to reduce the order of nonlinear ODEs and to generate integrating factors, use of Lie groups to reduce the dimension of partial differential equations and to generate similarity variables, exact solutions of nonlinear PDEs generated from groups. Mathematica-based software developed by the instructor is used for finding invariant groups of ODEs and PDEs.

3 units, Spr (Cantwell, B)

AA 222. Introduction to Multidisciplinary Design Optimization — Design of aerospace systems within a formal optimization environment. Mathematical formulation of the multidisciplinary design problem (parameterization of design space, choice of objective functions, constraint definition); survey of algorithms for unconstrained and constrained optimization and optimality conditions; description of sensitivity analysis techniques. Hierarchical techniques for decomposition of the multidisciplinary design problem; use of approximation theory. Applications to design problems in aircraft and launch vehicle design. Prerequisites: multivariable calculus; familiarity with a high-level programming language: FORTRAN, C, C++, or MATLAB.

3 units, not given this year

AA 236A. Spacecraft Design — The design of unmanned spacecraft and spacecraft subsystems, emphasizing identification of design drivers and current design methods. Topics: spacecraft configuration design, mechanical design, structure and thermal subsystem design, attitude control, electric power, command and telemetry, and design integration and operations.

3-5 units, Aut (Cutler, J)

AA 236B C, D. Spacecraft Design Laboratory — Continuation of 236A. Emphasis is on practical application of systems engineering to the life cycle program of spacecraft design, testing, launching, and operations. Prerequisites: 236A and consent of instructor.

3 units, B: Win, C: Spr, D: Sum (Cutler, J)

AA 238. Human-Centered Design for Aerospace Engineers — The what, when, who, and how of human-centered design. Is it art, magic, science, or engineering? How to integrate human-centered processes into engineering design processes. Analysis of recent human-centered aeronautical and space systems to evaluate successes and limitations.

3 units, Win (Null, C)

AA 240A. Analysis of Structures — Elements of two-dimensional elasticity theory. Boundary value problems; energy methods; analyses of solid and thin walled section beams, trusses, frames, rings, monocoque and semimonocoque structures. Prerequisite: ENGR 14 or equivalent.

3 units, Aut (Chang, F)

3 units, Win (West, M)

AA 241A-B. Introduction to Aircraft Design, Synthesis, and Analysis — New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-derived aeronautical system; applied structural fundamentals emphasizing fatigue and fail-safe considerations; design load determination; weight estimation; propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

3 units, A: Aut (Kroo, I), B: Win (Kroo, I)

AA 241X. Design, Construction, and Testing of Autonomous Aircraft — Students grouped according to their expertise to carry out the multidisciplinary design of a solar-powered autonomous aircraft that must meet a clearly stated set of design requirements. Design and construction of the airframe, integration with existing guidance, navigation, and control systems, and development and operation of the resulting design. Design reviews and reports. Prerequisites: expertise in any of the following disciplines by having satisfied the specified courses or equivalent work elsewhere: conceptual design (241A-B); applied aerodynamics (200A-B); structures (240A); composite manufacturing experience; guidance and control (208/271, ENGR 205).

3 units, Spr (Kroo, I)

AA 242A. Classical Dynamics — (Same as ME 331A.) Accelerating and rotating reference frames. Kinematics of rigid body motion; Euler angles, direction cosines. D’Alembert’s principle, equations of motion. Inertia properties of rigid bodies. Dynamics of coupled rigid bodies. Lagrange’s equations and their use. Dynamic behavior, stability, and small departures from equilibrium. Prerequisite: ENGR 15 or equivalent.

3 units, Aut (West, M)

AA 242B. Advanced Dynamics — (Same as ME 331B.) Formulation of equations of motion with Newton/Euler equations; angular momentum principle; D’Alembert principle; power, work, and energy; Kane’s method; and Lagrange’s equations. Numerical solutions of nonlinear algebraic and differential equations governing the behavior of multiple degree of freedom systems. Computed torque control.

3 units, Win (Mitiguy, P)

3 units, not given this year

AA 246. Computational Impact and Contact Modeling — Rigid body contact including multi-body impact, persistent contact, complementarity formulations, and solution techniques. Impact of elastic bodies using finite elements including penalty and mixed constraint formulations, solution techniques, and time-stepping methods. Shocks and vibration induced by impact. Friction and plasticity models for impact and persistent contact. Prerequisites: 242A, 242B or equivalent, familiarity with MATLAB.

3 units, not given this year

AA 252. Techniques of Failure Analysis — Introduction to the field of failure analysis, including fire and explosion analysis, large scale catastrophe projects, traffic accident reconstruction, aircraft accident investigations, human factors, biomechanics and accidents, design defect cases, materials failures and metallurgical procedures, and structural failures. Product liability, failure modes and effects analysis, failure prevention, engineering ethics, and the engineer as expert witness.

3 units, Spr (Weiss, S)

AA 253. Aerospace Product and Systems Development — Modern approaches to aerospace design development for life cycle value. Concepts of air and space systems development in a systems context. Stakeholder value issues and requirements through manufacturing and delivery. Processes and practices for functional analysis, concept and architecture development, trades, domain criteria, interfaces, and verification and validation. Reliability, risk, and safety. Value stream analysis, integrated product and process development, key characteristics, and hardware/software integration aimed at information systems. Tools involve quality function deployment, design structure matrices, and decision mechanisms.

3 units, Spr (Weiss, S)
AA 254. Information Systems in Aerospace Vehicles—Sensors, processors, activators, and operators, and the media and protocols that integrate them for performance and safety.
2 units, not given this year

AA 255. Space Experiments Lab—Design of a space system using off-the-shelf components. Circuits to measure temperature, pressure, voltages, currents, light levels, and chemical sensors. Zilog microprocessor development kit, MaxStream radios, GPS receivers, and small rover hardware.
3 units, Win, Spr (Twiggs, R)

3 units, Win (Chang, F)

AA 257. Design of Composite Structures—Hands-on design, analysis, and manufacturing in composites. Composite beams, columns, and plates; application of finite element methods to composite structures; failure analysis and damage tolerance design of composite structures; and impact damage, compression after impact, and bolted and bonded composite joints. Class divided into working teams (design, analysis, manufacturing, and tests) to design and build a composite structure to be tested to failure; the structure may enter the national SAMPE composite bridge design contest. Prerequisite: 256 or consent of instructor.
3 units, not given this year

AA 271A. Dynamics and Control of Spacecraft and Aircraft—The dynamic behavior of aircraft and spacecraft, and the design of automatic control systems for them. For aircraft: non-linear and linearized longitudinal and lateral dynamics; linearized aerodynamics; natural modes of motion; autopilot design to enhance stability, control the flight path, and perform automatic landings. For spacecraft in orbit: natural longitudinal and lateral dynamic behavior and the design of attitude control systems. Prerequisites: AA242A, ENGR 105.
3 units, Spr (Rock, S)

AA 272C. Global Positioning Systems—The principles of satellite navigation using GPS. Positioning techniques using code tracking, single and dual frequency, carrier aiding, and use of differential GPS for improved accuracy and integrity. Use of differential carrier techniques for attitude determination and precision position determination. Prerequisite: familiarity with matrix algebra.
3 units, Win (Enge, P)

3 units, not given this year

3 units, not given this year

AA 279. Space Mechanics—Orbits of near-earth satellites and interplanetary probes; transfer and rendezvous; decay of satellite orbits; influence of earth’s oblateness; sun and moon effects on earth satellites. Prerequisite: ENGR 15 or equivalent.
3 units, Spr (West, M)

AA 283. Aircraft and Rocket Propulsion—Introduction to the design and performance of airbreathing and rocket engines. Topics: the physical parameters used to characterize propulsion system performance; gas dynamics of nozzles and inlets; cycle analysis of ramjets, turbojets, turboprops, and turboprops; component matching and the compressor map; introduction to liquid and solid propellant rockets; multistage rockets; hybrid rockets; thermodynamics of reacting gases. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.
3 units, Win (Cantwell, B)

AA 284A. Advanced Rocket Propulsion—The principles of rocket propulsion system design and analysis. Fundamental aspects of the physics and chemistry of rocket propulsion. Focus is on the design and analysis of chemical propulsion systems including liquids, solids, and hybrids. Non-chemical propulsion concepts such as electric and nuclear rockets. Launch vehicle design and optimization issues including trajectory calculations. Limited enrollment. Prerequisites: 283 and consent of instructor.
3 units, Spr (Karabeyoglu, M)

AA 284B. Propulsion System Design Laboratory—Propulsion systems engineering through the design and operation of a sounding rocket. Students work in small teams through a full project cycle including requirements definition, performance analysis, system design, fabrication, ground and flight testing, and evaluation. Prerequisite: 284A and consent of instructor.
3 units, Win (Zilliac, G)

AA 284C. Propulsion System Design Laboratory—Continuation of 284A,B. Prerequisite: 284B, and consent of instructor.
3 units, Win (Zilliac, G)

AA 290. Problems in Aero/Astro—(Undergraduate register for 190 or 199.) Experimental or theoretical investigation. Students may work in any field of special interest. Register for section belonging to your research supervisor.
1-5 units, Win, Spr, Sum (Staff)

AA 291. Practical Training—Educational opportunities in high-technology research and development labs in aerospace and related industries. Internship integrated into a student’s academic program. Research report outlining work activity, problems investigated, key results, and any follow-on projects. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own employment and should see department student services manager before enrolling. May be repeated for credit.
1-3 units, Sum (Staff)

AA 294. Case Studies in Aircraft Design—Presentations by researchers and industry professionals. Registration for credit optional. May be repeated for credit. Optional research paper for additional credit.
1 unit, Spr (Jameson, A)

AA 297. Seminar in Guidance, Navigation, and Control—For graduate students with an interest in automatic control applications in flight mechanics, guidance, navigation, and mechanical design of control systems; others invited. Problems in all branches of vehicle control, guidance, and instrumentation presented by researchers on and off campus. Registration for credit optional. May be repeated for credit.
1 unit, Win, Spr (Lall, S)

AA 300. Engineer Thesis—Thesis for degree of Engineer. Students register for section belonging to their thesis adviser. (Staff)
1-15 units, Win, Spr, Sum (Staff)

1-15 units, Win, Spr, Sum (Staff)
COGNATE COURSES
See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

CME 200. Linear Algebra with Application to Engineering Computations—(Same as ME 300A.)
3 units, Aut (Gerritsen, M)

CME 204. Partial Differential Equations in Engineering—(Same as ME 300B.)
3 units, Win (Shafrich, E)

CME 206. Introduction to Numerical Methods for Engineering—
(Same as ME 300C.)
3 units, Spr (Farhat, C)

CME 342. Parallel Methods in Numerical Analysis
3 units, alternate years, not given this year

EE 366. Introduction to Fourier Optics
3 units, alternate years, not given this year

ENGR 105. Feedback Control Design
3 units, Win, Sum (Enami-Naeini, A)

ENGR 205. Introduction to Control Design Techniques
3 units, Aut (Rock, S)

ENGR 206. Control System Design
4 units, Spr (Niemeyer, T)

ENGR 207A,B. Modern Control Design
3 units, A: Win, B: Spr (Lall, S)

ENGR 209A. Analysis and Control of Nonlinear Systems
3 units, Win (Rock, S)

ENGR 209B. Advanced Nonlinear Control
3 units, not given this year

ENGR 210A. Robust Control Analysis and Synthesis
3 units, not given this year

ENGR 298. Seminar in Fluid Mechanics
1 unit, Aut (Moin, P), Win (Staff), Spr (Pitsch, H)

ME 359A,B. Advanced Design and Engineering of Space Systems
4 units, A: Win (Khayms, V), B: Spr (Yiu, Y)

ME 361. Turbulence
3 units, Spr (Pitsch, H)

ME 451A,B. Advanced Fluid Mechanics
3 units, A: Aut (Pitsch, H), B: not given this year

ME 469A. Computational Methods in Fluid Mechanics
3 units, Win (Iaccarino, G)

BIOENGINEERING
Chair: Scott L. Delp
Co-Chair: Paul Yock

Associate Professors: Kwabena Boahen, Charles Taylor

Assistant Professors: Jennifer R. Cochran, Karl Deisseroth

Affiliated Faculty: Rebecca Fahrig, Sanjiv Sam Gambhir, Christopher Jacobs, John Linehan, Michael T. Longaker, Kim Butts Pauly, Daniel Mark Spielman

Student Services: Clark Center, Room S-166

Mail Code: 94305-5444

Student Services Phone: (650) 723-8632

Web Site: http://bioengineering.stanford.edu/

Courses given in Bioengineering have the subject code BIOE. For a complete list of subject codes, see Appendix.

The mission of the Department of Bioengineering is to create a fusion of engineering and the life sciences that promotes scientific discovery and the invention of new technologies and therapies through research and education. The department encompasses both the use of biology as a new engineering paradigm and the application of engineering principles to medical problems and biological systems. The discipline embraces biology as a new science base for engineering.

Bioengineering is jointly supported by the School of Engineering and the School of Medicine. The research and educational thrusts are in biomedical computation, biomedical imaging, biomedical devices, regenerative medicine, and cell/molecular engineering. The clinical dimension of the department includes cardiovascular medicine, neuroscience, orthopedics, cancer care, neurology, and environment.

UNDERGRADUATE PROGRAMS

Although primarily a graduate-level department, pre-approved B.S. majors in Biomechanical Engineering and Biomedical Computation can be arranged through the School of Engineering. For detailed information, see the “School of Engineering” section of this bulletin and the Handbook for Undergraduate Engineering Programs at http://ughb.stanford.edu and available from the Office of the Dean of Engineering.

COTERMINAL B.S./M.S. PROGRAM

This option is available to outstanding Stanford undergraduates who wish to work simultaneously toward a B.S. in another field and an M.S. in Bioengineering. The degrees may be granted simultaneously or at the conclusion of different quarters, though the bachelor’s degree cannot be awarded after the master’s degree has been granted. As Bioengineering does not currently offer an undergraduate program, the B.S. degree must be from another department. The University minimum requirements for the coterminal bachelor’s/master’s program are 180 units for the bachelor’s
degree plus 45 unduplicated units for the master’s degree. Students may apply for the coterminal B.S. and M.S. program after 120 units are completed and they must be accepted into our program one quarter before receiving the B.S. degree. Students should apply directly to the Bioengineering Department. We require students interested in our coterminal degree to take the Graduate Record Examination (GRE); applications may be obtained at http://www.gre.org. New coterminal applications and procedures are now available on the Office of the University Registrar web site. Access the new application form, instructions, and supporting documents online at http://bioengineering.stanford.edu/education/coterminal.html; University regulations and forms concerning coterminal degree programs are available at http://registrar.stanford.edu/shared/publications.htm#Coterm.

The application must provide evidence of potential for strong academic performance as a graduate student. The application is evaluated and acted by the graduate admissions committee of the department. Students are expected to enter with a series of core competencies in mathematics, biology, chemistry, physics, computing, and engineering. Typically, a GPA of at least 3.5 in engineering, science, and math is expected.

GRADUATE PROGRAMS

The University’s requirements for the M.S. and Ph.D. degrees are outlined in the “Graduate Degrees” section of this bulletin.

Admission — Students are expected to enter with a series of core competencies in mathematics, biology, chemistry, physics, computing, and engineering. Students entering the program are assessed by the examination of their undergraduate transcripts and research experiences. Specifically, we require that students have completed mathematics through multivariable calculus and differential equations, completed a series of undergraduate biology courses (equivalent to BIOSCI 41, 42, 43 series) and completed physics, chemistry, and computer sciences courses required of all undergraduate majors in engineering.

Qualified applicants are encouraged to apply for predoctoral national competitive fellowships, especially those from the National Science Foundation. Applicants to the Ph.D. program should consult with their financial aid officers for information and applications.

The deadline for receiving applications is January 2, 2007.

Further information and application forms for all graduate degree programs may be obtained from Graduate Admissions, the Registrar’s Office, http://gradadmissions.stanford.edu/.

MASTER OF SCIENCE

The Master of Science in Bioengineering requires 45 units of course work. The curriculum consists of core bioengineering courses, technical electives, seminars and unrestricted electives. Core courses focus on quantitative biology and biological systems analysis. Approved technical electives are chosen by the student in consultation with his/her graduate adviser, and can be selected from graduate course offerings in mathematics, statistics, engineering, physical sciences, life sciences, and medicine. Seminars highlight emerging research in bioengineering and provide training in research ethics. Unrestricted electives can be freely chosen by the student in association with his/her adviser.

The department’s requirements for the M.S. in Bioengineering are:

1. Bioengineering courses (12-13 units); the following courses are required:
   - BIOE 200A. Molecular and Cellular Engineering (Aut)
   - BIOE 200B. Systems Biology and Tissue Engineering (Win)
   - BIOE 200C. Medical Devices, Diagnostics, Pharmaceuticals (Spr)
   - BIOE 201A. Molecular and Cellular Engineering Lab (Aut)
   - BIOE 201C. Medical Devices, Diagnostics, Pharmaceuticals Lab (Spr)

These courses, together with the approved technical electives, should form a cohesive course of study that provides depth and breadth.

2. Approved Technical Electives (24 units): these units must be selected from graduate courses in mathematics, statistics, engineering, physical science, life science, and medicine. They should be chosen in concert with the bioengineering courses to provide a cohesive degree program in a bioengineering focus area. Up to 9 units of directed study and research may be used as approved electives.

3. Seminars (3 units): the seminar units should be fulfilled through BIOE 390, Introduction to Bioengineering Research, BIOE 393, Bioengineering Forum, or BIOE 459, Frontiers in Interdisciplinary Biosciences. Other relevant seminar units may also be used with the approval of the faculty adviser. One of the seminar units must be MED 255, The Responsible Conduct of Research.

4. Unrestricted Electives (6 units).

Students are assigned an initial faculty adviser to assist them in designing a plan of study that creates a cohesive degree program with a concentration in a particular bioengineering focus area. These focus areas include, but are not limited to: Biomedical Computation, Regenerative Medicine/Tissue Engineering, Molecular and Cell Bioengineering, Biomedical Imaging, and Biomedical Devices.

To ensure that an appropriate program is pursued by all M.S. candidates, students who first matriculate at Stanford at the graduate level (a) submit an adviser approved “Program Proposal for a Master’s Degree” form to the Student Service Office during the first month of the first quarter of enrollment and (b) obtain approval from the M.S. adviser and the Chair of Graduate Studies for any subsequent program change or changes. It is expected that the requirements for the M.S., Bioengineering can be completed within approximately one year. There is no thesis requirement for the M.S.

DOCTOR OF PHILOSOPHY

A student studying for the Ph.D. degree must complete a master’s degree (45 units) comparable to that of the Stanford M.S. degree in Bioengineering. Up to 45 units of master’s degree residency units may be counted towards the degree. The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements. Students admitted to the Ph.D. program with an M.S. degree must complete at least 90 units of work at Stanford. The maximum number of transfer units is 45.

Students are assigned an initial faculty adviser on the basis of the research interests expressed in their application. Initial faculty advisers assist students in selecting courses and identifying research opportunities. The department does not require formal lab rotations, but students are encouraged to explore research activities in two or three labs during their first academic year.

Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of bioengineering fundamentals and a potential for research by passing a qualifying oral examination.

Typically, the exam is taken shortly after the student earns a master’s degree. The student is expected to have a nominal graduate Stanford GPA of 3.25 to be eligible for the exam. Once the student’s faculty sponsor has agreed that the exam is to take place, the student must submit an application folder containing items including a curriculum vitae, research project abstract, and preliminary dissertation proposal to the student service office. Information about the exam may be obtained from the student service office.

In addition to the course requirements of the M.S. degree, doctoral candidates must complete a minimum of 15 additional units of approved formal course work (excluding research, directed study, and seminars).

Dissertation Reading Committee — Each Ph.D. candidate is required to establish a reading committee for the doctoral dissertation within six months after passing the department’s Ph.D. Qualifying exams. Thereafter, the student should consult frequently with all members of the committee about the direction and progress of the dissertation research.

A dissertation reading committee consists of the principal dissertation adviser and at least two other readers. Reading committees in Bioengineering may include faculty from another department. It is expected that at least one member of the Bioengineering faculty be on each reading committee. The initial committee, and any subsequent changes, must be officially approved by the department Chair.

University Oral and Dissertation — The Ph.D. candidate is required to take the University oral examination after the dissertation is substantially completed (with the dissertation draft in writing), but before final approval. The examination consists of a public presentation of dissertation research, followed by substantive private questioning on the dissertation and related
fields by the University oral committee (four selected faculty members, plus a chair from another department). Once the oral has been passed, the student finalizes the dissertation for reading committee review and final approval. Forms for the University oral scheduling and a one-page dissertation abstract should be submitted to the department student services office at least three weeks prior to the date of the oral for departmental review and approval.

**M.D./PH.D. DUAL DEGREE PROGRAM**

Students interested in a career oriented towards bioengineering and medicine can pursue the combined M.D./Ph.D. degree program. Stanford has two ways to do an M.D./Ph.D. U.S. citizens and permanent residents can apply to the Medical Scientist Training Program and can be accepted with funding from both M.D. and Ph.D. programs for stipend and tuition. They can then select a bioengineering laboratory for their Ph.D. Students not admitted to the Medical Scientist Training Program must apply to be admitted separately to the M.D. program and the Ph.D. program of their choice.

The Ph.D. is administered by the Department of Bioengineering. To be formally admitted as a Ph.D. degree candidate in this combined degree program, the student must apply through normal departmental channels and must have earned or have plans to earn an M.S. in bioengineering or other engineering discipline at Stanford or another university. The M.S. requires 45 units of course work which consists of core bioengineering courses, technical electives, seminars, and 6 unrestricted units. Students must also pass the Department of Bioengineering Ph.D. qualifying examination.

For students fulfilling the full M.D. requirements who earned their master’s level engineering degree at Stanford, the Department of Bioengineering waives the normal departmental requirement of 15 units applied towards the Ph.D. degree beyond the master’s degree level through normal course work. Consistent with the University Ph.D. requirements, the department accepts 15 units comprised of courses, research, or seminars approved by the student’s academic adviser and the department chair. Students not completing their M.S. engineering degree at Stanford are required to take 15 units of formal course work in engineering-related areas as determined by their academic adviser.

**COURSES**

**STANFORD INTRODUCTORY SEMINARS**

**BIOE 70Q. Medical Device Innovation** — Stanford Introductory Seminar. Preference to sophomores. Commonly used medical devices in different medical specialties. Guest lecturers include Stanford Medical School physicians, entrepreneurs, and venture capitalists. How to identify clinical needs and design device solutions to address these needs. Fundamentals of starting a company. Field trips to local medical device companies; workshops. No previous engineering training required.

3 units, Spr (Doshi, Mandato)

**ADVANCED UNDERGRADUATE AND GRADUATE**

**BIOE 191. Bioengineering Problems and Experimental Investigation** — Directed study and research for undergraduates on a subject of mutual interest to student and instructor. Prerequisites: consent of instructor and adviser.

1-5 units, Aut, Win, Spr, Sum (Staff)

3 units, Aut (Cochran, J)

**BIOE 200B. Systems Biology and Tissue Engineering** — Preference to Bioengineering graduate students. The interaction, communication, and disorders of organ systems. Major organ systems and engineering means of probing them. Relevant developmental biology and tissue engineering from cells to complex organs.

3 units, Win (Deisseroth, K)

**BIOE 200C. Medical Devices, Diagnostics, and Pharmaceuticals** — Preference to Bioengineering graduate students. Major classes of technologies including imaging techniques, chemical diagnostics, drug design and delivery. Topics include pacemakers, immunoassays, and biomaterials. Principles, practical limitations, and feature trade-offs in clinical settings.

3 units, Spr (Ku, J)

**BIOE 201A. Molecular and Cellular Engineering Lab** — Preference to Bioengineering graduate students. Practical studies of metabolism, information flow and feedback, signal transduction, and means for engineering these processes. Emphasis is on experimental design and data analysis. Corequisite: 200A.

1-2 units, Aut (Quake, S; Robinett, C)

**BIOE 201C. Medical Devices, Diagnostics, and Pharmaceuticals Lab** — Preference to Bioengineering graduate students. Medical devices and instrumentation for clinical diagnosis and drug development. Topics include medical devices, imaging systems (MRI, CT, ultrasound), and cardiovascular devices. Corequisite: 200C.

1-2 units, Spr (Pelc, N)

**BIOE 220. Introduction to Imaging and Image-Based Human Anatomy** — (Same as RAD 220.) The physics of medical imaging and human anatomy through medical images. Emphasis is on normal anatomy, contrast mechanisms, and the relative strengths of each imaging modality. Labs reinforce imaging techniques and anatomy. Recommended: basic biology, physics, and math.

3 units, Win (Gold, G; Butts Pauly, K)

**BIOE 222A. Multimodality Molecular Imaging in Living Subjects I** — (Same as RAD 222A.) In vivo imaging techniques and applications to preclinical models and clinical disease management.

4 units, Win (Gambhir, S; Rao, J)

**BIOE 222B. Multimodality Molecular Imaging in Living Subjects II** — (Same as RAD 222B.) In vivo imaging techniques and applications to preclinical models and clinical disease management. Focus on cancer research, neurobiology, cardiovascular and musculoskeletal diseases.

4 units, Win (Gambhir, S; Rao, J)

**BIOE 261. Principles and Practice of Stem Cell Engineering** — (Same as NSUR 261.) Quantitative models used to characterize incorporation of new cells into existing tissues emphasizing pluripotent cells such as embryonic and neural stem cells. Molecular methods to control stem cell decisions to self-renew, differentiate, die, or become quiescent. Practical, industrial, and ethical aspects of stem cell technology application. Final projects: team-reviewed grants and business proposals.

3 units, Aut (Deisseroth, K; Palmer, T)

**BIOE 281. Biomechanics of Movement** — (Same as ME 281.) Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation.

3 units, Aut (Delp, S)

3 units, Aut (Taylor, C)

3 units, Win (Taylor, C)

GRADUATE

BIOE 331. Protein Engineering — The design and engineering of optimized biomolecules emphasizing proteins. Combinatorial methodologies, protein structure and function, and biophysical analyses of modified biomolecules. Clinically relevant examples from the literature and industry. Prerequisite: basic biochemistry.

2-3 units, Win (Coehran, J)

BIOE 332A,B. Large-Scale Neural Modeling — Emphasis is on cortical computation, from feature maps in the neocortex to episodic memory in the hippocampus, and the roles of recurrent connectivity, rhythmic activity, spike synchrony, synaptic plasticity, and noise and heterogeneity. Techniques to predict and quantify network behavior applied to data collected from models programmed and run in real-time on neuromorphic hardware developed for this purpose.

332A: 2 units, Win (Boahen, K)
332B: 2 units, Spr (Boahen, K)

BIOE 355. Advanced Biochemical Engineering — (Same as CHEM 355.) Approaches to combining new biological knowledge and methods with quantitative engineering principles for the production of beneficial products. Quantitative review of biochemistry and metabolism. Applications of recombinant DNA technology, synthetic biology, and metabolic engineering. The modern production of protein pharmaceuticals as a paradigm for advanced process development principles within the framework of current business and regulatory requirements. Prerequisite: CHEMENG 188 or BIOSCI 41, or equivalent.

3 units, Spr (Swartz, J)

BIOE 370. Microfluidic Device Laboratory — Fabrication of microfluidic devices for biological applications. Photolithography, soft lithography, and micromechanical valves and pumps. Emphasis is on device design, fabrication, and testing.

2 units, Win, Spr (Quake, S)

BIOE 374A. Biodesign Innovation: Needs Finding and Concept Creation — (Same as OIT 384, ME 374A, MED 272A.) Two quarter sequence. Strategies for interpreting clinical needs, researching literature, and searching patents. Clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping, and market assessment. Student entrepreneurial teams create, analyze, and screen medical technology ideas, and select projects for development.

3-4 units, Win (Yock, P; Makower, J; Zenios, S; Milroy, C)

BIOE 374B. Biodesign Innovation: Concept Development and Implementation — (Same as OIT 385, ME 374B, MED 272B.) Two quarter sequence. Concept development and implementation. Early factors for success; how to prototype inventions and refine intellectual property. Lectures, guest medical pioneers, and entrepreneurs about strategic planning, ethical considerations, new venture management, and financing and licencing strategies. Cash requirements; regulatory (FDA), reimbursement, clinical, and legal strategies, and business or research plans.

3-4 units, Spr (Yock, P; Makower, J; Zenios, S; Milroy, C)

BIOE 386. Neuromuscular Biomechanics — (Same as ME 386.) The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with movement disorders.

3 units, not given this year

BIOE 390. Introduction to Bioengineering Research — (Same as MED 289.) Preference to medical and bioengineering graduate students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Topics include: imaging; molecular, cell, and tissue engineering; biomechanics; biomedical computation; biochemical engineering; biosensors; and medical devices. Limited enrollment.

1-2 units, Aut, Win (Taylor, C)

BIOE 391. Directed Study — May be used to prepare for research during a later quarter in 392. Faculty sponsor required. May be repeated for credit.

1-6 units, Aut, Win, Spr, Sum (Staff)

BIOE 392. Directed Investigation — For Bioengineering graduate students. Previous work in 391 may be required for background; faculty sponsor required. May be repeated for credit.

1-10 units, Aut, Win, Spr, Sum (Staff)

BIOE 393. Bioengineering and Biodesign Forum — (Same as ME 389.) Guest speakers present research topics at the interfaces of biology, medicine, physics, and engineering. May be repeated for credit.

1 unit, Aut, Win, Spr (Staff)

BIOE 454. Synthetic Biology and Metabolic Engineering — (Same as CHEMENG 454.) Principles for the design and optimization of new biological systems. The development of new enzymes, metabolic pathways, and organisms for the production of central metabolites, amino acids, pharmaceutical proteins, polypeptide and polyketide antibiotics, and isoprenoids. Prerequisite: CHEMENG 250 or 355, or equivalent; 355 may be taken concurrently.

3 units, Spr (Swartz, J)

BIOE 459. Frontiers in Interdisciplinary Biosciences — (Same as BIOC 459, BIOSCI 459, CHEMENG 459, CHEM 459, PSYCH 459.) Cross-listed in departments in the schools of H&S, Engineering, and Medicine; students register through their affiliated department; otherwise register for CHEMENG 459.) For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://www.stanford.edu/group/biox/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.

1 unit, Aut, Win, Spr (Robertson, C)

BIOE 484. Computational Methods in Cardiovascular Bioengineering — (Same as ME 484.) Lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiologic quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning.

3 units, Spr (Taylor, C)

BIOE 485. Modeling and Simulation of Human Movement — (Same as ME 485.) Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic models of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331A,B, or equivalent.

3 units, not given this year

BIOE 500. Thesis (Ph.D.)

1-15 units, Aut, Win, Spr, Sum (Staff)
COGNATE COURSES

See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

BIOSC 218. Computational Molecular Biology
3 units, Win (Brutlag, D)

BIOMEDIN 210. Introduction to Biomedical Informatics: Fundamental Methods—(Same as CS 270.)
3 units, Aut (Musen, M)

BIOMEDIN 212. Introduction to Biomedical Informatics Research Methodology—(Same as CS 272, GENE 212.)
3 units, Aut (Altman, R; Cheng, B; Klein, T)

BIOMEDIN 214. Representation and Algorithms for Computational Molecular Biology—(Same as CS 274, GENE 214.)
3-4 units, Spr (Altman, R)

EE 369A,B. Medical Imaging Systems
3 units, A: Win, B: Spr (Nishimura, D)

EE 369C. Medical Image Reconstruction
3 units, not given this year

ME 280. Skeletal Development and Evolution
3 units, Spr (Carter, D)

ME 381. Orthopaedic Bioengineering
3 units, Win (Carter, D)

ME 382A,B. Biomedical Device Design and Evaluation
4 units, A: Win, B: Spr (Andriacchi, T)

ME 385. Tissue Engineering Lab
1-2 units, Win (Jacobs, C)

RAD 226. In Vivo Magnetic Resonance Spectroscopy and Imaging
3 units, Win (Spielman, D)

CHEMICAL ENGINEERING

Emeriti: (Professors) Andreas Acrivos, Michel Boudart, George M. Homisy, Robert J. Madix
Chair: Chaitan Khosla
Professors: Stacey F. Bent, Curtis W. Frank, Gerald G. Fuller, Chaitan Khosla, Channing R. Robertson, Eric S. G. Shaqfeh, James R. Swartz
Associate Professor: Zhenan Bao
Assistant Professors: Camilla M. Kao, Charles B. Musgrave, Andrew J. Spakowitz
Lecturers: Shari B. Libicki, Sara Loesch-Frank, John E. Moalli, Anthony Pavone
Acting Assistant Professor: Lisa Y. Hwang
Courtesies Professors: Daniel Herschlag, Jeffrey R. Koseff, Franklin M. Orr, Jr., Robert M. Waymouth
Consulting Professors: Douglas C. Cameron, Kay Kanazawa, Wolfgang Knoll, Jaan Noolandi, Mikhail Paulshto, Conrad Schadt, Robert Schwaar, Do Yeung Yoon
Visiting Professors: Jae Chun Hyun, Subhash Risbud
Administrative Office: Stauffer III, Room 113
Student Services Office: Keck Science Building, Room 189
Mail Code: 94305-5025
Student Services Phone: (650) 723-1302
Web Site: http://chemeng.stanford.edu

Courses given in Chemical Engineering have the subject code CHEMENG. For a complete list of subject codes, see Appendix.

Chemical engineers are responsible for the conception and design of processes involved in the production, transformation, and transport of materials. This activity begins with experimentation in the laboratory and is followed by implementation of the technology into full-scale production. The mission of the Department of Chemical Engineering at Stanford is to provide professional training, development, and education for the next generation of leaders in the chemical and biological sciences and engineering. A large number of industries depend on the synthesis and processing of chemicals and materials. In addition to traditional examples such as the chemical and energy industries, there are increasing opportunities in biotechnology, pharmaceuticals, electronic device fabrication and materials, and environmental engineering. Chemical and biological engineering is essential in these and other fields whenever processes involve the chemical, biological, or physical transformation of matter.

UNDERGRADUATE PROGRAMS

The University’s basic requirements for the bachelor’s degree and coterminal bachelor’s and master’s degrees are discussed in the “Undergraduate Degrees” section of this bulletin.

BACHELOR OF SCIENCE

The Chemical Engineering depth sequence required for the B.S. degree provides training in applied chemical kinetics, biochemical engineering, electronic materials, engineering thermodynamics, plant design, polymers, process analysis and control, separation processes, and transport phenomena. The B.S. program in Chemical Engineering additionally requires basic courses in biology, chemistry, engineering, mathematics, and physics. Undergraduates who wish to major in Chemical Engineering (CHEMENG) should consult the curriculum outlined in the “School of Engineering” section of this bulletin. Courses taken for the departmental major (math; science; science, technology, and society; engineering fundamentals; and engineering depth) must be taken for a letter grade if this option is offered.

There are several 4-year sequences of courses for a B.S. in Chemical Engineering. While each sequence starts at a different level based on prior preparation, all complete the major at the same level. Sample programs are available from the department’s student services and faculty advisers for undergraduates, the Office of Student Affairs in the School of Engineering, and in the Handbook for Undergraduate Engineering Programs, available at http://ughb.stanford.edu/. It is recommended that students discuss their prospective programs with chemical engineering advisers, especially if transferring from biology, chemistry, physics, or another engineering major. With advanced planning, students can usually arrange to attend one of the overseas campuses.

For information about the requirements for a Chemical Engineering minor, see the “School of Engineering” section of this bulletin.

BACHELOR OF SCIENCE WITH HONORS

The Department of Chemical Engineering offers a program leading to a Bachelor of Science in Chemical Engineering with honors. Qualified undergraduate majors conduct independent study and research at an advanced level with a faculty mentor, graduate students, and fellow undergraduates. This three quarter sequential program involves research study in an area proposed to and agreed to by a Department of Chemical Engineering faculty adviser, completion of a faculty-approved thesis, and participation in the Chemical Engineering Honors Symposium held annually during Spring Quarter. The last requirement may also be fulfilled through an alternative, public, oral presentation with the approval of the department chair.

Admission to the honors program is by application. Declared Chemical Engineering students with a cumulative grade point average (GPA) of 3.5 or higher are eligible to submit an application. Students should submit their applications by Winter Quarter of their junior year; applications are not accepted later than the first week of Autumn Quarter of the senior year. An application includes a research proposal, sponsored by a research thesis adviser and a second faculty reader. The adviser, or alternatively a sponsor, must be a member of the Chemical Engineering faculty. Students
should start honors research in their junior year and are encouraged to consider incorporating research opportunities such as those sponsored by Undergraduate Advising and Research (see http://urp.stanford.edu/StudentGrants/) into their three or four quarter honors research proposal. Subject to faculty approval, it is recommended that students include a writing course in the second quarter of their honors project. See departmental student services for a proposal template and other assistance.

In order to receive departmental honors, students admitted to the honors program must:

1. Maintain an overall grade point average (GPA) of at least 3.5 as calculated on the unofficial transcript.
2. Complete at least three quarters of research with a minimum total of 9 units of CHEMENG 190H for a letter grade. All quarters must focus on the same topic. The same faculty adviser and faculty reader should be maintained throughout if feasible.
3. Participate in the Chemical Engineering Honors Symposium held during Spring Quarter with a poster and oral presentation of thesis work or, at the faculty’s discretion, in a comparable public event.
4. Submit a completed draft of thesis simultaneously to the adviser and reader, and if appropriate to the Chemical Engineering faculty sponsor, no later than May 1, or the first day of the second month of the quarter in which the degree is to be conferred.
5. Complete all work and thesis revisions and obtain indicated faculty approvals on the Certificate of Final Reading of Thesis form by the end of the third week of May, or the second month of the graduation quarter.
6. Submit to Chemical Engineering student services three final copies of the honors thesis as approved by the appropriate faculty and with a certificate form for each copy. The deadline is May 21, 2007, or the Monday at the beginning of the fourth week of the second month of the graduation quarter.

COTERMINAL BACHELOR’S AND MASTER’S DEGREES

Undergraduates with strong academic records may apply to study for a master’s degree while completing their bachelor’s degree(s). Further details are in the “Undergraduate Degrees” section of this bulletin. Interested students should discuss their educational goals with their faculty advisers and departmental student services.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

GRADUATE PROGRAMS

The University’s requirements, including residency requirements, for the M.S., Engineer, and Ph.D. degrees are outlined in the “Graduate Degrees” section of this bulletin.

MASTER OF SCIENCE

An M.S. program comprising appropriate course work is available to accommodate students wishing to obtain further academic preparation, after receiving a B.S. degree, before pursuing a professional chemical engineering career. This degree is not a prerequisite for nor does it lead directly into the department’s Ph.D. program. For conferral of an M.S. degree, a formal thesis is not required, but the following departmental requirements must be met.

Unit and Course Requirements—For students terminating their graduate work with the M.S. degree in Chemical Engineering, a graduate-level, thematic program consisting of a minimum of 45 units of academic work is required, including (1) four Chemical Engineering lecture courses selected from the 300 series; (2) 3 units of 699 Colloquia; (3) an additional 30 units, selected from graduate-level science or engineering lecture courses in any department and, by petition to the Chair of the Department of Chemical Engineering, from upper-division undergraduate lecture courses in science and engineering. Alternatively, for terminal M.S. degree students, up to 6 units of research may be used in lieu of up to 6 units of the additional 30 units of research to partially satisfy the 45-unit minimum requirement. Another option for terminal M.S. students is an up-to-six-units combination of research units and no more than 3 units of 459 or other 1- or 2-unit graduate seminar courses in other departments, used in lieu of up to 6 units of the required additional 30 lecture units. Credit toward the M.S. degree is not given for Chemical Engineering special topics courses numbered in the 500 series nor for similar courses in other departments.

To ensure that an appropriate Chemical Engineering graduate program is pursued by all M.S. candidates, students who first matriculate at Stanford at the graduate level must (a) submit during the first quarter, no later than the ninth week, an adviser-approved Program Proposal for a Master’s Degree form to departmental student services for review by the department chair, and (b) obtain approval from the M.S. adviser and the department chair for any subsequent program change or changes. Stanford undergraduates admitted to the coterminal master’s program must (a) submit an adviser-approved Program Proposal for a Master’s Degree (a graduate degree progress form) either during their first quarter of graduate standing or upon the completion of 15 units of graduate work (whichever occurs first), and (b) document with student services their M.S. adviser’s review and approval of their graduate program when they have accrued 30 units toward the degree in Chemical Engineering. All M.S. programs must be reviewed and given final approval by the Chemical Engineering M.S. adviser and the department chair no later than the quarter before the quarter of M.S. degree conferral, in order to permit amendment of the final quarter’s study list if the faculty deem this necessary. Students with questions should contact student services.

Minimum Grade Requirement—Any course used to satisfy the 45-unit minimum for the M.S. degree must be taken for a letter grade, if offered. An overall grade point average (GPA) of 3.0 must be maintained for these courses.

Research Experience—Students in the M.S. program wishing to obtain research experience should work with the M.S. adviser on the choice of research adviser in advance of the quarter(s) of research, and, upon approval, register for enrollment in the appropriate section of CHEMENG 600 and hold meetings on a more frequent basis to help focus and guide the thesis project. It is each student’s responsibility to schedule meetings and to inform student services of meeting dates.

ENGINEER

The degree of Engineer is awarded after completion of a minimum of 90 units of graduate work beyond the B.S. degree and satisfactory completion of all University requirements plus the following departmental requirements. (This degree is not required to enter the Ph.D. program.)

Unit and Course Requirements—A minimum of 90 total units (including research) within which 45 units of lecture course work is required for the Engineer degree, including (1) 300, 310A, 340, 345, 355 and (2) 3 units of 699. The remaining lecture courses, to total at least 45 units, may be chosen from the basic sciences and engineering according to the guidelines given in the Master of Science section and with the consent of the graduate adviser and the department chair. An aggregate of 6 units maximum of the required 45-unit minimum of course work may include such courses as 459 and 699. Students seeking the Engineer degree may apply for the M.S. degree once the requirements for that degree have been fulfilled (see General Requirements in the “Graduate Degrees” section of this bulletin and Chemical Engineering’s “Master of Science” section above).

Minimum Grade Requirement—Any course intended to satisfy the degree requirements must be taken for a letter grade, if offered. An overall grade point average (GPA) of 3.0 must be maintained for these courses.

Reading Committee Requirement—All candidates are required to have an initial meeting with their reading committees consisting of two members of the Chemical Engineering faculty, by the end of their seventh quarter. Following this initial meeting, additional committee meetings must occur no less than once a year until all the requirements for the degree are satisfied. Students are encouraged to hold meetings on a more frequent basis to help focus and guide the thesis project. It is each student’s responsibility to schedule meetings and to inform student services of meeting dates.
THESIS REQUIREMENT — The thesis must represent a substantial piece of research equivalent to nine months of full-time effort and must be approved by the reading committee.

QUALIFICATION FOR THE PH.D. PROGRAM BY STUDENTS READY TO RECEIVE THE DEGREE OF ENGINEER — After completing the requirements for the Engineer degree, a student may request to be examined on the Engineer research work for the purpose of qualifying for the Ph.D. degree. If the request is granted, the student’s thesis must have been approved by the reading committee and be available in its final form for inspection by the entire faculty at least two weeks prior to the scheduled date of the examination.

DOCTOR OF PHILOSOPHY

The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements and the following departmental requirements. Completion of an M.S. degree is not a prerequisite for beginning, pursuing, or completing doctoral work.

UNIT AND COURSE REQUIREMENTS — A minimum of 135 completed units, including a minimum of 45 units of lecture course work, is required for the Ph.D. degree. The following courses are required: 300, 310A, 340, 345, and 355, plus two courses in the 440, 450, or 460 series. These must be taken at Stanford, and any petition to substitute another graduate-level course for any of these core courses must be approved by the chair. The remaining lecture courses may be chosen from graduate-level science and engineering lecture courses in any department and, by petition to the chair, from upper-division undergraduate lecture courses in the sciences and engineering. 3 units of 699 may be included in the required 45 units of lecture courses. Additionally, 1, 2, or 3 units of seminar courses such as 459 may be substituted for up to 3 units of the lecture course work requirement, but for not any of the specified CHEMENG courses above. All proposals for Ph.D. course work must be approved by the student’s adviser and the department chair. Students admitted to Ph.D. candidacy should enroll each quarter in the 500 series, 600, and 699 as appropriate and as study list unit limits allow. Pre-doctoral students have the option of petitioning for a M.S. degree program to be added to their graduate record. When the petition is approved, students may apply for M.S. degree conferral once the requirements for that degree have been fulfilled (see “Master of Science” section above). The M.S. degree must be awarded within the University’s time limit for completion of a master’s degree.

MINIMUM GRADE REQUIREMENT — Any course intended to satisfy the Ph.D. degree requirements must be taken for a letter grade, if offered. An overall grade point average (GPA) of 3.0 must be maintained for these courses.

QUALIFYING EXAMINATION — To be advanced to candidacy for the Ph.D. degree, the student must pass both parts of the qualifying examination. The first part is held at the beginning of Spring Quarter, or the third quarter of study, and the first-year student is asked to make an oral presentation to the faculty of a critical review of a published paper. This preliminary examination, in addition to performance in courses and during research rotations, is the basis for determining whether or not a first-year student may be allowed to choose a research adviser and to begin doctoral research work immediately. Failure in this first part of the qualifying examination leads to termination of a student’s study towards the Ph.D. degree; however, the student may continue to work toward an M.S. degree (see “Master of Science” section above). It also precludes any financial aid beyond that already awarded. Students who pass the preliminary examination take the second part of the qualifying examination at the beginning of their second year, or the fifth quarter. This second examination before the faculty is an oral presentation and defense of their current research work. Students who pass both examinations must promptly submit Application for Candidacy for Doctoral Degree forms approved by their research advisers and at the same time establish and meet with their doctoral dissertation reading committees.

READING COMMITTEE REQUIREMENT — All Ph.D. candidates are required to assemble reading committees and to have an initial committee meeting by the end of their seventh quarter. Reading committee meetings are not examinations; they are intended to be discussion sessions, to help focus and guide the dissertation project. Following the initial committee meeting, additional meetings must take place no less than once per year until all the requirements for the Ph.D. degree are satisfied. The department encourages students to take advantage of the benefits of more frequent meetings with their entire reading committee as a group. It is the student’s responsibility to schedule committee meetings and to report the meeting dates to the student services manager.

TEACHING REQUIREMENT — Teaching experience is considered an essential component of doctoral training. All Ph.D. candidates, regardless of the source of their financial support, are required to assist in the teaching of a minimum of two chemical engineering courses.

DISSERTATION AND ORAL DEFENSE REQUIREMENTS — A dissertation based on a successful investigation of a fundamental problem in chemical engineering is required. Within approximately five calendar years after enrolling in the department, students are expected to have fulfilled all the requirements for this degree, including the completion of dissertations approved by their research advisers. Upon adviser approval, copies of the final draft of a dissertation must be distributed to each reading committee member. No sooner than three weeks after this distribution, students may schedule University oral examinations. The examination is a dissertation defense, based on the candidate’s dissertation research, and is in the form of a public seminar followed by a private examination by the faculty on the student’s oral examination committee. Satisfactory performance in the oral examination and acceptance of an approved dissertation by Graduate Degree Progress, Office of the University Registrar, leads to Ph.D. degree conferral.

PH.D. MINOR

A Ph.D. minor is a program outside a student’s Ph.D. department. The University’s general requirements for the Ph.D. minor are specified in the “Graduate Degrees” section of this bulletin. An application for a Ph.D. minor must be approved by both the major and minor departments.

A student desiring a Ph.D. minor in Chemical Engineering must have a minor program adviser who is a regular Chemical Engineering faculty member. At a minimum, this adviser must be a member of the student’s reading committee for the doctoral dissertation, and the entire reading committee must meet at least once and at least one year prior to the scheduling of the student’s oral examination. The department strongly prefers that regular reading committee meetings start in the second year of graduate study. In addition, the minor adviser must be a member of the student’s University oral examination committee.

The Ph.D. minor program must include at least 20 units of graduate-level lecture courses (that is, courses numbered at the 200 level or above), but may not include in the 20-unit minimum any 1-2 unit courses in Chemical Engineering. The list of courses must form a coherent program and must be approved by the minor program adviser and the chair of the department. All courses for the minor must be taken for a letter grade, and a GPA of at least 3.0 earned for these courses.

RESEARCH ACTIVITIES

Research investigations are currently being carried out in the following fields: applied statistical mechanics, biocatalysis, bioengineering, colloid science, computational materials science, electronic materials, hydrodynamic stability, kinetics and catalysis, Newtonian and non-Newtonian fluid mechanics, polymer science, rheo-optics of polymeric systems, and surface and interface science. Additional information may be found at http://chemeng.stanford.edu.

FELLOWSHIPS AND ASSISTANTSHIPS

Fellowships are awarded each year, primarily to Ph.D. students. Fellowships for incoming students are awarded in the spring prior to matriculation at the beginning of the following academic year. Current students are encouraged to apply for external, competitive fellowships and may obtain information about various awarding agencies from faculty advisers and student services.

Assistantships are paid positions for graduate students that, in addition to a salary, provide the benefit of a tuition allocation. Individual faculty appoint students to research assistantships; the department chair appoints doctoral students to teaching assistantships. Contact student services for further information.
FURTHER INFORMATION
More information about the department can be found at http://chemeng.stanford.edu. Current Stanford students interested in pursuing advanced work in Chemical Engineering are encouraged to contact student services; admission is by approval of an internal petition. All other students should go to http://gradadmissions.stanford.edu/ for additional guidelines regarding application requirements and processes.

GRADUATE COURSES IN BIOLOGICAL INTERDISCIPLINARY SCIENCES AND ENGINEERING
The Department of Chemical Engineering offers opportunities for students to pursue course work in interdisciplinary biosciences which include the chemical, physical, mathematical, and engineering sciences. These include CHEMENG 250, 288, 289, 355, and 454. In addition, students seeking a broad introduction to current topics in the interdisciplinary biosciences and engineering should consider CHEMENG 459, Frontiers in Interdisciplinary Biosciences, which covers emerging technologies and other subject matter at the intersection of engineering and biology ranging from molecular to complex systems; see http://biox.stanford.edu. Students are encouraged to review course offerings in all departments of the School of Engineering.

COURSES
WIM indicates that the course satisfies the Writing in the Major requirements. (AU) indicates that the course is subject to the University Activity Unit limitations for undergraduates (8 units maximum).

PRIMARILY FOR UNDERGRADUATES
CHEMENG 10. The Chemical Engineering Profession—Open to all undergraduates; most useful for juniors and seniors in the major. Seminar. Faculty and alumni of the Chemical Engineering department present career paths and post-graduation opportunities available to Chemical Engineering graduates. Possible topics: preparing for graduate school (M.S. and Ph.D., and in law, business, medicine, other engineering fields); opportunities in areas related to the environment, soft and hard materials, and biotechnology; and non-traditional opportunities.
1 unit, Aut (Frank, C)

CHEMENG 20. Introduction to Chemical Engineering—(Same as ENGR 20.) Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. GER:DB-EngrAppSci 3 units, Spr (Robertson, C)

CHEMENG 25. Biotechnology—(Same as ENGR 25.) The interplay between molecular and cellular biology and engineering principles in the design, development, manufacture, and formulation of new drugs and agrochemicals. Emphasis is on understanding the scope of engineering in modern biotechnology. Topics include biological fundamentals, genomics and bioinformatics, protein engineering, fermentation and downstream recovery of biomolecules, antibody technologies, plant biotechnology, vaccines, transgenic animals, and stem cell technologies. The role of intellectual property and venture capital in biotechnology. Recommended: prior exposure to chemistry and biology. GER:DB-EngrAppSci 3 units, Spr (Hwang, L)

CHEMENG 60Q. Environmental Regulation and Policy—Stanford Introductory Seminar. Preference to sophomores. How environmental policy is formulated in the U.S. How and what type of scientific research is incorporated into decisions. How to determine acceptable risk, the public’s right to know of chemical hazards, waste disposal and clean manufacturing, brownfield redevelopment, and new source review regulations. The proper use of science and engineering including media presentation and misrepresentation, public scientific and technical literacy, and emotional reactions. Alternative models to formulation of environmental policy. Political and economic forces, and stakeholder discussions. GER:DB-EngrAppSci 3 units, Aut (Robertson, C; Libicki, S)

CHEMENG 70Q. Masters of Disaster—Stanford Introductory Seminar. Preference to sophomores. For students interested in science, engineering, politics, and the law. Learn from past disasters to avoid future ones. How disasters can be tracked to failures in the design process. The roles of engineers, artisans, politicians, lawyers, and scientists in the design of products. Failure as rooted in oversight in adhering to the design process. Student teams analyze real disasters and design new products presumably free from the potential for disastrous outcomes. GER:DB-EngrAppSci 3 units, Aut (Robertson, C; Moalli, J)

CHEMENG 80Q. Art, Chemistry, and Madness—Stanford Introductory Dialogue. Preference to sophomores. The science behind the properties of art materials, including oil, acrylic, and watercolor paints, inks, clays, and glazes. Perspectives of the artist and the material scientist. How the function of the material is based on principles of chemistry and physics. Toxicological effects of art supplies. Field trip to local art supply store.
3 units, Spr (Frank, C; Loesch-Frank, S)

CHEMENG 100. Chemical Process Modeling, Dynamics, and Control—Mathematical methods applied to engineering problems using chemical engineering examples. The development of mathematical models to describe chemical process dynamic behavior. Analytical and computer simulation techniques for the solution of ordinary differential equations. Dynamic behavior of linear first- and second-order systems. Introduction to process control. Dynamics and stability of controlled systems. Prerequisites: CHEMENG 20 or ENGR 20; CME 102 or MATH 53 or 170. 3 units, Aut (Hwang, L)

CHEMENG 110. Equilibrium Thermodynamics—Thermodynamic properties, equations of state, properties of non-ideal systems including mixtures, and phase and chemical equilibria. Prerequisite: CHEM 171. 3 units, Win (Hwang, L)

CHEMENG 120A. Fluid Mechanics—The flow of isothermal fluids from a momentum transport viewpoint. Continuum hypothesis, scalar and vector fields, fluid statics, non-Newtonian fluids, shell momentum balances, equations of motion and the Navier-Stokes equations, creeping and potential flow, parallel and nearly parallel flows, time-dependent parallel flows, boundary layer theory and separation, introduction to drag correlations. Prerequisites: junior in Chemical Engineering or consent of instructor; 100 and CME 102 or equivalent. 4 units, Win (Fuller, G)

CHEMENG 120B. Energy and Mass Transport—General diffusive transport, heat transport by conduction, Fourier’s law, conduction in composites with analogies to electrical circuits, advection-diffusion equations, forced convection, boundary layer heat transport via forced convection in laminar flow, forced convection correlations, free convection, free convection boundary layers, free convection correlations and application to geophysical flows, melting and heat transfer at interfaces, radiation, diffusive transport of mass for dilute and non-dilute transfer, mass and heat transport analogies, mass transport with bulk chemical reaction, mass transport with interfacial chemical reaction, evaporation. Prerequisite 120A or consent of instructor. 4 units, Spr (Spakowitz, A)

CHEMENG 130. Separation Processes—Analysis and design of equilibrium and non-equilibrium separation processes. Possible examples: distillation, liquid-liquid extraction, flash distillation, electrophoresis, centrifugation, membrane separations, chromatography, and reaction-assisted separation processes. 3 units, Spr (Musgrave, C)
CHEMENG 140. Microelectronics Processing Technology — (Same as 240.) The chemistry and transport of microelectronics device fabrication. Introduction to solid state materials and electronic devices. Chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, metallization, and plasma processing with emphasis on chemical, kinetic, and transport considerations. Recommended: CHEM 33, 171, and PHYSICS 55.
3 units, Spr (Bao, Z)

CHEMENG 150. Biochemical Engineering — (Same as 250.) How biological concepts are combined with quantitative engineering principles to produce beneficial products. The production of protein pharmaceuticals as a paradigm to explore quantitative biochemistry and cellular physiology, the elemental stoichiometry of metabolism, recombinant DNA technology, synthetic biology and metabolic engineering, fermentation development and control, product isolation and purification, protein folding and formulation, and biobusiness and regulatory issues. Prerequisite: CHEMENG 188 or BIOSCI 41 or equivalent.
3 units, Aut (Swartz, J)

CHEMENG 160. Polymer Science and Engineering — (Same as 260.) Topics include morphology of amorphous and semicrystalline polymers, linear viscoelasticity, and rheology. Selected applications of polymers in biomedical devices and microelectronics. Recommended: CHEM 33 and 171, or equivalent.
3 units, Spr (Hwang, L)

CHEMENG 170. Kinetics and Reactor Design — Chemical kinetics, elementary reactions, mechanisms, rate-limiting steps, and quasi-steady state approximations. Ideal isothermal and non-isothermal reactors; design principles. Steady state and unsteady state operation of reactors; conversion and limitations of thermodynamic equilibrium. Enzymes and heterogeneous catalysis and catalytic reaction mechanisms. Prerequisites: 110, 120A, 120B.
3 units, Aut (Bent, S)

CHEMENG 180. Chemical Engineering Plant Design — Open to seniors in chemical engineering or by consent of instructor. Application of chemical engineering principles to the design of practical plants for the manufacture of chemicals and related materials. Topics: flow-sheet development from a conceptual design, equipment design for distillation, chemical reactions, heat transfer, pumping, and compression; estimation of capital expenditures and production costs; plant construction.
3 units, Spr (Pavone, A)

CHEMENG 185. Chemical Engineering Laboratory — Experimental aspects of chemical engineering science emphasizing development of communication skills. Experiments illustrating lecture subjects conducted by student groups. WIM
4 units, Win (Frank, C; Hwang, L)

CHEMENG 188. Biochemistry I — (Same as 288, BIOSCI 188/288, CHEM 188.) Chemistry of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties of proteins including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Pre- or corequisites: BIOSCI 141, CHEM 131, and CHEM 135 or CHEM 171. GER: DB-NatSci
3 units, Aut (Kohler, J)

CHEMENG 189. Biochemistry II — (Same as 289, BIOSCI 189/289, CHEM 189.) Metabolism. Glycolysis, gluconeogenesis, citric acid cycle, oxidative phosphorylation, pentose phosphate pathway, glycolysis, metabolism, fatty acid metabolism, protein degradation and amino acid catabolism, protein translation and amino acid biosynthesis, nucleotide biosynthesis, DNA replication, recombination and repair, lipid and steroid biosynthesis. Medical consequences of impaired metabolism. Therapeutic intervention of metabolism. Prerequisite: 188/288. GER: DB-NatSci
3 units, Win (Khosla, C)

CHEMENG 190. Undergraduate Research in Chemical Engineering — Laboratory or theoretical work for undergraduates under the supervision of a faculty member. Research in one of the graduate research groups or other special projects in the undergraduate chemical engineering lab. Students should consult advisers for information on available projects.
1-6 units, Aut, Win, Spr, Sum (Staff)

CHEMENG 190H. Undergraduate Honors Research in Chemical Engineering — For declared Chemical Engineering B.S. with honors majors who have obtained faculty approval for a research proposal. Research for at least 3 quarters, concluding thesis, and oral presentation of work.
2-5 units, Aut, Win, Spr, Sum (Staff)

PRIMARILY FOR GRADUATE STUDENTS

CHEMENG 240. Microelectronics Processing Technology — (Same as 140; see 140.)
3 units, Spr (Bao, Z)

CHEMENG 250. Biochemical Engineering — (Same as 150; see 150.)
3 units, Aut (Swartz, J)

CHEMENG 260. Polymer Science and Engineering — (Same as 160; see 160.)
3 units, Spr (Hwang, L)

CHEMENG 288. Biochemistry I — (Same as 188, BIOSCI 188/288, CHEM 188; see 188.)
3 units, Aut (Kohler, J)

CHEMENG 289. Biochemistry II — (Same as 189, BIOSCI 189/289, CHEM 189; see 189.)
3 units, Win (Khosla, C)

CHEMENG 300. Applied Mathematics in the Chemical and Biological Sciences — (Same as CME 330.) Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalized vector space theory, linear operator theory with eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102 and 104, or equivalents.
3 units, Aut (Shaqfeh, E)

CHEMENG 310. Microscale Transport in Chemical Engineering — Transport phenomena on small–length scales appropriate to applications in microfluidics, complex fluids, and biology. The basic equations of mass, momentum, and energy, derived for incompressible fluids and simplified to the slow–flow limit. Topics: solution techniques utilizing expansions of harmonic and Green’s functions; singularity solutions; flows involving rigid particles and fluid droplets; applications to suspensions; lubrication theory for flows in confined geometries; slender body theory; and capillarity and wetting. Prerequisites: 120A,B, 300, or equivalents.
3 units, Win (Fuller, G)

CHEMENG 340. Molecular Thermodynamics — Statistical mechanics; ensembles, partition functions, and distribution functions. Applications to imperfect gases, liquid theory, and defects and heal capacity of solids; statistical mechanics of phase equilibria, and phase diagrams; and the Ising model, intermolecular forces and molecular simulation.
3 units, Aut (Musgrave, C)

CHEMENG 345. Fundamentals and Applications of Spectroscopy — Development of theoretical approaches to spectroscopy, including spectroscopic transitions, transition probabilities, and selection rules. Application to photon and electron spectroscopies of the gas and solid phases. Topics: rotational spectroscopy; infrared and Raman vibrational spectroscopies; fluorescence spectroscopy; Auger, x-ray and ultraviolet photoelectron spectroscopies. Prerequisite: CHEM 271 or course in quantum mechanics.
3 units, Win (Bent, S)
CHEMENG 355. Advanced Biochemical Engineering — (Same as BIOE 355.) Approaches to combining new biological knowledge and methods with quantitative engineering principles for the production of beneficial products. Quantitative review of biochemistry and metabolism. Applications of recombinant DNA technology, synthetic biology, and metabolic engineering. The modern production of protein pharmaceuticals as a paradigm for advanced process development principles within the framework of current business and regulatory requirements. Prerequisite: CHEMENG 188 or BIOSCI 41, or equivalent.

3 units, Spr (Swartz, J)

CHEMENG 442. Structure and Reactivity of Solid Surfaces — The structure of solid surfaces including experimental methods for determining the structure of single crystal surfaces. The adsorption of molecules on these surfaces including the thermodynamics of adsorption processes, surface diffusion, and surface reactions. Molecular structure of adsorbates. Current topics in surface structure and reactivity, including systems for heterogeneous catalysis and electronic materials.

3 units, not given this year (Bent, S)

CHEMENG 444. Quantum Simulations of Molecules and Materials — Quantum atomistic simulations to predict atomic structure, properties, reaction mechanisms, and kinetics. Review of quantum mechanics. Quantum chemical theory and electronic structure methods including Hartree Fock, configuration interaction, many body perturbation theory, and density functional theory. Property calculations: energy, forces, structure, and electronic and vibrational spectra. Student designed simulation projects involve applications to semiconductor processing, surface science, biochemistry, catalysis, polymers, environmental chemistry, and combustion. Prerequisite: undergraduate quantum mechanics.

3 units, Win (Musgrave, C)

CHEMENG 454. Synthetic Biology and Metabolic Engineering — (Same as BIOE 454.) Principles for the design and optimization of new biological systems. The development of new enzymes, metabolic pathways, and organisms for the production of central metabolites, amino acids, pharmaceutical proteins, polypeptide and polyketide antibiotics, and isoprenoids. Prerequisite: CHEMENG 250 or 355, or equivalent; 355 may be taken concurrently.

3 units, Spr (Swartz, J)

CHEMENG 459. Frontiers in Interdisciplinary Biosciences — (Same as BIOC 459, BIOE 459, BIOSCI 459, CHEM 459, PSYCH 459.) (Cross-listed in departments of the schools of H&S, Engineering, and Medicine; students register through their affiliated department; otherwise register for CHEMENG 459.) For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://www.stanford.edu/group/biox/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.

1 unit, Aut, Win, Spr (Robertson, C)

CHEMENG 460. Polymer Surfaces and Interfaces — Principles of interfacial thermodynamics and polymer physics applied to polymer surfaces and interfaces. Treatments of intermolecular forces; conformational statistics of macromolecular structure; models for polymer dynamics; tethering of polymers at different interfaces; techniques for chemical modification of surfaces; methods for physical characterization of polymer surfaces and interfaces. Applications in adhesion and biocompatibility. Prerequisite: exposure to principles of polymer science or consent of instructor.

3 units, Win (Frank, C)

CHEMENG 462. Complex Fluids and Non-Newtonian Flows — Division of complex fluids into suspensions, solutions, and melts. Suspensions as colloidal and non-colloidal. Extra stress and relation to the stresslet. Suspension rheology including Brownian and non-Brownian fibers. Microhydrodynamics and the Fokker-Planck equation. Linear viscoelasticity and the weak flow limit. Polymer solutions including single mode (dumbbell) and multimode models. Nonlinear viscoelasticity. Intermolecular effects in molindile solutions and melts and the concept of reptation. Prerequisites: low Reynolds number hydrodynamics or consent of instructor.

3 units, not given this year (Shaqfeh, E)

CHEMENG 464. Polymer Chemistry — Polymer synthesis, characterization, and application. Topics include organic and kinetic aspects of polymerization, polymer characterization techniques, and structure and properties of bulk polymers for commercial applications and emerging technologies.

3 units, not given this year (Bao, Z)

CHEMENG 466. Polymer Physics — Concepts and applications in the equilibrium and dynamic behavior of complex fluids. Topics include solution thermodynamics, scaling concepts, semiflexibility, characterization of polymer size (light scattering, osmotic pressure, size-exclusion chromatography, intrinsic viscosity), viscoelasticity, rheological measurements, polyelectrolytes, liquid crystals, biopolymers, and gels.

3 units, Aut (Spakowitz, A)

CHEMENG 468. Advanced Transport Topics in Complex Fluids and Biological Systems — Topics include: the theory of Brownian motion; slender body theory in Stokes flows; advection-dispersion theory and generalized Taylor dispersion; the molecular basis for complex fluid rheology; hindered diffusion and flow in porous media; heat and mass transfer in laminar boundary layers with reactions, adsorption, and desorption; drop deformation and breakup; and the hydrodynamic stability of laminar multiphase flows. Prerequisite: 310 or equivalent, or consent of instructor.

3 units, Spr (Shaqfeh, E), alternate years, not given next year

CHEMENG 500. Special Topics in Protein Biotechnology — Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut, Win, Spr, Sum (Swartz, J)

CHEMENG 501. Special Topics in Semiconductor Processing — Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut, Win, Spr, Sum (Bent, S)

CHEMENG 502. Special Topics in Computational Materials Science — Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut, Win, Spr, Sum (Musgrave, C)

CHEMENG 503. Special Topics in Biocatalysis — Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut, Win, Spr, Sum (Khosla, C)

CHEMENG 504. Special Topics in Bioengineering — Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut, Win, Spr, Sum (Robertson, C)

CHEMENG 505. Special Topics in Microtechnology — Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut, Win, Spr, Sum (Fuller, G)

CHEMENG 507. Special Topics in Polymer Physics and Molecular Assemblies — Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut, Win, Spr, Sum (Frank, C)
CHEMENG 510. Special Topics in Transport Mechanics—Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.
  1 unit, Aut, Win, Spr (Shaqfeh, E)

CHEMENG 511. Special Topics in Functional Genomics—Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.
  1 unit, Aut, Win, Spr, Summer (Kao, C)

CHEMENG 513. Special Topics in Functional Organic Materials for Electronic and Optical Devices—Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.
  1 unit, Aut, Win, Spr, Summer (Bao, Z)

CHEMENG 514. Special Topics in Biopolymer Physics—Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.
  1 unit, Aut, Win, Spr, Summer (Spakowitz, A)

CHEMENG 600. Graduate Research in Chemical Engineering—Laboratory and theoretical work leading to partial fulfillment of requirements for an advanced degree.
  1-12 units, Aut, Win, Spr, Summer (Staff)

CHEMENG 699. Colloquium—Weekly lectures by experts from academia and industry in the field of chemical engineering. May be repeated for credit.
  1 unit, Aut, Win, Spr (Spakowitz, A)

CIVIL AND ENVIRONMENTAL ENGINEERING

Chair: Richard G. Luthy
Associate Chair: Gregory G. Deierlein

Associate Professors: Sarah L. Billington, David L. Freyberg, Lynn M. Hildemann, Mark Z. Jacobson, Eduardo Miranda (on leave), Azadeh Tabazadeh.

Assistant Professors: Jack W. Baker, Alexandria B. Boehm, Jennifer Davis, Oliver B. Fringer, John R. Haymaker

Professor (Research): Martin Reinhard

Courtesy Professors: Peter M. Pinsky, David D. Pollard, Stephen H. Schneider, George S. Springer

Courtesy Assistant Professor: Margot G. Gerritsen

Consulting Associate Professors: Olaf A. Cirpka, Amatzia Genin, Thomas L. Holzer, Jonathan G. Koomey, Michael E. London, Colin Ong, Joel N. Swisher, Jie Wang, James M. Williams, Jane Woodward

Consulting Assistant Professors: Cristina L. Archer, William J. Behrman, Murray D. Einarson, Edward S. Gross, Charles S. Han, Calvin K. Kam, Lisa V. Lucas, Michael L. MacWilliams

MAP/Ming Visiting Professor: Amory B. Lovins

Shimizu Visiting Professor: James R. Rice

UPS Visiting Professor: Kristopher McNeill

* Recalled to active duty.

Department Offices: Terman Engineering Center, Room M42
Mail Code: 94305-4020
Phone: (650) 723-3074; Fax: (650) 725-8662
Web Site: http://cee.stanford.edu

Courses in Civil and Environmental Engineering have the subject code CEE. For a complete list of subject codes, see Appendix.

The undergraduate Civil Engineering major provides a pre-professional program balancing the fundamentals common to many special fields of civil engineering with specialization in Environmental and Water Studies or Structures and Construction. The undergraduate Environmental Engineering major offers a more focused program in Environmental and Water Studies. Laboratory facilities are available to students in building energy, construction, environmental engineering and science, experimental stress analysis, fluid mechanics, structural and earthquake engineering, and advanced sensing technologies. The department also hosts the School of Engineering pre-approved major in Architectural Design; see requirements in the “School of Engineering” section of this bulletin.
At least one year of graduate study is strongly recommended for professional practice. Students who contemplate advanced study at Stanford should discuss their plans with their advisers in the junior year. The coterminal B.S.-M.S. program should be considered by students who want an integrated five-year program. Potential coterminal students in Environmental Engineering and Science should be aware that applications are considered once a year, near the beginning of Winter Quarter.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

The Department of Civil and Environmental Engineering (CEE), in collaboration with other departments, offers graduate degree programs in: Atmosphere and Energy Construction Engineering and Management Design/Construction Integration Environmental and Water Studies Environmental Engineering and Science Environmental Fluid Mechanics and Hydrology Structural Engineering and Geomechanics Geomechanics Structural Engineering Research work and instruction under these programs are carried out in the following facilities: Building Energy Laboratory, Environmental Fluid Mechanics Laboratory (EFML), Geotechnical Engineering Laboratory, Structural Engineering Laboratory, and water quality control research and teaching laboratories. Research in earthquake engineering is conducted in the John A. Blume Earthquake Engineering Center. Research on control of hazardous substances is coordinated within the Western Region Hazardous Substance Research Center. Research and advanced global teamwork education is conducted in the Project Based Learning (PBL) Laboratory. In collaboration with the Department of Computer Science, the Center for Integrated Facility Engineering (CIFE) employs advanced CAD, artificial intelligence, communications concepts, and information management to integrate the presently fragmented participants in the facility development process and to support design and construction automation.

PROGRAMS OF STUDY ATMOSPHERE/ENERGY

Energy and Atmosphere are linked in two primary ways. First, fossil-fuel derived energy use contributes to air pollution and climate change. Second, atmospheric winds and solar radiation are major sources of renewable energy. Because atmospheric problems can be mitigated best by increasing the efficiency with which energy is used, optimizing the use of natural energy resources, and understanding the effects of energy technologies on the atmosphere, the areas of Energy and Atmosphere are naturally coupled together.

Students in this program receive a transcript designation of Atmosphere/Energy. Courses include those in energy resources, indoor and outdoor air pollution, energy efficient buildings, climate change, renewable energy, weather and storm systems, energy technologies in developing countries, energy systems, and air quality management.

Current research in the program includes projects on wind energy distribution and statistics, indoor exposure to air pollutants, the effects of a hydrogen economy on atmospheric pollution and climate, measurements of particulate matter and vehicle exhaust, hydrogen and other fuel generation by bacteria, numerical modeling of the effects of vehicles and power plants on climate, numerical weather prediction, improving the energy efficiency of buildings, improving the links between wind farms and the transmission grid, and studying the effects of aerosol particles on UV radiation and climate, among others.

Within the department, the program links to studies of water quality, environmental biotechnology, environmental fluid mechanics, sustainable construction, green buildings, and risk management. Outside the department, it links to Earth Systems, Management Science and Engineering, Mechanical Engineering, Energy Resources Engineering, Urban Studies, Aeronautics and Astronautics, and Biological Sciences, among others. In addition, the program has natural connections with the Woods Institute for the Environment, the Interdisciplinary Graduate Program in Environment and Resources (IPER), and the Global Climate and Energy Program (GCEP).

CONSTRUCTION

The Construction Engineering and Management (CEM) program prepares technically qualified students for responsible roles in all phases of the sustainable development of major constructed facilities. It emphasizes engineering and management techniques useful in planning, coordinating, and controlling the activities of diverse specialists (designers, contractors, subcontractors, and client representatives) within the unique project environment of the construction industry. By appropriate choice of elective subjects, students wishing to work for a contractor, construction management consultant, a design-build firm, or the facilities department of an owner’s organization, or a construction technology firm, can design a program for their needs.

Courses offered include building systems, construction administration, construction finance and accounting, design and construction of housing, real estate development, equipment and methods, estimating, international construction, labor relations, managing human resources, planning and control techniques, productivity improvement, and project and company organizations. Additional related course work is available from other programs within the department, from other engineering departments, and from other schools in the University such as Earth Sciences and the Graduate School of Business.

The program leads to the degrees of Master of Science (M.S.), Engineer, and Ph.D. Students with undergraduate degrees in chemical, electrical, mechanical, mining, and petroleum engineering, or in architecture who do not wish to satisfy the undergraduate prerequisite courses for the M.S. in Civil and Environmental Engineering, Construction Engineering and Management, have the option of meeting the same graduate course requirements as the above and obtaining the M.S. in Engineering. Many M.S.-level graduate students and most Ph.D. candidates are supported each year through research and teaching assistantships, and through fellowships.

The Construction Program faculty and students are active participants in the Center for Integrated Facility Engineering (CIFE). In collaboration with Computer Science and other departments, CIFE conducts research on the automation, integration, and management of technology in the construction industry. The Collaboratory for Research on Global Projects (CRGP) carries out research on the special challenges of international projects in partnership with CIFE.

The program maintains close ties with the construction industry through the Stanford Construction Institute. Students participate in weekly discussions with visiting lecturers from all sectors of the U.S. construction industry.

DESIGN/CONSTRUCTION INTEGRATION

To better prepare graduates for successful careers as design and construction professionals making major contributions to integrated projects, the department offers a Master of Science (M.S.), Engineer, and Ph.D. degree field in Design/Construction Integration (DCI).

This program aims to educate design and construction professionals to understand the goals and concerns of the many other project stakeholders, and to prepare for multidisciplinary, collaborative teamwork to develop sustainable buildings and infrastructure facilities in an integrated design and construction process.

The field of Design/Construction Integration is open to applicants with backgrounds in engineering and science. Applicants should also have a background in the planning, design, or construction of facilities by virtue of previous work experience and/or their undergraduate education. Knowledge in basic subjects from the traditional areas of civil engineering is necessary for students to receive the degree and to satisfy prerequisite requirements for some of the required graduate courses.

The M.S. Degree in Design/Construction Integration requires 45 quarter units, which are normally completed in one academic year. This includes core courses in design/construction integration, structural and geotechnical engineering, and construction engineering and management, along with approved electives.

Stanford Bulletin, 2006-07 | 135
The department offers three programs related to the design and construction of facilities: Structural Engineering and Geomechanics (SEG), Construction Engineering and Management (CEM), and Design/Construction Integration (DCI).

The SEG program prepares students for careers as designers, engineering analysts, engineering risk managers, specialty consultants, or tool developers. It encompasses structural analysis and design, dynamics, earthquake engineering, risk and reliability analysis, modern computational methods, and geomechanics.

The CEM program prepares technically qualified students for responsible engineering and management roles in all phases of the development of major constructed facilities. It emphasizes management techniques useful in organizing, planning, and controlling the activities of diverse specialists working within the unique project environment of the construction industry. The program also includes the engineering aspects of heavy, industrial, and building construction.

The DCI program prepares students for multidisciplinary collaborative teamwork in an integrated design and construction process. The program extends a student’s design or construction background with core courses in each of these areas and develops the background needed to understand the concerns and expertise of the many project stakeholders. It includes a comprehensive project-based learning experience.

Prospective students should use their intended career path as the primary criterion in selecting between these three programs. SEG best suits students planning to focus on designing facilities; CEM is for students planning to emphasize building facilities or managing teams and operations. Both of these degree options provide background for many different types of careers in design and construction, with some emphasis on preparation for working on projects using traditional forms of contracting and organization. Students planning careers with design or construction firms that emphasize design-build, EPC, or turnkey projects should consider DCI.

All three of the degree options include substantial flexibility for students to tailor their program of study to career interests.

ENVIRONMENTAL AND WATER STUDIES

This program covers a broad spectrum of specialties, including environmental engineering and science, environmental fluid mechanics, environmental planning, and hydrology. Course offerings are scheduled to permit either intensive study in a single area or interrelated study between areas. Seminars provide a broad coverage of environmental problems. The programs are kept flexible to foster interaction among students and to encourage the development of individual programs suitable for a broad range of engineering and science backgrounds and career goals. The Stanford laboratories for water quality control and environmental fluid mechanics are well equipped and instrumented for advanced research and instruction.

Students with backgrounds in all areas of engineering and science who are interested in applying their specialized abilities to solving environmental and water problems are welcome. Comprehensive introductory courses in each major area of study are given to provide common understanding among those with dissimilar backgrounds. Courses from many other programs and departments both complement and supplement these course offerings. Examples include Computer Science (numerical methods), Geological and Environmental Sciences (geostatistics, hydrogeology), Mechanical Engineering (applied math, experimental methods, fluid mechanics, heat transfer), Energy Resources Engineering (reservoir engineering, well-test analysis), and Statistics (probability and statistics).

The major areas of specialization in the two programs, environmental engineering and science, and environmental fluid mechanics and hydrology, are described below. Admissions to these two programs are handled separately; prospective students should clearly indicate their preference on their application by specifying one or the other area of specialization.

The Environmental Engineering and Science Program (EES) emphasizes the chemical and biological processes involved in water quality engineering, pollution treatment, remediation, and environmental protection. Course offerings include the biological, chemical, and engineering aspects of water supply; the movement and fate of pollutants in surface and ground waters, soil, and the atmosphere; hazardous substance control; molecular environmental biotechnology; and water and air pollution. Companion courses in the Environmental Fluid Mechanics and Hydrology Program (EFMH) include environmental planning and impact assessment, as well as environmental fluid mechanics, hydrology, and transport modeling. Research on hazardous substances is coordinated through the Western Region Hazardous Substance Research Center. The objective of this center, sponsored by the U.S. Environmental Protection Agency, is to promote through fundamental and applied research the development of alternative and advanced physical, chemical, and biological processes for the treatment of hazardous substances in the environment, with emphasis on groundwater contamination.

The Environmental Fluid Mechanics and Hydrology Program focuses on developing an understanding of the physical processes controlling the movement of mass, energy, and momentum in the water environment and the atmosphere. The program also considers environmental and institutional issues involved in planning water resources development projects. Environmental fluid mechanics courses address experimental methods; fluid transport and mixing processes; the fluid mechanics of stratified flows; natural flows in coastal waters, estuaries, lakes, and open channels; and turbulence and its modeling. Hydrology courses consider flow and transport in porous media, stochastic methods in both surface and subsurface hydrology, and watershed hydrology and modeling. Atmosphere-related courses deal with climate, weather, storms and air pollution and their modeling. Planning courses emphasize environmental policy implementation and sustainable water resources development. The research of this group is focused primarily in the Environmental Fluid Mechanics Laboratory, which includes the P.A. McCuen Environmental Computer Center.

STRUCTURAL ENGINEERING AND GEOMECHANICS

Structural engineering at Stanford encompasses teaching and research programs in structural design and analysis, earthquake engineering and structural dynamics, risk and reliability analysis, computational science and engineering, and geomechanics. The programs provide broad knowledge in these fields to prepare students for industrial or academic careers. Academic programs can be designed to meet the needs of students wishing to launch careers as consultants on large and small projects, designers, and engineering analysts. Students have the opportunity to balance engineering fundamentals with modern computational methods.

Structural design and analysis focuses on the conceptual and detailed design of structural systems and on computational methods for predicting the static and dynamic, linear and nonlinear responses of structures. Some courses emphasize earthquake resistant design, design with high-performance materials, and concepts for computer-based design. Related course work is available from departments such as Computer Science, Materials Science and Engineering, and Mechanical Engineering. In collaboration with CIFE, research involving design for constructability, engineering information management, and collaborative engineering is being conducted.

Earthquake engineering and structural dynamics addresses the earthquake phenomenon, resulting ground shaking, and the behavior, analysis, and design of various types of structures under seismic and other dynamic forces. Automated structural monitoring devices and control systems, and the use of advanced materials for civil infrastructure and seismic retrofits, are part of the ongoing research activities. Advanced analytical and experimental research in earthquake engineering is conducted at the John A. Blume Earthquake Engineering Center, which houses static and dynamic testing equipment including two shaking tables.

Reliability and risk analysis focuses on advanced methods for structural safety evaluation and design, including methods for loss estimation from damage and failure of structures and lifeline systems. Course work combines background in structural analysis and design with probability theory and statistics. Research includes regional loss and damage evaluation, reliability of marine systems, seismic risk and reliability of large structural systems, and wind hazards.

Computational science and engineering emphasizes the application of modern computing methods to structural engineering and geomechanics. It draws on the disciplines of computer science, mathematics, and me-
mechanics, and encompasses numerical structural and geotechnical analysis, including finite element analysis and boundary element methods. There is collaborative research in high performance computing with the Institute for Computational and Mathematical Engineering.

Students with primary interests in the application of the principles of applied mechanics to problems involving geologic materials have the option of enrolling in a degree program in geomechanics. This program focuses on instruction and research in theoretical soil and rock mechanics, computational methods, and analysis and design of foundations and earth structures. In addition to the program’s offerings, related courses are available in construction engineering, earth sciences, structural engineering, and the water resources program.

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

The B.S. in Civil Engineering and the B.S. in Environmental Engineering are ABET accredited programs. High priority is placed on integrating research with engineering education. Four major objectives structure both degree programs:
1. To provide an understanding of engineering principles and the analytical, problem solving, design, and communication skills to continue succeeding and learning in diverse careers.
2. To prepare for successful engineering practice with a longer term perspective that takes into account new tools such as advanced information technology and biotechnology, and increasingly complex professional and societal expectations.
3. To prepare for possible graduate study in engineering or other professional fields.
4. To develop the awareness, background, and skills necessary to become responsible citizens and leaders in service to society.

Students who major in Civil Engineering or in Environmental Engineering must complete the appropriate requirements for the B.S. degree listed under Undergraduate Programs in the “School of Engineering” section of this bulletin. Elective units may be used in any way the student desires, including additional studies in civil and environmental engineering. Because the undergraduate engineering curriculum is designed to ensure breadth of study, students who intend to enter professional practice in civil or environmental engineering should plan to obtain their professional education at the graduate level.

A number of undergraduate programs at Stanford may be of interest to students seeking to specialize in environmental studies. In addition to the two majors offered within our own department, interested students should examine related programs such as Earth Systems, Geological and Environmental Sciences, Urban Studies, and Human Biology.

HONORS PROGRAM

This program leads to a B.S. with Honors for undergraduates majoring in Civil Engineering (CE) or in Environmental Engineering (EnvE). It is designed to encourage highly qualified students to undertake a more intensive study of civil and environmental engineering than is required for the normal majors via a substantial, independent research project.

The program involves an in-depth research study in an area proposed to and agreed to by a Department of Civil and Environmental Engineering (CEE) faculty adviser and completion of a thesis of high quality. A written proposal for the research to be undertaken must be submitted and approved in the fourth quarter prior to graduation. At the time of application, the student must have an overall grade point average (GPA) of at least 3.3 for course work at Stanford; this GPA must be maintained to graduation. The thesis is supervised by a CEE faculty adviser and must involve input from the School of Engineering Writing Program by means of ENGR 102S or its equivalent. The written thesis must be approved by the thesis adviser. Students are encouraged to present their results in a seminar for faculty and other students. Up to 10 units of CEE 199HI, Undergraduate Honors Research in Civil and Environmental Engineering, may be taken to support the research and writing (not to duplicate ENGR 102S). These units are beyond the normal Civil Engineering (CE) or Environmental Engineering (EnvE) major program requirements.

MINOR IN CIVIL ENGINEERING OR ENVIRONMENTAL ENGINEERING

The department offers minor programs in both Civil Engineering and Environmental Engineering. Departmental expertise and undergraduate course offerings are available in the areas of Architectural Design, Construction Engineering, Construction Management, Structural/Geotechnical Engineering, Environmental Engineering and Science, Environmental Fluid Mechanics and Hydrology, and Atmosphere/Energy. The courses required for the minors typically have prerequisites. Minors are not ABET-accredited programs. Further details on minors are provided in the “School of Engineering” section of this Bulletin.

GRADUATE PROGRAMS

The University requirements governing the M.S., Engineer, and Ph.D. are described in the “Graduate Degrees” section of this bulletin.

Admission—Applications require online submission of the application form and statement of purpose, followed by three letters of recommendation, results of the General Section of the Graduate Record Examination, and transcripts of courses taken at colleges and universities. See http://gradmissions.stanford.edu/. Policies for each of the department’s programs are available by referring to http://cee.stanford.edu.

Successful applicants are advised as to the degree and program for which they are admitted. If students wish to shift from one CEE program to another after being accepted, an application for the interdepartmental change must be filed within the department; they will then be advised whether the change is possible. If, after enrollment at Stanford, students wish to continue toward a degree beyond the one for which they were originally admitted, a written application must be made to the Department of Civil and Environmental Engineering.

Financial Assistance—The department maintains a continuing program of financial aid for graduate students. Applications for financial aid and assistantships should be filed by December 12, 2006; it is important that Graduate Record Examination scores be available at that time. Applicants not requesting financial assistance have until March 13, 2007 for the online submission.

Teaching assistantships carry a salary for as much as one-half time work to assist with course offerings during the academic year. Up to half-time research assistantships also are available. Engineer and Ph.D. candidates may be able to use research results as a basis for the thesis or dissertation. Assistantships and other basic support may be supplemented by fellowship and scholarship awards or loans. Continued support is generally provided for further study toward the Engineer or Ph.D. degree based on the student’s performance, the availability of research funds, and requisite staffing of current projects.

MASTER OF SCIENCE

The following programs are available leading to the M.S. degree in Civil and Environmental Engineering: Atmosphere/Energy, Construction Engineering and Management, Design/Construction Integration, Environmental Engineering and Science, Environmental Fluid Mechanics and Hydrology, Geomechanics, and Structural Engineering.

Students admitted to graduate study with a B.S. in Civil Engineering, or equivalent, from an accredited curriculum can satisfy the requirements for the M.S. degree in Civil and Environmental Engineering by completing a minimum of 45 units beyond the B.S. All 45 units must be taken at Stanford. A minimum 2.75 grade point average (GPA) is required for candidates to be recommended for the M.S. degree. No thesis is required.

The program of study must be approved by the faculty of the department and should include at least 45 units of courses in engineering, mathematics, science, and related fields unless it can be shown that other work is pertinent to the student’s objectives. Additional program area requirements are available from the department’s student services office (Terman M-42).

Candidates for the M.S. in Civil and Environmental Engineering who do not have a B.S. in Civil Engineering may, in addition to the above, be required to complete those undergraduate courses deemed important to
their graduate programs. In such cases, more than three quarters is often required to obtain the degree. Students may, with the approval of their academic adviser, select a program that satisfies the requirements for the M.S. in Engineering.

Forms required for the degree may be secured from the department’s office of student services.

ENGINEER

A student with an M.S. in Civil Engineering may satisfy the requirements of the degree of Engineer in Civil and Environmental Engineering by completing 45 unduplicated course work and research units for the degree and minimum residency of 90 total units. Engineer candidates must submit an acceptable thesis (12 to 15 units) and maintain a minimum GPA of 3.0. The program of study must be approved by a faculty member in the department.

This degree is recommended for those desiring additional graduate education, especially those planning a career in professional practice. The thesis normally should be started in the first quarter of graduate study after the M.S. degree. Programs are offered in the fields of specialization mentioned for the M.S. degree. The Engineer thesis topic, for students who will continue study toward a CEE Ph.D., must be significantly different from their doctoral research.

DOCTOR OF PHILOSOPHY

The Ph.D. is offered under the general regulations of the University as set forth in the “Graduate Degrees” section of this bulletin. This degree is recommended for those who expect to engage in a professional career in research, teaching, or technical work of an advanced nature. The Ph.D. program requires a total of 135 units of graduate study, at least two years of which must be at Stanford with a minimum GPA of 3.0 in post-M.S. course work. Experience has shown that few students complete the Ph.D. within the minimum residence period. Prospective doctoral students should anticipate the possibility of at least one extra year. All candidates for the Ph.D. degree are required to complete CEE 200 in conjunction with a one-quarter teaching assistantship/course assistantship to gain training and instructional experience. Further information on Ph.D. requirements and regulations is found in the department handbook.

The first year of graduate study can be represented by the M.S. program described above. The second year is devoted partly to additional graduate courses and partly to preliminary work toward a dissertation. The third and subsequent years are applied to further course work and to the completion of an acceptable dissertation.

The program of study is arranged by the prospective candidate at the beginning of the second year with the advice of a faculty committee whose members are nearest in the field of interest to that of the student. The chair of the committee serves as the student’s pro tem adviser until such time as a member of the faculty has agreed to direct the dissertation research. Insofar as possible, the program of study is adapted to the interests and needs of the student within the framework of the requirements of the department and the University.

By the end of the second year of graduate study (or by the end of the first year for students who enroll at Stanford with an M.S.), the student is expected to pass the department’s General Qualifying Examination (GQE) to be admitted to candidacy for the doctoral degree. The purpose of the GQE is to ensure that the student is adequately prepared to undertake doctoral research and has a well planned research topic. The exam may take the form of (1) a written and/or oral general examination of the candidate’s major field, (2) a presentation and defense of the candidate’s doctoral research dissertation proposal, or (3) a combination research proposal and general examination. The GQE is administered by an advisory committee consisting of at least three Stanford faculty members, including a chair who is a faculty member in Civil and Environmental Engineering. All members are normally on the Stanford Academic Council. A petition for appointment of one advisory committee member who is not on the Academic Council may be made if the proposed person contributes an area of expertise that is not readily available from the faculty. Such petitions are subject to approval by the department chair. When the primary research adviser is not a member of the CEE Academic Council faculty the committee must consist of four examiners, with two members from the CEE department.

PH.D. MINOR

A Ph.D. minor is a program outside a major department. Requirements for a minor are established by the minor department. Acceptance of the minor as part of the total Ph.D. program is determined by the major department. Application for the Ph.D. minor must be approved by both the major and the minor department, and the minor department must be represented at the University oral examination.

A student desiring a Ph.D. minor in Civil and Environmental Engineering (CEE) must have a minor program adviser who is a regular CEE faculty member in the program of the designated subfield. This adviser must be a member of the student’s University oral examination committee and the reading committee for the doctoral dissertation.

The program must include at least 20 units of graduate-level course work (that is, courses numbered 200 or above, excluding special studies and thesis) in CEE completed at Stanford University. The list of courses must form a coherent program and must be approved by the minor program adviser and the CEE chair. A minimum GPA of 3.0 must be achieved in these courses.

HONORS COOPERATIVE PROGRAM

Some of the department’s graduate students participate in the Honors Cooperative Program (HCP), which makes it possible for academically qualified engineers and scientists in industry to be part-time graduate students in Civil and Environmental Engineering while continuing professional employment. Prospective HCP students follow the same admissions process and must meet the same admissions requirements as full-time graduate students. For more information regarding the Honors Cooperative Program, see the “School of Engineering” section of this bulletin.

COURSES

WIM indicates that the course satisfies the Writing in the Major requirements. (AU) indicates that the course is subject to the University Activity Unit limitations for undergraduates (8 units maximum).

UNDERGRADUATE

CEE 31. Accessing Architecture Through Drawing — Preference to Architectural Design and CEE majors; others by consent of instructor. Drawing architecture to probe the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment. 4 units, Win (Barton, J)

CEE 31Q. Accessing Architecture Through Drawing — Stanford Introductory Seminar. Preference to sophomores. Drawing architecture provides a deeper understanding of the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment. GER:DB-EngrAppSci 4 units, Aut (Walters, P)

CEE 46Q. Fail Your Way to Success — Stanford Introductory Seminar. Preference to sophomores. How to turn failures into successes; cases include minor personal failures and devastating engineering disasters. How personalities and willingness to take risks influence the way students approach problems. Field trips, case studies, and guest speakers applied to students day-to-day interactions and future careers. Goal is to redefine what it means to fail. GER:DB-EngrAppSci 3 units, Spr (Clough, R)
CEE 48Q. Design Organizations to Execute Global Projects—Stanford Introductory Seminar. Confusion, misunderstanding, and conflict among multinational team members on global projects can cause significant delays and cost overruns. Challenges in carrying out global projects; theory, methods, and tools to enhance global project outcomes. Opportunities to participate in ongoing research in the Collaboratory for Research on Global Projects involving faculty from multiple Stanford departments and schools; see http://crgp.stanford.edu. Students teams model and simulate crosscultural teams engaged in global projects.

4 units, Win (Levitt, R)

CEE 63. Weather and Storms—(Graduate students register for 263C.) Daily and severe weather, and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, global circulation, jet streams, high and low pressure systems, inversions, el Niño, la Niña, atmosphere-ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate, and atmospheric optics. GER: DB-EngrAppSci

3 units, Aut (Jacobson, M)

CEE 64. Air Pollution: From Urban Smog to Global Change—(Graduate students register for 264.) Survey of urban through global-scale air pollution. Topics: the evolution of the Earth’s atmosphere, indoor air pollution, urban smog formation, history of discovery of atmosphere chemicals, visibility, acid rain, global climate change, stratospheric ozone reduction, Antarctic ozone destruction, air pollution transport across political boundaries, the effects of meteorology on air pollution, and the effects of air pollution and stratospheric ozone on ultraviolet radiation. GER: DB-NatSci

3 units, Win (Jacobson, M)

CEE 70. Environmental Science and Technology—Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environmental and engineering systems.

3 units, Aut (Kopperud, R)

CEE 80N. The Art of Structural Engineering—Stanford Introductory Seminar. Preference to freshmen. The history of modern bridges, buildings, and other large-scale structures. Principles of structural engineering through case studies. Analysis of structural form with scientific, social, and symbolic considerations. Field trip to Bay Area landmark and hands-on exercises including building and testing a model bridge. Modern structures, the social context in which they are built, and their symbolic value. Students from all backgrounds welcome. GER:DB-EngrAppSci

4 units, Win (Billington, S)

CEE 100. Managing Sustainable Building Projects—Managing the life cycle of buildings from the owner, designer, and contractor perspectives emphasizing sustainability goals; methods to define, communicate, coordinate, and manage multidisciplinary project objectives including scope, quality, life cycle cost and value, schedule, safety, energy, and social concerns; roles, responsibilities, and risks for project participants; virtual design and construction methods for product, organization, and process modeling; individual writing assignment related to a real world project. GER:DB-EngrAppSci, WIM

4 units, Aut (Fischer, M)

CEE 101A. Mechanics of Materials—Introduction to beam and column theory. Normal stress and strain in beams under various loading conditions; shear stress and shear flow; deflections of determinant and indeterminate beams; analysis of column buckling; structural loads in design; strength and serviceability criteria. Lab experiments. Prerequisite: ENGR 14. GER:DB-EngrAppSci

4 units, Win (Staff)

CEE 101B. Mechanics of Fluids—Physical properties of fluids and their effect on flow behavior; equations of motion for incompressible ideal flow, including the special case of hydrostatics; continuity, energy, and momentum principles; control volume analysis; laminar and turbulent flows; internal and external flows in specific engineering applications including pipes, open channels, estuaries, and wind turbines. Prerequisites: PHYSICS 41 (formerly 53), MATH 51. GER:DB-EngrAppSci

4 units, Spr (Koseff, J)

3-4 units, Aut (Borja, R)

CEE 101D. Mathematical Laboratory Applications in Civil and Environmental Engineering—(Graduate students register for 201D.) Use of commercial professional software in the design and analysis of civil and environmental engineering systems. MATLAB 5 is applied to relevant problems and issues that students encounter in subsequent courses and in engineering practice. Limited enrollment.

2 units, Aut (Snodgrass, M)

CEE 102. Legal Aspects of Engineering and Construction—(Graduate students register for 202.) Introduction to the U.S. legal system as it applies to civil engineering and construction. Fundamental concepts of contract and tort law, claims, risk management, business formation and licensing, agency, insurance and bonding, and real property.

3 units, Win (London, M)

CEE 110. Building Information Modeling—(Graduate students register for 210.) Creation, management, and application of building information models. Process and tools available for creating 2D and 3D computer representations of building components and geometries. Organizing and operating on models to produce architectural views and construction documents, renderings and animations, and interface with analysis tools. Lab exercises, class projects. Limited enrollment.

3 units, Aut (Katz, G)

CEE 111. Multidisciplinary Modeling and Analysis—(Graduate students register for 211.) Modeling, visualization, analysis, and graphical communication of building projects. Use of 3D models in laser scanning, rendering, animation, daylight, energy, cost, structural, and lighting analysis, and computer controlled fabrication. Underlying 3D computer representations; and analysis tools and their applications. Guest lectures, lab exercises, class project. Prerequisite: 110 or CAD experience. GER: DB-EngrAppSci

3-4 units, Win (Haymaker, J)

CEE 115. Goals and Methods of Sustainable Building Projects—(Graduate students register for 215.) Design, construction, and operation methods to enhance the economy, ecology, equity, and sustainability of building projects. Methods related to sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality and other project-specific goals. USGBC’s LEED rating system, project case studies, guest lecturers, and group project.

3-4 units, Spr (Haymaker, J)

CEE 122A. Computer Integrated Architecture/Engineering/Construction (A/E/C)—(Graduate students register for 222A.) Undergraduates serve as apprentices.) Crossdisciplinary, collaborative, geographically distributed, project-based, teamwork environment. Round table A/E/C panel discussions, lectures, and labs on collaborative technologies provide a global perspective of the A/E/C industry and cutting edge information technologies. Students exercise theoretical discipline knowledge in architecture, structural, engineering, construction management, and the information technologies in a multidisciplinary context focusing on the concept development phase of a comprehensive building project. May be repeated for credit.

3 units, Win (Fruchter, R)
CEE 122B. Computer Integrated A/E/C — (Graduate students register for 222B.) (Undergraduates serve as apprentices.) Comprehensive team project, including project development and documentation, and final project presentation of product and process. Design and construction alternatives are subject to examination by rapid computational prototyping, concurrent multidisciplinary evaluation, and trade-off analysis. Prerequisite 222A. 
2 units, Spr (Frchter, R)

CEE 124. Sustainable Development Studio — (Graduate students register for 224A.) Project-based. Sustainable design, development, use and evolution of buildings; connections of building systems to broader resource systems. Areas include architecture, structure, materials, energy, water, air, landscape, and food. Projects use a cradle-to-cradle approach focusing on technical and biological nutrient cycles and information and knowledge generation and organization. May be repeated for credit. 
1-5 units, Aut, Win, Spr (Staff)

CEE 130. Architectural Design: 3-D Modeling, Methodology, and Process — Preference to Architectural Design and CEE majors; others by consent of instructor. Incrementally staged design projects investigate form, space, and conceptual strategies. Making 3-D models. Students prepare graphic and written account of personal design process and intentions. Final project applies systems and strategies to the design of a simple building. Limited enrollment. Prerequisite: CEE 31, 31Q, or 131. 
4 units, Win (Walters, P)

4 units, Aut (Blake, C)

CEE 132. Interplay of Architecture and Engineering — (Graduate students register for 232.) The range of requirements that drive a building’s design including architecture, engineering, constructability, building codes, and budget. Case studies illustrate how structural and mechanical systems are integrated into building types including residential, office, commercial, and retail. In-class studio work. 
4 units, Spr (Katz, G)

CEE 134A. Site and Space — Preference to Architectural Design and CEE majors; others by consent of instructor. Intermediate architectural studio. The design of small buildings. Emphasis is on design, form, space making, context, and structure; attention to program and sustainability. Limited enrollment. May be repeated for credit. Prerequisites: CEE 31 or 31Q, and 130. 
4 units, Aut (Barton, J)

CEE 136. Green Architecture — (Graduate students register for 236.) Preference to Architectural Design and CEE majors; others by consent of instructor. Goal is to develop a working definition of ecologically sustainable design and strategies for greening the built environment. Research for an architectural design studio which explores the student and faculty inspired green dorm initiative. Limited enrollment. Prerequisites: 31 or 31Q, and 130, 131, or 132. GER:DB-EngrAppSci 
4 units, Spr (Jacobson, B)

CEE 137A. Forms and Structure — Preference to Architectural Design and CEE majors; others by consent of instructor. Intermediate architectural studio. The integration of structure, form, site, and program. Emphasis is on developing a schematic design in the context of site topography and structural systems. Limited enrollment. Prerequisites: 31 or 31Q, and 130. 
4 units, Win (Staff)

CEE 139. Design Portfolio Methods — Students present designs completed in other studio courses to communicate design intentions and other aspects of their work. Instruction in photography; preparation of a design portfolio; and short essays that characterize portfolio contents. Oral presentation workshops offered through the Center for Teaching and Learning. Limited enrollment with preference to students in CEE, Urban Studies, and Art. Prerequisites: two Art or Architecture studio courses, or consent of instructor. 
3 units, Spr (Barton, J)

CEE 140. Field Surveying Laboratory — (Graduate students register for 240B.) Friday afternoon laboratory provides practical surveying experience. Additional morning classes to prepare for the afternoon sessions. Hands-on operation of common traditional field survey tools with an introduction to the newest generation of digital measuring, positioning, and mapping tools that are emerging as modern standards. Emphasis is on the concept of using the data collected in the field as the basis for subsequent engineering and economic decisions. GER:DB-EngrAppSci 
3 units, Spr (Staff)

CEE 142A. Sustainable Development — (Graduate students register for 242A.) How the built environment influences the way people interact with each other in communities. Case studies. How tradeoffs among economic, ecological, and social benefits can be managed. Frameworks for managing stakeholder processes including negotiating multiparty processes. Group project. Enrollment limited to 50. 
3 units, Win (Christensen, S)

CEE 143. Integrated Concurrent Engineering — (Graduate students register for 243.) Computer-based models in building design and construction. Virtual design and construction (VDC): the use of multidisciplinary performance models of design-construction projects, including the product (facilities), work processes, organization of the design-construction-operation team, and economic impact (model of both cost and value of capital investments) to support business objectives. Opportunity for 4-day mini-internship at an A/E/C company over Spring break. Prerequisite for undergraduates: 100 or consent of instructor. Recommended for graduate students: 241, 242. 
3–4 units, Win (Kunz, J)

CEE 147. Cases in Personality, Leadership, and Negotiation — (Graduate students register for 247.) Case studies target personality issues, risk willingness, and life skills essential for real world success. Failures, successes, and risk willingness in individual and group tasks based on the professor’s experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Application downloaded from coursework must be submitted before first class; mandatory first class attendance. No auditors. 
3 units, Spr (Kunz, J)

CEE 150. Negotiation — (Graduate students register for 251; same as ME 207, MS&E 285.) Negotiation styles and processes to help students conduct and review negotiations. Workshop format integrating intellectual and experiential learning. Exercises, live and field examples, individual and small group reviews. Application required before first day of class; see http://www.stanford.edu/class/msande285/. Enrollment limited to 50. 
3 units, Spr (Christensen, S)

CEE 151. Cases in Estimating Costs — (Graduate students register for 254.) Students participate in bidding contests requiring cost determination in competitive markets. Monetary forces driving the construction industry as general principles applicable to any competitive business. Cases based on professor’s experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Mandatory first class attendance. GER:DB-EngrAppSci 
3 units, Aut (Clough, R)

CEE 154. Cases in Estimating Costs — (Graduate students register for 254.) Students participate in bidding contests requiring cost determination in competitive markets. Monetary forces driving the construction industry as general principles applicable to any competitive business. Cases based on professor’s experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Mandatory first class attendance. GER:DB-EngrAppSci 
3 units, Aut (Clough, R)

CEE 156. Building Systems — (Graduate students register for 256.) Design concepts, options for increased sustainability, integration issues, construction materials, and installation operations for heating, ventilating, and air conditioning systems. Overview of other building systems. GER:DB-EngrAppSci 
4 units, Spr (Daly, A)

2 units, Aut (Clough, R)
CEE 160. Mechanics of Fluids Laboratory — Lab experiments/demonstrations illustrate conservation principles and flows of real fluids. Corequisite: 101B. 2 units, Spr (Monismith, S)

CEE 161A. Rivers, Streams, and Canals — (Graduate students register for 264A.) The movement of water through natural and engineered channels, streams, and rivers. Equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Design of flood-control and canal systems. Flow controls such as weirs and sluice gates; gradually varied flow; Saint-Venant equations and flow waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Students taking lab section register for 4 units. Prerequisites: 101B, 160. GER:DB-EngrAppSci 3-4 units, Aut (Fong, D)

CEE 161T. Physical Chemistry of Atmospheric Particles — (Graduate students register for 261T; same as GEOPHYS 136/236.) Thermodynamic principles and their application to approximate the phase behavior and surface properties of multi-component solution droplets in the atmosphere. Topics: water and its phase transformations; equilibrium models of electrolyte solutions; aerosol water uptake; relative humidity conditions for particle efflorescence (crystallization) and deliquescence; mechanisms of colloid formation and organic matter precipitation in aqueous particles; aerosol and cloud surface characterization using bulk composition and adsorption isotherms; and the role of aerosol surface tension in cloud activation. 3 units, Spr (Tabazadeh, A)

CEE 162. Modeling and Simulation for Civil and Environmental Engineers — (Graduate students register for 262C.) Introduction to mathematical and computational methods for modeling and simulation, and the use of Matlab for topics including predator-prey problems, buckling, transport and mixing, wave modeling, flow reactors, and traffic flow. Prerequisites: CME 102 and CME 104, or equivalents. GER: DB-EngrAppSci 3 units, Spr (Fringer, O), Sum (Staff)

CEE 164. Introduction to Physical Oceanography — (Graduate students register for 262D; same as EARTHYS 164.) The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). GER: DB-NatSci 4 units, Win (Staff)

CEE 166A. Watersheds and Wetlands — (Graduate students register for 266A.) Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: 101B or equivalent. GER:DB-EngrAppSci 3 units, Aut (Freyberg, D)

CEE 166B. Floods and Droughts, Dams and Aqueducts — (Graduate students register for 266B.) Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. GER:DB-EngrAppSci 3 units, Win (Freyberg, D)

CEE 166D. Water Resources and Water Hazards Field Trips — (Graduate students register for 266D.) Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities (dams, reservoirs, fish ladders and hatcheries, pumping plants, aqueducts, hydro-power plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip preceded by an orientation lecture. 2 units, Win (Freyberg, D)

CEE 169. Environmental and Water Resources Engineering Design — Application of fluid mechanics, hydrology, water resources, environmental science, and engineering economy fundamentals to the design of a system addressing a complex problem of water in the natural and constructed environment. Problem changes each year, generally drawn from a challenge confronting the University or a local community. Student teams prepare proposals, progress reports, presentations, and a final design report. Prerequisite: senior in Civil Engineering or Environmental Engineering; 166B. 5 units, alternate years, not given this year

CEE 171. Environmental Planning Methods — For juniors and seniors. Use of microeconomics and mathematical optimization theory in the design of environmental regulatory programs; tradeoffs between equity and efficiency in designing regulations; techniques for predicting visual, noise, and traffic impacts in environmental impact assessments. Prerequisites: MATH 51. Recommended: 70. GER:DB-EngrAppSci 3 units, Win (Ortolano, L)

CEE 172. Air Quality Management — Quantitative introduction to the engineering methods used to study and seek solutions to current air quality problems. Topics: global atmospheric changes, urban sources of air pollution, indoor air quality problems, design and efficiencies of pollution control devices, and engineering strategies for managing air quality. Prerequisites: 70, MATH 51. GER:DB-EngrAppSci 3 units, Win (Hildemann, L)

CEE 172A. Indoor Air Quality — (Graduate students register for 278C.) Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, resuspended dust, and airborne molds and fungi. Recommended: 172 or 278A. 2-3 units, not given this year

CEE 173A. Energy Resources — (Graduate students register for 207A; same as EARTHYS 103.) Overview of oil, natural gas, coal, nuclear, hydro, solar, geothermal, biomass, wind, and ocean energy resources in terms of supply, distribution, recovery and conversion, environmental impacts, economics, policy, and technology. The opportunities for energy efficiency, electric power basics, the changing role of electric utilities, transportation basics, and energy use in developing countries. Field trips. Recommended: CEE 70, GER:DB-EngrAppSci 4-5 units, Aut (Woodward, J)

CEE 173B. The Coming Energy Revolution — (Graduate students register for 207B.) The forces driving an energy revolution: environmental pressures; global, social, and economic revolution; and technological change. Assessment of evolution versus revolution, developed versus developing countries, transportation, electric power, resource development and extraction, end use technologies, deregulation, privatization and globalization, barriers to change, and the mechanisms to overcome them. Enrollment limited to 15. Prerequisite: 173A. GER:DB-EngrAppSci 4 units, alternate years, not given this year

CEE 173L. Energy End-Use Efficiency: Technology, Implementation, and Implications — (Graduate students register for 273L.) Offered during Spring Break. End-use efficiency technologies, primarily for electricity and mobility fuels, focusing on techniques, design, and performance evaluation. Barriers, incentives, and strategies to implementing least-cost efficiency measures, including implications for energy supply and demand, business interests, and national security. Recommended: 173A. 1-3 units, Spr (Staff)
CEE 175A. California Coast: Science, Policy, and Law — (Graduate students register for 275A; same as EARTHSYS 175/275, LAW 514.) Interdisciplinary. The legal, science, and policy dimensions of managing California’s coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions.
3-4 units, Win (Caldwell, M; Boehm, A; Sivas, D)

3-4 units, Win (Masters, G)

CEE 176B. Electric Power: Renewables and Efficiency — Renewable and efficient electric power systems emphasizing analysis and sizing of photovoltaic arrays and wind turbines. Basic electric power generation, transmission and distribution, distributed generation, combined heat and power, fuel cells. End use demand, including lighting and motors. Lab. GER:DB-EngrAppSci
3-4 units, Win (Masters, G)

CEE 177. Aquatic Chemistry and Biology — Undergraduate-level introduction to the chemical and biological processes in the aqueous environment. Basic aquatic equilibria; the structure, behavior, and fate of major classes of chemicals that dissolve in water; redox reactions; the biochemistry of aquatic microbial life; and biogeochemical processes that govern the fate of nutrients and metals in the environment and in engineered systems. Prerequisite: CHEM 31. GER:DB-EngrAppSci
4 units, Aut (Criddle, C)

CEE 177S. Design for a Sustainable World — (Graduate students register for 277S.) Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concept, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See http://esw.stanford.edu for application.
1-5 units, Aut, Win, Spr (Staff)

3 units, Spr (Leckie, J)

CEE 179A. Water Chemistry Laboratory — (Graduate students register for 279A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques.
3 units, Win (Robertson, A)

CEE 179B. Process Design for Environmental Biotechnology — (Graduate students register for 279B.) Preference to juniors and seniors in Civil or Environmental Engineering. The design of a water or wastewater treatment system using biological processes to remove contaminants. Student teams characterize contaminants in water or wastewater, design and operate bench- and pilot-scale units, and develop a full-scale design. Limited enrollment. Prerequisites: 177, 179A. GER:DB-EngrAppSci
5 units, not given this year

CEE 179C. Environmental Engineering Design — Application of engineering fundamentals including environmental engineering, hydrology, and engineering economy to a design problem. 2005-06 project was green water for a green dorm. Enrollment limited; preference to seniors in Civil and Environmental Engineering.
5 units, Spr (Robertson, A)

4 units, Spr (Baker, J)

CEE 181. Design of Steel Structures — Concepts of the design of steel structures with a load and resistance factor design (LRFD) approach; types of loading; structural systems; design of tension members, compression members, beams, beam-columns, and connections; and design of trusses and frames. Prerequisite: 180. GER:DB-EngrAppSci
4 units, Aut (Law, K)

CEE 182. Design of Reinforced Concrete Structures — Properties of concrete and reinforcing steel; behavior of structural elements subject to bending moments, shear forces, torsion, axial loads, and combined actions; design of beams, slabs, columns and footings; strength design and serviceability requirements; design of simple structural systems for buildings. Prerequisite: 180. GER:DB-EngrAppSci
4 units, Win (Staff)

CEE 183. Integrated Building Design — Restricted to CE majors. Design decision making from conception through construction of civil infrastructure facilities, considering sustainable design aspects. Execution of a design alternative through development of a structural system, considering integration with architecture, construction, and building systems. Prerequisites: 180, 181, 182.
4 units, Spr (Deierlein, G)

CEE 195A. Fundamentals of Structural Geology — (Same as GES 111A.) Techniques for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurement and analysis of stress. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisites: GES 1, MATH 51, 52. GER:DB-NatSci
3 units, Aut (Pollard, D)

CEE 195B. Fundamentals of Structural Geology — (Same as GES 111B.) Continuation of GES 111A/CEE 195A. Conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisite: GES 111A/CEE 195B.
3 units, Win (Pollard, D)

CEE 196. Engineering Geology Practice — (Same as GES 115.) The application of geologic fundamentals to the planning and design of civil engineering projects. Field exercises and case studies emphasize the impact of site geology on the planning, design, and construction of civil works such as buildings, foundations, transportation facilities, excavations, tunnels and underground storage space, and water supply facilities. Topics: Quaternary history and tectonics, formation and physical properties of surficial deposits, site investigation techniques, geologic hazards, and professional ethics. Prerequisite: GES 1 or consent of instructor. GER:DB-NatSci
3 units, alternate years, not given this year

CEE 198. Directed Reading or Special Studies in Civil Engineering — Written report or oral presentation required. Students must obtain a faculty sponsor.
2-3 units, Aut, Win, Spr, Sum (Staff)

CEE 199. Undergraduate Research in Civil and Environmental Engineering — Written report or oral presentation required. Students must obtain a faculty sponsor.
2-3 units, Aut, Win, Spr, Sum (Staff)
CEE 199A. Special Projects in Architecture — Faculty-directed study or internship. May be repeated for credit. Prerequisite: consent of instructor. 1-4 units, Aut, Win, Spr (Staff)

CEE 199B. Directed Studies in Architecture — Projects may include studio-mentoring activities, directed reading and writing on topics in the history and theory of architectural design, or investigations into design methodologies. 1-4 units, Aut, Win, Spr (Staff)

CEE 199H. Undergraduate Honors Thesis — For students who have declared the Civil Engineering B.S. honors major and have obtained approval of a topic for research under the guidance of a CEE faculty adviser. Letter grade only. Written thesis or oral presentation required. 2-3 units, Aut, Win, Spr, Sam (Staff)

PRIMARILY FOR GRADUATE STUDENTS

CEE 200A,B,C. Teaching of Civil and Environmental Engineering — Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. 200A. 1 unit, A: Aut, B: Win, C: Spr (Staff)

CEE 201D. Mathematical Laboratory Applications in Civil and Environmental Engineering — (Undergraduates register for 101D; see 101D.) 2 units, Aut (Snodgrass, M)

CEE 202. Legal Aspects of Engineering and Construction — (Undergraduates register for 102; see 102.) 3 units, Win (London, M)

CEE 203. Probabilistic Models in Civil Engineering — Introduction to probability modeling and statistical analysis in civil engineering. Emphasis is on the practical issues of model selection, interpretation, and calibration. Application of common probability models in civil engineering including Poisson processes and extreme value distributions. Parameter estimation. Linear regression. 3-4 units, Aut (Baker, J)

CEE 204. Structural Reliability — Procedures for evaluating the safety of structural components and systems. First-and second-order estimates of failure probabilities of engineered systems. Sensitivity of failure probabilities to assumed parameter values. Measures of the relative importance of random variables. Reliability of systems with multiple failure modes. Reliability updating. Simulation methods and variance reduction techniques. Prerequisite: 203 or equivalent. 3-4 units, not given this year

CEE 205. Structural Materials Testing and Simulation — Hands-on laboratory experience with fabrication, computer simulation, and experimental testing of material and small-scale structural components. Comparison of innovative and traditional structural materials. Behavior and application of high-performance fiber reinforced concrete materials for new design, fiber-reinforced polymeric materials for structural retrofits and fracture in metals and polymers. 3-4 units, Spr (Billington, S)

CEE 207A. Energy Resources — (Undergraduates register for 173A; see 173A; same as EARTHSYS 103.) 4-5 units, Aut (Woodward, J)

CEE 207B. The Coming Energy Revolution — (Undergraduates register for 173B; see 173B.) 4 units, alternate years, not given this year

CEE 210. Building Information Modeling — (Undergraduates register for 110; see 110.) 4 units, Aut (Katz, G)

CEE 211. Multidisciplinary Modeling and Analysis — (Undergraduates register for 111; see 111.) 3-4 units, Win (Haymaker, J)

CEE 215. Goals and Methods of Sustainable Building Projects — (Undergraduates register for 115; see 115.) 3-4 units, Spr, Haymaker, J

CEE 222A. Computer Integrated Architecture/Engineering/Construction (A/E/C) — (Undergraduates register for 122A; see 122A.) 3 units, Win (Fruchter, R)

CEE 222B. Computer Integrated A/E/C — (Undergraduates register for 122B; see 122B.) 2 units, Spr (Fruchter, R)

CEE 223A. Design and Construction of Steel Structures — Using a 15-story steel building project, students analyze the implications of design decisions on the fabrication and erection of steel structures. Emphasis is on integration of design and construction of different types of steel structures. The implications on structural performance, cost and construction schedule, and evaluation of design alternatives. Economic considerations. Other topics include planning for lead times, floor systems and lateral load resisting systems, composite floor systems, innovative lateral load resisting systems, economics of steel structures, design and construction of steel connections, implication of design decisions related to welding and bolting. Prerequisite: 181 or equivalent. 3 units, Win (Staff)

CEE 223B. Design and Construction of Concrete Structures — Implications of design decisions in the structural performance, cost, and construction schedule of concrete structures. Emphasis is on integration of design and construction of concrete structures and on economic considerations. Reinforced concrete and pre-stressed concrete structures. Evaluation of design alternatives. Economic considerations in the selection of floor systems and lateral resisting systems for buildings. Design and construction of beams, one way slabs, post-tensioned slabs, structural walls, coupled structural walls. Design and construction of precast and post-tensioned elements, and of connections in precast elements. Prerequisite: 182 or equivalent. 3 units, not given this year

CEE 224. Preconstruction Planning for Design/Construction Integration — Marketing, planning commission, fire and building codes, team building, schedule development, and budget development using the design construction integration approach. Projects studied include entertainment, museums, educational, high-tech, semi-conductor, housing, and biotech. 3 units, Win (Staff)

CEE 224A. Sustainable Development Studio — (Undergraduates register for 124; see 124.) 1-5 units, Aut, Win, Spr (Staff)

CEE 232. Interplay of Architecture and Engineering — (Undergraduates register for 132; see 132.) 4 units, Spr (Katz, G)

CEE 236. Green Architecture — (Undergraduates register for 136; see 136.) 4 units, Spr (Jacobson, B)

CEE 240. Design and Management of Construction Operations — Designing on-site construction processes including: goals, roles, responsibilities, performance metrics; inputs/outputs; labor and capital intensive construction methods, task assignments and crew instructions, safety management and site supervision, and productivity measurement; value stream modeling, materials management, daily and weekly progress, and financial reports; site operations and management; construction process modeling and simulation methods; and digital models for planning and executing site operations. Field and computer lab work. Prerequisite: 241 or consent of instructor. 3 units, Spr (Fischer, M)

CEE 240B. Field Surveying Laboratory — (Undergraduates register for 140; see 140.) 3 units, Spr (Staff)
CEE 241. Managing Fabrication and Construction — Methods to manage the physical production of construction projects; design, analysis, and optimization of the fabricate-assemble process including performance metrics. Project management techniques and production system design including: push versus pull methods; master scheduling and look-ahead scheduling; scope, cost, and schedule control; earned value analysis; critical path method; location-based scheduling; 4D modeling; workflow; trade coordination; methods to understand uncertainty and reduce process variability; and supply chain systems including made-to-stock, engineered-to-order, and made-to-order. Group term project. Prerequisite: 100 or consent of instructor.

3-4 units, Win (Fischer, M)

CEE 242. Organization Design for Projects and Companies — Introduction to organizational behavior. Information-processing theory of organizational design for projects and companies and computer-based organizational analysis tools. Groups of 12 students practice running problem-focused meetings. Case studies focus on facility/product design and construction/manufacturing organizations; concepts are applicable to project-focused teams and companies in all industries.

4 units, Aut (Levitt, R)

CEE 242A. Sustainable Development — (Undergraduates register for 142A; see 142A.)

3 units, Win (Christensen, S)

CEE 243. Integrated Concurrent Engineering — (Undergraduates register for 143; see 143.)

3-4 units, Win (Kunz, J)

2 units, Aut (Tucker, A; Meyer, P)

CEE 244B. Advanced Construction Accounting, Financial Issues, and Claims — Continuation of 244A. The recovery of project overruns, and construction industry financial disclosures. Construction claims, project cost overrun analysis, and cost recovery methods related to labor, equipment, indirect costs, overhead, cost of capital, and profit claims. Schedule delay analysis in the context of claims.

2 units, Win (Meyer, P; Tucker, A)

CEE 245A. Global Projects Seminar — Issues related to large, complex, global development projects including infrastructure development, urban and rural development, and the development of new cities. Guest presentations by industry practitioners and academics, including: Sabeer Bhatia, founder of Hotmail and architect of NanoCity; Ian Bremmer, CEO of the Eurasia Group, and Greg Huger, managing director of AirliePartners. May be repeated for credit.

1 units, Aut (Orr, R)

CEE 245B. Global Projects: An Institutional Perspective — (Same as SOC 216B.) The multifaceted challenges of global projects that involve participants from multiple societal systems through the lens of institutional theory. Sources include sociology, economics, development and engineering literatures.

1-2 units, Spr (Orr, R)

CEE 245C. Project Finance — Public and private sources of finance for large, complex, capital-intensive projects in developed and developing countries. Benefits and disadvantages, major participants, risk sharing, and challenges of project finance in emerging markets. Financial, economic, political, cultural, and technological elements that affect project structures, processes, and outcomes. Case studies.

1-5 units, Win (Orr, R)

CEE 245D. Real Estate Development — (Undergraduates register for 145; see 145.)

3 units, Spr (Daly, A)

CEE 246. Managing Engineering and Construction Companies — Management of design and construction companies in the architecture-engineering-construction industry. Focus is on management of risks inherent in the A/E/C industry; developing business strategies and organizations to cope with cyclical demand, alternative contracting approaches, managing receivables and cash flow, administration of human resources, safety, quality, insurance, and bonding. Students play different management roles in a computer simulation of a construction company. Prerequisites: introductory accounting course such as ENGR 60, CEE 244A, or MS&E 140.

4 units, Spr (Levitt, R)

CEE 246A. Engineering Economy Primer — Satisfies the engineering economy prerequisite for 246 or 253. Application of engineering economy concepts and principles to the construction industry. Equivalence concept; interest formulas; value of money across time; present value, annual cash flow, internal rate of return and benefit-cost methods; retirement and replacement; depreciation; capital budgeting; and sensitivity and risk analysis. Construction finance concepts, loans, mortgages, and construction pro formas.

2 units, Aut (Koen Cohen, N)

CEE 247. Cases in Personality, Leadership, and Negotiation — (Undergraduates register for 147; see 147.)

3 units, Spr (Clough, R)

CEE 248. Real Estate Development — Critical activities and key participants. Topics: conceptual and feasibility studies, market perspectives, the public roles, steps for project approval, project finance, contracting and construction, property management, and sales. Group projects focus on actual developments now in the planning stage. Enrollment limited to 24; priority to graduate majors in the department’s CEM and GSB programs. Prerequisites: 241, 244A or equivalent, ENGR 60.

3 units, Spr (Kroll, M)

CEE 249. Labor and Industrial Relations: Negotiations, Strikes, and Dispute Resolution — Labor/management negotiations, content of a labor agreement, strikes, dispute resolution, contemporary issues affecting labor and management, and union versus open shop competitiveness in the marketplace. Case studies; presentations by union leaders, legal experts, and contractor principals. Simulated negotiation session with union officials and role play in an arbitration hearing.

2 units, Win (Walton, M)

CEE 251. Negotiation — (Undergraduates register for 151; see 151; same as ME 207, MS&E 285.)

3 units, Spr (Christensen, S)

CEE 252. Construction Engineering for Concrete and Steel Structures — Technical overview of materials, methods, and field operations required for construction of steel and concrete structures. Steel work includes detailing, fabricating, erecting, connecting. Concrete work includes batching, transporting, placing, finishing, curing, and formwork. Introduction to activities required to provide technical support for field operations. Group analysis of technical operation or support activity.

4 units, Aut (Tatum, C)

CEE 254. Cases in Estimating Costs — (Undergraduates register for 154; see 154.)

3 units, Aut (Clough, R)

CEE 255. Fostering Innovation in Organizations — Classification of technology and processes of innovation. Differences in innovative organizations, including competitive strategy, organization structure, organization culture, and roles such as innovation champions. Readings from economics and management; case studies of special innovations. Group analysis of an innovation in an organization and how it came about.

4 units, Spr (Tatum, C)

CEE 256. Building Systems — (Undergraduates register for 156; see 156.)

4 units, Spr (Daly, A)
CEE 257. Building Better: Technical and Sustainable Construction — Overview of design and construction for technical facilities and sustainable construction operations. Technical facilities include high purity systems, control systems, laboratories, biotech manufacturing facilities, and semiconductor fabs. Sustainable construction includes sites, resources, and field operations. Field trips, reports, and papers on technical and sustainable construction.

3 units, Win (Tatum, C)

CEE 258. Donald R. Watson Seminar in Construction Engineering and Management — Required of graduate students in the CEM program; other students including undergraduates welcome. Weekly discussions with speakers from industry and government. Students interact with industry representatives in small group discussions at dinner after class. May be repeated for credit.

1 unit, Aut (Clough, R), Win (Fischer, M)

CEE 259, Career Skills Seminar — (Undergraduates register for 159; see 159.)

2 units, Aut (Clough, R)

CEE 259A,B,C. Construction Problems — Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies. Prerequisites: graduate standing in CEM program and consent of instructor.

1-3 units, A: Aut, B: Win, C: Spr (Staff)

CEE 260A. Physical Hydrogeology — (Same as GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.

4 units, Aut (Gorelick, S)

CEE 260B. Surface and Near-Surface Hydrologic Response — (Same as GES 237.) Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology.

3 units, alternate years, not given this year

CEE 260C. Contaminant Hydrogeology — (Same as GES 231.) For earth scientists and engineers. Environmental and water resource problems involving contaminated groundwater. The processes affecting contaminant migration through porous media including interactions between dissolved substances and solid media. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and optimal aquifer remediation. Prerequisite: GES 230 or CEE 260A or equivalent.

4 units, Spr (Staff)

CEE 261T. Physical Chemistry of Atmospheric Particles — (Undergraduates register for 161T; see 161T; same as GEOPHYS 136/236.)

3 units, Spr (Tabazadeh, A)

CEE 262A. Hydrodynamics — The flow of incompressible viscous fluid; emphasis is on developing an understanding of fluid dynamics that can be applied to environmental flows. Topics: kinematics of fluid flow; equations of mass and momentum conservation (including density variations); some exact solutions to the Navier-Stokes equations; appropriate analysis of fluid flows including Stokes flows, potential flows, and laminar boundary layers; and an introduction to the effects of rotation and stratification through scaling analysis of fluid flows. Prerequisites: 101B or consent of instructor; and some knowledge of vector calculus and differential equations.

3-4 units, Aut (Montsmith, S)

3-4 units, Win (Monismith, S)

CEE 262C. Modeling and Simulation for Civil and Environmental Engineers — (Undergraduates register for 162; see 162.)

3 units, Spr (Fringer, O), Sum (Staff)

CEE 262D. Introduction to Physical Oceanography — (Undergraduates register for 164; see 164; same as EARTHSYS 164.)

4 units, Win (Staff)

CEE 262E. Modeling Surface Water Flows

2 units, Spr (Monismith, S)

CEE 263A. Air Pollution Modeling — The numerical modeling of urban, regional, and global air pollution focusing on gas chemistry and radiative transfer. Stratospheric, free-tropospheric, and urban chemistry. Methods for solving stiff systems of chemical ordinary differential, including the multistep implicit-explicit method, Gear’s method with sparse-matrix techniques, and the family method. Numerical methods of solving radiative transfer, coagulation, condensation, and chemical equilibrium problems. Project involves developing a basic chemical ordinary differential equation solver. Prerequisite: CS 106A or equivalent.

3-4 units, not given this year

3-4 units, Spr (Jacobson, M)

CEE 263C. Weather and Storms — (Undergraduates register for 63; see 63.)

3 units, Aut (Jacobson, M)

CEE 263D. Air Pollution: From Urban Smog to Global Change — (Undergraduates register for 64; see 64.)

3 units, Win (Jacobson, M)

CEE 264A. Rivers, Streams, and Canals — (Undergraduates register for 161A; see 161A.)

3-4 units, Aut (Fong, D)

CEE 265A. Sustainable Water Resources Development — Alternative criteria for judging the sustainability of projects. Application of criteria to evaluate sustainability of water resources projects in several countries. Case studies illustrate the role of political, social, economic, and environmental factors in decision making. Evaluation of benefit-cost analysis and environmental impact assessment as techniques for enhancing the sustainability of future projects. Limited enrollment. Prerequisite: graduate standing in Environmental and Water Studies, or consent of instructor.

3 units, Win (Ortolano, L)

CEE 265C. Water Resources Management — Principles of surface and ground water resources management in the context of water scarcity and hydrologic uncertainty. Topics include reservoir, river basin, and aquifer management, conjunctive use of surface and ground water, wastewater reuse, and demand management. Technical, economic, social, and political elements of water management.

3 units, Sum (Findikakis, A)
CEE 265D. Water and Sanitation in Developing Countries — Economic, social, political, and technical aspects of sustainable water supply and sanitation service provision in developing countries. Case studies from Asia, Africa, and Latin America. Service pricing, alternative institutional structures including privatization, and the role of consumer demand and community participation in the planning process. Environmental and public health considerations, and strategies for serving low-income households. Limited enrollment. Prerequisite: consent of instructor.

3 units, Aut (Davis, J)

CEE 266A. Watersheds and Wetlands — (Undergraduate register for 166A; see 166A.)

3 units, Aut (Freyberg, D)

CEE 266B. Floods and Droughts, Dams and Aqueducts — (Undergraduate register for 166B; see 166B.)

3 units, Win (Freyberg, D)

CEE 266C. Advanced Topics in Hydrology and Water Resources — Graduate seminar. Focus is on one or more hydrologic processes or water resources systems. Topics vary based on student and instructor interest. Examples include freshwater wetland hydrology, watershed-scale hydrologic modeling, renaturalization of stream channels, reservoir sediment management, and dam removal. Enrollment limited. Prerequisites: 266A,B, or equivalents. Recommended: 260A or equivalent.

3 units, Spr (Freyberg, D), alternate years, not given next year

CEE 266D. Water Resources and Water Hazards Field Trips — (Undergraduate register for 166D; see 166D.)

2 units, Win (Freyberg, D)

CEE 268. Groundwater Flow — Flow and mass transport in porous media through analytical techniques. Applications of potential flow theory to practical groundwater problems: flow to and from wells, rivers, lakes, drainage ditches; flow through and under dams; streamline tracing; capture zones of wells; and mixing schemes for in-situ remediation. Prerequisites: calculus and introductory fluid mechanics.

3 units, Win (Kitanidis, P)

CEE 269. Environmental Fluid Mechanics and Hydrology Seminar — Problems in all branches of water resources. Talks by visitors, faculty, and students. May be repeated for credit.

1 unit, Spr (Kitanidis, P)

CEE 270. Movement and Fate of Organic Contaminants in Waters — Transport of chemical constituents in surface and groundwater including advection, dispersion, sorption, interphase mass transfer, and transformation; impacts on water quality. Emphasis is on physiochemical processes and the behavior of hazardous waste contaminants. Prerequisites: undergraduate chemistry and calculus. Recommended: 101B.

3 units, Aut (Lathy, R), Sum (Robertson, A)

3 units, Win (Lathy, R)

CEE 271B. Environmental Biotechnology — Stoichiometry, kinetics, and thermodynamics of microbial processes for the transformation of environmental contaminants. Design of dispersed growth and biofilm-based processes. Applications include treatment of municipal and industrial waste waters, detoxification of hazardous chemicals, and groundwater remediation. Prerequisites: 270; 177 or 274A or equivalents.

4 units, Win (Criddle, C)

CEE 272. Coastal Contaminants — Coastal pollution and its effects on ecosystems and human health. The sources, fate, and transport of human pathogens, nutrients, heavy metals, persistent organics, endocrine disrupters, and toxic algae. Background on coastal ecosystems and coastal transport phenomena including tides, waves, and cross shelf transport. Introduction to time series analysis with MATLAB. Undergraduates may enroll with consent of instructor.

3-4 units, Aut (Boehm, A)

CEE 273. Aquatic Chemistry — Chemical principles and their application to the analysis and solution of problems in aqueous geochemistry (temperatures near 25° C and atmospheric pressure). Emphasis is on natural water systems and the solution of specific chemical problems in water purification technology and water pollution control. Prerequisites: CHEM 31 and 33, or equivalents.

3 units, Aut (Staff)

CEE 273A. Water Chemistry Laboratory — (Undergraduates register for 179A; see 179A.)

3 units, Win (Robertson, A)

CEE 273L. Energy End-Use Efficiency: Technology, Implementation, and Implications — (Undergraduate register for 173L; see 173L.)

1-3 units, Spr (Staff)

CEE 273R. Energy End-Use Efficiency Opportunities at Stanford University — Project-based. Focus is on developing transdisciplinary analysis and recommendations for integrating energy efficiency, renewable energy, and carbon-management strategies into Stanford infrastructure. Limited enrollment; preference to graduate students concurrently enrolled in 273L.

2-4 units, Spr (Staff)

3 units, Aut (Spormann, A), Sum (Staff)

3 units, Spr (Spormann, A)

CEE 274D. Pathogens and Disinfection — Introduction to epidemiology, major pathogens and infectious diseases, the immune system, movement and survival of pathogens in the environment, transfer of virulence and antibiotic resistance genes, and pathogen control, with an emphasis on public health engineering measures (disinfection). Prerequisite: 274A.

3 units, Spr (Criddle, C), alternate years, not given next year

CEE 274E. Pathogens in the Environment — Sources, fates, movement, and ecology of waterborne pathogens in the natural environment and disinfection systems; epidemiology and microbial risk assessment. No microbiology background required; undergraduates may enroll with consent of instructor.

3 units, not given this year
CEE 274P. Environmental Health Microbiology — Microbiology skills including culture-, microscope-, and molecular-based detection techniques. Focus is on standard and EPA-approved methods to enumerate and isolate organisms used to assess risk of enteric illnesses, such as coliforms, enterococci, and coliphage, in drinking and recreational waters including lakes, streams, and coastal waters. Student project to assess the microbial water quality of a natural water. Limited enrollment; priority to CEE graduate students.

3-4 units, Spr (Boehm, A)

CEE 274S. Hopkins Microbiology — Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

9-12 units, Sum (Spormann, A)

CEE 275A. California Coast: Science, Policy, and Law — (Undergraduates register for 175A; see 175A; same as EARTH SYS 175/275, LAW 514.)

3-4 units, Win (Caldwell, M; Boehm, A; Sivas, D)

CEE 275B. Process Design for Environmental Biotechnology — (Undergraduates register for 179B; see 179B.)

5 units, not given this year

CEE 276. Introduction to Human Exposure Analysis — (Undergraduates register for 178; see 178.)

3 units, Spr (Leckie, J)

CEE 277A. Teaching Science Literacy for a Sustainable Society — Teaching science to nontechnical audiences emphasizing technologies and science for the sustainable use of water. Guest lecturers. Learning styles, and the role of engineers and scientists in K-12 and media communication. Students develop teaching modules to be used in educational settings involving nontechnical audiences.

2-4 units, Win (Staff)

CEE 277S. Design for a Sustainable World — (Undergraduates register for 177S; see 177S.)

1-5 units, Aut, Win, Spr (Staff)

3 units, Aut (Hildemann, L)

3 units, Spr (Hildemann, L)

CEE 278C. Indoor Air Quality — (Undergraduates register for 172A; see 172A.)

2-3 units, not given this year

CEE 279. Environmental Engineering Seminar — Current research, practice, and thinking in environmental engineering and science. Attendance at seminars is self-directed, and may be accrued throughout the school year.

1 unit, Spr (Hildemann, L)

CEE 280. Advanced Structural Analysis — Theoretical development and implementation of direct stiffness method of structural analysis; virtual work principles; computation of element stiffness matrices and load vectors; direct assembly procedures; solution equation techniques. Analysis of two- and three-dimensional trusses and frame structures, thermal loads, and substructuring and condensation techniques for large systems. Practical modeling techniques and programming assignments. Introduction to nonlinear analysis concepts. Prerequisites: elementary structural analysis and matrix algebra.

3-4 units, Aut (Deierlein, G)

CEE 281. Finite Element Structural Analysis — Formulation and implementation of frame, plane stress, plane strain, axisymmetric, torsional, solid, plate, and shell elements. Topics: strong and weak forms of the problem, variational principles and the principle of minimum potential energy, the finite element method as an extension of the Rayleigh-Ritz methods, shape functions, isoparametric mapping, numerical integration, convergence requirements, and error estimation. Techniques for application to modeling structural systems. Prerequisite: 280 or equivalent.

3-4 units, Spr (Staff)

CEE 282. Nonlinear Structural Analysis — Introduction to methods of geometric and material nonlinear analysis, emphasizing modeling approaches for framed structures. Large-displacement analysis, concentrated and distributed plasticity models, and nonlinear solution methods. Applications to frame stability and performance-based seismic design. Assignments emphasize computer implementation and applications. Prerequisites: 280, 286 or equivalent.

3 units, Win (Deierlein, G)

CEE 283. Structural Dynamics — Vibrations and dynamic response of simple structures under time dependent loads; dynamic analysis of single and multiple degrees of freedom systems; support motion; response spectra.

3-4 units, Aut (Law, K)

CEE 284. Computational Methods in Structural Dynamics — Methods of structural dynamics for discretized and continuous systems in free and forced vibration, modal analysis; numerical methods; introduction to nonlinear dynamics; advanced topics. Prerequisites: 280, 283.

3 units, Win (Law, K), alternate years, not given next year

CEE 285. Behavior of Structural Systems for Buildings — Basic design concepts, performance criteria, loading, methods of design, types of structural systems, behavior under gravity and lateral loads, approximate methods of analysis, preliminary conceptual design, performance assessment, behavior of structural elements. Prerequisites: basic courses in design of steel and reinforced concrete structures.

3-4 units, Win (Krawinkler, H)

3-4 units, Aut (Krawinkler, H)

3 units, Spr (Aslani, H)
CEE 288. Earthquake Hazard and Risk Analysis — Earthquake phenomena, faulting, ground motion, study of past major earthquakes, effects of earthquakes on man-made structures, response spectra, Fourier spectra, soil effects on ground motion and structural damage, methods for structural damage evaluation, and formulation of the performance-based earthquake engineering. Prerequisites: 203, 283.
3-4 units, Win (Kiremidjian, A)

CEE 290. Structural Performance and Failures — Basic concepts in the definition of satisfactory structural performance; key elements in structural performance; types of failures, ranging from reduced serviceability to total collapse; failure sources and their root cause allocation, emphasizing design/construction process failures; failure prevention mechanisms; illustration with real life examples.
2 units, Spr (Moncarz, P)

CEE 292. Computer Methods in Structural Engineering — Techniques for the development of structural engineering analysis and design software. Topics: basic data structure; computer representation of engineering systems; implementation of advanced numerical methods and engineering software; automated conformance checking of design codes and standards. Prerequisite: CS 106A or equivalent.
3 units, not given this year

CEE 293. Foundation Engineering — Types, characteristics, analysis, and design of shallow and deep foundations; rigid and flexible retaining walls; braced excavations; settlement of footings in sands and clays; slope stability analysis by method of slices including search algorithms for the critical slip surface. Special seminars by guest speakers; computing assignment. Prerequisite: 101C or equivalent.
3 units, Win (Borja, R)

CEE 294. Computational Geomechanics — Continuum and finite element formulations of steady-state and transient fluid conduction problems on geomechanics; elliptic, parabolic, and hyperbolic systems; variational inequality and free-boundary problems; three-dimensional consolidation theory; undrained condition, mesh locking, B-bar and strain projection methods; finite element formulations of multiphase dynamic problems. Computing assignments. Prerequisite: ME 335A or equivalent.
3 units, alternate years, not given this year

CEE 295. Plasticity Modeling and Computation — Theory of plasticity; micromechanical basis; classical yield models; return-mapping algorithm; multi-surface and bounding surface models; material instabilities; localization and bifurcation. Prerequisite: ME 338A or equivalent.
3 units, Spr (Borja, R), alternate years, not given next year

CEE 296. Modeling in Geotechnical Engineering — Physical and numerical modeling in geomechanics. Primitive geotechnical models illustrate three-dimensional seepage and strain localization in simple shear and triaxial devices. Finite element modeling and simulations conducted using ANSYS. Numerical simulations demonstrate the 3D, solid-mesh generation capabilities of the program and the limitations of deformation analysis in the softening regime. Prerequisite: 101C or equivalent. Corequisite: course in finite element method.
2 units, Win (Borja, R)

CEE 297. Issues in Geotechnical and Environmental Failures — Causes and consequences of the failure of buildings, earth structures, waste storage, and high hazard facilities in contact with the environment; technical, ethical, economic, legal, and business aspects; failure analysis and forensic problems; prevention, liability, and dispute management. Case histories including earthquake, flood, and hazardous waste facilities. Student observation, participation in active lawsuits where possible.
3 units, Spr (Meehan, R)

CEE 297G. Structural Geology and Rock Mechanics — (Same as GES 215A.) Quantitative field and laboratory data integrated with solutions to initial and boundary-value problems of continuum mechanics introduce tectonic processes in Earth’s crust that lead to the development of geologic structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.
3-5 units, Aut (Pollard, D)

CEE 297H. Structural Geology and Rock Mechanics — (Same as GES 215B.) Field equations for elastic solids and viscous fluids derived from conservation laws to develop mechanical models for tectonic processes and their structural products. Topics include: conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding, model development, and methodology. Models constructed and solutions visualized using MATLAB. Prerequisite: GES 215A.
3-5 units, Win (Pollard, D)

CEE 298. Structural Engineering and Geomechanics Seminar — Recommended for all graduate students. Lectures on topics of current interest in professional practice and research.
1 unit, Win (Staff)

CEE 299. Independent Study in Civil Engineering — Directed study for graduate students on subjects of mutual interest to students and faculty. Student must obtain faculty sponsor.
1-5 units, Aut, Win, Spr, Sum (Staff)

CEE 299S. Independent Project in Civil and Environmental Engineering — Prerequisite: consent of instructor.
1-4 units, Aut, Win, Spr, Sum (Staff)

CEE 300. Thesis (Engineer Degree) — Research by Engineer candidates.
1-15 units, Aut, Win, Spr, Sum (Staff)

CEE 301. The Energy Seminar — Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students.
1 unit, Aut, Win, Spr, Sum (Staff)

CEE 310. Post-Master’s Seminar — For post-master’s students to serve as orientation to the selection of a research topic.
1 unit, Aut, Win, Spr (Staff)

CEE 316. Research Methods in Facility Engineering — For CEE Ph.D. students. Facility planning, design, management, and operation. Research philosophy and methods. Experimental design: ethnography, case study, survey, classical experiment (natural, synthetic, or computational). Data analysis: ANOVA, regression, correlation. Introduction to modeling social systems. Publication strategies. Final project to develop and refine research proposal and publication plan.
3-4 units, Win (Levitt, R)

CEE 320. Integrated Facility Engineering — Individual and group presentations on goals, research, and state-of-practice of virtual design and construction in support of integrated facility engineering, including objectives for the application and further development of virtual design and construction technologies. May be repeated for credit.
1 unit, Aut, Win, Spr (Kunz, J)

CEE 321. Formal Models for Design — Theories, methods, and formal systems to support the design of buildings. Academic and industrial frameworks to represent and manage the products, organizations, and processes of building projects. May be repeated for credit.
3 units, Aut (Haymaker, J)

CEE 333. Water Policy Colloquium — (Same as GES 333, IPER 333.) Student-organized interdisciplinary colloquium. Creation, implementation, and analysis of policy affecting the use and management of water resources. Weekly speakers from academia and local, state, national, and international agencies and organizations. Previous topics include water policy in California and developing countries.
1 unit, Spr (Freyberg, D)
CEE 362. Numerical Modeling of Subsurface Processes — Numerical modeling including: problem formulation, PDEs and weak formulations, and choice of boundary conditions; solution using the finite-element code COMSOL Multiphysics with a variety of solvers and pre- and postprocessing of data; and interpretation of results. Problems include: flow in saturated porous media with complex boundaries and heterogeneities; solute transport with common reaction models; effects of heterogeneity on dispersion, dilution, and mixing of solutes; variable-density flow and seawater intrusion; upscaling or coarsening of scale; and biofilm modeling. Enrollment limited to 5.

3-4 units, Win (Kiritidis, P)

3 units, Win (Fong, D)

CEE 363C. Ocean and Estuarine Modeling — Advanced topics in modeling for ocean and estuarine environments, including methods for shallow water, primitive, and nonhydrostatic equations on Cartesian, curvilinear, and unstructured finite-volume grid systems. Topics include free-surface methods, nonhydrostatic solvers, and advanced Eulerian and Lagrangian advection techniques. Focus is on existing techniques and code packages, and their methodologies, including POM, ROMS, TRIM, ELCOM, and SUNTANS. Prerequisites: CME 200, 206, or equivalents.

3 units, Win (Fringer, O)

CEE 365A,B,C,D. Advanced Topics in Environmental Fluid Mechanics and Hydrology — Students must obtain a faculty sponsor.

2-6 units, A: Aut, B: Win, C: Spr, D: Sum (Staff)

CEE 370A,B,C,D. Environmental Research — Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

5-6 units, A: Aut, B: Win, C: Spr, D: Sum (Staff)

CEE 371. Frontiers in Environmental Research — How to evaluate environmental research.

1-2 units, Aut, Win, Spr (Staff)

CEE 372. Environmental Informatics: Information and Knowledge Management in Environmental Engineering — (Formerly 374.) Information systems dealing with large amounts of environmental and sustainable development data at multiple spatial-temporal scales and from crossdisciplinary research activities. Topics include: domain information modeling and processing, and interoperability; information security; knowledge management and integration in environmental engineering domain; access to information for decision making; and systematic assessment in management and engineering. The use of IT and the Internet.

3 units, Spr (Wang, J)

CEE 374C. Introduction to Physiology of Microbes in Biofilms —

1-6 units, Spr (Staff)

CEE 374S. Advanced Topics in Microbial Pollution — May be repeated for credit. Prerequisite: consent of instructor.

1-5 units, Aut, Win, Spr, Sum (Staff)

CEE 376. Organic Analyses in Environmental Sciences — Theory and practice of instrumental methods used in environmental engineering and sciences, emphasizing determination of organic substances by gas chromatography, mass spectrometry, and high pressure liquid chromatography. Interpretation of mass spectra adaptation of techniques to specific environmental matrices. Case studies. Prerequisite: consent of instructor.

2-3 units, Spr (Reinhard, M)

1-3 units, Aut, Win, Spr, Sum (Staff)

3 units, not given this year

CEE 398. Report on Civil Engineering Training — On-the-job training under the guidance of experienced, on-site supervisors; meets the requirements for Curricular Practical Training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. Prerequisite: qualified offer of employment and consent of adviser as per I-Center procedures.

1 unit, Aut, Win, Spr, Sum (Staff)

CEE 399. Advanced Engineering Problems — Individual graduate work under the direction of a faculty member on a subject of mutual interest. Student obtains faculty sponsor. May be repeated for credit.

1-10 units, Aut, Win, Spr, Sum (Staff)

CEE 400. Thesis (Ph.D. Degree) — For students who have successfully completed the department general qualifying examination. Research and dissertation for the Ph.D. degree.

1-15 units, Aut, Win, Spr, Sum (Staff)

COGNATE COURSES

See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

ECON 155. Environmental Economics and Policy — (Same as EARTHSYS 112.)

5 units, Spr (Gurney, D)

GEOPHYS 162. Laboratory Methods in Geophysics

1-3 units, Spr (Staff)

GEOPHYS 190. Near-Surface Geophysics

3 units, Aut (Staff)

OVERSEAS STUDIES

Courses approved for the Civil and Environmental Engineering major and taught overseas can be found in the “Overseas Studies” section of this bulletin, or in the Overseas Studies Office, 126 Sweet Hall.

AUSTRALIA

CEE 168X. Coral Reef Ecosystems — (Same as BIOSCI 109Z, EARTHSYS 120X, HUMBIO 111X.) GER:DB-EngrAppSci

3 units, Aut (Ward, S; Fine, M; Anthony, K)

CEE 168Y. Coastal Resource Management — (Same as BIOSCI 110Z, EARTHSYS 121X, HUMBIO 112X.) GER:DB-EngrAppSci

3 units, Aut (Johnstone, R; Chifflings, T)

CEE 168Z. Coastal Forest Ecosystems — (Same as BIOSCI 111Z, EARTHSYS 122X, HUMBIO 113X.) GER:DB-EngrAppSci

3 units, Aut (Pole, M; Duke, N)

KYOTO

CEE 171X. Environmental Policy Design and Implementation in Japan, China, and the U.S.

3 units, Spr (Ortolano, L)
Institute for Computational and Mathematical Engineering

Emeritus: (Professor) Joe Keller (Applied Mathematics)
Director: Peter Glynn (Management Science and Engineering)
Director of Student Affairs: Walter Murray (Management Science and Engineering)
Professors: Stephen Boyd (Electrical Engineering), Gunnar Carlsson (Mathematics), Persi Diaconis (Mathematics), David Donoho (Statistics), Charbel Farhat (Mechanical Engineering), Peter Glynn (Management Science and Engineering), Gene Golub (Computer Science), Pat Hanrahan (Computer Science, Electrical Engineering), Antony Jameson (Aeronautics and Astronautics), Sanjiva Lele (Mechanical Engineering, Aeronautics and Astronautics), Parviz Moin (Mechanical Engineering), Brad Osgood (Electrical Engineering), George Papanicolaou (Mathematics), Eric Shaqfeh (Chemical Engineering, Mechanical Engineering), Wing Wong (Statistics), Yinyu Ye (Management Science and Engineering)
Associate Professor: Juan Alonso (Aeronautics and Astronautics)
Assistant Professors: Eric Darve (Mechanical Engineering), Ronald Fedkiw (Computer Science), Oliver Fringer (Civil and Environmental Engineering), Margot Gerritsen (Energy Resources Engineering), Ashish Goel (Management Science and Engineering), Adrian Lew (Mechanical Engineering), Doron Levy (Mathematics), Amin Saberi (Management Science and Engineering), Charles Taylor (Mechanical Engineering)
Professors (Research): Walter Murray (Management Science and Engineering), Michael A. Saunders (Management Science and Engineering)
Consulting Professors: Bertil Gustafsson, Sepandar Kamvar, Vadim Khayms, Pat Langley, Pat Miller, Andrew Pohorille
Web Site: http://icme.stanford.edu
Mail Code: 94305-4042
Phone: (650) 736-9038

Courses given in Computational and Mathematical Engineering have the subject code CME. For a complete list of subject codes, see Appendix.

The Institute for Computational and Mathematical Engineering’s central research mission is to develop sophisticated algorithmic and mathematical tools that impact many applied disciplines. ICME leverages Stanford’s strengths in engineering applications and the physical, biological, and earth sciences to guide the development of modern methods for research and education in computational mathematics including mathematical modeling of engineering systems using computer simulation technology and numerical simulation for discovery-driven engineering research, theory, and physical experiments.

ICME’s central teaching mission is to ensure that Stanford’s computational engineers are well trained in mathematical modeling and computer programming for numerical computation. ICME strives to integrate numerical computation in all its course offerings to facilitate application of mathematical techniques and theories to real world problems.

ICME research covers broad mathematical and computational areas of interest to all engineering departments from discrete mathematics, including computational probability and combinatorial optimization, to numerical solution of partial differential equations representing physical devices. The institute identifies research areas that benefit from a multidisciplinary approach in which computational mathematics plays a key role.

A strength of ICME is its multidisciplinary intellectual environment, with interaction among students and faculty with diverse backgrounds and expertise. ICME offers service courses for undergraduates and graduate students to fulfill departmental requirements, core courses for M.S. and Ph.D. students in Scientific Computing and Computational Mathematics, and specialized electives in various application areas.

Graduate Programs

University regulations governing the M.S. and Ph.D. degrees are described in the “Graduate Degrees” section of this bulletin.

Master of Science

The M.S. degree in Computational and Mathematical Engineering is intended as a terminal professional degree and does not lead to the Ph.D. program. Students interested in the doctoral program should apply directly to the Ph.D. program. Master’s students who have maintained a minimum grade point average (GPA) of 3.5 are eligible to take the Ph.D. qualifying exam; those who pass this examination and secure a research adviser may continue into the Ph.D. program upon acceptance by the institute.

The master’s program consists of 45 units of course work taken at Stanford. No thesis is required; however, students may become involved in research projects during the master’s program, particularly to explore an interest in continuing to the doctoral program. Although there is no specific background requirement, significant exposure to mathematics and engineering course work is necessary for successful completion of the program.

Applications to the M.S. program and all required supporting documents must be received by January 23, 2007. See http://icme.stanford.edu/admissions/ for up-to-date information including departmental deadlines. See http://gradadmissions.stanford.edu for information and application materials. Applicants should take the Graduate Record Examination by October of the year the application is submitted. Contact the department for deadline information.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#coterm.

Requirements

A candidate is required to complete a program of 45 units of courses numbered 200 or above. At least 36 of these must be graded units, passed with a grade point average (GPA) of 3.0 (B) or better. Master’s students interested in continuing to the doctoral program must maintain a 3.5 or better grade point average in the program.

Requirement 1 —The following courses may be needed as prerequisites for other courses in the program: MATH 41, 42, 51, 52, 53, 103, 113; CME 100, 102, 104, 108, 200, 204, 302; CS 106A, 106X, 108, 205, 229; ENGR 62; STATS 116 or 202.

Requirement 2 —Students must demonstrate breadth of knowledge in the field by completing the following core courses:

CME 302. Numerical Linear Algebra
CME 304. Numerical Optimization
CME 305. Discrete Mathematics and Algorithms
CME 306. Numerical Solution of Partial Differential Equations
CME 308. Stochastic Methods in Engineering
MATH 220A. Partial Differential Equations of Applied Mathematics

Courses in this area must be taken for letter grades. Deviations from the core curriculum must be justified in writing and approved by the student’s ICME adviser and the chair of the ICME curriculum committee. Courses that are waived may not be counted towards the master’s degree.

Requirement 3 —12 units of electives in the eight application areas listed below must be completed. The elective course list represents automatically accepted electives within the program, and the list is expanded on a continuing basis; the elective part of the ICME program is meant to be broad and inclusive of relevant courses of comparable rigor to ICME courses. Courses outside this list can be accepted as electives subject to approval of the student’s ICME adviser and the chair of the ICME curriculum committee.
1. Aeronautics and Astronautics:
   - AA 214A. Numerical Methods in Fluid Mechanics
   - AA 214B. Numerical Computation of Compressible Flow
   - AA 214C. Numerical Computation of Viscous Flow
   - AA 215A,B. Advanced Computational Fluid Dynamics
   - AA 218. Introduction to Symmetry Analysis

2. Computational and Mathematical Engineering:
   - CME 208. Mathematical Programming and Combinatorial Optimization
   - CME 210. Multiscale Methods in Engineering
   - CME 212. Introduction to Large Scale Computing in Engineering
   - CME 324. Advanced Methods in Matrix Computation
   - CME 326. Numerical Methods for Initial Boundary Value Problems

3. Computer Science:
   - CS 221. Artificial Intelligence: Principles and Techniques
   - CS 228. Probabilistic Models in Artificial Intelligence
   - CS 229. Machine Learning
   - CS 255. Introduction to Cryptography
   - CS 261. Optimization and Algorithmic Paradigms
   - CS 315A. Parallel Computer Architecture and Programming
   - CS 340. Level Set Methods
   - CS 348A. Computer Graphics: Geometric Modeling
   - CS 365. Randomized Algorithms

4. Electrical Engineering:
   - EE 222. Applied Quantum Mechanics I
   - EE 223. Applied Quantum Mechanics II
   - EE 262. Two-Dimensional Imaging
   - EE 278. Introduction to Statistical Signal Processing
   - EE 292E. Analysis and Control of Markov Chains
   - EE 363. Linear Dynamic Systems
   - EE 364. Convex Optimization
   - EE 376A. Information Theory

5. Management Science and Engineering:
   - MS&E 220. Probabilistic Analysis
   - MS&E 221. Stochastic Modeling
   - MS&E 223. Simulation
   - MS&E 251. Stochastic Decision Models
   - MS&E 310. Linear Programming
   - MS&E 313. Vector Space Optimization
   - MS&E 316. Pricing Algorithms and the Internet
   - MS&E 321. Stochastic Systems
   - MS&E 322. Stochastic Calculus and Control
   - MS&E 323. Stochastic Simulation

6. Mechanical Engineering:
   - ME 355A,B,C. Finite Element Analysis
   - ME 469A,B. Computational Methods in Fluid Mechanics
   - ME 484. Computational Methods in Cardiovascular Bioengineering

7. Statistics:
   - STATS 227. Statistical Computing
   - STATS 237. Time Series Modeling and Forecasting
   - STATS 250. Mathematical Finance
   - STATS 324. Classical Multivariate and Random Matrix Theory
   - STATS 345. Computational Molecular Biology
   - STATS 362. Monte Carlo Sampling
   - STATS 366. Computational Biology

8. Other:
   - CEE 281. Finite Element Structural Analysis
   - ENGR 209A. Analysis and Control of Nonlinear Systems
   - MATH 220B. Partial Differential Equations of Applied Mathematics
   - MATH 220C. The Mathematics of Imaging

   Requirement 4—9 units of focused graduate application electives, approved by ICME graduate adviser, in the areas of Engineering, Mathematics, and Physical, Biological, and other quantitative sciences.

   Requirement 5—3 units of ICME graduate seminar (CME 500) or other approved seminar sequence.

DOCTOR OF PHILOSOPHY

Applications to the Ph.D. program and all required supporting documents must be received by January 9, 2007. See http://icme.stanford.edu/admissions/ for up-to-date information. Prospective graduate students should see http://gradadmissions.stanford.edu for information and application materials. Applicants should take the Graduate Record Examination by October of the year the application is submitted.

Admission to the Ph.D. program does not imply that the student is a candidate for the Ph.D. degree. Advancement to candidacy requires superior academic achievement and passing the qualifying examination.

Requirements—Ph.D. students must (1) complete a minimum of 135 units of residency at Stanford, including 45 units from the master’s program, 27 units of focused electives in an area planned with the student’s Ph.D. adviser, 12 units from ICME specialized electives (CME courses numbered 320-380), 60 units of thesis research, and 3 units of free electives; (2) maintain a grade point average (GPA) of 3.5; (3) pass the qualifying examination administered by ICME; (4) complete an approved program of original research and a written dissertation based on research; and (6) pass an oral examination that is a defense of the dissertation research.

PH.D. MINOR

For a minor in Computational and Mathematical Engineering (CME), a doctoral candidate must complete 20 unduplicated units in the program. These should include three ICME core courses and three ICME graduate electives at the 300 level or above. A maximum of two units can be taken as ICME seminar units. All courses, except the seminar courses, must be taken for a letter grade and passed with a grade of ‘B’ or better. Minor programs must receive approval from the ICME curriculum chair prior to completing any of the ICME graduate electives. Minor programs should be developed in close discussion between the student and their primary Ph.D. adviser.

FINANCIAL ASSISTANCE

The department awards a limited number of fellowships, course assistantships, and research assistantships to incoming graduate students. Applying for such assistance is part of submitting the application for admission to the program. Students are appointed for half-time assistantships which provide a tuition scholarship at the 8, 9, 10 unit rate during the academic year and a monthly stipend. Half-time appointments generally require 20 hours of work per week. Most course assistantships and research assistantships are awarded to students in the doctoral program in ICME. If the number of Ph.D. students is not sufficient to staff all course and research assistantship positions available, these positions may be open to master’s students. However, master’s students are not guaranteed financial assistance.

COURSES

CME 100. Vector Calculus for Engineers—(Same as ENGR 154.) Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green’s, divergence, and Stokes’ theorems. Examples and applications drawn from various engineering fields. Prerequisites: MATH 41 and 42, or 10 units AP credit. GER:DB-Math

5 units, Aut (Darve, E)

5 units, Win (Darve, E; Moin, P)
5 units, Spr (Khayms, V)

CME 106. Introduction to Probability and Statistics for Engineers—(Same as ENGR 155C.) Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR 154 or MATH 51. GER: DB-Math
3-4 units, Win (Khayms, V)

CME 108. Introduction to Scientific Computing—Numerical computation for mathematical, computational, and physical sciences and engineering: numerical solution of systems of algebraic equations, least squares, quadrature, minimization of a function, banded matrices, nonlinear equations, numerical solution of ordinary and partial differential equations; truncation error, numerical stability for time dependent problems, stiffness, boundary value problems. Prerequisites: CS 106A or familiarity with MATLAB; MATH 51, 52, 53; inappropriate for students who have taken CME 102, 104/ENGR 154, or MATH 51. GER: DB-EngrAppSci
3-4 units, Win (Golub, G)

CME 110. Matrix Computations with Applications to Data Mining and IT—Basic matrix factorizations, numerical stability, updating/downdating procedures; data mining and knowledge discovery, application to information retrieval, text mining, search engines, character recognition, medical informatics, bioinformatics. Mathematical, numerical, and statistical techniques. Prerequisites: CS 106A; MATH 103 or 113; or equivalents.
3 units, alternate years, not given this year (Golub, G)

CME 200. Linear Algebra with Application to Engineering Computations—(Same as MATH 300A.) Solving matrix-vector systems. Direct and iterative solvers for non-singular linear systems of equations; their accuracy, convergence properties, and computational efficiency. Under- and over-determined systems, and nonlinear systems of equations. Eigenvalues, eigenvectors, and singular values; their application to engineering problems. Concepts such as basis, linear independence, column space, null space, rank, norms and condition numbers, projections, and matrix properties. Recommended: familiarity with computer programming; mathematics background equivalent to MATH 103, 130.
3 units, Aut (Gerritsen, M)

CME 204. Partial Differential Equations in Engineering—(Same as MATH 300B.) Geometric interpretation of partial differential equation (PDEs) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor.
3 units, Win (Shaqfeh, E)

3 units, Spr (Farhat, C)

CME 208. Mathematical Programming and Combinatorial Optimization—(Same as MS&E 112/212.) Combinatorial and mathematical programming (integer and non-linear) techniques for optimization. Topics: linear program duality and LP solvers; integer programming; combinatorial optimization problems on networks including minimum spanning trees, shortest paths, and network flows; matching and assignment problems; dynamic programming; linear approximations to convex programs; NP-completeness. Hands-on exercises. Prerequisites: CS 106A or X; ENGR 62 or MATH 103. GER: DB-EngrAppSci
3 units, Spr (Saberi, A)

CME 210. Multiscale Methods in Engineering—Multigrid methods to solve partial differential equations including anisotropic and nonlinear equations; multilevel adaptive refinement; fast multipole methods based on Taylor expansions, Chebyshev polynomials, plane wave representation, and singular value decomposition; and wavelets for signal and image compression, Haar wavelets, splines, and multiscale representation of curves and surfaces. Prerequisites: numerical methods (iterative solution of linear equations, interpolation, partial differential equations), scientific programming language.
3 units, not given this year (Darve, E)

CME 211. Computer Programming in C++ for Earth Scientists and Engineers—(Same as ENGR 211.) Computer programming methodology emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and modularity. Fundamental data structures. Time and space complexity analysis. The basic facilities of the programming language C++. Numerical problems from various science and engineering applications.
3 units, Win (Staff)

CME 212. Introduction to Large-Scale Computing in Engineering—Advanced programming methodologies for solving fundamental engineering problems using algorithms with pervasive application across disciplines. Overview of computer systems from a programming perspective including processor architectures, memory hierarchies, machine arithmetic, performance tuning techniques. Algorithms include iterative, direct linear solvers, fit, and divide and conquer strategies for n-body problems. Software development; other practical UNIX tools including shell scripting (bash), vi/emacs, gcc, make, gdb, gprof, rcs, and latex. Prerequisites: CME 200/ME 300A and CS 106X or equivalent level of programming in C/C++.
3 units, Win (Staff)

CME 291. Master’s Research—Students require faculty sponsor.
1-5 units, Aut, Win, Spr, Sum (Staff)

CME 300. Departmental Seminar Series—Required for first-year ICME Ph.D. students; recommended for first-year ICME M.S. students. Presentations about research at Stanford by faculty and researchers from Engineering, H&S, and organizations external to Stanford.
1 unit, Aut, Win, Spr (Murray, W)

CME 302. Numerical Linear Algebra—First in a three quarter graduate sequence. Solution of systems of linear equations: direct methods, error analysis, structured matrices; iterative methods and least squares. Parallel techniques. Prerequisites: CME 108, MATH 103 or 113.
3 units, Aut (Golub, G)

CME 304. Numerical Optimization—(Same as MS&E 315.) Solution of nonlinear equations; unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.
3 units, Win (Murray, W)
CME 305. Discrete Mathematics and Algorithms — (Same as MS&E 316.) Topics: enumeration (permutations, stirling numbers, Cayley’s theorem), SDR, flows and cuts (deterministic and randomized algorithms), eigenvalues and expansion arguments, asymptotics (NP-hardness and approximation algorithms). Topics illustrated with EE, CS, and bioinformatics applications. Prerequisites: MATH 51 or 103 or equivalents.

3 units, Win (Saberi, A)

CME 306. Numerical Solution of Partial Differential Equations — Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burgers equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: CME 302, MATH 220A.

3 units, Spr (Fedkiw, R)

CME 308. Stochastic Methods in Engineering — Review of basic probability: Monte Carlo simulation; state space models and time series; parameter estimation, prediction, and filtering; Markov chains and processes; stochastic control; and stochastic differential equations. Examples from various engineering disciplines. Prerequisites: exposure to probability; background in real variables and analysis.

3 units, Spr (Glynn, P)

3 units, not given this year (Golub, G)

CME 326. Numerical Methods for Initial Boundary Value Problems — Initial boundary value problems are solved in different areas of engineering and science modeling phenomena, such as wave propagation and vibration, and fluid flow. Numerical techniques for such simulations in the context of applications. Emphasis is on stability and convergence theory for methods for hyperbolic and parabolic initial boundary value problems, and the development of efficient methods for these problems.

3 units, Win (Gustafsson, B)

CME 330. Applied Mathematics in the Chemical and Biological Sciences — (Same as CHEMENG 300.) Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalized vector space theory, linear operator theory with eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102/ENGR 155A and CME 104/ENGR 155B, or equivalents.

3 units, Aut (Shaafieh, E)

CME 332. Computational Methods for Scientific Reasoning and Discovery — Computational approaches to representing, reasoning with, and inferring scientific knowledge. Formation of taxonomies, induction of descriptive laws, and construction of explanatory models. Examples include reconstructions from the history of physics and chemistry, and generation of new results in biology and Earth science. Methods to represent, use, and infer scientific knowledge. Prerequisites: familiarity with artificial intelligence and list processing; ability to think computationally in terms of knowledge structures and mechanisms that operate on them.

3 units, Spr (Langley, P)

CME 334. Advanced Methods in Numerical Optimization — (Same as MS&E 312.) Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.

3 units, Aut (Murray, W)

CME 336. Linear and Conic Optimization with Applications — (Same as MS&E 314.) Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent.

3 units, Aut (Ye, Y)

CME 338. Large-Scale Numerical Optimization — (Same as MS&E 318.) The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. Interior methods. The simplex method. Factorization and updates. The reduced-gradient, augmented Lagrangian, and SQP methods. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108 or 302.

3 units, Spr (Saunders, M)

CME 340. Computational Methods in Data Mining — Focus is on very large scale data mining. Topics include computational methods in supervised and unsupervised learning, association mining, and collaborative filtering. Individual or group applications-oriented programming project. 1 unit without project; 3 units requires final project. Prerequisites: statistics and linear algebra at the level of MATH 103 and STATS 116; programming at the level of CS 108. Recommended: machine learning at the level of CS 229 or STATS 202.

1-3 units, Win (Kamvar, S)

CME 342. Parallel Methods in Numerical Analysis — Emphasis is on techniques for obtaining maximum parallelism in numerical algorithms, especially those occurring when solving matrix problems and partial differential equations, and the subsequent mapping onto the computer. Implementation issues on parallel computers. Topics: parallel architecture, programming models, matrix computations, FFT, fast multiple methods, domain decomposition, and graph partitioning. Prerequisite: CME 302 or 200/ME300A, or consent of instructor. Recommended: differential equations and advanced programming language such as C or C++.

3 units, alternate years, not given this year (Alonso, J)

CME 380. Constructing Scientific Simulation Codes — Practical methods for writing and combining software components to generate simulation applications. Practical methodologies for constructing simulation code applications. How to design, write, and combine software components to generate simulation applications. Steering: using a small driver language like Python to script or steer the progress of a code. Data models and formats: how data is represented and shared inside an application and its external representation on disk. Mixed language programming using C, C++, F77, F90, and Python. Rational software engineering including testing, configuration control, code generation and makefiles. Other technologies needed to create real world applications regardless of scientific discipline.

3 units, Aut (Miller, P)

CME 390. Curricular Practical Training — May be repeated three times for credit.

1 unit, Aut, Win, Spr, Sum (Murray, W)

CME 400. Ph.D. Research

1-15 units, Aut, Win, Spr, Sum (Staff)

CME 444. Computational Consulting — Advice by graduate students under supervision of ICME faculty. Weekly briefings with faculty adviser and associated faculty to discuss ongoing consultancy projects and evaluate solutions. May be repeated for credit.

1-3 units, Aut, Win, Spr, Sum (Gerritsen, M)
CME 500. Numerical Analysis and Computational and Mathematical Engineering Seminar — Weekly research lectures by experts from academia, national laboratories, industry, and doctoral students. May be repeated for credit.

    1 unit, Aut, Win, Spr (Staff)

Cognate Courses

See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

MATH 220A,B. Partial Differential Equations of Applied Mathematics

    3 units, A: Aut (Vasy, A), B: Win (Liu, T)

ME 436. Computational Molecular Modeling and Parallel Computing

    3 units, Spr (Darve, E)

MS&E 319. Topics in Network Algorithms

    3 units, Win (Saberi, A)

COMPUTER SCIENCE

    Chair: William J. Dally

    Acting Associate Chair for Education: Eric S. Roberts

Professors: Alex Aiken, David Cheriton, William J. Dally, David Dill, Hector Garcia-Molina, Gene H. Golub, Leonidas J. Guibas, Patrick Hanrahan, John Hennessy, Mark A. Horowitz, Oussama Khatib, Daphne Koller, Monica Lam, Jean-Claude Latombe, Marc Levoy, Zohar Manna, John Mitchell, Rajeev Motwani, Youy Shoham, Jennifer Widom, Terry Winograd

Associate Professors: Dan Boneh, Dawson Engler, Michael Genesereth, Christopher Manning, Nick McKeown, Serge A. Plotkin, Balaji Prabhakar, Mendel Rosenblum, Sebastian Thrun

Assistant Professors: Serajim Biatzoglou, Gill Bejerano, Ronald P. Fedkiw, Scott Klemmer, Vladlen Koltun, Christoforos Kozyrakis, Philip Levis, David Mazieres, Andrew Ng, Tim Roughgarden

Professor (Research): John K. Salisbury

Professor (Teaching): Eric S. Roberts

Senior Lecturer: Margaret Johnson

Lecturers: Gerald Cain, Nicholas J. Parlate, Robert Plummer, Patrick Young, Julie Zelenski

Acting Assistant Professor: Pei Cao

Course Professors: Bernd Girod, Michael Levitt, Teresa Meng, Mark Musen, Clifford I. Nass, Fouad A. Tobagi

Consulting Associate Professor: Alex Aiken

Consulting Professor: Martin Abadi

* Recalled to active duty.

Mail Code: 94305-9025

Phone: (650) 723-2273

Web Site: http://www.cs.stanford.edu/

Courses given in Computer Science have the subject code CS. For a complete list of subject codes, see Appendix.

Each research group in Computer Science has systems specific to its research needs. These systems include PCs, Macs, multi-CPU computer clusters, and file servers. Servers and workstations manufactured by SUN, SGI, Dell, and Apple are commonplace. Support for course work and instruction is provided on systems available through Information Technology Systems (ITS) and the School of Engineering (SoE).

Undergraduate Programs

The mission of Stanford’s undergraduate program in Computer Science is to provide a foundation of mathematics, science, and engineering knowledge. Building on Stanford’s core ideals of liberal education, the program combines fundamentals with practical experience in problem solving, programming, communication, and collaboration, allowing each student to realize his or her individual potential.

Graduates of the program are prepared to pursue graduate study at the highest academic level, or advance into leadership positions in industry. The program creates an atmosphere that promotes innovative thinking, values mutual respect and diversity, supports scholarship and research, instills ethical behavior, and cultivates lifelong learning.

The department offers both a major and a minor in Computer Science. The requirements for these programs are outlined in the “School of Engineering” section of this bulletin and described in more detail in the Handbook for Undergraduate Engineering Programs published by the School of Engineering. The department has an honors program, which is described in the following section.

In addition to Computer Science itself, Stanford offers several interdisciplinary degrees with a substantial computer science component. The Computer Systems Engineering major (also in Engineering) allows the study of areas requiring a knowledge of both computer hardware and software, bridging the gap between traditional CS and Electrical Engineering majors. The Symbolic Systems major (in the School of Humanities and Sciences) offers an opportunity to explore computer science and its relation to linguistics, philosophy, and psychology. Finally, the Mathematical and Computational Sciences major (also Humanities and Sciences) allows students to explore computer science along with more mathematics, statistics, and operations research.

Honors

The Department of Computer Science (CS) offers an honors program for selected undergraduates whose academic records and personal initiative indicate that they have the necessary skills to undertake high-quality research in computer science. Admission to the program is by application only. To apply for the honors program, students must be majoring in Computer Science, have a grade point average (GPA) of at least 3.6 in courses that count toward the major, and achieve senior standing (135 or more units) by the end of the academic year in which they apply. Coterminal master’s students are eligible to apply as long as they have not already received their undergraduate degree. Beyond these requirements, students who apply for the honors program must also find a Computer Science faculty member who agrees to serve as the thesis adviser for the project. Thesis advisers must be members of Stanford’s Academic Council.

Students who meet the eligibility requirements and wish to be considered for the honors program must submit a written application to the CS undergraduate program office by May 1 of the year preceding the honors work. The application must include a letter describing the research project, a letter of endorsement from the faculty sponsor, and a transcript of courses taken at Stanford. Each year, a faculty review committee selects the successful candidates for honors from the pool of qualified applicants.

In order to receive departmental honors, students admitted to the honors program must, in addition to satisfying the standard requirements for the undergraduate degree, do the following:

1. Complete at least 9 units of CS 191 or 191W under the direction of their project sponsor.
2. Attend a weekly honors seminar Winter and Spring quarters.
3. Complete an honors thesis deemed acceptable by the thesis adviser and at least one additional faculty member.
4. Present the thesis at a public colloquium sponsored by the department.
5. Maintain the 3.6 GPA required for admission to the honors program.

GRADUATE PROGRAMS

The University’s basic requirements for the M.S. and Ph.D. degrees are discussed in the “Graduate Degrees” section of this bulletin.

MASTER OF SCIENCE

In general, the M.S. degree in Computer Science is intended as a terminal professional degree and does not lead to the Ph.D. degree. Most students planning to obtain the Ph.D. degree should apply directly for admission to the Ph.D. program. Some students, however, may wish to complete the master’s program before deciding whether to pursue the Ph.D. To give such students a greater opportunity to become familiar with research, the department has instituted a program leading to a master’s degree with distinction in research. This program is described in more detail in a subsequent section.

Applications for admission to the M.S. program, and all of the required supporting documents, must be received by December 12, 2006. Exceptions are made for applicants who are already students at Stanford and are applying to the coterminal program. Information on these deadlines is available from the department.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

REQUIREMENTS

A candidate is required to complete a program of 45 units. At least 36 of these must be graded units, passed with a grade point average (GPA) of 3.0 (B) or better. The 45 units may include no more than 21 units of courses from those listed below in Requirements 1 and 2. Thus, students needing to take more than seven of the courses listed in Requirements 1 and 2 actually complete more than 45 units of course work in this program. Only well-prepared students may expect to finish the program in one year; most complete the program in six quarters. Students hoping to complete the program with 45 units should already have a substantial background in computer science, including course work or experience equivalent to all of Requirement 1 and some of the courses in Requirement 2.

Requirement 1 — The following courses may be needed as prerequisites for other courses in the program: CS 103A, B, or X, 106A, B, or X, 107, 108; EE 108B; MATH 103.

Requirement 2 — Students must demonstrate breadth of knowledge in the field by completing the following courses:

1. Area A: Mathematical and Theoretical Foundations:
   a) Required:
      1) Statistics (STATS 116 or MS&E 220 or CME 106)
      2) Algorithms (CS 161)
      3) Automata (CS 154)
   b) Choose one of:
      1) Numerical Analysis (CME 108 or 302)
      2) Logic (CS 156, 157, 258, or PHIL 251)
      3) Mathematical Methods (CS 205)

2. Area B: Computer Systems:
   a) Required: Architecture (EE 108B or 282)
   b) Choose two of:
      1) Operating Systems (CS 140)
      2) Compilers (CS 143)
      3) Introduction to Computer Networks (CS 244A or EE 284)

3. Area C: AI and Applications:
   a) Choose two of the following, with at least one 200-level course:
      1) AI (CS 121 or 221)
      2) Databases (CS 145 or 245)
      3) Graphics (CS 148 or 248)
   b) Choose one of:
      1) AI (CS 251 or 351)
      2) Databases (CS 245 or 246)
      3) Graphics (CS 248 or 249)
   c) At least two additional courses chosen from the following:
      1) AI (CS 242, 243, 245, 246, 248)
      2) Databases (CS 244, 246, 248, 348B)
      3) Graphics (CS 246, 248)

Individual specializations may narrow the set of choices in specific areas of the breadth requirement; see the individual specialization sheets at http://cs.stanford.edu/degrees/mscs/programsheets/ for details. Breadth courses are waived only if evidence is provided that similar or more advanced courses have been taken, either at Stanford or another institution. Courses that are waived rather than taken may not be counted toward the M.S. degree. Breadth courses may be taken on a satisfactory/no credit basis provided that a minimum of 36 graded units is presented within the 45-unit program.

Requirement 3 — At least 1 but no more than 3 units of 500-level seminars must be taken.

Requirement 4 — A program of 21 units in an area of specialization must be completed. All courses in this area must be taken for letter grades. Nine approved programs are listed below. Students may propose to the M.S. program committee other coherent programs that meet their goals and satisfy the basic requirements.

1. Artificial Intelligence
   a) at least four of: CS 222, 223A, 223B, 224M, 224N, 224U, 226, 227, 228, 229
   b) A total of 21 units from category (a) and the following: CS 205, 225A, 225B, 227B, 246, 256, 262, 270, 273, 274, 276, 277, 294, 321, 323, 324, 327A, 328, 329, 374, 377, * 379*, ECON 286; EE 263, 376A; ENGR 205, 209A; LINGUIST 180; MS&E 251, 252, 339, 351, 352, 353; PSYCH 202, 205; STATS 202, 315A, 315B

2. Biocomputation
   a) at least four of: CS 262, 270, 272, 273, 274, 278
   b) A total of 21 units from category (a) and the following: CS 228, 229, 245, 261, 277, 345, 346, 365, 368, 374; BIOC 218; BIOMEDIN 234; GENE 203, 211, 228

3. Computer and Network Security
   a) CS 155, 244A, 255
   b) at least three of: CS 240, 244B, 244C, 259, 261, 344, 365
   c) at least one additional course chosen from (b) and the following:
      CS 240E, 244E, 245, 295, 345, 347, 355, 361A; EE 384A, 384B, 384C, 384M, 384S

4. Human-Computer Interaction
   a) CS 147, 247; MS&E 430
   b) at least two of: CS 148 or 248, 376, 377 (may be taken repeatedly), 378, 447; COMM 207, 268, 269; EDUC 124; MUSIC 250A; SYMBSYS 145
   c) A total of 21 units from categories (a), (b), and the following:
      CS 249, 270, 271, 272, 348A, 348B, 448; COMM 272; LINGUIST 180; MS&E 234, 284; ME 101, 115, 313, 314; PSYCH 205, 221, 252

5. Numerical Analysis/Scientific Computation
   a) CME 302, 306, 326
   b) at least two of: CS 205, 260; MS&E 121; MATH 131, 132, 220A, 220B, 220C; STATS 200
   c) at least two of: CS 223A, 327A, 328, 339; AA 214A, 214B; CME 324, 342; STATS 227

6. Real-World Computing
   a) at least two of: CS 223A, 223B, 248
   b) at least three of: CS 205, 226, 249, 262, 277, 348A, 348B, 368, 374; CME 302, 306, 326
   c) A total of 21 units from the above and from the following:
      CS 225A, 225B, 228, 229, 247, 270, 271, 272, 273, 274, 294, 327A, 328, 448; CME 324; PSYCH 267

7. Software Theory
   a) CS 242, 243, 256, 258
   b) at least one of: CS 244A, 245, 295, 343, 345
   c) at least one course from the following:
      CS 255, 259, 261, 351, 355, 356, 361A, 361B, 365, 368
   d) At least one additional course chosen from (b), (c), and CS 346

8. Systems
   a) CS 240, 242
   b) at least three of: CS 243, 244A, 245, 248, 348B; EE 271, 275
   c) at least two additional courses chosen from (b) and the following:
9. Theoretical Computer Science
   a) CS 256, 258, 261 (361A, 361B, or 365 may be substituted for 261)
   b) at least four additional courses chosen from CS 228, 255, 259, 262,
      365, 368, 369*, 374; M&EE 310

   * With consent of specialization chair.

   Requirement 5—Additional elective units must be technical courses
   (numbered 100 or above) related to the degree program and approved
   by the adviser. Elective courses may be taken on a satisfactory/no credit
   basis provided that a minimum of 36 graded units is presented within the
   45-unit program.

**MASTER OF SCIENCE WITH DISTINCTION IN RESEARCH**

A student who wishes to pursue the M.S./CS with distinction in research
must first identify a faculty adviser who agrees to supervise and support
the research work. The research adviser must be a member of the Aca-
demic Council and must hold an appointment in Computer Science. The
student and principal adviser must also identify another faculty member,
who need not be in the Department of Computer Science, to serve as a
secondary adviser and reader for the research report. In addition, the
student must complete the following requirements beyond those for the
regular M.S./CS degree:

1. **Research Experience**: The program must include significant research
   experience at the level of a half-time commitment over the course of
   three academic quarters. In any given quarter, the half-time research
   commitment may be satisfied by a 50 percent appointment to a
departmentally supported research assistantship, 6 units of indepen-
dent study (CS 393, 395, or 399), or a prorated combination of the two
(such as a 25 percent research assistantship supplemented by 3 units
of independent study). This research must be carried out under the
direction of the primary or secondary adviser.

2. **Supervised Writing and Research**: In addition to the research experi-
   ence outlined in the previous requirement, students must enroll in at
least 3 units of independent research (CS 393, 395, or 399) under the
direction of their primary or secondary adviser. These units should
be closely related to the research described in the first requirement,
but focused more directly on the preparation of the research report
described in the next section. Note that the writing and research units
described in parts (1) and (2) must be taken in addition to the 21 units
required for the specialization, although they do count toward the 45
units required for the degree.

3. **Research Report**: Students must complete a significant report describ-
   ing their research and its conclusions. The research report represents
work that is publishable in a journal or at a high-quality conference,
although it is presumably longer and more expansive in scope than a
typical conference paper. Two copies of the research report must be
submitted to the Student Services Office in the department three weeks
before the beginning of the examination period in the student’s final
quarter. Both the primary and secondary adviser must approve the
research report before the distinction-in-research designation can be
conferred.

**DOCTOR OF PHILOSOPHY**

Applications to the Ph.D. program and all supporting documents must
be received by December 12, 2006. See http://cs.stanford.edu/admissions/
for complete information. Changes or updates to the admission process
are posted by September and October, 2006. The following are general
department requirements; see the Computer Science Ph.D. administrator
for details.

1. A student should plan and successfully complete a coherent program
   of study covering the basic areas of computer science and related
disciplines. The student’s adviser has primary responsibility for the
adequacy of the program, which is subject to review by the Ph.D.
program committee.

2. Each student, to remain in the Ph.D. program, must satisfy the breadth
   requirement covering introductory level graduate material in major
   areas of computer science. Once a student fulfills six of eight whole
   areas of the breadth requirement, he or she may apply for admission
to candidacy for the Ph.D. prior to the second year in the program. The
student must completely satisfy the breadth requirement by the end of
nine quarters (excluding summers), and must pass a qualifying exam
in the general area of the expected dissertation.

3. As part of the training for the Ph.D., the student is required to complete at
   least 4 units (usually 10 hours per week for one quarter) as a course assistant
   or instructor for courses in Computer Science numbered 100 or above.

4. The most important requirement is the dissertation. After passing the
   required qualifying examination, each student must secure the agree-
   ment of a member of the department faculty to act as the dissertation
   adviser. (In some cases, the dissertation adviser may be in another
department.)

5. The student must pass a University oral examination in the form of a
defense of the dissertation. It is usually held after all or a substantial
portion of the dissertation research has been completed.

6. The student is expected to demonstrate the ability to present scholarly
material orally, both in the dissertation defense and by a lecture in a
department seminar.

7. The dissertation must be accepted by a reading committee composed
   of the principal dissertation adviser, a second member from within the
department, and a third member chosen from within the University.
The principal adviser and at least one of the other committee members
must be Academic Council members.

**PH.D. MINOR**

For a minor in Computer Science, a candidate must complete 20 undu-
licated units of computer science course work numbered 200 or above.
At least three of the courses must be master’s core courses to provide breadth
and one course numbered 300 or above to provide depth. One of the courses
taken must include a significant programming project to demonstrate
programming efficiency. All courses must be taken for a letter grade and
passed with a grade ‘B’ or better. Applications for a minor in Computer
Science are submitted at the same time as admission to candidacy.

**TEACHING AND RESEARCH ASSISTANTSHIPS**

Graduate student assistantships are available. Half-time assistants
receive a tuition scholarship for 8, 9, or 10 units per quarter during the
academic year, and in addition receive a monthly stipend.

Duties for half-time assistants during the academic year involve
approximately 20 hours of work per week. Course assistants (CAs) help
an instructor teach a course by conducting discussion sections, consulting
with students, grading examinations, and so on. Research assistants (RAs)
help faculty and senior staff members with research in computer science.
Most course and research assistantships are held by Ph.D. students in the
Department of Computer Science. If there is an insufficient number of
Ph.D. students to staff teaching and research assistantships, then these
positions are open to a limited number of master’s students in the depart-
ment. However, master’s students should not plan on being appointed to
an assistantship.

Students with fellowships may have the opportunity to supplement
their stipends by serving as graduate student assistants.
COURSES

WIM indicates that the course satisfies the Writing in the Major requirement. (AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

GUIDE TO CHOOSING INTRODUCTORY COURSES

Students arriving at Stanford have widely differing backgrounds and goals, but most find that the ability to use computers effectively is beneficial to their education. The department offers many introductory courses to meet the needs of these students.

For students whose principal interest is an exposure to the fundamental ideas behind computer science and programming, CS 105 is the most appropriate course. It is intended for students in nontechnical disciplines who expect to make some use of computers, but who do not expect to go on to more advanced courses. CS 105 meets the General Education Disciplinary Breadth Requirement in Engineering and Applied Sciences and includes an introduction to programming and the use of modern Internet-based technologies. Students interested in learning to use the computer should consider CS 1C, Introduction to Computing at Stanford.

Students who intend to pursue a serious course of study in computer science may enter the program at a variety of levels, depending on their background. Students with little prior experience or those who wish to take more time to study the fundamentals of programming should take 106A followed by 106B. Students in 106A need not have prior programming experience. Students with significant prior exposure to programming or those who want an intensive introduction to the field should take 106X, which covers most of the material in 106A and B in a single quarter. CS106A uses Java as its programming language; CS106B and X use C++. No prior knowledge of these languages is assumed, and the prior programming experience required for 106X may be in any language. In all cases, students are encouraged to discuss their background with the instructors responsible for these courses.

After the introductory sequence, Computer Science majors and those who need a significant background in computer science for related majors in engineering should take 103, 107 and 108. CS 103 offers an introduction to the mathematical and theoretical foundations of computer science. CS 107 exposes students to a variety of programming paradigms that illustrate critical strategies used in systems development; 108 builds on this material, focusing on the development of large interactive programs based on the object-oriented programming paradigm.

In summary:
For exposure: 1C
For nontechnical use: 105
For scientific use: 106A
For a technical introduction: 106A
For significant use: 106A,B or 106X, along with 103, 107, and 108

NUMBERING SYSTEM

The first digit of a CS course number indicates its general level of sophistication:
001-099 service courses for nontechnical majors
100-199 other service courses, basic undergraduate
200-299 advanced undergraduate/beginning graduate
300-399 advanced graduate
400-499 experimental
500-599 graduate seminars

The tens digit indicates the area of Computer Science it addresses:
00-09 Introductory, miscellaneous
10-19 Hardware Systems
20-29 Artificial Intelligence
30-39 Numerical Analysis
40-49 Software Systems
50-59 Mathematical Foundations of Computing
60-69 Analysis of Algorithms
70-79 Computational Biology and Interdisciplinary Topics
90-99 Independent Study and Practicum

NON-MAJOR

CS 1C. Introduction to Computing at Stanford —For those with limited experience on computers or who want to learn more about Stanford’s computing environment. The basics of computing, and a variety of programs. Topics include email, word processing, spreadsheets, the web and the Internet, and computing resources at Stanford. Macintosh and PC systems. One-hour lecture/demonstration in dormitory clusters prepared and administered weekly by the Resident Computer Coordinator (RCC). Final project. Not a programming course.
1 unit, Aut (Ly, J)

CS 2C. Intermediate Computing at Stanford —Continuation of 1C. Topics: sound, movie and image editing, advanced web pages. Applications include: Audacity, Dreamweaver, Photoshop, and Powerpoint. One-hour lecture/demonstration in dormitory clusters prepared and administered weekly by the Resident Computer Coordinator (RCC). Final project. Not a programming course.
1 unit, Win (Ly, J)

CS 20N. The Role of Information Technology in Global Conflict Resolution —Stanford Introductory Seminar. Preference to freshmen. Larger aspects of the impact of the Internet such as war and peace. Online activities of peace NGOs. Group project to build a portal for NGO activities concerning the Israeli-Palestinian conflict. Web site design and group project management.
3 units, Spr (Shoham, Y)

CS 26N. Motion Planning for Robots, Digital Actors, and Other Moving Objects —Stanford Introductory Seminar. Preference to freshmen. Motion planning theory and computational approaches. Intriguing algorithms, representations, and applications. Terminology and concepts for reading motion planning research literature. Problems may include: how a robot arm manipulates parts without colliding with its environment; how many maneuvers are required to park a car in a tight spot; how characters in computer games avoid running into obstacles; and how molecules change shapes to perform biological functions. GER:DB-EngrAppSci
3 units, Spr (Latombe, J)

CS 48N. The Science of Art —Stanford Introductory Seminar. Preference to freshmen. The interwoven histories of science and Western art from the Renaissance to the 19th century. Emphasis is on the revolutions in science and mathematics that inspired parallel revolutions in the visual arts such as Brunelleschi’s invention of linear perspective, Newton’s discoveries in geometric optics, and the theories of color vision proposed by Goethe, Young, and Helmholtz. The scientific principles behind image making including digital image synthesis and computer graphics. No programming experience required. GER:DB-EngrAppSci
3 units, Win (Levoy, M)

3 units, Spr (Wiederhold, G; Barr, A; Tessler, S)

3 units, Aut (Dill, D)
UNDERGRADUATE

3 units, Aut (Plummer, R), Win (Johnson, M)

CS 103B. Discrete Structures — Continuation of 103A. Topics: analysis of algorithms, recurrence relations, mathematical formulations of basic data models (sets, relations, linear models, trees and graphs), regular expressions, grammars, and finite automata. Corequisite: 106B or X. GER:DB-Math
3 units, Win (Cain, G), Spr (Johnson, M)

CS 103X. Discrete Structures (Accelerated) — Covers the material in 103A and B in a single quarter. The mathematical foundations of computer science. Mathematical proof techniques, number theory, set theory and logic, functions and relations, combinatorics, and graph theory. Prerequisite: background in mathematical formalism and mathematical proof. GER:DB-EngrAppSci, DB-Math
3-4 units, Win (Koltun, V)

CS 105. Introduction to Computers — For non-technical majors. What computers are and how they work. Practical experience in programming. Construction of computer programs and basic design techniques. A survey of Internet technology and the basics of computer hardware. Students in technical fields and students looking to acquire programming skills should take 106A or 106X. Students with prior computer science experience at the level of 106 or above require consent of instructor. Prerequisite: minimal math skills. GER:DB-EngrAppSci
3-5 units, Aut, Spr (Young, P)

CS 106A. Programming Methodology — (Same as ENGR 70A.) Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. GER:DB-EngrAppSci
3-5 units, Aut (Young, P), Win (Roberts, E), Spr (Young, P), Sum (Staff)

CS 106B. Programming Abstractions — (Same as ENGR 70B.) Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or consent of instructor. GER:DB-EngrAppSci
3-5 units, Win (Zelenski, J), Spr (Staff)

CS 106X. Programming Methodology and Abstractions (Accelerated) — (Same as ENGR 70X.) Intensive: 106A, B in one quarter. Students who complete 106A should enroll in 106B; 106X may be taken after 106A only with consent of instructor. Uses the C++ programming language. How programming concepts are expressed in C++. Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees). Introduction to time and space complexity analysis. Prerequisite: substantial programming experience that allows ready understanding of concepts presented in 106A. GER:DB-EngrAppSci
3-5 units, Aut (Zelenski, J), Win (Cain, G), Sum (Staff)

CS 107. Programming Paradigms — Advanced memory management features of C and C++; the differences between imperative and object-oriented paradigms. The functional paradigm (using LISP) and concurrent programming (using C and C++). Brief survey of other modern languages such as Python, Objective C, and C#. GER:DB-EngrAppSci
3-5 units, Aut, Spr (Cain, G)

CS 107L. Programming Paradigms Laboratory — Advanced C++ topics beyond the scope of 107. Topics: advanced memory management; placement new; manual destruction; operator overloading; STL template containers; algorithms; iterators; single and multiple inheritance; class hierarchy design; and C++ pitfalls.
1 unit, Aut, Spr (Cain, G)

CS 108. Object-Oriented Systems Design — Software design and construction in the context of large OOP libraries. Taught in Java. Topics: review of OOP, the structure of Graphical User Interface (GUI) OOP libraries, GUI application design and construction, OOP software engineering strategies, approaches to programming in teams. Prerequisite: 107. GER:DB-EngrAppSci
3-4 units, Aut, Win (Parlanete, N)

CS 121. Introduction to Artificial Intelligence — (Only one of 121/221 counts towards any CS degree program.) Concepts, representations, and techniques used in building practical computational systems (agents) that appear to display artificial intelligence (AI), through the use of adaptive information processing algorithms. Topics: history of AI, reactive systems, heuristic search, planning, constraint satisfaction, knowledge representation and uncertain reasoning, machine learning, classification, applications to language, and vision. Prerequisites: 103B or X, and facility with differential calculus, vector algebra, and probability theory. GER:DB-EngrAppSci
3 units, Win (Latombe, J), Sum (Staff)

CS 140. Operating Systems and Systems Programming — Operating systems design and implementation. Basic structure; synchronization and communication mechanisms; implementation of processes, process management, scheduling, and protection; memory organization and management, including virtual memory; I/O device management, secondary storage, and file systems. Prerequisite: 107. GER:DB-EngrAppSci
3-4 units, Aut, Win (Rosenblum, M), Sum (Staff)

CS 143. Compilers — Principles and practices for design and implementation of compilers and interpreters. Topics: lexical analysis; parsing theory; symbol tables; type systems; scope; semantic analysis; intermediate representations; runtime environments; code generation; and basic program analysis and optimization. Students construct a compiler for a simple object-oriented language during course programming projects. Prerequisites: 103B or X, and 107. GER:DB-EngrAppSci
3-4 units, Aut, Win (Aiken, A), Sum (Staff)

CS 145. Introduction to Databases — Database design and use of database management systems for applications. The relational model, relational algebra, and SQL, the standard language for creating, querying, and modifying relational and object-relational databases. XML data including the query languages XPath and XQuery. UML database design, and relational design principles based on functional dependencies and normal forms. Other topics include indexes, views, transactions, authorization, integrity constraints, and triggers. Advanced topics from data warehousing, data mining, web data management, Datalog, data integration, data streams and continuous queries, and data-intensive web services. Prerequisites: 103B or X, and 107. GER:DB-EngrAppSci
3-4 units, Aut, Win (Aiken, A), Sum (Staff)

CS 147. Introduction to Human-Computer Interaction Design — Usability and affordances, direct manipulation, systematic design methods, user conceptual models and interface metaphors, human cognitive and physical ergonomics, information and interactivity structures, and design tools and environments. Team project in interaction design. Prerequisite: 106A or equivalent background in programming.
3-4 units, Aut (Winograd, T)
CS 148. Introductory Computer Graphics — (Only one of 148 or 248 counts towards any CS degree program.) For undergraduates; M.S. students and those interested in continuing in graphics, register for 248. Two- and three-dimensional computer graphics. Topics: input and display devices, scan conversion of geometric primitives, two- and three-dimensional transformations and clipping, windowing techniques, curves and curved surfaces, three-dimensional viewing and perspective, hidden surface removal, illumination and color models, OpenGL, and 3-D modeling tools. Emphasis is on practical skills in using graphics libraries and tools. Programming using C/C++ and OpenGL, with demos in SoftImage. Prerequisites: 107, MATH 103. GER:DB-EngrAppSci
3 units, Win (Hannrathan, P), Sum (Staff)

CS 154. Introduction to Automata and Complexity Theory — Regular sets: finite automata, regular expressions, equivalences among notations, methods of proving a language not to be regular. Context-free languages: grammars, pushdown automata, normal forms for grammars, proving languages non-context-free. Turing machines: equivalent forms, undecidability. Nondeterministic Turing machines: properties, the class NP, complete problems for NP, Cook’s theorem, reducibilities among problems. Prerequisites: 103B or X. GER:DB-EngrAppSci
3-4 units, Aut (Dill, D), Spr (Motwani, R), Sum (Staff)

CS 154N. Introduction to NP-Completeness — Turing machines: equivalent forms, undecidability. Nondeterministic Turing machines: properties, the class NP, complete problems for NP, Cook’s theorem, reducibilities among problems. Students participate in approximately the last half of 154. Prerequisite: formal languages and automata as in first part of 154.
2 units, Aut (Dill, D), Spr (Motwani, R)

CS 155. Computer and Network Security — For seniors and first-year graduate students. Principles of computer systems security. Attack techniques and how to defend against them. Topics include: network attacks and defenses, operating system holes, application security (web, email, databases), viruses, software engineering attacks, privacy, and digital rights management. Course projects focus on building reliable code. Prerequisite: 140. Recommended: basic Unix. GER:DB-EngrAppSci
3 units, Spr (Boneh, D; Mazieres, D)

CS 156. Calculus of Computation — Methods for analyzing and developing robust software. Logic review. Verification: methods for proving correctness of sequential programs; need for decision procedures; and algorithms that decide the validity of logical formulas. Decision procedures for common theories in program analysis including SAT, equality, recursive data structures, arrays, and arithmetic; methods of combining decision procedures for different theories; incorporating decision procedures in first-order theorem proving. Static analysis: methods for deducing program properties algorithmically. Induction and termination: well-founded induction. Students apply methods to the analysis of programs. Prerequisites: 103, 106, or equivalents. GER:DB-EngrAppSci
3-4 units, Aut (Manna, Z; Bradley, A)

CS 157. Logic and Automated Reasoning — An elementary exposition from a computational point of view of propositional and predicate logic, axiomatic theories, and theories with equality and induction. Interpretations, models, validity, proof, strategies, and applications. Automated deduction: polarity, skolemization, unification, resolution, equality. Prerequisite: 103B or X. GER:DB-EngrAppSci
3 units, Aut (Gnesereth, M)

3-4 units, Aut (Plotkin, S), Win (Roughgarden, T), Sum (Staff)

CS 191W. Writing Intensive Senior Project — Restricted to Computer Science and Computer Systems Engineering students. Writing-intensive version of CS 191. Register using the section number of an Academic Council member. WIM
3-6 units, Aut, Win, Spr (Staff)

CS 192. Programming Service Project — Restricted to Computer Science students. Appropriate academic credit (without financial support) is given for volunteer computer programming work of public benefit and educational value.
1-4 units, Aut, Win, Spr, Sum (Staff)

CS 193C. Client-Side Internet Technologies — JavaScript, document object model, Flash, HTML, cascading style sheets, and XML. Prerequisite: programming experience at the level of CS 106A. GER:DB-EngrAppSci
3 units, not given this year

CS 193D. Professional Software Development with C++ — C++ programming techniques and methodologies. Language concepts including object-oriented design, memory management, and the standard library. Modern software development concepts such as design patterns, test-driven development, extreme programming, and XML. Prerequisites: basic C++ or significant experience in C or Java. GER:DB-EngrAppSci
3 units, not given this year

CS 193E. Object-Oriented User Interface Programming — Hands-on project using the Cocoa frameworks for the Mac OS X platform. The essentials of designing and implementing graphical applications using Cocoa tools and APIs. Topics include: object-oriented event-driven programming; Objective-C language; development tools such as Interface Builder, ProjectBuilder, and debugging and profiling tools; APIs for the foundation and application kits; and the Quartz graphic system. Requirements: C language and programming experience at the level of 106B/X. Recommended: UNIX, object-oriented programming, and graphical toolkits. GER:DB-EngrAppSci
3 units, Win (Staff)

CS 193S. Embedded Linux Systems Programming — Programming—embedded system-on-a-chip (SOC) microprocessors. Embedded driver development concepts: reading schematics and data sheets, using cross-compilers and debuggers, programming interrupts, synchronization, memory mapped I/O, DMA, and MMU operations. Emphasis is on real-world design decisions, trade-offs, and optimizations for performance, limited system resources, and power consumption. Projects in ARM assembly and C/C++, on embedded hardware running Linux. Prerequisites: CS 140, EE 108B.
3 units, Spr (Plummer, R)

CS 191. Senior Project — Restricted to Computer Science and Computer Systems Engineering students. Group or individual projects under faculty direction. Register using instructor’s section number. A project can be either a significant software application or publishable research. Software application projects include substantial programming and modern user-interface technologies and are comparable in scale to shareware programs or commercial applications. Research projects may result in a paper publishable in an academic journal or presentable at a conference. Required public presentation of final application or research results.
1-6 units, Aut, Win, Spr, Sum (Staff)

CS 193F. Software Project — Design, specification, coding, and testing of a significant team programming project under faculty supervision. Documentation includes a detailed proposal. Public demonstration of the project at the end of the quarter. Prerequisite: 108. GER:DB-EngrAppSci
3 units, Spr (Plummer, R)

CS 196. Microcomputer Consulting — Focus is on Macintosh and PC systems. Topics: hardware, operating systems, networking, troubleshooting, computer and network security, and consulting methodology. On-campus computing environments. Final project. Prerequisite: 1C or equivalent.
2 units, Win, Spr (Ly, J)
CS 198. Teaching Computer Science — Students lead a discussion section of 106A while learning how to teach a programming language at the introductory level. Focus is on teaching skills, techniques, and course specifics. Application and interview required; email cs198@cs for information. Prerequisite: 106B or X.
4 units, Aut, Win, Spr (Roberts, E; Zhao, J; Young, J)

CS 199. Independent Work — Special study under faculty direction, usually leading to a written report. Letter grade; if not appropriate, enroll in 199P.
1-6 units, Aut, Win, Spr, Sum (Staff)

CS 199P. Independent Work
1-6 units, Aut, Win, Spr, Sum (Staff)

UNDERGRADUATE AND GRADUATE

CS 201. Computers, Ethics, and Social Responsibility — Primarily for majors entering computer-related fields. Ethical and social issues related to the development and use of computer technology. Ethical theory, and social, political, and legal considerations. Scenarios in problem areas: privacy, reliability and risks of complex systems, and responsibility of professionals for applications and consequences of their work. Prerequisite: 106B or X, WIM
3-4 units, not given this year

CS 202. Law for Computer Science Professionals — Essential legal topics for the computer science professional including: intellectual property law as it relates to computer science including copyright registration, patents, and trade secrets; contract issues such as non-disclosure/non-compete agreements, license agreements, and works-made-for-hire; dispute resolution; and principles of business formation and ownership. Emphasis is on topics of current interest such as open source and the free software movement, peer-to-peer sharing, encryption, data mining, and spam.
1 unit, Aut (Hansen, D)

CS 205. Mathematical Methods for Robotics, Vision, and Graphics — Overview of continuous mathematics background necessary for research in robotics, vision, and graphics. Possible topics: linear algebra; the conjugate gradient method; ordinary and partial differential equations; vector and tensor calculus; calculus of variations. Prerequisites: 106B or X; MATH 51 and 113; or equivalents.
3 units, Aut (Fedkiw, R)

CS 221. Artificial Intelligence: Principles and Techniques — (Only one of 121 or 221 counts towards any CS degree program.) Topics: search, planning, constraint satisfaction, knowledge representation, probabilistic models, machine learning, neural networks, vision, robotics, and natural language understanding. Prerequisites: 103B or X, or PHIL 160A, 106B, or 106X, and exposure to probability. Recommended: 107 and facility with basic differential calculus.
3-4 units, Aut (Ng, A)

CS 222. Knowledge Representation — Declarative knowledge representation methods in artificial intelligence. Topics: time and action, defaults, compositional modeling, object-oriented representation, inheritance, ontologies, knowledge on the web, knowledge servers, multiple views, qualitative modeling. Prerequisite: familiarity with logic. Recommended: exposure to artificial intelligence as in 121/221.
3 units, Spr (Shoham, Y; van Benthem, J)

CS 222A. Introduction to Robotics — Topics: robotics foundations in kinematics, dynamics, control, motion planning, trajectory generation, programming and design. Recommended: matrix algebra.
3 units, Win (Khatib, O)

CS 223B. Introduction to Computer Vision — Fundamental issues and techniques of computer vision. Image formation, edge detection and image segmentation, stereo, motion, shape representation, recognition.
3 units, Win (Thrun, S)

CS 224M. Multi-Agent Systems — For advanced undergraduates, and M.S. and beginning Ph.D. students. Topics: logics of knowledge and belief, other logics of mental state, theories of belief change, multi-agent probabilities, essentials of game theory, social choice and mechanism design, multi-agent learning, communication. Applications discussed as appropriate, but emphasis is on conceptual matters and theoretical foundations. Prerequisites: basic probability theory and first-order logic.
3 units, Win (Shoham, Y)

CS 224N. Natural Language Processing — (Same as LINGUIST 280.) Methods for processing linguistic information and the underlying computational properties of natural languages. Syntactic and semantic processing from a linguistic and an algorithmic perspective. Focus is on modern quantitative techniques in NLP: using large corpora, statistical models for acquisition and interpretation, and representational systems. Prerequisites: CS 121/221 or LINGUIST 180, programming experience, familiarity with logic and probability.
3-4 units, Spr (Manning, C)

CS 224S. Speech Recognition and Synthesis — (Same as LINGUIST 281.) Automatic speech recognition, speech synthesis, and dialogue systems. Focus is on key algorithms including noisy channel model, hidden Markov models (HMMs), Viterbi decoding, N-gram language modeling, unit selection synthesis, and roles of linguistic knowledge. Prerequisite: programming experience. Recommended: CS 221 or 229.
2-4 units, Win (Jurafsky, D)

CS 224U. Natural Language Understanding — (Same as LINGUIST 188/288.) Machine understanding of natural language. Computational semantics (determination of sense, event structure, thematic role, time, aspect, synonymy/meronymy, causation), and computational pragmatics and discourse (coherence relations, anaphora resolution, information packaging, generation). Theoretical issues, online resources, and relevance to question answering, summarization, and inference. Prerequisites: one of LINGUIST 180, CS 224N,S; and LINGUIST 130A or B, or knowledge of logic.
2-4 units, not given this year

CS 225A. Experimental Robotics — Hands-on. Topics: kinematic and dynamic control of motion, compliant motion and force control, sensor-based collision avoidance, motion planning, dynamic skills, and robot-human interfaces. Limited enrollment. Prerequisite: 223A.
3 units, Spr (Khatib, O)

CS 225B. Robot Programming Laboratory — For robotics and non-robotics students. Students program mobile robots to exhibit increasingly complex behavior (simple dead reckoning and reactivity, goal-directed motion, localization, complex tasks). Topics: motor control and sensor characteristics; sensor fusion, model construction, and robust estimation; control regimes (subsumption, potential fields); active perception; reactive planning architectures; topics in sensor-based control, including vision-guided navigation. Student programmed robot contest. Programming is in C++ on Unix or Windows machines, done in teams. Prerequisites: programming skills at the level of 106B, 106X, 205, or equivalent.
3-4 units, Aut (Konolige, K)

3-4 units, not given this year

CS 227. Reasoning Methods in Artificial Intelligence — Technical presentation of algorithmic techniques for problem solving in AI. Combines formal algorithmic analysis with a description of recent applications. Topics: propositional satisfiability, constraint satisfaction, planning and scheduling, diagnosis and repair. Focus is on recent results. Prerequisites: familiarity with the basic notions in data structures and design and with techniques in the design and analysis of algorithms. Recommended: previous or concurrent course in AI.
3 units, Spr (Nayak, P)
CS 227B. General Game Playing — A general game playing system accepts a formal description of a game to play it without human intervention or algorithms designed for specific games. Hands-on introduction to these systems and artificial intelligence techniques such as knowledge representation, reasoning, learning, and rational behavior. Students create GGP systems to compete with each other and in external competitions. Prerequisite: programming experience. Recommended: 103 or equivalent.
3 units, Win (Levis, P)

CS 228. Probabilistic Models in Artificial Intelligence — Probabilistic modeling languages for representing complex domains, algorithms for reasoning and decision making using these representations, and learning these representations from data. Focus is on probabilistic graphic models, including Bayesian and Markov networks, extensions to temporal modeling such as hidden Markov models and dynamic Bayesian networks, and extensions to decision making such as influence diagrams. Topics: theoretical foundations and applications to domains including speech recognition, biological modeling and discovery, medical diagnosis, message encoding, vision, and robot motion planning. Prerequisites: basic probability theory and algorithm design and analysis.
3 units, Win (Koller, D)

CS 229. Machine Learning — Topics: statistical pattern recognition, linear and non-linear regression, non-parametric methods, exponential family, GLIMs, support vector machines, kernel methods, model/feature selection, learning theory, VC dimension, clustering, density estimation, EM, dimensionality reduction, ICA, PCA, reinforcement learning and adaptive control, Markov decision processes, approximate dynamic programming, and policy search. Prerequisites: linear algebra, and basic probability and statistics.
3 units, Aut (Ng, A)

CS 240. Advanced Topics in Operating Systems — Recent research. Classic and new papers. Topics: virtual memory management, synchronization and communication, file systems, protection and security, operating system extension techniques, fault tolerance, and the history and experience of systems programming. Prerequisite: 140 or equivalent.
3 units, Aut (Mazieres, D), Spr (Engler, D)

CS 240C. Advanced Operating Systems Implementation — Operating system techniques for meeting the performance, security, flexibility, and robustness needs of demanding applications. Review of hardware/software interface and traditional operating system concepts. Recent operating systems research. Lab to apply concepts. Students work with a minimal operating system capable of running on standard PC hardware. Operating system written in C with some assembly. Prerequisite: 140 or consent of instructor.
3 units, not given this year

CS 240D. Distributed Storage Systems — File system implementation, low-level database storage techniques, and distributed programming. File system structures, journaling and logging, I/O system performance, RAID (redundant arrays of inexpensive disks), remote procedure call abstraction, and systems illustrating these concepts. File systems, distributed computing, replication and consistency, fault tolerance, and crash recovery. Programming assignments. Final project to build a functioning Unix file system. Prerequisites: C++ and familiarity with Unix; 140 or consent of instructor.
3 units, not given this year

CS 240E. Embedded Wireless Systems — The structure and implementation of software systems for low power embedded sensors; how to build software that can run unattended for years on small batteries. Topics: hardware trends, energy profiles, execution models, aggregation, storage, application requirements, allocation, power management, resource management, scheduling, time synchronization, programming models, software design, and fault tolerance.
3 units, Win (Levis, P)

CS 240X. Advanced Operating Systems II — Same content as 240, with expanded topics focusing on more difficult and specialized papers. Recent topics in systems research.
3 units, Win (Engler, D)

CS 242. Programming Languages — Elements and programming paradigms: functional, imperative, and object-oriented. Formal semantic methods. Modern type systems, higher-order functions and closure, exceptions and continuations. Runtime support for language features. Emphasis is on separating elements of programming languages and styles. First half uses Lisp and ML to illustrate concepts; second half object-oriented languages. Prerequisite: 107, or experience with Lisp, C, and an object-oriented language.
3 units, Aut (Mitchell, J)

CS 243. Advanced Compiling Techniques — The theoretical and practical aspects of building modern compilers. Topics: intermediate representations, basic blocks and flow-graphs, data flow analysis, register allocation, global code optimizations, and interprocedural analysis. Prerequisite: 143 or equivalent.
3-4 units, Win (Lam, M)

CS 244A. Introduction to Computer Networks — Packet switching; the Internet architecture; routing; router architecture; flow control algorithms; retransmission algorithms; congestion control, TCP/IP; detecting and recovering from errors; switching; Ethernet (wired and wireless) and local area networks; physical layers; clocking and synchronization. Assignments introduce network programming, including sockets, designing a router and implementing a transport layer. EE284 is an alternate class, with less emphasis on programming. Students should not take both EE284 and CS244A. Prerequisite: 140 or equivalent.
3-4 units, Win (McKeown, N)

CS 244B. Distributed Systems — Distributed operating systems and applications issues, emphasizing high-level protocols and distributed state sharing as the key technologies. Topics: distributed shared memory, object-oriented distributed system design, distributed directory services, atomic transactions and time synchronization, file access, process scheduling, process migration and remote procedure call focusing on distribution, scale, robustness in the face of failure, and security. Prerequisite: 249. Corequisite: 244A.
3 units, Win (Engler, D; Mazieres, D)

CS 244C. Distributed Systems Project — Companion project option for students taking 244B. Corequisite: 244B.
3-6 units, Win (Engler, D; Mazieres, D)

CS 244E. Low Power Wireless Networking — Research challenges of low power wireless networking protocols and applications. Topics: the OSI model, 802.11, Bluetooth, 802.15.4, Zigbee, hardware considerations, traffic patterns, media access (CSMA, TDMA, R/TCS, idle listening), DSSS, UWB, radio propagation models, cross-layer interactions, flooding, dissemination, gossip, epidemics, probabilistic approaches, global versus local communication, and in-network processing.
3 units, Spr (Levis, P)

3 units, Win (Garciá-Molina, H)

CS 247. Human-Computer Interaction Design Studio — Project-based. Methods used in interaction design including needs analysis, user observation, idea sketching, concept generation, scenario building, storyboards, user character stereotypes, usability analysis, and market strategies. Prerequisites: 147 and 106A or equivalent background in programming.
3-4 units, Win (Klemmer, S; Verplank, W)
CS 248. Introduction to Computer Graphics—(Only one of 148 or 248 counts towards any CS degree program.) Input and display devices, scan conversion of geometric primitives, 2D and 3D geometric transformations, clipping and viewing, scene modeling and animation, algorithms for visible surface determination, local and global shading models, color, and real-time rendering methods. Written assignments and programming projects. Prerequisites: 108, MATH 103 or equivalent.

3-5 units, Aut (Levoy, M)

CS 249. Object-Oriented Programming from a Modeling and Simulation Perspective—Topics: large-scale software development approaches, encapsulation, use of inheritance and dynamic dispatch, design of interfaces and interface/implementation separation, exception handling, design patterns, minimizing dependencies and value-oriented programming. The role of programming conventions/style/restrictions in surviving object-oriented programming for class libraries, frameworks, and programming-in-the-large; general techniques for object-oriented programming. Prerequisites: C, C++, and programming methodology as developed in 106B or X, and 107 (107 may be taken concurrently). Recommended: 193D.

3-5 units, Aut (Linton, M)

CS 255. Introduction to Cryptography—For advanced undergraduates and graduate students. Theory and practice of cryptographic techniques used in computer security. Topics: encryption (single and double key), digital signatures, pseudo-random bit generation, authentication, electronic commerce (anonymous cash, micropayments), key management, PKI, zero-knowledge protocols. Prerequisite: basic probability theory.

3 units, Win (Boneh, D)

3 units, Win (Manna, Z)

CS 256L. Formal Methods for Reactive Systems Laboratory—Practical application of the specification and verification methods in 256. Individual projects include implementation of verification methods, verification case studies, or tool evaluation, depending on student preference.

2 units, Win (Manna, Z)

CS 261. Optimization and Algorithmic Paradigms—Algorithms for network optimization: max-flow, min-cost flow, matching, assignment, and min-cut problems. Introduction to linear programming. Use of LP duality for design and analysis of algorithms. Approximation algorithms for NP-complete problems such as Steiner Trees, Traveling Salesman, and scheduling problems. Randomized algorithms. Introduction to online algorithms. Prerequisite: 161 or equivalent.

3 units, Win (Plotkin, S)

CS 262. Computational Genomics—(Same as BIOMEDIN 262.) Applications of computer science to genomics, and concepts in genomics from a computer science point of view. Topics: dynamic programming, sequence alignments, hidden Markov models, Gibbs sampling, and probabilistic context-free grammars. Applications of these tools to sequence analysis: comparative genomics, DNA sequencing and assembly, genomic annotation of repeats, genes, and regulatory sequences, microarrays and gene expression, phylogeny and molecular evolution, and RNA structure. Prerequisites: 161 or familiarity with basic algorithmic concepts. Recommended: basic knowledge of genetics.

3 units, Win (Batzoglou, S)

3 units, Win (Guibas, L)

CS 270. Introduction to Biomedical Informatics: Fundamental Methods—(Same as BIOMEDIN 210.) Issues in the modeling, design, and implementation of computational systems for use in biomedicine. Topics: basic knowledge representation, controlled terminologies in medicine and biological science, fundamental algorithms, information dissemination and retrieval, knowledge acquisition, and ontologies. Emphasis is on the principles of modeling data and knowledge in biomedicine and on translation of resulting models into useful automated systems. Recommended: principles of object-oriented systems.

3 units, Aut (Musen, M)

CS 271. Introduction to Biomedical Informatics: System Design—(Same as BIOMEDIN 211.) Focus is on undertaking design and implementation of computational and information systems for life scientists and healthcare providers. Case studies will illustrate what design factors lead to success or failure in building systems in complex biomedical environments. Topics: requirements analysis, workflow and organizational factors, functional specification, knowledge modeling, data heterogeneity, component-based architectures, human-computer interaction, and system evaluation. Prerequisite: 210, or consent of instructor.

3 units, Win (Das, A; Johnson, C; Xu, R)

CS 272. Introduction to Biomedical Informatics Research Methodology—(Same as BIOMEDIN 212, GENE 212.) Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: 210, 211 or 214, or consent of instructor.

3 units, Aut (Altman, R; Cheng, B)

CS 274. Algorithms for Structure and Motion in Biology—(Same as BIOMEDIN 273.) Algorithms motivated by challenges in predicting molecule properties in silico. Topics: geometric and kinematic models of biomolecules (proteins, ligands), conformation spaces, obtention of structure from experimental data, finding sequence and structural similarities, molecular surfaces and shape analysis, energy calculation, detection of steric clashes and proximity computation, conformation sampling, threading, and study folding and binding motions.

3 units, not given this year

CS 274. Representations and Algorithms for Computational Molecular Biology—(Same as BIOMEDIN 214, GENE 214.) Topics: algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, computing with networks of genes, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, graphical display of biological data, and machine learning (clustering and classification), and natural language text processing. Consent of instructor required for 3 units. Prerequisites: programming skills, interest in biology.

3-4 units, Spr (Altman, R)
CS 275. Translational Bioinformatics — (Same as BIOMEDIN 217.)
Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphism, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology.
4 units, Win (Butte, A)

CS 276. Text Retrieval and Web Search — Text information retrieval systems; efficient text indexing: Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems. Text clustering and classification: classification algorithms, latent semantic indexing, taxonomy induction, cluster labeling; Web search engines including crawling and indexing, link-based algorithms, and web metadata.
3 units, Aut (Manning, C; Prabhakar, R)

CS 277. Experimental Haptics — Haptics as it relates to creating touch feedback in simulated or virtualized environments. Goal is to develop virtual reality haptic simulators and applications. Theoretical topics: psychophysical issues, performance and design of haptic interfaces, haptic rendering methods for 3-D virtual environments, and haptic simulation and rendering of rigid and deformable solids. Applied topics: the CHAI haptic library; implementation of haptic rendering algorithms; collision detection in 3-D environments; design of real-time models for deformable objects. Guest speakers. Lab/programming exercises; a more open-ended final project. Enrollment limited to 20. Prerequisite: experience with C++. Recommended: 148 or 248, 223A.
3 units, Aut (Manning, C; Prabhakar, R)

3 units, Win (Dill, D)

CS 279. Computational Methods for Analysis and Reconstruction of Biological Networks — Types of interactions, including: regulatory such as transcriptional, signaling, and chromatin modification; protein-protein interactions; and genetic. Biological network structure at scales such as single interaction, small subgraphs, and global organization. Methods for analyzing properties of biological networks. Techniques for reconstructing networks from biological data, including: DNA/protein sequence motifs and sequence conservation; gene expression data; and physical binding data such as protein-DNA, protein-RNA, and protein-protein. Network dynamics and evolution. Prerequisites: biology at the level of BIOSCI 41; computer science and data structures at the level of CS 103 and 106; and probability and statistics at the level of STATS 116.
3 units, Aut (Koller, D)

CS 294. Research Project in Computer Science — Student teams work under faculty supervision on research and implementation of a large project in some major sub-discipline in computer science. Lectures on state-of-the-art methods related to the particular problem domain. Prerequisites: consent of instructor.
3 units, Win (Thrun, S), Spr (Koller, D)

CS 294A. Research Project in Artificial Intelligence — Student teams under faculty supervision work on research and implementation of a large project in AI. State-of-the-art methods related to the problem domain. Prerequisites: AI course from 220 series, and consent of instructor.
3 units, Win (Thrun, S), Spr (Koller, D)

CS 294S. Research Project in Software Systems and Security — Student teams implement a prototype security-critical system. The processes of developing requirements specifications, defining interfaces, implementation, and testing. Possible attacks on the system. Enrollment limited to 20.
3 units, not given this year

CS 294W. Writing Intensive Research Project in Computer Science — Restricted to Computer Science and Computer Systems Engineering undergraduates. Students enroll in the CS 294W section attached to the particular CS 294 project they have selected. WIM
3 units, Win (Thrun, S), Spr (Koller, D)

CS 295. Software Engineering — Software specification, testing, and verification. Emphasis is on current best practices and technology for developing reliable software at reasonable cost. Assignments focus on applying these techniques to realistic software systems. Prerequisites: 108. Recommended a project course such as 140, 143, or 145.
2-3 units, Spr (Aiken, A)

CS 298. Seminar on Teaching Introductory Computer Science — Faculty, undergraduates, and graduate students interested in teaching discuss topics raised by teaching computer science at the introductory level. Prerequisite: consent of instructor.
1-3 units, not given this year

PRIMARILY FOR GRADUATE STUDENTS

CS 300. Departmental Lecture Series — For first-year Computer Science Ph.D. students. Presentations by members of the department faculty, each describing informally his or her current research interests and views of computer science as a whole.
1 unit, Aut (Motwani, R)

CS 309. Industrial Lectureships in Computer Science — Guest computer scientist. By arrangement. May be repeated for credit.

CS 309A. Software on Demand — For technology and business students. The shift from traditional software model of disconnected development and CD-ROM deployment to engineering and delivery on the Internet as a service. Guest industry experts give first-hand view of changes in the software industry.
1 unit, Aut (Chou, T)

CS 315A. Parallel Computer Architecture and Programming — The principles and tradeoffs in the design of parallel architectures. Emphasis is on naming, latency, bandwidth, and synchronization in parallel machines. Case studies on shared memory, message passing, data flow, and data parallel machines illustrate techniques. Architectural studies and lectures on techniques for programming parallel computers. Programming assignments on one or more commercial multiprocessors. Prerequisites: EE 282, and reasonable programming experience.
3 units, Win (Olukotun, O)

CS 319. Topics in Digital Systems — Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.
3 units, by arrangement

CS 321. Information Processing for Sensor Networks — Design and implementation of algorithms and protocols for performing information processing tasks in sensor networks, including routing, data dissemination and aggregation, information discovery and brokerage, service establishment (localization, time synchronization), sensor tasking and control, and distributed data storage. Techniques from signal processing, networking, energy-waste computing, distributed databases and algorithms, and embedded systems and platforms. Physical networking, and application layers and design trade-offs across the layers. Prerequisites: linear algebra and elementary probability.
3 units, Spr (Guibas, L)
CS 327A. Advanced Robotics — Emerging areas of human-centered robotics and interactive haptic simulation of virtual environments. Topics: redundancy; task-oriented dynamics and control, whole-body control-task and posture decomposition, cooperative robots, haptics and simulation, haptically augmented teleoperation, human-friendly robot design. Prerequisites: 223A or equivalent.

3 units, Spr (Khatib, O)

CS 329. Topics in Artificial Intelligence — Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, by arrangement

CS 339. Topics in Numerical Analysis — Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, by arrangement

CS 340. Level Set Methods — Modeling surfaces with implicit functions. Focus is on the mathematical and computational techniques required to treat dynamic implicit surfaces. Level set methods can be used for applications including multiphase flow (such as bubbles and drops), image processing, computer vision, and graphics.

3 units, Spr (Fedkiw, R)

CS 343A. Advanced Topics in Compilers — Topics change every quarter. May be repeated for credit. Prerequisite: 243.

3 units, Spr (Lam, M)

CS 344. Projects in Computer Networks — Router implementation. A hardware and software student are paired to develop a functional Internet router. Course ends with open-ended design challenge judged by panel of expert network designers from industry. Prerequisites: 244A or network programming experience. Recommended: for those interested in hardware design, background in VHDL or Verilog; for those interested in software, C.

3 units, Spr (McKeown, N)

CS 344B. Advanced Distributed Systems — Issues involving LAN clusters, WAN systems, and the Internet. Classical results and ongoing research efforts. Sources include research publications from the last 20 years.

3 units, not given this year

CS 345. Advanced Topics in Database Systems — Content varies. May be repeated for credit with instructor consent. Prerequisite: 145. Recommended: 245.

CS 345A. Data Mining — Techniques for extracting information from very large databases, including finding frequent and correlated pairs and clustering data in high dimensional spaces. Techniques for mining the web and data streams.

3 units, Aat (Ullman, J; Rajaraman, A)

CS 345B. XML and Databases — Foundations for efficient XML data processing for different application areas. Topics: XML basics including XML Schema, XQuery, XUpdate, and SQL/X; implementation techniques emphasizing optimization of XML data processing; storage techniques; web services; programming languages and Java; information retrieval and query processing techniques; RSS and XML-based publish/subscribe; Semantic Web (RDF and OWL). May be repeated for credit with consent of instructor. Prerequisite: 145. Recommended: 245.

3 units, Win (Staff)

CS 346. Database System Implementation — A major database system implementation project realizes the principles and techniques covered in earlier courses. Students independently build a complete database management system, from file structures through query processing, with a personally designed feature or extension. Lectures on project details and advanced techniques in database system implementation, focusing on query processing and optimization. Guest speakers from industry on commercial DBMS implementation techniques. Prerequisites: 145, 245, programming experience in C++.

3-5 units, Spr (Widom, J)

CS 347. Transaction Processing and Distributed Databases — The principles and system organization of distributed databases. Data fragmentation and distribution, distributed database design, query processing and optimization, distributed concurrency control, reliability and commit protocols, and replicated data management. Distributed algorithms for data management: clocks, deadlock detection, and mutual exclusion. Heterogeneous and federated distributed database systems. Overview of commercial systems and research prototypes. Prerequisites: 145, 245.

3 units, Spr (Staff)

3-4 units, Aut (Guibas, L)

CS 348B. Computer Graphics: Image Synthesis Techniques — Intermediate level, emphasizing the sampling, shading, and display aspects of computer graphics. Topics: local and global illumination methods including radiosity and distributed ray tracing, texture generation and rendering, volume rendering, strategies for anti-aliasing and photo-realism, human vision and color science as they relate to computer displays, and high-performance architectures for graphics. Written assignments and programming projects. Prerequisite: 248 or equivalent. Recommended: Fourier analysis or digital signal processing.

3-4 units, Spr (Hanrahan, P)

CS 349. Topics in Programming Systems — Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

CS 349A. Large-Scale Software Development — Object-oriented programming techniques. Reliability, evolvability, and predictable performance. Topics: generic programming and templates; minimizing process overhead; self-checking software and integrated software audit; abstract data type programming and operator overloading; predictable memory management; collection class templates; large-scale description objects; concurrent object-oriented programming; inheritance versus composition; and manager/factory patterns. Prerequisite: 249 or background in OOP/C++.

3 units, Win (Greenberg, E)

CS 355. Advanced Topics in Cryptography — Topics: pseudo-random generation, zero knowledge protocols, elliptic curve systems, threshold cryptography, security analysis using random oracles, lower and upper bounds on factoring and discrete log. May be repeated for credit. Prerequisite: 255.

3 units, not given this year

CS 357. Advanced Topics in Formal Methods — Topics vary annually. Possible topics include automata on infinite words, static analysis methods, verification of real-time and hybrid systems, and verification diagrams. May be repeated for credit. Prerequisite: 256.

3 units, Spr (Manna, Z; Sipma, H)

CS 359. Topics in the Theory of Computation — Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

CS 359D. Hardness of Approximation — Results on and proof techniques for ruling out good approximation algorithms for NP-hard optimization problems. Topics: the PCP theorem; parallel repetition theorem; the unique games conjecture; applications to set cover, clique, max cut, network design, and problems. Prerequisites: 154 and 261, or equivalents.

3 units, Win (Roughgarden, T)
CS 361A. Advanced Algorithms — Advanced data structures: union-find, self-adjusting data structures and amortized analysis, dynamic trees, Fibonacci heaps, universal hash function and sparse hash tables, persistent data structures. Advanced combinatorial algorithms: algebraic (matrix and polynomial) algorithms, number theoretic algorithms, group theoretic algorithms and graph isomorphism, online algorithms and competitive analysis, strings and pattern matching, heuristic and probabilistic analysis (TSP, satisfiability, cliques, colorings), local search algorithms. May be repeated for credit. Prerequisite: 161 or 261, or equivalent.
3 units, not given this year

CS 361B. Advanced Algorithms — Topics: fundamental techniques used in the development of exact and approximate algorithms for combinatorial optimization problems such as generalized flow, multicommodity flow, sparsest cuts, generalized Steiner trees, load balancing, and scheduling. Using linear programming, emphasis is on LP duality for design and analysis of approximation algorithms; interior point methods for LP. Techniques for development of strongly polynomial algorithms.
3 units, not given this year

CS 364A. Algorithmic Game Theory — Topics at the interface of theoretical computer science and game theory such as: algorithmic mechanism design; combinatorial and competitive auctions; congestion and potential games; cost sharing; existence, computation, and learning of equilibria; Internet game theory; network games; price of anarchy and stability; and selfish routing. Minimal overlap with 224M and 324. Prerequisites: 154N and 161, or equivalents.
3 units, Aut (Roughgarden, T)

CS 364B. Topics in Algorithmic Game Theory — Further exploration of topics from 364A. Students work on a research problem related to the course. May be taken prior to 364A; may be repeated for credit. Prerequisites: 154N and 161, or equivalents.
3 units, alternate years, not given this year

CS 365. Randomized Algorithms — Design and analysis of algorithms that use randomness to guide their computations. Basic tools, from probability theory and probabilistic analysis, that are recurrent in algorithmic applications. Randomized complexity theory and game-theoretic techniques. Algebraic techniques. Probability amplification and derandomization. Applications: sorting and searching, data structures, combinatorial optimization and graph algorithms, geometric algorithms and linear programming, approximation and counting problems, parallel and distributed algorithms, online algorithms, number-theoretic algorithms. Prerequisites: 161 or 261, STAT 116, or equivalents.
3 units, Aut (Motwani, R)

CS 369. Topics in Analysis of Algorithms — Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.
3 units, by arrangement

CS 374. Algorithms in Biology — (Same as BIOMEDIN 374.) Algorithms and computational models applied to molecular biology and genetics. Topics vary annually. Possible topics include biological sequence comparison, annotation of genes and other functional elements, molecular evolution, genome rearrangements, microarrays and gene regulation, protein folding and classification, molecular docking, RNA secondary structure, DNA computing, and self-assembly. May be repeated for credit. Prerequisites: 161, 262 or 274, or BIOCHEM 218, or equivalents.
2-3 units, Aut (Batzoglou, S)

CS 376. Research Topics in Human-Computer Interaction — Interactive systems, research areas in interaction techniques, and the design, prototyping, and evaluation of user interfaces. Topics: computer-supported cooperative work; audio, speech, and multimodal interfaces; user interface toolkits; design and evaluation methods; ubiquitous and context-aware computing; tangible interfaces, haptic interaction; and mobile interfaces.
3 units, Aut (Klemmer, S)

CS 377. Topics in Human-Computer Interaction — Contents change each quarter. May be repeated for credit. See http://hci.stanford.edu/academics for offerings.

CS 377A. Introduction to Cybernetics and the Design of Systems — Application of cybernetics, the science of goals and feedback, to designing complex interactive systems, modeling human-computer interaction, and managing design processes, for physical, virtual, social or hybrid systems. Project work in areas such as: software applications and web services; environments for learning, business, and government; and collaboration systems for work or play. History and principles of cybernetics relative to CS and AI. Technical background not required.
3 units, Aut (Dubberly, H; Pangaro, P)

CS 377G. Digital Multimedia Tools and Environments — Implications for tools and environments of a representative set of standards, including ISO/ITU; trade group, and vendor. HCI issues including media formats and scripting languages. Relationship between HCI topics and the constraints of the underlying media.
3 units, Win (Schwannauer, S)

3-4 units, Win (Winograd, T)

CS 379. Interdisciplinary Topics — Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

CS 379C. Computational Models of Neocortex — The problem of modeling the primate perceptual neocortex using probabilistic graphical models, including Bayesian and Markov networks, and extensions to model time and change such as hidden Markov models and dynamic Bayesian networks. Problems of learning, inference, and attention. Sources include literature in computational and cognitive neuroscience, machine learning, and other fields that bear on how biological and engineered systems make sense of the world. Prerequisites: basic probability theory, algorithms, and statistics.
3 units, Aut (Dean, T)

CS 390A,B,C. Curricular Practical Training — Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390 A, B, and C may each be taken once.
1 unit, Aut, Win, Spr, Sum (Staff)

CS 393. Computer Laboratory — For CS graduate students. Substantial computer program designed and implemented; written report required. Recommended as preparation for dissertation research. Prerequisite: consent of instructor.
1-9 units, Aut, Win, Spr, Sum (Staff)

CS 395. Independent Database Project — For graduate students in Computer Science. Use of database management or file systems for a substantial application or implementation of components of database management systems. Written analysis and evaluation required. Register using the section number associated with the instructor. Prerequisite: consent of instructor.
1-6 units, Aut, Win, Spr, Sum (Staff)

CS 399. Independent Project — Letter grade only.
1-9 units, Aut, Win, Spr, Sum (Staff)

CS 399P. Independent Project — Graded satisfactory/no credit.
1-9 units, Aut, Win, Spr, Sum (Staff)
EXPERIMENTAL

CS 400. Future Faculty Seminar — How to enter and succeed in academia. Topics vary from year to year and may include: the academic job search, time management for new faculty, grant writing, finding and advising students, designing courses, planning and delivering lectures, the service role of faculty, and the tenure process.

1 unit, Spr (Dally, W; Klingner, J; Beberg, A)

CS 447. Interdisciplinary Interaction Software Design — (Same as ME 325.) Interdisciplinary student teams apply user-centered methodologies to develop composite software systems that create new opportunities such as a citizen-access portal to a city’s information. Real systems on industrial-strength platforms, focusing on innovative design for the full software system, including construction, distribution, and social and organizational implementation. Enrollment limited to 25.

3-4 units, Spr (Winograd, T; Yusuf, Z; Plattner, H)

CS 448. Topics in Computer Graphics — Topic changes each quarter. Recent topics: exotic input and display technologies, graphics architectures, advanced rendering techniques, modeling shape and motion, data visualization, and computational photography. See http://graphics.stanford.edu/courses for offerings. May be repeated for credit. Prerequisite: 248 or consent of instructor.

3-4 units, Spr (Hanrahan)

CS 468. Geometric Algorithms Seminar — Recent offerings include: shape matching, proximity and nearest-neighbor problems, visibility and motion planning, collision detection, geometric sampling methods, and computational topology. May be repeated for credit. Prerequisite: 268, 368, or consent of instructor.

3 units, Aut (Koltun, V), Win (Guibas, L)

CS 499. Advanced Reading and Research — For CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

1-15 units, Aut, Win, Spr, Sum (Staff)

GRADUATE SEMINARS

CS 528. Broad Area Colloquium for Artificial Intelligence, Geometry, Graphics, Robotics, and Vision — Weekly series of informal research talks on topics related to perceiving, modeling, manipulating, and displaying the physical world. The computational models and numerical methods underlying these topics. May be repeated for credit.

1 unit, Aut, Spr (Baziotis, S)

CS 541. Clean Slate Internet Research Seminar — Solving Internet deficiencies. Focus is on unconventional, bold, and long-term research that tries to break the network’s ossification. Given what is known today, how would a newly designed global communications infrastructure work? How should the Internet look in 15 years? Weekly speakers describe new work or propose new problems.

1 unit, not given this year

CS 545. Database and Information Management Seminar — Current research and industrial innovation in database and information systems.

1 unit, Win (Widom, J)

CS 547. Human-Computer Interaction Seminar — Weekly speakers. May be repeated for credit.

1 unit, Aut, Win, Spr (Winograd, T)

CS 548. Internet and Distributed Systems Seminar — Guest speakers from academia and industry. May be repeated for credit.

1 unit, not given this year

COGNATE COURSES

CHEMENG 459. Frontiers in Interdisciplinary Biosciences — (Same as BIOC 459, BIOE 459, BIOSCI 459, CHEM 459, PSYCH 459.)

1 unit, Aut, Win, Spr (Robertson, C)

CME 108. Introduction to Scientific Computing

3-4 units, Win (Staff)

CME 302. Numerical Linear Algebra

3 units, Aut (Golub, G)

CME 306. Numerical Solution of Partial Differential Equations

3 units, Win (Staff)

CME 324. Advanced Methods in Matrix Computation: Iterative Methods

3 units, Spr (Staff)

CME 326. Numerical Methods for Initial Boundary Value Problems

3 units, Win (Staff)

CME 500. Numerical Analysis and Computational and Mathematical Engineering Seminar

1 unit, Aut, Win, Spr (Saberi, A)

COMM 107/207. The First Amendment in the Digital Age

4-5 units, Win (Staff)

EE 282. EE 282. Computer Systems Architecture

3 units, Spr (Kozyrakis, C)

EE 380. Seminar on Computer Systems

1 unit, Aut, Win, Spr, Sum (Allison, D; Long, E)

EE 385A. Digital Systems Reliability Seminar

1-4 units, Aut, Win, Spr, Sum (McCluskey, E)

MATH 108. Introduction to Combinatorics and Its Applications

3 units, Spr (Thiem, F)

MUSIC 253. Musical Information: An Introduction

1-4 units, Win (Selfridge-Field, E)

MUSIC 254. Applications of Musical Information: Query, Analysis, and Style Simulation

1-4 units, Spr (Selfridge-Field, E)

OVERSEAS STUDIES

Courses approved for the Computer Science major and taught overseas can be found in the “Overseas Studies” section of this bulletin, or in the Overseas Studies office, 126 Sweet Hall.

BERLIN

CS 201X. Computers, Ethics, and Social Responsibility

3-4 units, Spr (Roberts, E)

Chair: Bruce A. Wooley
Vice Chair: Robert M. Gray
Associate Chair (Admissions): R. Fabian Pease
Assistant Chair: Sharon A. Gerlach

Assistant Professors: Shahnui Fan, Christoforos Es Kyrasakis, Philip Levis, Suhbash Mishra, Andrea Montanari, Boris Murmann, Peter Peumans, Krishna V. Shenoy, Jelena Vuckovic, Tsachy Weissman

Lecturers: Dennis Allison, Soosung Hwang, Eileen Long, Dieter Scherer, Jason Stinson, Howard Swain, Meenaarchagan Vishn

Courteous Professors: John Bravman, David Cheriton, John L. Dill, Per Erne, Gary Glover, Peter Glynn, Gene Golub, Leonidas Guibas, Donald E. Knuth (emeritus), Monica S. Lam, David G. Luenberger, John C. Mitchell, Sandy Napel, Richard Olshen, Norbert Pelc, Vaughan R. Pratt (emeritus), Zhi-Xun Shen, Jeffrey D. Ullman (emeritus), Brian Wandell, Gyo Wiederhold (emeritus), Yinye Ye, Shoucheng Zhang

Courteous Associate Professors: Stacey Bent, Kwanbae Boahen, Peter Fitzgerald, Michael McConnell, Mendel Rosenblum, Julian Smith, Daniel Spielman, Claire Tomlin

Courteous Assistant Professors: Namesh Johari, Sanjay Lall, David H. Liang, Hari Manoharan, David Mazieres, Andrew Ng, Gunter Niemeyer, Ramin Shahidi (Research)

Consulting Associate Professors: Hamid Aghajan, John Apostolopoulos, David Burns, Timothy Drabik, Ludwig Gablans, Stuart Osnar, Sergey Orlov, Stephen Richardson, Glenn Solomon, David K. Su, Noel Thompson, Jun Ye

Consulting Assistant Professors: Erik Chmelar, Mar Hershenson, Patrick Hung, Seung J. Kim, My T. Le, Ravi Narasimhan, Mehdi Soltan, Olaf Tornblad, Katelijn Vleugels, Eric Volkerink, Susie Wee

Visiting Professors: Giovanni DeMicheli, Sam Dong Kim, Essam Marouf, Stephen McLaughlin
Visiting Associate Professors: David Elata, Yuji Wasaka
Visiting Assistant Professors: Markus Flierl, Maneesh Sahani
Teaching Fellow: Moshe Malkin

*recalled to active duty*

Mail Code: 94305-9505
Phone: (650) 723-3931; Fax: (650) 723-1882
Web Site: http://ee.stanford.edu/

Courses given in Electrical Engineering have the subject code EE. For a complete list of subject codes, see Appendix.

UNDERGRADUATE PROGRAMS

The mission of the undergraduate program of the Department of Electrical Engineering is to augment the liberal education expected of all Stanford undergraduates and impart a basic understanding of electrical engineering built on a foundation of physical science, mathematics, computing, and technology.

Graduates of the undergraduate program are expected to possess knowledge of the fundamentals of electrical engineering and of at least one specialty area. The graduates are expected to have the basic experimental, design, and communication skills to be prepared for continued study at the graduate level or for entry-level positions that require a basic knowledge of electrical engineering, science, and technology.

The educational objectives of the program are:

1. Technical knowledge: provide a basic knowledge of electrical engineering principles along with the required supporting knowledge of computing, engineering fundamentals, mathematics, and science. The program must include depth in at least one specialty area, currently including computer hardware, computer software, controls, circuits, fields and waves, communication and signal processing, and semiconductor devices.

2. Laboratory and design skills: develop the basic skills needed to perform and design experimental projects. Develop the ability to formulate problems and projects and to plan a process for solution, taking advantage of diverse technical knowledge and skills.

3. Communications skills: develop the ability to organize and present information and to write and speak effective English.

4. Preparation for further study: provide sufficient breadth and depth for successful subsequent graduate study, postgraduate study, or lifelong learning programs.

5. Preparation for the profession: provide an appreciation for the broad spectrum of issues arising in professional practice, including economics, ethics, leadership, professional organizations, safety, service, and teamwork.

To specialize in Electrical Engineering (EE), undergraduates should follow the depth sequence given in the discussion of undergraduate programs in the “School of Engineering” section of this bulletin. Students are required to have a program planning sheet approved by their adviser and the department prior to the end of the quarter following the quarter in which they declare their major and at least one year prior to graduation. Program sheets for the general EE requirements and for each of the EE specialty sequences may be found at http://ugibh.stanford.edu. Majors must receive at least a 2.0 grade point average (GPA) in courses taken for the EE depth requirement; all classes must be taken for a letter grade.

For information about an EE minor, see the “School of Engineering” section of this bulletin.

A Stanford undergraduate may work simultaneously toward the B.S. and M.S. degrees. See “Dual and Coterminal Degree Programs” in the “School of Engineering” section of this bulletin.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.
HONORS

The Department of Electrical Engineering offers a program leading to a Bachelor of Science in Electrical Engineering with honors. This program offers a unique opportunity for qualified undergraduate majors to conduct independent study and research at an advanced level with a faculty mentor, graduate students, and fellow undergraduates.

Admission to the honors program is by application. Declared EE students with a grade point average (GPA) of at least 3.5 in Electrical Engineering are eligible to submit an application. Applications must be submitted by Autumn quarter of the senior year, be signed by the thesis adviser and second reader (one must be a member of the EE Faculty), and include an honors proposal. Students need to declare honors on Axess.

In order to receive departmental honors, students admitted to the honors program must:
1. maintain a grade point average (GPA) of at least 3.5 in EE courses
2. complete at least 10 units of EE 191 for a letter grade with their project adviser
3. submit two final copies of the honors thesis approved by the adviser and second reader
4. attend poster and oral presentation in the Electrical Engineering Honors Symposium held at the end of Spring Quarter or present in another suitable forum approved by the faculty adviser.

GRADUATE PROGRAMS

University regulations governing the M.S., Engineer, and Ph.D. degrees are described in the "Graduate Degrees" section of this bulletin.

The profession of electrical engineering demands a strong foundation in physical science and mathematics, a broad knowledge of engineering techniques, and an understanding of the relationship between technology and man. Curricula at Stanford are planned to offer the breadth of education and depth of training necessary for leadership in the profession. To engage in this profession with competence, four years of undergraduate study and at least one year of postgraduate study are recommended. For those who plan to work in highly technical development or fundamental research, additional graduate study is desirable.

A one- to two-year program of graduate study in Electrical Engineering may lead to the degree of Master of Science. The program is typically completed in five academic quarters. At two- to three-year program, offering a wider selection of engineering course work, more opportunity for study in the related fields of engineering, mathematics, and physics, and in particular, more independent work and individual guidance, may lead to the degree of Engineer.

The degree of Doctor of Philosophy is offered under the general regulations of the University. The doctoral program, requiring a minimum of 135 units of graduate study, should be considered by those with the ability and desire to make a life work of research or teaching.

Application for Admission—Applications for admission with graduate standing in Electrical Engineering (EE) should be completed electronically at http://gradadmissions.stanford.edu. For more information concerning Electrical Engineering graduate admissions, see http://ee-admissions.stanford.edu. The application deadline for admission for Autumn Quarter 2007-08 is December 12, 2006.

MASTER OF SCIENCE

Students with undergraduate degrees in physics, mathematics, or related sciences, as well as in various branches of engineering, are invited to apply for admission. They should typically be able to complete the master's degree in five academic quarters; note that many courses are not taught during the summer. Students with undergraduate degrees in other fields may also be admitted for graduate study; see below.

The master's degree program may provide advanced preparation for professional practice or for teaching on the junior college level, or it may serve as the first step in graduate work leading to the degree of Engineer or Ph.D. The faculty does not prescribe specific courses to be taken. Each student, with the help of a program adviser, prepares an individual program and submits it to the faculty for approval. The master's program proposal must be submitted to the department office during the first quarter of graduate study; modifications may be made later. Detailed requirements and instructions are in the Handbook for Graduate Students in Electrical Engineering at Stanford University (http://ee.stanford.edu/gradhandbook/).

Programs of at least 45 quarter units that meet the following guidelines are normally approved. Cognate (extradepartmental) courses of the appropriate level are considered as Electrical Engineering courses.

1. A sequence of three or more letter-graded electrical engineering courses numbered above 200, to provide depth in one area. The student must maintain an average 3.0 grade point average (GPA) or better in both the depth area and overall.
2. At least one letter-graded EE course numbered above 200 in each of three distinct course areas outside of the area selected under item 1 to provide breadth. Two courses are not considered to be in distinct areas if they can be found under a common depth area.
3. Enough additional units of EE courses so that items 1 through 3 total at least 21 units of letter-graded EE courses numbered above 200, including at least 9 units of such courses numbered in the 300s or 400s. Some 600- or 700-level summer courses may also be considered for inclusion in the M.S. program. Special studies units may not be used.
4. Additional course work to bring the total to 45 or more quarter units, including:
   a) at least 36 letter-graded units
   b) at least 36 units at or above the 100 level
   c) at least 30 units in technical areas such as engineering, mathematics, and science; thesis and special studies units cannot be included.
5. The EE 201A seminar in Autumn Quarter and either (a) one formal EE seminar course for credit, or (b) attend a minimum of eight informal or formal EE research seminars, and submit with the final M.S. program a list of the seminars with a paragraph describing the content and the signature of the M.S. adviser. This requirement is to ensure that students sample the many available research seminars. In case of conflict with EE 201A, tapes may be viewed in Terman Library.

Capable students without formal undergraduate preparation in electrical engineering may also be admitted for graduate study. Such students may have graduated in any field and may hold either the B.S. or B.A. degree. Each student, with the help of an adviser, prepares a program of study to meet particular needs and submits it to the faculty for approval. A student with adequate preparation in mathematics through calculus and college physics including electricity can usually complete the M.S. degree requirements within two academic years. A student with some additional preparation in electrical engineering may be able to complete the M.S. requirements in only one academic year.

Graduate study in EE demands that students be adequately prepared in circuits, digital systems, fields, lab work, mathematics, and physics. Skill in using modern computing facilities is essential for electrical engineers, and an increasing number of courses routinely require it. Skill should be acquired early in the program, either by taking one of the regular computer science courses or one of the special short courses given by the Computation Center, or by self-study.

It is the student's responsibility, in consultation with an adviser, to determine whether the prerequisites for advanced courses have been met. Prerequisite courses ordinarily taken by undergraduates may be included as part of the graduate program of study. However, if the number of these is large, the proposed program may contain more than the typical 45 units, and the time required to meet the degree requirements may be increased.

Students working toward the Master of Science degree in Electrical Engineering who are considering a Ph.D. or Engineer degree program in Electrical Engineering at Stanford must request the addition of a new degree program by submitting a Graduate Program Authorization Petition for approval by the department. Once the M.S. degree in EE has been conferred, a student may not register for additional course work without this approval. Permission to study beyond the M.S. degree is normally granted to students who were originally admitted to the Ph.D. program if the student:
1. has passed the Ph.D. qualifying examination within the past year, or
2. has a written commitment from a regular member of the EE faculty to serve as an Engineer or Ph.D. dissertation adviser, and has a satisfactory academic record to date.

SCHOOL OF ENGINEERING

168 | Stanford Bulletin, 2006-07
Students originally admitted only for the M.S. degree and not to the Ph.D. program may petition the EE graduate admissions committee during Autumn Quarter of their second year at Stanford for a change of status to the Ph.D. program with permission to take the Ph.D. qualifying exam in January. Requirements for the petition include a grade point average of 3.5 on Stanford courses and a written statement of support from an EE faculty member with whom the student has conducted preliminary research through directed reading (EE 390 or 391) or as part of a 300-level project course. Decisions are based on performance and the strength of the support letter. If admitted to the Ph.D. program, permission to study beyond the M.S. degree is normally granted under the same conditions as those described above for students originally admitted to the Ph.D. program. Students not admitted to the Ph.D. program are normally granted permission to continue past the M.S. degree only if there is a written commitment from a regular member of the EE faculty to serve as an Engineer dissertation supervisor. The student should file for candidacy for the Engineer degree within one quarter of receiving the M.S.

ENGINEER

The degree of Engineer requires a minimum of 90 units of residency. Units completed at Stanford towards a master’s degree in an Engineering discipline may be used towards the 90-unit residency requirement for the Engineer degree. A student who received an M.S. degree elsewhere can transfer in 45 units towards the 90-unit requirement for an Engineer’s degree. A student would need to fill out the Application for Graduate Residency Credit form to be filed with the Degree Progress Office in the Registrar’s Office.

Work toward the degree of Engineer in Electrical Engineering normally includes the requirements for work toward the master’s degree in Electrical Engineering, including qualifications for admission.

An additional year allows time for a broader program, or a more concentrated program, or whatever arrangement may seem suitable to the candidate, his adviser, and the department. Advanced study at other universities, or in other departments at Stanford, may be allowed within the foregoing consideration. The equivalent of approximately one quarter is devoted to independent study and thesis work with faculty guidance. The thesis is often of the nature of a professional report on the solution of a design problem. The degree of Engineer differs from the Ph.D. in that it prepares for professional engineering work rather than theoretical research. The candidate may select courses that are suitable for either the degree of Engineer or the Ph.D. degree and decide later which program to pursue.

The best procedure for the applicant to follow is (1) if now working toward the Stanford M.S. degree in Electrical Engineering, request permission to continue graduate studies beyond the master’s degree, using the Graduate Program Authorization Petition form obtained from the Department of Electrical Engineering office, or (2) if not planning to receive the Stanford M.S. degree in Electrical Engineering, apply for admission to the Department of Electrical Engineering as a candidate for the degree of Engineer.

During the first quarter of work beyond the M.S. degree, formal application for admission to candidacy for the degree of Engineer is made on a form that can be obtained from the department office. The program of study is prepared by the student with the help of the thesis adviser and submitted to the academic associate for approval. The form should contain a list of all graduate courses completed at Stanford and elsewhere and all courses yet to be completed. For the most recent information, see http://ee.stanford.edu/gradhandbook/engineer.html.

DOCTOR OF PHILOSOPHY

Admission to a graduate program does not imply that the student is a candidate for the Ph.D. degree. Advancement to candidacy requires superior academic achievement, satisfactory performance on a qualifying examination, and sponsorship by two faculty members. Enrollment in EE 391, Special Studies, is recommended as a means for getting acquainted with a faculty member whom he might be willing to serve as a supervisor.

Students admitted to the Ph.D. program should submit an application to take the department qualifying examination (given each Winter Quarter). Upon completion of the qualifying examination and after securing agreement by two faculty members to serve as dissertation advisers, the student should file an Application for Doctoral Candidacy. The Ph.D. in Electrical Engineering is a specialized degree, and is built on a broad base of physics, mathematics, and engineering skills. The course program is expected to reflect competency in Electrical Engineering and specialized study in other areas relevant to the student’s research focus. Normally the majority of units are drawn from EE department or cognate courses, with typically 9 units from related advanced physics, mathematics, engineering, or computer science courses, depending on the area of research. Only after receiving department approval to that application does the student become a candidate for the Ph.D. degree.

Requirements may be summarized as follows. The student must complete (1) a minimum of 135 units of residence with graduate standing at Stanford; (2) one or more qualifying examinations given by the faculty of the Department of Electrical Engineering; (3) an approved course of study in Electrical Engineering; (4) an approved program of research and a written dissertation, based on research, which must be a contribution to knowledge; (5) an oral examination that is a defense of dissertation research and is taken near the completion of the doctoral program.

PH.D. MINOR

For a minor in Electrical Engineering (EE), the student must fulfill the M.S. depth requirement, complete a total of at least 20 units of course work at the 200-plus level in electrical engineering (of which 15 units must be graded) and be approved by the department’s Ph.D. Degree Committee. A grade point average (GPA) of at least 3.35 on these courses is required.

FINANCIAL ASSISTANCE

The department awards a limited number of fellowships, teaching and course assistantships, and research assistantships to incoming graduate students. Applying for such assistance is part of the admission application.

THE HONORS COOPERATIVE PROGRAM

Many of the department’s graduate students are supported by the Honors Cooperative Program (HCP), which makes it possible for academically qualified engineers and scientists in nearby companies to be part-time graduate students in Electrical Engineering while continuing nearly full-time professional employment. Prospective HCP students follow the same admission process and must meet the same admission requirements as full-time graduate students. For more information regarding the Honors Cooperative Program, see the “School of Engineering” section of this bulletin.

AREAS OF RESEARCH

Candidates for advanced degrees participate in the research activities of the department as paid research assistants or as students of individual faculty members. At any one time, certain areas of research have more openings than others. A new applicant should express a second choice of research interest in the event that there are no vacancies in the primary area of interest. At present, faculty members and students are actively engaged in research in the areas listed below.

COMMUNICATIONS

Adaptive Modulation and Coding
Adaptive Multisuser Coding and Reception
Applied Optics and Optoelectronics
Cellular Radio Systems/Networks
Coding and Coded Modulation
Communication Channels and Signal Propagation
Communication and Information Theory
Digital Subscriber Lines
Digital Transmission
Frequency Reuse in Large Wireless Networks
Mobility in Wireless Networks
Multicarrier Modulation and OFDM
Multipath Mitigation Techniques
Multiple Access Techniques
Multiple Antenna and MIMO Systems
Optical Communications
Optical Networks
Optoelectronic Components and Systems
Resource Allocation/Channel Assignment/Handoff in Wireless Networks
Wavelength Division Multiplexing
Wireless Ad-Hoc Networks
Wireless Communications
Wireless Local Area Networks
Wireless Personal Communication Systems

COMPUTER SYSTEMS
Asynchronous Circuits
Compilers
Computer-Aided Design
Computer Architecture
Computer Graphics
Computer Networks
Computer Organization
Computer Reliability
Concurrent Languages
Concurrent Processes and Processors
Distributed Systems
Embedded System Design
Hardware/Software Co-Design
Hardware Verification
Human Computer Interaction
Multimedia Systems
Operating Systems
Performance Measurement and Modeling
Programming Languages
Program Verification
VLSI Design

INFORMATION SYSTEMS
Adaptive Control and Signal Processing
Adaptive Neural Networks
Biomedical Signal Analysis
Computer-Aided Design and Analysis of Systems
Data Communications
Digital Signal Processing
Estimation Theory and Applications
Fourier and Statistical Optics
Information and Coding Theory
Medical Imaging and Image Processing
Multivariable Control
Optical Communications
Optimization-Based Design
Pattern Recognition and Complexity
Quantization and Data Compression
Real-Time Computer Applications
Signal Processing
Speech and Image Coding

INTEGRATED CIRCUITS
Analog Integrated Circuits
Biomedical Sensors, Circuits, and Signal Processing
Bipolar, MOS, and other Device and Circuit Technologies
CAD of Processes, Devices, and Equipment
Custom Integrated Circuits for Computers and Telecommunications
Digital Integrated Circuits
Integrated Sensors and Actuators
Mixed Signal Integrated Circuits
Nanostructures
Neural Recording and Signal Processing
Optoelectronic Integrated Circuits
Organic Materials, Devices and Circuits
Process, Device, Circuit, and Equipment Modeling

RF Circuits for Wireless Transmission
Sensors and Control for VLSI Manufacturing
VLSI Device Structures and Physics
VLSI Fabrication Technology
VLSI Materials, Interconnections, and Contacts
VLSI Packaging and Testing

LASERS AND QUANTUM ELECTRONICS
Coherent UV and X-Ray Sources
Free-Electron Lasers
Laser Applications in Aeronautics, Biology, Chemistry, Communications, Electronics, and Physics
Laser Devices and Laser Physics
Nonlinear Optical Devices and Materials
Optoelectronic Devices
Photoacoustic Phenomena
Semiconductor Diode Lasers
Ultrafast Optics and Electronics

MICROWAVES, ACOUSTICS, AND OPTICS
Acoustic Microscopy
Acousto-Optic Devices
Fiber Optics
Holography
Microwave Integrated Circuits and Devices
Nanophotonics
Nondestructive Testing
Optical Interferometry
Scanning Optical Microscopes

RADIOSCIENCE AND REMOTE SENSING
Environmental Studies using Satellite Technology
Exploration of the Earth from Space
Interferometric and Holographic Imaging with Radio Waves
Numerical Methods for Science Data Analysis
Optical Remote Sensing
Planetary Exploration
Radar Interferometry
Radar Remote Sensing
Radio Occultation Studies
Radio Wave Scattering
Remote Sensing of Atmospheres and Surfaces
Signal and Image Processing Methods
Space Data Management
Spaceborne Radio Receiver Development
Synthetic Aperture Radar Satellites

SOLID STATE
Applied and Fundamental Superconductivity
Crystal Preparation: Epitaxy and Ion Implantation, and Molecular Beam Epitaxy
Defect Analysis in Semiconductors
Electron and Ion Beam Optics
Electron Spectroscopy
Experimental Determination of the Electronic Structure of Solids
High Resolution Lithography
Laser, Electron, and Ion Beam Processing and Analysis
Magnetic Information Storage
Magnetic Materials Fundamentals and Nanostructures
Nanostructure Fabrication and Applications
Nanophotonics
Molecular Beam Epitaxy
Novel Packaging Approaches for Electronic Systems
Optoelectronic Devices
Physics and Chemistry of Surfaces and Interfaces
Semiconductor and Solid State Physics
Solid State Devices: Physics and Fabrication
Ultrasound and Photodetectors
**SPACE PHYSICS AND ELECTROMAGNETICS**

Computational Electromagnetics
Detection of Electromagnetic Fields from Earthquakes
Electromagnetic Waves and Plasmas
Geomagnetically Trapped Radiation
Ionospheric and Magnetospheric Physics
 Ionospheric Modification
Lightning Discharges
Lightning-Ionosphere Interactions
Space Engineering (also see the “Space Science and Astrophysics” section of this bulletin)
Ultra-Low Frequency Fluctuations of the Earth’s Magnetic Field
Very Low Frequency Wave Propagation and Scattering

**COURSES**

WIM indicates that the course satisfies the Writing in the Major requirement. (AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

Electrical Engineering courses are typically numbered according to the year in which the courses are normally taken.

- EE 10N. How Musical Instruments Work — Stanford Introductory Seminar. Preference to freshmen. Musical instruments as examples of science, engineering, and the interplay between the two. The principles of operation of wind, string, and percussion instruments. Concepts include waves, resonators, sound spectra and the harmonic structure of instruments, engineering design, and the historical co-development of instruments and the science and engineering that makes them possible. Prerequisites: high school math and physics. Recommend: some experience playing a musical instrument. GER:DB-EngrAppSci 3 units, Spr (Miller, D)

EE 18N. Pi and Other Physical Constants in Math, Physics, and Engineering — Stanford Introductory Seminar. Preference to freshmen. Famous mathematical and physical constants, including pi, e, golden ratio, gravitational constant, speed of light, and electron mass. Their history; how to calculate or measure them; their consequences on the physical world; what would happen if they were different; and how to memorize them. GER:DB-EngrAppSci 3 units, Spr (McKeown, N)

EE 19N. How the Internet Works — Stanford Introductory Seminar. Preference to freshmen. Issues faced by develops and possible solutions. Functions required for building this complex system; how a large and complex system can be designed by dividing it into elements which can be organized into a well defined structure. GER:DB-EngrAppSci 3 units, Win (Tobagi, F)

EE 20N. Hacking Stuff — Stanford Introductory Seminar. Preference to freshmen. The design of a complete system by combining electrical engineering disciplines such as control theory, circuit design, microprocessors, and semiconductor devices. Based on radio-controlled toy cars, the design and construction of a robot capable of autonomously following a track. Teams compete in a race against the clock in a version of the DARPA Grand Challenge. GER:DB-EngrAppSci 3 units, Win (Peumans, P)

EE 21N. What is Nanotechnology? — Stanford Introductory Seminar. Preference to freshmen. Possibilities and impossibilities of nanotechnology. Sources include Feynman’s There’s Plenty of Room at the Bottom, Drexler’s Engines of Creation: The Coming Era of Nanotechnology, and Crichton’s Prey. Assumptions and predictions of these classic works; what nano machinery may do; scenarios of a technology that may go astray. Prerequisites: high school math, physics and chemistry. GER:DB-EngrAppSci 3 units, Aut (Wong, P)

EE 41. Physics of Electrical Engineering — How everything from electrostatics to quantum mechanics is used in common high-technology products. Electrostatics are critical in micro-mechanical systems used in many sensors and displays, and basic EM waves are essential in all high-speed communication systems. How to propagate energy in free space. Which aspects of modern physics are needed to generate light for the operation of a DVD player or TV. Introduction to semiconductors, solid-state light bulbs, and laser pointers. Hands-on labs to connect physics to everyday experience. GER:DB-EngrAppSci 5 units, Win (Solgaard, O)

EE 60Q. Man versus Nature: Coping with Disasters Using Space Technology — (Same as GEOPHYS 60Q.) Stanford Introductory Seminar. Preference to sophomores. Natural hazards (earthquakes, volcanoes, floods, hurricanes, and fires) affect thousands of people everyday. Disasters such as asteroid impacts periodically obliterate many species of life. Spaceborne imaging technology makes it possible to respond quickly to such threats to mitigate consequences. How these new tools are applied to natural disasters, and how remotely sensed data are manipulated and analyzed. Basic scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. GER: DB-EngrAppSci 3 units, Aut (Zebker, H)

EE 100. The Electrical Engineering Profession — Lectures/discussions on topics of importance to the electrical engineering professional. Continuing education, professional societies, intellectual property and patents, ethics, entrepreneurial engineering, and engineering management. 1 unit, Aut (Gray, R)

EE 101A. Circuits I — First of two-course sequence. Introduction to circuit modeling and analysis. Topics include creating the models of typical components in electronic circuits and simplifying non-linear models for restricted ranges of operation (small signal model); and using network theory to solve linear and non-linear circuits under static and dynamic operations. GER:DB-EngrAppSci 4 units, Win (Wong, S)

EE 101B. Circuits II — Second of two-course sequence. MOS large-signal and small-signal models. MOS amplifier design including DC bias, small signal performance, multistage amplifiers, frequency response, and feedback. Prerequisite: 101A. GER:DB-EngrAppSci 4 units, Aut (Shenoy, K; Hershenson, M), Spr (Shenoy, K)
4 units, Win (Pauly, J)

4 units, Spr (Kahn, J)

EE 106. Planetary Exploration — The other worlds of the solar system as revealed by electromagnetic emissions and recent space missions. Planetary interiors, surfaces, atmospheres, moons, rings, and the interplanetary environment, including its gas, dust, meteorites, and comets. Orbital data and Hohmann orbits for spacecraft. Stanford EE department radio experiments that have been a part of every major NASA planetary mission. Prerequisite: one year of college engineering. GER:DB-EngrAppSci
3 units, Spr (Fraser-Smith, A)

3-4 units, Aut (Daily, W), Win (Mitra, S)

3-4 units, Aut (Olukotun, O), Win (Kozyrakis, C)

4 units, Spr (Olukotun, O)

EE 114X. Simulation-Based Circuit Design — Electronic circuit design based on hand analysis and circuit simulations. Concepts of design space, robust design, and constraint-driven optimization. Hands-on, simulation lab experience. Hands on, simulation lab-based experience that bridges electronics fundamentals and more advanced electronics design classes. Prerequisite: 101B.
2 units, Aut (Dutton, R)

3 units, Spr (Peumans, P)

EE 118. Introduction to Mechatronics — Technologies involved in mechatronics (intelligent electro-mechanical systems) and techniques to integrate these technologies into mechatronic systems. Topics: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design (event-driven programming, state machine based design); DC and stepper motors; basic sensing; mechanical design (machine elements and mechanical CAD). Lab component of structured assignments combined with large, open-ended team project. Limited enrollment. Prerequisites: ENGR 40, and CS 106A or 106X (preferred).
4 units, Win (Carrier, J)

EE 122. Analog Circuits Laboratory — Practical applications of analog circuits, including simple amplifiers, filters, oscillators, power supplies, and sensors. Design skills, computer-aided design, and circuit fabrication and debugging. The design process through proposing, designing, simulating, building, debugging, and demonstrating a project. Radio frequency and largely digital projects not suitable for EE122. Prerequisite: ENGR 40 or equivalent. GER:DB-EngrAppSci
3 units, Aut, Spr (Kovacs, G)

EE 133. Analog Communications Design Laboratory — Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminal EE students. Prerequisite: 101B. GER:DB-EngrAppSci
4 units, Win (Dutton, R)

EE 134. Introduction to Photonics — Photonics, optical sensors, and fiber optics. Conceptual and mathematical tools for design and analysis of optical communication and sensor systems. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors. Class project aimed on confocal microscopy for biomedical applications. Laboratory experiments. Prerequisite: 41 or equivalent. GER:DB-EngrAppSci
4 units, Spr (Solgaard, O)

EE 136. Introduction to Nanophotonics and Nanostructures — Electromagnetic and quantum mechanical waves and semiconductors. Confining these waves, and devices employing such confinement. Localization of light and applications: metallic mirrors, photonic crystals, optical waveguides, microresonators, plasmonics. Localization of quantum mechanical waves: quantum wells, wires, and dots. Generation of light in semiconductors: spontaneous and stimulated emission, lasers, and light emitting diodes. Devices incorporating localization of both electromagnetic and quantum mechanical waves such as resonant cavity quantum well lasers and microcavity-based single photon sources. System-level applications such as optical communications, biochemical sensing, and quantum cryptography. Prerequisite: familiarity with electromagnetic and quantum mechanical waves and semiconductors at the level of EE 41 or equivalent. GER:DB-EngrAppSci
3 units, Win (Vuckovic, J)
4 units, Aut (Inan, U)

3 units, Win (Inan, U)

EE 144. Wireless Electromagnetic Design Laboratory — Hands-on experiments and projects with antennas, transmission lines and propagation for wireless communications and remote sensing. Using spectrum analysers, swept frequency generators, frequency counters, couplers, detectors and slotted lines, develop measurement and design capability in the 1-20 GHz range in support of chosen design projects. Team projects from antenna, guided wave distributed circuits, remote sensing, or related topics. Working model constructed and demonstrated; some funding available for project costs. Lab. Enrollment limited to 30. Prerequisite: 122 or 142, or consent of instructor. GER:DB-EngrAppSci
3 units, Spr (Leeson, D)

EE 168. Introduction to Digital Image Processing — Computer processing of digital 2-D and 3-D data, combining theoretical material with implementation of computer algorithms. Topics: properties of digital images, design of display systems and algorithms, time and frequency representations, filters, image formation and enhancement, imaging systems, perspective, morphing, and animation applications. Instructional computer lab exercises implement practical algorithms. Final project consists of computer animations incorporating techniques learned in class. Prerequisite: Matlab programming. GER:DB-EngrAppSci
3-4 units, Win (Zebker, H)

3 units, Win (El Gamal, A)

EE 179. Introduction to Communications — Communication system design and performance analysis. Topics include current communication systems (cellular, WLANs, radio and TV broadcasting, satellites, Internet), Fourier techniques, energy and power spectral density, random variables and random (noise) signals, filtering and modulation of noise, analog modulation (AM and FM) and its performance in noise, digital modulation (PSK and FSK), optimal receiver design, and probability of bit error for digital modulation. Prerequisite: 102A. GER:DB-EngrAppSci
3 units, Win (Gray, R)

EE 190. Special Studies or Projects in Electrical Engineering — Independent work under the direction of a faculty member. Individual or team activities involve lab experimentation, design of devices or systems, or directed reading.
1-15 units, Aut, Win, Spr, Sum (Staff)

EE 191. Special Studies and Reports in Electrical Engineering — Independent work under the direction of a faculty member given for a letter grade only. If a letter grade given on the basis of required written report or examination is not appropriate, enroll in 190.
1-15 units, Aut, Win, Spr, Sum (Staff)

COGNATE COURSES

Courses approved to fulfill EE program requirements at the level of 100-199 EE courses are listed below according to the undergraduate specialty areas or as “Other.” See respective department listings for course descriptions and General Education Requirements (GER) information.

COMPUTER HARDWARE

CS 107. Programming Paradigms
3-5 units, Aut, Spr (Cain, G)

COMPUTER SOFTWARE

CS 107. Programming Paradigms
3-5 units, Aut, Spr (Cain, G)

CS 108. Object-Oriented Systems Design
3-4 units, Aut, Win, Parlante, N)

CS 194. Software Project
3 units, Spr (Plummer, R)

CONTROLS

ENGR 105. Feedback Control Design
3 units, Win, Sum (Emami-Naeini, A)

OTHER

APPPHYS 207,208. Laboratory Electronics
207: 3 units, Win (Fox, J)
208: 3 units, Spr (Fox, J), alternate years, not given next year

CS 148. Introductory Computer Graphics
3 units, Win (Hanrahan, P), Sum (Staff)

GEOPHYS 140. Introduction to Remote Sensing
3 units, Aut (Zebker, H)

UNDERGRADUATE AND GRADUATE

EE 201A. Introductory Graduate EE Seminar — Topics of current interest in Electrical Engineering. Orientation to Stanford and the EE department. Students with a conflict may view via videotape in the library.
1 unit, Aut (Reis, R)

EE 201B. Life after Stanford for Master’s Students — Activities of graduates in industry, startups, government laboratories, and community colleges.
1 unit, Win (Reis, R)

EE 202. Medical Electronics — Open to all. Primarily biological in nature, introduction to the physiological and anatomic aspects of medical instrumentation. Areas include patient monitoring, imaging, medical transducers, the unique aspects of medical electronic systems, the socioeconomic impact of technology on medical care, and the constraints unique to medicine. Prerequisite: familiarity with circuit instrumentation techniques as in 101B.
3 units, Aut (Thompson, N)

EE 203. The Entrepreneurial Engineer — Seminar. For prospective entrepreneurs with an engineering background. Contributions made to the business world by engineering graduates. Speakers include Stanford and other engineering and M.B.A. graduates who have founded large and small companies in nearby communities. Contributions from EE faculty and other departments including Law, Business, and MS&E.
1 unit, Win (Melen, R)
EE 212. Integrated Circuit Fabrication Processes—For students interested in the physical bases and practical methods of silicon VLSI chip fabrication, or the impact of technology on device and circuit design, or intending to pursue doctoral research involving the use of Stanford’s Nanofabrication laboratory. Process simulators illustrate concepts and provide a virtual lab experience. Topics: principles of integrated circuit fabrication processes, physical and chemical models for crystal growth, oxidation, ion implantation, etching, deposition, lithography, and back-end processing. Required for 410. Prerequisite: undergraduate semiconductor device physics.
3 units, Aut (Plummer, J)

3 units, Aut (Murmann, B)

EE 215. Bipolar Analog Integrated Circuit Design—Bipolar analog circuits for high-frequency operation, including applications for networking and communications, such as video and broadband RF amplifiers. Device operation and compact modeling in support of circuit simulations needed for design. Circuit building blocks, including current and voltage references, and cascaded multi-stage amplifiers. Analysis and design of feedback circuits. Small design projects and use of SPICE models representative of state-of-the-art bipolar technology. Prerequisite: 101B.
3 units, Win (Dutton, R; Wooley, B)

EE 216. Principles and Models of Semiconductor Devices—Carrier generation, transport, recombination, and storage in semiconductors. Physical principles of operation of the p-n junction, heterojunction, metal semiconductor contact, bipolar junction transistor, MOS capacitor, MOS and junction field-effect transistors, and related optoelectronic devices such as CCDs, solar cells, LEDs, and detectors. First-order device models that reflect physical principles and are useful for integrated-circuit analysis and design. Prerequisite: 116 or equivalent.
3 units, Aut (Harris, J), Win (Saraswat, K; Pease, R)

EE 218. Introduction to Nanotechnology and Nanoelectronics—Device physics and operation principles. Device and material options for advanced silicon FETs at the nanoscale. Topics identified by the International Technology Roadmap for Semiconductors, emerging research device sections; see http://public.itrs.net. Non-silicon-based devices such as carbon nanotubes, semiconductor nanowires, and molecular devices; and non-FET based devices such as single electron transistors (SET), resonant tunneling diodes (RTD), and quantum dots. Logic and memory devices. Prerequisite: undergraduate device physics.
3 units, Spr (Wong, P)

EE 222. Applied Quantum Mechanics I—Emphasis is on applications in modern devices and systems. Topics include: Schrodinger’s equation, eigenfunctions and eigenvalues, operator approach to quantum mechanics, Dirac notation, solutions of simple problems including quantum wells and tunneling. Quantum harmonic oscillator, coherent states. Calculation techniques including matrix diagonalization, perturbation theory, and variational method. Time-dependent perturbation theory, applications to optical absorption, nonlinear optical coefficients, and Fermi’s golden rule. Quantum mechanics in crystalline materials. Prerequisites: MATH 52 and 53, PHYSICS 65 or PHYSICS 43 and 45.
3 units, Aut (Vuckovic, J)

EE 223. Applied Quantum Mechanics II—Continuation of 222, including more advanced topics: angular momentum in quantum mechanics, spin, hydrogen atom, systems of identical particles (bosons and fermions), methods for one-dimensional problems, introductory quantum optics (electromagnetic field quantization, coherent states), fermion annihilation and creation operators, interaction of different kinds of particles (spontaneous emission, optical absorption, and stimulated emission). Quantum information and interpretation of quantum mechanics. Other topics in electronics, optoelectronics, optics, and quantum information science. Prerequisite: 222.
3 units, Win (Miller, D)

3 units, Aut (Peumans, P)

EE 231. Introduction to Lasers—How lasers work, including quantum transitions in atoms, stimulated emission and amplification, rate equations, saturation, feedback, coherent optical oscillation, laser resonators, and optical beams. Limited primarily to steady-state behavior; classical models for atomic transitions with little quantum mechanics background required. Prerequisites: electromagnetic theory to the level of 142, preferably 241, and some atomic or modern physics such as PHYSICS 70 or 130, 131.
3 units, Spr (Digonnet, M)

EE 232. Laser Dynamics—Continuation of 231, emphasizing dynamic and transient effects including spiking, Q-switching, mode locking, frequency modulation, frequency and spatial mode competition, linear and nonlinear pulse propagation, short pulse expansion, and compression. Prerequisite: 231.
3 units, Aut (Fan, S)

EE 234. Photonics Laboratory—Photonics and fiber optics with a focus on communication and sensing. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors. Prerequisite: 142.
3 units, Win (Kahn, J)

3 units, Spr (Fan, S)

EE 241. Waves I—Waves and wave phenomena in natural, lab, and application settings. Electromagnetic, acoustic, seismic, atmospheric, plasma, and water waves and their mathematical and physical correspondence in terms of Hamilton’s principle. Propagation, attenuation, reflection, refraction, surface and laminal guiding, and intrinsic and structural dispersion; energy density, power flow, and phase and group velocities. Geometric and structural complexities are minimized to stress basic wave concepts. Analysis in terms of transmission line and impedance concepts using exponential notation and vector phasors. Treatment limited to plane harmonic waves in isotropic media. Nonhomogeneous cases limited to plane interfaces and exponentially stratified media. Prerequisite: 142 or equivalent, or other wave course.
3 units, not given this year

EE 243. Semiconductor Optoelectronic Devices—Operating principles and practical device features. Semiconductor physics and optical processes in semiconductors. Semiconductor heterostructures and optical detectors including p-i-n, avalanche, and MSM, light emitting diodes, electroabsorptive modulators (Franz-Keldysh, QCSE), electrorefractive (directional couplers, Mach-Zehnder), switches (SEEDs), and lasers (waveguide and vertical cavity). Prerequisites: basic quantum mechanics, solid state physics, and lasers, such as 222, 228, 231, or equivalents.
3 units, Win (Harris, J)

EE 245. Wireless Electromagnetic Design Laboratory—Same content as 144 but with a higher level project.
3 units, Spr (Leeson, D)
EE 246. Microwave Engineering — Microwave applications (terrestrial and satellite communications, radar, remote sensing, wireless communications) and their system and component requirements. Review of Maxwell’s equations. Propagation modes of transmission lines (TEM, waveguide, microstrip), S-parameter matrix modeling of discontinuities, junctions and circuits (impedance transformers, directional couplers, hybrids, filters, circulators, solid state amplifiers and oscillators). Microwave computer-aided design examples. General flow of course is application to system component; individual components are modeled by fields to modes to equivalent network. Prerequisite: 142.

3 units, alternate years, not given this year

3 units, Aut (Kahn, J)

3 units, Aut (Yamamoto, Y)

EE 249. Introduction to the Space Environment — The environment in which space probes and vehicles travel and orbit and which moderates the gases and radiation from the sun. Experimentation and the tools used. Its regions including the ionosphere, magnetosphere, and interplanetary space. The role of the sun, the effects of changes in solar activity, charged particle motion which in combination with the earth’s magnetic field moderates the gases and radiation from the sun. Experimentation and the tools used. Its regions including the ionosphere, magnetosphere, and interplanetary space. The role of the sun, the effects of changes in solar activity, charged particle motion which in combination with the earth’s magnetic field leads to auroras and the Van Allen belts. Prerequisites: familiarity with electromagnetics at the level of 142; senior or graduate standing.

3 units, alternate years, not given this year

3 units, not given this year

EE 252. Principles of Radar Systems — Analysis and design. Radar equation and systems parameters, components of radar systems, radar cross-section and target characteristics, signal detection in noise, ambiguity function (with applications to measurement precision, resolution, clutter rejection, and waveform design); pulse compression waveforms, synthetic aperture radar, tracking and scanning radars, HF (OTH) radar, radar environmental and remote sensing, radar astronomy. Prerequisite: senior or graduate standing.

3 units, alternate years, not given this year

3 units, Spr (Inan, U), alternate years, not given next year

EE 261. The Fourier Transform and its Applications — The Fourier transform as a tool for solving physical problems. Fourier series, the Fourier transform of continuous and discrete signals and its properties. The Dirac delta, distributions, and generalized transforms. Convolutions and correlations and applications; probability distributions, sampling theory, filters, and analysis of linear systems. The discrete Fourier transform and the FFT algorithm. Multidimensional Fourier transform and use in imaging. Further applications to optics, crystallography. Emphasis is on relating the theoretical principles to solving practical engineering and science problems. Prerequisites: Fourier series at the level of 102A, and linear algebra.

3 units, Aut (Osgood, B), Win (Hesselink, L)

EE 262. Two-Dimensional Imaging — Time and frequency representations, two-dimensional auto- and cross-correlation, Fourier spectra, diffraction and antennas, coordinate systems and the Hankel and Abel transforms, line integrals, impulses and sampling, restoration in the presence of noise, reconstruction and tomography, imaging radar. Tomographic reconstruction using projection-slice and layergarm methods. Students create software to form images using these techniques with actual data. Final project consists of design and simulation of an advanced imaging system. Prerequisite: 261. Recommended: 278, 279.

3 units, alternate years, not given this year

3 units, Aut (Beyd, S), Spr (Osgood, B)

3 units, Aut (widrow, B)

3-4 units, Spr (Meng, T)
EE 268. Introduction to Modern Optics—Geometrical optics: ray matrices, Gaussian beams, optical instruments, and radiometry. Wave nature of light: Maxwell’s equations, propagation through media with varying index of refraction (e.g., fibers). Interferometry: basic principles, practical systems, and applications.

3 units, Aut (Hesselink, L)

EE 271. Introduction to VLSI Systems—Large-scale MOS design. Topics: MOS transistors, static and dynamic MOS gates, MOS circuit fabrication, design rules, resistance and capacitance extraction, power and delay estimation, scaling, MOS combinatorial and sequential logic design, registers and clocking schemes, memory, data-path, and control-unit design. Elements of computer-aided circuit analysis, synthesis, and layout techniques. Prerequisites: 101A and 108B; familiarity with circuits, logic design, and digital system organization.

3 units, Aut (Horowitz, M; Mitra, S)

EE 273. Digital Systems Engineering—Electrical issues in the design of high-performance digital systems, including signaling, timing, synchronization, noise, and power distribution. High-speed signaling methods; noise in digital systems, its effect on signaling, and methods for noise reduction; timing conventions; timing noise (skew and jitter), its effect on systems, and methods for mitigating timing noise; synchronization issues and synchronizer design; clock and power distribution problems and techniques; impact of electrical issues on system architecture and design. Prerequisites: 102B and 108A, or equivalents. Recommended: 214.

3 units, not given this year

3 units, Spr (Cox, D)

EE 278. Introduction to Statistical Signal Processing—Random variables, vectors, and processes; convergence and limit theorems; IID, independent increment, Markov, and Gaussian random processes; stationary random processes; autocorrelation and power spectral density; mean square error estimation, detection, and linear estimation. Prerequisites: 178 or STATS 116, and linear systems and Fourier transforms at the level of 102A or 261.

3 units, Aut (Gill III, J), Spr (El Gamal, A)

EE 279. Introduction to Communication Systems—Analysis and design of communication systems; analog and digital modulation and demodulation, frequency conversion, multiplexing, noise and distortion; spectral and signal-to-noise ratio analysis, probability of error in digital systems, spread spectrum. Prerequisites: 179 or 261, and 178 or 278.

3 units, Win (Cox, D)

EE 282. Computer Systems Architecture—Advanced architecture topics for systems such as personal computers, servers, and embedded or portable devices. Cache hierarchies, memory systems, storage and I/O systems, clusters, fault-tolerance, and low power design. Programming assignments; introduction to performance analysis and optimization techniques for small- and large-scale systems. Locality, coarse-grain parallelism, overlapping communication and computation, performance/power trade-offs, and reliability. How computer systems are organized and why they are organized that way. Characteristics of modern processors that affect system architecture. Prerequisite: 108B.

3 units, Spr (Kozyrakis, C)

EE 284. Introduction to Computer Networks—Structure and components of computer networks; functions and services; packet switching; layered architectures; OSI reference model; physical layer; data link layer; error control; window flow control; media access control protocols used in local area networks (Ethernet, Token Ring, FDDI) and satellite networks; network layer (datagram service, virtual circuit service, routing, congestion control, Internet Protocol); transport layer (UDP, TCP); application layer.

3 units, Aut (Tobagi, F)

EE 290A,B,C. Curricular Practical Training for Electrical Engineers—For EE majors who need relevant work experience as part of their program of study. Final report required. Prerequisite for 290B: candidate for Engineer or Ph.D. in Electrical Engineering. Prerequisite for 290C: candidate for Ph.D. degree in Electrical Engineering.

1 unit, Aut, Win, Spr (Sum (Gray, R)

3 units, alternate years, not given this year

EE 292F. Digital Processing of Speech Signals—How digital signal processing techniques are used in applications such as speech coding, speech synthesis, speech recognition, and speaker verification. Short MATLAB projects. Prerequisite: 102B.

3 units, Win (Schafer, R)

EE 293A. Fundamentals of Energy Processes—For seniors and graduate students. The physics and chemistry underlying topics in renewable energy processes. Generalities applicable to all energy systems. Thermodynamics and kinetic theory of gases. Mechanical heat engines as a basis for comparison. The basics of wind energy and of thermoelectric devices. Recommended: MATH 41, 43; PHYSICS 41, 43, 45.

3-4 units, Aut (da Rosa, A)

3-4 units, Win (da Rosa, A)

COGNATE COURSES

Courses approved to fulfill EE program requirements at the level of 200-299 EE courses are listed below according to the undergraduate specialty, M.S. depth areas, or as “Other.” See respective department listings for course descriptions.

COMPUTER SOFTWARE SYSTEMS

CS 140. Operating Systems and Systems Programming 3-4 units, Aut (Rosenblum, M), Sum (Staff)

CS 143. Compilers 3-4 units, Aut, Win, Sum (Staff)

CS 240. Advanced Topics in Operating Systems 3 units, Aut (Mazieres, D), Spr (Engler, D)

CS 242. Programming Languages 3 units, Aut (Mitchell, J)

CS 248. Introduction to Computer Graphics 3-5 units, Aut (Levoy, M)

CONTROL AND SYSTEM ENGINEERING

ENGR 205. Introduction to Control Design Techniques 3 units, Aut (Rock, S)

ENGR 207A. Modern Control Design I 3 units, Win (Lall, S)

ENGR 207B. Modern Control Design II 3 units, Spr (Lall, S)

ENGR 209A. Analysis and Control of Nonlinear Systems 3 units, Win (Rock, S)
ENGR 209B. Advanced Nonlinear Control
3 units, not given this year

ENGR 210B. Advanced Topics in Computation for Control
3 units, not given this year

**CONTROLS (UNDERGRADUATE SPECIALTY)**

ENGR 205. Introduction to Control Design Techniques
3 units, Aut (Rock, S)

ENGR 206. Control System Design
4 units, Spr (Niemeyer)

ENGR 207A,B. Modern Control Design
3 units, A: Win, B: Spr (Lall, S)

ENGR 209A. Analysis and Control of Nonlinear Systems
3 units, Win (Rock, S)

**ELECTRONIC DEVICES, SENSORS, AND TECHNOLOGY**

ENGR 240. Introduction to Micro and Nano Electromechanical Systems (M/NEMS)
3 units, Win (Pruitt, B; Howe, R)

**IMAGE SYSTEMS**

CS 248. Introduction to Computer Graphics
3-5 units, Aut (Levoy, M)

**NETWORK SYSTEMS**

CS 244A. Introduction to Computer Networks
3-4 units, Win (McKeown, N)

**SIGNAL PROCESSING**

CS 221. Artificial Intelligence: Principles and Techniques
3-4 units, Aut (Ng, A)

CS 228. Probabilistic Models in Artificial Intelligence
3 units, Win (Koller, D)

CS 229. Machine Learning
3 units, Win (Ng, A)

STATS 315A. Modern Applied Statistics: Learning
3 units, Win (Friedman, J)

STATS 315B. Modern Applied Statistics: Data Mining
3 units, Win (Kovacs, G)

**SOLID STATE MATERIALS AND DEVICES**

MATSCI 209. Electronic and Optical Properties of Solids — (Same as MATSCI 199)
3-4 units, Spr (Bronsersma, M)

MATSCI 323. Thin Film and Interface Microanalysis
3 units, Aut (Koster, G)

MATSCI 347. Introduction to Magnetism and Magnetic Nanostructures
3 units, Spr (Staff)

**OTHER**

AA 272C. Global Positioning Systems
3 units, Win (Engle, P)

AA 278. Optimal Control and Hybrid Systems
3 units, not given this year

APPPHYS 226. Physics of Quantum Information
3 units, Spr (Yamamoto, Y), alternate years, not given next year

APPPHYS 227. Applications of Quantum Information
3 units, not given this year

APPPHYS 272,273. Solid State Physics
3 units, 272: Win, 273: Spr (Laughlin, R)

3 units, Aut (Fedkiw, R)

CS 223B. Introduction to Computer Vision
3 units, Win (Thrun, S)

CS 255. Introduction to Cryptography
3 units, Win (Boneh, D)

MS&E 237. Progress in Worldwide Telecommunications
3 units, Sum (Ivanek, F; Chiu, S)

MS&E 246. Game Theory with Engineering Applications
3 units, Win (Johari, R)

MS&E 251. Stochastic Decision Models
3 units, Win (Staff)

ME 358. Heat Transfer in Microdevices
3 units, Spr (Goodson, K)

**GRADUATE**

EE 300. Master's Thesis and Thesis Research — Independent work under the direction of a department faculty. Written thesis required for final letter grade. The continuing grade “N” is given in quarters prior to thesis submission. See 390 if a letter grade is not appropriate.
1-15 units, Aut, Win, Spr, Sum (Staff)

EE 309. Semiconductor Memory Devices and Technology — Memory devices such as SRAM, DRAM, and NVRAM. Operation principles, device design considerations, device scaling, device fabrication, addressing, and readout circuits. Cell structures including 1T-1C, 6T, 4T, 1T-1R, 0T-1R, floating gate FLASH, SONOS, and NROM; memory organization including open bit-line, folded bit-line, NAND, NOR, and cross-point. New memory concepts such as nanocrystal memory, single-electron memory, magnetic tunnel junction memory (MRAM), ferroelectric memory (FRAM), phase change memory (PRAM), T-RAM, polymer memory. Prerequisite: 216.
3 units, alternate years, not given this year

1 unit, Win (Nishi, Y; Wong, P; Saraswat, K)

EE 311. Advanced Integrated Circuit Fabrication Processes — Practical and fundamental limits to the evolution of the technology of modern MOS and bipolar devices. Modern device and circuit fabrication and likely future changes. Advanced techniques and models of device and back-end (interconnect and contact) processing. Use of TSUPREM4 and PISCES for process and device modeling. MOS and bipolar process integration. Prerequisites: 212, 216.
3 units, Spr (Staff)

EE 312. Micromachined Sensors and Actuators — Solid-state sensors and actuators, focusing on the use of integrated circuit fabrication technology for their realization. Categories of sensors and actuators include biological, chemical, mechanical, optical, and thermal. Basic mechanisms of transduction, fabrication techniques, and the relative merits of different technologies. Micromachining techniques for monolithic integration of active circuits with sensors or actuators and directions for future research. Prerequisite: 212 or equivalent.
3 units, Win (Kovacs, G)

EE 313. Digital MOS Integrated Circuits — Analysis and design of digital MOS integrated circuits. Development of different models for MOS transistors and how to use them to analyze circuit performance. Use of computer-aided circuit analysis. Logic styles include static, dynamic and pass logic, pulse-mode gates, and current-mode logic. Topics include sizing for min delay, noise and noise margins, power dissipation. The class uses memory design (SRAM) as a motivating example. DRAM and EEPROM design issues. Prerequisites: 101B, 108A. Recommended: 271.
3 units, Win (Horowitz, M)
EE 314. RF Integrated Circuit Design — Design of RF integrated circuits for communications systems, primarily in CMOS. Topics: the design of matching networks and low-noise amplifiers at RF, passive and active filters, mixers, modulators, and demodulators; review of classical control concepts necessary for oscillator design including PLLs and PLL-based frequency synthesizers. Design of low phase noise oscillators. Design of high-efficiency (e.g., class E, F) RF power amplifiers, coupling networks. Behavior and modeling of passive and active components at RF. Narrowband and broadband amplifiers; noise and distortion measurements and mitigation methods. Overview of transceiver architectures. Prerequisite: 214. 3 units, Win (Lee, T)

EE 315. VLSI Data Conversion Circuits — Design of mixed-signal integrated circuits for implementing the interfaces between analog and digital signals in CMOS VLSI systems. Fundamental circuit elements such as sample-and-hold circuits, comparators, analog gain blocks and integrators. The design of the constituent circuits for Nyquist-rate and oversampling analog-to-digital and digital-to-analog converters, sampled-data and continuous-time analog filters, and digital decimation and interpolation filters. Prerequisite: 214. 3 units, Spr (Murrmann, B)

EE 316. Advanced VLSI Devices — In modern VLSI technologies, device electrical characteristics are sensitive to structural details and therefore to fabrication techniques. How are advanced VLSI devices designed and what future changes are likely? What are the implications for device electrical performance caused by fabrication techniques? Physical models for nanometer scale structures, control of electrical characteristics (threshold voltage, short channel effects, ballistic transport) in small structures, and alternative device structures for VLSI. Prerequisites: 212 and 216, or equivalent. 3 units, Win (Wong, P)

EE 317. Micropatterning for Integrated Circuits — The fundamentals of generating submicron patterns in integrated circuit manufacturing. Technologies include the formation of submicron images of ultraviolet light, the resulting exposure of polymeric resists, the subsequent development of resist patterns and their transfer into functional circuit material patterns through plasma etching and other techniques. Use of phase-shifting masks and other wavefront-engineering approaches. Hands-on computer simulations. Prerequisites: 141 or equivalent, 212 or equivalent. 3 units, Spr (Pease, R), alternate years, not given next year

EE 322. Molecular Electronics and Photonics — Physics of charge and energy transfer in molecular systems and connection with traditional mesoscopic transport theories. Analysis of molecular organic light-emitting diodes, photovoltaic cells and transistors. Technology and applications of molecular semiconductors. Prerequisite: 228 or equivalent. 3 units, not given this year

EE 327. Properties of Semiconductor Materials — Modern semiconductor devices and integrated circuits are based on unique energy band, carrier transport, and optical properties of semiconductor materials. How to choose these properties for operation of semiconductor devices. Emphasis is on quantum mechanical foundations of the properties of solids, energy bandgap engineering, semiclassical transport theory, semiconductor statistics, carrier scattering, electro-magneto transport effects, high field ballistic transport, Boltzmann transport equation, quantum mechanical transitions, optical absorption, and radiative and non-radiative recombination. Prerequisites: 216, 228. 3 units, Spr (Harris, J), alternate years, not given next year

EE 328. Physics of Advanced Semiconductor Devices — Principles governing the operation of modern semiconductor devices. Assumptions and approximations commonly made in analyzing devices. Emphasis is on the application of semiconductor physics to the development of advanced semiconductor devices such as heterojunctions, HJ-bipolar transistors, HJ-FETs, nanostructures, tunneling, single electron transistor and photonic devices. Use of ATLAS, a 2-D Poisson solver, for simulation of ultra-small devices. Examples related to state-of-the-art devices and current device research. Prerequisite: 216. 3 units, alternate years, not given this year

EE 329. The Electronic Structure of Surfaces and Interfaces — Physical concepts and phenomena for surface science techniques probing the electronic structure of surfaces and interfaces. Microscopic and atomic models of structures; applications such as within semiconductor device technology and catalysis. Physical processes of low energy electron diffraction, Auger electron spectroscopy, UV and X-ray photoemission spectroscopy, electron/photon stimulated ion desorption, inelastic tunneling spectroscopy, ion scattering, surface EXAFS, and energy loss spectroscopy, and experimental aspects of these surface science techniques. Prerequisites: PHYSICS 70 and 238, or consent of instructor. 3 units, Aut (Planetta, P), alternate years, not given next year

EE 335. Introduction to Information Storage Systems — Data storage technologies including optical data storage (CD-ROM, DVD, magneto-optic recording, and holographic recording), solid state memory (flash memory, ferroelectric memory, and emerging magnetic random access memory), probe-based storage, and magnetic disk drives. Comparisons among data storage technologies. Related nanotechnologies. Prerequisites: electromagnetism, optics, transistors, binary algebra, probability, and Fourier transform. 3 units, Win (Wang, S)

EE 340. Advanced Topics in Optics and Quantum Optics — Optical microcavities and their device applications. Types of optical microcavities (microdisks, microspheres, and photonic crystal cavities), and their electromagnetic properties, design, and fabrication techniques. Cavity quantum electrodynamics: strong and weak-coupling regime, Purcell factor, spontaneous emission control. Applications of optical microcavities, including low-threshold lasers, resonant cavity light-emitting diodes, and single-photon sources. Prerequisites: advanced undergraduate- or basic graduate-level knowledge of electromagnetics, quantum mechanics, and physics of semiconductors. 3 units, Spr (Vuckovic, J)

EE 343. Advanced Optoelectronic Devices — Semiconductor quantum well structures; superlattices and coupled quantum wells; optical properties of quantum wells; valence band structure; effects of strain; quantum well lasers; intersubband detectors; excitons in quantum wells; absorption saturation; electroabsorption; quantum well modulators and switches. Prerequisites: 222 or equivalent quantum mechanics, 243. 3 units, alternate years, not given this year

EE 344. High Frequency Laboratory — Lecture/lab emphasizing lab. Techniques in the 1MHz-1GHz range useful in designing and measuring oscillators, amplifiers, and mixers. High frequency measurement techniques including s-parameter measurements, amplifier noise figure, and oscillator phase noise. Guest speakers from Lucent and Hewlett-Packard. Enrollment limited to 20. Prerequisites: transmission lines, Smith charts. 3 units, Aut (Cox, D)

EE 345. Optical Fiber Communication Laboratory — Experimental techniques in optical fiber communications. Experimental investigation of key optical communications components including fibers, lasers, modulators, photodiodes, optical amplifiers, and WDM multiplexers and demultiplexers. Key optical communications systems techniques: eye diagrams and BER measurements. Prerequisite: 247. 3 units, alternate years, not given this year
EE 346. Introduction to Nonlinear Optics — Wave propagation in anisotropic, non-linear, and time-varying media. Microscopic and macroscopic description of electric dipole susceptibilities. Free and forced waves: phasematching; slowly varying envelope approximation—dispersion, diffraction, space-time analogy; harmonic generation; frequency conversion; parametric amplification and oscillation; electro-optic light modulation; nonlinear processes in optical fibers. Prerequisite: 141, 142.
3 units, alternate years, not given this year

EE 347. Optical Methods in Engineering Science — Design and understanding of modern optical systems. Topics: geometrical optics; aberration theory; systems layout; applications such as microscopes, telescopes, optical processors. Computer ray tracing program as a design tool. Prerequisite: 268 or 366, or equivalent.
3 units, alternate years, not given this year

3 units, not given this year

EE 349. Nano Optics and Grating Photonics — Coupled wave analysis of periodic structures, gratings structures for optical communications, wave-matter interactions with periodic media and photonic crystals, applications of periodic structures. Prerequisite: 268 or 366, or equivalent.
3 units, Spr (Hesseling, L), alternate years, not given next year

EE 350. STARLab Seminar — Research topics from space physics, planetary exploration, ionospheric and magnetospheric physics, radar and remote sensing of the environment, applied electromagnetics, waves in optical fibers, and information systems with space applications. Applied research areas include wireless personal communications, high bandwidth wired and wireless transmission, optical communication systems, sensor networks, and related underlying and advancing technologies.
1 unit, Win (Inan, U)

3 units, Spr (Gibbons, F; Siegel, M)

EE 354. Introduction to Radio Wave Scattering — Integral and differential equations of radio wave scattering; exact, approximate, and numerical solutions of single particle scattering for spheres, edges, points, and cylinders. Scattering from rough surfaces with large and small roughness scales, as time permits. Multiple scattering; formulation and solution techniques for equation of transfer in discrete media and scattering by continuous media in weak and strong regimes. Applications to radar, radar astronomy, remote sensing, and biological media. Prerequisites: electromagnetic theory through standard graduate engineering topics; partial differential equations, boundary value problems in rectangular and spherical coordinates; and consent of instructor.
3 units, Win (Tyler, G), alternate years, not given next year

EE 355. Imaging Radar and Applications — Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisite: 261. Recommended: 254, 278, 279.
3 units, Win (Zebker, H) alternate years, not given next year

3 units, alternate years, not given this year

EE 359. Wireless Communication — Design, performance analysis, and performance limits of wireless systems. Topics include: current wireless systems, path loss and shadowing, statistical multipath channel models, capacity of wireless channels, digital modulation and its performance in fading and intersymbol interference, adaptive modulation, diversity, multiple antenna systems (MIMO), equalization, multicarrier modulation, and spread spectrum and RAKE receivers. Multiuser system design issues such as multiple access, frequency reuse in cellular systems, and ad hoc wireless network design. Optional term project for 4 units; otherwise 3 units. Prerequisite: 279.
3-4 units, Aut (Hashemi, H)

EE 360. Multiuser Wireless Systems and Networks — Possible topics include multiuser detection and interference cancellation, cellular system design and optimization, dynamic resource allocation and power control, random and multiple access, Shannon capacity and achievable rate regions of wireless networks, ad hoc wireless network design, sensor and energy-constrained networks, QoS support, and joint network and application design. Student input in topic selection. Prerequisite: 359.
3 units, alternate years, not given this year

EE 363. Linear Dynamic Systems — Continuation of 263. Optimal control and dynamic programming; linear quadratic regulator. Lyapunov theory and methods. Linear estimation and the Kalman filter. Perron-Frobenius theory. Examples and applications from digital filters, circuits, signal processing, and control systems. Prerequisites: 263 or equivalent; basic probability.
3 units, not given this year

3 units, not given this year

EE 364B. Convex Optimization II — Continuation of 364A. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Alternating projections. Exploiting problem structure in implementation. Convex relaxations of hard problems, and global optimization via branch and bound. Robust optimization. Applications in areas such as control, circuit design, signal processing, and communications. Substantial project. Prerequisite: 364A.
3 units, Win (Boyd, S), alternate years, not given next year
3 units, alternate years, not given this year

EE 368. Digital Image Processing — Image sampling and quantization, point operations, linear image filtering and correlation, image transforms, eigenimages, multidimensional signals and systems, multiresolution image processing, wavelets, morphological image processing, noise reduction and restoration, simple feature extraction and recognition tasks, image registration. Emphasis is on the general principles of image processing. Students write and investigate image processing algorithms in Matlab. Competitive term project. Prerequisites: 261, 278.
3 units, Spr (Girod, B)

EE 369A. Medical Imaging Systems I — Imaging internal structures within the body using high-energy radiation studied from a systems viewpoint. Modalities covered: x-ray, computed tomography, and nuclear medicine. Analysis of existing and proposed systems in terms of resolution, frequency response, detection sensitivity, noise, and potential for improved diagnosis. Prerequisite: 261.
3 units, Win (Nishimura, D)

EE 369B. Medical Imaging Systems II — Imaging internal structures within the body using non-ionizing radiation studied from a systems viewpoint. Modalities include ultrasound and magnetic resonance. Analysis of ultrasonic systems including diffraction and noise. Analysis of magnetic resonance systems including physics, Fourier properties of image formation, and noise. Prerequisite: 261.
3 units, Spr (Nishimura, D)

EE 369C. Medical Image Reconstruction — Reconstruction from non-uniform frequency domain data, automatic deblurring, phase unwrapping, reconstruction from incomplete data. Examples from fast magnetic resonance imaging methods including spiral, echo-planar, multi-coil/parallel and partial k-space reconstructions. Prerequisite: 369B.
3 units, not given this year

EE 371. Advanced VLSI Circuit Design — Issues in high performance digital CMOS VLSI design from a system perspective. Topics: wire modeling, logic families, latch design and clocking issues, clock distribution, RAMs, ALUs, I/O and I/O noise issues. Final project involves the design of a subsystem for a high-speed processor. Extensive use of SPICE. Prerequisites: 271 and 313, or consent of instructor.
3 units, Spr (Horowitz, M)

EE 372. Quantization and Compression — Theory and design of codes for quantization and signal compression systems (source coding systems), systems which convert analog or high bit rate digital signals into low bit rate digital signals while optimizing fidelity subject to available communication or storage capacity. Applications to the design of systems for compression, statistical classification, and density estimation using statistical clustering techniques. Asymptotic theory: Zador/Gersho theory for high rate quantization theory and Shannon rate-distortion theory. Code structures: uniform and lattice codes, tree structured codes, transform codes, composite codes, universal codes. Mismatch and dithering. Prerequisites: 261, 278. Recommended: 376A, MATH 137.
3 units, Spr (Gray, B), alternate years, not given next year

3 units, Win (Widrow, B)

3 units, Spr (Widrow, B)

EE 376A. Information Theory — Information theory and statistics. The extreme points of communication theory: data compression to the entropy limit, and communication at the channel capacity limit. Shannon entropy. Rate distortion theory. Huffman coding and random coding. Unified treatment based on the asymptotic equipartition theorem. Prerequisite: 178 or 278 or STATS 116, or equivalent.
3 units, Win (Weissman, I)

3 units, not given this year

3 units, Spr (Weissman, I)

EE 379A. Digital Communication I — Maximum-likelihood data detection, modulation methods and bandwidth requirements, bandpass systems and analysis, intersymbol interference and equalization methods, diversity, phase-locking, and synchronization. Prerequisites: 102B, 278.
3 units, Win (Malkin, M)

EE 379B. Digital Communication II — Basic channel capacity formulae, decoding algorithms: Viterbi detection, sequence detectors, and iterative decoding methods; partial-response methods, convolutional, trellis, turbo codes, and low-density parity check codes. Prerequisites: 278, 379A. Recommended: 387.
3 units, alternate years, not given this year

EE 379C. Advanced Digital Communication — Multi-dimensional modulation and basis functions, transmit optimization for channels with intersymbol interference, discrete multitone (DMT), orthogonal frequency division multiplexing (OFDM), vector modulation, generalized decision-feedback equalization (GDFE). Prerequisite: 379A.
3 units, alternate years, not given this year

EE 380. Seminar on Computer Systems — Current research in the design, implementation, analysis, and use of computer systems from integrated circuits to operating systems and programming languages.
1 unit, Aut, Win, Spr, Sum (Allison, D; Long, E)
EE 382A. Advanced Processor Architecture — Topics include advanced instruction-set design and pipelining, wide instruction fetch, branch prediction, out-of-order and speculative execution, memory disambiguation, vector processors, simultaneous multithreading, and low-level compiler optimizations for instruction-level parallelism. Trade-offs among performance, power, and complexity, and techniques for addressing them. The design of out-of-order processor core using the Verilog hardware design language. Prerequisites: 108B, 282.
  3 units, not given this year

EE 382C. Interconnection Networks — The architecture and design of interconnection networks used to communicate from processor to memory, from processor to processor, and in switches and routers. Topics: network topology, routing methods, flow control, router microarchitecture, and performance analysis. Enrollment limited to 30. Prerequisite: 282.
  3 units, Spr (Dally, W), alternate years, not given next year

EE 382D. Advanced Computer Arithmetic — Number systems, floating point representation, state of the art in arithmetic algorithms, problems in the design of high speed arithmetic units. Prerequisite: 282.
  3 units, alternate years, not given this year

EE 384A. Internet Routing Protocols and Standards — Local area networks: MAC addressing; IEEE 802.1 bridging protocols (transparent bridging, virtual LANs). Internet routing protocols: Internet protocol (IPv4, IPv6, ICMP); interior gateways (RIP, OSPF) and exterior gateways (BGP, policy routing); IP multicast (IGMP, DVMRP, CBT, MOSPF, PIM); multiprotocol label switching (MPLS). Prerequisite: 284 or CS 244A.
  3 units, not given this year

EE 384B. Multimedia Communication over the Internet — Applications and requirements. Traffic generation and characterization: voice encoding (G.711, G.729, G.723); image and video compression (JPEG, H.261, MPEG-2, H.263, H.264), TCP data traffic. Quality impairments and measures. Networking technologies: LAN technologies; home broadband services (ADSL, cable modems, PONs); and wireless LANs (802.11). Network protocols for multimedia applications: resource reservation (ST2+, RSVP); differentiated services (DiffServ); and real-time transport protocol (RTP, RTCP). Audio-video-data conferencing standards: Internet architecture (SDP, SAP, SIP); ITU recommendations (H.320, H.323 and T.120); and real-time streaming protocol (RTSP). Prerequisite: 284 or CS 244A. Recommended: 384A.
  3 units, Win (Tobagi, F), alternate years, not given next year

EE 384C. Wireless Local Area Networks — Characteristics of wireless communication: multipath, noise, and interference. Communications techniques: spread-spectrum, CDMA, and OFDM. IEEE 802.11 physical layer specifications: FHSS, DSSS, IEEE 802.11b (CCK), and 802.11a/g (OFDM). IEEE 802.11 media access control protocols: carrier sense multiple access with collision avoidance (CSMA/CA), point coordination function (PCF), IEEE802.11e for differentiated services. IEEE 802.11 network architecture: ad hoc and infrastructure modes, ad hoc point functionality, Management functions: synchronization, power management and association. Current research papers in the open literature. Prerequisite: 284 or CS 244A.
  3 units, alternate years, not given this year

EE 384M. Network Algorithms — Theory and practice of designing and analyzing algorithms arising in networks. Topics include: designing algorithms for load balancing, switching, congestion control, network measurement, the web infrastructure, and wireless networks; and analyzing the performance of algorithms via stochastic network theory. Algorithm design using randomization, probabilistic sampling, and other approximation methods. Analysis methods include the use of large deviation theory, fluid models, and stochastic comparison. Research project. Prerequisite: EE 278 or CS 365.
  3 units, not given this year

EE 384S. Network Architectures and Performance Engineering — Modeling and control methodologies used in network performance engineering: Markov chains and stochastic modeling, queueing networks, stochastic simulation, dynamic programming, network optimization algorithms, large-scale distributed computation for networking operations. Applications to design issues in high-performance network architectures for wireline and wireless networking: traffic modeling, congestion control, IP network dynamics, TCP flow control, quality of service support, network admission control and operations management, power control and dynamic bandwidth allocation in wireless networks. Prerequisites: 284 and good understanding of probability and general systems modeling.
  3 units, Spr (Bambos, N)

  3 units, not given this year

  3 units, not given this year

EE 385A. Digital Systems Reliability Seminar — Student/faculty discus- sions of research problems in the design of reliable digital systems. Areas: fault-tolerant systems, design for testability, production testing, and system reliability. Emphasis is on student presentations and Ph.D. thesis research. Prerequisite: consent of instructor.
  1-4 units, Aut, Win, Spr, Sum (McCluskey, E)

EE 386. Robust System Design — Causes of system malfunctions; techniques for building robust systems that avoid or are resilient to such malfunctions through built-in error detection and correction, prediction, self-recovery, and self-repair; case studies and new research problems. Prerequisites: 108A,B, 282.
  3 units, Spr (Mitra, S)

EE 387. Error-Correcting Codes — Theory and implementation of algebraic codes for detection and correction of random and burst errors. Introduction to finite fields. Linear block codes, cyclic codes, Hamming codes, Fire codes, BCH codes, Reed-Solomon codes. Decoding algorithms for BCH and Reed-Solomon codes. Prerequisites: elementary probability, linear algebra.
  3 units, Spr (Gill III, J)

EE 390. Special Studies or Projects in Electrical Engineering — Independent work under the direction of a faculty member. Individual or team projects, or directed reading. Prerequisite: consent of instructor.
  1-15 units, Aut, Win, Spr, Sum (Staff)

EE 391. Special Studies and Reports in Electrical Engineering — Independent work under the direction of a faculty member; written report or written examination required. Letter grade given on the basis of the report; if not appropriate, student should enroll in 390.
  1-15 units, Aut, Win, Spr, Sum (Staff)

EE 392B. Introduction to Imaging Sensors — Design and analysis: sili- con photodetectors; CCD and CMOS passive and active sensor operation; noise and FPN analysis; spatial resolution and MTF; SNR and dynamic range; high dynamic range architectures; A/D conversion approaches. Analysis of the signal path in a digital camera starting from the optics, through the sensor, the A/D converter, to the different color processing steps. MATLAB camera simulator is used to explore various tradeoffs in camera design. Prerequisites: undergraduate level device, circuit, and system background equivalent to 102A, 101A,B; and familiarity with noise analysis.
  3 units, alternate years, not given this year
3 units, Win (Forney, G)

3 units, not given this year

EE 392F. Logic Synthesis of VLSI Circuits—Similar to former 318. Solving logic design problems with CAD tools for VLSI circuits. Exact and heuristic algorithms for logic synthesis. Representation and optimization of combinational logic functions (encoding problems, binary decision diagrams) and of multiple-level networks (algebraic and Boolean methods, don’t-care set computation, timing verification, and optimization); and modeling and optimization of sequential functions and networks (retiming, semicustom libraries, and library binding. Prerequisites: familiarity with logic design, algorithm development, and programming.
3 units, Win (Vishnu, M)

EE 392J. Digital Video Processing—Spatio-temporal sampling, motion analysis, parametric motion models, motion-compensated filtering, and video processing operations including noise reduction, restoration, superresolution, deinterlacing and video sampling structure conversion, and compression (frame-based and object-based methods). Video segmentation and layered video representations, video streaming, compressed-domain video processing, and digital TV. Prerequisite: 368.
3 units, alternate years, not given this year

EE 392R. Charged Particle Optics—Electron optics of charged particle instruments including transmission electron microscope, scanning electron microscope and related tools, mass and energy spectrometers, electron beam lithography tools, focused ion beam systems, electron diffraction, proximal probe tools such as the scanning tunneling microscope. Topics include sources, first-order focusing of electrons and ions, third-order aberrations, space-charge effects and diffraction. Goal is to compute the optical parameters of axially-symmetric magnetic and electric lenses and to be familiar with the principles of operation of the above charged-particle systems and the factors limiting their performance. Prerequisites: undergraduate geometrical optics and vector calculus or 217.
3 units, alternate years, not given this year

EE 392S. Sensor Networks Seminar—Silicon-based sensors, local computation, and the emerging technology of low power, ad hoc radio networks as enablers of networked sensing systems. Integration issues, information theory, and networking concerns suggest capabilities for smart sensing network nodes and system trade-offs. Human factors and practical considerations for widespread, consumer adoption of smart sensing networks. Future applications and barriers to adoption. Speakers from industry and academia.
1 unit, not given this year

EE 392T. Seminar in Chip Test and Debug—Seminars by industry professionals in the area of digital IC manufacturing test and silicon debug. Topics covered will include yield and bin split modeling, defect types and detection, debug hardware, physical analysis, and design for test/debug circuits. Case studies of real silicon failures will be discussed. Prerequisite: Basic understanding of digital IC design (271 or 371).
1 unit, Aut (Stinson, J)

EE 392W. Wireless Sensor Networks: Concepts and Implementation—Hands-on experience with existing systems and application development work. The collection of development and testing platforms at the Wireless Sensor Networks Lab available to facilitate access to algorithm implementation and analysis efforts.
3 units, not given this year

EE 395. Electrical Engineering Instruction: Practice Teaching—Open to advanced EE graduate students who plan to make teaching their career. Students conduct a section of an established course taught in parallel by an experienced instructor. Enrollment limited.
1-15 units, Aut, Win, Spr (Gray, R)

3 units, alternate years, not given this year

3 units, alternate years, not given next year

3 units, Spr (Girod, B), alternate years, not given next year

EE 400. Thesis and Thesis Research—Limited to candidates for the degree of Engineer or Ph.D.
1-15 units, Aut, Win, Spr, Sum (Staff)

EE 402A. Topics in International Technology Management—Theme for 2006-07 is IP management for technology businesses in Asia. Challenges and solutions to patenting, copyright, trademarks, standards in high-growth markets. Employee turnover issues, IP-based business models. Guest speakers from industry and government. May be repeated for credit.
1 unit, Aut (Dashner, R)

EE 402S. Topics in International Advanced Technology Research—Theme for 2006-07 is advanced technologies for biomedical applications. Photonic and electronic systems and components for imaging, microarrays, drug delivery, artificial organs, and robot-assisted surgery. Guest speakers from industry, government, and universities. May be repeated for credit. Recommended: basic electronics.
1 unit, Spr (Dashner, R)

EE 402T. Entrepreneurship in Asian High Tech Industries—Entrepreneurship in Asian high tech industries. Patterns and challenges of entrepreneurship in Asia. Business and technology issues in start-up companies in Asian economies. Guest speakers from industry, government, and universities. May be repeated for credit.
1 unit, Spr (Dashner, R)
EE 410. Integrated Circuit Fabrication Laboratory — Fabrication, simulation, and testing of a highly simplified 1.5 micron CMOS process developed for this course. Practical aspects of IC fabrication including silicon wafer cleaning, photolithography, etching, oxidation, diffusion, ion implantation, chemical vapor deposition, physical sputtering, and wafer testing. Students perform simulations of the CMOS process using process simulator TSUPREM4 of the structures and electrical parameters that should result from the process flow in the lab. Taught in the Stanford Nanofabrication Facility (SNF) in the Center for Integrated Systems (CIS). Preference to students pursuing doctoral research program requiring SNF facilities. Enrollment limited to 20. Prerequisites: 212, 216, consent of instructor.

3-4 units, Win (Saraswat, K)

EE 414. Design of Discrete RF Circuits for Communications Systems — Students design, build, and test GHz transceivers using microstrip construction techniques and discrete components. The design, construction, and experimental characterization of representative transceiver building blocks: low noise amplifiers (LNAs), diode ring mixers, PLL-based frequency synthesizers, voltage-controlled oscillators (VCOs), power amplifiers (PAs), and microstrip filters and patch antennas. The characteristics of passive microstrip components (including interconnect). Emphasis is on a quantitative reconciliation of theoretical predictions and extensive experimental measurements performed with spectrum and network analyzers, time-domain reflectometers (TDRs), noise figure meter and phase noise analyzers. Prerequisites: 314, 344.

3 units, Spr (Lee, T)

EE 418. Topics in Neuroengineering — Neuroscience and electrical engineering, focusing on principles and theory in modern neural prosthetic systems (brain-computer or brain-machine interfaces). Electrical properties of neurons, information encoding, neural measurement techniques and technology, processing electronics, information decoding and estimators, and statistical data analysis. Prerequisites: 214, 278.

3 units, Win (Shenoy, K)

3 units, not given this year

EE 469B. RF Pulse Design for Magnetic Resonance Imaging — Magnetic resonance imaging (MRI) and spectroscopy (MRS) based on the use of radio frequency pulses to manipulate magnetization. Analysis and design of major types of RF pulses in one and multiple dimensions, analysis and design of sequences of RF pulses for fast imaging, and use of RF pulses for the creation of image contrast in MRI. Prerequisite: 369B.

3 units, Aut (Pauly, J), alternate years, not given next year

3 units, not given this year

EE 478. Topics in Multiple User Information Theory — Topics in multiple user source and channel coding; multiple access channel, correlated source coding, broadcast channel, interference channel, relay channel, and channels with feedback; asymptotic capacity of networks; source coding with side information, multiple descriptions, channels with state, MIMO channels. Prerequisite: 376A.

3 units, Aut (El Gamal, A), alternate years, not given next year

EE 479. Multiuser Digital Transmission Systems — Multiuser communications design, modulation, and reception. Capacity regions and fundamentally optimum designs for multiple access, broadcast, and interference channels. Iterative waterfilling, vectoring, and multi-user generalized decision feedback equalization (GDFE) as used for vector broadcast and multiple access. Prerequisite: 379C.

3 units, alternate years, not given this year

EE 487. Communication SoC Design — Design and implementation of communication systems-on-a-chip (SoC) using state-of-the-art integrated circuit technology. The choice of architecture for applications and its impact on performance, area, and energy efficiencies. Related topics such as digital communication, modeling of analog subsystems and their impairments, and the incorporation of flexibility into the design. Wireless system design used as the application because it provides a concrete realization of issues in an SoC design. Prerequisites: 264 or 265, 271.

3 units, alternate years, not given this year

EE 492M. Space-Time Wireless Communications — For EE graduate students and wireless systems engineers. Space-time (ST) wireless communications offer performance improvements in capacity, coverage, and quality. Aspects of ST technology are already part of 2.5G/3G systems. More advanced aspects (MIMO) are being incorporated into several standards. Prerequisites: 276, 278, 279. Recommended: 359.

3 units, alternate years, not given this year

COGNATE COURSES

Courses approved to fulfill EE program requirements at the level of 300-499 EE courses are listed below according to the M.S. depth areas or as “Other.” See respective department listings for course descriptions.

COMPUTER HARDWARE

CS 315A. Parallel Computer Architecture and Programming

3 units, Win (Olukotun, O)

COMPUTER SOFTWARE SYSTEMS

CS 243. Advanced Compiling Techniques

3-4 units, Win (Lam, M)

CS 245. Database Systems Principles

3 units, Win (Staff)

CS 343. Advanced Topics in Compilers

3 units, Spr (Lam, M)

CS 348A. Computer Graphics: Geometric Modeling

3-4 units, Aut (Guibas, L)

3-4 units, Spr (Hanrahan, P)

DYNAMIC SYSTEMS AND OPTIMIZATION

MS&E 339. Approximate Dynamic Programming

3 units, not given this year

MS&E 351. Dynamic Programming and Stochastic Control

3 units, Spr (Veinott, A)

ELECTRONIC DEVICES, SENSORS, AND TECHNOLOGY

ENGR 341. Micro/Nano Systems Design and Fabrication

3-5 units, Spr (Solgaard, O; Pruitt, B)

ME 342B. MEMS Laboratory II

3-4 units, Sum (Pruitt, B)

IMAGE SYSTEMS

CS 348A. Computer Graphics: Geometric Modeling

3-4 units, Aut (Guibas, L)

3-4 units, Spr (Hanrahan, P)
PSYCH 221. Applied Vision and Image Systems
1-3 units, Win (Wandell, B)

LASERS, OPTOELECTRONICS, AND QUANTUM ELECTRONICS
APP PHYS 304. Lasers Laboratory
3 units, Win (Byer, R)
APP PHYS 305. Nonlinear Optics Laboratory
3 units, Spr (Byer, R)

NETWORK SYSTEMS
CS 344. Projects in Computer Networks
3 units, Spr (McKeown, N)
MS&E 336. Topics in Game Theory with Engineering Applications
3 units, Spr (Johari, R)

SIGNAL PROCESSING
MUSIC 420. Signal Processing Methods in Musical Acoustics
3-4 units, Win (Smith, J)
MUSIC 421. Audio Applications of the Fast Fourier Transform (FFT)
3-4 units, Spr (Smith, J)
MUSIC 422. Perceptual Audio Coding
3 units, Win (Bosi-Goldberg, M)

OTHER
APP PHYS 387. Quantum Optics and Measurements
3 units, alternate years, not given this year
APP PHYS 388. Mesoscopic Physics and Nanostructures
3 units, alternate years, not given this year
CS 346. Database System Implementation
3-5 units, Spr (Widom, J)
CS 347. Transaction Processing and Distributed Databases
3 units, Staff
CS 528. Broad Area Colloquium for Artificial Intelligence, Geometry, Graphics, Robotics, and Vision
1 unit, Aut, Spr (Batzoglou, S)

GEOPHYS 265. Imaging Radar and Applications
3 units, Win (Zebker, H)

MATSCI 316. Nanoscale Science, Engineering, and Technology
3 units, Win (Cui, Y; McGehee, M)
MATSCI 343. Organic Semiconductors for Electronics and Photonics
3 units, Spr (McGehee, M)
MS&E 338. Advanced Topics in Information Science and Technology
3 units, not given this year
RAD 226. In Vivo Magnetic Resonance Spectroscopy and Imaging
3 units, Win (Staff)

OVERSEAS STUDIES
Courses approved for the Electrical Engineering major and taught overseas can be found in the “Overseas Studies” section of this bulletin, or in the Overseas Studies office, 126 Sweet Hall.

KYOTO
EE 101B. Circuits II
4 units, Spr (Shenoy, K)
EE 108B. Digital Systems II
4 units, Spr (Olukotun, O)
application include finance, production, information, organizational behavior, marketing, entrepreneurship, policy, and strategy. Programs in these functional areas emphasize both fundamental concepts and practical applications. Close associations with other engineering departments and with industry enrich the programs by providing opportunities to apply MS&E methods to important problems and by motivating new theoretical developments from practical experience. MS&E's programs also provide a basis for contributing to other important areas such as biotechnology, defense policy, environmental policy, information systems, telecommunications, and other areas where mastery of fundamentals, functional knowledge, and an engineering viewpoint are extremely valuable.

CAREERS IN MS&E

MS&E helps students prepare for a variety of professional careers in business, government, industry, non-profit institutions, and universities. Graduates have pursued successful careers in consulting, enterprise management, financial analysis, government policy analysis, industrial research, line management, product development, project management, strategic planning, and university teaching and research. Some have founded companies specializing in financial services, high technology products, management and systems consulting, or software. Other graduates have helped establish new analytical capabilities in existing firms or government agencies.

Many graduates have become leaders in technology-based businesses, which have an increasing need for well-educated, analytically oriented people who understand both business and technology. The Department of MS&E is attractive to people with engineering, mathematical science, and physical science backgrounds as it complements their technical abilities with the conceptual frameworks needed to analyze problems of investment, management, marketing, operations, production, and strategic planning in a technical environment.

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

The program leading to the B.S. degree in Management Science and Engineering (MS&E) is stated earlier under the “School of Engineering” section of this bulletin, and more information is contained in the School of Engineering’s Handbook for Undergraduate Engineering Programs. Students are encouraged to plan their academic programs as early as possible, ideally in the freshman or sophomore year. Students should not wait until they are declaring a major to consult with the department’s student services staff. This is particularly important for students who would like to study overseas or pursue another major or minor.

The undergraduate curriculum in Management Science and Engineering provides students training in the fundamentals of engineering systems analysis to prepare them to plan, design, and implement complex economic and technological management systems where a scientific or engineering background is necessary or desirable. Graduates will be prepared for work in a variety of career paths, including facilities and process management, investment banking, management consulting, or graduate study in industrial engineering, operations research, economics, public policy, medicine, law, or business.

The educational objectives of the undergraduate degree program are:

1. Principles and Skills: provide students with a basic understanding of management science and engineering principles, including analytical problem solving and communications skills.
2. Preparation for Practice: prepare students for practice in a field that sees rapid changes in tools, problems, and opportunities.
3. Preparation for Continued Growth: prepare students for graduate study and self-development over an entire career, and
4. Preparation for Service: develop in students the awareness, background, and skills necessary to become responsible citizens, employees, and leaders.

In particular, the department wants to help students develop:

1. an ability to apply knowledge of math, science, and engineering.
2. an ability to design and conduct experiments.
3. an ability to design a system or components to meet desired needs.
4. an ability to identify, formulate, and solve engineering problems.
5. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
6. an ability to function on multidisciplinary teams.
7. an ability to communicate effectively.
8. a recognition of the need for and an ability to engage in life-long learning.
9. background necessary for admission to top professional graduate engineering or business programs.
10. an understanding of professional and ethical responsibility.
11. the broad education necessary to understand the impact of engineering solutions in a global and societal context.
12. a knowledge of contemporary issues pertinent to the field of management science and engineering.

The program builds on the foundational courses for engineering, including calculus, engineering fundamentals, and physics or chemistry. The department core, taken for all concentrations, includes courses in computer science, deterministic optimization, information, organization theory, a senior project, and finance or production. Through the core, all students in the program are exposed to the breadth of faculty interests, and are in a good position to choose a concentration during the junior year.

The five concentrations are designed to allow a student to explore one area of the department in greater depth.

1. Financial and Decision Engineering: focuses on the design and analysis of financial and strategic plans. It features accounting, decision analysis, economics, finance, investment science, and stochastic models.
2. Operations Research: provides a more mathematical program, based on algorithms, theory, and applications in economics and operations.
3. Organization, Technology, and Entrepreneurship: focuses on understanding and design of organizations, particularly technology-based issues. It features courses on innovation, product development, entrepreneurship, work and manufacturing systems, information systems, and human-computer interaction.
4. Production and Operations Management: focuses on the design and analysis of manufacturing, production, and service systems.
5. Policy and Strategy: focuses on the design and analysis of public policies and corporate strategies, especially those with technology-based issues. It features a core in microeconomics and modeling approaches, and policy-focused courses in topics such as national security, energy and environment, and health care, and strategy-focused courses in topics such as entrepreneurship, innovation, and product development.

For information about an MS&E minor, see the “School of Engineering” section of this bulletin.

MS&E also participates with the departments of Computer Science, Mathematics, and Statistics in a program leading to a B.S. in Mathematical and Computational Science. See the “Mathematical and Computational Science” section of this bulletin.

GRADUATE PROGRAMS

MS&E, in collaboration with other departments of the University, offers programs leading to the degrees of Master of Science and Doctor of Philosophy. The department also offers a coterminal B.S./M.S. degree, and a dual master’s degree in cooperation with each of the other departments in the School of Engineering.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

Applicants for admission as graduate students in MS&E must submit the results of the verbal, quantitative, and analytical parts of the Graduate Record Examination. The deadline for application is January 2 for doctoral applicants and January 9 for master’s applicants.

Except in unusual circumstances, admission is limited to the Autumn Quarter because courses are arranged sequentially with basic courses and prerequisites offered early in the academic year.

Assistantships and Fellowships—A limited number of fellowships and
Assistantships are awarded each year. Applicants admitted to the doctoral program, who have indicated on their application that they would like to be considered for financial aid, are automatically considered for these assistantships and fellowships.

Information about loan programs and need-based aid for U.S. citizens and permanent residents can be obtained from the Financial Aid Office.

MASTEr OF SCIENCE

The M.S. degree programs require a minimum of 45 units beyond the equivalent of a B.S. degree at Stanford. All programs represent substantial progress in the major field beyond the bachelor's degree.

University requirements for the master’s degree are described in the “Graduate Degrees” section of this bulletin.

MANAGEMENT SCIENCE AND ENGINEERING

The M.S. program in Management Science and Engineering (MS&E) prepares individuals for a lifelong career addressing critical technical and managerial needs in private and public decision making. Department requirements for the M.S. degree provide breadth across some of the areas of the department, and flexibility for meeting individual objectives of depth in a particular area of concentration. The master’s degree may be a terminal degree program with a professional focus, or a preparation for a more advanced graduate program. The M.S. degree can normally be earned in one academic year (three academic quarters) of full-time work, although students may choose to continue their education by taking additional MS&E courses beyond that year. Background requirements, taken in addition to degree requirements, must be met by students who have had insufficient course work in mathematical sciences, computer science, engineering and/or natural sciences.

Students must take a minimum of 45 course units as follows:
1. At least five core courses
2. At least three other courses in an area of concentration of their choice
3. A course in probability, unless a college-level course in probability has already been passed
4. A project course requirement
5. The remaining units in elective courses

Background Requirements — Students must have had or must take the following (or equivalent) courses before the M.S. degree is conferred:
- MATH 41, 42, 51, Calculus, 15 units; CS 106A Programming Methodology, 5 units, and an additional 15 units of engineering, mathematical sciences, or natural sciences. These courses do not count toward the 45 units of the M.S. degree. Courses taken to meet MS&E background requirements may be at either the undergraduate or graduate level, and may be taken as credit/no credit. These additional background requirements would typically be met by students who have a bachelor’s degree in engineering, or mathematical or natural sciences.

Core Courses — M.S. students must take at least five courses out of the following ten options:
- MS&E 201. Dynamic Systems or MS&E 251. Stochastic Decision Models
- MS&E 211. Linear and Nonlinear Optimization
- MS&E 221. Introduction to Stochastic Modeling or MS&E 223. Simulation
- MS&E 240. Industrial Accounting or MS&E 242. Investment Science
- MS&E 241. Economic Analysis
- MS&E 252. Decision Analysis or MS&E 250A. Risk Analysis
- MS&E 261. Production Systems
- MS&E 270. Strategy in Technology-Based Companies
- MS&E 271. Global Entrepreneurial Marketing
- MS&E 280. Organizational Behavior and Management

Students may not waive core courses. They may, however, petition to substitute an approved, more advanced course in the same area. Courses used to satisfy the core requirement must be taken for a letter grade, must be taken for a minimum of three units each, and may not also be used to satisfy the concentration requirement.

Courses in an Area of Concentration — Students must complete a departmentally approved set of three or more letter-graded courses taken for a minimum of three units each, in an area of concentration of one of the following types:
1. An area of concentration in the MS&E department
2. An area of concentration in one of the seven other departments of the School of Engineering
3. In exceptional cases, a coherent area of concentration designed by the student. Petitions for student-designed concentrations must list the three proposed courses (taken for three units or more and at the 200-level or above) and include a brief justification. The petition must be submitted to student services no later than the fifth week of the quarter prior to graduation.

Project Course Requirement — Students must take either a designated project course or two designated integrated project courses. The project course(s) must be taken for letter grade, must be taken for a minimum of three units, and may also be used to satisfy the core or concentration requirement.

Additional requirements are:
1. At least 45 units must be in courses numbered 100 and above
2. At least 27 units must be in courses numbered 200 and above in MS&E, taken for a letter grade and a minimum of two units each, and at least 36 letter-graded units must be in MS&E or closely related fields. Closely related fields include any department in the School of Engineering, mathematics, statistics, economics, sociology, psychology, or business.
3. The degree program must be completed with a grade point average (GPA) of 3.0 or higher.
4. A maximum of three units of language courses (numbered 100 and above)
5. A maximum of three units of 1-unit courses such as seminars, colloquia, workshops, in any department, and a maximum of one unit of MS&E 208, Curricular Practical Training.
6. A maximum of 18 non-degree option (NDO) units through the Stanford Center for Professional Development (SCPD)
7. Courses in athletics may not be applied toward the degree.

Please see the student services office or department web site for complete listing of project, integrated project and approved concentrations.

DUAL MASTER'S DEGREE

Admission — For the dual degree, admission to two departments is required, but is coordinated by designated members of both Admissions Committees who make recommendations to the committees of their respective departments. Students may apply to only one Department initially. After the first quarter at Stanford, students may apply to be admitted to the second Department.

Advising — Every student in the dual degree program has one adviser in each department.

The Dual Degree Program — This dual degree program enables a small set of graduate students to obtain two master’s degrees simultaneously. Students complete the course requirements for each department. A total of 90 units is required to complete the dual master’s degree.

PROFESSIONAL EDUCATION

The Stanford Center for Professional Development (SCPD) provides opportunities for employees of some local and remote companies to take courses at Stanford.

The Honors Cooperative Program (HCP) provides opportunities for employees of SCPD Member companies to earn an M.S. degree, over a longer period, by taking one or two courses per academic quarter. Some courses are only offered on campus; HCP students may attend those courses at Stanford to meet the degree requirements. It is possible to complete this program as a remote HCP student although the remote offerings are limited. Students must apply for a degree program through the standard application process, and must meet the standard application deadline of January 9, 2007.

The non-degree option (NDO) allows employees of some local companies to take courses for credit from their company sites before being admitted to a degree program. Students apply to take NDO courses each quarter.
through the Stanford Center for Professional Development. Up to 18 units taken as an NDO student may be applied toward a degree program. For additional information about the NDO application process and deadlines, see http://scpd.stanford.edu, or contact SCPD at (650) 725-3000.

The department offers a certificate program within the framework of the NDO program. A certificate can be obtained by completing three MS&E core courses, plus one MS&E elective course for a total of four courses. For further information, see http://scpd.stanford.edu/scpd/programs/certs/managementSci.htm.

**DOCTOR OF PHILOSOPHY**

University requirements for the Ph.D. degree are described in the “Graduate Degrees” section of this bulletin.

The Ph.D. degree in MS&E is intended for students primarily interested in a career of research and teaching, or high-level technical work in universities, industry, or government. The program requires three years of full-time graduate study, at least two years of which must be at Stanford. Typically, however, students take about four to five years after entering the program to complete all Ph.D. requirements. The Ph.D. is generally organized around the requirement that the students acquire a certain breadth across some of the eight areas of the department, and depth in one of them. These areas are:

- Decision analysis and risk analysis
- Economics and finance
- Information science and technology
- Organization, technology, and entrepreneurship
- Policy and strategy
- Probability and stochastic systems
- Production and operations management
- Systems modeling and optimization

Doctoral students are required to take a number of courses, both to pass a qualifying exam in one of these areas, or the Systems Program which is a combination of several areas, and to complete a dissertation based on research which must make an original contribution to knowledge.

Each student admitted to the Ph.D. program must satisfy a breadth requirement and pass a qualification procedure. The purpose of the qualification procedure is to assess the student’s command of the field and to evaluate his or her potential to complete a high-quality dissertation in a timely manner. The student must complete specified course work in one of the eight areas of the department, or the Systems Program which is a combination of several areas. The qualification decision is based on the student’s grade point average (GPA), on the one or two preliminary papers prepared by the student, and on the student’s performance in an area examination. Considering this evidence, the department faculty votes on advancing the student to candidacy in the department at large. The Ph.D. requires a minimum of 135 units, at least 54 of which must be in courses of 3 units or more. At least 48 course units in courses of 3 units or more must be taken for a letter grade. The Ph.D. requirements for the eight areas of the MS&E department are available from the MS&E student services office.

**PH.D. MINOR**

Students pursuing a Ph.D. in another department who wish to receive a Ph.D. minor in Management Science and Engineering should consult the MS&E student services office. A minor in MS&E may be obtained by completing 20 units of approved graduate-level MS&E courses, of which at least 6 units must be at the 300-level. Courses approved for the minor must form a coherent program, and must include one course from at least three of the ten MS&E M.S. core options. The program must include a minimum of 16 letter-graded units, and a minimum grade point average of 3.3 must be achieved in these courses.

**Qualification Procedure Requirements** — The qualification procedure is based both on breadth across the department’s disciplines and depth in an area of the student’s choice. The qualification process must be completed by the end of the month of May of the student’s second year of graduate study in the department. The performance of all doctoral students is reviewed every year at a department faculty meeting at the end of May or beginning of June. Ph.D. qualification decisions are made at that time and individual feedback is provided.

The Ph.D. qualification requirements comprise three elements:

1. **Grade Point Average:** a student must maintain a GPA of at least 3.4 in the four courses chosen to satisfy the breadth requirements, and a GPA of at least 3.4 in the set of all courses taken by the student within the department. In both cases, the GPA is computed on the basis of the nominal number of units for which each course is offered.

2. **Paper(s):** a student may choose between two options, either to be completed before the Spring Quarter of the student’s second year. The first option involves one paper supervised by a primary faculty adviser and a faculty consultant. This paper should be written in two quarters.

   The second option involves two shorter sequential tutorials, with two different faculty advisers. Each tutorial should be completed in one quarter. In both options, the student chooses the faculty adviser(s)/consultant with the faculty members’ consent.

   A student may register for up to 3 units per tutorial and up to 6 units for a paper. These paper or tutorial units do not count towards the 54 course units required for the Ph.D., and letter grades are not given.

3. **Area Qualification:** in addition, during the second year, a student must pass an examination in one of the eight areas of the MS&E department or the Systems Program which is a combination of several areas, which will be of his or her choice. This area examination is written, oral, or both at the discretion of the area faculty administering the exam.

4. **Area Course Requirement:** students must complete the depth requirements of one of the eight areas of the MS&E department or the Systems Program which is a combination of several areas. All courses used to satisfy depth requirements must be taken for a letter grade. The Ph.D. requirements for the eight areas of the MS&E department are available from the MS&E student services office.
MS&E 41. Financial Literacy — Practical knowledge about personal finance and money management including budgeting, pay checks, credit cards, banking, insurance, taxes, and saving. Class especially appropriate for those soon to be self-supporting. Limited enrollment.

1 unit, Win, Spr (Morrison, M)

MS&E 92Q. International Environmental Policy — Stanford Introductory Seminar. Preference to sophomores. Science, economics, and politics of international environmental policy. Current negotiations on global climate change, including actors and potential solutions. Sources include briefing materials used in international negotiations and the U.S. Congress.

4 units, Win (Weyant, J)

3 units, Spr (Hecker, S)

MS&E 94Q. The Public Use and Misuse of Mathematics: How to Interpret Numbers as Used by Media and Politicians — Stanford Introductory Seminar. How to unearth and interpret the relevant math to illuminate underlying political and economic issues. How to interpret public budgets, assess whether bond issues are justified, and estimate pollution risks or the cost of health care. How to deal with rare but high-consequence eventualities such as terrorism, a nuclear meltdown, or a pandemic. How to determine how much to pay to reduce carbon emissions, when a medicine should be withdrawn, and what is a useful forecast. GER:DB-EngrAppSci

3 units, Spr (May, M)

MS&E 101. Undergraduate Directed Study — Subject of mutual interest to student and faculty member. Prerequisite: faculty sponsor. 1-15 units, Aut, Win, Spr, Sum (Staff)

MS&E 107. Interactive Management Science — (Graduate students register for 207.) Analytical techniques such as linear and integer programming, Monte Carlo simulation, forecasting, decision analysis, and Markov chains in the environment of the spreadsheet. Materials include spreadsheet add-ins for implementing these and other techniques. Emphasis is on building intuition through interactive modeling, and extending the applicability of this type of analysis through integration with existing business data structures. Project required of those enrolled in 207. GER:DB-EngrAppSci

3 units, Aut (Savage, S)

MS&E 108. Senior Project — Restricted to MS&E majors in their senior year. Students carry out a major project in groups of four, applying techniques and concepts learned in the major. Project work includes problem identification and definition, data collection and synthesis, modeling, development of feasible solutions, and presentation of results.

5 units, Win (Barley, S; Carlson, R; Katila, R; Shachter, R)

MS&E 111. Introduction to Optimization — (Same as ENGR 62.) Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Application to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: MATH 51. GER:DB-EngrAppSci

4 units, Aut (Van Roy, B), Spr (Goel, A)

MS&E 112. Mathematical Programming and Combinatorial Optimization — (Graduate students register for 212; same as CME 208.) Combinatorial and mathematical programming (integer and non-linear) techniques for optimization. Topics: linear program duality and LP solvers; integer programming; combinatorial optimization problems on networks including minimum spanning trees, shortest paths, and network flows; matching and assignment problems; dynamic programming; linear approximations to convex programs; NP-completeness. Hands-on exercises. Prerequisites: CS 106A or X; ENGR 62 or MATH 103. GER:DB-EngrAppSci

3 units, Spr (Saber, A)

MS&E 120. Probabilistic Analysis — Concepts and tools for the analysis of problems under uncertainty, focusing on model building and communication: structuring, processing, and presentation of probabilistic information. Examples from legal, social, medical, and physical problems. Spreadsheets illustrate and solve problems as a complement to analytical closed-form solutions. Topics: axioms of probability, probability trees, random variables, distributions, conditioning, expectation, change of variables, and limit theorems. Prerequisite: MATH 51. Recommended: knowledge of spreadsheets. GER:DB-EngrAppSci

5 units, Aut (Shachter, R)

4 units, Win (Glynn, P)

3 units, Win (Luenberger, D)

MS&E 134. Organizations and Information Systems — (Graduate students register for 234.) How information systems impact organizations and how organizations take control of information technology (IT) to gain a competitive edge. Topics include: IT components, architecture, and transformation; the effect of IT on competition; real-time enterprise; leadership; and outsourcing. Student teams perform field studies based on situations in which information technology is creating a significant management problem or business opportunity. Enrollment limited. Prerequisites: CS 106A, 180, or equivalents.

4 units, Win (Tabrizi, B)

MS&E 140. Industrial Accounting — (Graduate students register for 240.) Non-majors and minors who have taken or are taking elementary accounting should not enroll. Introduction to accounting concepts and the operating characteristics of accounting systems. The principles of financial and cost accounting, design of accounting systems, techniques of analysis, and cost control. Interpretation and use of accounting information for decision making. Designed for the user of accounting information and not as an introduction to a professional accounting career.

3-4 units, Win, Sum (Stanton, F)

MS&E 142. Investment Science — Theory and application of modern quantitative investment analysis from an engineering perspective. How investment concepts are used to evaluate and manage opportunities, portfolios, and investment products including stocks, bonds, mortgages, and annuities. Topics: deterministic cash flows (term structure of interest rates, bond portfolio immunization, project optimization); mean-variance theory (Markowitz model, capital asset pricing); and arbitrage pricing theory. Group project. Prerequisites: 120, ENGR 60, MATH 51, or equivalents. Recommended: 140, ENGR 62, knowledge of spreadsheets.

3 units, Aut (Primbs, J)
MS&E 152. Introduction to Decision Analysis — How to make good decisions in a complex, dynamic, and uncertain world. People often make decisions that on close examination they regard as wrong. Decision analysis uses a structured conversation based on actional thought to obtain clarity of action in a wide variety of domains. Topics: distinctions, possibilities and probabilities, relevance, value of information and experimentation, relevance and decision diagrams, risk attitude. Students seeking to fulfill the Writing in the Major requirement should register for MS&E 152W. GER:DB-EngrAppSci
3-4 units, Spr (Shachter, R)

MS&E 152W. Introduction to Decision Analysis — (Same as MS&E 152.) For students seeking to fulfill the Writing in the Major requirement. GER:DB-EngrAppSci, WIM
4 units, Spr (Shachter, R)

MS&E 153. Introduction to Decision Making in Organizations — Experienced management consultants share lessons and war stories. Case studies, disguised examples from real engagements, and movie clips illustrate theories and concepts of decision analysis. Student teams critique decisions made in actual organizations. Topics include what makes a good decision, how decisions can be made better, framing and structuring techniques, modeling and analysis tools, biases and probability assessment, evaluation and appraisal methods, decision psychology, creativity and organizational leadership, and effective presentation styles. GER: DB-EngrAppSci
3 units, Sum (Holtzman, S; Robinson, B)

MS&E 160. Analysis of Production and Operating Systems — (Graduate students register for 260.) Businesses add value through production and delivery of products and services; operations managers are responsible for designing, running, and improving systems and processes to meet demand for goods and services. Techniques to analyze an operating system. Topics include determination of optimal facility location, production lot sizing, optimal timing and sizing of capacity expansion, and inventory control. Prerequisites: probability and optimization.
4 units, Aut (Oez, O)

MS&E 169. Quality Control and Management — (Graduate students register for 269.) Topics include the cost of quality, inspection, sampling plans, statistical process control, uncertainty in the supply process, Bayesian decision methods, reliability, robust quality, quality function deployment, quality in services, and approaches to quality management. Case studies. Class project involving local industry required for fourth unit. Prerequisites: 120 and STATS 110.
3-4 units, Win (Brandenau, M)

MS&E 175. Innovation, Creativity, and Change — Problem solving in organizations; creativity and innovation skills; thinking tools; creative organizations, teams, individuals, and communities.
3-4 units, Win (Katila, R)

MS&E 180. Organizations: Theory and Management — For undergraduates only; preference to MS&E majors. Classical and contemporary organization theory; the behavior of individuals, groups, and organizations. Limited enrollment. Students must attend first session.
4 units, Aut (Eisenhardt, K), Spr (Hinds, P)

MS&E 181. Issues in Technology and Work for a Post-Industrial Economy — How changes in technology and organization are altering work and lives. Approaches to studying and designing work. How understanding work and work practices can assist engineers in designing better technologies and organizations. Topics include job design, distributed and virtual organizations, the blurring of boundaries between work and family life, computer supported cooperative work, trends in skill requirements and occupational structures, monitoring and surveillance in the workplace, downsizing and its effects on work systems, project work and project-based lifestyles, the growth of contingent employment, telecommuting, electronic commerce, and the changing nature of labor relations.
3 units, Spr (Barley, S)

MS&E 184. Technology and Work — Interplay between technology and work, emphasizing technological change and its impact on workers at all levels. Individual and group reactions to technological change with implications for design and management. Technologies include the assembly line, computer and information systems, cardiac surgery techniques and advanced computational software. Motivations for and consequences of change, including rationalization, deskilling, reskilling, offshoring, and increasing abstraction of work. Conceptions of work and technology under scientific management, engineering psychology, human factors, computer supported cooperative work, and sociotechnical systems perspectives.
3 units, Spr (Bailey, D)

MS&E 185. Global Work — Issues, challenges, and opportunities facing workers, teams, and organizations working across national boundaries. Topics include geographic distance, time zones, language and cultural differences, technologies to support distant collaboration, team dynamics, and corporate strategy.
4 units, Spr (Hinds, P)

MS&E 190. Methods and Models for Policy and Strategy Analysis — Guest lectures by departmental practitioners. Emphasis is on links among theory, application, and observation. Environmental, national security, and health policy; marketing, new technology, and new business strategy analyses. Comparisons between domains and methods.
3 units, Spr (Weyant, J)

MS&E 193. Technology and National Security — (Graduate students register for 293.) The interaction of technology and national security policy from the perspective of history to implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy. Students seeking to fulfill the WIM requirement should register for 193W.
3 units, Aut (Perry, W; Hecker, S)

MS&E 193W. Technology and National Security — (Same as 193/293.) For students seeking to fulfill the Writing in the Major requirement. WIM
3 units, Aut (Perry, W; Hecker, S)

MS&E 196. Transportation Systems and Urban Development — (Graduate students register for 296.) Transportation systems and planning, and their roles in society. Analytical tools at a conceptual level to examine issues and evaluate alternatives. Policy implications and system effectiveness analysis of transportation in an urban context. Topics: economic analysis of transportation, supply and demand equilibrium analysis, urban transportation networks, congestion management, short and long term transportation planning, the impact of technology on transportation systems, land use and transportation, case studies of current transportation news items. Prerequisite: MATH 41.
3 units, Win (Chiu, S)

MS&E 197. Ethics and Public Policy — (Same as PUBLPOL 103B, STS 110.) Ethical issues in science- and technology-related public policy conflicts. Focus is on complex, value-laden policy disputes. Topics: the nature of ethics and morality; rationales for liberty, justice, and human rights; and the use and abuse of these concepts in policy disputes. Case studies from biomedicine, environmental affairs, technical professions, communications, and international relations. GER:DB-Hum, EC-Ethic-Reas, WIM
5 units, Win (McCinn, R)

COGNATE COURSES (UNDERGRADUATE)
See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the department’s student services office for applicability of these courses to a major or minor program.

ENGR 60. Engineering Economy
3 units, Aut (Chiu, S), Win, Sum (Weber, T)
ENGR 145. High Technology Entrepreneurship  
4 units, Win (Byers, T; Komisar, R)

5 units, Win (Sagan, S)

PRIMARILY FOR GRADUATE STUDENTS  
GENERAL AND SYSTEMS ANALYSIS METHODS

MS&E 201. Dynamic Systems — Goal is to think dynamically in decision making, and recognize and analyze dynamic phenomena in diverse situations. Concepts: formulation and analysis; state-space formulation; solutions of linear dynamic systems, equilibria, dynamic diagrams; eigenvalues and eigenvectors of linear systems, the concept of feedback; nonlinear dynamics, phase plane analysis, linearized analysis, Liapunov functions, catastrophe theory. Examples: grabber-holder dynamics, technology innovation dynamics, creation of new game dynamics in business competition, ecosystem dynamics, social dynamics, and stochastic exchange dynamics. Prerequisite: MATH 103 or equivalent.  
3-4 units, Spr (Tse, E)

MS&E 206. Art of Mathematical Modeling — Practicum. Students build mathematical models of real-life, ill-framed problems. Emphasis is on framing the issues, articulating modeling components logically (drawing from student’s mathematical background), and analyzing the resulting model. Hands-on modeling. Project work in small groups. Prerequisites: basic analysis, calculus and algebra, and probability theory. Recommended: decision analysis, optimization and dynamic systems.  
3-4 units, Spr (Kieffel, H)

MS&E 207. Interactive Management Science — (Undergraduates register for 107; see 107.)  
3 units, Aut (Savage, S)

MS&E 208A,B,C. Practical Training — MS&E students obtain employment in a relevant industrial or research activity to enhance their professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. A maximum of 1 unit counts toward the M.S. degree and a maximum of 3 units toward the B.S. or Ph.D. degree.  
1 unit, Aut, Win, Spr, Sum (Staff)

OPTIMIZATION

3-4 units, Aut (Ye, Y)

MS&E 212. Mathematical Programming and Combinatorial Optimization — (Undergraduates register for 112; see 112; same as CME 208.)  
3 units, Spr (Saberi, A)

PROBABILITY AND STOCHASTIC SYSTEMS

MS&E 220. Probabilistic Analysis — Concepts and tools for the analysis of problems under uncertainty, focusing on model building and communication: the structuring, processing, and presentation of probabilistic information. Examples from legal social, medical, and physical problems. Spreadsheets illustrate and solve problems as a complement to analytical closed-form solutions. Topics: axioms of probability, probability trees, random variables, distributions, conditioning, expectation, change of variables, and limit theorems. Prerequisite: MATH 51. Recommended: knowledge of spreadsheets.  
3-4 units, Aut (Chiu, S)

MS&E 221. Stochastic Modeling — Focus is on time-dependent random phenomena. Topics: discrete and continuous time Markov chains, renewal processes, queueing theory, and applications. Emphasis is on building a framework to formulate and analyze probabilistic systems. Prerequisite: 220 or consent of instructor.  
3 units, Win (Johari, R)

MS&E 223. Simulation — Discrete-event systems, generation of uniform and non-uniform random numbers, Monte Carlo methods, programming techniques for simulation, statistical analysis of simulation output, efficiency-improvement techniques, decision making using simulation, applications to systems in computer science, engineering, finance, and operations research. Prerequisites: working knowledge of a programming language such as C, C++, Java, or FORTRAN; probability; and statistical methods.  
3 units, Spr (Haas, P)

INFORMATION SCIENCE AND TECHNOLOGY

MS&E 234. Organizations and Information Systems — (Undergraduates register for 134; see 134.)  
4 units, Win (Tabrizi, B)

MS&E 235. Internet Commerce — The technology, mathematics, and economics of Internet commerce. Topics include: models of Internet commerce; online advertising; product recommendation systems and personalized marketing; pricing and delivery of digital media; web tools; piracy, copyright, and peer-to-peer networks; rating and reviewing of online businesses; and co-evolution of Internet technology and commerce. Hands-on exercises; group project. Prerequisites: 111 or 211, and CS 106B or X.  
3 units, Aut (Goel, A)

MS&E 236. Pricing Next Generation Telecommunications Products and Services — Interdisciplinary. Position, price, and distribution of traditional and innovative telecommunication services. Topics: the telecommunication industry as driven by technological advances, policy choices, and business opportunities; the pricing revolution and arbitrage opportunities in international voice created by data-voice convergence and liberalization; competitive aspects of service delivery channels; commoditizing of bandwidth and basic services; clearinghouses; financial risk hedging through futures and derivatives trading; intelligent pricing and provisioning agents for product bundling; grade of service differentiation; positioning and revenue optimization by capturing consumer preferences. Group project in industrial participation.  
3 units, Sum (Chiu, S)

MS&E 237. Progress in Worldwide Telecommunications — Interdisciplinary. Guest speakers from industry, government and academia. Topics include networks and services, market-driven competition, policy, regulation and deregulation, technology, standardization, and the needs of underserved parts of the world. Focus is on wireless communications, broadband user access, the Internet, and globalization. Individual or team case study and verbal presentation. May be repeated for credit. Limited enrollment.  
3 units, Sum (Ivanek, F; Chiu, S)

ECONOMICS, FINANCE, AND INVESTMENT

MS&E 240. Industrial Accounting — (Undergraduates register for 140; see 140.)  
3-4 units, Win, Sum (Stanton, F)

MS&E 241. Economic Analysis — Principal methods of economic analysis of the production activities of firms, including production technologies, cost and profit, and perfect and imperfect competition; individual choice, including preferences and demand; and the market-based system, including price formation, efficiency, and welfare. Practical applications of the methods presented. See 341 for continuation of 241. Recommended: 211, ECON 50.  
3-4 units, Win (Weber, T)
MS&E 242. Investment Science—Theory and application of modern quantitative investment analysis from an engineering perspective. How investment concepts are used to evaluate and manage opportunities, portfolios, and investment products including stocks, bonds, mortgages, and annuities. Topics: deterministic cash flows (term structure of interest rates, bond portfolio immunization, project optimization); mean-variance theory (Markowitz model, capital asset pricing); and arbitrage pricing theory. Group project. Prerequisites: 120, ENGR 60, MATH 51, or equivalents. Recommended: 140, ENGR 62, knowledge of spreadsheets. Limited enrollment.
3 units, Aut (Primbs, J)

MS&E 242H. Investment Science Honors—Concepts of modern quantitative finance and investments. Basic concepts under certainty including arbitrage, term structure of interest rates, and bond portfolio immunization. A situation of uncertainty in one period. Topics: arbitrage; theorems of asset pricing; pricing measures; derivative securities; applications and estimating of financial risk measures; mean-variance portfolio analysis; and equilibrium and the capital asset pricing model. Group projects involving financial market data. Prerequisites: basic probability, statistics, and economics such as MS&E 120, 121, MATH 51, ENGR 60, or equivalents. No prior knowledge of finance required.
3 units, Aut (Giesecke, K)

MS&E 242S. Investment Science—Emphasis is on a cash flow approach. Topics include deterministic cash flow analysis (time value of money, present value, internal rate of return, taxes, inflation), fixed income securities, duration and bond portfolio immunization, term structure of interest rates (spot rates, discount factors, forward rates), Fisher-Weil duration and immunization, capital budgeting, dynamic optimization problems, investments under uncertainty, mean-variance portfolio theory, capital asset pricing, and basic options theory. Goal is to create a link between engineering analysis and business decision making.
3 units, Sum (Feinstein, C)

MS&E 243. Energy and Environmental Policy Analysis—(Same as IPER 243.) Concepts, methods, and applications. Energy/environmental policy issues such as automobile fuel economy regulation, global climate change, research and development policy, and environmental benefit assessment. Group project. Prerequisite: 241 or ECON 50, 51.
3 units, not given this year (Sweeney, J; Goulder, L)

MS&E 245G. Finance I for Non-MBAs—(Same as ECON 135, FINANCE 221.) For graduate students and advanced undergraduates. The foundations of finance; applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on process valuation. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Major corporate financial instruments including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: 51, or ENGR 60, or equivalent; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression
4 units, Win (Admati, A)

MS&E 246. Game Theory with Engineering Applications—Strategic interactions among multiple decision makers emphasizing applications to engineering systems. Topics: efficiency and fairness; collective decision making and cooperative games; static and dynamic noncooperative games; and complete and incomplete information models. Competition: Bertrand, Cournot, and Stackelberg models. Mechanism design: auctions, contracts. Examples from engineering problems. Prerequisites: MATH 51 and exposure to probability such as 120 or EE 178. Recommended: 211, concurrent enrollment in 241 or ECON 202.
3 units, Win (Johari, R)

MS&E 247S. International Investments—Introduces international financial markets, their comparative behavior, and their interrelations. Focus is on the assets traded in liquid markets: currencies, equities, bonds, swaps, and derivatives. Topics: institutional arrangements, taxation and regulation, international arbitrage and parity conditions, valuation of target firms for cross-border acquisitions, direct foreign investment, international diversification and portfolio management, derivative instruments and dynamic investment strategies, international performance analysis, international capital flows and financial crises, and topics of current relevance and importance. Prerequisite: basic finance theory (equivalent of 242 or 245G).
3 units, Sum (Fu, Y)

MS&E 248. Economics of Natural Resources—Intertemporal economic analysis of natural resource use, particularly energy, and including air, water, and other depletable mineral and biological resources. Emphasis is on an integrating theory for depletable and renewable resources. Stock-flow relationships; optimal choices over time; short- and long-run equilibrium conditions; depletion/extinction conditions; market failure mechanisms (common-property, public goods, discount rate distortions, rule-of-capture); policy options. Prerequisite: 241 or ECON 51.
3-4 units, not given this year (Sweeney, J)

MS&E 249. Growth and Development—What generates economic growth. Emphasis is on theory accompanied by intuition, illustrated with country cases. Topics: the equation of motion of an economy; optimal growth theory; calculus of variations and optimal control approaches; deriving the Euler and Pontriaquine equations from economic reasoning. Applications: former planned economies in Russia and E. Europe; the financial crises in E. Asia and Argentina; a comparative study of India and China. The links between economic growth and civilization; the causes of the rise and decline of civilizations; lessons for the future.
3 units, Sum (De La Grandville, O)

DECISION AND RISK ANALYSIS

MS&E 250A. Engineering Risk Analysis—The techniques of analysis of engineering systems for risk management decisions involving trade-offs (technical, human, environmental aspects). Elements of decision analysis; probabilistic risk analysis (fault trees, event trees, systems dynamics); economic analysis of failure consequences (human safety and long-term economic discounting); and case studies such as space systems, nuclear power plants, and medical systems. Public and private sectors. Prerequisites: 120 or STATS 116, and ENGR 60, or equivalents.
2-3 units, Win (Paté-Cornell, E)

MS&E 250B. Project Course in Engineering Risk Analysis—Students, individually or in groups, choose, define, formulate, and resolve a real risk management problem, preferably from a local firm or institution. Oral presentation and report required. Scope of the project is adapted to the number of students involved. Three phases: risk assessment, communication, and management. Emphasis is on the use of probability for the treatment of uncertainties and sensitivity to problem boundaries. Limited enrollment. Prerequisite: 250A, consent of instructor.
3 units, Spr (Paté-Cornell, E)

MS&E 251. Stochastic Decision Models—Efficient formulation and computational solution of sequential decision problems under uncertainty. Markov decision chains and stochastic programming. Maximum expected present value and rate of return. Optimality of simple policies: myopic, linear, index, acceptance limit, and (s,S). Optimal stationary and periodic infinite-horizon policies. Applications to investment, options, overbooking, inventory, production, purchasing, selling, quality, repair, sequencing, queues, capacity, transportation. MATLAB is used. Prerequisites: probability, linear programming.
3 units, Win (Staff)
MS&E 252. Decision Analysis I: Foundations of Decision Analysis —
Coherent approach to decision making, using the metaphor of developing a
structured conversation having desirable properties, and producing
actional thought that leads to clarity of action. Instruction is Socratic,
with computational issues covered in problem sessions. Emphasis is on creation
of distinctions, representation of uncertainty by probability, development of
alternatives, specification of preference, and the role of these elements in
creating a normative approach to decisions. Evaluates information
sharing opportunities in terms of a value measure. Relevance and decision
provides represent and clarify inference and decision. Principles
are applied to decisions in business, technology, law, and medicine. See
332 for continuation.
3-4 units, Aut (Howard, R)

MS&E 254. The Ethical Analyst — The professional analyst who uses
technical knowledge in support of any individual, organization, or govern-
ment is ethically responsible for the consequences. Students are sensitized
in ethical issues, providing the means to form ethical judgments, question-
ning the desirability of physical coercion and deception as a means to reach
any end. Exploration of human action and relation in society in the light
of previous thought, and additional research on the desired form of social
interactions. Attitudes toward ethical dilemmas explored by creating an
explicit personal code. Issues from the range of human affairs test the
student’s framework for ethical judgment.
1-3 units, Spr (Howard, R)

MS&E 256. Technology Assessment and Regulation of Medical De-
vices — (Formerly 475.) Regulatory approval and reimbursement for new
medical technologies as a key component of product commercialization.
The regulatory and payer environment in the U.S. and abroad, and com-
mon methods of health technology assessment. Framework to identify
factors relevant to adoption of new medical devices, and the management
of those factors in the design and development phases. Case studies; guest
speakers from government (FDA) and industry.
1-3 units, Spr (Pietzsch, J)

PRODUCTION OPERATIONS, SERVICES, AND
MANUFACTURING

MS&E 260. Analysis of Production and Operating Systems — (Under-
graduates register for 160; see 160.)
4 units, Aut (Ozer, O)

MS&E 261. Inventory Control and Production Systems — Topics
in the planning and control of manufacturing systems. The functions
of inventory, determination of order quantities and safety stocks, alternative
inventory replenishment systems, item forecasting, production-inventory
systems, materials requirements planning (MRP), just-in-time systems,
master and operations scheduling, supply chain management, and ser-
vice operations. Limited enrollment. Prerequisite: 120, or STATS 116,
or equivalent.
3 units, Win (Hausman, W)

MS&E 262. Supply Chain Management — Definition of a supply
chain; coordination difficulties; pitfalls and opportunities in supply chain
management; inventory/service tradeoffs; performance measurement and
incentives. Global supply chain management; mass customization; supplier
management. Design and redesign of products and processes for supply chain
management; tools for analysis; industrial applications; current industry
initiatives. Enrollment limited to 50. Prerequisite: 260 or 261.
3 units, Spr (Hausman, W)

MS&E 263. Internet-Enabled Supply Chains — E-businesses have
changed traditional supply chain interactions by creating a web-like structure and more flexible relationships, and it is no longer possible op-
erationally or strategically to ignore the information-based virtual value
chains for any business. How information technologies advanced supply
chain integration; e-markets including auctions and exchanges; dynamic
pricing; bundling; strategic implications of lock-in and switching costs;
compatibility choices; and standardization efforts.
3 units, not given this year

MS&E 263B. Demand and Supply Chain Analytics — Tools to effi-
ciently manage supply and demand networks. Topics include service and
inventory tradeoffs, stock allocation, pricing, and contracts and coordina-
tion. Timely product distribution to market while avoiding excess invento-
ries; allocating adequate resources to the most profitable products. Selling
the right product to the right customer at the right price at the right time.
3 units, Spr (Ozer, O)

MS&E 264. Manufacturing Systems Design — Multidisciplinary. The
concepts and techniques of designing and improving performance and
productivity in systems composed of and influenced by people, organiza-
tional factors, environmental factors, and technology. Emphasis is on the
design of high-performance manufacturing systems. Use of simulation
as a tool for design evaluation.
3-4 units, Spr (Erhun Oguz, F)

MS&E 265. Supply Chain Logistics — Student teams redesign the
manufacturing and distribution system of a medium-sized manufacturer.
Focus is on the transportation system, inventory policies for a regional
warehouse, design of a national distribution system, improvements of work
flow, and layout of the manufacturing plant. The redesign is at a detailed
operational level consistent with a strategy of integrating the functions
of manufacturing and distribution. Analytical and game software is used.
Knowledge of inventory theory, linear/integer programming, economic
analysis, and applied probability is required. Emphasis is on group learn-
ing. Limited enrollment. Prerequisites: senior or graduate standing, 160,
ENG 60 and 62, or consent of instructor.
4 units, Spr (Erhun Oguz, F)

MS&E 266. Management of New Product Development — Techniques
of managing or leading the process of new product development that have
been found effective. Emphasis is placed on how much control is desir-
able and how that control can be exercised in a setting where creativity
has traditionally played a larger role than discipline. Topics: design for
manufacturability, assessing the market, imposing discipline on the new
product development process, selecting the appropriate portfolio of new
product development projects, disruptive technology, product develop-
ment at internet speed, uncertainty in product development, role of experi-
mentation in new product development, creating an effective development
organization, and developing products to hit cost targets.
3-4 units, Win (Carlson, R)

MS&E 267. Innovations in Manufacturing — Major innovations includ-
ing mass production, quality movement, lean manufacturing, outsourcing,
and sustainable manufacturing; underlying changes in how products are
made, who makes them, and why they are designed and marketed as they
are; and key metrics such as cost, quality, speed of delivery, product variety,
and social or environmental responsibility. Economic, social, and political
factors influencing product, process, and organizational changes.
3-4 units, Spr (Bailey, D)

MS&E 268. Operations Strategy — The development and implementa-
tion of the operations functional strategy. The integration of operations
strategy with business and corporate strategies of a manufacturing-based
firm. Topics: types and characteristics of manufacturing technologies,
quality management, capacity planning and facilities choice, organization
and control of operations, and operations’ role in corporate strategy.
Prerequisites: 260 or 261, or equivalent experience.
3 units, Spr (Carlson, R)

MS&E 269. Quality Control and Management — (Undergraduates
register for 169; see 169.)
3-4 units, Win (Brandeau, M)

STRATEGY, ENTREPRENEURSHIP, AND MARKETING

MS&E 270. Strategy in Technology-Based Companies — For graduate
students only. Introduction to the basic concepts of strategy, with emphasis
on high technology firms. Topics: competitive positioning, resource-based
perspectives, co-creation and standards setting, and complexity/evolu-
tionary perspectives. Limited enrollment.
3-4 units, Aut (Eisenhardt, K), Win (Kattila, R)
MS&E 271. Global Entrepreneurial Marketing — Skills needed to market new technology-based products to customers around the world. Case method discussions. Cases include startups and global high tech firms. Marketing toolkit, targeting markets and customers, product marketing and management, partners and distribution, sales and negotiation, and outbound marketing. Team-based take-home final exam. Limited enrollment. 
4 units, Win, Spr (Kosnik, T; Novitsky, D; Ramfelt, L; Smith, L)

MS&E 272. Entrepreneurial Finance — Primarily for graduate engineering students. Introduction to the concepts in and around the financing of entrepreneurial companies. Focus is on teaching future general managers how to use financial perspective to make better decisions in entrepreneurial settings, including selecting financial partners, evaluating financing vehicles, and financing companies through all growth stages, from startup through initial public offering. Limited enrollment. Prerequisites: 140, and ENGR 60. Recommended: 245G. 
3 units, not given this year

MS&E 273. Technology Venture Formation — The process of starting venture scale high-tech businesses. Assessing opportunities, sizing markets, evaluating sales channels, developing R&D and operations plans, raising venture capital, managing legal issues, and building a team. Teaching team includes entrepreneurs, venture capitalists, and guest speakers. Student teams write a business plan and make a formal presentation to a group of first tier venture capitalists. Enrollment limited. Recommended: 140, 270, 271, 272, or equivalent. 
3-4 units, Aut (Lyons, M; MacLean, A)

MS&E 274. Building Dynamic Entrepreneurial Organizations — Focus is on the dynamic development of corporate skills, knowledge, and infrastructure to compete in a changing global competitive environment due to rapid technology advancement, global economic development, changes in consumer’s preference, and government regulations. Model analysis and case studies are used to develop a methodology in building dynamic entrepreneurial organizations in response to dynamic competitive requirements. Links between MS&E core and the notion of managing change as a basis for a normative theory on entrepreneurial activities in new business creation and corporate expansion. 
3 units, Win (Tse, E)

MS&E 277. Creativity and Innovation — Factors that promote and inhibit creativity of individuals, teams, and organizations. Creativity tools, assessment metrics, and exercises; workshops, field trips, and case studies. Each student completes an individual creativity portfolio and participates in a long-term team project. Enrollment limited to 32. See http://creativity.stanford.edu. 
4 units, Spr (Seelig, T)

ORGANIZATIONAL BEHAVIOR, MANAGEMENT, AND WORK

MS&E 280. Organizational Behavior: Evidence in Action — Organization theory; concepts and functions of management; behavior of the individual, work group, and organization. Emphasis is on case and related discussion. Enrollment limited; priority to MS&E students. 
3-4 units, Win (Sutton, R)

MS&E 281. Management and Organization of Research and Development — The organization of R&D in industry and the problems of the technical labor force. Relevant theoretical perspectives from sociology, anthropology, and management theory on the social and pragmatic issues that surround technical innovation and the employment of scientists and engineers. Possible topics: organization of scientific and technical communities, industrialization of research, the nature of scientific and technical work, strategies for fostering innovation, careers of scientists and engineers, and managerial problems characteristic of R&D settings. 
3 units, not given this year (Barley, S)

MS&E 285. Negotiation — (Same as CEE 151/251, ME 207.) Negotiation styles and processes to help students conduct and review negotiations. Workshop format integrating intellectual and experiential learning. Exercises, live and field examples, individual and small group reviews. Application required before first day of class; see http://www.stanford.edu/class/msande285/. Enrollment limited to 50. 
3 units, Aut, Spr (Christensen, S)

MS&E 286. Interpersonal Influence and Leadership — (Same as IPER 286.) How one’s actions affect influence upon others and the ability to work with them. Foundational skills such as the ability to work through difficult issues, give and receive feedback, and work in groups. How to work with different people. The art of learning from experience. 
3 units, Win (Robin, C)

MS&E 288. Creating Infectious Action — (Same as ME 228.) Offered by the d.school. Teams of master’s students from disciplines including engineering, design, business, behavioral sciences, and education attempt to spread positive behavior through projects that include spreading the adoption of the Firefox web browser, applying methods from hip hop to fuel the spread of fads, and spreading financially responsible individual behavior. Industry experts and academics provide guidance. 
3-4 units, Spr (Sutton, R)

MS&E 289. Clicks and Bricks: Creating Customer Experiences — Project-based; offered by the d.school. Interdisciplinary student teams develop and build prototype solutions to improve offline and online customer service experiences. 
3 units, Aut (Sutton, R)

PUBLIC POLICY ANALYSIS

MS&E 292. Health Policy Modeling — Primarily for master’s students; also open to undergraduates and doctoral students. The application of mathematical, statistical, economic, and systems models to problems in health policy. Areas include: disease screening, prevention, and treatment; assessment of new technologies; bioterrorism response; and drug control policies. 
3 units, Win (Brandeau, M)

MS&E 293. Technology and National Security — (Undergraduates register for 193; see 193.) 
3 units, Aut (Perry, W; Hecker, S)

MS&E 294. Climate Policy Analysis — Design and application of formal analytical methods in climate policy development. Issues include instrument design, technology development, resource management, multiparty negotiation, and dealing with complexity and uncertainty. Links among art, theory, and practice. Emphasis is on integrated use of modeling tools from diverse methodologies and requirements for policy making application. Recommended: background in economics, optimization, and decision analysis. 
3 units, alternate years, not given this year, (Weyant, J)

MS&E 296. Transportation Systems and Urban Development — (Undergraduates register for 196; see 196.) 
3 units, Win (Chiu, S)

MS&E 299. Designing A Free Society — Ethical theory, feasibility, and desirability of a social order in which coercion by individuals and government is minimized and people pursue ends on a voluntary basis. Topics: efficacy and ethics; use rights for property; contracts and torts; spontaneous order and free markets; crime and punishment based on restitution; guardian-ward theory for dealing with incompetents; the effects of state action-hypothesis of reverse results; applications to help for the needy, armed intervention, victimless crimes, and environmental protection; transition strategies to a voluntary society. 
1-3 units, Win (Howard, R)
MS&E 300. Ph.D. Qualifying Tutorial or Paper — Restricted to Ph.D. students assigned tutorials as part of the MS&E Ph.D. qualifying process. Enrollment optional.
1-3 units, Aut, Win, Spr, Sum (Staff)

MS&E 301. Dissertation Research — Prerequisite: doctoral candidacy.
1-15 units, Aut, Win, Spr, Sum (Staff)

MS&E 303. Readings in Decomposition Principles — For Ph.D. students interested in modeling and solving large optimization problems. Focus is on structure and solution principles rather than detailed algorithms. Topics include Dantzig-Wolfe and Benders’ decomposition principles and their duality relationship, decomposition and solving large Markov chains, decomposition and incentive compatibility, and applications of decomposition principles to solving large problems. Master’s students require consent of instructor. Prerequisites: 211, 220. Recommended: Markov chains.
1-3 units, not given this year

OPTIMIZATION

MS&E 310. Linear Programming — Formulation of standard linear programming models. Theory of polyhedral convex sets, linear inequalities, alternative theorems, and duality. Variants of the simplex method and the state of art interior-point algorithms. Sensitivity analyses, economic interpretations, and primal-dual methods. Relaxations of harder optimization problems and recent convex conic linear programs. Applications include game equilibrium facility location. Prerequisite: MATH 113 or consent of instructor.
3 units, Aut (Ye, Y)

MS&E 311. Optimization — Applications, theories, and algorithms for finite-dimensional linear and nonlinear optimization problems with continuous variables. Elements of convex analysis, first- and second-order optimality conditions, sensitivity and duality. Algorithms for unconstrained optimization, and linearly and nonlinearly constrained problems. Modern applications in communication, game theory, auction, and economics. Prerequisites: MATH 113, 115, or equivalent.
3 units, Win (Ye, Y)

MS&E 312. Advanced Methods in Numerical Optimization — (Same as CME 334.) Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.
3 units, Aut (Ye, Y)

MS&E 313. Vector Space Optimization — Optimization theory from the unified framework of vector space theory: treating together problems of mathematical programming, calculus of variations, optimal control, estimation, and other optimization problems. Emphasis is on geometric interpretation. Duality theory. Topics: vector spaces including function spaces; Hilbert space and the projection theorem; dual spaces and the separating hyperplane theorem; linear operators and adjoints; optimization of functionals, including theory of necessary conditions in general spaces, and convex optimization theory; constrained optimization including Fenchel duality theory. Prerequisite: MATH 115.
3 units, Aut (Luenberger, D)

MS&E 314. Linear and Conic Optimization with Applications — (Same as CME 336.) Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: 211 or equivalent.
3 units, Aut (Ye, Y)

MS&E 315. Numerical Optimization — (Same as CME 304.) Solution of nonlinear equations; unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.
3 units, Win (Murray, W)

MS&E 316. Discrete Mathematics and Algorithms — (Same as CME 305.) Topics: enumeration (permutations, stirling numbers, Cayley’s theorem), SDR, flows and cuts (deterministic and randomized algorithms), eigenvalues and expansion arguments, asymptotics (NP-hardness and approximation algorithms). Topics illustrated with EE, CS, and bioinformatics applications. Prerequisites: MATH 51 or 103 or equivalents.
3 units, Win (Saberi, A)

MS&E 318. Large-Scale Numerical Optimization — (Same as CME 338.) The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. Interior methods. The simplex method. Factorization and updates. The reduced-gradient, augmented Lagrangian, and SQP methods. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108 or 302.
3 units, Spr (Saunders, M)

MS&E 319. Approximation Algorithms — Combinatorial and mathematical programming techniques to derive approximation algorithms for NP-hard optimization problems. Possible topics include: greedy algorithms for vertex/set cover; rounding LP relaxations of integer programs; primal-dual algorithms; semidefinite relaxations. May be repeated for credit. Prerequisites: 112 or CS 161.
3 units, Win (Saberi, A)

PROBABILITY AND STOCHASTIC SYSTEMS

MS&E 321. Stochastic Systems — Topics in stochastic processes, emphasizing applications. Markov chains in discrete and continuous time; Markov processes in general state space; Lyapunov functions; regenerative process theory; renewal theory; martingales, Brownian motion, and diffusion processes. Application to queueing theory, storage theory, reliability, and finance. Prerequisites: 221 or STATS 217; MATH 113, 115.
3 units, Spr (Glynn, P)

MS&E 322. Stochastic Calculus and Control — Ito integral, existence and uniqueness of solutions of stochastic differential equations (SDEs), diffusion approximations, numerical solutions of SDEs, controlled diffusions and the Hamilton-Jacobi-Bellman equation, and statistical inference of SDEs. Applications to finance and queueing theory. Prerequisites: 221 or STATS 217; MATH 113, 115.
3 units, alternate years, not given this year; (Glynn, P)

3 units, alternate years, not given this year; (Glynn, P)

INFORMATION SCIENCE AND TECHNOLOGY

3 units, Aut (Bamboz, N)
MS&E 336. Topics in Game Theory with Engineering Applications — Recent research applying economic methods to engineering problems. Possible topics: incentives in practical networked systems including communication networks, power systems, and online marketplaces; pricing and network resource allocation; mechanism design for networked systems; and game theoretic approaches to network formation. Prerequisite: optimization at the level of 211; mathematical preparation at the level of MATH 115; exposure to game theory. Recommended: 246 or ECON 203.

3 units, Spr (Johari, R)

3 units, alternate years, not given this year

MS&E 338. Advanced Topics in Information Science and Technology — Advanced material in this area is sometimes taught for the first time as a topics course. Prerequisite: consent of instructor.

3 units, not given this year

MS&E 339. Approximate Dynamic Programming — Approximation algorithms for large-scale dynamic programming. Real-time dynamic programming and reinforcement learning algorithms. Generalizations of value iteration, policy iteration, and linear programming approaches. Recent research topics. Prerequisite: 251, 351, CS 221, CS 228, or CS 229.

3 units, not given this year (Van Roy, B)

ECONOMICS, FINANCE, AND INVESTMENT

MS&E 341. Advanced Economic Analysis — Builds on 241 concepts. Market structure and industrial organization (oligopoly, strategic behavior of firms, game theoretic models); economics of uncertainty; general equilibrium theory and economic efficiency (formulation, Walras’ Law, existence, uniqueness, duality between efficiency and general equilibrium, trade); intertemporal equilibrium and asset markets; public goods, externalities. Background for advanced economics. Prerequisite: 241.

3 units, Spr (Weber, T)

MS&E 342. Advanced Investment Science — Topics: forwards and futures contracts, continuous and discrete time models of stock price behavior, geometric Brownian motion, Ito’s lemma, basic options theory, Black-Scholes equation, advanced options techniques, models and applications of stochastic interest rate processes, and optimal portfolio growth. Computational issues and general theory. Teams work on independent projects. Prerequisite: 242.

3 units, Win (Luenberger, D)

MS&E 344. Applied Information Economics — The strategic acquisition, pricing, transfer, and use of information. Theoretical findings applied to real-world settings. Topics: optimal risk bearing, adverse selection, signaling, screening, nonlinear and state-contingent pricing, design of contests, incentives and organizations, strategic information transmission, long-run relationships, negative information value, research and invention, leakage and espionage, imperfect competition, information sharing, search and advertising, learning, and real-option exercise games. Prerequisites: 211, 220, 241. Recommended: 341.

3 units, not given this year (Weber, T)

MS&E 345. Advanced Topics in Financial Engineering — Derivative pricing theory from an engineering perspective. Underlying principles that apply to all derivative securities; general frameworks to model and price derivative securities on equities, interest rates, and credit. Topics in hedging and risk management. Prerequisites: derivative pricing and stochastic differential equations; and 220, 221, 242, 342, or consent of instructor. Recommended: Matlab.

3 units, Win (Primsb, J)

MS&E 346. Credit Risk: Modeling and Management — Credit risk modeling, valuation, and hedging emphasizing underlying economic, probabilistic, and statistical concepts. Structural, incomplete information and reduced form approaches. Single name products: bonds, equity, equity options, credit and equity default swaps, swaptions. Multiname modeling: index and tranche swaps and swaptions, collateralized debt obligations. Implementation, calibration and testing of models. Industry and market practice. Data and implementation driven group projects. Prerequisites: stochastic processes at the level of MSE 321, 322 or equivalent, and financial engineering at the level of MSE 342, MATH 180, MATH 240, FINANCE 622 or equivalent.

3 units, Spr (Giesecke, K)

MS&E 347. Optimization of Uncertainty and Applications in Finance — How to make optimal decisions in the presence of uncertainty, solution techniques for large-scale systems resulting from decision problems under uncertainty, and applications in finance. Decision trees, utility, two-stage and multi-stage decision problems, approaches to stochastic programming, model formulation; large-scale systems, Benders and Dantzig-Wolfe decomposition, Monte Carlo sampling and variance reduction techniques, risk management, portfolio optimization, asset-liability management, mortgage finance. Projects involving the practical application of optimization under uncertainty to financial planning.

3 units, Win (Infanger, G)

MS&E 349. Investment Science Frontiers — Advanced concepts of investment science with emphasis on theories and methods for solving practical problems: real options theory and practice; valuing and structuring projects, mergers, acquisition and contracts; designing portfolios for optimal growth; and managing risk and enhancing value within a complex business enterprise. Combination lecture, seminar, and project. No auditors. Prerequisites: 242, 342.

3 units, not given this year (Luenberger, D)

DECISION AND RISK ANALYSIS

MS&E 350. Doctoral Seminar in Risk Analysis — Limited to doctoral students. Literature in the fields of engineering risk assessment and management. New methods and topics, emphasizing probabilistic methods and decision analysis. Applications to risk management problems involving the technical, economic, and organizational aspects of engineering system safety. Possible topics: treatment of uncertainties, learning from near misses, and use of expert opinions.

3 units, alternate years, not given this year (Paté-Cornell, E)

3 units, Spr (Veinott, A)

MS&E 352. Decision Analysis II: Professional Decision Analysis — How to organize the decision conversation, the role of the decision analysis cycle and the model sequence, assessing the quality of decisions, framing decisions, the decision hierarchy, strategy tables for alternative development, creating spare and effective decision diagrams, biases in assessment, knowledge maps, uncertainty about probability. Sensitivity analysis, approximations, value of revelation, joint information, options, flexibility, bidding, assessing and using corporate risk attitude, risk sharing and scaling, and decisions involving health and safety. See 353 for continuation. Prerequisite: 252.

3-4 units, Win (Howard, R)
MS&E 353. Decision Analysis III: Frontiers of Decision Analysis — The concept of decision composite; probabilistic insurance and other challenges to the normative approach; the relationship of decision analysis to classical inference and data analysis procedures; the likelihood and exchangeability principles; inference, decision, and experimentation using conjugate distributions; developing a risk attitude based on general properties; alternative decision aiding practices such as analytic hierarchy and fuzzy approaches. Student presentations on current research. Goal is to prepare doctoral students for research. Prerequisite: 352. 
3 units, Spr (Howard, R)

3 units, alternate years, not given this year (Shachter, R)

PRODUCTION OPERATIONS, SERVICES, AND MANUFACTURING

3 units, alternate years, not given this year (Veinott, A)

MS&E 362. Advanced Models in Production and Operations — The design and operation of production-inventory systems. Topics include production scheduling, capacity planning, sequencing, assembly-line balancing, dynamic scheduling, and multiobjective optimizations. Readings primarily from journal articles. Prerequisite: 260. 
3 units, alternate years, not given this year (Carlson, R)

MS&E 363. Advanced Models in Management Science — Primarily for doctoral students. Content varies. Topics based on recent literature and working papers. See http://www.stanford.edu/~ozalp/ for information. May be repeated for credit. Prerequisite: consent of instructor. 
3 units, alternate years, not given this year (Ozer, O)

MS&E 364. Multi-echelon Inventory Models — Theoretical treatment of control problems arising in inventory management, production, and distribution systems. Inventory control for single and multi-location systems. Emphasis is on operating characteristics, performance measures, and optimal operating and control policies. Dynamic programming and applications in inventory control. Prerequisite: STATS 217 or equivalent, linear programming. 
3 units, Spr (Ozer, O)

MS&E 365B. Game Theoretic Models in Operations Management — Formal analysis of strategic interactions among decision makers such as suppliers, manufacturers, retailers, and consumers; the resulting dynamics in a market environment. Game theory as the main tool of analysis. Readings primarily from journal articles. May be repeated for credit. Prerequisite: 246 or equivalent. 
3 units, Spr (Erhan Oguz, F)

MS&E 366. Advanced Models in Supply Chain Management — Primarily for doctoral students. Content varies. Topics based on recent literature and working papers. May be repeated for credit. Prerequisite: consent of instructor. 
3 units, Win (Hausman, W)

MS&E 369. Supply Chain Risk and Flexibility Management — Methods and analytic tools for quantifying and managing the impact of uncertainty in supply and demand on the operating and financial performance of firms and networks of firms. Design and delivery of products and services to provide competitive differentiation by enabling cost, value, risk and flexibility to be balanced and managed across supply networks. Case study applications by leading companies to procurement, manufacturing, outsourcing, and sales relationships. Tools, processes, and internal crossfunctional coordination required to operationalize approaches in core planning and execution systems and processes. Prerequisite: 262. 
3-4 units, Spr (Johnson, B)

STRATEGY, ENTREPRENEURSHIP, AND MARKETING

MS&E 371. Innovation and Strategic Change — Doctoral research seminar, limited to Ph.D. students. Current research on innovation strategy. Topics: scientific discovery, innovation search, organizational learning, evolutionary approaches, and incremental and radical change. Topics change yearly. Recommended: course in statistics or research methods. 
2-3 units, alternate years, not given this year (Katila, R)

MS&E 374. Dynamic Corporate Strategy — Restricted to Ph.D. students. Research on the creation and shaping of disruptive industry dynamics and how companies can formulate and implement strategies to excel in such changing environments. Dynamic system model approach; case studies. Prerequisites: 201 or equivalent, 274. 
3 units, Win (Tse, E), alternate years, not given next year

MS&E 376. Strategy and Organization Doctoral Research Seminar — Current research at the interface of strategy policy and organization theory. Topics vary annually. Limited enrollment. Prerequisites: SOC 360 or equivalent, and consent of instructor. 
3 units, Aut (Eisenhardt, K)

ORGANIZATIONAL BEHAVIOR, MANAGEMENT, AND WORK

MS&E 380. Doctoral Research Seminar in Organizations — Limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor. 
3 units, not given this year

MS&E 381A. Doctoral Research Seminar in Work, Technology, and Organization: Theoretical Underpinnings — Enrollment limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor. 
2-3 units, Win (Barley, S)

MS&E 381B. Doctoral Research Seminar in Work, Technology, and Organization: The Study of Work — Enrollment limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor. 
2-3 units, Spr (Bailey, D)

MS&E 383. Doctoral Seminar on Ethnographic Research — For graduate students; upper-level undergraduates with consent of instructor. Ethnographic interviewing and participant observation. Techniques for taking, managing, and analyzing field notes and other qualitative data. 15 hours per week outside class collecting and analyzing own data. Methods texts and ethnographies offer examples of how to analyze and communicate ethnographic data. Prerequisite: consent of instructor. 
5-6 units, alternate years, not given this year (Barley, S)

MS&E 384. Groups and Teams — Research on groups and teams in organizations from the perspective of organizational behavior and social psychology. Topics include group effectiveness, norms, group composition, diversity, conflict, group dynamics, temporal issues in groups, geographically distributed teams, and intergroup relations. 
3 units, Win (Hinds, P), alternate years, not given next year
MS&E 385. Geographically Distributed Work—Focus is on understanding how being distributed from one’s coworkers can affect productivity, interpersonal relationships, perceptions of work, information sharing, organizational structure, and other factors related to work and work effectiveness. Current research on distributed work and research in related areas that provide a theoretical foundation for understanding the impact of distance on work. Prerequisite: consent of instructor.

1-3 units, not given this year (Hinds, P)

MS&E 386. Behavioral Aspects of Computer Supported Cooperative Work—For Ph.D. students. Research on behavioral aspects of computer supported cooperative work. Topics include knowledge management, awareness and awareness systems, group decision support, cooperation and collaboration, effects of computer mediated communications on interpersonal relationships, and geographically distributed work.

3 units, alternate years, not given this year (Hinds, P)

PROJECT COURSES, SEMINARS, AND WORKSHOPS

MS&E 408. Directed Reading and Research—Directed study and research on a subject of mutual interest to student and faculty member. Prerequisite: faculty sponsor.

1-15 units, Aut, Win, Spr, Sum (Staff)

MS&E 412. Affiliate Project Course—Students work on a project with an MS&E Department Affiliate Company. Projects not necessarily available every year. Prerequisite: consent of instructor.

3-4 units, Win (Savage, S)

MS&E 430. Tools for Experience Design—Interdisciplinary, project-based, studio course to create innovative tools for designers and for future students. Focus is on empathy with the experience of designers. Field visits, guest speakers, case studies.

3-4 units, not given this year (Hinds, P)

MS&E 444. Investment Practice—Theory of real options, option derivatives, and related ideas. Problems from financial engineering and risk management. Examples from industry. Small group projects formulate and design solutions to actual industry problems. Enrollment limited to 30. Prerequisites: 242, 342.

3-4 units, Spr (Giesecke, K; Luenberger, R)

MS&E 446. Policy and Economics Research Roundtable (PERR)—Research in progress or contemplated in policy and economics areas. Emphasis depends on research interests of participants, but is likely to include energy, environment, transportation, or technology policy and analysis. May be repeated for credit.

1 unit, Aut, Win, Spr (Staff)

MS&E 450. Lessons in Decision Making—Experienced management consultants and executives from Fortune 500 companies share real-world stories and insights from their experience in decision making.

1 unit, Spr (Howard, R)

MS&E 451. Decision Systems I: Professional Secrets and Tricks of the Trade—Professional tricks for designing decision systems that help in facing decisions such as buying a car, bidding on the Internet, hiring NFL players, making charitable donations, or choosing medical treatment. Demonstrations; small project. Topics: automatic decision diagram formulation, decision-class analysis, and dynamic sensitivity analysis. No programming required.

2-3 units, Win (Robinson, B; Holtzman, S)

MS&E 452. Decision Systems II: Business, Consumer, and Medical Applications—Students design a system to help business, consumer, medical, or other decision makers. Previous student teams have designed systems for auction bidding, cancer treatment, sailing tactics, automobile purchasing, network design, Mars exploration, flu treatment, platoon tactics, high-tech manufacturing, and oil-and-gas exploration. No programming required. Satisfies MS&E project course requirement. Prerequisite: 252 or equivalent. Recommended: 451.

3 units, Spr (Holtzman, S; Robinson, B)

MS&E 453A. Medical Decision Making Seminar—Applications and tools. Modeling complex medical decisions under uncertainty. Guest speakers from academia, government, and industry. May be repeated for credit.

1 unit, Aut (Robinson, B)

MS&E 453B. Energy Decision Making Seminar—Applications and tools. Modeling complex energy decisions under uncertainty. Guest speakers from academia, government, and industry. May be repeated for credit.

1 unit, Win (Robinson, B)

MS&E 453C. Environmental Decision Making Seminar—Applications and tools. Modeling complex environmental decisions under uncertainty. Guest speakers from academia, government, and industry. May be repeated for credit.

1 unit, Spr (Robinson, B)

MS&E 454. Decision Analysis Seminar—Current research and related topics presented by doctoral students and invited speakers.

1 unit, Aut, Win, Spr (Howard, R)

MS&E 455. Decision Making in Organizations: Avoiding Traps, Motivating People, and Improving Process—Lectures and war stories from management consultants experienced in applying decision analysis. Student teams critique decisions from news articles, case studies, and interviews with leaders of local organizations. Topics: roles people play, normative versus descriptive approaches, avoiding traps and failure modes, decision process and content quality, bias, expert judgments, creativity, organizational leadership styles, decision psychology, mutual learning models, advocacy and inquiry, new venture investing, DRAM economic analysis, and movie studio portfolio evaluations.

2 units, Aut (Robinson, B; Holtzman, S)

MS&E 456. Decision Analysis Toolkit: From Tried and True Methods to State of the Art Techniques—Experienced management consultants show how and when to use decision analysis in real situations. Student teams apply tools to frame, structure, model, and analyze business cases or strategic decisions. Topics: force-field diagrams, in/out frames, decision hierarchies, strategy tables, decision diagrams, preference trade-offs, spreadsheet models, tornado diagrams, probability assessment, stochastic sensitivity analysis, value of information and control, efficient frontiers, portfolio value creation, C5 Corvette design, and the global HDTV battle.

2 units, Win (Robinson, B; Holtzman, S)

MS&E 457. Decision Analysis Projects: Helping Real Leaders Make Real Decisions—A virtual consulting firm directed by experienced management consultants. Student teams help local organizations make current strategic decisions such as start-up venture funding, R&D project portfolio, new product or market entry, acquisition or partnering, cost reduction, or public policy decisions. Typical organizations include businesses, nonprofits, educational institutions, healthcare providers, and government agencies. Emphasis is on developing clarity of action and delivering insights to clients. Satisfies MS&E project course requirement. Prerequisite: 252 or equivalent.

3 units, Spr (Robinson, B; Holtzman, S)

MS&E 458. Professional Decision Consulting: How to Market Services, Deliver Results, and Balance Lifestyle—Experienced management consultants share lessons about professional services marketing, pricing to value, leading and managing consulting projects, communicating with diverse audiences, and delivering insights that exceed client expectations. What it looks like from inside a consulting firm, the client’s view, and the consulting industry perspective. Student teams develop answers to questions about service sales, prepare marketing materials, and propose solutions for consulting services to decision makers in local organizations.

2 units, Aut (Robinson, B; Holtzman, S)
MS&E 459. International Conflict Resolution — (Same as LAW 611, PSYCH 283.) Sponsored by the Stanford Center on International Conflict and Negotiation (SCICN). Interdisciplinary colloquium. Conflict, negotiation, and dispute resolution emphasizing international dimensions including conflicts involving states, peoples, and political factions. Lectures by SCICN faculty and affiliated scholars, guest lecturers, and practitioners from around the world.
1 unit, Win (Staff)

MS&E 464. Global Project Coordination — Students engage in projects that are global in nature, and related to the planning, design, and operations of supply chains, marketing, manufacturing, and product development. Project teams from Stanford and an overseas university work on common projects using telephones, faxes, email, Internet, video conferencing, and face-to-face meetings. As part of the project, students travel to Hong Kong or the Netherlands. Applications due in November for Winter, and February for Spring. See http://www.stanford.edu/class/msande464/.
3-4 units, Win (Tabrizi, B), Spr (Gillai, B)

MS&E 472. Entrepreneurial Thought Leaders’ Seminar — Entrepreneurial leaders share lessons from real-world experiences across entrepreneurial settings. ETL speakers include entrepreneurs, leaders from global technology companies, venture capitalists, and best-selling authors. Half-hour talks followed by half hour of class interaction. Required web discussion. May be repeated for credit.
1 unit, Aut, Win, Spr (Byers, T; Kosnik, T; Seelig, T)

MS&E 474. Business and Environmental Issues — (Same as GSBGEN 547.) This speaker seminar examines the overlap and synergies between the business and environmental fields. Weekly speakers include leaders from both the for-profit and non-profit sectors. Past speakers have included business executives, alternative energy experts, environmental consultants, and professors. Group assignments build on concepts presented during the weekly 90-minute class discussions.
2 units, Spr (Matson, P; Tobagi, F; Sweeney, J)

MS&E 485. Crosscultural Design — Project-based. The design of products and services for a global world. How to design products or services to be used across cultures, how to design for a culture other than one’s own, and how the process of design is approached in different cultures.
3-4 units, not given this year (Hinds, P)

COGNATE COURSES (GRADUATE)
See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the department’s student services office for applicability of these courses to a major or minor program.

AA 253. Aerospace Product and Systems Development
3 units, Spr (Weiss, S)

CS 364A. Algorithmic Game Theory
3 units, Aut (Roughgarden, T)

EE 284. Introduction to Computer Networks
3-4 units, Aut (Tobagi, F)

EE 384S. Network Architectures and Performance Engineering
3 units, Spr (Bambos, N)

EE 402A. Topics in International Technology Management
1 unit, Aut (Dasher, R)

EE 402T. Entrepreneurship in Asian High Tech Industries
1 unit, Spr (Dasher, R)

FINANCE 323. International Financial Management
4 units, Spr (Staff)

STATS 252. Data Mining and Electronic Business
3 units, Sum (Weigend, A)

STRAMGT 356. Evaluating Entrepreneurial Opportunities
3 units, Win, Spr (Staff)

STS 279. Technology, Policy, and Management in Newly-Industrializing Countries
2-4 units (Forbes, N) alternate years, not given this year
MATERIALS SCIENCE AND ENGINEERING

Chair: Robert Sinclair
Associate Chair: Reinhold H. Dauskardt

Associate Professor: Paul C. McIntyre
Assistant Professors: Mark L. Brongersma, Yi Cui, Sarah Heilshorn, Michael D. McGeehe, Nicholas Melosh, Alberto Salleo

Courtesy Professors: Stacey Bent, Curtis W. Frank, James S. Harris, Yoshio Nishi, James D. Plummer, Krishna Saraswat, Jonathan F. Serra, Shan X. Wang

Lecturers: Ann Marshall, Arturas Vailionis

* Recalled to active duty.

Department Offices: 416 Escondido Mall, Building 550
Mail Code: 94305-2205
Phone: (650) 723-2534
Email: matsciengr@stanford.edu
Web Site: http://www-mse.stanford.edu

Courses in Materials Science and Engineering have the subject code MATSCI. For a complete list of subject codes, see Appendix.

The Department of Materials Science and Engineering is concerned with the relation between the structure and properties of materials, factors that control the internal structure of solids, and processes for altering their structure and properties. The undergraduate program, described under the “School of Engineering” section of this bulletin, provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable students are encouraged to take at least one year of graduate study to extend their course work to obtain a coterminal degree. Coterminal degree programs are encouraged both for undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines. Graduate programs lead to the degrees of Master of Science, Engineer, and Doctor of Philosophy.

FACILITIES

The department is based in the Thomas F. Peterson Engineering Laboratory (Building 550), with extensive facilities in the Jack A. McCullough building and the Gordon and Betty Moore Materials Research Building. These buildings house offices for the chair and most of the faculty, for the administrative and technical staff, and for most graduate students, along with lecture and seminar rooms. Facilities for teaching and research are also available, including equipment for electrical measurements; mechanical testing of bulk and thin film materials; fracture and fatigue of advanced materials; metallurgy; optical, scanning, transmission electron microscopy, and atomic force microscopy; UHV sputter deposition; vacuum annealing treatments; wet chemistry; and x-ray diffraction. The McCullough/Moore Complex is also the home for the Center for Magnetic Nanotechnology, with corresponding facilities for magnetic measurements. The Rapid Prototyping Laboratory (RPL), housing material deposition and removal stations, is a joint facility with Mechanical Engineering, and is housed next to the Peterson Labs in Building 530. The department maintains two microcomputer clusters for its students, both of which are linked to the Internet.

Depending on the needs of their programs, students and faculty also conduct research in a number of other departments and independent laboratories. Chief among these are the Center for Integrated Systems (CIS), the Geballe Laboratory for Advanced Materials (GLAM), and the Stanford Synchrotron Radiation Laboratory (SSRL).

The Center for Integrated Systems (CIS) is a laboratory joining government and industrially funded research on microelectronic materials, devices, and systems. It houses a 10,000 square foot, class 100 clean room for Si and GaAs integrated circuit fabrication; a large number of electronic test, materials analysis, and computer facilities; and office space for faculty, staff, and students. In addition, CIS provides startup research funds and maintains a “Fellow-Mentor” program with industry.

For information on GLAM and SSRL, see the “Geballe Laboratory for Advanced Materials” and “Stanford Synchrotron Radiation Laboratory” sections of this bulletin.

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

The undergraduate program provides training in solid state fundamentals and materials engineering. Students desiring to specialize in this field during their undergraduate period may do so by following the curriculum outlined in the “School of Engineering” section of this bulletin as well as the School of Engineering Undergraduate Handbook. The University’s basic requirements for the bachelor’s degree are discussed in the “Undergraduate Degrees” section of this bulletin. Electives are available so that students with broad interests can combine materials science and engineering with work in another science or engineering department.

For information about minor, see the “School of Engineering” section of this bulletin.

COTERMINAL B.S./M.S. PROGRAM

Stanford undergraduates who wish to continue their studies for the Master of Science degree in the coterminal program may apply for admission after they have earned 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript; applicants must submit their application no later than the quarter prior to the expected completion of their undergraduate degree. The application must give evidence that the student possesses the potential for strong academic performance at the graduate level. Scores from the Graduate Record Exam (GRE) General Test must be reported before action can be taken on an application. Materials science is a highly integrated and interdisciplinary subject, and so applications from students of any engineering or science undergraduate major are encouraged. Information forms pertaining to the coterminal program may be obtained from the department’s student services manager, Room 551F. For information on GLAM and SSRL, see the “Geballe Laboratory for Advanced Materials” and “Stanford Synchrotron Radiation Laboratory” sections of this bulletin.

GRADUATE PROGRAMS

Graduate students can specialize in any of the areas of materials science and engineering.

MASTER OF SCIENCE

The University’s basic requirements for the M.S. degree are discussed in the “Graduate Degrees” section of this bulletin. The following are specific departmental requirements.

The Department of Materials Science and Engineering requires a minimum of 45 units for a master’s degree to be taken in residence at Stanford. Master’s Program Proposal forms should be filled out, signed by the student’s academic adviser, and submitted to the department’s student services manager by the end of the student’s first quarter of study. Final changes to the master’s program must be submitted no later than one academic quarter prior to degree conferred. Stanford Materials Science undergraduates who are pursuing or who plan to pursue a coterminal...
M.S. degree may have more flexibility in their programs and should consult with their academic advisers regarding appropriate core course and elective choices.

Degree requirements are as follows:

1. A minimum of 30 units of Materials Science course work, including core and lab courses specified below, taken for a letter grade. Research units, one-unit seminars, and courses in other departments (i.e., where students cannot enroll in a class with a MATSCI subject code) cannot be counted for this requirement.

2. Three core courses: 203; 204; 207.

3. Lab courses: MATSCI 171, 172, 173. Note: students who have had equivalent lab courses at other universities, equivalent practical experience, a materials related degree or background, or passed the Ph.D. qualifying exam, are expected to file a petition with the department’s student services manager to have this requirement waived and to substitute other appropriate technical courses for the lab units.

4. 15 units of approved course electives that result in a technically coherent program. Of the 15 units of elective courses:
   a) 12 of the 15 units must be taken for a letter grade (except for those submitting an M.S. report).
   b) a maximum of 3 units may be seminars.
   c) if writing a master’s research report, a minimum of 6 and a maximum of 15 units of Materials Science research units (MATSCI 200) may be counted. M.S. research units may only be counted if writing an M.S. research report.
   d) a maximum of 3 units may be undergraduate units (offered at Stanford University).
   e) a maximum of 5 units may be used for a foreign language course (not including any remedial English courses or courses in the student’s native language if other than English).
   f) the combination of seminar, undergraduate, and language units may not exceed 6 units total.
   g) the combination of research, seminar, undergraduate, and language units may not exceed 15 units total.
   h) activity units may not be counted toward a graduate degree.

5. A minimum grade point average (GPA) of 2.75 for degree course work taken at Stanford.

All proposed degree programs are subject to approval by the department’s student services manager and the Academic Degree Committee, which has responsibility for assuring that each proposal is a technically coherent program.

MASTER’S RESEARCH REPORT

Students wishing to take this option must include 6-15 Materials Science research units on their program proposal and the name of the faculty member who will be supervising the research. Students using 15 units of research toward the degree must participate in a more complex and demanding research project than those using fewer units.

The report must be approved by two faculty members. One faculty member is the student’s research adviser. The other faculty member must be approved by the department’s student services manager. Three copies of the report (one copy for each approving faculty member and one for the department file), in final form and signed by two faculty members, must be submitted to the department’s student services manager one week before final examinations of the final quarter of the program. The report is not an official University thesis but rather is intended to demonstrate to department faculty an ability to conduct and report directed research. Refer to the Materials Science and Engineering Student Handbook for further clarification concerning this report.

In cases where students decide to pursue research after the initial program submission deadline, they should submit a revised M.S. Program Proposal at least two quarters before the degree is granted. The total combined units of Materials Science research units, seminars, language courses, and undergraduate courses cannot exceed 15. If a master’s research report is not to be submitted, units of MATSCI 200 cannot be applied to the department’s requirement of 45 units for the master’s degree.

HONORS COOPERATIVE PROGRAM

Some of the department’s graduate students participate in the Honors Cooperative Program (HCP), which makes it possible for academically qualified engineers and scientists in industry to be part-time graduate students in Materials Science while continuing professional employment. Prospective HCP students follow the same admissions process and must meet the same admissions requirements as full-time graduate students. For information regarding the Honors Cooperative Program, see the “School of Engineering” section of this bulletin.

PETITION PROCESS FOR TRANSFER FROM M.S. TO PH.D. DEGREE PROGRAM

Students admitted to the graduate program are admitted specifically into either the M.S. or the Ph.D. program. A student admitted to the M.S. program should not assume admission to the Ph.D. program. Admission to the Ph.D. program is required for the student to be eligible to work towards the Ph.D. degree.

A student in the M.S. program may petition to be admitted to the Ph.D. program by filing an M.S. to Ph.D. Transfer Petition. This petition must be accompanied by a one-page statement of purpose stating the reasons why the student wishes to transfer to the Ph.D. program, an updated transcript, and two letters of recommendation from members of the Stanford faculty, including one from the student’s prospective advisor and at least one from a Materials Science faculty member belonging to the Academic Council. The M.S. to Ph.D. Transfer Petition is due to the student services manager by the end of the second week of Spring Quarter during the student’s first year in the M.S. program. Only students enrolled in the 200 series core course sequence are eligible to petition, and a grade point average (GPA) of 3.25 or better in the core courses is required.

Transferring to the Ph.D. program is a competitive process and only fully qualified M.S. students are admitted. Faculty consider the student’s original application to the graduate program as well as the material provided with the transfer petition.

ENGINEER

The University’s basic requirements for the degree of Engineer are outlined in the “Graduate Degrees” section of this bulletin.

A student wishing to enter the Engineer program must have completed the requirements of the M.S. in Materials Science and Engineering, and must file a petition requesting admission to the program, stating the type of research to be done and the proposed supervising professor. Once approved, the Application for Candidacy must be submitted to the department’s student services manager by the end of the second quarter in the Engineer program. Final changes in the Application for Candidacy form must be submitted no later than one academic quarter prior to degree conferral.

The 90-unit program must include 9 units of graduate courses in Materials Science with a MATSCI subject code (exclusive of research units, seminars, colloquia, and MATSCI 400. Participation in Teaching) beyond the requirements for the M.S. degree, and additional research or other units to meet the 90-unit University minimum requirement. A grade point average (GPA) of 3.0 must be maintained for all degree course work taken at Stanford.

Completion of an acceptable thesis is required. The Engineer thesis must be approved by two Academic Council faculty members, one of whom must be a member of the department, and submitted in triplicate.

DOCTOR OF PHILOSOPHY

The University’s basic requirements for the Ph.D. degree are outlined in the “Graduate Degrees” section of this bulletin.

Degree requirements are as follows:

1. Submit a Ph.D. program consisting of at least 135 units, which contains a minimum of 57 technical course units. Of these 57 units:
   a) at least 54 of the 57 units must be for a letter grade
   b) 33 units must be taken as Materials Science courses with a MATSCI subject code for a letter grade
   c) students must take six core courses for a letter grade

1) 203, 204, and 207 are required of first-year students
2) students must take three additional core courses in their first year from the following: 202, 205, 206, 208, 209, 210.

d) a minimum of 12 units of 300-level Materials Science courses (not including MATSCI 300, Ph.D. Research, or MATSCI 400, Participation in Materials Science Teaching)

e) a minimum of 12 units of courses taken from one of the following lists of advanced specialty courses (see below). Some or all of these courses can be the same as the courses used to meet the requirement of 12 units of 300-level courses; however, the units may not be counted toward both the 57 technical or 135 total degree units.

f) elective technical courses to bring the total units up to 57

g) the remaining units beyond the 57 units of technical course work may consist of Ph.D. research, seminars, and teaching experience.

2. First-year Ph.D. students are required to take the Materials Science Colloquium, MATSCI 230, each quarter of their first year (not counted as technical course units).

3. Ph.D. students are required to obtain an M.S. degree in Materials Science normally by the end of their second year. Paperwork must be submitted prior to taking the qualifying examination. Courses taken for the 57 technical units of Ph.D. work may count to meet the M.S. degree requirements.

4. A departmental oral qualifying examination must be passed by the end of January of their second year. A grade point average (GPA) of 3.25 from the six core classes taken is required for admission to the Ph.D. qualifying exam. Students who have passed the departmental oral examination are required to complete the Application for Candidacy for the Ph.D. Degree by the end of the quarter in which they pass the exam. Final changes in the Application for Candidacy form must be submitted no later than one academic quarter prior to degree conferral.

5. Maintain a GPA of 3.0 in all degree courses taken at Stanford.

6. Present the result of the dissertation at the University oral examination.

* Students may, if they have sufficient background, petition out of some of the required core courses. To successfully petition, students must have prior permission from their academic adviser, and also permission from the instructor of the particular core course. That instructor provides an exam or written examination that the petitioning student must pass.

† At least 90 units must be taken in residence at Stanford. Students entering with an M.S. degree in Materials Science from another university may request to transfer up to 45 units of equivalent work toward the total of 135 required units.

ADVANCED SPECIALTY COURSES

1. Biomaterials: APPPHYS 292; BIOPHYS 228; CHEMENG 260, 310, 355, 444, 452; ME 284A, B, 381, 385, 386, 457

2. Electronics Materials Processing: EE 212, 216, 217, 311, 316, 410; MATSCI 312, 313, 330

3. Materials Characterization: APPPHYS 216, 218; CHEMENG 345; EE 329; MATSCI 320, 321, 322, 323, 324, 325

5. Physics of Solids and Computation: APPPHYS 218, 272, 273; CHEMENG 444; EE 222, 223, 228, 327, 328, 329, 335; MATSCI 330, 343, 347; ME 344A, B, 444B

PH.D. MINOR

The University’s basic requirements for the Ph.D. minor are outlined in the “Graduate Degrees” section of this bulletin. A minor requires 20 units of graduate work of quality and depth to be approved by the Advanced Degree Committee of the department. Individual programs must be submitted to the Student Services Manager at least one quarter prior to degree conferral and approved as are other academic plans.

COURSES

PRIMARILY FOR UNDERGRADUATES

MATSCI 70N. Building the Future: Invention and Innovation with Engineering Materials — Stanford Introductory Seminar. Preference to freshmen. The technological importance of materials in human civilization is captured in historical names such as the Stone, Bronze, and Iron Ages. The present Information Age could rightly be called the Silicon Age. The pivotal roles of materials in the development of new technologies: Quantitative problem sets, field trips, and formal presentations of small-group projects. GER:DB-EngrAppSci, WRITE-2

5 units, Spr (Bravman, J)

MATSCI 110. Undergraduate Independent Study — Independent study in materials science under supervision of a faculty member.

1-3 units, Aut, Win, Spr, Sum (Staff)

MATSCI 150. Undergraduate Research — Participation in a research project.

3-6 units, Aut, Win, Spr, Sum (Staff)

MATSCI 1151. Microstructure and Mechanical Properties — (Same as 251.) Primarily for students without a materials background. Mechanical properties and their dependence on microstructure in a range of engineering materials. Elementary deformation and fracture concepts, strengthening and toughening strategies in metals and ceramics. Topics: dislocation theory, mechanisms of hardening and toughening, fracture, fatigue, and high-temperature creep. Prerequisite: ENGR 50 or equivalent. GER: DB-EngrAppSci

4 units, Aut (Dauskardt, R)

MATSCI 152. Electronic Materials Engineering — Materials science and engineering for electronic device applications. Kinetic molecular theory and thermally activated processes; band structure and electrical conductivity of metals and semiconductors; intrinsic and extrinsic semiconductors; diffusion; elementary p-n junction theory; operating principles of metal-oxide-semiconductor field effect transistors; introduction to crystal growth; oxidation kinetics; ion implantation; thermodynamics and kinetics of chemical vapor deposition; survey of physical vapor deposition methods, etching, and photolithography. GER:DB-EngrAppSci

4 units, Spr (Staff)

MATSCI 153. Nanostructure and Characterization — The structure of materials at the nanoscale is in most cases the same crystalline form as the natural phase. Structures of materials such as semiconductors, ceramics, metals, and nanotubes; classification of these materials according to the principles of crystallography. Primary methods of structural characterization, X-ray diffraction, and electron microscopy and their applications to study such nanostructures. GER:DB-EngrAppSci

4 units, Win (Sinclair, R)

MATSCI 154. Solid State Thermodynamics — The principles of thermodynamics and relationships between thermodynamic variables. Equilibrium in thermodynamic systems. Thermodynamics of multicomponent systems. Prerequisite: physical chemistry or introductory thermodynamics. GER:DB-EngrAppSci

4 units, Aut (Barnett, D)

MATSCI 155. Nanomaterials Synthesis — The science of synthesis of nanometer scale materials. Examples including solution phase synthesis of nanoparticles, the vapor-liquid-solid approach to growing nanowires, formation of mesoporous materials from block-copolymer solutions, and formation of photonic crystals. Relationship of the synthesis phenomena to the materials science driving forces and kinetic mechanisms. Materials science concepts including capillarity, Gibbs free energy, phase diagrams, and driving forces. Prerequisite: ENGR 50, and MATSCI 154 or CHEMENG 110. GER:DB-EngrAppSci

4 units, Spr (Clemens, B)
4 units, Spr (Sinclair, R)

MATSCI 160. Nanomaterials Laboratory — Preference to sophomores and juniors. Hands-on approach to synthesis and characterization of nanoscale materials. How to make, to pattern, and analyze the latest nanotechnology materials, including nanoparticles, nanowires, and carbon nanotubes. Techniques such as soft lithography, self-assembly, and surface functionalization. The VLS mechanism of nanowire growth, nanoparticle size control, self-assembly mechanisms, and surface energy considerations. Laboratory projects. Enrollment limited to 24. GER:DB-EngrAppSci
4 units, Spr (Melosh, N)

MATSCI 161. Nanocharacterization Laboratory — (Same as 171.) The development of standard lab procedures for materials scientists emphasizing microscopy, metallography, and technical writing. Techniques: optical, scanning-electron, atomic-force microscopy; and metallographic specimen preparation. The relationships among microscopic observation, material properties, and processing. Prerequisite: ENGR 50 or equivalent. GER:DB-EngrAppSci, WIM
4 units, Win (Staff)

MATSCI 162. X-Ray Diffraction Laboratory — (Same as 172.) Introduction to x-ray diffraction for microstructural analysis of materials, emphasizing powder and single-crystal techniques. Diffraction from thin films, thin-film multilayers, amorphous materials, strain measurements, orientation measurements, and electron diffraction. Prerequisite: 193/203. GER:DB-EngrAppSci
4 units, Win (Vailionis, A)

MATSCI 163. Mechanical Behavior Laboratory — (Same as 173.) Experimental techniques for the study of the mechanical behavior of engineering materials in bulk and thin film form, including tension testing, nanoindentation, and wafer curvature stress analysis. Metallic and polymeric systems will be studied. Prerequisites: 198/208, 151/251, ME 80 or equivalent. GER:DB-EngrAppSci
4 units, Aut (Staff)

MATSCI 164. Electronic and Photonic Materials and Devices Laboratory — Lab course. Current electronic and photonic materials and devices. Device physics and micro-fabrication techniques. Students design, fabricate, and perform physical characterization on the devices they have fabricated. Established techniques and materials such as photolithography, metal evaporation, and Si technology; and novel ones such as soft lithography and organic semiconductors.
4 units, not given this year (Salleo, A)

MATSCI 170. Materials Selection in Design — (For undergraduates; see 270.) GER:DB-EngrAppSci
4 units, not given this year (Prinz, F)

MATSCI 171. Nanocharacterization Laboratory — (For graduate students; see 161.)
3 units, Win (Staff)

MATSCI 172. X-Ray Diffraction Laboratory — (For graduate students; see 162.)
3 units, Win (Vailionis, A)

MATSCI 173. Mechanical Behavior Laboratory — (For graduate students; see 163.)
3 units, Aut (Staff)

MATSCI 190. Organic Materials — (For undergraduates; see 210.) GER:DB-EngrAppSci
4 units, Spr (Heilshorn, S)

4 units, Aut (Cui, Y)

MATSCI 193. Atomic Arrangements in Solids — (For undergraduates; see 203.) GER: DB-EngrAppSci
4 units, Aut (Sinclair, R)

MATSCI 194. Phase Equilibria — (For undergraduates; see 204.) GER: DB-EngrAppSci
4 units, Win (Salleo, A)

MATSCI 195. Waves and Diffraction in Solids — (For undergraduates; see 205.) GER:DB-EngrAppSci
4 units, Win (Clemens, B)

MATSCI 196. Imperfections in Crystalline Solids — (For undergraduates; see 206.) GER:DB-EngrAppSci
4 units, Win (Nix, W)

MATSCI 197. Rate Processes in Materials — (For undergraduates; see 207.) GER:DB-EngrAppSci
4 units, Spr (McIntyre, P)

MATSCI 198. Mechanical Properties of Materials — (For undergraduates; see 208.) GER:DB-EngrAppSci
4 units, Spr (Dauskardt, R)

MATSCI 199. Electronic and Optical Properties of Solids — (For undergraduates; see 209.) GER:DB-EngrAppSci
4 units, Spr (Brongersma, M)

PRIMARILY FOR GRADUATE STUDENTS

MATSCI 200. Master’s Research — Participation in a research project. 1-15 units, Aut, Win, Spr, Sum (Staff)

MATSCI 202. Materials Chemistry — (Same as 192.) Chemical principles of materials formed by chemical bonds and intermolecular and surface forces. Crystal structure and bonding; synthesis and characterization of bulk crystals; nanostructures; electronic structures and properties with a comparison between bulk and nano materials; intermolecular and surface forces for self-assembly including electrostatic, van der Waals force, hydrogen bond, hydrophobicity, solvation, entropic force, and DLVO theory; and self-assembled materials. Prerequisite: undergraduate physical chemistry or equivalent.
3 units, Aut (Cui, Y)

MATSCI 203. Atomic Arrangements in Solids — (Same as 193.) Atomic arrangements in perfect and imperfect crystalline solids, especially important metals, ceramics, and semiconductors. Elements of formal crystallography, including development of point groups and space groups.
3 units, Aut (Sinclair, R)

MATSCI 204. Phase Equilibria — (Same as 194.) The principles of heterogeneous equilibria and their application to phase diagrams. Thermodynamics of solutions; chemical reactions; non-stoichiometry in compounds; first order phase transitions and metastability; higher order transitions; and thermodynamics of surfaces, elastic solids, dielectrics and magnetic solids. Prerequisite: 192/202 or consent of instructor.
3 units, Win (Salleo, A)

MATSCI 205. Waves and Diffraction in Solids — (Same as 195.) The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell’s equations. Diffracted intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: 193/203 or consent of instructor.
3 units, Win (Clemens, B)
3 units, Win (Nix, W)

3 units, Spr (McIntyre, P)

MATSCI 208. Mechanical Properties of Materials.—(Same as 198.) Introduction to the mechanical behavior of solids, emphasizing the relationships between microstructure and mechanical properties. Elastic, anelastic, and plastic properties of materials. The relations between stress, strain, strain rate, and temperature for plastically deformable solids. Application of dislocation theory to strengthening mechanisms in crystalline solids. The phenomena of creep, fracture, and fatigue and their controlling mechanisms. Prerequisites: 193/203.
3 units, Spr (Dauskardt, R)

MATSCI 209. Electronic and Optical Properties of Solids.—(Same as 199.) The concepts of electronic energy bands and transports applied to metals, semiconductors, and insulators. The behavior of electronic and optical devices including pn junctions, MOS-capacitors, MOSFETS, optical waveguides, quantum-well lasers, light amplifiers, and metallo-dielectric light guides. Emphasis is on relationships between structure and physical properties. Elementary quantum and statistical mechanical concepts are used. Prerequisite: 195/205 or equivalent.
3 units, Spr (Heilshorn, S)

MATSCI 210. Organic Materials.—(Same as 190.) Unique physical and chemical properties of organic materials and their uses. The relationship between structure and physical properties, and techniques to determine chemical structure and molecular ordering. Examples include liquid crystals, dendrimers, carbon nanotubes, hydrogels, and biopolymers such as lipids, protein, and DNA.
3 units, Spr (Heilshorn, S)

MATSCI 230. Materials Science Colloquium.—May be repeated for credit.
1 unit, Aut, Win, Spr (Staff)

MATSCI 251. Microstructure and Mechanical Properties.—(For graduate students; see 151.)
3 units, Aut, Win, Spr (Dauskardt, R)

3 units, not given this year (Prinz, F)

MATSCI 299. Practical Training.—Educational opportunities in high-technology research and development labs in industry. Qualified graduate students engage in internship work and integrate that work into their academic program. Following the internship, students complete a research report outlining their work activity, problems investigated, key results, and any follow-on projects they expect to perform. Student is responsible for arranging own employment. See department student services manager before enrolling.
3 units, Aut, Win, Spr, Sum (Staff)

MATSCI 300. Ph.D. Research.—Participation in a research project.
1-15 units, Aut, Win, Spr, Sum (Staff)

MATSCI 302. Solar Cells.—Theory of conventional pn junction and excitonic solar cells. Design, fabrication, and characterization of crystalline silicon, amorphous silicon, CdTe, CIGS, and tandem and organic solar cells. Emerging solar cell concepts such as intermediate band gap and bioinspired solar cells. Emphasis is on the materials science aspects of solar cells research. Module design and economic hurdles that must be overcome for solar cell technology to generate a significant fraction of the world’s electricity. Group project to explore one solar cell approach in depth.
3 units, Aut (McGehee, M)

3 units, Spr (Salleo, A)

MATSCI 312. New Methods in Thin Film Synthesis.—Materials base for engineering new classes of coatings and devices. Techniques to grow thin films at atomic scale and to fabricate multilayers/superlattices at nanoscale. Vacuum growth techniques including evaporation, molecular beam epitaxy (MBE), sputtering, ion beam assisted deposition, laser ablation, chemical vapor deposition (CVD), and electroplating. Future direction of material synthesis such as nanocluster deposition and nanoparticles self-assembly. Relationships between deposition parameters and film properties. Applications of thin film synthesis in microelectronics, nanotechnology, and biology. SITN/SCPD televised.
3 units, Aut (Wang, S)

MATSCI 316. Nanoscale Science, Engineering, and Technology.—Sample application areas: renewable energy including nanoscaled photovoltaic cells, hydrogen storage, fuel cells, and nanoelectronics. Nanofabrication techniques including: self-assembly of amphiphilic molecules, block copolymers, organic-inorganic mesostructures, colloidial crystals, organic monolayers, proteins, DNA and abalone shells; biologically inspired growth of materials; photolithography, electron beam lithography, and scanning probe lithography; and synthesis of carbon nanotubes, nanowire, and nanocrystals. Other nanotechnology topics may be explored through a group project. SITN/SCPD televised.
3 units, Win (Cui, Y; McGehee, M)

3 units, alternate years, not given this year (Sinclair, R)

MATSCI 321. Transmission Electron Microscopy.—Image formation and interpretation. The contrast phenomena associated with perfect and imperfect crystals from a physical point of view and from a formal treatment of electron diffraction theory. The importance of electron diffraction to systematic analysis and recent imaging developments. Recommended: 193/203, 195/205, or equivalent.
3 units, Win (Sinclair, R), alternate years, not given next year

MATSCI 322. Transmission Electron Microscopy Laboratory.—Experimental application of electron microscopy to typical materials science studies. Topics include microscope operation and alignment, diffraction modes and analysis, bright-field/dark-field analysis of defects, high resolution imaging, and analytical techniques for compositional analysis (EDAX). Enrollment limited to 12. Prerequisites: 321, consent of instructor.
3 units, Spr (Marshall, A)
MATSCI 323. Thin Film and Interface Microanalysis—The science and technology of microanalytical techniques, including Auger electron spectroscopy (AES), Rutherford backscattering spectroscopy (RBS), secondary ion mass spectroscopy (SIMS), ion scattering spectroscopy (ISS), and x-ray photoelectron spectroscopy (XPS or ESCA). Generic processes such as sputtering and high-vacuum generation. Prerequisite: some prior exposure to atomic and electronic structure of solids. SITN/SCPD televised.
3 units, Aut (Koster, G)

MATSCI 324. Topics in Thin Film Microcharacterization—Case study characterizing materials, defining problems in characterizing surfaces or thin films, analyzing samples, and reporting results. Students propose problems, and operate electron, ion, and x-ray probe instruments. Methodology for approaching characterization problems; experience in interpreting and presenting experimental results. Emphasis is on application of advanced measurement methods to practical problems, and capabilities and limitations of modern techniques. Topics: choosing techniques, analytical pitfalls, quantitative analysis, effects of noise and other uncertainties on analytical precision. Enrollment limited. Prerequisite: 323 or consent of instructor.
3 units, not given this year

MATSCI 325. X-Ray Diffraction—Diffraction theory and its relationship to structural determination in solids. Focus is on applications of x-rays; concepts can be applied to neutron and electron diffraction. Topics: Fourier analysis, kinematic theory, Patterson functions, diffraction from layered and amorphous materials, single crystal diffraction, dynamic theory, defect determination, surface diffraction, techniques for data analysis, and determination of particle size and strain. Prerequisites: 193/203, 195/205.
3 units, Aut (Clemens, B) alternate years, not given next year

MATSCI 343. Organic Semiconductors for Electronics and Photonics—The science of organic semiconductors and their use in electronic and photonic devices. Topics: methods for fabricating thin films and devices; relationship between chemical structure and molecular packing on properties such as band gap, charge carrier mobility and luminescence efficiency; doping; field-effect transistors; light-emitting diodes; lasers; biosensors; photodetectors and photovoltaic cells. SITN/SCPD televised.
3 units, Spr (McGehee, M)

3 units, Win (Fan, S; Brongersma, M)

MATSCI 347. Introduction to Magnetism and Magnetic Nanostructures—Atomic origins of magnetic moments, magnetic exchange and ferromagnetism, types of magnetic order, magnetic anisotropy, domains, domain walls, hysteresis loops, hard and soft magnetic materials, magnetization factors, and applications of magnetic materials, especially magnetic nanostructures and nanotechnology. Tools include finite-element and micromagnetic modeling. Design topics include electromagnet and permanent magnet, electronic article surveillance, magnetic inductors, bio-magnetic sensors, and magnetic drug delivery. Design projects, team work, and computer-aided design. Prerequisites: PHYSICS 29 and 43, or college-level electricity and magnetism.
3 units, Spr (Wang, S; White, R)

MATSCI 352. Stress Analysis in Thin Films and Layered Composite Media—Introduction to methods of stress analysis of layered dissimilar media, including thin films deposited on substrates, composite laminates, and stratified anisotropic elastic materials based on techniques pioneered by Stroh. Stress states generated by thermal and elastic mismatch and local stress concentrations at interfacial cracks or corners, with applications to integrated circuit devices, aircraft materials, and geophysical media. Prerequisites: introductory course on the strength of materials or the theory of elasticity; familiarity with matrix algebra.
3 units, not given this year (Barnett, D)

3 units, Spr (Nix, W) alternate years, not given next year

3 units, Win (Dauskardt, R)

MATSCI 359. Crystalline Anisotropy—(Same as ME 336.) Matrix and tensor analysis with applications to the effects of crystal symmetry on elastic deformation, thermal expansion, diffusion, piezoelectricity, magnetism, thermodynamics, and optical properties of solids, on the level of J. F. Nye’s Physical Properties of Crystals. Homework sets use Mathematica.
3 units, Win (Barnett, D)

MATSCI 380. Molecular Biomaterials—For students with engineering backgrounds interested in the interface between biology and materials science. The characteristics of natural and man-made biomaterials from a molecular perspective. Why molecules with particular structures and properties are used for drug delivery, cell scaffolding, and surface passivation. Goal is to exploit these characteristics to create new materials and devices. Engineering strategies to interface biological species with inorganic, man-made devices.
3 units, not given this year (Melosh, N)

MATSCI 381. Biomaterials in Regenerative Medicine—Materials design and selection for regenerative medicine. How materials interact with cells through their micro- and nanostructure, mechanical properties, degradation characteristics, surface chemistry, and biochemistry. Examples include novel materials for drug and gene delivery, materials for stem cell proliferation and differentiation, and tissue engineering scaffolds.
3 units, not given this year (Heilshorn, S)

MATSCI 399. Graduate Independent Study—Under supervision of a faculty member.
1-10 units, Aut, Win, Spr, Sum (Staff)

MATSCI 405. Seminar in Applications of Transmission Electron Microscopy—May be repeated for credit.
1 unit, Aut, Win, Spr (Sinclair, R)

COGNATE COURSES
See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

AA 252. Techniques of Failure Analysis
3 units, Spr (Murray, S)

AA 256. Mechanics of Composites
3 units, Win (Chang, F)
MECHANICAL ENGINEERING

Mechanical Engineering Executive Committee: Mark Cappelli (Student Services and Undergraduate Curriculum), Mark R. Cutkosky (Faculty Affairs), John K. Eaton (Vice Chairman), Kenneth E. Goodson, (Graduate Admissions and Curriculum), Thomas W. Knelly (Graduate Admissions and Curriculum), Drew Nelson (Student Services and Undergraduate Curriculum), Friedrich B. Prinz (Chairman, Mechanical Engineering)

Group Chairs: Thomas P. Andriacchi (Biomechanical Engineering), Craig T. Bowman (Thermosciences), Mark R. Cutkosky (Design), Parviz Moin (Flow Physics and Computation), Peter M. Pinsky (Mechanics and Computation)

Laboratory Directors: David W. Beach (Product Realization Laboratory), J. Edward Carryer (Smart Product Design Laboratory), Mark R. Cutkosky (Manufacturing Sciences Lab), John K. Eaton (Heat Transfer and Turbulence Mechanics), Kosuke Isihii (Manufacturing Modeling Laboratory), Christopher Jacobs (Veterans Affairs Rehabilitation R&D Center), Larry J. Leifer (Center for Design Research), Reginald E. Mitchell (High Temperature Gas Dynamics), Parviz Moin (Center for Turbulence Research), Friedrich B. Prinz (Rapid Prototyping Laboratory)

Associate Professors: Christopher Edwards, J. Christian Gerdes, Reginald E. Mitchell, Juan G. Santiago, Charles Taylor

Assistant Professors: Wei Cai, Eric Darve, Adrian Lew, Gunter Niemeyer, Heinz Pitsch, Beth Pruit, Xiaolin Zheng

Professors (Research): Richard M. Christensen, Kenneth Waldron

Associate Professor (Research): Christopher Jacobs

Professor (Teaching): David W. Beach

Senior Lecturers: Vadim Khayms, J. Craig Milroy

Lecturers: George A. Kembl, Matthew R. Ohline

Acting Associate Professor: Rainer Fasching

Courtes: Fu-Kuo Chang, Ralph Greco, Kenneth Salisbury, George S. Springer, Robert T. Street, Paul Yock

Consulting Associate Professors: J. Edward Carryer, Gary D. Lichtenstein, Paul Mitiguy, William Moggridge, Carol B. Muller, Charles J. Petrie, Sunil Puria, Paul Saffo, George Toye, Machiel Van der Loos

Consulting Assistant Professors: Michael Barry, Mark Bolas, Brendan J. Boyle, Dennis Boyle, William Burnett, Dev Patnaik, Sara Little

Turnbull

Visiting Professor: Jooj Schoonman

* Recalled to active duty.

Student Services: Building 530, Room 125
Mail Code: 94305-3030
Student Services Phone: (650) 725-7695
Web Site: http://me.stanford.edu

Courses given in Mechanical Engineering have the subject code ME. For a complete list of subject codes, see Appendix.

The programs in the Department of Mechanical Engineering (ME) emphasize a mix of applied mechanics, biomechanical engineering, computer simulations, design, and energy science and technology. Since
mechanical engineering is a broad discipline, the undergraduate program can be a springboard for graduate study in business, law, medicine, political science, and other professions where understanding technology is important. Both undergraduate and graduate programs provide technical background for work in biomechanical engineering, environmental pollution control, ocean engineering, transportation, and other multidisciplinary problems that concern society. In all programs, emphasis is placed on developing systematic procedures for analysis, communication of work and ideas, practical and aesthetic aspects in design, and responsible use of technology.

The department has five groups: Biomechanical Engineering; Design; Flow Physics and Computation; Mechanics and Computation; and Thermosciences. Each maintains its own labs, shops, and offices.

The Biomechanical Engineering (BME) Group has teaching and research activities which focus primarily on musculoskeletal biomechanics, neuromuscular biomechanics, cardiovascular biomechanics, and rehabilitation engineering. Research in other areas including hearing, ocean, plant, and vision biomechanics exist in collaboration with associated faculty in biology, engineering, and medicine. The group has strong research interactions with the Mechanics and Computation and the Design groups, and the departments of Neurology, Radiology, and Surgery in the School of Medicine.

The Design Group emphasizes cognitive skill development for creative design. It is concerned with automatic control, computer-aided design, creativity, design aesthetics, design for manufacturability, design research, experimental stress analysis, fatigue and fracture mechanics, finite element analysis, human factors, kinematics, manufacturing systems, microcomputers in design, micro-electromechanics systems (MEMS), robotics, and vehicle dynamics. The group offers undergraduate and graduate programs in Product Design (jointly with the Department of Art and Art History) and is centrally involved in the Institute of Design; for further information, see http://dschool.stanford.edu.

The Flow Physics and Computation Group (FPC) is developing new theories, models, and computational tools for accurate engineering design analysis and control of complex flows (including acoustics, chemical reactions, interactions with electromagnetic waves, plasmas, and other phenomena) of interest in aerodynamics, electronics cooling, environment engineering, materials processing, planetary entry, propulsion and power systems, and other areas. FPC research emphasizes modeling and analysis of physical phenomena in engineering systems. Students and research staff are developing new methods and tools for generation, access, display, interpretation and post-processing of large databases resulting from numerical simulations of physical systems. Research in FPC ranges from advanced simulation of complex turbulent flows to active flow control. Faculty teach graduate and undergraduate courses in acoustics, aerodynamics, computational fluid mechanics, computational mathematics, fluid mechanics, combustion, and thermodynamics and propulsion.

The Mechanics and Computational Group covers biomechanics, continuum mechanics, dynamics, experimental and computational mechanics, finite element analysis, fluid dynamics, fracture mechanics, micromechanics, nanotechnology, and simulation based design. Qualified students can work as research project assistants, engaging in thesis research in association with the faculty director and fellow students. Projects include analysis, synthesis, and control of systems; biomechanics; flow dynamics of liquids and gases; fracture and micro-mechanics, vibrations, and nonlinear dynamics; and original theoretical, computational, and experimental investigations in the strength and deformability of elastic and inelastic elements of machines and structures.

The Thermosciences Group conducts experimental and analytical research on both fundamental and applied topics in the general area of thermal and fluid systems. Research strengths include high Reynolds number flows, microfluidics, combustion and reacting flows, multiphase flow and combustion, plasma sciences, gas physics and chemistry, laser diagnostics, microscale heat transfer, convective heat transfer, and energy systems. Research motivation comes from applications including air-breathing and space propulsion, bioanalytical systems, pollution control, electronics fabrication and cooling, stationary and mobile energy systems, biomedical systems, and materials processing. Emphasis is on fundamental experiments leading towards advances in modeling, optimization, and control of complex systems.

**Mission Statement**—The goal of Stanford’s undergraduate program in Mechanical Engineering is to provide each student with a balance of intellectual and practical experiences, accumulation of knowledge, and self-discovery to prepare the graduate to address societal needs. The program prepares each student for entry-level work as a mechanical engineer, graduate study in engineering, or graduate study in another field where a broad engineering background provides a foundation. With grounding in the principles and practice of mechanical engineering, graduates are ready to engage in learning about and employing new concepts, technologies, and methodologies.

**FACILITIES**

The department groups maintain modern laboratories that support undergraduate and graduate instruction and graduate research work.

The Structures and Composites Laboratory, a joint activity with the Department of Aeronautics and Astronautics, studies structures made of fiber-reinforced composite materials. Equipment for fabricating structural elements includes autoclave, filament winder, and presses. X-ray, ultrasound, and an electron microscope are available for nondestructive testing. The lab also has environmental chambers, a high speed impactor, and mechanical testers. Lab projects include designing composite structures, developing novel manufacturing processes, and evaluating environmental effects on composites.

Experimental facilities are available through the interdepartmental Structures and Solid Mechanics Research Laboratory, which includes an electrohydraulic materials testing system, a vehicle crash simulator, and a shake table for earthquake engineering and related studies, together with highly sophisticated auxiliary instrumentation. Facilities to study the micromechanics of fracture areas are available in the Micromechanics/Fracture Laboratory, and include a computer-controlled materials testing system, a long distance microscope, an atomic force microscope, and other instrumentation. Additional facilities for evaluation of materials are available through the Center for Materials Research, Center for Integrated Circuits, and the Ginzton Laboratory. Laboratories for biological experimentation are accessible through the School of Medicine. Individual accommodation is available for the work of each research student.

Major experimental and computational laboratories engaged in bioengineering work are located in the Biomechanical Engineering Group. Other Biomechanical Engineering Group activities and resources are associated with the Rehabilitation Research and Development Center of the Veterans Administration Palo Alto Health Care System. This major national research center has computational and prototyping facilities. In addition, the Rehabilitation Research and Development Center houses the Electrophysiology Laboratory, Experimental Mechanics Laboratory, Human Motor Control Laboratory, Rehabilitation Device Design Laboratory, and Skeletal Biomechanics Laboratory. These facilities support graduate course work as well as Ph.D. student research activities.

Computational and experimental work is also conducted in various facilities throughout the School of Engineering and the School of Medicine, particularly the Advanced Biomaterials Testing Laboratory of the Department of Materials Science and Engineering, the Orthopaedic Research Laboratory in the Department of Functional Restoration, and the Vascular Research Laboratory in the Department of Surgery. In collaboration with the School of Medicine, facilities throughout the Stanford Medical Center and the Veterans Administration Palo Alto Health Care System conduct biological and clinical work.

The Design Group has facilities for lab work in experimental mechanics and experimental stress analysis. Additional facilities, including MTS electrohydraulic materials test systems, are available in the Solid Mechanics Research Laboratory. Design Group students also have access to Center for Integrated Systems (CIS) and Ginzton Lab microfabrication facilities.

The group also maintains the Product Realization Laboratory (PRL), a teaching facility offering students integrated experiences in market defi-
tion, product design, and prototype manufacturing. The PRL provides coaching, design manufacturing tools, and networking opportunities to students interested in product development. The ME 310 Design Project Laboratory has facilities for CAD, assembly, and testing of original designs by master’s students in the engineering design program. A Smart Product Design Laboratory supports microprocessor application projects. The Center for Design Research (CDR) has an excellent facility for concurrent engineering research, development, and engineering curriculum creation and assessment. Resources include a network of high-performance workstations. For worldwide web mediated concurrent engineering by virtual, non-collocated, design development teams, see the CDR web site at http://cdr.stanford.edu. In addition, CDR has several industrial robots for student projects and research. These and several NC machines are part of the CDR Manufacturing Sciences Lab. The Manufacturing Modeling Laboratory (MML) addresses various models and methods that lead to competitive manufacturing. MML links design for manufacturing (dFM) research at the Department of Mechanical Engineering with supply chain management activities at the Department of Management Science and Engineering. The Rapid Prototyping Laboratory consists of seven processing stations including cleaning, CNC milling, grit blasting, laser deposition, low temperature deposition, plasma deposition, and shot peening. Students gain experience by using ACIS and Pro Engineer on Hewlett Packard workstations for process software development. The Design Group also has a Product Design Loft in which students in the Joint Program in Design develop graduate thesis projects.

The Flow Physics and Computation Group has a 32 processor Origin 2000, 48-node and 85-node Linux cluster with high performance interconnection and an array of powerful workstations for graphics and data analysis. Several software packages are available, including all the major commercial CFD codes. FPC is strongly allied with the Center for Turbulence Research (CTR), a research consortium between Stanford and NASA, and the Center for Integrated Turbulence Simulations (CITS), which is supported by the Department of Energy (DOE) under its Accelerated Strategic Computing Initiative (ASCI). The Center for Turbulence Research has direct access to major national computing facilities located at the nearby NASA-Ames Research Center, including massively parallel super computers. The Center for Integrated Turbulence Simulations has access to DOE’s vast supercomputer resources. The intellectual atmosphere of the Flow Physics and Computation Group is greatly enhanced by the interactions among CTR’s and CITS’s postdoctoral researchers and distinguished visiting scientists.

The Mechanics and Computation Group has a Computational Mechanics Laboratory that provides an integrated computational environment for research and research-related education in computational mechanics and scientific computing. The laboratory houses Silicon Graphics, Sun, and HP workstations and servers, including an 8-processor SGI Origin2000 and a 16-processor networked cluster of Intel-architecture workstations for parallel and distributed computing solutions of computationally intensive problems. Software is available on the laboratory machines, including commercial packages for engineering analysis, parametric geometry and meshing, and computational mathematics. The laboratory supports basic research in computational mechanics as well as the development of related applications such as simulation-based design technology.

The Thermosciences Group has four major laboratory facilities. The Heat Transfer and Turbulence Mechanics Laboratory concentrates on fundamental research aimed at understanding and improved prediction of turbulent flows and high performance energy conversion systems. The laboratory includes two general-purpose wind tunnels, a pressurized high Reynolds number tunnel, two supersonic cascade flow facilities, three specialized boundary layer wind tunnels, and several other flow facilities. Extensive diagnostic equipment is available including multiple particle-image velocimetry and laser-Doppler anemometry systems.

The High Temperature Gas Dynamics Laboratory includes research on sensors, plasma sciences, cool and biomass combustion and gas pollutant formation, and reactive and non-reactive gas dynamics. Research facilities include diagnostic devices for combustion gases, a spray combustion facility, laboratory combustors including a coal combustion facility and supersonic combustion facilities, several advanced laser systems, a variety of plasma facilities, a pulsed detonation facility, and four shock tubes and tunnels. The Thermosciences Group and the Design Group share the Microscale Thermal and Mechanical Characterization laboratory (MTMC). MTMC is dedicated to the measurement of thermal and mechanical properties in thin-film systems, including microfabricated sensors and actuators and integrated circuits, and features a nanosecond scanning laser thermometry facility, a laser interferometer, a near-field optical microscope, and an atomic force microscope. The activities at MTMC are closely linked to those at the Heat Transfer Teaching Laboratory (HTTL), where undergraduate and master’s students use high-resolution probe stations to study thermal phenomena in integrated circuits and thermally-actuated microvalves. HTTL also provides macroscopic experiments in convection and radiative exchange.

The Energy Systems Laboratory is a teaching and research facility dedicated to the study of energy conversion systems. The lab includes three dynamometers for engine testing, a computer-controlled variable engine valve controller, a fuel-cell experimental station, a small rocket testing facility, and a small jet engine thrust stand.

The Guidance and Control Laboratory, a joint activity with the Department of Aeronautics and Astronautics and the Department of Mechanical Engineering, specializes in construction of electromechanical systems and instrumentation, particularly where high precision is a factor. Work ranges from robotics for manufacturing to feedback control of fuel injection systems for automotive emission control. The faculty and staff work in close cooperation with both the Design and Thermosciences Groups on device development projects of mutual interest.

Many computation facilities are available to department students. Three of the department’s labs are equipped with super-minicomputers. Numerous smaller minicomputers and microcomputers are used in the research and teaching laboratories.

Library facilities at Stanford beyond the general library include Engineering, Mathematics, and Physics department libraries.

**UNDERGRADUATE PROGRAMS**

**BACHELOR OF SCIENCE**

Specializing in Mechanical Engineering (ME) during the undergraduate period may be done by following the curriculum outlined under the “School of Engineering” section of this bulletin. The University’s basic requirements for the bachelor’s degree are discussed in the “Undergraduate Degrees” section of this bulletin. Courses taken for the departmental major (math; science; science, technology, and society; engineering fundamentals; and engineering depth) must be taken for a letter grade if the instructor offers the option.

A Product Design program offered by the Design Group leads to the B.S. in Engineering (Product Design). An individually designed major in Biomechanical Engineering offered by the Biomechanical Engineering Group leads to the B.S. in Engineering (Biomechanical Engineering); this may be appropriate for students preparing for medical school or graduate bioengineering studies.

*Grade Requirements* — To be recommended by the department for a B.S. in Mechanical Engineering, a student must achieve the minimum grade point average (GPA) set by the School of Engineering (2.0 in engineering fundamentals and engineering depth).

For information about an ME minor, see the “School of Engineering” section of this bulletin.

**HONORS PROGRAM**

The Department of Mechanical Engineering offers a program leading to a B.S. in Mechanical Engineering with honors. This program offers a unique opportunity for qualified undergraduate engineering majors to conduct independent study and research at an advanced level with a faculty mentor.

Mechanical Engineering majors who have a grade point average (GPA) of 3.5 or higher in the major may apply for the honors program. Students who meet the eligibility requirement and wish to be considered for the
honors program must submit a written application to the Mechanical Engineering student services office no later than the second week of the Autumn Quarter in the senior year. The application to enter the program can be obtained from the ME student services office, and must contain a one-page statement describing the research topic and include a transcript of courses taken at Stanford. In addition, the application is to be approved by a Mechanical Engineering faculty member who agrees to serve as the thesis adviser for the project. Thesis advisers must be members of Stanford’s Academic Council.

In order to receive department honors, students admitted to the program must:
1. maintain the 3.5 GPA required for admission to the honors program.
2. under the direction of the thesis adviser, complete at least 9 units of ME 191H, Honors Thesis, during the senior year.
3. submit a completed thesis draft to the adviser by mid-May. Further revisions and final endorsement by the adviser are to be finished by the first week of June, when two bound copies are to be submitted to the Mechanical Engineering student services office.
4. present the thesis at the Mechanical Engineering Honors Symposium held in mid-May.

COTERMINAL B.S./M.S. PROGRAM

Stanford undergraduates who wish to continue their studies for the Master of Science degree in the coterminal program must have earned a minimum of 120 units towards graduation. This includes allowable Advanced Placement (AP) and transfer credit. Applicants must submit their application no later than the quarter prior to the expected completion of their undergraduate degree. This is normally the Winter Quarter (January 15 is the deadline) prior to the Spring Quarter graduation. The application must provide evidence of potential for strong academic performance as a graduate student. The department graduate admissions committee evaluates and acts on each application. Typically, a GPA of at least 3.5 in engineering, science, and math is expected. Applicants must have completed two of 80/81, 112, 113, 131A, and 131B, and must take the Graduate Record Examination (GRE) before action is taken on the application. Product designers must have completed ME 116 to be considered, and are required to work at least one year before rejoining the program. Coterminal information, applications deadlines, and forms can be obtained from the ME student services office.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

GRADUATE PROGRAMS

ADMISSION AND FINANCIAL ASSISTANCE

To be eligible for admission to the department, a student must have a B.S. degree in engineering, physics, or a comparable science program. To apply for the Ph.D. degree, applicants must have already completed an M.S. degree. Applications for Ph.D. and HCP programs are accepted throughout the year. M.S. applications for fellowship aid must be received by the first Tuesday in December. The department annually awards, on a competitive basis, a limited number of fellowships, teaching assistantships, and research assistantships to incoming graduate students. Research assistantships are used primarily for post-master’s degree students and are awarded by individual faculty research supervisors, not by the department.

Mechanical engineering is a varied profession, ranging from primarily aesthetic aspects of design to highly technical scientific research. Disciplinary areas of interest to mechanical engineers include biomechanics, energy conversion, fluid mechanics, materials, nuclear reactor engineering, propulsion, rigid and elastic body mechanics, systems engineering, scientific computing, and thermodynamics, to name a few. No mechanical engineer is expected to have a mastery of the entire spectrum.

Master’s degree programs leading to the M.S. are offered in Mechanical Engineering, Engineering (Biomechanical Engineering), Engineering (Product Design), and Engineering.

The following sections list specific requirements for the master’s degrees listed above.

MASTER OF SCIENCE

The basic University requirements for the M.S. degree are discussed in the “Graduate Degrees” section of this bulletin.

The master’s program consists of 45 units of course work taken at Stanford. No thesis is required, although many students become involved in research projects during the master’s program, particularly to explore their interests in working towards a Ph.D. degree. Students whose undergraduate backgrounds are entirely devoid of some of the major subject disciplines of engineering (for example, applied mechanics, applied thermodynamics, fluid mechanics, ordinary differential equations) may need to take some undergraduate courses to fill obvious gaps and prepare themselves to take graduate courses in these areas. Such students may require more than three quarters to fulfill the master’s degree requirements, as the makeup courses may not be used for other than the unrestricted electives (see item 4 below) in the M.S. degree program. However, it is not the policy to require fulfillment of mechanical engineering B.S. degree requirements to obtain an M.S. degree; furthermore, students who have already fulfilled certain categories of the M.S. degree requirements as a result of undergraduate work may find they have sufficient time (see item 3 below) to obtain the M.S. degree in the three quarters.

MECHANICAL ENGINEERING

The master’s degree program requires 45 units of course work taken as a graduate student at Stanford. No thesis is required. However, students who want some research experience during the master’s program may participate in research through ME 391 and 392.

Requirements are subject to change and students are encouraged to refer to the Mechanical Engineering Graduate Student Handbook provided by the student services office. The department’s requirements for the M.S. in Mechanical Engineering are as follows:

1. Mathematical competence in two of the following areas: partial differential equations, linear algebra, complex variables, numerical analysis, or statistics, as demonstrated by completion of two appropriate courses from the following list: ME 300A, 300B, 300C, CME 106, 302; MATH 106, 109; CS 205; EE 263, 261; STATS 110. Mathematics courses must be taken for a letter grade. (6 units required).

Students who completed comparable graduate-level courses as an undergraduate, and who can demonstrate their competence to the satisfaction of the instructors of the Stanford courses, may waive this requirement via petition by their adviser and the graduate curriculum committee, and place the 6 units in the approved elective category.

2. Specialty in Mechanical Engineering (depth): set of graduate-level courses in Mechanical Engineering to provide depth in one area. The faculty have approved these sets as providing depth in specific areas as well as a significant component of applications of the material in the context of engineering synthesis. These sets are outlined in the Mechanical Engineering Graduate Student Handbook. Depth courses must be taken for a letter grade.

3. Breadth in Mechanical Engineering: two or three additional graduate level courses (outside the depth) from the breadth chart listed in the Mechanical Engineering Graduate Handbook to bring the total number of units to at least 24 (including mathematics course work). Combined depth and breadth courses must total at least 18 units. Breadth courses must be taken for a letter grade.

4. Approved electives (to bring the total number of units to at least 39): all approved electives must be approved by an adviser. Graduate engineering, math, and science courses are normally approved. Approved electives must be taken for a letter grade.

5. Of the 39 units above (mathematics, depth, breadth, and approved electives), no more than 6 units may come from ME 391 and 392, and no more than 3 may come from seminars. Students planning a Ph.D. degree should discuss with their advisers the desirability of taking 391 or 392 during the master’s year.

6. Unrestricted electives (to bring the total number of units submitted for the M.S. degree to 45): students are encouraged to use these units outside of engineering, mathematics, or the sciences. Students should consult their advisers on course loads and on ways to use the unrestricted electives to make a manageable program.
7. Within the courses satisfying the requirements above, there must be at least one graduate-level course dealing with lab studies. Courses which satisfy this requirement are: 218A, 306A, 307B, 310A, B, C, 317B, 318, 324, 348, 354, 367, 382A, B; ENGR 206, 207B.

Candidates for the M.S. in Mechanical Engineering are expected to have the approval of the faculty, and a minimum grade point average (GPA) of 2.75 in the 45 units presented for fulfillment of degree requirements. All courses used to fulfill mathematics, depth, breadth, approved electives, and lab studies must be taken for a letter grade (excluding seminars and courses for which a letter grade is not an option for any student).

Students falling below a GPA of 2.5 at the end of 20 units may be disqualified from further registration. Students failing to meet the complete degree requirements at the end of 60 units of graduate registration are disqualified from further registration. Courses used to fulfill deficiencies arising from inadequate undergraduate preparation for mechanical engineering graduate work may not be applied to the 60 units required for graduate registration.

PRODUCT DESIGN

The Joint Program in Design focuses on the synthesis of technology with human needs and values to create innovative product experiences. This program is a joint offering of the departments of Mechanical Engineering and Art and Art History. It provides a design education that integrates technical, human, aesthetic, and business concerns. The resulting two-year degree of M.S. in Engineering (Product Design) is considered a terminal degree for the practice of design.

* Approved electives fulfill career objectives of the students. Students may focus their energy in engineering, business, psychology, or other areas relevant to design. Most students elect a breadth of training by taking courses in one or more related fields or technical electives.

† Approved electives must be discussed with the student’s adviser.

Admission requirements are the same as for the M.S. in Mechanical Engineering described above, with additional requirements of a minimum of one year’s experience after the bachelor’s degree, and a portfolio showing strong evidence of design ability and aesthetic skills and sensitivity.

Students with non-engineering undergraduate degrees in design, art, architecture, or similar majors, may apply to the Department of Art and Art History for a similar graduate design program and leading to an M.F.A. in Design. Students with non-engineering degrees who wish to earn the M.S. degree should consult with the program adviser.

BIOMECHANICAL ENGINEERING

Students interested in graduate studies in biomechanical engineering can choose one of the programs below.

1. **M.S. in Mechanical Engineering**: students who apply and are admitted to the M.S. in Mechanical Engineering program can elect to take biomechanical engineering courses as part of their requirements. These courses are usually applied towards the student’s engineering breadth or technical electives.

2. **M.S. in Engineering, Biomechanical Engineering subplan**: this major program allows students more flexibility in taking courses in the life sciences and generally emphasizes a more interdisciplinary curriculum. Minimum grade point average (GPA) requirements are the same as for the M.S. in Mechanical Engineering.

A Ph.D. in Biomechanical Engineering is not offered. Students from either master’s degree path (Mechanical Engineering or Engineering, Biomechanical Engineering subplan) receive their Ph.D. degrees in Mechanical Engineering.

ENGINEERING

As described in the “School of Engineering” section of this bulletin, each department in the school may sponsor students in a more general degree, the M.S. in Engineering. Sponsorship by the Department of Mechanical Engineering (ME) requires (1) filing a petition for admission to the program by no later than the day before instruction begins, and (2) that the center of gravity of the proposed program lies in ME; no more than 18 units used for the proposed program can have been previously completed. The program must include at least 9 units of graduate-level work in the department other than ME 300A, B, C, seminars, and independent study. The petition must be accompanied by a statement explaining the program objectives and how it is coherent, contains depth, and fulfills a well-defined career objective. The grade requirements are the same as for the M.S. in Mechanical Engineering.

POST-MASTER’S DEGREE PROGRAMS

The department offers two post-master’s degrees: Engineer and Doctor of Philosophy. Post-master’s research generally requires some evidence that a student has research potential before a faculty member agrees to supervision and a research assistantship appointment. It is most efficient to carry out preliminary research during the M.S. degree program.

ENGINEER

The basic University requirements for the degree of Engineer are discussed in the “Graduate Degrees” section of this bulletin.

This degree represents an additional year of study beyond the M.S. degree and includes a research thesis. The program is designed for students who wish to do professional engineering work upon graduation and who want to engage in more specialized study than is afforded by the master’s degree alone.

Admission standards are substantially the same as indicated under the master’s degree. However, since thesis supervision is required and the availability of thesis supervisors is limited, admission is not granted until the student has personally engaged a faculty member to supervise a research project. This most often involves a paid research assistantship awarded by individual faculty members (usually from the funds of sponsored research projects under their direction) and not by the department. Thus, individual arrangement between student and faculty is necessary. Students studying for the M.S. degree at Stanford who wish to continue to the Engineer degree ordinarily make such arrangements during the M.S. degree program. Students holding master’s degrees from other universities are invited to apply and may be admitted providing they are sufficiently well qualified and have made thesis supervision and financial aid arrangements.

Department requirements for the degree include an acceptable thesis; up to 18 units of credit are allowed for thesis work (ME 400). In addition to the thesis, 27 units of approved advanced course work in mathematics, science, and engineering are expected beyond the requirements for the M.S. degree; the choice of courses is subject to approval of the adviser. Students who have not fulfilled the Stanford M.S. degree requirements are required to do so, with allowance for approximate equivalence of courses taken elsewhere; up to 45 units may be transferable.

Candidates for the degree must have faculty approval and have a minimum grade point average (GPA) of 3.0 for all courses (exclusive of thesis credit) taken beyond those required for the master’s degree.

DOCTOR OF PHILOSOPHY

The basic University requirements for the Ph.D. degree are discussed in the “Graduate Degrees” section of this bulletin. The Ph.D. degree is intended primarily for students who desire a career in research, advanced development, or teaching; for this type of work, a broad background in math and the engineering sciences, together with intensive study and research experience in a specialized area, are the necessary requisites.

The department allows but does not require a minor field from another department. However, if a minor is waived, the candidate must show breadth of training by taking courses in one or more related fields or departments as noted below.
Ph.D. students must have a master’s degree, and must fulfill the requirements for the Stanford M.S. degree in Mechanical Engineering.

In special situations dictated by compelling academic reasons, Academic Council members who are not members of the department’s faculty may serve as the principal dissertation adviser when approved by the department. In such cases, a member of the department faculty must serve as program adviser and as a member of the reading committee, and agree to accept responsibility that department procedures are followed and standards maintained.

Admission involves much the same consideration described under the Engineer degree. Since thesis supervision is required, admission is not granted until the student has personally engaged a member of the faculty to supervise a research project. Once a student has obtained a research supervisor, this supervisor becomes thereafter the student’s academic adviser. Research supervisors may require that the student pass the departmental qualifying examination before starting research and before receiving a paid research assistantship. Note that research assistantships are awarded by faculty research supervisors and not by the department.

Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of engineering fundamentals by passing a qualifying examination. The academic level and subject matter of the examination correspond approximately to the M.S. program described above. More details on the qualifying exam may be obtained at the student services office.

Typically, the exam is taken shortly after the student completes the M.S. degree requirements. The student is required to have a minimum graduate Stanford GPA of 3.5 to be eligible for the exam. Once the student’s faculty sponsor has agreed that the exam is to take place, the student must submit an application folder containing several items including a curriculum vitae, research project abstract, and preliminary dissertation proposal. Information, examination dates, and deadlines may be obtained from the department’s student services office.

Ph.D. candidates must complete a minimum of 27 units of approved formal course work (excluding research, directed study, and seminars) in advanced study beyond the M.S. degree. The courses should consist primarily of graduate courses in engineering and sciences, although the candidate’s reading committee may approve a limited number of upper-level undergraduate courses and courses outside of engineering and sciences, as long as such courses contribute to a strong and coherent program. In addition to this 27-unit requirement, all Ph.D. candidates must participate each quarter in one of the following (or equivalent) seminars: ME 389, 390, 394, 395, 396 397; AA 297; ENGR 298, 31A.

The Ph.D. thesis normally represents at least one full year of research work and must be a substantial contribution to the field. Students may register for course credit for thesis work (ME 500) to help fulfill University academic unit requirements, but there is no minimum limit on registered dissertation units. Candidates should note that only completed course units are counted toward the requirement. Questions should be directed to the department student services manager.

The department has a breadth requirement for the Ph.D. degree. This may be satisfied either by a formal minor in another department or by course work that is approved by the dissertation reading committee.

The final University oral examination (dissertation defense) is conducted by a committee consisting of a chair from another department and four faculty members of the department or departments with related interests. Usually, the committee includes the candidate’s adviser and two faculty members chosen to read and sign the candidate’s dissertation. The examination consists of two parts. The first is open to the public and is scheduled as a seminar talk, usually for one of the regular meetings of a seminar series. The second is conducted in private and covers subjects closely related to the dissertation topic.

PH.D. MINOR

Students who wish a Ph.D. minor in ME should consult the ME student services office. A minor in ME may be obtained by completing 20 units of approved graduate-level ME courses. Courses approved for the minor must form a coherent program and must be selected from those satisfying requirement 2 for the M.S. in Mechanical Engineering.

COURSES

WIM indicates that the course satisfies the Writing in the Major requirements. (AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

The department uses the following course numbering system:

010-099 Freshman and Sophomore
100-199 Junior and Senior
200-299 Advanced Undergraduate and Beginning Graduate
300-399 Graduate
400-499 Advanced Graduate
500 Ph.D. Thesis

UNDERGRADUATE (FRESHMEN AND SOPHOMORES)

Note—Lab sections in experimental engineering are assigned in groups. If the lab schedule permits, students are allowed, with due regard to priority of application, to arrange their own sections and lab periods. Enrollment with the instructor concerned, on the day before instruction begins or the first day of University instruction, is essential in order that the lab schedule may be prepared. Enrollment later than the first week is not permitted.

ME 10N. Form and Function of Animal Skeletons—Stanford Introductory Seminar. Preference to freshmen. The biomechanics and mechanobiology of the musculoskeletal system in human beings and other vertebrates on the level of the whole organism, organ systems, tissues, and cell biology. Field trips to labs. GER:DB-EngrAppSci
3 units, Win (Carter, D)

ME 12N. The Jet Engine—Stanford Introductory Seminar. Preference to freshmen. How a jet engine works; the technologies and analytical techniques required to understand them. Dynamics, thermodynamics, turbomachinery, combustion, advanced materials, cooling technologies, and control systems. Visits to research laboratories, examination of a partially disassembled engine, and probable operation of a small jet engine. Prerequisites: high school physics. GER:DB-EngrAppSci
3 units, Win (Eaton, J)

ME 13N. Redesigning the Human Experience—Stanford Introductory Seminar. Preference to freshmen. Focus is on creative thinking skills such as observation of the human endeavor and how to transform concepts into products, services, and intellectual property. How the products people use shape, shade, and sometimes undermine the pursuit of well-being. Student teams work on hands-on projects. Web-based student idea logs. No prior design experience required. GER:DB-EngrAppSci
3 units, Win (Leifer, L)

ME 15N. The Science and Engineering of Sports Equipment—Preference to freshmen. Scientific concepts of sports equipment. How design and manufacture improve performance and marketability. Why golf balls have dimples, tennis balls are fuzzy, golf shafts are made of steel or graphite, and sailboats win or break. How composite materials make structures light, strong, and tailored to the athlete’s ability. Skis, snowboards, race cars, and bicycles demonstrated through photographs, models, and products. GER:DB-EngrAppSci
3 units, not given this year (Kenny, T; Springer G)

ME 16N. The Science of Flames—Stanford Introductory Seminar. Preference to freshmen. The roles that chemistry and fluid dynamics play in governing the behaviors of flames. Emphasis is on factors that affect flame microstructure, external appearance, and on the fundamental physical and chemical processes that cause flames and fires to propagate. Topics: history, thermodynamics, and pollutant formation in flames. Trips to labs where flames are studied. Prerequisites: high school physics. GER:DB-EngrAppSci
3 units, Win (Mitchell, R)
ME 18Q. Creative Teams and Individual Development — Stanford Introductory Seminar. Preference to sophomores. Roles on a problem-solving team that best suit individual creative characteristics. Two teams are formed for teaching experientially how to develop less conscious abilities from teammates creative in those roles. Reinforcement teams have members with similar personalities; problem solving teams are composed of people with maximally different personalities. GER:DB-EngrAppSci
3 units, Aut (Wilde, D)

ME 21N. Renaissance Machine Design — Stanford Introductory Seminar. Preference to freshmen. Touch and force feedback elements of human/machine interaction with applications including video games and robot-assisted surgery. Do haptics have the potential to rival vision and sound in future computer applications? The biology of human touch and tactile perception; technologies that can be used for conveying a sense of touch to human beings interacting with computer-controlled systems. Demonstrations of applications in robotics, medicine, gaming, and virtual reality. Future systems with immersive haptic feedback; what technological advances are needed to make them practical. GER:DB-EngrAppSci
3 units, Win (Cutkosky, M)

ME 22N. The Art of Experimentation — Stanford Introductory Seminar. Preference to freshmen. Students build, conduct, and interpret physical experiments in a lab setting, including: Galileo’s experiments on the motions of falling bodies and pendulums; Newton’s experiments on momentum and sound waves; experiments on heat transfer, fluid mechanics, and the propagation of electronic signals; and measuring the speed of light using simple lab equipment. Experiment design and construction, simple electronic circuit building, introductory transducer physics, and computer-automated data collection. Prerequisites: high-school level introductory physics and calculus, or pre-calculus by consent of instructor. GER:DB-EngrAppSci
3 units, Aut (Santiago, J)

4 units, Win (Cappelli, M)

3 units, Aut (Cai, W)

1 unit, Aut (Waldron, K)

UNDERGRADUATE (Juniors and Seniors)

ME 101. Visual Thinking — Lecture/lab. Visual thinking and language skills are developed and exercised in the context of solving design problems. Exercises for the mind’s eye. Rapid visualization and prototyping with emphasis on fluent and flexible idea production. The relationship between visual thinking and the creative process. Enrollment limited to 60. GER:DB-EngrAppSci
3 units, Aut (Northway, D; Bishop, S), Win (Bishop, S; Sather, E), Spr (Sheppard, S; Northway, D)

ME 103D. Engineering Drawing and Design — Designed to accompany 203. The fundamentals of engineering drawing including orthographic projection, dimensioning, sectioning, exploded and auxiliary views, and assembly drawings. Homework drawings are of parts fabricated by the student in the shop. Assignments in 203 supported by material in 103D and sequenced on the assumption that the student is enrolled in both courses simultaneously.
1 unit, Aut, Win (Milroy, J)

ME 110A. Design Sketching — Freehand sketching, rendering, and design development, guided by instructors. Concurrent assignments in 115 and 216B,C provide subject matter, but open to anyone wanting to improve freehand drawing skills.
1 unit, Win, Spr (Zmijewski, B)

ME 110B. Advanced Design Sketching — Freehand sketching, rendering, design development, and some computer use, guided by instructors. Concurrent assignments in 116 provide subject matter. Prerequisite: 110A or consent of instructor based on drawing skill.
1 unit, Aut (Zmijewski, B)

4 units, Win (Gerdes, C)

ME 113. Mechanical Engineering Design — Goal is to create designs and models of new mechanical devices. Design is experienced by students as they work on a team design project obtained from industry or other organizations. Prerequisites: 80, 101, 112. GER:DB-EngrAppSci
4 units, Spr (Nelson, D)

ME 115. Human Values in Design — The central philosophy of the product design program, emphasizing the relation between technical and human values, the innovation process, and design methodology. Lab exercises include development of simple product concepts visualized in rapidly executed three-dimensional mockups. Prerequisite: 101. GER:DB-EngrAppSci
3 units, Win (Boyle, B)

ME 116. Advanced Product Design: Formgiving — Small- and medium-scale design projects are carried to a high degree of aesthetic refinement. Emphasis is on form development and interaction design. Prerequisites: 115, ARTHIST 160. GER:DB-EngrAppSci
4 units, Aut (Kembel, G; Burnett, W)

ME 120. History and Philosophy of Design — Major schools of 19th- and 20th-century design (Arts-and-Crafts movement, Bauhaus, Industrial Design, and postmodernism) are analyzed in terms of their continuing cultural relevance. The relation of design to art, technology, and politics; readings from principal theorists, practitioners, and critics; recent controversies in industrial and graphic design, architecture, and urbanism. Enrollment limited to 40. GER:DB-EngrAppSci
3-4 units, Spr (Katz, B)
ME 131A. Heat Transfer — The principles of heat transfer by conduction, convection, and radiation with examples from the engineering of practical devices and systems. Topics include transient and steady conduction, conduction by extended surfaces, boundary layer theory for forced and natural convection, boiling, heat exchangers, and graybody radiative exchange. Prerequisites: 70, ENGR 30. Recommended: intermediate calculus, ordinary differential equations. GER:DB-EngrAppSci
4 units, Aut (Goodson, K)

4 units, Win (Mungal, G)

ME 140. Advanced Thermal Systems — Capstone course. Thermal analysis and engineering emphasizing integrating heat transfer, fluid mechanics, and thermodynamics into a unified approach to treating complex systems. Mixtures, humidity, chemical and phase equilibrium, and availability. Labs apply principles through hands-on experience with a turbojet engine, PEM fuel cell, and hybrid solid/oxygen rocket motor. Use of MATLAB as a computational tool. Prerequisites: ENGR 30, ME 70, and 131A,B. GER:DB-EngrAppSci
5 units, Spr (Bowman, C)

3 units, not given this year

ME 161. Dynamic Systems — (Same as 261.) Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of ordinary differential equations governing the behavior of single and multiple degree of freedom systems. Stability, resonance, amplification and attenuation, and control system design. Demonstrations and laboratory experiments. Prerequisite: background in dynamics and calculus such as ENGR 15 and MATH 43. Recommended: CME 102, and familiarity with differential equations, linear algebra, and basic electronics. GER:DB-EngrAppSci
4 units, Aut (Mitiguy, P)

ME 191. Engineering Problems and Experimental Investigation — Directed study and research for undergraduates on a subject of mutual interest to student and staff member. Student must find faculty sponsor and have approval of adviser.
1-5 units, Aut, Win, Spr, Sum (Staff)

ME 191H. Honors Research — Student must find faculty honors adviser and apply for admission to the honors program.
1-5 units, Aut, Win, Spr, Sum (Staff)

COGNATE COURSES (UNDERGRADUATE)
See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the department’s student services office for applicability of these courses to a major or minor program.

ARTSTUDI 60. Design I: Fundamental Visual Language
3-5 units, Aut, Win, Spr (Edmark, J; Kahn, M)

ARTSTUDI 160. Design II: The Bridge
3-6 units, Win (Kahn, M), Spr (Edmark, J)

CS 106A. Programming Methodology — (Same as ENGR 70A.)
3-5 units, Aut (Young, P), Win (Roberts, E), Spr (Young, P), Sum (Staff)

3 units, Aut (Sheppard, S), Spr (Kiremidjian, A)

ENGR 15. Dynamics
3 units, Aut (Niemeyer, G), Spr (Waldron, K)

ENGR 25. Biotechnology — (Same as CHEMENG 25.)
3 units, Spr (Hwang, L)

ENGR 30. Engineering Thermodynamics
3 units, Aut (Edwards, C), Win (Pitsch, H)

ENGR 31. Chemical Principles with Application to Nanoscale Science and Technology
4 units, Aut (McIntyre, P)

ENGR 40. Introductory Electronics
5 units, Aut (Howe, R), Spr (Wong, S)

ENGR 102M. Technical/Professional Writing for Mechanical Engineers
1 unit, Aut, Win (Lounge, D)

ENGR 105. Feedback Control Design
3 units, Win, Sum (Emami-Naeini, A)

ADVANCED UNDERGRADUATE AND BEGINNING GRADUATE

ME 201. Dim Sum of Mechanical Engineering — Introduction to research in mechanical engineering for M.S. students and upper-division undergraduates. Weekly presentations by current ME Ph.D. and second-year fellowship students to show research opportunities across the department. Strategies for getting involved in a research project.
1 unit, Aut (Sheppard, S; Gardella, J)

ME 203. Manufacturing and Design — Prototype development techniques as an intrinsic part of the design process. Machining, welding, and casting. Manufacturing processes. Design aspects developed in an individual term project chosen, designed, and fabricated by students. Labs, field trips. Undergraduates majoring in Mechanical Engineering or Product Design must take course for 4 units. Limited enrollment with consent of instructor. Corequisite: 103D or CAD experience. Corequisite for WIM for Mechanical Engineering and Product Design majors: ENGR 102M. Recommended: 101.
3-4 units, Aut, Win (Beach, D)

3 units, Spr (Connolly, R)

ME 206A,B. Entrepreneurial Design for Extreme Affordability — (Same as OIT 333/334.) Project course jointly offered by School of Engineering and Graduate School of Business. Students apply engineering and business skills to design product prototypes, distribution systems, and business plans for entrepreneurial ventures in developing countries for a specified challenge faced by the world’s poor. Topics include user empathy, appropriate technology design, rapid prototype engineering and testing, social technology entrepreneurship, business modeling, and project management. Weekly design reviews; final course presentation. Industry and adviser interaction. Limited enrollment via application; see http://www.stanford.edu/class/me206.
A: Win, 4 units (Beach, D; Kelley, D; Patell, J), B: Spr, 4 units (Kelley, D; Patell, J)
ME 207. Negotiation—(Same as CEE 151/251, MS&E 285.) Negotiation styles and processes to help students conduct and review negotiations. Workshop format integrating intellectual and experiential learning. Exercises, live and field examples, individual and small group reviews. Application required before first day of class; see http://www.stanford.edu/class/msande285/. Enrollment limited to 50.
3 units, Spr (Christensen, S)

ME 208. Patent Law and Strategy for Innovators and Entrepreneurs—Strategies to build a patent portfolio and avoid patent infringement. How to conduct patent searches and file provisional patent applications. 2-3 units, Aut (Kembel, G; Schox, J)

ME 209. Redesigning the Future—(Same as HUMNTIES 204.) Project-based. Futures and foresight methods; how the future can be envisioned, designed, and communicated. Integration of analysis with experience, foresight with design thinking, and building prototypes for the future. The role of future human needs. In previous years, students have designed the future of the university experience. Student teams of three or four. Design experience or fabrication skills not required.
3 units, Win (Cockayne, W; Leifer, L)

ME 210. Introduction to Mechatronics—Technologies involved in mechatronics (intelligent electro-mechanical systems), and techniques to apply this technology to mechatronic system design. Topics include: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. Large, open-ended team project. Limited enrollment. Prerequisites: ENGR 40, CS 106, or equivalents.
4 units, Win (Kenny, T; Ohline, R)

ME 216A. Advanced Product Design: Needfinding—Human needs that lead to the conceptualization of future products, environments, systems, and services. Field work in public and private settings; appraisal of personal values; readings on social ethnographic issues; and needfinding for a corporate client. Emphasis is on developing the flexible thinking skills that enable the designer to navigate the future. Prerequisite: 115, 203, 313, or consent of instructor.
3-4 units, Win (Barry, M; Patnaik, D)

ME 216B. Advanced Product Design: Implementation—Summary project using knowledge, methodology, and skills obtained in 115/313 and 216A. Students implement design concepts and present them to a professional jury. Prerequisite: 216A.
4 units, Spr (Klebanth, P; French, A)

ME 218A. Smart Product Design Fundamentals—Team design project series on programmable electromechanical systems design. Topics: transistors as switches, basic digital and analog circuits, operational amplifiers, comparators, software design, programming in C. Lab fee. Limited enrollment.
4-5 units, Aut (Carreyer, J)

ME 218B. Smart Product Design Applications—Second in team design project series on programmable electromechanical systems design. Topics: user I/O, timer systems, interrupts, signal conditioning, software design for embedded systems, sensors, actuators, noise, and power supplies. Lab fee. Limited enrollment. Prerequisite: 218A or passing the smart product design fundamentals proficiency examination.
4-5 units, Win (Carreyer, J)

ME 218C. Smart Product Design Practice—Advanced level in series on programmable electromechanical systems design. Topics: inter-processor communication, system design with multiple microprocessors, architecture and assembly language programming for the PIC microcontroller, controlling the embedded software tool chain, A/D and D/A techniques, electronic manufacturing technology. Lab fee. Limited enrollment. Team project. Prerequisite: 218B.
4-5 units, Spr (Carreyer, J)

ME 218D. Smart Product Design: Projects—Industrially sponsored project is the culmination of the Smart Product Design sequence. Student teams take on an industrial project requiring application and extension of knowledge gained in the prior three quarters, including prototyping of a final solution with hardware, software, and professional documentation and presentation. Lectures on electronic and software design, and electronic manufacturing techniques. Topics: chip level design of microprocessor systems, real time operating systems, alternate microprocessor architectures, and PCB layout and fabrication.
4 units, Aut (Carreyer, J)

ME 219. The Magic of Materials and Manufacturing—Methods for market-quantity manufacturing of parts and products from a product designer’s point of view. Materials including metals, plastics, ceramics, fibers, and foams, and processes that manipulate, exploit, transform, and modify these materials. Manufacturing site visits and laboratory projects.
3 units, Spr (Beach, D)

ME 220. Introduction to Sensors—Sensors are widely used in scientific research and as an integral part of commercial products and automated systems. The basic principles for sensing displacement, force, pressure, acceleration, temperature, optical radiation, nuclear radiation, and other physical parameters. Performance, cost, and operating requirements of available sensors. Elementary electronic circuits which are typically used with sensors. Lecture demonstration of a representative sensor from each category elucidates operating principles and typical performance. Lab experiments with off-the-shelf devices.
3-4 units, Spr (Kenny, T)

ME 222. Beyond Green Theory: A Workshop in Ecological Design—Goal is to translate green theory into product form through short projects that address materials, product function and co-function, and situational patterns or habits. How to blend ecological design processes with standard design methodologies.
2-3 units, Spr (Kembel, G; MacPherson, M)

ME 227. Vehicle Dynamics and Control—The application of dynamics, kinematics, and control theory to the analysis and design of ground vehicle behavior. Simplified models of ride, handling, and braking, their role in developing intuition, and limitations in engineering design. Suspension design fundamentals. Performance and safety enhancement through automatic control systems. In-car laboratory assignments for model validation and kinesthetic understanding of dynamics. Limited enrollment. Prerequisites: ENGR 105, consent of instructor.
3 units, Spr (Gerdes, C)

ME 228. Creating Infectious Action—(Same as MS&E 288.) Offered by the d.school. Teams of master’s students from disciplines including engineering, design, business, behavioral sciences, and education attempt to spread positive behavior through projects that include spreading the adoption of the Firefox web browser, applying methods from hip hop to fuel the spread of fads, and spreading financially responsible individual behavior. Industry experts and academics provide guidance.

ME 240. Introduction to Nanotechnology—Nanotechnology as multidisciplinary with contributions from physical sciences, engineering, and industry. Current topics in nanotechnology research; developments in nanomaterials, mechanics, electronics, and sensors; and applications. Nanoscale materials building blocks, fabrication and assembly processes, characterization and properties, and novel system architectures. Implications for future development.
3 units, not given this year

3 units, Spr (Prinz, F)

ME 261. Dynamic Systems—(Same as 161; see 161.)
4 units, Aut (Mitiguy, P)
ME 280. Skeletal Development and Evolution — The mechanobiology of skeletal growth, adaptation, regeneration, and aging is considered from developmental and evolutionary perspectives. Emphasis is on the interactions between mechanical and chemical factors in the regulation of connective tissue biology. Prerequisites: 80, or Human Biology core, or Biological Sciences core.
3 units, Spr (Carter, D)

ME 281. Biomechanics of Movement — (Same as BIOE 281.) Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation. GER: DB-EngrAppSci
3 units, Aut (Delp, S)

3 units, Win (Taylor, C)

3 units, Win (Taylor, C)

ME 289. Biomechanical Engineering Research Seminar — BME research conducted at Stanford for incoming students. Graduate students and postdoctoral fellows present research emphasizing motivation of research questions, project design, methods, and preliminary results.
1 unit, Aut (Muendermann, A)

ME 294. Medical Device Design — In collaboration with the School of Medicine. Introduction to medical device design for undergraduate and graduate engineering students. Design and prototyping. Labs; medical device environments including hands on device testing; and field trips to operating rooms and local device companies. Limited enrollment. Prerequisite: 203.
3 units, Aut (Milroy, J; Doshi, R)

ME 297. Forecasting the Future of Engineering — Goal is to develop a 25-year forecast of the future of engineering including the challenges engineers are likely to be asked to solve, and how engineers can be prepared to meet these challenges. Students prepare a long-range forecast of a specific science/engineering sector and a proposed initiative tying new engineering capabilities with global challenges.
3 units, Win (Kelley, D; Saffo, P)

ME 298. Silversmithing and Design — Skills involved in working with precious metals at a small scale. Investment casting and fabrication techniques such as reticulation, granulations, filigree, and mokume gane.
3-4 units, Win (Shaughnessy, S; Knox, A)

ME 299. Practical Training — Educational opportunities in high technology research and development labs in industry. Qualified graduate students engage in internship work and integrate that work into their academic program. Following internship, students complete a research report outlining work activity, problems investigated, key results, and follow-on projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own employment and faculty sponsorship. Register under faculty sponsor’s section number.
1 unit, Aut, Win, Spr, Sum (Staff)

GRADUATE
ME 300A. Linear Algebra with Application to Engineering Computations — (Same as CME 200.) Solving matrix-vector systems. Direct and iterative solvers for non-singular linear systems of equations; their accuracy, convergence properties, and computational efficiency. Under- and over-determined systems, and nonlinear systems of equations. Eigenvalues, eigenvectors, and singular values; their application to engineering problems. Concepts such as basis, linear independence, column space, null space, rank, norms and condition numbers, projections, and matrix properties. Recommended: familiarity with computer programming; mathematics background equivalent to MATH 103, 130.
3 units, Aut (Gerritsen, M)

ME 300B. Partial Differential Equations in Engineering — (Same as CME 204.) Geometric interpretation of partial differential equation (PDEs) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200, equivalent, or consent of instructor.
3 units, Win (Shaugh, E)

3 units, Spr (Farhat, C)

ME 308. Spatial Motion — The geometry of motion in Euclidean space. Fundamentals of theory of screws with applications to robotic mechanisms, constraint analysis, and vehicle dynamics. Methods for representing the positions of spatial systems of rigid bodies with their inter-relationships; the formulation of Newton-Euler kinetics applied to serial chain systems such as industrial robotics.
3 units, alternate years, not given this year (Waldron, K)

ME 309. Finite Element Analysis in Mechanical Design — Basic concepts of finite elements, with applications to problems confronted by mechanical designers. Linear static, modal, and thermal formulations; nonlinear and dynamic formulations. Students implement simple element formulations. Application of a commercial finite element code in analyzing design problems. Issues: solution methods, modeling techniques features of various commercial codes, basic problem definition. Individual projects focus on the interplay of analysis and testing in product design/development. Prerequisite: MATH 103, or equivalent. Recommended: 80, or equivalent in structural and/or solid mechanics; some exposure to principles of heat transfer.
3 units, Spr (Sheppard, S)

ME 310A. Tools for Team-Based Design — (Same as ENGR 310A.) For graduate students; open to limited SITN/global enrollment. Project-based, exposing students to the tools and methodologies for forming and managing an effective engineering design team in a business environment, including product development teams that may be spread around the world. Topics: personality profiles for creating teams with balanced diversity; computational tools for project coordination and management; real-time electronic documentation as a critical design process variable; and methods for refining project requirements to ensure that the team addresses the right problem with the right solution. Computer-aided tools for supporting geographically distributed teams. Final project analyzes industry-sponsored design projects for consideration in 310B,C. Inves-
tigation includes benchmarking and meetings with industrial clients. Deliverable is a detailed document with project specifications and optimal design team for subsequent quarters. Limited enrollment.

3-4 units, Aut (Cutkosky, M; Leifer, L)

**ME 310B.C. Design Project Experience with Corporate Partners**—(Same as ENGR 310B.) Two quarter project for graduate students with design experience who want involvement in an entrepreneurial design team with real world industrial partners. Products developed are part of the student’s portfolio. Each team functions as a small startup company with a technical advisory board of the instructional staff and a coach. Computer-aided tools for project management, communication, and documentation; budget provided for direct expenses including technical assistants and conducting tests. Corporate liaisons via site visits, video conferencing, email, fax, and phone. Hardware demonstrations, peer reviews, scheduled documentation releases, and a team environment provide the mechanisms and culture for design information sharing. Enrollment by consent of instructor; depends on a pre-enrollment survey in December and recommendations by project definition teams in 310A. For some projects, 217 and 218 may be prerequisites or corequisites; see http://me310.stanford.edu for admission guidelines.

B: 3-5 units, Win (Cutkosky, M; Leifer L)
C: 3-4 units, Spr (Cutkosky, M; Leifer, L)

**ME 310X. Tools for Team-Based Design Global Teaming Lab**—(Same as ENGR 310X.) Participation in a global design team with students in Sweden or Japan. Limited enrollment. May be repeated for credit. Prerequisite: consent of instructor. Corequisite: ENGR 310A,B,C. 1-5 units, Aut, Win, Spr, Sum (Cutkosky, M; Leifer L)

**ME 312. Advanced Product Design: Formgiving**—Small- and medium-scale design projects carried to a high degree of aesthetic refinement. Emphasis is on generating appropriate forms to the task and setting. Prerequisites: 203, 313, ARTHIST 160.

3-4 units, Win (Burnett, W; Kembel, G)

**ME 313. Human Values and Innovation in Design**—Introduction to the philosophy, spirit, and tradition of the product design program. Hands-on design projects used as vehicles for design thinking, visualization, and methodology. The relationships among technical, human, aesthetic, and business concerns. Drawing, prototyping, and design skills. Focus is on tenets of design philosophy: point of view, user-centered design, design methodology, and iterative design. Enrollment limited to 60.

3 units, Aut (Kelley, D)

**ME 314. Good Products, Bad Products**—The characteristics of industrial products that cause them to be successes or failures; the straightforward (performance, economy, reliability), the complicated (human and cultural fit, compatibility with the environment, craftsmanship, positive emotional response of the user), the esoteric (sophistication, symbolism). Why engineers and business people must better understand these factors to produce more successful products. Projects, papers, guest speakers, field trips.

3-4 units, Win (Beach, D)

**ME 315. The Designer in Society**—For graduate students. Career objectives and psychological orientation compared with existing social values and conditions. Emphasis is on assisting individuals in assessing their roles in society. Readings on political, social, and humanistic thought are related to technology and design. Experiential, in-class exercises, and term project. Enrollment limited to 24.

3 units, Win (Roth, B)

**ME 316A,B,C. Product Design Master’s Project**—For graduate Product Design or Design (Art) majors only. Students create and present two master’s theses under the supervision of engineering and art faculty. Theses involve the synthesis of aesthetics and technological concerns in the service of human need and possibility. Product Design students register for 4 units; Art students for 2 units. Corequisite: ARTHIST 360.

2-4 units, A: Aut, B: Win, C: Spr (Kelley, D; Kembel, G)

**ME 317A. Design for Manufacturability: Product Definition for Market Success**—Systematic methodologies to define, develop, and produce world-class products. Student team projects to identify opportunities for improvement and develop a comprehensive product definition. Topics include value engineering, quality function deployment, design for assembly and producibility, design for variety and supply chain, design for life-cycle quality, and concurrent engineering. Students must take 317B to complete the project and obtain a letter grade. On-campus enrollment limited to 28; no limit on SCPD class size, but each site must have at least 3 students to form a project team.

4 units, Win (Ishii, K)

**ME 317B. Design for Manufacturability: Quality by Design for Customer Value**—(Formerly 217B.) Continuation of 317A. Focus is on implementation of competitive product design. Student groups apply structured methods to optimize the design of an improved product, and plan for manufacture, testing, and service. Project deliverable is a comprehensive product and process specification. Topics: concept generation and selection (Pugh’s method); FMEA applied to the manufacturing process; design for robustness; Taguchi method; SPC and six sigma process; tolerance analysis; flexible manufacturing; product testing; and rapid prototyping. Enrollment limited to 40, not including SCPD students. Minimum enrollment of two per SCPD viewing site; single student site by consent of instructor. On-campus class limited to 25. For SCPD students, no enrollment limit, but each site must have a minimum of three students to form a project team and define a project on their own. Prerequisite: 317A.

4 units, Spr (Ishii, K)

4 units, Aut (Milroy, J; Beach, D), Win, Spr (Milroy, J)

**ME 322. Kinematic Synthesis of Mechanisms**—The rational design of linkages. Techniques to determine linkage proportions to fulfill design requirements using analytical, graphical, and computer based methods.

3 units, Win (Roth, B)

**ME 323. Modeling and Identification of Mechanical Systems for Control**—The art and science behind developing mathematical models for control system design. Theoretical and practical system modeling and parameter identification. Frequency domain identification, parametric modeling, and black-box identification. Analytical work and laboratory experience with identification, controller implementation, and the implications of unmodeled dynamics and non-linearities. Prerequisites: linear algebra and system simulation with MATLAB/SIMULINK; ENGR 105.

3 units, Aut (Gerdes, C)

**ME 324. Precision Engineering**—Advances in engineering are often enabled by more accurate control of manufacturing and measuring tolerances. Concepts and technology enable precision such that the ratio of overall dimensions to uncertainty of measurement is large relative to normal engineering practice. Typical application areas: non-spherical optics, computer information storage devices, and manufacturing metrology systems. Application experience through design and manufacture of a precision engineering project, emphasizing the principles of precision engineering. Structured labs; field trips. Prerequisite: consent of instructors.

4 units, Spr (Beach, D; Debra, D)

**ME 325. Interdisciplinary Interaction Design**—(Same as CS 447.) Interdisciplinary student teams apply user-centered methodologies to develop composite software systems that create new opportunities such as a citizen-access portal to a city’s information. Real systems on industrial-strength platforms, focusing on innovative design for the full software system, including construction, distribution, and social and organizational implementation. Enrollment limited to 25.

3-4 units, Spr (Winograd, T; Yusuf, Z; Platter, H)
ME 326. Telerobotics and Human-Robot Interactions — Focus is on dynamics and controls. Evaluation and implementation of required control systems. Topics include master-slave systems, kinematic and dynamic similarity; control architecture, force feedback, haptics, sensory substitutions; stability, passivity, sensor resolution, servo rates; time delays, prediction, wave variables. Hardware-based projects encouraged, which may complement ongoing research or inspire new developments. Limited enrollment. Prerequisites: ENGR 205, 320 or CS 223A, or consent of instructor.

3 units, Win (Niemeyer, G)

3 units, alternate years, not given this year

ME 330. Advanced Kinematics — Kinematics from mathematical viewpoints. Introduction to algebraic geometry of point, line, and plane elements. Emphasis is on basic theories which have potential application to mechanical linkages, computational geometry, and robotics.

3 units, Aut (Roth, B)

ME 331A. Classical Dynamics — (Same as AA 242A.) Accelerating and rotating reference frames. Kinematics of rigid body motion; Euler angles, direction cosines. D'Alembert's principle, equations of motion. Inertia properties of rigid bodies. Dynamics of coupled rigid bodies. Lagrange's equations and their use. Dynamic behavior, stability, and small departures from equilibrium. Prerequisite: ENGR 15 or equivalent.

3 units, Aut (West, M)

ME 331B. Advanced Dynamics — (Same as AA 242B.) Formulation of equations of motion with Newton/Euler equations; angular momentum principle; D'Alembert principle; power, work, and energy; Kane's method; and Lagrange's equations. Numerical solutions of nonlinear algebraic and differential equations governing the behavior of multiple degree of freedom systems. Computed torque control.

3 units, Win (Mitiguy, P)

ME 333. Mechanics — Goal is a common basis for advanced mechanics courses. Formulation of the governing equations from a Lagrangian perspective. Examples include systems of particles and linear elastic solids. Waves in discrete and continuous media. Linear elasticity formulation in the static and dynamic cases, and elementary measures of stress and strain. Tensor and variational calculus.

3 units, Aut (Lew, A)

3 units, alternate years, not given this year (Cai, W)

3 units, Win (Pinsky, P)

3 units, Spr (Pinsky, P)

3 units, not given this year (Pinsky, P)

ME 336. Crystalline Anisotropy — (Same as MATSCI 359.) Matrix and tensor analysis with applications to the effects of crystal symmetry on elastic deformation, thermal expansion, diffusion, piezoelectricity, magnetism, thermodynamics, and optical properties of solids, on the level of J. F. Nye’s Physical Properties of Crystals. Homework sets use Mathematica.

3 units, Win (Barnett, D)

3 units, Win (Lew, A)

ME 338B. Continuum Mechanics — Constitutive theory; equilibrium constitutive relations; material frame indifference and material symmetry; finite elasticity; formulation of the boundary value problem; linearization and well-posedness; symmetries and configurational forces; numerical considerations.

3 units, Spr (Lew, A)

3 units, not given this year

3 units, Spr (Cai, W)

ME 340B. Elasticity in Microscopic Structures — Elasticity theory and applications to structures in micro devices, material defects, and biological systems. Theoretical basis: stress, strain, and energy; equilibrium and compatibility conditions; boundary value problem formulation. Solution methods: stress function, Green’s function, and Fourier transformation; moderate numerical exercises using Matlab. Methods and solutions applied to the elastic behaviors of thin films and MEMS structures, cracks and dislocations, and cell filaments and membranes.

3 units, not given this year (Cai, W)
ME 341. Building Mathematical Models in Biomechanics — Theory and practice of mathematical models. Based on the research literature, examples from hearing and speech sciences, orthopedic bioengineering, and neuromuscular biomechanics. General, meta-theoretical issues that go beyond the particular subject matter. Examples include: What is a model? What constitutes a good model? What is the process of building a model? What are the different approaches to modeling? Dualisms in modeling include: the interplay between theory and experiment, analytic and computational models, and forward and inverse approaches.

3 units, alternate years, not given this year

ME 342. MEMS Laboratory II — Emphasis is on tools and methodologies for designing and fabricating MEMS-based solutions. Student interdisciplinary teams collaborate with students and faculty from other departments to invent, develop, and integrate MEMS/biomedical. Design alternatives fabricated and tested. Manufacturability, assembly, test, and design for redesign. At least one design alternative developed into a functional prototype. Limited enrollment. Prerequisite: 342A or equivalent.

3-4 units, Sum (Pruitt, B)

ME 342D. MEMS Laboratory Assignments — Prerequisite: consent of instructor.

1-2 units, not given this year (Pruitt, B)

ME 343. An Introduction to Waves in Elastic Solids — One-dimensional motion of an elastic continuum, the linearized theory of elasticity and elastodynamic theory, elastic waves in an unbounded medium, plane harmonic waves in elastic half-spaces including reflection and refraction, slowness, energy velocity and anisotropic effects. Text is first five chapters of Achenbach’s Wave Propagation in Elastic Solids.

3 units, Spr (Barnett, D)

ME 344A. Computational Nanotechnology — Atomistic simulations as computational tools to design nanoscale materials and devices. Nanoparticles and nanowires introduced as main classes of nano building blocks. Computational modeling of carbon nanomaterials (fullerenes and nanotubes); nanoparticles and quantum dots; semiconductor and metal nanowires; and molecular wires. Atomistic modeling programs with graphical user interface used to gain hands-on experience of nanomaterials design.

3 units, not given this year

ME 344B. Nanomaterials Modeling — Atomistic and quantum mechanical simulation methods. Focus is quantum simulation of nanomaterials. Review of concepts and practical techniques of atomistic simulations; finite difference algorithms and practical computational issues for molecular dynamics and Monte Carlo simulations. Graphical user interface, designing nanomaterials through analysis and feedback processes, configuration optimization, dynamic mode analysis, and electronic structure analysis. Hands-on experience in computational design of nanomaterials, and fundamentals of simulations.

3 units, not given this year

ME 345. Fatigue Design and Analysis — The mechanism and occurrences of fatigue in service. Methods for predicting fatigue life and for protecting against premature fatigue failure. Use of elastic stress and inelastic strain analyses to predict crack initiation life. Use of linear elastic fracture mechanics to predict crack propagation life. Effects of stress concentrations, manufacturing processes, load sequence, irregular loading, multi-axial loading. Subject is treated from the viewpoints of the engineer seeking up-to-date methods of life prediction and the researcher interested in improving understanding of fatigue behavior. Prerequisite: undergraduate mechanics of materials.

3 units, Win (Nelson, D)

3 units, Win (Cai, W)

3 units, not given this year (Barnett, D)

ME 348. Experimental Stress Analysis — Theory and applications of photoelasticity, strain gauges, and holographic interferometry. Comparison of test results with theoretical predictions of stress and strain. Other methods of stress and strain determination (optical fiber strain sensors, thermoelasticity, Moire, residual stress determination).

3 units, not given this year (Barnett, D)

ME 351A. Fluid Mechanics — Exact and approximate analysis of fluid flow covering kinematics, global and differential equations of mass, momentum, and energy conservation. Forces and stresses in fluids. Euler’s equations and the Bernoulli theorem applied to inviscid flows. Vorticity dynamics. Topics in irrotational flow: stream function and velocity potential for exact and approximate solutions; superposition of solutions; complex potential function; circulation and lift. Some boundary layer concepts.

3 units, Aut (Mungal, G)

ME 351B. Fluid Mechanics — Laminar viscous fluid flow. Governing equations, boundary conditions, and constitutive laws. Exact solutions for parallel flows. Creeping flow limit, lubrication theory, and boundary layer theory including free-shear layers and approximate methods of solution; boundary layer separation. Introduction to stability theory and transition to turbulence, and turbulent boundary layers. Prerequisite: 351A.

3 units, Win (Lele, S)

ME 352A. Radiative Heat Transfer — The fundamentals of thermal radiation heat transfer; blackbody radiation laws; radiative properties of non-black surfaces; analysis of radiative exchange between surfaces and in enclosures; combined radiation, conduction, and convection; radiative transfer in absorbing, emitting, and scattering media. Advanced material for students with interest in heat transfer, as applied in high-temperature energy conversion systems. Take 352B,C for depth in heat transfer. Prerequisites: graduate standing and undergraduate course in heat transfer. Recommended: computer skills.

3 units, Aut (Mitchell, R)

3 units, Win (Goodson, K)

3 units, Spr (Eaton, J)
ME 354. Experimental Methods in Fluid Mechanics — Experimental methods associated with the interfacing of laboratory instruments, experimental control, sampling strategies, data analysis, and introductory image processing. Instrumentation including point-wise anemometers and particle image tracking systems. Lab. Prerequisite: previous experience with computer programming and consent of instructor. Limited enrollment.

4 units, Win (Santiago, J)

3 units, Spr (Mungal, G)

ME 358. Heat Transfer in Microdevices — Application-driven introduction to the thermal design of electronic circuits, sensors, and actuators that have dimensions comparable to or smaller than one micrometer. The impact of thin-layer boundaries on thermal conduction and radiation. Convection in microchannels and microscopic heat pipes. Thermal property measurements for microdevices. Emphasis is on Si and GaAs semiconductor devices and layers of unusual, technically-promising materials such as chemical-vapor-deposited (CVD) diamond. Final project based on student research interests. Prerequisite: consent of instructor.

3 units, Spr (Goodson, K)

ME 359A. Advanced Design and Engineering of Space Systems I — The application of advanced theory and concepts to the development of spacecraft and missile subsystems; taught by experts in their fields. Practical aspects of design and integration. Mission analysis, systems design and verification, radiation and space environments, orbital mechanics, space propulsion, electrical power and avionics subsystems, payload communications, and attitude control. Subsystem-oriented design problems focused around a mission to be completed in groups. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related engineering field or consent of instructor.

4 units, Win (Khayms, V)

ME 359B. Advanced Design and Engineering of Space Systems II — Continuation of 359A. Topics include aerospace materials, mechanical environments, structural analysis and design, finite element analysis, mechanisms, thermal control, probability and statistics. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related field, or consent of instructor.

4 units, Spr (Yiu, Y)

3 units, Spr (Pitsch, H)

ME 362A. Physical Gas Dynamics — Concepts and techniques for description of high-temperature and chemically reacting gases from a molecular point of view. Introductory kinetic theory, chemical thermodynamics, and statistical mechanics as applied to properties of gases and gas mixtures. Transport and thermodynamic properties, law of mass action, and equilibrium chemical composition. Maxwellian and Boltzmann distributions of velocity and molecular energy. Examples and applications from areas of current interest such as combustion and materials processing.

3 units, Aut (Cappelli, M)

ME 362B. Nonequilibrium Processes in High-Temperature Gases — Chemical kinetics and energy transfer in high-temperature gases. Collision theory, transition state theory, and unimolecular reaction theory. Prerequisite: 362A or consent of instructor.

3 units, Win (Hanson, R)

ME 363. Partially Ionized Plasmas and Gas Discharges — Introduction to partially ionized gases and the nature of gas discharges. Topics: the fundamentals of plasma physics emphasizing collisional and radiative processes, electron and ion transport, ohmic dissipation, oscillations and waves, interaction of electromagnetic waves with plasmas. Applications: plasma diagnostics, plasma propulsion and materials processing. Prerequisite: 362A or consent of instructor.

3 units, Spr (Cappelli, M)

ME 364. Optical Diagnostics and Spectroscopy — The spectroscopy of gases and laser-based diagnostic techniques for measurements of species concentrations, temperature, density, and other flow field properties. Topics: electronic, vibrational, and rotational transitions; spectral lineshapes and broadening mechanisms; absorption, fluorescence, Rayleigh and Raman scattering methods; collisional quenching. Prerequisite: 362A or equivalent.

3 units, not given this year (Hanson, R)

4 units, Spr (Hanson, R)

ME 370A. Energy Systems I: Thermodynamics — Thermodynamic analysis of energy systems emphasizing systematic methodology for and application of basic principles to generate quantitative understanding. Availability, mixtures, reacting systems, phase equilibrium, chemical availability, and modern computational methods for analysis. Prerequisites: undergraduate engineering thermodynamics and computer skills such as Matlab.

3 units, Aut (Bowman, C)

ME 370B. Energy Systems II: Modeling and Advanced Concepts — Development of quantitative device models for complex energy systems, including fuel cells, reformers, combustion engines, and electrolyzers, using thermodynamic and transport analysis. Student groups work on energy systems to develop conceptual understanding, and high-level, quantitative and refined models. Advanced topics in thermodynamics and special topics associated with devices under study. Prerequisite: 370A.

4 units, Win (Simon, A)

ME 370C. Energy Systems III: Projects — Refinement and calibration of energy system models generated in ME 370B carrying the models to maturity and completion. Integration of device models into a larger model of energy systems. Prerequisites: 370A,B, consent of instructor.

4 units, Spr (Staff)

ME 371. Combustion Fundamentals — Heat of reaction, adiabatic flame temperature, and chemical composition of products of combustion; kinetics of combustion and pollutant formation reactions; conservation equations for multi-component reacting flows; propagation of laminar premixed flames and detonations. Prerequisite: 362A or 370A, or consent of instructor.

3 units, Win (Bowman, C)

ME 372. Combustion Applications — The role of chemical and physical processes in combustion: ignition, flammability, and quenching of combustible gas mixtures; premixed turbulent flames; laminar and turbulent diffusion flames; combustion of fuel droplets and sprays. Prerequisite: 371.

3 units, Spr (Zheng, X)

ME 374A. Biodesign Innovation: Needs Finding and Concept Creation — (Same as BIOE 374A, OIT 384, MED 272A.) First of two-part sequence. Strategies for interpreting clinical needs, researching literature, and searching patents. Clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping, and market assessment. Student entrepreneurial teams create, analyze, and screen medical technology ideas, and select projects for development.

3-4 units, Win (Makower, J; Milroy, J; Yock, P; Zenios, S)
ME 374B. Biodesign Innovation: Concept Development and Implementation — (Same as BIOE 374B, OIT 385, MED 272B.) Continuation of 374A. Early factors for success; how to prototype inventions and refine intellectual property. Lectures, guest medical pioneers, and entrepreneurs about strategic planning, ethical considerations, new venture management, and financing and licensing strategies. Cash requirements; regulatory (FDA), reimbursement, clinical, and legal strategies, and business or research plans.

3-4 units, Spr (Makower, J; Milroy, J; Yock, P; Zenios, S)

ME 377. Experiences in Innovation and Design Thinking — Immersive experiences in innovation and design thinking, blurring the boundaries among technology, business, and human values. Preparation for real world innovation and courses on social entrepreneurship, and experience and business prototyping. Hands-on exercises and projects focusing on frameworks and methods.

2-3 units, not given this year

ME 381. Orthopaedic Bioengineering — Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices.

3 units, Win (Carter, D)

ME 382A. Biomedical Device Design and Evaluation I — Real world problems and challenges of biomedical device design and evaluation. Students engage in industry sponsored projects resulting in new designs, physical prototypes, design analyses, computational models, and experimental tests, gaining experience in: the formation of design teams; interdisciplinary communication skills; regulatory issues; biological, anatomical, and physiological considerations; testing standards for medical devices; and intellectual property.

4 units, Win (Andriacchi, T)

ME 382B. Biomedical Device Design and Evaluation II — Continuation of industry sponsored projects from 382A. With the assistance of faculty and expert consultants, students finalize product designs or complete detailed design evaluations of new medical products. Bioethics issues and strategies for funding new medical ventures.

4 units, Spr (Andriacchi, T)

ME 385. Tissue Engineering Lab — (Same as BIOE 360.) Hands-on experience in the fabrication of living engineered tissues. Techniques include sterile culture, culture of mammalian cells, creation of cell-seeded scaffolds, and the effects of mechanical loading on the metabolism of living engineered tissues. Theory, background, and practical demonstration for each technique. Lab.

1-2 units, Win (Jacobs, C)

ME 386. Neuromuscular Biomechanics — (Same as BIOE 386.) The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with movement disorders.

3 units, not given this year (Delp, S)

ME 389. Bioengineering and Biodesign Forum — (Same as BIOE 393.) Guest speakers present research topics at the interfaces of biology, medicine, physics, and engineering. May be repeated for credit.

1 unit, Aut, Win, Spr (Edwards, C)

ME 390. Thermosciences Research Project Seminar — Review of work in a particular research program and presentations of other related work.

1 unit, Aut (Staff)

ME 391. Engineering Problems — Directed study for graduate engineering students on subjects of mutual interest to student and staff member. May be used to prepare for experimental research during a later quarter under 392. Faculty sponsor required.

1-5 units, Aut, Win, Spr, Sum (Staff)

ME 392. Experimental Investigation of Engineering Problems — Graduate engineering students undertake experimental investigation under guidance of staff member. Previous work under 391 may be required to provide background for experimental program. Faculty sponsor required.

1-5 units, Aut, Win, Spr, Sum (Staff)

ME 393. Topics in Biologically Inspired or Human Interactive Robot — Application of observations from human and animal physiology to robotic systems. Force control of motion including manipulation, haptics, and locomotion. Weekly literature review forum led by student. May be repeated for credit.

1 unit, Aut (Cukkosky, M; Niemeyer, G; Waldron, K), Win (Staff), Spr (Waldron, K)

ME 394. Design Forum — Introduction to the design faculty and research labs. Faculty describe their work and research interests followed by open discussion.

1 unit, Aut (Niemeyer, G)

1 unit, Aut, Win, Spr (Cai, W)

ME 396. Design and Manufacturing Forum — Guest speakers address issues of interest to design and manufacturing engineers. Sponsored by Stanford Engineering Club for Automation and Manufacturing (SECAM).

May be repeated for credit.

1 unit, Win, Spr (Reis, R)

ME 397. Design Theory and Methodology Seminar — Research on the use of information and computer tools in a global collaborative design scenario to augment the performance of design teams. Goal is to synthesize the frameworks, knowledge, and skills of distributed teams working with digital information repositories. Students participate in a short distributed design exercise. May be repeated for credit.

2 units, Aut (Leifer, L; Mabogunje, A)

ME 399. Fuel Cell Seminar — Interdisciplinary research in engineering, chemistry, and physics. Talks on fundamentals of fuel cells by speakers from Stanford, other academic and research institutions, and industry. The potential to provide high efficiency and zero emissions energy conversion for transportation and electrical power generation.

1 unit, not given this year

ADVANCED GRADUATE

ME 400. Thesis (Engineer Degree) — Investigation of some engineering problems. Required of Engineer degree candidates.

2-15 units, Aut, Win, Spr, Sum (Staff)

3 units, not given this year

ME 406. Turbulence Physics and Modeling Using Numerical Simulation Data

2 units, alternate years, not given this year (Moin, P)
ME 408. Spectral Methods in Computational Physics — Data analysis, spectra and correlations, sampling theorem, nonperiodic data, and windowing; spectral methods for numerical solution of ordinary and partial differential equations; accuracy and computational cost; fast Fourier transform, Galerkin, collocation, and Tau methods; spectral and pseudospectral methods based on Fourier series and eigenfunctions of singular Sturm-Liouville problems; Chebyshev, Legendre, and Laguerre representations; convergence of eigenfunction expansions; discontinuities and Gibbs phenomenon; aliasing errors and control; efficient implementation of spectral methods; spectral methods for complicated domains; time differencing and numerical stability.

3 units, Aut (Moin, P)

3 units, alternate years, not given this year (Lew, A)

ME 414. Solid State Physics Issues for Mechanical Engineering Experiments — Principles of statistical mechanics, quantum mechanics, and solid-state physics. Provides graduate mechanical engineering students with understanding needed to work on devices or technologies which rely on solid-state physics.

3 units, Sam (Kenny, T)

ME 417. Total Product Integration Engineering — For students aspiring to be product development executives and leaders in research and education. Advanced methods and tools beyond the material covered in 217: quality design across global supply chain, robust product architecture for market variety and technology advances, product development risk management. Small teams or individuals conduct a practical project that produces a case study or enhancement to produce development methods and tools. Enrollment limited to 16. Prerequisites: 317A,B.

4 units, alternate years, not given this year (Ishii, K)

ME 420. Applied Electrochemistry: Micro- and Nanoscale — Concepts of physical chemistry such as thermodynamic equilibrium, reaction kinetics, and mass transport mechanisms from which the fundamentals of electrochemistry are derived. Theory of electrochemical methods for material analyses and modifications with emphasis on scaling behaviors. Electrochemical devices such as sensors, actuators, and probes for scanning microscopes, and their miniaturization concepts. Examples of these devices built, characterized, and applied in labs using technologies such as scanning probe techniques. Projects focus on current problems in biology, material science, microfabrication, and energy conversion.

3 units, Aut (Fasching, R)

3 units, Spr (Darve, E)

3 units, not given this year

ME 451A. Advanced Fluid Mechanics — Topics: kinematics (analysis of deformation, critical points and flow topology, Helmholtz decomposition); constitutive relations (viscous and visco-elastic flows, non-inertial frames); vortex dynamics; circulation theorems, vorticity generation mechanisms, vortex filaments and Biot-Savart formula, local induction approximation, impulse and kinetic energy of vortex systems, vorticity in rotating frame. Prerequisite: graduate courses in compressible and viscous flow.

3 units, not given this year (Pitsch, H)

ME 451B. Advanced Fluid Mechanics — Waves in fluids: surface waves, internal waves, inertial and acoustic waves, dispersion and group velocity, wave trains, transport due to waves, propagation in slowly varying medium, wave steepening, solitons and solitary waves, shock waves. Instability of fluid motion: dynamical systems, bifurcations, Kelvin-Helmholtz instability, Rayleigh-Beard convection, energy method, global stability, linear stability of parallel flows, necessary and sufficient conditions for stability, viscosity as a destabilizing factor, convective and absolute instability. Focus is on flow instabilities. Prerequisites: graduate courses in compressible and viscous flow.

3 units, not given this year (Lele, S)

3 units, not given this year

3 units, Win (Farhat, C)

3 units, not given this year (Shaqfeh, E)

ME 457. Fluid Flow in Microdevices — Physico-chemical hydrodynamics of creeping flow, electric double layers, and electrochemical transport such as Nernst-Planck equation; hydrodynamics of solutions of charged and uncharged particles. Device applications include microsystems that perform capillary electrophoresis, drug dispersion, and hybridization assays. Emphasis is on bioanalytical applications where electrophoresis, electro-osmosis, and diffusion are important. Prerequisite: consent of instructor.

3 units, Win (Santiago, J)

ME 461. Advanced Topics in Turbulence — Large eddy simulation, constitutive equations and filtering, dynamic subgrid scale models, scale similarity, and reconstruction models; wall models; compressibility effects on turbulence, shock/turbulence interactions, compressible turbulent boundary layers, and multi-phase flow modeling; reduced order
modeling, proper orthogonal decomposition; space-time characteristics of organized structures; complexity; computational issues, and higher order conservations.

3 units, not given this year (Moin, P)

ME 463. Advanced Topics in Plasma Science and Engineering — Research areas such as plasma diagnostics, plasma transport, waves and instabilities, and engineering applications.

3 units, not given this year (Cappelli, M)

3 units, Win (Iaccarino, G)

3 units, Spr (Iaccarino, G)

ME 471. Turbulent Combustion — Basis of turbulent combustion models. Assumption of scale separation between turbulence and combustion, resulting in Reynolds number independence of combustion models. Level-set approach for premixed combustion. Different regimes of premixed turbulent combustion with either kinematic or diffusive flow/chemistry interaction leading to different scaling laws and unified expression for turbulent velocity in both regimes. Models for non-premixed turbulent combustion based on mixture fraction concept. Analytical predictions for flame length of turbulent jets and NOx formation. Partially premixed combustion. Analytical scaling for lift-off heights of lifted diffusion.

3 units, alternate years, not given this year (Pitsch, H)

ME 484. Computational Methods in Cardiovascular Bioengineering — (Same as BIOE 484.) lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiologic quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning.

3 units, Spr (Taylor, C)

ME 485. Modeling and Simulation of Human Movement — (Same as BIOE 485.) Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic modeling of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331A,B, or equivalent.

3 units, not given this year (Delp, S)

ME 500. Thesis (Ph.D.)

2-15 units, Aut, Win, Spr, Sum (Staff)

COGNATE COURSES (GRADUATE)

See respective department listings for course descriptions. See degree requirements above or the department’s student services office for applicability of these courses to a major or minor program.

CHEMENG 444. Quantum Simulations of Molecules and Materials

3 units, Win (Musgrave, C)

CS 223A. Introduction to Robotics

3 units, Win (Khatib, O)

CS 327A. Advanced Robotics

3 units, Spr (Khatib, O)

ENGR 205. Introduction to Control Design Techniques

3 units, Aut (Rock, S)

ENGR 206. Control System Design

4 units, Spr (Niemeyer, G)

ENGR 207A,B. Modern Control Design

3 units, A: Win, B: Spr (Lall, S)

ENGR 209A. Analysis and Control of Nonlinear Systems

3 units, Win (Rock, S)

ENGR 240. Introduction to Micro and Nano Electromechanical Systems (M/NEMS)

3 units, Win (Pruitt, B; Howe, R)

ENGR 341. Micro/Nano Systems Design and Fabrication Laboratory

3-5 units, Spr (Solgaard, O; Pruitt, B)

MS&E 250A. Engineering Risk Analysis

2-3 units, Win (Paté-Cornell, E)

MS&E 264. Manufacturing Systems Design

3-4 units, Spr (Erhun Oguz, F)

MS&E 289. Clicks and Bricks: Creating Customer Experiences

3 units, Aut (Sutton, R)
The School of Humanities and Sciences includes the departments of Anthropological Sciences, Applied Physics, Art and Art History, Asian Languages, Biological Sciences (and the Hopkins Marine Station), Chemistry, Classics, Communication, Comparative Literature, Cultural and Social Anthropology, Drama, Economics, English, French and Italian, German Studies, History, Linguistics, Mathematics, Music, Philosophy, Physics, Political Science, Psychology, Religious Studies, Slavic Languages and Literatures, Sociology, Spanish and Portuguese, and Statistics.

The school also includes 19 interdepartmental degree programs: African and African American Studies; African Studies; American Studies; Archaeology; Biophysics; Comparative Studies in Race and Ethnicity; East Asian Studies; Human Biology; Feminist Studies; Financial Mathematics; Interdisciplinary Studies in Humanities; International Policy Studies; International Relations; Latin American Studies; Mathematical and Computational Science; Modern Thought and Literature; Public Policy; Russian, East European and Eurasian Studies; Science, Technology, and Society; Symbolic Systems; and Urban Studies.

In addition, the school sponsors programs that do not currently grant degrees: Astronomy; Black Performing Arts; Buddhist Studies; Ethics in Society; History and Philosophy of Science; the Institute for Gender Research; the Institute for Social Science Research; Islamic Studies; Jewish Studies; Medieval Studies; and the Social Science History Institute.

Faculty and academic staff of the School of Humanities and Sciences are listed under the respective departments or programs.

DEGREES OFFERED

Candidates for the degree of Bachelor of Arts, Bachelor of Science, Bachelor of Arts and Sciences, Master of Arts, Master of Fine Arts, Master of Science, Doctor of Musical Arts, or Doctor of Philosophy should consult the department or program in which they intend to specialize.

COURSES

HUMSCI 190. Individually Designed Major Honor’s Thesis — May be repeated for credit.

1-10 units, Aut, Win, Spr (Staff)

HUMSCI 201. Graduate Environment of Support — Psychosocial, financial, and career issues in adapting graduate students to Stanford; how these issues relate to diversity, resources, policies, and procedures. Discussions among faculty, advanced graduate students, campus resource people, and the dean’s office.

1 unit, Aut (Thomas, A)
PROGRAM IN AFRICAN AND AFRICAN AMERICAN STUDIES

Director: Lawrence D. Bobo
Associate Director: Vera I. Grant
Advisory Committee: Lisa Brown (student), Clayborne Carson (History), Harry Elam (Drama), Michele Elam (English), Joel Samoff (African Studies), Morris Graves (Associate Dean of Students), Amanda Johnson (student), Marycilia Morgan (Communication), Elaine C. Ray (Director, Stanford University News Service), Arnold Rampersad (English), John R. Rickford (Linguistics)
Affiliated Faculty: David Abernethy (Political Science, emeritus), Ametha Ball (Education), Richard Banks (Law), Lucius Barker (Political Science, emeritus), Michele Elam (English), Albert Camarillo (History), Clayborne Carson (History), Susan Cashion (Drama), Wanda Corn (Art History), Linda Darling-Hammond (Education), David Degusta (Cultural and Social Anthropology), Sally Dickson (Law), Sandra Drake (English, emeritus), Jennifer Eberhardt (Psychology), Paulla Ebron (Cultural and Social Anthropology), Harry Elam (Drama), James Ferguson (Cultural and Social Anthropology), Shelley Fisher Fishkin (English), Louis Fraga (Political Science), George Fredrickson (History, emeritus), James Gibbs Jr. (Political Science, emeritus), William B. Gould (Law, emeritus), Sean Hanretta (History), Anthony Kramer (Drama), Teresa LaFromboise (Education), Brian Lowery (Graduate School of Business), Lisa Malkki (Cultural and Social Anthropology), Hazel Markus (Psychology), Barbara Martinez-Ruiz (Art and Art History), Monica McDermott (Sociology), Marycilia Morgan (Communication), Robert Moses (Drama), Paula Moya (English), Angaluki Muaka (Stanford Language Center), Elisabeth Mulembe-Boyii (French and Comparative Literature), Na’Ilah S. Nasir (Education), Susan Olzak (Sociology), David Palumbo-Liu (Comparative Literature), Jack Rakove (History), Arnold Rampersad (English), John R. Rickford (Linguistics), Richard Roberts (History), Ramón Saldívar (English), Joel Samoff (African Studies), Ewart Thomas (Psychology), Jeremy Weinstein (Political Science), Joy Williamson (Education)

Program Offices: 450 Serra Mall, Building 240
Mail Code: 94305-2084
Phone: (650) 723-3782
Email: aaas@stanford.edu
Web Site: http://www.stanford.edu/dept/AAAS/

Courses given in the Program in African and African American Studies have the subject code AFRICAAM. For a complete list of subject codes, see Appendix.

UNDERGRADUATE PROGRAMS

BACHELOR OF ARTS

The African and African American Studies (AAAS) program emphasizes creative scholarship and research in fields including: (1) the history, literature, culture, and social science of African Americans as a central component of American culture; and (2) the history, literature, culture, and social science of the peoples of Africa and the African Diaspora. AAAS is an indispensable subject for those interested in the cultural, economic, historical, political, or social study of the United States.

To investigate the field which AAAS covers, students are encouraged to use interdisciplinary methods drawn from fields including anthropology, art, art history, economics, education, history, languages, linguistics, literature, music, philosophy, political science, psychology, religion, and sociology. A degree in AAAS prepares students for many jobs requiring a broad liberal arts perspective, as well as those requiring the specialized knowledge that AAAS offers. Students in AAAS receive training that is especially valuable for graduate study and careers in fields such as business, comparative literature, creative writing, education, history, journalism, law, linguistics, medicine, performing arts, politics, social sciences, social work, teaching, and urban studies.

MAJORS

Majors and double majors must complete a total of 60 units, of which 25 units must be selected from the AAAS core courses, including AFRICAAM 105 and ENGLISH 152D (not given this year) which are mandatory. Since AAAS is affiliated with the program in Comparative Studies in Race and Ethnicity (CSRE), AAAS students must enroll in two CSRE core introductory courses and complete a CSRE senior seminar (CSRE 200X) before graduating. Students may count one single-group core course toward their 15-unit core introductory course requirement as long as that course takes as its focus the experience of a racial or ethnic group different from the one in which they are majoring.

Additionally, 20 units are to be selected from areas I (African American Studies) or II (Africa and the African Diaspora), or an individually designed area. All majors must include at least one course from area I and II. Students who choose to create an individually designed area may devise a program with a special theme. This choice allows the student to use up to 20 units to explore issues encountered in other courses in greater depth or to strike out in new directions. Students who choose to create an individually designed area must work closely with an adviser and must have written approval from the director of the program. Regardless of whether students choose to focus on area I or II or an individually designed area, no more than two courses of a general nature (such as SOC 145, Race and Ethnic Relations, which deals with race and ethnicity, but without a primary African American focus) may be counted toward the major.

All AAAS majors must take the CSRE 200X, CSRE Senior Seminar; this course satisfies the Writing in the Major requirement (WIM).

THEMATIC CONCENTRATION IN IDENTITIES, DIVERSITY AND AESTHETICS (IDA)

Students interested in focusing their study on how questions of race and diversity can be critically examined through the arts can choose a thematic concentration in Identities, Diversity, and Aesthetics (IDA) within any of the CSRE majors. This concentration is not declared on Axess; it does not appear on the transcript or diploma. A thematic concentration in IDA offers students a curriculum that integrates academic theory and artistic practice focused on issues of diversity including race and ethnicity and gender and sexuality. This area of study encourages new thinking in cultural theory and the arts because it cuts across traditional disciplines within the humanities, and moves beyond the boundaries between the humanities and other disciplines.

The IDA thematic concentration develops social, cultural, and practical knowledge and leadership through hands-on work with artists and the Institute for Diversity in the Arts and courses with Stanford faculty that use the arts as a lens for understanding the dynamic interrelationship of race, gender, and sexuality. The Institute for Diversity in the Arts offers performing arts workshops with professional artists working in culturally rooted, community-based art forms. Students learn techniques, historical significance, and social application of artistic processes from their origins to contemporary practice.

For details about the requirements for the thematic concentration in Identities, Diversity and Aesthetics, contact the CSRE undergraduate program office.

MINORS

Students who minor in AAAS must complete either (1) a total of six courses of 3 or more letter-graded units, or (2) a minimum of 25 graded units from the list of AAAS courses listed below. The courses must include AFRICAAM 105 and at least one course from the social sciences and one from the humanities. Students should develop a coherent theme in their course selections, in consultation with the program director or associate director.

AAAS stresses academic advising. The director or associate director advises all AAAS students, including majors, minors, and double majors. Additionally, majors and double majors have the opportunity to participate in individual and group mentoring activities offered by CSRE. The program prides itself on its responsiveness to student concerns, and its advisory committee includes both faculty and student representation.

Stanford Bulletin, 2006-07 | 223
HONORS

 Majors who have maintained a grade point average (GPA) of at least 3.5 or higher in the major may apply for the honors program. Students should apply in the Spring Quarter of junior year. The honors thesis is intended to enable students to synthesize skills to produce a document or project demonstrating a measure of competence in their specialty. The honors thesis must be discussed with and approved by the major adviser and the program director. A student may receive 5-15 units for the honors thesis. All students completing an honors thesis must participate in at least two quarters of the CSRE Senior Seminar; take CSRE 200X in Autumn Quarter and AFRICAAM 199 in Winter and Spring quarters for the full 15 units.

CORE COURSES

The core consists of 25 units, including the two required courses.

Subject and Catalog Number | Units
--- | ---
AFRICAAM 101. African and African American Lecture Series | 1-3
AFRICAAM 105. Intro to African and African American Studies | 5
AFRICAAM 123. Great Works of the African American Tradition | (not given this year) 5
COMM 148. Hip-Hop and Don’t Stop: Introduction to Modern Speech Communities | 4-5
ENGLISH 152D. W.E.B. Du Bois and American Culture (required) | (not given this year) 5
FRENCH 133. Literature and Society: Introduction to Francophone Literature from Africa and the Caribbean | 4
HISTORY 145B. Africa in the 20th Century | 5
HISTORY 166. Introduction to African American History: The Modern African American Freedom Struggle | 4-5
LINGUIST 65. African American Vernacular English | 3-5
POLISCI 225R. Black Politics in the Post-Civil Rights Era | (not given this year) 5
SOC 144. Race and Crime in America | 5

CSRE INTRODUCTORY CORE COURSES

15 units from the following courses are required for AAAS majors:

Subject and Catalog Number | Units
--- | ---
AFRICAAM 88. Theories in Race and Ethnicity not given this year | 5
COMPLIT 241. Comparative Fictions of Ethnicity | 5
CSRE 196C. Introduction to Comparative Studies in Race and Ethnicity not given this year | 5
CSRE 200X. CSRE Senior Seminar (WIM) | 5
EDUC 156A. Understanding Racial and Ethnic Identity (not given this year) | 3-5
EDUC 177. Education of Immigrant Students | 4
ENGLISH 45/145. Writings by Women of Color | 3-5
ENGLISH 172E. The Literature of the Americas | 5
HISTORY 64. Introduction to Race and Ethnicity in the American Experience (not given this year) | 5
PHIL 77. Philosophical Issues Concerning Race and Racism (not given this year) | 4
PSYCH 75. Cultural Psychology | 5
SOC 143. Prejudice, Racism, and Social Change (not given this year) | 5
SOC 145. Race and Ethnic Relations (not given this year) | 5
SOC 147/247. Comparative Ethnic Conflict | 5

SINGLE-GROUP CORE COURSES

Subject and Catalog Number | Units
--- | ---
COMPLIT 148. Introduction to Asian American Cultures | 5
HISTORY 59. Introduction to Asian American History | 5
CHICANST 180E. Introduction to Chicana/o Life and Culture | 5
SOC 138. American Indians in Comparative Historical Perspective (not given this year) | 5
SOC 139. American Indian in Contemporary Society (not given this year) | 5

AREA I: AFRICAN AMERICAN HISTORY, LITERATURE, CULTURE, AND SOCIETY

Area I majors choose at least 20 units in addition to the core from the following list, plus at least one course from the Area II list below:

AFRICAN AND AFRICAN AMERICAN STUDIES (AFRICAAM)

101. African and African American Lecture Series (Aut, Win, Spr)

SOCIAL SCIENCES

Area I minors must choose at least one course below:

Communication (COMM):
148. Hip-Hop and Don’t Stop: Introduction to Modern Speech Communities
246. Language and Discourse: Race, Class, and Gender
Economics (ECON):
116. American Economic History

Education (EDUC):
156A. Understanding Racial and Ethnic Identity
193C. Peer Counseling: The African American Community
201A. History of African American Education
201B. Education for Liberation

Cultural and Social Anthropology (CASAS):
88. Theories in Race and Ethnicity: A Comparative Perspective

Political Science (POLISCI):
225R. Black Politics in the Post-Civil Rights Era
325S. Race and Place in American Politics

Psychology (PSYCH):
180. Social Psychological Perspectives on Stereotyping and Prejudice
215. Mind, Culture, and Society

Sociology (SOC):
144. Race and Crime in America
149. The Urban Underclass

HUMANITIES

Area I minors must choose at least one course below.

Dance (DANCE):
44. Jazz Dance I
144. Jazz Dance II
145. Jazz Dance III

History (HISTORY):
166. Introduction to African American History: The Modern African American Freedom Struggle
299M. Martin Luther King, Jr. Papers Project

Linguistics (LINGUIST):
65. African American Vernacular English

Music (MUSIC):
18A. Jazz History: Ragtime to Bebop (1900-1940)
18B. Jazz History: Bebop to Present (1940-Present)
20A. Jazz Theory
20B. Advanced Jazz Theory
161B. Jazz Orchestra

Philosophy (PHIL):
177. Philosophical Issues Concerning Race and Racism

AREA II: AFRICAN HISTORY, CULTURE, AND SOCIETY; HISTORY, CULTURE, AND SOCIETY OF THE BLACK DIASPORA

Area II majors choose at least 20 units from the following lists in addition to the core courses, plus at least one course from the Area I list:

AFRICAN AND AFRICAN AMERICAN STUDIES (AFRICAAM)

101. African and African American Lecture Series (Aut, Win, Spr)

SOCIAL SCIENCES

Area II minors must choose at least one course below:

Cultural and Social Anthropology (CASAS):
72. Dance and Culture in Latin America
88. Theories of Race and Ethnicity

HUMANITIES

Area II minors must choose at least one course below:

Dance (DANCE):
43. Afro-Brazilian and Afro-Peruvian Dance

French and Italian (FRENCH):
133. Literature and Society: Introduction to Francophone Literature from Africa and the Caribbean

History (HISTORY):
48Q. South Africa: Contested Transitions
61. The Constitution and Race
147G. African History in Novels and Film
145B. Africa in the 20th Century
245E. Health and Society in Africa
245G. Law and Colonialism in Africa
246. Successful Futures for Africa: An Inventory of the 1970s-2000s
246S. Popular Culture in Africa
248S. African Societies and Colonial States

Language Center (AMELANG):
100A, B, C. Beginning Amharic
102A, B, C. Advanced Amharic
106A, B, C. Beginning Swahili
107A, B, C. Intermediate Swahili
108A, B, C. Advanced Swahili
133A, B, C. The African Forum
COURSES

WIM indicates that the course satisfies the Writing in the Major requirements.

AFRICAAM 10. Topics in the Study of Race and Ethnicity — (Same as CSRE 10.) Guest speakers, panel presentations, film screenings, and artistic performances. Autumn Quarter theme is immigration. May be repeated for credit.
1-3 units, Aut, Win, Spr (Grant, V)

AFRICAAM 101. African American Lecture Series — Weekly lectures on African or African American artistic expression, culture, history, language, literature, music, politics, religion and society. One unit for attendance at lecture reading and submission of brief response papers. Additional units require participation in discussion sections, readings, and the opportunity to conduct and record interviews with speakers in the lecture series for the AAAS archives. Topics this year: Autumn, Black Europe; Winter, Paris noir; Spring, Black film.
1-3 units, Aut, Win, Spr (Grant, V)

1 unit, Win (Grant, V)

5 units, Win (Bobo, L; Carson, C)

3-5 units, Aut (Chakarova, M)

AFRICAAM 123. Great Works of the African American Tradition — Foundational African and African American scholarly figures and their work from the 19th century to the present. Historical, political, and scholarly context. Dialogues distinctive to African American culture.
5 units, not given this year

AFRICAAM 190. Directed Reading — May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut, Win, Spr (Staff)

AFRICAAM 199. Honors Project — May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Win, Spr (Bobo, L)

COGNATE COURSES

See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

AFRICAST 211. Education for All? The Global and Local in Public Policy Making in Africa
5 units, Spr (Samoff, J)

ARTHIST 192/392. Introduction to African Art
4 units, not given this year

ARTHIST 195/395. Introduction to Black Atlantic Visual Traditions
4 units, Win (Martinez-Ruiz, B)

ARTHIST 292A. Researching Africa: Problem and Theory in African Art
5 units, Win (Martinez-Ruiz, B)

CASA 180. Ethnography of Africa
5 units, Spr (Malkki, L)

COMM 148/248. Hip-Hop and Don’t Stop: Introduction to Modern Speech Communities
4-5 units, Spr (Morgan, M)

COMPLIT 41Q. Ethnicity and Literature
3-5 units, Aut (Palumbo-Liu, D)

COMPLIT 241. Comparative Fictions of Ethnicity
5 units, Win (Palumbo-Liu, D)

CSRE 10. Topics in the Study of Race and Ethnicity — (Same as AFRICAAM 10.)
1-3 units, Aut, Win, Spr (Palumbo-Liu, D)

CSRE 145A. Poetics and Politics of Caribbean Women’s Literature
5 units, Win (Duffy, C)

CSRE 198. Internship for Public Service
1-5 units, Aut, Win, Spr (Staff)

CSRE 200X. CSRE Senior Seminar
5 units, Aut (Palumbo-Liu, D; Thompson, V)

CSRE 203A. The Changing Face of America: Civil Rights and Education Strategies for the 21st Century
5 units, Spr (Montoya, J; Steyer, J)

DANCE 42. Dances of Latin America
2 units, Spr (Cashion, S)

DANCE 43. Afro-Peruvian Dance
1 unit, Aut (Cashion, S)

DANCE 44. Jazz Dance I
2 units, Aut, Win, Spr (Staff)

DRAMA 110. Identity, Diversity, and Aesthetics: The Institute for Diversity in the Arts
5 units, Win (Elam, H)

DRAMA 163/263. Performance and America
5 units, not given this year

DRAMA 168/268. African American Drama: Traditions and Revisions
5 units, Aut (Diggs, S)

DRAMA 169/269. Contemporary Dramatic Voices of Color
5 units, Win (Elam, H)

ECON 116. American Economic History
5 units, Spr (Wright, G)

EDUC 103B/337. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices
3-4 units, Win (Ball, A)

EDUC 156A. Understanding Racial and Ethnic Identity Development
3-5 units, not given this year

EDUC 193C. Peer Counseling in the African American Community
1 unit, Aut (Edwards, S)

EDUC 201. History of Education in the United States
3-4 units, Win (Williamson, J)

EDUC 201A. History of African American Education
3-4 units, not given this year
EDUC 201B. Education for Liberation
3-4 units, Aut (Williamson, J)

ENGLISH 45/145. Writings by Women of Color
3-5 units, Win (Moya, P)

ENGLISH 152G. Harlem Renaissance
5 units, Spr (Elam, M)

ENGLISH 260G. Century’s End: Race, Gender, and Ethnicity at the
Turn of the Century
5 units, Spr (Fishkin, S)

HISTORY 48Q. South Africa: Contested Transitions
3 units, Win (Samoff, J)

HISTORY 145A. Africa Until European Conquest
5 units, Aut (Hanretta, S)

HISTORY 145B. Africa in the 20th Century
5 units, Spr (Roberts, R)

HISTORY 150A. Colonial and Revolutionary America
5 units, Aut (Winterer, C)

HISTORY 150B. 19th-Century America
5 units, Win (Staff)

HISTORY 150C. The United States in the Twentieth Century
5 units, Spr (Camarillo, A; Chang, G)

HISTORY 158. The United States Since 1945
4-5 units, Win (Bernstein, B)

HISTORY 166. Introduction to African American History: The
Modern African American Freedom Struggle
4-5 units, Aut (Carson, C)

HISTORY 245G/348D. Law and Colonialism in Africa
4-5 units, Win (Roberts, R)

HISTORY 248S/448A. African Societies and Colonial States
5 units, Win (Roberts, R), Spr (Staff)

HISTORY 255. Martin Luther King, Jr.: The Social Gospel and the
Struggle for Justice
5 units, Aut (Carson, C)

HISTORY 260. Race and Ethnicity in the American Metropolis: A
Case Study of Los Angeles
5 units, Spr (Camarillo, A)

HISTORY 275/375. Slavery in the Americas
5 units, Aut (Staff)

HISTORY 299M. Undergraduate Directed Research: Martin Luther
King, Jr., Research and Education Institute
1-4 units, Aut, Win, Spr (Staff)

HISTORY 345A. Core Colloquium: Precolonial Africa
4-5 units, Aut (Roberts, R)

HISTORY 448B. African Societies and Colonial States
5 units, Spr (Roberts, R)

LINGUIST 65/265. African American Vernacular English
3-5 units, Spr (Rickford, J)

LINGUIST 152/252. Pidgin and Creole Sociolinguistics
2-4 units, not given this year (Rickford, J)

MUSIC 18A. Jazz History: Ragtime to Bebop, 1900-1940
3 units, Win (Berry, F)

MUSIC 18B. Jazz History: Bebop to Present, 1940-Present
3 units, Spr (Berry, F)

MUSIC 20A. Jazz Theory
3 units, Aut (Nadel, J)

MUSIC 20B. Advanced Jazz Theory
3 units, Win (Nadel, J)

MUSIC 20C. Jazz Arranging and Composition
3 units, alternate years, not given this year

MUSIC 161B. Jazz Orchestra
1 unit, Aut, Win, Spr (Berry, F)

POLISCI 21N. The Evolution of Voting Rights in the U.S.
5 units, Win (Fraga, L)

POLISCI 46N. Contemporary African Politics
5 units, Aut (Weinstein, J)

POLISCI 141. The Global Politics of Human Rights
5 units, Win (Staff)

PSYCH 75. Introduction to Cultural Psychology
5 units, Spr (Markus, H)

PSYCH 215. Mind, Culture, and Society
3 units, Win (Markus, H; Steele, C)

SOC 141A/241A. Social Class, Race, Ethnicity, Health
4-5 units, Win (Barr, D)

SOC 143/243. Prejudice, Racism, and Social Change
5 units, not given this year

SOC 144/244. Race and Crime in America
5 units, Spr (Bobo, L)

SOC 145/245. Race and Ethnic Relations
5 units, not given this year

OVERSEAS STUDIES
Courses approved for the major and taught overseas can be found in
the “Overseas Studies” section of this bulletin, or in the Overseas Studies
office, 126 Sweet Hall.

PARIS
AFRICAM 186F. Contemporary African Literature in French—
(Same as FRENLIT 186F) GER:DB-Hum, EC-GlobalCom
4 units, Win (Diop, P)

AFRICAN STUDIES
Emeriti: David B. Abernethy, John Baugh, Sandra E. Drake, George
M. Frederickson, James, L. Gibbs, Jr., William B. Gould, Bruce F.
Johnston, William R. Leben, Hans N. Weiler, Sylvia Wynter
Chair: Richard Roberts
Professors: Jean-Marie Apostolidès (French, Drama), Ellen Jo Baron
(Pathology), Joel Beinin (History), Russell Berman (Comparative
Literature, German Studies), John Boothroyd (Microbiology
and Immunology), Joan Bresnan (Linguistics), Martin Carnoy
(Education), Peter Egbert (Ophthalmology), Harry Elam (Drama),
James Fearon (Political Science), James Ferguson (Cultural and Social
Anthropology), Terry Lynn Karl (Political Science), Richard Klein
(Anthropological Sciences), David Laitin (Political Science), Lynn
Meskell (Cultural and Social Anthropology), Mary L. Polan (Obstetrics
and Gynecology), John Rickford (Linguistics, African and African
American Studies), Richard Roberts (History)
Associate Professors: Elisabeth Mudimbe-Boyi (French and Italian,
Comparative Literature), Paulla A. Ebron (Cultural and Social
Anthropology), Akhil Gupta (Cultural and Social Anthropology),
Bruce Lusignan (Electrical Engineering), Yvonne Maldonado
(Pediatrics, Infectious Diseases), Lisa Malkki (Cultural and Social
Anthropology), Joseph Manning (Classics), Michael McFaul (Political
Science), Robert Siegel (Microbiology and Immunology)
Assistant Professors: David DeGusta (Anthropological Sciences), Oliver
Fringer (Civil and Environmental Engineering), Sean A. Hanretta
African Studies

Undergraduate programs may choose an African Studies focus from:
1. A major in a traditionally defined academic department (for example, Anthropological Sciences, Cultural and Social Anthropology, History, Political Science). These departments afford ample opportunity to enroll in courses outside the major, leaving the student free to pursue the interdisciplinary study of Africa.
2. Interdepartmental majors, such as African and African American Studies or International Relations, which offer coordinated and comprehensive interdisciplinary course sequences, permitting a concentration in African Studies.
3. An individually designed major. Under the supervision of a faculty adviser and two other faculty members, the student can plan a program of study focused on Africa that draws courses from any department or school in the University. If approved by the Dean’s Advisory Committee on Individually Designed Majors, the program becomes the curriculum for the B.A. degree.

MINORS
The Committee on African Studies awards a minor in African Studies. Students majoring in any field qualify for this minor by meeting the following requirements:
1. Taking a minimum of 25 units of Africa-related courses. Students may not double-count courses for completing major and minor requirements.
2. Having at least one quarter’s exposure to a sub-Saharan African language. Africa is a linguistically heterogeneous region, and most Africans are multilingual. Learning an African language is an excellent way to learn about African cultures. The Center for African Studies and the Special Languages Program may arrange instruction in any of several languages spoken in West, East, Central, and Southern Africa.
3. Completing one introductory course that deals with more than one region of Africa.
4. Writing a minimum 25-page research paper, with a clear focus on Africa. This paper may be an extension of a previous paper written for an African Studies course.
5. Designate a focus of study (either disciplinary or regional) through a three-course concentration.

Upon satisfactory completion of all requirements, final certification of the minor is made by the Center for African Studies and appears on the student’s transcript.

CERTIFICATE
Students may apply for a certificate in African Studies. Requirements for the certificate are the same as for the minor; however students may double-count courses applied toward their major or graduate studies. The principal difference between the minor and the certificate, however, is that the certificate does not appear on the transcript. For more information and an application, contact the center.

GRADUATE STUDY
For those who wish to specialize in Africa at the graduate level, African Studies can be designated a field of concentration within the master’s and doctoral programs of some academic departments. Students in such departments as Anthropological Sciences, Cultural and Social Anthropology, History, Political Science, and Sociology, and in the School of Education, may declare African Studies as the area of specialization for their master’s and Ph.D. thesis work. Some other departments, programs, and institutes such as International Policy Studies and the International Comparative Education Program also permit students to specialize in African Studies. Stanford graduate students who are U.S. citizens or permanent residents may request an academic year application for a Foreign Language and Area Studies (FLAS) Fellowship. Students need not be enrolled at Stanford to apply for the summer fellowship. The deadline for both is mid-January.

For more information or an application, contact the center.

COURSES
AFRICAST 200. The HIV/AIDS Epidemic in Tanzania: A Pre-Field Seminar—Goal is to prepare students for an HIV/AIDS prevention, service-learning experience in Tanzania. Topics include: history of HIV/AIDS epidemic globally and in Tanzania; social and economic impact of AIDS; national and societal responses; ethical issues in crosscultural service learning; teaching for prevention; biology of HIV transmission, disease progression, and prevention; introduction to Tanzanian history and politics; HIV/AIDS and development; social, cultural, and economic context of HIV risk; and strategies for HIV prevention in Tanzania.

1 unit, Spr (Hoagland, S)
AFRICAST 211. Education for All? The Global and Local in Public Policy Making in Africa—Policy making in Africa and the intersection of policy processes and their political and economic dimensions. The failure to implement agreements by international institutions, national governments, and nongovernmental organizations to promote education. Case studies of crowded and poorly equipped schools, overburdened and underprepared teachers, and underfunded education systems.
5 units, Spr (Samoff, J)

COGNATE COURSES
See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.
For courses in African and Middle Eastern language instruction with the subject code AMELANG, see the “Language Center” section of this bulletin.

AFRICAAM 101. African American Lecture Series
1-3 units, Aut, Win, Spr (Grant, V)

AFRICAAM 105. Introduction to African and African American Studies—(Same as HISTORY 150X.)
5 units, Win (Carson, C; Bobo, L)

Courses given in American Studies have the subject code AMSTUD.
For a complete list of subject codes, see Appendix.

The American Studies program is administered through the office of Interdisciplinary Studies in Humanities.

UNDERGRADUATE PROGRAMS

BACHELOR OF ARTS
American Studies is an interdisciplinary undergraduate major that seeks to convey a broad understanding of American culture and society. Building on a foundation of courses in history and institutions, literature and the arts, and race and ethnicity, students bring a range of disciplines to bear on their efforts to analyze and interpret America’s past and present, forging fresh and creative syntheses along the way.

The core requirements illustrate how different disciplines approach the study and interpretation of American life and include three courses in each of two main areas: history and institutions; and literature, art, and culture. The required gateway seminar, AMSTUD 160, Perspectives on American Identity, explores the tensions between commonality and difference from a variety of disciplinary perspectives.
Beyond the core requirements of the major, American Studies expects students to define and pursue their own interests in interpreting important dimensions of American life. Accordingly, each student designs a thematic concentration of at least five courses drawn from fields such as history, literature, art, communication, theater, political science, African American studies, feminist studies, economics, cultural and social anthropology, religious studies, Chicana/o studies, law, sociology, education, Native American studies, music, and film. At least one of the five courses in a student’s thematic concentration should be a small group seminar or a colloquium. With program approval, students may conclude the major with a capstone honors research project during their senior year.

Whether defined broadly or narrowly, the thematic focus or concentration should examine its subject from the vantage of multiple disciplines. Examples of concentrations include: race and the law in America; gender in American culture and society; technology in American life and thought; health policy in America; art and culture in 19th-century America; education in America: nature and the environment in American culture; politics and the media; religion in American life; borders and boundaries in American culture; the artist in American society, and civil rights in America.

To illustrate how different disciplines approach the study of American life, the major requires undergraduates to take three courses in each of two main areas (history and institutions, and literature, art, and culture), at least one additional course in Comparative Race and Ethnicity, and AMSTUD 160, Perspectives on American Identity. Completion of the major thus normally requires 13 courses (totaling at least 60 units), all of which must be taken for a letter grade.

The course requirements for the American Studies major are:

1. **History and Institutions**—All American Studies majors are required to complete three foundation courses in American History and Institutions. Specific requirements are: HISTORY 150A, Colonial and Revolutionary America, and HISTORY 150B, 19th-Century America. The third course may be chosen from one of the following: AMSTUD 179, the Civil Rights Movement in America; AMSTUD 180, The Transformation of American Thought and Culture, 1865 to the Present (not given 2006-07); ECON 116, American Economic History; HISTORY 150C, The United States in the 20th Century; HISTORY 158, The United States since 1945; POLISCI 2, American National Government and Politics; HISTORY 161, U.S. Women’s History, 1890s–1990s (not given 2006-07).

2. **Literature, Art, and Culture**—Majors must take three gateway courses that, together, cover the broad range of the American experience. Specific requirements are:
   a. at least one course focusing on the period before the Civil War, normally AMSTUD 150, American Literature and Culture to 1855.
   b. two additional courses, including at least one from Art or Drama. Choices include but are not limited to: AMSTUD 138C, Huckleberry Finn and American Culture; ARTHIST 132, American Art and Culture, 1528–1860; ARTHIST 178, Ethnicity and Dissent in United States Art and Literature (not given 2006-07); DRAMA 163, Performance and America (not given 2006-07); DRAMA 169, Contemporary Dramatic Voices of Color; ENGLISH 121, Masterpieces of American Literature; ENGLISH 152G, Harlem Renaissance; ENGLISH 186A, American Hauntings.

3. **Comparative Race and Ethnicity**—All majors are required to take one course in Comparative Studies of Race and Ethnicity (CSRE) that focuses on comparative studies rather than a single racial or ethnic group (5 units). Courses that satisfy this requirement include: HISTORY 64, Introduction to Race and Ethnicity in the American Experience (not given 2006-07); CASA 88, Theories of Race and Ethnicity (not given 2006-07); SOC 145, Race and Ethnic Relations (not given 2006-07); SOC 149, The Urban Underclass; SOC 148, Racial Identity (not given 2006-07); CSRE 144, Race and Crime; COMPLIT 148, Introduction to Asian American Cultures; and COMPLIT 241, Comparative Fictions of Ethnicity. If a CSRE course is appropriate for a student’s thematic focus, the course may be used to satisfy both this requirement and, in part, the unit requirement for the focus.

4. **Gateway Seminar**—All majors are required to take AMSTUD 160, Perspectives on American Identity (5 units), which is the Writing in the Major (WIM) course for American Studies.

5. **Thematic Concentration and Capstone Seminar**—Students must design a thematic concentration of at least 5 courses. The courses, taken together, must give the student in-depth knowledge and understanding of a coherent topic in American cultures, history, and institutions. With the help of faculty advisers, students are required to design their own thematic concentrations, preferably by the end of registration period, Autumn quarter of the junior year. Sample thematic concentrations and courses that allow a student to explore them are available in the American Studies Office in Building 250. At least one of these courses must be a capstone seminar or other group discussion course in the thematic concentration that requires a research paper. The American Studies Program office has a list of courses that satisfy the seminar requirement, but students are encouraged to propose others that fit better with their concentration area. An independent study course with a faculty member culminating in a research paper or an honors project may also fulfill this requirement, with the Director’s approval.

**MINORS**

To earn a minor in American Studies, students must complete at least 28 units of course work in the program. Because students may not count courses for both a major and a minor, the specific courses that are used for an American Studies minor depend on the courses that are used to satisfy the major requirement.

A student must take the following:

1. at least 2 courses from category 1 (History and Institutions)
2. at least 2 courses from category 2 (Literature, Art, and Culture)
3. at least 1 course from category 3 (CSRE)
4. AMSTUD 160.

All courses that are used to satisfy these requirements must be taken for a letter grade.

**HONORS PROGRAM**

To graduate with honors, American Studies majors must complete a senior thesis and have an overall grade point average of 3.5 in the major, or demonstrated academic competence. Students must apply to enter the honors program no later than the end of registration period in the Autumn Quarter of their senior year, and must enroll in 10-15 units of AMSTUD 250, Senior Research, during the senior year. These units are in addition to the units required for the major. The application to enter the program must contain a one-page statement of the topic of the senior thesis, and must be signed by at least one faculty member who agrees to be the student’s honors adviser. (Students may have two honors advisers.) The thesis must be submitted for evaluation and possible revision to the adviser no later than four weeks before graduation.

Students are encouraged to choose an honors topic and adviser during the junior year. To assist students in this task, American Studies offers a pre-honors seminar in which students learn research skills, develop honors topics, and complete honors proposals. Students also may enroll in the American Studies Honors College during September before the senior year. American Studies also provides students the opportunity to work as paid research assistants for faculty members during the summer between their junior and senior year, which includes participation in a research seminar. More information about American Studies honors is available from the program office.
COURSES
See departmental listings for complete descriptions and University General Education Requirements (GER) notations. Some courses may require prerequisites that do not apply toward the major. See the Time Schedule and Axess each quarter for changes in listings. An up-to-date list is also available in the program office.

AMERICAN STUDIES

AMSTUD 68N. Mark Twain and American Culture — (Same as ENGLISH 68N.) Stanford Introductory Seminar. Preference to freshmen. Mark Twain defined the rhythms of American prose, the contours of its moral map, and its promise, failures, foibles, and flaws. Focus is on how his work provides a window on his time and speaks to the present. Sources include his travel books, journalism, short stories, and novels. GER:DB-Hum
4 units, Aut (Fishkin, S)

AMSTUD 101. American Fiction into Film: How Hollywood Scripts and Projects Black and White Relations — Movies and the fiction that inspires them; power dynamics behind production including historical events, artistic vision, politics, and racial stereotypes. What images of black and white does Hollywood produce to forge a national identity? How do films promote equality between the races? What is lost or gained in film adaptations of books? GER:EC-AmerCul
3-5 units, Win (Mesa, C)

AMSTUD 114N. Visions of the 1960s — Stanford Introductory Seminar. Preference to sophomores. Introduction to the ideas, sensibility, and, to a lesser degree, the politics of the American 60s. Topics: the early 60s vision of a beloved community; varieties of racial, generational, and feminist dissent; the meaning of the counterculture; and current interpretive perspectives on the 60s. Film, music, and articles and books. GER:DB-Hum, EC-AmerCul
5 units, Aut (Gillam, R)

AMSTUD 138C. Huckleberry Finn and American Culture — (Same as ENGLISH 138C.) From publication to the present, Mark Twain’s Adventures of Huckleberry Finn has generated widespread disagreement over what it is, what it means, and why it should be valued. The literature, history, and popular culture that shaped the novel, and that it helped shape. Topics include vernacular traditions in American literature, the history of racism in American society, and the role of African American voices in shaping the text. GER:DB-Hum
5 units, Win (Fishkin, S)

AMSTUD 150. American Literature and Culture to 1855 — (Same as ENGLISH 123.) Major issues in early American cultural and literary history; developments in the fine and domestic arts; and methodological issues central to American Studies. Texts include Cotton Mather and Melville. GER:DB-Hum, EC-AmerCul
5 units, Win (Fliegelman, J)

AMSTUD 151. The Transformation of American Thought and Culture, 1865 to the Present — Persistent strains and tensions in American intellectual life and culture over the past 140 years. Readings include autobiographies, novels, documentary works, and historical and theoretical analyses that bear on issues of technology and culture, consumerism, mass society, gender, sexuality, violence, political extremism, and power. GER:DB-Hum, EC-AmerCul
5 units, not given this year

5 units, Win (Gillam, R)

AMSTUD 179. Introduction to American Law — (Same as LAW 106, POLISCI 122.) For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general. GER:DB-SocSci
3-5 units, Aut (Friedman, L)

AMSTUD 183. Border Crossings and American Identities — How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deavere Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguist borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldua’s conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one’s own identity. GER:DB-Hum, EC-AmerCul
5 units, Aut (Duffy, C)

AMSTUD 185. American Studies Internship — Restricted to declared majors. Practical experience working in a field related to American Studies for six to ten weeks. Students make internship arrangements with a company or agency, under the guidance of a sponsoring faculty member, and with the consent of the director or a program coordinator of American Studies. Required paper focused on a topic related to the internship and the student’s studies. May be repeated for credit.
1-3 units, Aut, Win, Spr, Sum (Staff)

1-2 units, Aut (Fishkin, S)

AMSTUD 195. Individual Work
1-5 units, Aut, Win, Spr, Sum (Staff)

AMSTUD 203A. Children in American History — Children as a subject of historical inquiry. The experience of children, ideas about childhood, and policies and institutions for children from the late 18th century to the present. How were children perceived and cared for within families, and what was growing up like for children? Variations in childhood experience based on class, race, ethnicity, gender, and geographic location. Discourses on the nature of childhood developed by experts and society. How society defined its responsibility to children, and how it treated those dependent on public care or defined as social problems. GER:DB-SocSci
5 units, Spr (Horn, M)

AMSTUD 214. The American 1960s: Thought, Protest, and Culture — The meaning of the American 60s emphasizing ideas, culture, protest, and the new sensibility that emerged. Topics: black protest, the new left, the counterculture, feminism, the new literature and journalism of the 60s, the role of the media in shaping dissent, and the legacy of 60s protest. Interpretive materials from film, music, articles, and books. GER:DB-Hum, EC-AmerCul
5 units, Aut (Gillam, R)

AMSTUD 240. Pre-Honors Seminar — Methods, interpretations, and issues pertinent to honors work in American Studies. Open to juniors interested in honors.
2-5 units, Spr (Gillam, R)

AMSTUD 250. Senior Research — Research and writing of senior honors thesis under supervision of a faculty member. Final grade for the thesis is assigned by the chair based on the evaluations of the primary thesis adviser and a second reader appointed by the program. Prerequisite: consent of chair.
1-15 units, Aut, Win, Spr, Sum (Staff)
COGNATE COURSES
See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

ARTHIST 132/332. American Art and Culture, 1528-1860
4 units, Spr (Wolf, B)

ARTHIST 143A/343A. American Architecture
4 units, Win (Beischer, T)

ARTHIST 195/395. Introduction to Black Atlantic Visual Traditions
4 units, Win (Martinez-Ruiz, B)

ARTHIST 232. Rethinking American Art
5 units, Aut (Wolf, B)

COMM 1A/211. Media Technologies, People, and Society
4-5 units, Aut (Nass, C)

COMM 1B. Media, Culture, and Society
5 units, Win (Iyengar, S; Turner, F)

COMM 117/217. Digital Journalism
4-5 units, Win (Rheingold, H)

COMM 120/220. Digital Media in Society
4-5 units, Spr (Turner, F)

COMM 125/225. Perspectives on American Journalism
4-5 units, Aut (Glasser, T)

COMM 131/231. Media Ethics and Responsibilities
4-5 units, Win (Glasser, T)

COMM 148/248. Hip-Hop and Don’t Stop: Introduction to Modern Speech Communities
4-5 units, Spr (Morgan, M)

COMPLIT 41Q. Ethnicity and Literature
3-5 units, Aut (Palumbo-Liu, D)

COMPLIT 142. The Literature of the Americas — (Same as ENGLISH 172E.)
5 units, Aut (Saldivar, R; Greene, R)

COMPLIT 148. Introduction to Asian American Cultures
3-5 units, Win (Palumbo-Liu, D)

COMPLIT 241. Comparative Fictions of Ethnicity
5 units, Win (Palumbo-Liu, D)

5 units, Aut (Wilcox, M)

CAS A 82/282. Medical Anthropology
4-5 units, Spr (Kohrman, M)

CAS A 132. Science, Technology, and Gender
3-5 units, Spr (Jain, S)

CAS A 174. Cultures of Disease: Cancer
5 units, Win (Jain, S)

CAS A 185/285. Environmental Ethics
3-5 units, Win (Gupta, A)

D RAM A 110. Cartographies of Race: The Institute for Diversity in the Arts at Stanford
5 units, Win (Elam, H)

D RAM A 169/269. Contemporary Dramatic Voices of Color
5 units, Win (Elam, H)

D RAM A 180Q. Noam Chomsky: The Drama of Resistance
3 units, Aut (Rehm, R)

ECON 116. American Economic History
5 units, Spr (Wright, G)

ECON 158. Antitrust and Regulation
5 units, Win (Rosston, G)

EDUC 177/277. Education of Immigrant Students: Psychological Perspectives
4 units, Win (Padilla, A)

EDUC 201. History of Education in the United States
3-4 units, Win (Williamson)

EDUC 212X. Urban Education
3-4 units, Spr (Staff)

ENGLISH 21/121. Masterpieces of American Literature
3-5 units, Aut (Heise, U)

ENGLISH 42B/142B. The Films of Woody Allen
3-5 units, Spr (Polhemus, R)

ENGLISH 142. American Film: The Western
5 units, Aut (Fields, K)

ENGLISH 145E. Golden States: California in Film and Fiction
5 units, Spr (Moser, J)

ENGLISH 152G. Harlem Renaissance
5 units, Spr (Elam, M)

ENGLISH 153G. Technology, Ecology, and the Imagination of the Future — (Same as STS 114.)
5 units, Spr (Heise, U)

ENGLISH 173. American Comedy and Satire: Topics in Laughter and Ethics
5 units, Spr (Obenzinger, H)

ENGLISH 186A. American Hauntings
5 units, Spr (Richardson, J)

ENGLISH 223E. Whitman and Dickinson
5 units, Aut (Fliegelman, J)

ENGLISH 260G. Century’s End: Race, Gender, and Ethnicity at the Turn of the Century
5 units, Spr (Fishkin, S)

HISTORY 59. Introduction to Asian American History
5 units, Aut (Chang, G)

HISTORY 62N. The Atomic Bomb in Policy and History
4-5 units, Spr (Bernstein, B)

HISTORY 107. Introduction to Feminist Studies — (Same as FEMST 101.)
5 units, Aut (Freedman, E)

HISTORY 150A. Colonial and Revolutionary America
5 units, Aut (Winterer, C)

HISTORY 150B. 19th-Century America
5 units, Win (Staff)

HISTORY 150C. The United States in the Twentieth Century
5 units, Spr (Camarillo, A; Chang, G)

HISTORY 158. The United States Since 1945
4-5 units, Win (Bernstein, B)

HISTORY 166. Introduction to African American History: The Modern African American Freedom Struggle
4-5 units, Aut (Carson, C)

HISTORY 252G. Environmental History of Urban America
5 units, Aut (Rawson, M)

Courses given in Anthropological Sciences have the subject code ANTHSCI. For a complete list of subject codes, see Appendix.

A major goal of the Department of Anthropological Sciences is to provide students with the scientific tools needed to understand the unity and diversity of human beings in the past and present. First, the department provides a classic four subfield approach to anthropology, preparing students with the data and analytical tools of sociocultural anthropology, biological anthropology, linguistic anthropology and archaeology; each student is expected to have a basic literacy in at least three of these four areas of traditional anthropological study. Second, it provides integration of the subfields through a focus on the interrelations of biology, culture, social system, and environment. The undergraduate curriculum includes an explicit human evolution framework that highlights the contemporary and historical interplay of these four dimensions of human existence. In short, Anthropological Sciences graduates know the human species and how to make sense of it.

The undergraduate curriculum includes courses at three levels, designed to: (1) expose undergraduates to the theories, methods, and data of the anthropological sciences; (2) provide undergraduate majors and minors with a program of work leading to the bachelor’s degree, including an honors program; and (3) prepare candidates for advanced degrees in the discipline. Whether at the undergraduate or graduate level, the curriculum emphasizes the use of scientific methodology. Students are also encouraged to pursue ethnographic area studies building on existing faculty research in Asia, Latin America, Africa, and North America.

The department offers an undergraduate Bachelor of Arts degree. Undergraduates may elect to specialize in any one of four concentration areas: (1) Culture, Social Relations, and Language; (2) Archaeology and Evolutionary Studies; (3) Population and Environment; or (4) Medical Anthropology and Genetics. These concentrations are reported to the department; they are not declared on Axess. Within each of these concentrations, students work with faculty advisers to design a course of study that includes at least one course from each of five areas of the human evolution framework, described below: human nature and variation; human history and prehistory; human evolutionary processes and their interactions; cultural systems and cultural transmission; and laboratory and field methods. The framework is designed to ensure that students of all specializations receive a grounding in evolutionary thinking and analysis.

The department offers three graduate degrees: Master of Science, Master of Arts, and the Doctor of Philosophy. The graduate curriculum encourages students to pursue both breadth across the anthropological sciences and individual interests and projects under the supervision of a faculty committee. The backbone of the graduate program is the department-wide ANTHSCI 291, Graduate Core Seminar, devoted to ongoing discussion of issues and approaches in the anthropological sciences. The teaching assistant training program, focused on students in the second year of the Ph.D. program, is an integral part of graduate training. The graduate program offers students a wide range of opportunities for training in theoretical and practical skills including model building, ethnographic methods, archaeological and osteological techniques, data analysis, computer imaging, laboratory methods in genetics, and a variety of field training options.

The department also offers hands-on research and training opportunities, including research assistantships, internships on- and off-campus, an undergraduate honors program, and field seminars with scholarships in the Amazon, Andes, American Southwest, Middle America, and the Galapagos. Undergraduate and graduate students are encouraged to work with faculty at their field sites each summer. The department maintains ongoing historical discovery anywhere in the world (application in Winter Quarter). In addition, students have the opportunity to participate in ongoing historical archaeology conducted on campus.

UNDERGRADUATE PROGRAMS

The Department of Anthropological Sciences offers a Bachelor of Arts degree together with an honors program and a minor. These programs include undergraduate advising, described below.

BACHELOR OF ARTS

The B.A. degree program in Anthropological Sciences gives students an understanding of the breadth and depth of anthropological knowledge, as well as a series of intellectual and practical tools. Majors choose from one of four concentration tracks: Culture, Social Relations, and Language; Archaeology and Evolutionary Studies; Population and Environment; and Medical Anthropology and Genetics. The B.A. in Anthropological Sciences provides preparation for careers in anthropology, business, economic development, education, environmental conservation, foreign service, health professions, international relations, law, and public policy.

With the addition of courses from the natural, physical, and mathematical sciences, the B.A. degree also provides preparation for further study in a broad variety of scientific areas, including earth sciences, ecology and evolutionary biology, environmental sciences, human genetics, medicine, and psychology.

REQUIREMENTS

The department offers considerable flexibility in structuring an Anthropological Sciences major. In consultation with a faculty adviser, students develop a program that reflects their individual interests and needs. Majors in anthropological sciences meet with their advisers at least once every quarter. Each student’s progress toward fulfilling the major requirements is recorded in a departmental file. It is the student’s responsibility to see that this file is kept up to date.

All B.A. majors in the Department of Anthropological Sciences (ANTHSCI) must fulfill the following requirements:

1. Complete course work equivalent to 65 units, with at least 45 units in Anthropological Sciences. The remaining 20 units may be taken in any of the related humanities, social science, and science departments and programs. Outside courses must form a coherent program of study and must be approved by the student’s adviser. Up to 10 of the 65 units may be in Directed Individual Study.

ANTHROPOLOGICAL SCIENCES
2. Complete ANTHSCI 2A and 2B (same as HUMBIO 2A and 2B), or 10 units of other introductory courses, numbered 3-19, listed below, from at least two concentration tracks. Students may substitute one introductory area course, numbered 20-39, for one of these courses.

3. Complete the theory course ANTHSCI 190, Social Theory in the Anthropological Sciences, with a letter grade of ‘B’ or better. This course fulfills the University’s Writing in the Major Requirement (WIM) and should be taken no later than the junior year.

4. Declare a concentration track and complete at least 25 units in that track. One introductory area course, numbered 20-39, may be included in the concentration track, as long as it is not used as an introductory course (see 2).

5. Complete at least one course from each of the five Human Evolution Framework (HEF) areas below. Note that some courses satisfy multiple areas of the HEF.

6. Complete at least one foreign language course at the second-year level with a letter grade of ‘B’ or better. This requirement may also be met by special examination, presentation of superior foreign language placement scores, or certification in writing from an appropriate department.

7. Complete at least one course in statistics (ANTHSCI 192, STATS 60, STATS 141, or equivalent).

CONCENTRATION TRACKS

Concentration tracks are designed to encourage students to acquire in-depth knowledge and training. Undergraduates in the major program may elect to specialize in one of the four tracks described below. Alternatively, students may design their own specialization(s) with the guidance of a faculty adviser. Each student is required to complete 25 units within the chosen track. With consent of their faculty adviser, students may replace one course with a relevant course offered by another department. The 25 units count towards the total of 65 units required for the major. Concentration tracks are not declared on Axess; they do not appear on the transcript or diploma.

Culture, Social Relations, and Language (Track 1) — Emphasizes the unity and diversity of contemporary social, cultural, and linguistic systems. Course offerings include culture and social theory, family, gender, kinship, linguistic anthropology, and political economy. Ethnographic or linguistic area studies are strongly encouraged for students who choose this track.

Archaeology and Evolutionary Studies (Track 2) — Features primate evolution, human origins and prehistory, and the development of human societies from early hunter-gatherers through complex civilizations. Students choose from courses in anthropological genetics, archaeology, evolutionary theory, historical linguistics, paleoanthropology, and primatology.

Population and Environment (Track 3) — Explores mutual relationships between human populations and their environments. Biocultural adaptations of human societies to diverse environments are examined, as are the causes and consequences of human impact upon local and global environments. Students choose from courses in behavioral ecology, demography, ecological and environmental anthropology, and selected area studies.

Medical Anthropology and Genetics (Track 4) — Examines human biological and cultural variation from a variety of perspectives. Within medical anthropology, the focus is on the social, cultural, and genetic correlates of physical and mental health, as well as disease. In anthropological genetics, students explore the extent, origins, and impact of variation among human genomes. Students choose from courses in epidemiology, genetics, and medical anthropology.

HUMAN EVOLUTION FRAMEWORK (HEF)

Crosscutting these concentration tracks is an evolutionary framework designed to familiarize students with the tools of analysis in anthropological sciences. The department divides this framework into five essential components (HEF I-V) as outlined below. Regardless of the concentration track, students are required to take at least one course in each of these component areas. Many courses offered by the department satisfy one or more of these requirements as shown by the HEF designations under “Courses” below.

Human Nature and Variation: Past and Present (HEF I):
- Biological nature and variation
- Cultural nature and variation
- Language capability and linguistic variation
- Human universals, human differences

Human History and Prehistory: Inferring Events of the Past (HEF II):
- Population events: movements, splits, admixture, extinctions
- Environmental events: changes in climate, resources, disease
- Species events: adaptation, speciation, species extinction
- Social and cultural events: changes in technology, settlement, language, and social organization

Evolutionary Processes and their Interactions (HEF III):
- Molecular evolution, population genetics, and speciation
- Cultural and linguistic evolution, ethnogenesis, social evolution
- Causes and consequences of environmental change
- Interactions of genetic, cultural, and social evolution

Cultural Systems and Cultural Transmission (HEF IV):
- Systemic properties of culture and language
- Transmission of culture in space and time
- Cultural ontology and socialization
- Relationship between individual, society, and culture

Lab and Field Methods: Tools for the Anthropological Sciences (HEF V):
- Laboratory and field methods
- Ethnographic methods
- Data analysis
- Computational models and methods

MAJORS

Declaring a Major—To declare an Anthropological Sciences major, students should first discuss their ideas and plans with one or more department faculty, and with the peer adviser. When they have a good working plan on paper (forms are available from the student services coordinator) for their course of study, they must declare on Axess, obtain the signature of their student and faculty advisers, and contact the department’s student services coordinator who reviews the degree requirements and gives general guidance. It may be helpful for students to meet with the chair of the department’s Student Affairs Committee for initial academic advising and assistance in choosing an appropriate adviser in the department. Students must complete the declaration process (including the signature of their Anthropological Sciences adviser) by the time they achieve junior status (85 units completed).

Undergraduates are actively encouraged to take advantage of funding opportunities to carry out independent research. Funding for undergraduate research is available from Undergraduate Advising and Research (UAR) grants, affiliated area studies programs (for example, Latin American Studies), the Beagle II Awards, and the department’s own Pritzker Summer Scholars Program and Franz Boas Summer Scholars Program described above. Information and applications for the latter are available from the student services coordinator in the department office.

Advising Program — The department puts high priority on undergraduate advising. Each student works with a peer adviser, as well as a faculty adviser, to design and carry out an Anthropological Sciences major or minor. The advising program is built on a faculty mentoring approach, in order to help students develop a good working relationship with at least one faculty member. Students are expected to meet regularly, and for at least two hours per quarter, with their faculty adviser to discuss their progress and to review course selection, research opportunities, graduate or professional schools, and career planning. The peer adviser is often the first step in seeking advice; the peer adviser keeps regular hours in the peer advising office in the department.

MINORS

Declaring a Minor — The department offers flexibility in structuring an Anthropological Sciences minor. In consultation with both peer and faculty advisers, students develop a minor that reflects their individual interests and needs. Prospective Anthropological Sciences minors should request an Anthropological Sciences Minor Planning Form from the department’s
student services coordinator. All minors in the Department of Anthropological Sciences must fulfill the following four requirements:
1. Selection of an Anthropological Sciences faculty adviser and approval of the minor courses by both peer and faculty advisers.
2. Completion of 30 units of course work in Anthropological Sciences with an average letter grade of ‘B-‘ or better. No more than 10 of the 30 units may be taken for an instructor-elected satisfactory/no credit grade. Student-elected satisfactory/no credit units are not allowed. No more than 5 of the 30 units may be in directed individual study.
3. Completion of ANTHSCI 2A and 2B (HUMBIO 2A and 2B) or 10 units of introductory courses, numbered 3-19, listed below, from at least two concentration tracks. Students may substitute one introductory area course, numbered 20-39, in place of an introductory course.
4. Completion of at least two courses at the 100 level or higher. Please note: Human Biology majors who minor in ANTHSCI may use HUMBIO 2A and 2B to fulfill requirement 3, but may not use it towards requirement 2. That is, students are not required to take an additional 10 units of introductory courses, but they must take 30 units of ANTHSCI course work other than 2A and 2B.

HONORS
The honors program in Anthropological Sciences provides students with an opportunity to conduct original research under the guidance of a faculty adviser. Declared Anthropological Sciences majors of sophomore or junior standing may apply for admission to the honors program by submitting an application form (available from the student services coordinator), a transcript, a copy of their planned course of study in the major, a proposal of their honors research project and paper, and a formal letter of recommendation from the professor who will supervise the student’s honors project. A minimum average letter grade of ‘B+‘ in Anthropological Sciences course work is required for students to enroll in the honors program. For students planning fieldwork as part of their thesis project, all application materials must be completed and turned in no later than March 1 of the candidate’s junior year. For students planning lab- or library-based research projects, applications must be submitted by the third week of Spring Quarter in the candidate’s junior year. Applications are reviewed by the department’s undergraduate student affairs committee which selects the students who become candidates for honors. Honors projects typically involve field research, but applications for lab or library-based research will be considered.

Throughout honors work, students work closely with their advisers to plan the honors proposal, conduct the research, and write the honors paper. Honors students are strongly encouraged to take ANTHSCI 190 and 192 no later than their junior year and are required to take ANTHSCI 193 Prefield Seminar, ANTHSCI 194, Post Field Seminar, and ANTHSCI 196, Honors and Master’s Writing Workshop, to prepare and write up their research projects. Additionally, an honors candidate may enroll in ANTHSCI 199, Directed Individual Study, for as many as 15 units but may not count more than five of these units toward fulfilling the 65-unit requirement for the major. The honors paper is to be completed and two copies are to be handed in to the student services coordinator no later than the second Friday in May of the student’s senior year. The paper is read and evaluated by the adviser and by one other faculty member. Candidates submitting a paper that is judged to be of honors quality (letter grade of ‘A‘- or better, from both readers) are awarded honors.

COTERMINAL BACHELOR’S AND MASTER’S DEGREES
The Department of Anthropological Sciences accepts applications from Stanford undergraduates to work toward coterminal M.A. or M.S. degrees. Undergraduates with strong academic records may apply by the third Friday of the Winter Quarter. Students planning fieldwork are encouraged to take ANTHSCI 193 in Spring Quarter. Students apply by submitting application forms, a proposal of their master’s research project and paper, a plan for their master’s course of study, at least one writing sample (preferably a research paper). A University transcript, and a letter of recommendation from the faculty member who will supervise their master’s work in the department. The GRE is not required. Requirements for coterminal degrees are described under “Graduate Programs” below.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.html#Coterm.
1. Coterminal master’s studies are normally carried out in the student’s fifth year, subsequent to the undergraduate degree program.
2. As a graduation requirement, master’s students defend their project before a committee comprised of a primary and secondary reader in a forum of the primary reader’s choosing. This same committee ensures that the student has met all requirements before signing approval for the degree.
3. The deadline for completion of all requirements for the coterminal master’s degree is the second Friday in May in the fifth year of study. Any exceptions to this rule must be approved by the departmental graduate affairs committee.
4. The primary reader/adviser for the coterminal master’s degree must be an Academic Council member in the Department of Anthropological Sciences.
5. Students must meet all requirements for the Master of Arts or Master of Science listed in the graduate section (below).

GRADUATE PROGRAMS
University requirements for the degrees of Master of Arts, Master of Science, and Doctor of Philosophy are described in the “Graduate Degrees” section of this bulletin. The department offers three graduate degrees: Master of Arts, Master of Science, and Doctor of Philosophy. The graduate curriculum encourages students to pursue individual interests and projects under the supervision of a faculty committee. Details of the graduate programs in Anthropological Sciences are outlined in the Guide to the Ph.D. Program in Anthropological Sciences, available in the department office.

MASTER OF ARTS
The Department of Anthropological Sciences offers the M.A. degree to four groups of students: Stanford undergraduates who enroll in the coterminal program; Stanford graduate students taking advanced degrees in other departments or schools at Stanford; Ph.D. students in Anthropological Sciences who fulfill the M.A. requirements in the course of their work toward the Ph.D. degree; and students who apply from outside of Stanford for entry into the terminal M.A. program.

REQUIREMENTS
1. Graduate enrollment at Stanford for at least three quarters of full tuition.
2. At least 45 units of course work for a letter grade (in addition to any pertinent undergraduate courses), with at least 30 units in Anthropological Sciences. The remaining 15 units may be taken from related humanities, social science, and science departments and programs. Outside courses must be approved by the student’s adviser and must form a coherent program of study. No more than 10 of the 45 units may be in Directed Individual Study. Students must maintain an average letter grade of ‘B’ or better.
3. Complete three fundamentals courses, each for a letter grade: ANTHSCI 290A, Advanced Social Theory in Anthropological Sciences; ANTHSCI 290B, Evolutionary Theory in Anthropological Sciences; and ANTHSCI 292, Data Analysis in the Anthropological Sciences, plus any two 200-level courses other than special courses. Units earned in these courses count toward the 45-unit M.A. requirement.
4. Enroll in ANTHSCI 291, Graduate Core Seminar, while in residence for at least 1 unit each quarter.
5. Submit a master’s-level field, laboratory, or library research paper to be read and approved by at least two department faculty members. The master’s paper is to be completed and two bound and signed copies are to be handed in to the student services coordinator no later than the sixth Friday of the quarter in which the student intends to graduate. As a graduation requirement, master’s students defend their project before a committee comprised of a primary and secondary reader in a forum of the primary reader’s choosing. This committee ensures that the student has met all requirements before signing approval for the degree.
**MASTER OF SCIENCE**

The Department of Anthropological Sciences offers the M.S. degree to four groups of students: Stanford undergraduate science majors who enroll in the coterminal program; Stanford graduate students taking advanced degrees in other departments or schools at Stanford; Ph.D. students in Anthropological Sciences who fulfill the M.S. requirements in the course of their work toward the Ph.D. degree; and students who apply from outside Stanford for entry into the terminal M.S. program.

**REQUIREMENTS**

1. Graduate enrollment at Stanford for at least three quarters of full tuition.
2. At least 45 units of course work for a letter grade (in addition to any pertinent undergraduate courses), with at least 30 units in Anthropological Sciences. The remaining 15 units must be taken from earth or natural sciences, statistics, computer science, chemistry, engineering, math, or physics. Outside courses must be approved by the student’s adviser and must form a coherent program of study. No more than 10 of the 45 units may be in Directed Individual Study. Students must maintain an average letter grade in master’s work of ‘B’ or better.
3. Complete three fundamentals courses, each for a letter grade: ANTH-SCI 290A, Advanced Social Theory in Anthropological Sciences; ANTHSCI 290B, Evolutionary Theory in Anthropological Sciences; and ANTHSCI 292, Data Analysis in the Anthropological Sciences, plus any two 200-level courses other than special courses. Units earned in these courses count toward the 45-unit M.S. requirement.
4. Enroll in ANTHSCI 291, Graduate Core Seminar, while in residence for at least 1 unit each quarter.
5. Submit a master’s-level field, laboratory, or library research paper to be read and approved by at least two department faculty members. The master’s paper is to be completed and two bound and signed copies are to be handed in to the student services coordinator no later than the sixth Friday of the quarter in which the student intends to graduate. As a graduation requirement, master’s students defend their project before a committee comprised of a primary and secondary reader in a forum of the primary reader’s choosing. This committee ensures that the student has met all requirements before signing approval for the degree.

**DOCTOR OF PHILOSOPHY**

Prospective graduate students should request application materials from http://gradadmissions.stanford.edu. The deadline for applications is January 2, 2007. The Graduate Record Exam (GRE) is required. Successful applicants for the Ph.D. program may enter only in Autumn Quarter. It is the policy of the department not to defer admission.

**REQUIREMENTS**

Requirements 1-9 must be completed within the first two years:

1. Within the first two years, complete 87 units of course work for a letter grade (including 10 units each summer). Of these 87 units, at least 60 units must come from graduate-level courses within the department, with an overall average of ‘B+’ or better. The remaining 27 units may include advanced undergraduate courses as well as courses from related humanities, social science, and science departments and programs. Outside courses must form a coherent program of study and be approved by the student’s adviser.
2. Enroll in ANTHSCI 200 during Autumn Quarter of the first year, unless exempted by petition. This course must be taken for a letter grade.
3. Enroll in the departmental Core Seminar (ANTHSCI 291) each quarter while in residence (except for students in the second year of the program who are working as TAs or RAs and thus have a 9-10 unit course limit). Units for ANTHSCI 291 count toward the unit requirements for the Ph.D.
4. Complete three fundamentals courses, each for a letter grade: ANTHSCI 290A, Advanced Social Theory in Anthropological Sciences; ANTHSCI 290B, Evolutionary Theory in Anthropological Sciences; and ANTHSCI 292, Data Analysis in the Anthropological Sciences.
5. Complete, for a letter grade, one designated 200-level course from each of the following three distribution areas of anthropological sciences:
   a. Ethnography/Ecological Anthropology/Linguistics (DA-A)
   b. Archaeology/Paleoanthropology/Linguistics (DA-B)
   c. Medical Anthropology/Anthropological Genetics/Demography (DA-C)

Courses that fulfill this requirement are shown by the distribution areas (DA) designation in the course listings that follow. Courses that fulfill DA-A must have significant ethnographic content.

6. Apply for outside funding during their first quarter in the program; this applies only to students who entered without outside funding. See the Guide to the Ph.D. Program in Anthropological Sciences, downloadable at http://www.stanford.edu/dept/anthsci/graduate.html, for details.
7. Submit a written research plan (GRP) by the first Monday in May of their first year in the program. The GRP describes the intellectual framework for the student’s graduate program, emphasizing research, and the steps needed to meet those aims (for detailed guidelines, see the Guide to the Ph.D. Program in Anthropological Sciences). The written GRP and an oral presentation of it are evaluated by a student-selected, three-person faculty committee, at least two members of which must be full-time Academic Council members in the department. The resulting evaluation and plan of action guide the student towards the University orals, which take the form of a prospectus exam (see below).
8. Submit a master’s-level research paper to a faculty committee of at least two readers by the first Monday in December of the third year in the program. To be considered acceptable, the paper must receive a grade of ‘B+’ or better from each reader. Students must specify in their GRP (see #6 above) how they plan to meet this requirement (for detailed guidelines, see the Guide to the Ph.D. Program in Anthropological Sciences).
9. Enroll in a methods course in the chosen area of specialization. This course must contain an ethics component and be taken for a letter grade.
10. Serve as a teaching assistant for the department. In preparation for this responsibility, students are expected to take part in the departmental Teaching Assistant Training Program organized each year. (Students can petition to substitute an internship or research assistantship for one quarter as a TA.)
11. For those whose native language is English, pass an examination in a language other than English that can serve as a field or research language. The language exam is normally given in the third quarter of the second year. For those whose native language is not English, satisfactory command of English must be demonstrated by completion of courses and other requirements of the first two years of graduate study. After successful completion of the first two years of the program, and after an accepted petition for doctoral candidacy, advanced graduate students are required to complete the following:
   1. Take at least one quarter of Proposal Writing (ANTHSCI 294) and prepare a dissertation proposal. If appropriate, obtain Human Subjects clearance.
   2. Pass a prospectus examination by the end of Winter Quarter of the third year, and petition for candidacy. To pass the examination, a student is required to complete the following within a 6-week period: (a) submit a thesis proposal and obtain committee consent to proceed on a form available from the student services coordinator, no less than 2 weeks prior to the University orals; (b) present the thesis proposal publicly; and (c) pass the University Oral exam consisting of both a review of the proposal and a test of knowledge in a chosen subfield (e.g., archaeology, medical anthropology, anthropological genetics) and/or geographic area as appropriate.
   3. Submit the Doctoral Dissertation Reading Committee form no later than the end of the third year and before approval of TGR.
   4. Take at least one quarter of Dissertation Writing (ANTHSCI 298) and complete an approved dissertation based on independent research.
   5. Give a public presentation of the dissertation in the department.
Financial Support—The department endeavors to provide needed financial support (through fellowships, teaching and research assistantships, and tuition grants) to all students admitted to the Ph.D. program who maintain satisfactory progress. As noted above, first-year students in the Ph.D. program who have entered without outside funding are required to apply for such funding during their first quarter.

PH.D. MINOR

The requirements for a Ph.D. minor in Anthropological Sciences are the following:

1. Enlist a faculty member of Department of Anthropological Sciences who consents to serve as the adviser for the minor.
2. Submit an application for admission to the Ph.D. minor to the Department of Anthropological Sciences. The completed application must include the written consent of the adviser. The application and any associated instructions should be obtained from the student services coordinator of the Department of Anthropological Sciences.
3. Complete 27 units of courses in the Department of Anthropological Sciences at Stanford for letter grades (in courses for which letter grades are offered), each with a grade of ‘B’ or better. The University Ph.D. minor requirements state that 20 of these units must be in courses numbered 200 or above, and that course work for the minor cannot also be used to meet the requirements for a master’s degree. Of the additional 7 units, 2 must come from the Department’s Core Seminar (ANTHSCI 291, see below); the additional 5 units are not restricted as to course number.
4. In conjunction with the adviser, determine a coherent course of study related to the student’s interests. Among the 27 units of required Anthropological Science courses, the student must take ANTHSCI 290A, Advanced Social Theory in Anthropological Sciences, or ANTHSCI 290B, Evolutionary Theory in Anthropological Sciences, and must enroll in the department’s Core Seminar (ANTHSCI 291) for at least two quarters at a minimum of 1 unit per quarter. No more than 10 of the 27 units can be individual study or independent research. No more than 15 of the 27 units can be counted from courses taken before submission of the application for admission to the Ph.D. minor, but only with the approval of the adviser.
5. It is expected that the student’s adviser participate as a representative of the Department at the student’s University Ph.D. oral examination. The student is responsible for this arrangement with the major department.
6. For graduation, complete all necessary paperwork with the student services coordinator of the department.

COURSES

WIM indicates that the course satisfies the Writing in the Major requirements.

Undergraduate Anthropological Sciences courses numbered 100 and above are organized by concentration tracks, 1 to 4 (see above). HEF designations indicate that the course satisfies requirement I, II, III, IV, or V of the Human Evolution Framework, also described above. A course may satisfy more than one HEF requirement.

NUMBERING SYSTEM

Anthropological Sciences courses are numbered according to the following scheme:

1-99 Introductory Courses
   1-19 General Introductory Courses
   20-39 Introductory Area Courses
   40-49 SIS Courses (freshmen)
   50-59 SIS Seminars and Dialogues (sophomores)
100-129 Culture, Social Relations, and Language
   100-109 Culture and Social Relations
   110-119 Language
   120-124 Area Studies: The Americas
   125-129 Area Studies: Asia
130-149 Archaeology and Evolutionary Studies
   130-139 Evolutionary Studies
   140-149 Archaeology
150-169 Population and Environment
   150-159 Population/Demography
   160-169 Environment/Ecology
170-189 Medical Anthropology and Genetics
   170-179 Medical Anthropology
   180-189 Anthropological Genetics
190-199 Special Courses
200-299 Graduate-level Courses

INTRODUCTORY

Intended to serve as an introduction to the methods, theories, and substance of Anthropological Sciences, introductory courses are for both majors and non-majors. ANTHSCI 2A and 2B (HUMBIO 2A and 2B) provide a good introduction to the major; alternatively, a student may take three other introductory courses numbered from 3 to 39.

ANTHSCI 3. Introduction to Prehistoric Archaeology—(Same as ARCHLGY 1.) Aims, methods, and data in the study of human society’s development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development are examined for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each. (HEF I, II) GER:DB-SocSci, EC-GlobalCom
4-5 units, Aut (Rick, J; Robertson, I)

ANTHSCI 5. The Biology and Evolution of Language—(Graduate students register for 214.) Language as an evolutionary adaptation of humans. Comparison of communicative behavior in humans and animals, and the inference of evolutionary stages. Structure, linguistic functions, and the evolution of the vocal tract, ear, and brain, with associated disorders (stuttering, dyslexia, autism, schizophrenia) and therapies. Controversies over language centers in the brain and the innateness of language acquisition. Vision, color terminology, and biological explanation in linguistic theory. (HEF III; DA-A) GER: DB-NatSci
4-5 units, not given this year (Fox, J)

ANTHSCI 6. Human Origins—(Graduate students register for 206; same as HUMBIO 6.) The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them. (HEF I, III; DA-B) GER: DB-NatSci
5 units, Win (Klein, R)
ANTHSCI 7. Marriage and Kinship — Variation in human kinship systems; whether or not they can be understood as evolutionary products and the contribution to be made by a Marxist perspective. Eurasia and Africa contrasted with Europe and East Asia. (HEF I) GER:DB-SocSci, EC-Gender
4-5 units, Spr (Wolf, A)

ANTHSCI 12. Querying Human Nature — Historical and contemporary anthropological perspectives on human nature. Topics include human behaviors such as aggression, incest avoidance, sexual jealousy, childhood attachments, maternal care, color symbolism, facial expression, and language. (HEF I) GER:DB-SocSci
5 units, Win (Wolf, A)

ANTHSCI 13. Bioarchaeology — The study of skeletal remains from archaeological contexts. Methods of bioarchaeology including taphonomy, paleodemographics, paleopathology, and molecular approaches. Case studies illustrate issues such as health consequences of the adoption of agriculture, cannibalism, and relationships among health, violence, class, and sex in historic and prehistoric cultures. (HEF I, IV) GER:DB-NatSci
3-5 units, not given this year (DeGusta, D)

ANTHSCI 14. Introduction to Anthropological Genetics — (Same as HUMBIO 14.) How genetic methods address anthropological questions. Examples include the evolutionary relationships between humans and the apes, the place of the Neanderthals in human evolution, the peopling of the New World, ancient DNA, the genetics of ethnicity, forensic genetics, genomics, behavioral genetics, and hereditary diseases. (HEF I, II) GER:DB-NatSci
3-5 units, Spr (DeGusta, D)

ANTHSCI 15. Sex and Gender — Commonality and diversity of gender roles in crosscultural perspective. Cultural, ecological, and evolutionary explanations for such diversity. Theory of the evolution of sex and gender, changing views about men’s and women’s roles in human evolution, conditions under which gender roles vary in contemporary societies, and issues surrounding gender equality, power, and politics. (HEF I) GER:DB-SocSci, EC-Gender
3 units, Aut (Bird, R)

5 units, not given this year (Barrett, K)

ANTHSCI 18. Ecotourism in Anthropological Perspective — Ecotourism as a market-based conservation strategy providing solutions for environmental and social problems, and as a force of change in ecosystems and communities. How ecotourism seeks to substitute new economic opportunities for damaging land use patterns. Advantages and challenges in ecotourism initiatives; how anthropology informs ecotourism enterprises. Case studies from Latin America, Australia, Africa, the U.S., and Polynesia. (HEF IV)
5 units, not given this year

INTRODUCTORY AREA COURSES

Intended to serve as introductions to particular areas of the world as known through ethnoarchaeology, archaeology, and history. Prior courses in anthropology recommended but not required.

ANTHSCI 22. Archaeology of North America — Why and how people of N. America developed. Issues and processes that dominate or shape developments during particular periods considering the effects of history and interactions with physical and social environment. Topics include the peopling of the New World, explaining subsequent diversity in substance and settlement adaptations, the development of social complexity, and the impact of European contact. (HEF II, III) GER:DB-SocSci, EC-AmerCul
3-5 units, Win (Truncer, J)

ANTHSCI 24. Cultural History of Japan — (Graduate students register for 228; same as CASA 128.) Since WWII. Transformation of religion, kinship, gender, education, work, leisure, ideology, and national identity as interconnected institutions. Tokugawa and prewar Japan as antecedents to postwar developments. (HEF I, II) GER:DB-SocSci
3-5 units, Spr (Befu, H)

ANTHSCI 25. Human Ecology of the Amazon — (Same as HUMBIO 25.) The diversity of peoples and cultures in the Amazon Basin and the ecosystems in which they live. Themes in ecological anthropology of Amazonia including limiting factors, the protein debate, indigenous knowledge and resource management, and anthropogenic modification. Ethnographic, historical, and archeological evidence. (HEF I, IV) GER:DB-SocSci, EC-GlobalCom
5 units, not given this year

ANTHSCI 27. The Aztecs and Their Ancestors: Introduction to Mesoamerican Archaeology — The prehispanic cultures of Mesoamerica through archaeology and ethnohistory, from the archaic period to the Spanish conquest in the 16th century. (HEF II) GER:DB-SocSci, EC-GlobalCom
3-5 units, Win (Robertson, I)

ANTHSCI 29A,B,C. First-Year Nahuatl — The language of the Aztecs, once used as a lingua franca throughout Mesoamerica. Focus is on vocabulary building and reading colonial literary and historical documents, including Central Mexican codices. Modern spoken dialects, the place of Nahuatl in the Uto-Aztecan language phylum, and the relationship between the language and Aztec culture. (HEF IV)
4 units, not given this year (Fox, J)

CULTURE, SOCIAL RELATIONS, AND LANGUAGE

In addition to the courses listed below, 23, 24, 25, and 121, also count towards the Track 1 concentration.

CULTURE AND SOCIAL RELATIONS

ANTHSCI 102. Women, Fertility, and Work — (Graduate students register for 202.) Is gender culturally or biologically determined or both? The arguments for sociobiological and cultural determinist explanations of the differences between women and men are compared, emphasizing their intersection in work. Case studies: hunter/gatherer, horticultural (Melanesian), southern Chinese, and Anglo American societies. (HEF I, IV; DA-A) GER:DB-SocSci, EC-Gender
5 units, not given this year (Barrett, K)

LANGUAGE

ANTHSCI 110. Introduction to Language Change — (Same as LINGUIST 160.) Variation and change as the natural state of language. Differentiation of dialects and languages over time. Determination and classification of historical relationships among languages, and reconstruction of ancestral stages. Types, rates, and explanations of change. Parallels with cultural and genetic evolutionary theory. Implications for the description and explanation of language in general. (HEF II; DA-A) GER:DB-SocSci
4-5 units, not given this year (Fox, J)

ANTHSCI 111. Language and Prehistory — (Graduate students register for 211.) Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparison of linguistic and biological classifi-
Anthropological Sciences

ARTHUR SCI 112. Human Diversity: A Linguistic Perspective. (Same as HUMBIO 187.) The diversity and distribution of human language and its implications for the origin and evolution of the human species. The origin of existing languages and the people who speak them. Where did current world languages come from and how can this diversity be used to study human prehistory? Evidence from related fields such as archaeology and human genetics. Topics: the origin of the Indo-European languages, the peopling of the Americas, and evidence that all human languages share a common origin. (HEF II; DA-A) GER: DB-NatSci
3 units, Aut (Ruhlen, M; Fournier, R)

ANTHSCI 112B. Globalization and Japan. (Graduate students register for 228B; same as CASA 128B.) Globalization theories in anthropology and sociology, and Japan in the context of these theories. Ethnographic cases of Japan’s global presence from the 15th century to the present. Processes of globalization in business management, popular culture, and expatriate communities. Japan’s multiculturization through its domestic globalization. (HEF IV; DA-A) GER:DB-SocSci
3-5 units, Spr (Befu, H)

ARCHAEOLOGY AND EVOLUTIONARY STUDIES

In addition to the courses listed directly below, 22, 27, 110, 111, 112, 115, 116, and 122 count towards the Track 2 concentration.

EVOLUTIONARY STUDIES

ANTHSCI 130C. Current Issues in Paleoanthropology. (Graduate students register for 230C.) Current issues in fossil, archaeological, and genetic evidence for human evolution. Topics chosen by participants. May be repeated for credit.
1 unit, Aut, Win, Spr (DeGusta, D; Klein, R)

ANTHSCI 131A. Primate Evolution. (Graduate students register for 231A.) The fossil, molecular, and anatomical data on primate origins, from their mammalian ancestors to the origin of the hominids. The adaptive radiations of lemurs, lorises, tarsiers, monkeys, and apes. The functional anatomy of primates in relation to habitat and social ecology. (HEF I; II; DA-B) GER: DB-NatSci
5 units, not given this year

ANTHSCI 131B. Primate Societies. (Graduate students register for 231B.) Introduction to primatology. Survey of the living primates, primate evolution, distribution, and taxonomy. Life history patterns, dominance hierarchies, reproductive strategies, and social structures. Focus is on cultural behaviors, including tool manufacture and use, language and communication, hunting and warfare, and political behavior. Analysis of current conservation issues. (HEF II, III; DA-B) GER: DB-NatSci
5 units, not given this year

ANTHSCI 133A. Human Osteology. (Graduate students register for 233A; same as HUMBIO 180.) The human skeleton. Focus is on identification of fragmentary human skeletal remains. Analytical methods include forensic techniques, archaeological analysis, paleopathology, and age/sex estimation. Students work independently in the laboratory with the skeletal collection. (HEF I; DA-B) GER: DB-NatSci
5 units, Win (DeGusta, D)

ANTHSCI 133B. Advanced Human Osteology. (Graduate students register for 233B.) Skeletal analytical methods such as paleopathology, taphonomy, osteometry, and functional and evolutionary morphology. Strategies for osteological research. Students conduct independent projects in their area of interest. (HEF II; DA-B) GER: DB-NatSci
5 units, Spr (DeGusta, D)

ANTHSCI 141. Hunter-Gatherers in Archaeological Perspective. (Graduate students register for 241.) Hunter-gatherer diversity as documented by ethnography and archaeology; how these areas of study provide different but complementary forms of information. Ethnographic case studies of hunter-gatherer groups from Africa, Australia, and N. America; comparisons with examples from the archaeological record. The use of ethnographic analogy in archaeology; current trends in hunter-gatherer archaeological research. (HEF I, II; DA-B) GER:DB-SocSci, EC-GlobalCom
4-5 units, Aut (Truncer, J)

ANTHSCI 142. Incas and their Ancestors: Peruvian Archaeology. The development of high civilizations in Andean S. America from the development of Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred. (HEF II, III; DA-B) GER:DB-SocSci, EC-GlobalCom
3-5 units, Aut (Bird, D)

ANTHSCI 143. Ethnoarchaeology. (Graduate students register for 243.) The study of relationships between observable human behavior and material consequences. How ethnographic observation serves the primary goal of archaeology: to describe variability in past human behavior. The role of ethnoarchaeology in the history of anthropological inquiry, ethnoarchaeological studies of the use of space and subsistence, and future directions. (HEF II, IV; DA-B) GER:DB-SocSci
3-5 units, Aut (Truncer, J)

ANTHSCI 144. Urbanism in the Prehispanic New World. Prehispanic urbanism as exemplified by prehispanic New World societies. Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America. (HEF II; DA-B)
3-5 units, Spr (Robertson, I)

ANTHSCI 144B. Archaeology of South Asia. S. Asian proto- and prehistory emphasizing the development of agriculture and social complexity. Rise and fall of the Indus or Harappan civilization; why cultural change occurred the way it did. (HEF II; DA-B) GER:DB-SocSci
3 units, not given this year (Truncer, J)

ANTHSCI 144C. Archaeology of Central Mexico. Prehispanic Central Mexico from the appearance of agricultural settlements to the arrival of Europeans. The development of the ancient state of Teotihuacan. Regional focus is the basin of Mexico and adjoining regions. Relations between central Mexico and other parts of Mesoamerica including the Maya area, the Gulf lowlands, and Oaxaca. (HEF II; DA-B)
3-5 units, not given this year (Robertson, I)

ANTHSCI 145B. Evolution of Civilizations. Prehistoric urbanism as exemplified by the development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B) GER:DB-SocSci
3-5 units, not given this year (Truncer, J)

ANTHSCI 147. Archaeology of Modern Times. (Same as ARCHLGY 104.) Archaeological theory, method, and data are used to arrive at a better understanding of an issue of contemporary public concern. Issues include resource and energy management strategies such as the electricity situation in California, biodegradation and solid waste management, the relationship between human beings and dogs, ethnic wars in the Balkans and elsewhere, and Bill Gates’ strategies in the rise of Microsoft. (HEF IV; DA-B) GER:DB-SocSci
5 units, Win (Rathje, W)

Stanford Bulletin, 2006-07 | 239
ANTHSCI 148. Archaeological Methods — (Graduate students register for 248; same as ARCHLGY 102.) Methods and issues related to the archaeological investigation of ancient sites, materials, and contexts. Topics include research design for survey and excavation, artifact analysis, and dating methods. (HEF V; DA-B) GER:DB-SocSci
3-5 units, not given this year

ANTHSCI 149. Archaeological Field Methods — Hands-on archaeological field research in the local area. The practical working methodology of the archaeologist through excavation and site survey, with training in registration, preservation, and analysis of archaeological data. (HEF V; DA-B) GER:DB-SocSci
5 units, not given this year (Rick, J)

ANTHSCI 149B. Models and Imaging in Archaeological Computing — (Graduate students register for 208.) Hands-on seminar. Digital photography, mapping, and modeling methodology relevant to archaeology. Emphasis is on sharing skills between participants and instructor. (HEF V; DA-B) GER:DB-EngrAppSci
3-5 units, not given this year (Rick, J)

POPULATION AND ENVIRONMENT
In addition to the courses listed directly below, 25, 124, and 179, count towards the Track 3 concentration.

POPULATION/DEMOGRAPHY
ANTHSCI 151. Anthropology and Demography — (Graduate students register for 251.) Topics include W. Europe and China as examples of extreme demographic regimes. (HEF V; DA-A) GER:DB-SocSci
5 units, not given this year (Wolf, A)

ANTHSCI 155. Demography and Life History Theory — (Graduate students register for 255.) Problems in demography and theoretical population biology applied to human systems. Emphasis is on establishing relationships between models in theoretical population biology and empirical demographic methodology. Topics include philosophy of models and model building, population dynamics, stable population theory, species interactions in human ecology, models of infectious diseases and their control, cultural evolution. Prerequisites: HUMBIO 137 or consent of instructor. (HEF I, III, V; DA-C) GER:DB-SocSci
5 units, Win (Jones, J)

ENVIRONMENT/ECOLOGY
ANTHSCI 160B. Conservation Anthropology — Environmental conservation as a social and cultural process including strategies used around the world to achieve conservation goals such as market-based conservation, protected areas, and single-species conservation. Emphasis is on social and cultural issues and theory. (HEF III, IV; DA-A) GER:DB-SocSci
5 units, not given this year

ANTHSCI 162. Indigenous Peoples and Environmental Problems — (Graduate students register for 262.) The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas. (HEF I, IV; DA-A) GER:DB-Hum, EC-GlobalCom
3-5 units, Aut (Durham, W)

ANTHSCI 162B. Indigenous Peoples and Social Inclusion in Latin America — (Graduate students register for 262B.) Existing and new indigenous social organizations; their past and present values, community structures, traditional roles, and dynamics of change under new leadership, from the colonial period as a form of resistance to the present day. (HEF IVV)
3-5 units, Win (Karp, E)

ANTHSCI 163. Human Behavioral Ecology — (Graduate students register for 263; same as HUMBIO 117.) Theory, method, and application in anthropology. How theory in animal behavioral ecology is applied to questions about human economic decision making in ecological and evolutionary contexts. Topics include decisions about foraging and subsistence, competition and cooperation, mating, and reproduction and parenting. (HEF I, III; DA-A) GER:DB-SocSci
3-5 units, not given this year (Bird, R)

ANTHSCI 163C. Saving Western Wide Open Spaces: Conservation Crises and Strategies in the North American West — (Graduate students register for 263C.) Conservation crises and related ideological divides that threaten the creation, management, and preservation of open space in the western U.S. Guest speakers, case studies, field trips. The ecological and social consequences of conservation tools and their impact on decision making.
3-5 units, not given this year

ANTHSCI 164. Ecological Anthropology — (Graduate students register for 264; same as HUMBIO 118.) Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America. (HEF I, III; DA-A) GER:DB-SocSci
3-5 units, Win (Bird, R)

ANTHSCI 166. Social Policy for Sustainable Resource Use — (Graduate students register for 267; same as EARTHSYS 167/267.) The development of social policies that foster a positive human role in the ecosystem. Goal is to develop group skills in a team setting while researching case studies of forest peoples impacted by integration into the global economy. The case of voluntary forest product certification under the Forest Stewardship Council system. Local participation in policy development, the effectiveness of certification, tenure and institutional aspects of sustainability, indigenous rights and forest conservation, and the role of local communities and workers in sustaining forests over the long term. Prerequisite: consent of instructor. (HEF IV, V; DA-A) GER: DB-SocSci
5 units, not given this year (Irvine, D)

ANTHSCI 167C. Managing the Commons: Evolving Theories for Sustainable Resource Use — (Graduate students register for 267C; same as EARTHSYS 167C/267C.) Development of common property theory since Hardin’s article on the tragedy of the commons. Interdisciplinary theorizing about sustainable management of common-pool resources such as grazing, forest, or marine resources; debates about sustainability of commons management within heterogeneous state and global systems; and new commons such as atmosphere or the information commons. Links among theory, methods, and policy. Prerequisite: 190 or consent of instructor. (HEF II, III, IV; DA-A) GER:DB-SocSci
5 units, Aut (Irvine, D)

ANTHSCI 169. Conservation and Evolutionary Ecology — (Graduate students register for 269.) Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, resource acquisition and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy. (HEF I, III; DA-A) GER:DB-SocSci
3-5 units, not given this year (Bird, D)

MEDICAL ANTHROPOLOGY AND GENETICS
In addition to the courses listed below, 133B and 151 count towards the Track 4 concentration.

MEDICAL ANTHROPOLOGY
ANTHSCI 170. Medical Anthropology — (Same as HUMBIO 178.) The crosscultural study of the health beliefs and healing systems around the world. How social processes shape human health. (HEF I, IV; DA-C) GER:DB-SocSci, EC-GlobalCom
3 units, not given this year (Barrett, R)
ANTHSCI 171. Aging: From Biology to Social Policy—(Same as HUMBIO 149.) What people can expect when they join the ranks of the elderly. Issues include social security, medical care, lifespan, and the cultural, social, and economic consequences of a large elderly population in the U.S. and other countries. Films, service learning component. (HEF I, DA-C) GER:DB-SocSci 5 units, Spr (Barnett, C)

ANTHSCI 173A. The Evolution of Human Diet—(Graduate students register for 273A; same as HUMBIO 181.) Human dietary choices and their consequences from ecological, epidemiological, and evolutionary perspectives. Topics include foraging theory, human community ecology, evidence for evolutionary design in physiological and motivational systems relating to feeding and nutrition, epidemiology of nutritional disorders, subsistence economies and modes of production, reduction diets, and health diets. (HEF I, II, IV, DA-C) GER:DB-SocSci 5 units, not given this year (Jones, J)

ANTHSCI 175. The Anthropology of Death and Dying—(Graduate students register for 275; same as HUMBIO 146.) Death as a biocultural process. Funerary practices and attitudes toward dying in different societies. Issues include hospice care, palliative care, and euthanasia. Instructor is an anthropologist and registered nurse with hospice experience. (HEF I, IV, V, DA-C) 5 units, not given this year (Barrett, R)

ANTHSCI 176A. Anthropological Perspective on Child Malnutrition—(Graduate students register for 276A.) Practices at the core of child welfare debates, including corporal punishment, neglect, male and female circumcision, gender discrimination, emotional abuse, child labor, and sexual abuse. Legal and ethical issues surrounding global definitions of malnutrition. Literature on child growth and development. (HEF I, IV, V, DA-C) GER:DB-SocSci, EC-Gender 5 units, Aut (Barrett, K)

ANTHSCI 178. Contagion and Conflict—Historical and anthropological relationships between human disease and human conflict. Disease epidemics including Paleolithic conflicts, medieval crusades, world wars, and genocides of the last century. ALLiances among military institutions, sanitary reform movements, and health agencies. Biowarfare including smallpox blankets, cold war weaponry, and bioterrorism. Application to current events; policy implications. (HEF IV, DA-C) GER:DB-SocSci 3-5 units, not given this year (Barrett, R)

ANTHSCI 179. Environmental Change and Emerging Infectious Diseases—(Graduate students register for 279; same as HUMBIO 114.) The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV. (HEF III, DA-C) GER:DB-SocSci 3-5 units, not given this year (Durham, W; Jones J)

ANTHROPOLOGICAL GENETICS

ANTHSCI 187. The Genetic Structure of Populations—(Graduate students register for 287.) Inference of evolutionary history from the current structure of genetic variation within a population genetic and phylogenetic framework. Methods include tree inference, analysis of molecular variance, gene genealogies and the coalescent, phylogeny, phylogenetics, clustering algorithms, and Bayesian and frequentist approaches. Applications in evolutionary studies, medicine, conservation, and forensics. Principles and methods illustrated primarily with human and other primate examples; students investigate species of own choice. Prerequisites: 2A or Biology Core. (HEF II, III, V, DA-C) GER:DB-SocSci 5 units, not given this year (Mountain, J)

ANTHSCI 188. Research in Anthropological Genetics—(Graduate students register for 288.) Seminar. Current research at Stanford and beyond. Presentations by instructor, guests, and class participants. May be repeated for credit. (HEF V; DA-C) 1-5 units, not given this year (Mountain, J)

SPECIAL COURSES

ANTHSCI 190. Social Theory in the Anthropological Sciences—Required of majors. Foundational course in the history of social theory in anthropology from the late 19th century to the present. Major approaches to human culture and society: symbolic, material, and psychologial. Questions about the role of theory in anthropology and how it can be applied to human issues. (HEF IV) GER: DB SocSci, WIM 5 units, Aut (Barrett, R)

ANTHSCI 191A. Communicating Science: Proposals, Talks, Articles—(Graduate students register for 291A.) The principles and practice of effective communication in science. Grant proposals, conference presentations, and scientific journal articles. Focus is on writing and speaking skills in professional contexts. (HEF V) GER:DB-SocSci 4-5 units, Win (DeGusta, D)

ANTHSCI 191B. Conduct and Misconduct in Science—(Graduate students register for 291B.) The structure of modern science through a study of ethics and misconduct in research. Case studies of alleged scientific misconduct; what constitutes ethical research practices; the meaning of authorship; the limits of grantsmanship; the place of science in society; and roles of advisers, students, and postdocs. Theoretical and practical aspects of these issues. Emphasis is on anthropology and biology. (HEF V) GER:DB-SocSci 3-5 units, not given this year (DeGusta, D)

ANTHSCI 191C. Anthropological Sciences Capstone Core Seminar—See 291 for description. Required of undergraduate majors who are not in the honors program. Must be taken in the senior year, or by petition in the junior year. 1-3 units, Aut (Bird, R)

ANTHSCI 192. Data Analysis in the Anthropological Sciences—(Graduate students register for 292.) Univariate, multivariate, and graphical methods used for analyzing quantitative data in anthropological research. Archaeological and paleobiological examples. Recommended: algebra. (HEF V) GER:DB-Math 5 units, Spr (Klein, R)

ANTHSCI 193. Prefield Research Seminar—Required of Anthropological Sciences honors students. Preparation for field or laboratory research. Students develop a testable hypothesis and realistic data collection procedures; and ethical issues. Proposal writing and human subjects protocol preparation. Anthsci majors may not substitute this course for 193. (HEF V) 5 units, Spr (Bird, D)

ANTHSCI 193U. Field Research Methods and Proposal Writing—For undergraduates of any major. Social science methods for field research. Formulation of research questions and testable hypotheses; data collection techniques including participant observation, interviewing, surveys, and sampling procedures; and ethical issues. Proposal writing and human subjects protocol preparation. Anthsci majors may not substitute this course for 193. (HEF V) 5 units, Spr (Bird, D)

ANTHSCI 194. Post Field Seminar—Undergraduates analyze and write about material gathered during summer fieldwork. Emphasis is on writing and revising in analysis and composition. Student critiques of each other’s work. Limited enrollment. (HEF V) GER:DB-SocSci 5 units, Aut (Robertson, I; Slovak, N)

ANTHSCI 195. Research Project—Independent research conducted under faculty supervision, normally taken junior or senior year in pursit of an honors project. May be taken for more than one quarter for credit. Prerequisite: completed application to the honors program. 1-10 units, Aut, Win, Spr, Sum (Staff)
ANTHSCI 196. Honors and Master’s Writing Workshop — Techniques for interpreting data, organizing bibliographic material, writing, editing, and revising. Preparation of papers for conferences and publications in anthropology.
2-6 units, Aut, Win, Spr, Sum (Staff)

ANTHSCI 197. Internship in Anthropological Sciences — Opportunity for students to pursue their specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency. May be repeated for credit.
4-5 units, Aut, Win, Spr, Sum (Staff)

ANTHSCI 199. Directed Individual Study — Prerequisite: consent of instructor.
1-10 units, Aut, Win, Spr, Sum (Staff)

GRADUATE

These courses are intended for graduate students. However, advanced undergraduates may be admitted with consent of instructor.

ANTHSCI 200. Introduction to the Anthropological Sciences — Themes and topics of lasting heuristic value in the anthropological sciences. Combines the lecture content of 2A and 2B with a discussion section for graduate students. Must be taken in the Autumn Quarter of a student’s first year in the graduate program.
5 units, Aut (Durham, W)

ANTHSCI 202. Women, Fertility, and Work — (Graduate section; see 102.) 5 units, not given this year (Barrett, K)

ANTHSCI 203. Topics in the Anthropology of China and Taiwan — Graduate seminar. Topics vary; contact department office. (DA-A)
3-5 units, not given this year (Brown, M)

ANTHSCI 204. Archaeology of Central Mexico — (Graduate section; see 144C.) 3-5 units, not given this year (Robertson, I)

ANTHSCI 206. Human Origins — (Graduate section; see 6; same as HUMBIO 6.) 5 units, Win (Klein, R)

ANTHSCI 208. Models and Imaging in Archaeological Computing — (Graduate section; see 149B.) 3-5 units, not given this year (Rick J)

ANTHSCI 210. Examining Ethnographies — Eight or nine important ethnographies, including their construction, their impact, and their faults and virtues. (HEF IV; DA-A)
5 units, Aut (Wolf, A)

ANTHSCI 211. Language and Prehistory — (Graduate section; see 111.) 3 units, Aut (Ruhlen, M; Fournier, R)

ANTHSCI 212. Linguistic Anthropology — Seminar. The ethnography of communication; language repertoires including registers, dialects, styles, and their functions; language classification, phylogeny, ethnicity, and ideology; vocabulary, grammar, and codability in culture and cognition; discourse, conversation, narrative, and poetry; writing and literacy; multilingualism and bilingualism. Emphasis is on authorial argumentation and theoretical preoccupations, linguistic fieldwork, and the richness of language repertoires around the world. Sources include monographs and articles on relationships among language, culture, and society. Student presentations. (HEF IV; DA-A)
5 units, not given this year (Fox, J)

ANTHSCI 214. The Biology and Evolution of Language — (Graduate section; see 5.) 4-5 units, not given this year (Fox, J)

ANTHSCI 228. Cultural History of Japan — (Graduate section; see 24; same as CASA 128.) 3-5 units, not given this year

ANTHSCI 228B. Globalization and Japan — (Graduate section; see 128B; same as CASA 128B.) 3-5 units, Spr (Befu, H)

ANTHSCI 230C. Current Issues in Paleoanthropology — (Graduate section; see 130C.) 1 unit, Aut, Win, Spr (DeGusta, D; Klein, R)

ANTHSCI 231A. Primate Evolution — (Graduate section; see 131A.) 5 units, not given this year

ANTHSCI 231B. Primate Evolution — (Graduate section; see 131B.) 5 units, not given this year

ANTHSCI 233A. Human Osteology — (Graduate section; see 133A; same as HUMBIO 180.) 5 units, Win (DeGusta, D)

ANTHSCI 233B. Advanced Human Osteology — (Graduate section; see 133B.) 5 units, Spr (DeGusta, D)

ANTHSCI 243. Ethnoarchaeology — (Graduate section; see 143.) 3-5 units, Aut (Bird, D)

ANTHSCI 244. Urbanism in the Prehispanic New World — (Graduate section; see 144.) 3-5 units, Spr (Robertson, I)

ANTHSCI 245B. Evolution of Civilizations — (Graduate section; see 145B.) 3-5 units, not given this year (Truncer, J)

ANTHSCI 248. Archaeological Methods — (Graduate section; see 148; same as ARCHLGY 102.) 3-5 units, not given this year

ANTHSCI 251. Anthropology and Demography — (Graduate section; see 151.) 5 units, not given this year (Wolf, A)

ANTHSCI 254. Applied Bayesian Analysis — (Same as POLISCI 354F.) Bayesian modeling in the social sciences emphasizing applications in political science, anthropological science, sociology, and education testing. Topics include: Bayesian computation via Markov chain Monte Carlo; Bayesian hierarchical modeling; Bayesian models for latent variables and longitudinal data; efficient sampling from posterior densities, data analysis, and model comparisons. Final project. Prerequisites: exposure to statistical modeling such as 200-level STATS or POLISCI 150/350B,C, or ANTHSCI 292. 3-5 units, Spr (Jones, J; Jackman, S)

ANTHSCI 255. Demography and Life History Theory — (Graduate section; see 155.) 5 units, Win (Jones, J)

ANTHSCI 262. Indigenous Peoples and Environmental Problems — (Graduate section; see 162.) 3-5 units, Aut (Durham, W)

ANTHSCI 262B. Indigenous Peoples and Social Inclusion in Latin America — (Graduate section; see 162B.) 3-5 units, Win (Karp, E)
ANTHSCI 262C. Cultural Diversity, Ethnicity, and Governance in Indigenous Latin America—Continuation of 262B. Possibilities for building representative institutions within a democratic regional and national context for the empowerment of indigenous peoples. Case studies of where this has happened. Long-term consequences, reaction from different sectors of society, business, media, and professionals. (DA-A)  
3-5 units, Spr (Karp, E)

ANTHSCI 263. Human Behavioral Ecology—(Graduate section; see 163; same as HUMBIO 117.)  
3-5 units, not given this year (Bird, R)

ANTHSCI 263C. Saving Western Wide Open Spaces: Conservation Crises and Strategies in the North American West—(Graduate section; see 163C.)  
3-5 units, not given this year

ANTHSCI 264. Ecological Anthropology—(Graduate section; see 164; same as HUMBIO 118.)  
3-5 units, Win (Bird, R)

ANTHSCI 265B. Central America: Environment, Sustainable Development, and Security—(Graduate section; see 165B; same as EARTHSYS 167/267.)  
3-5 units, not given this year

ANTHSCI 267. Social Policy for Sustainable Resource Use—(Graduate section; see 167; same as EARTHSYS 167/267.)  
5 units, not given this year (Irvine, N)

ANTHSCI 267C. Managing the Commons: Evolving Theories for Sustainable Resource Use—(Graduate section; see 167C; same as EARTHSYS 167C/267C.)  
5 units, Spr (Irvine, D)

ANTHSCI 269. Conservation and Evolutionary Ecology—(Graduate section; see 169.)  
3-5 units, not given this year (Bird, D)

ANTHSCI 270. Advanced Topics in Medical Anthropology—Graduate seminar. Specializes in human health, illness, and healing from anthropological perspectives. Topics based upon faculty and graduate student research interests and current issues. Students present topical research and analyses from published sources; required journal-quality paper. The history, theories, and methods of research. Recommended: courses in medical anthropology. (HEF I, IV; DA-C)  
3-5 units, not given this year (Barrett, R)

ANTHSCI 273A. The Evolution of Human Diet—(Graduate section; see 173A; same as HUMBIO 181.)  
5 units, not given this year (Jones, J)

ANTHSCI 275. The Anthropology of Death and Dying—(Graduate section; see 175; same as HUMBIO 146.)  
5 units, not given this year (Barrett, R)

ANTHSCI 276A. Anthropological Perspective on Child Maltreatment—(Graduate section; see 176A.)  
5 units, Aut (Barrett, K)

ANTHSCI 279. Environmental Change and Emerging Infectious Diseases—(Graduate section; see 179; same as HUMBIO 114.)  
3-5 units, not given this year (Durham W; Jones J)

ANTHSCI 287. The Genetic Structure of Populations—(Graduate section; see 187.)  
5 units, not given this year (Mountain, J)

ANTHSCI 288. Research in Anthropological Genetecis—(Graduate section; see 188.)  
1-5 units, not given this year (Mountain, J)

SPECIAL COURSES

ANTHSCI 290A. Advanced Social Theory in the Anthropological Sciences—Social theories that have influenced anthropology including evolutionism, Marxism, interpretivism, and postmodernism. Implications of debates among theorists for anthropological research. Prerequisite: graduate standing or consent of instructor. With consent of instructors of 190 and 290A, undergraduate majors may substitute 290A for 190. (HEF IV)  
5 units, Aut (Barrett, R)

ANTHSCI 290B. Evolutionary Theory in Anthropological Sciences—History of evolutionary theory from the 19th century to present, emphasizing anthropological applications. Theory and concept in evolutionary biology; evolutionary theories of culture; and interactions of genetic, social, and cultural evolution and their implications. Emphasis is on tools of analysis and the value of evolutionary thinking for formulating research questions in anthropology today. Prerequisite: graduate standing or consent of instructor. (HEF II, III)  
5 units, Win (Bird, R)

ANTHSCI 291. Graduate Core Seminar—The use of the scientific method in anthropological research. Published papers from subfields illustrate effective research design, the formulation and testing of hypotheses, and comparative methods. Field exercises in interviewing, observation, and taking and using field notes. The ethics of field research and procedures for maintaining physical and mental health in the field. May be repeated for credit.  
1-5 units, Aut (Bird, R), Win (Jones, J), Spr (Klein, R)

ANTHSCI 291A. Communicating Science: Proposals, Talks, Articles—(Graduate section; see 191A.)  
4-5 units, Win (DeGusta, D)

ANTHSCI 291B. Conduct and Misconduct in Science—(Graduate section; see 191B.)  
3-5 units, not given this year (DeGusta, D)

ANTHSCI 292. Data Analysis in the Anthropological Sciences—(Graduate section; see 192.)  
5 units, Spr (Klein, R)

ANTHSCI 294. Proposal Writing Seminar—Required of ANTHSCI Ph.D. students. Hands-on practical training in grant writing methods. Students draft a research prospectus based on their own interests and proposed projects, and work closely with their advisers and other faculty. May be repeated for credit.  
5 units, Aut, Win, Spr, Sum (Staff)

ANTHSCI 295. Research in Anthropological Sciences—Supervised work with an individual faculty member on the student research project. May be taken for more than one quarter.  
3-5 units, Aut, Win, Spr, Sum (Staff)

ANTHSCI 296. Graduate Internship—Provides graduate students with the opportunity to pursue their area of specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency.  
4-5 units, Aut, Win, Spr, Sum (Staff)

ANTHSCI 297. Teaching Assistantship—Supervised experience as assistant in one undergraduate course.  
3-5 units, Aut, Win, Spr, Sum (Staff)

ANTHSCI 298. Dissertation Writing Seminar—Required of ANTHSCI Ph.D. students. Students work with advisers and committee members to write a draft of their dissertation.  
5 units, Aut, Win, Spr, Sum (Staff)

ANTHSCI 299. Directed Individual Study—Prerequisite: consent of instructor.  
1-10 units, Aut, Win, Spr, Sum (Staff)
COGNATE COURSES

See degree requirements above or the department’s student services office for applicability of these courses to a major or minor program.

BIOSCI 146. Population Studies
1 unit, Win (Feldman, M)

CASA 150. Archaeological Methods
5 units, Spr (Hodder, I)

COMPMED 107/207. Comparative Neuroanatomy
5 units, Spr (Buckmaster, P; Darian-Smith, C)

EDUC 191X. Introduction to Survey Research
5-4 units, Win (Adams, J)

HUMBIO 2A. Genetics, Evolution, and Ecology
5 units, Aut (Boggs, C; Durham, W)

HUMBIO 2B. Culture, Evolution, and Society
5 units, Aut (Klein, R; Wolf, A)

SURG 101. Regional Study of Human Structure
5 units, Win (Staff)

OVERSEAS STUDIES

Courses approved for the Anthropological Sciences major and taught overseas can be found in the “Overseas Studies” section of this bulletin, or in the Overseas Studies office, 126 Sweet Hall.

KYOTO

ANTHSCI 125X. An Enduring Kyoto — (Same as CASA 149.)
2 units, Aut (Befu, H)

OXFORD

ANTHSCI 101X. The British Healthcare System
5 units, Spr (Barrett, R)

ANTHSCI 171X. British Ethnography and Ethnographies of Britain
5 units, Spr (Barrett, R)

SANTIAGO

ANTHSCI 104X. Modernization and Culture in Latin America — (Same as SPANLIT 290Z.) GER:DB-Hum, EC-GlobalCom
5 units, Aut (Subercaseaux, B)

ANTHSCI 111X. Language and Prehistory
5 units, Aut (Fox, J)

APPLIED PHYSICS

Emeriti: (Professors) Theodore H. Geballe, Walter A. Harrison, W. Conyers Herring, Peter A. Sturrock; (Professors, Research) Calvin F. Quate, Helmut Wiedermann, Herman Winick; (Courtesy) Gordon S. Kino

Chair: Aharon Kapitulnik

Associate Professor: Kathryn A. Moler

Assistant Professors: Ian R. Fisher, Martin Greven, Mark J. Schnitzer

Visiting Professors: Guy Deutschel, Eli Zeldov

Department Office: Applied Physics 101

Mail Code: 94305-4090

Phone: (650) 723-4027

Web Site: http://www.stanford.edu/dept/app-physics/

Courses given in Applied Physics have the subject code APPPHYS. For a complete list of subject codes, see Appendix.

The Department of Applied Physics offers qualified students with backgrounds in physics or engineering the opportunity to do graduate course work and research in the physics relevant to technical applications and natural phenomena. These areas include accelerator physics, biophysics, condensed matter physics, nanostructured materials, optoelectronics, photonics, quantum optics, space science and astrophysics, synchrotron radiation and applications. Student research is supervised by the faculty members listed above and also by various members of other departments such as Biological Sciences, Chemistry, Electrical Engineering, Materials Science and Engineering, Physics, SLAC, and faculty of the Medical School who are engaged in related research fields. Research activities are carried out in laboratories including the Geballe Laboratory for Advanced Materials, the Edward L. Ginzton Laboratory, the Hansen Experimental Physics Laboratory, the Stanford Linear Accelerator Center, and the Stanford Synchrotron Radiation Laboratory.

The number of graduate students admitted to Applied Physics is limited. Applications should be received by January 2, 2007. Graduate students normally enter the department only in Autumn Quarter.

GRADUATE PROGRAMS

Admission requirements for graduate work in Applied Physics include a bachelor’s degree in Physics or an equivalent engineering degree. Students entering the program from an engineering curriculum should expect to spend at least an additional quarter of study acquiring the background to meet the requirements for advanced degrees in Applied Physics.

MASTER OF SCIENCE

The University’s basic requirements for the master’s degree are discussed in the “Graduate Degrees” section of this bulletin. The minimum requirements for the degree are 45 units, of which at least 39 units must be graduate-level courses in applied physics, engineering, mathematics, and physics. The required program consists of the following:

1. Courses in Physics and Mathematics to overcome deficiencies, if any, in undergraduate preparation.
2. Basic graduate courses (letter grade required):
   a) Advanced Mechanics—one quarter, 3 units: PHYSICS 210, or approved substitute 211
   b) Electrodynamics—two quarters, 6 units: PHYSICS 220, 221
c) Quantum Mechanics—two quarters, 6 units: PHYSICS 230, 231, or approved substitutes 232, 330, 331, 332, 370
3. 30 units of additional advanced courses in science and/or engineering. 15 of the 30 units may be any combination of advanced courses, Directed Study (APPPHYS 290), and 1-unit seminar courses, to complete the requirement of 45 units. At least 15 of these 30 units must be taken for a letter grade.
4. A final overall grade point average (GPA) of 3.0 (B) is required for courses used to fulfill degree requirements.

There are no department or University examinations, and a thesis is not required. If a student is admitted to the M.S. program only, but later wishes to change to the Ph.D. program, the student must apply to the department’s Admissions Committee.

DOCTOR OF PHILOSOPHY

The University’s basic requirements for the Ph.D. (residency, dissertation, examination, and so on) are discussed in the “Graduate Degrees” section of this bulletin. The program leading to a Ph.D. in Applied Physics consists of course work, research, qualifying for Ph.D. candidacy, a research progress report, a University oral examination, and a dissertation as follows:

1. Course Work:
   a) Courses in Physics and Mathematics to overcome deficiencies, if any, in undergraduate preparation.
   b) Basic graduate courses* (letter grades required):
      1) Advanced Mechanics—one quarter: PHYSICS 210, or approved substitute 211
      2) Statistical Physics—one quarter: PHYSICS 212
      3) Electrodynamics—two quarters: PHYSICS 220, 221
      4) Quantum Mechanics—two quarters: PHYSICS 230, 231, or approved substitutes 232, 330, 331, 332, 370
      5) Laboratory—one quarter: APPPHYS 207, 208, 304, 305; BIOSCI 232; EE 234, 410; MATSCI 171, 172, 173; PHYSICS 301
   c) 18 units of additional advanced courses in science and/or engineering. not including Directed Study (APPPHYS 290), Dissertation Research (APPPHYS 390), and 1-unit seminar courses. Only 3 units at the 300 or above level may be taken on a satisfactory/no credit basis
   d) 96 units of additional courses to meet the minimum residency requirement of 135. Directed study and research units as well as 1-unit seminar courses can be included
   e) A final average overall grade point average (GPA) of 3.0 (B) is required for courses used to fulfill degree requirements.
   f) Students are normally expected to complete the specified course requirements by the end of their third year of graduate study.

2. Research: may be conducted in a science/engineering field under the supervision of a member of the Applied Physics faculty or appropriate faculty from other departments.

3. Ph.D. Candidacy: satisfactory progress in academic and research work, together with passing the Ph.D. candidacy qualifying examination, qualifies the student to apply for Ph.D. candidacy, and must be completed before the third year of graduate registration. The examination consists of a seminar on a suitable subject delivered by the student before the faculty advisory committee (or an approved substitute) and two other members of the faculty selected by the department.

4. Research Progress Report: normally before the end of the Winter Quarter of the fourth year of enrollment in graduate study at Stanford, the student arranges to give an oral research progress report of approximately 45 minutes, of which a minimum of 15 minutes should be devoted to questions from the Ph.D. reading committee.

5. University Ph.D. Oral Examination: consists of a public seminar in defense of the dissertation, followed by private questioning of the candidate by the University examining committee.

6. Dissertation: must be approved and signed by the Ph.D. reading committee.

* Requirements for item 1b may be totally or partly satisfied with equivalent courses taken elsewhere, pending the approval of the graduate study committee.

COURSES

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

APPPHYS 79Q. Energy Choices for the 21st Century — Stanford Introductory Seminar. Preference to sophomores. Choices for meeting the future energy needs of the U.S. and the world. Basic physics of energy sources, technologies that might be employed, and related public policy issues. Trade-offs and societal impacts of different energy sources. Policy options for making rational choices for a sustainable world energy economy. 3 units, Aut (Fox, J; Geballe, T)

APPPHYS 192. Introductory Biophysics — (For undergraduates; see 292.) 3 units, alternate years, not given this year

APPPHYS 214. Randomness in the Physical World — Topics include: random numbers, and their generation and application; disordered systems, quenching, and annealing; percolation and fractal structures; universality, the renormalization group, and limit theorems; path integrals, partition functions, and Wiener measure; random matrices; and optical estimation. Prerequisite: introductory course in statistical mechanics or analysis. 3 units, not given this year

APPPHYS 215. Numerical Methods for Physicists and Engineers — Review of basic numerical techniques with additional advanced material: derivatives and integrals; linear algebra; linear least squares fitting, FFT and wavelets, singular value decomposition, linear prediction; optimization, nonlinear least squares, maximum entropy methods; deterministic and stochastic differential equations, Monte Carlo methods. 3 units, not given this year

APPPHYS 218. X-Ray and Neutron Scattering in the 21st Century — Interaction of X-rays and neutrons with matter. Modern sources of radiation: synchrotrons, x-ray free electron lasers, and spallation neutron sources. Scattering formulae. Determination of molecular, crystal, and magnetic structures, and their associated charge, lattice, and magnetic excitations. Applications from condensed matter physics, materials science, biophysics, medicine, and the arts. Examples include thermal and quantum phase transitions, excitations and competing phases in high-temperature superconductors, materials under extreme pressure, structure of nanoparticles, proteins and water, computer-aided tomography, and nondestructive testing of art objects. 3 units, alternate years, not given this year
3 units, Spr (Yamamoto, Y), alternate years, not given next year

3 units, Win (Laughlin, R)

3 units, Spr (Laughlin, R)

APPPHYS 275. Probing the Nanoscale — Theory, operation, and applications of nanoprobes of interest in physics and materials science. Lecture by experts. Topics include scanning tunneling microscopy, spectroscopy, potentiometry; atomic manipulation; scanning magnetic sensors and atomic manipulation; scanning field-effect gates; scanning force probes; and ultra-near-field optical scanning.
3 units, Win (Beasly, M)

APPPHYS 280. Phenomenology of Superconductors I — Applications based on superconductivity as a phase-coherent macroscopic quantum phenomena. Topics include the superconducting pair wave function, London and Ginzburg-Landau theories, their physical content, the Josephson effect and superconducting quantum interference devices, s- and d-wave superconductivity, the response of superconductors to currents, magnetic fields, and RF electromagnetic radiation.
3 units, not given this year

APPPHYS 290. Directed Studies in Applied Physics — Special studies under the direction of a faculty member for which academic credit may properly be allowed. May include lab work or directed reading.
1-15 units, Aut, Win, Spr, Sum (Staff)

APPPHYS 291. Practical Training — Opportunity for practical training in industrial labs. Arranged by student with research adviser’s approval. Summary of activities required.
3 units, Sum (Staff)

3 units, alternate years, not given this year

APPPHYS 304. Lasers Laboratory — Theory and practice. Theoretical and descriptive background for lab experiments, detectors and noise, and lasers (helium neon, beams and resonators, argon ion, cw dye, titanium sapphire, semiconductor diode, and the Nd:YAG). Measurements of laser threshold, gain, saturation, and output power levels. Laser transverse and axial modes, linewidth and tuning, Q-switching and mode locking. Limited enrollment. Prerequisites: EE 231 and 232, or consent of instructor.
3 units, Win (Byer, R)

APPPHYS 305. Nonlinear Optics Laboratory — Laser interaction with matter. Laser devices provide radiation to explore the linear and nonlinear properties of matter. Experiments on modulation, harmonic generation, parametric oscillators, mode locking, stimulated Raman and Brillouin scattering, coherent anti-Stokes scattering, optical Kerr effect, four-wave mixing interactions such as wavefront conjugation and optical bistability. Optical pumping and spectroscopy of atomic and molecular species. Limited enrollment. Prerequisites: 304, EE 231 and 232, or consent of instructor.
3 units, Spr (Byer, R)

3 units, Win (Doniach, S), alternate years, not given next year

APPPHYS 324. Introduction to Accelerator Physics — Dynamics of a beam of particles from first principles. Transverse dynamics description with Courant-Snyder matrix formalism. Longitudinal dynamics description with phase space Hamiltonian. Effects of synchrotron radiation on beam dynamics. Advanced topics of nonlinear dynamics and collective instability effects. Emphasis is on physical concepts and practical application examples. Prerequisites: undergraduate electromagnetism and mathematical physics.
3 units, alternate years, not given this year

APPPHYS 377. Literature of Condensed Matter Physics — Discoveries and experiments in condensed matter physics in the past 15 years. Topics: sliding charge density waves in layer compounds, the first pressure-induced Mott transition and organic superconductor, discovery of superfluid 3He, quasicrystals, the Sharvin effect, the quantum Hall effect, and reentrant superconductivity. Journal club format; student presentations.
3 units, alternate years, not given this year

3 units, Win (Bucksbaum, P)

3 units, alternate years, not given this year

3 units, alternate years, not given this year

APPPHYS 390. Dissertation Research
1-15 units, Aut, Win, Spr, Sum (Staff)

APPPHYS 392. Topics in Molecular Biophysics — Concepts from statistical mechanics applied to contemporary molecular biology: allostery; protein folding; molecular recognition; actin polymers and gels; molecular motors; lipids and membrane proteins; ion channels. Some of the basic models used to quantify fundamental biomolecular functions. Prerequisites: elementary statistical mechanics and chemical kinetics.

3 units, Spr (Doniach, S), alternate years, not given next year

APPPHYS 453A. Topics in Accelerator Physics: Introduction to Microwave Linear Accelerators — Microwave circuit representations, periodic structures, and beam transport and emittance concepts. Design concepts of linear accelerator structures. Types of normal conducting accelerator structures such as standing-wave, traveling-wave, and bi-periodic structures. Superconducting accelerator structures design concepts, including low beta, medium beta, and speed of light design concepts. System considerations, including RF sources and pulse compression systems. Impedance and wake field concepts. Other advanced accelerator concepts such as laser and beam-driven wake field accelerators. May be repeated for credit.

3 units, Win (Tantawi, S)

APPPHYS 453B. Topics in Accelerator Physics: Nonlinear Dynamics in Particle Accelerators — Topics include introduction to particle accelerators, Hamiltonian motion and phase space, linear dynamics, physics of nonlinear motion, perturbation theory, resonances and resonance islands, stability and instability, integrability, symplectic integration, and lie algebraic techniques. Techniques for calculating or simulating nonlinear dynamical effects for large particle accelerators. May be repeated for credit.

3 units, Spr (Ruth, R)

APPPHYS 470. Condensed Matter Seminar — Current research and literature; offered by faculty, students, and outside specialists. May be repeated for credit.

1 unit, Aut, Win, Spr (Fisher, I)
ARCHAEOLOGY PROGRAM

Director: Ian Hodder (Cultural and Social Anthropology)
Professors: Ian Hodder (Cultural and Social Anthropology), Richard Klein (Anthropological Sciences), Gail Mahood (Geological and Environmental Sciences), Lynn Meskell (Cultural and Social Anthropology), Ian Morris (Classics, History), Amos Nur (Geophysics), Michael Shanks (Classics)
Associate Professors: Jody Maxmin (Art History, Classics), John Rick (Anthropological Sciences), Jennifer Tribble (Classics)
Assistant Professors: Giovanna Ceserani (Classics), David DeGusta (Anthropological Sciences), Joanna Mountain (Anthropological Sciences), Ian Robertson (Anthropological Sciences), Barbara Voss (Cultural and Social Anthropology), Michael Wilcox (Cultural and Social Anthropology)

Associated Staff: Laura Jones (Campus Archaeologist), Tom Seligman (Cantor Center)
Fellows: Patrick Hunt, Bill Rathje, James Truncer

Program Offices: Building 500, Main Quad
Mail Code: 94305-2170
Web Site: http://archaeology.stanford.edu

Human beings and their ancestors have roamed the earth for at least five million years, but only invented writing five thousand years ago. And for most of the period since its invention, writing only tells us about small elite groups. Archaeology is the only discipline that gives direct access to the experiences of all members of all cultures, everywhere in the world. Stanford’s Archaeology Program is unique in providing students with an interdisciplinary approach to the material remains of past societies, drawing in equal parts on the humanities, social sciences, and natural sciences.

The program has three goals:
1. To provide a broad and rigorous introduction to the analysis of the material culture of past societies, drawing on the questions and methods of the humanities, social sciences, and natural sciences.
2. To relate this analysis to the practice of archaeology in the contemporary world.
3. To help each student achieve a high level of understanding through concentrated study of a particular research area.

The Archaeology curriculum draws on faculty from a wide range of University departments and schools. To complete the requirements for the major, students must take courses from the offerings of the program and from the listings of other University departments. The program culminates in a B.A. in Archaeology.

Archaeology majors are well prepared for advanced training in professional schools such as education, law, and journalism, and, depending on their choice of upper-division courses, graduate programs in the humanities, social sciences, and natural sciences.

UNDERGRADUATE PROGRAMS

BACHELOR OF ARTS

The B.A. in Archaeology requires a minimum of 65 units in the major, divided between five components:

1. Core Program (20 units), consisting of:
   a) Gateway: ANTHSCI 3, Introduction to Prehistoric Archaeology (5 units)
   b) Intermediate: ANTHSCI 148, Introduction to Scientific Methods in Archaeology (5 units)
   c) Intermediate: CASA 108, History of Archaeological Thought (5 units)
   d) Capstone: ANTHSCI 147, Archaeology of Modern Times (5 units; Writing in the Major)

   ANTHSCI 3 is recommended as a first course, and many upper-level courses in Archaeology require this course as a prerequisite. Students should normally take the capstone course in their final year of course work in the major.

2. Analytical Methods and Computing (at least 3-5 units): quantitative skills and computing ability are indispensable to archaeologists. It is recommended that students take either ANTHSCI 192, Data Analysis in Anthropological Science, or ANTHSCI 208, Models and Imaging in Archaeological Computing. Other courses that may satisfy this requirement are PSYCH 10/STATS 60, ECON 102A, and GES 160.

3. Archaeological Skills (at least 10 units): archaeological skills include archaeological formation processes, botanical analysis, cartography, ceramic analysis, dating methods, faunal analysis, geographic information systems, geology, geophysics, genetics, osteology, remote sensing, soil chemistry, and statistics. All students are required to take at least 5 units from section A, Formation Processes, and at least 5 units from section B, Archaeological Methods. Students are strongly encouraged, whenever possible, to take GES 186, Geoarchaeology, to fulfill the formation processes requirement. With the approval of the instructor and Archaeology director, undergraduates may fulfill part of this requirement from graduate-level courses (i.e., courses with numbers of 200 or higher). Note: this list combines historical and current offerings subject to change; contact the Archaeology administrator for course planning beyond 2006-07 and check the web site.

   Section A: Formation Processes
   - GES 1. Fundamentals of Geology 5
   - GES 49N. Field Trip to Death Valley and Owens Valley 5
   - GES 102. Earth Materials 5
   - GES 144 Fundamentals of Geographic Information Science 4
   - GES 186/286. Geoarchaeology (not given 06-07) 5
   - GES 185 Volcanology 4
   - GES 188 Analytical Perspectives on Archaeological Pottery 3-5
   - GEOPHYS 50Q. Earthquakes and Archaeology: Lectures and Field Trip to Mexico (not given 06-07) 3
   - GEOPHYS 140. Introduction to Remote Sensing 3
   - GEOPHYS 144. Fundamentals of Geophysical Information Sciences (GIS) (not given 06-07) 4
   - GEOPHYS 190. Near-Surface Geophysics 3

   Section B: Archaeological Methods
   - ANTHSCI 133A. Human Osteology 5
   - ANTHSCI 133B. Advanced Human Osteology 5
   - ANTHSCI 146. Archaeological Ceramics (not given 06-07) 5
   - ANTHSCI 149. Archaeological Field Methods (not given 06-07) 5
   - CASA 103. Laboratory Methods in Historical Archaeology 5
   - CASA 150. Archaeological Methods 5
   - CLASSART 150. Archaeological Fieldwork in the Mediterranean 5

4. Theory (at least 10 units): topics include archaeological, art-historical, sociocultural, historical, and material culture theory. With the approval of the instructor, undergraduates may fulfill part of this requirement from graduate-level courses (i.e., courses with numbers of 200 or higher). Note: the following list is a combination of historical and current offerings; contact the Archaeology administrator for course planning beyond 2006-07 and check web site.

   - ANTHSCI 111. Language and Prehistory 5
   - ANTHSCI 141. Hunter-Gatherers in an Archaeological Perspective 5
   - ANTHSCI 143 Ethnoarchaeology 5
   - ANTHSCI 145A. Evolutionary Theory in Archaeology (not given 06-07) 5
   - ANTHSCI 190. Social Theory in the Anthropological Sciences 5
   - CASA 108. History of Archaeological Thought 5
   - CASA 112. Archaeology of Modern Urbanism 5
   - CASA 131. Archaeology and Anthropology of Visual Culture (not given 06-07) 5
   - CASA 134. Archaeology of Architecture (not given 06-07) 5
   - CASA 138. Feminist Practice in Archaeology (not given 06-07) 5
   - CASA 152. Archaeology: World Cultural Heritage 5
   - CASA 161. Modern Material Culture (not given 06-07) 5
   - CASA 162. Historical Archaeology: From Colony to Heterotopia (not given 06-07) 5
   - CASA 172 Object Lessons 5

5. Area of Concentration (at least 20 units): in consultation with their faculty advisers, students choose an area of concentration in archaeological research. Concentrations can be defined in terms of time and space (e.g., Mediterranean Archaeology, New World Archaeology) or in terms of research problems (e.g., Hunter-Gatherer Archaeology, the Archaeology of Complex Societies). An area of concentration should provide both breadth and depth in a specific research area. Courses should be selected from the list given below. Courses other...
than those on this list can be used to fulfill this requirement with the prior approval of both the student’s faculty adviser and the program director. With the approval of the instructor, undergraduates may fulfill part of this requirement from graduate-level courses (typically courses numbered 200 or higher). Some courses (e.g., ANTHSCI 140, Stone Tools in Prehistory) can be taken either to fulfill the skills requirement or as part of an area of concentration. However, each course may only count toward one component of the program. Students are encouraged to design their own area of concentration, with the prior approval of the student’s faculty adviser and the program director.

Concentrations—In addition to the following components, all majors must participate in an archaeological field project, and complete a collateral language requirement. Note: this list combines historical and current offerings subject to change. Please contact the Archaeology administrator for course planning beyond 2006-07 and visit the web site.

Hunter-Gatherer Archaeology:
ANTHSCI 141. Hunter-Gatherers in an Archaeological Perspective 5
ANTHSCI 142. Incas and their Ancestors: Peruvian Archaeology 5

Archaeology of Complex Societies:
ANTHSCI 122. The Ancient Maya (not given 06-07) 5
ANTHSCI 142. Incas and their Ancestors: Peruvian Archaeology 5
CLASSART 101. Archaic Greek Art (not given 06-07) 5
CASA 120. Archaeology of Early China 5
CASA 178. Archaeology of the Middle East (not given 06-07) 5
CLASSART 210Q. Eight Great Archaeological Sites in Europe 5
CLASSART 61. The Archaeology of the Greek World 5
CLASSART 81. Introduction to Roman Archaeology 5
CLASSART 102. Classical and 4th-Century Greek Art (not given 06-07) 4-5
CLASSART 113. Ten Things: Science, Technology, and Design 4-5
IHM 31A, B. The Ancient Empires 10

Mediterranean Archaeology:
ARTHIST 202. Beazley and After 5
CASA 158. Sex, Death and Body in Ancient Egypt 5
CLASSART 61. The Archaeology of the Greek World 5
CLASSART 81. Introduction to Roman Archaeology 5
CLASSART 101. Archaic Greek Art (not given 06-07) 5
CLASSART 102. Classical and 4th-Century Greek Art (not given 06-07) 4-5
CLASSART 105. The Body in Roman Art 5

New World Archaeology:
ANTHSCI 111. Language and Prehistory 5
ANTHSCI 115. Maya Hieroglyphic Writing (not given 06-07) 5
ANTHSCI 116. Research in Maya Hieroglyphic Writing (not given 06-07) 5
ANTHSCI 122. The Ancient Maya (not given 06-07) 1-2
ANTHSCI 141. Hunter-Gatherers in an Archaeological Perspective 5
ANTHSCI 142. Incas and their Ancestors: Peruvian Archaeology 5
ANTHSCI 144. Urbanism in the Prehispanic New World 5
ANTHSCI 22. Archaeology of North America 5
ANTHSCI 27. Introduction to Mesoamerican Archaeology 5
ANTHSCI 204. Archaeology of Central Mexico (not given 06-07) 5
CASA 117. Archaeology of the American Southwest 5
CASA 135. Native Peoples of the Americas: Prehistory and History of Indigenous Societies (not given 06-07) 5
GEO/PHY 50Q. Earthquakes and Archaeology: Lectures and Field Trip to Mexico (not given 06-07) 3

Archaeological Fieldwork—Students may meet this requirement in three ways:
1. by taking ANTHSCI 149, Archaeological Field Methods.
2. by taking part in a month-long field project directed by a Stanford faculty member, and taking a directed reading during the returning academic year for credit. In 2006-07, field projects are underway in Peru, Rome, Sicily, Switzerland, and Turkey.
3. by completing a field school offered by another institution. Such field schools must be approved in advance by the student’s undergraduate adviser and by the director of the Archaeology Program.

Collateral Language Requirement—All Archaeology majors must demonstrate competence in a foreign language beyond the first-year level. Students can meet this requirement by completing a course beyond the first-year level with a grade of ‘B’ or better, and are encouraged to choose a language that has relevance to their archaeological region or topic of interest. Students may petition to take an introductory-level course in a second language to fulfill this requirement by demonstrating the connection between the language(s) and their research interest(s).

To declare a major in Archaeology, students should contact the program administrator, who provides an application form, answers initial questions, and helps the student select a faculty adviser and area of concentration. All majors must complete 65 units, which must form a coherent program of study and be approved by the student’s faculty adviser and the program director.

Students who plan to pursue graduate work in Archaeology should be aware of the admission requirements of the particular departments to which they intend to apply. These vary greatly. Early planning is advisable to guarantee completion of major and graduate school requirements.

MINOR
A minor in Archaeology provides an introduction to the study of the material cultures of past societies. It can complement many majors, including but not limited to Anthropological Sciences, Applied Physics, Art and Art History, Classics, Cultural and Social Anthropology, Earth Systems, Geological and Environmental Sciences, History, and Religious Studies.

To minor in Archaeology, the student must complete at least 27 units of relevant coursework, including:
1. Core Program (10 units), consisting of:
   a) Gateway: ANTHSCI 3, Introduction to Prehistoric Archaeology (5 units)
   b) Capstone: ANTHSCI 147, The Archaeology of Contemporary Issues (5 units; Writing in the Major)

   ANTHSCI 3 is highly recommended as a first course, and many of the upper-level courses in archaeology require this course as a prerequisite. Students should normally take the capstone course in their final year of course work in the minor.
2. Archaeological Skills (2-5 units): archaeological skills include dating methods, faunal analysis, botanical analysis, ceramic analysis, geology, geophysics, soil chemistry, remote sensing, osteology, genetics, statistics, cartography, and geographic information systems. The course(s) must be selected from either section in the list above.
3. Theory (5 units): topics include archaeological, art-historical, sociocultural, historical, and material-culture theory. The course(s) must be selected from the list above.
4. Area of Concentration (10 units): in consultation with their faculty advisers, students choose an area of concentration in archaeological research. Concentrations can be defined in terms of time and space (e.g., Mediterranean Archaeology, New World Archaeology) or in terms of research problems (e.g., Hunter-Gatherer Archaeology, the Archaeology of Complex Societies). An area of concentration should provide breadth and depth in a specific research area. Courses must be selected from the list above. Students are encouraged to design their own area of concentration, with the prior approval of both the student’s faculty adviser and the program director. Students must complete the declaration process (both the planning form submission and Axess registration) by the last day of the quarter, two quarters prior to degree conferral (for example, by the last day of Autumn Quarter if Spring graduation is intended).

HONORS PROGRAM
The honors program in Archaeology gives qualified Archaeology majors the chance to work closely with faculty on an individual research project culminating in an honors thesis. Students may begin honors research from a number of starting points including topics introduced in the core or upper-division courses, independent interests, research on artifacts in Stanford’s collections, or fieldwork experiences. Candidates of sophomore and junior standing with an overall Stanford grade point average (GPA) of 3.0 or better should submit an application to the program administrator no later than the end of the fourth week of the Spring Quarter. It must include a brief statement of the project, a transcript, a short paper, and a letter of recommendation from the faculty member who supervises the honors thesis. Students are notified of their acceptance by the undergraduate committee.
Approved candidates must complete all of the requirements for their major and submit an honors thesis no later than four weeks prior to the end of the quarter in which graduation is anticipated. The thesis is read by the candidate’s adviser and a second reader appointed by the undergraduate committee. Honors candidates may enroll in one of the honors or thesis courses in Anthropological Sciences, Classics, Cultural and Social Anthropology, Geological and Environmental Sciences, or Geophysics for up to three quarters during their senior year (15 units maximum). No more than 5 of those units may count toward the 65-unit degree requirement.

**COURSES**

**CORE COURSES**

These courses are required of all Archaeology majors.

**ARCHLGY 1. Introduction to Prehistoric Archaeology**—(Same as ANTHSCI 3.) Aims, methods, and data in the study of human society’s development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development are examined for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each. GER:DB-SocSci, EC-GlobalCom

3-5 units, Aut (Rick, J; Robertson, I)

**ARCHLGY 102. Archaeological Methods**—(Same as ANTHSCI 148/248.) Methods and issues related to the archaeological investigation of ancient sites, materials, and contexts. Topics include research design for survey and excavation, artifact analysis, and dating methods. GER: DB-SocSci

3-5 units, not given this year

**ARCHLGY 103. History of Archaeological Thought**—(Same as CASA 108.) Introduction to the history of archaeology and the forms that the discipline takes today, emphasizing developments and debates over the past five decades. Historical overview of culture, historical, processual and post-processual archaeology, and topics that illustrate the differences and similarities in these theoretical approaches.

5 units, Aut (Meskell, L)

**ARCHLGY 104. Archaeology of Modern Times**—(Same as ANTHSCI 147.) Archaeological theory, method, and data are used to arrive at a better understanding of an issue of contemporary public concern. Issues include resource and energy management strategies such as the electricity situation in California, biodegradation and solid waste management, the relationship between human beings and dogs, ethnic wars in the Balkans and elsewhere, and Bill Gates’ strategies in the rise of Microsoft. GER: DB-SocSci, WIM

5 units, Win (Rathje, W)

**ARCHLGY 118/218. Geoarchaeology**—(Same as GES 186/286.) For juniors, seniors, and beginning graduate students with interests in archaeology or geosciences. Geological concepts, techniques, and data in the study of artifacts and the interpretation of the archaeological record. Topics include: sediments and soils; sedimentary settings of site formation; postdepositional processes that disturb sites; paleoenvironmental reconstruction of past climates and landscapes using plant and animal remains and isotopic studies; raw materials (minerals, metals, stone, shells, clay, building materials) and methods used in sourcing; estimating age based on stratigraphic and radiometric techniques. Weekly lab; weekend field trips to local archaeological/geological sites. GER: DB-NatSci

5 units, alternate years, not given this year

**COGNATE COURSES**

See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

**ANTHSCI 14. Introduction to Anthropological Genetics**—(Same as HUMBIO 14.)

3-5 units, Spr (DeGusta, D)

**ANTHSCI 22. Archaeology of North America**

3-5 units, Win (Truncer, J)

**ANTHSCI 27. The Aztecs and Their Ancestors: Introduction to Mesoamerican Archaeology**

3-5 units, Win (Robertson, I)

**ANTHSCI 111/211. Language and Prehistory**

3 units, Aut (Ruhlen, M; Fournier, R)

**ANTHSCI 130C/230C. Current Issues in Paleoanthropology**

1 unit, Win, Spr (DeGusta, D; Klein, R)

**ANTHSCI 133A/233A. Human Osteology**—(Same as HUMBIO 180.)

5 units, Win (DeGusta, D)

**ANTHSCI 133B/233B. Advanced Human Osteology**

5 units, Spr (DeGusta, D)

**ANTHSCI 141/241. Hunter-Gatherers in Archaeological Perspective**

4-5 units, Aut (Truncer, J)

**ANTHSCI 142. Incas and their Ancestors: Peruvian Archaeology**

3-5 units, Spr (Rick, J)

**ANTHSCI 143/243. Ethnoarchaeology**

3-5 units, Aut (Burce, A)

**ANTHSCI 144/244. Urbanism in the Prehispanic New World**

3-5 units, Spr (Robertson, I)

**ANTHSCI 190. Social Theory in the Anthropological Sciences**

5 units, Aut (Barrett, R)

**ANTHSCI 191A/291A. Communicating Science: Proposals, Talks, Articles**

4-5 units, Win (DeGusta, D)

**ANTHSCI 192/292. Data Analysis in the Anthropological Sciences**

5 units, Spr (Staff)

**ANTHSCI 194. Post Field Seminar**

5 units, Aut (Robertson, I; Slovak, N)

**ANTHSCI 290B. Evolutionary Theory in Anthropological Sciences**

5 units, Win (Bird, R)

5 units, Aut (Wilcox, M)

**CAS 94. Postfield Research Seminar**

5 units, Aut (Burce, A)

**CAS 103/203. Laboratory Methods in Archaeology**

5 units, Win (Voss, B)

**CAS 112/212. The Archaeology of Modern Urbanism**

5 units, Aut (Voss, B)

**CAS 117/217. Archaeology of the American Southwest: Contemporary Peoples, Contemporary Debates**

5 units, Aut (Wilcox, M)

**CAS 120/220. Archaeology of Early China**

5 units, Aut (Reinhart, K)
CASA 137E/237E. Excavation at Catalhoyuk, Turkey
3-5 units, Spr (Staff)

CASA 150. Archaeological Methods
5 units, Spr (Hodder, I)

CASA 152/252. Archaeology: World Cultural Heritage
5 units, Win (Hodder, I)

CASA 158. Sex, Death, and the Body in Ancient Egypt
5 units, Win (Meskell, L)

CASA 172/272. Object Lessons
3-5 units, Aut (Meskell, L)

CASA 326. Continental Philosophy and the Human Sciences: The Self and the Oppressive Other—(Same as FRENGEN 326.)
5 units, Spr (Domanska, E)

CASA 346A. Sexuality Studies in Anthropology
5 units, Spr (Mankekar, P; Voss, B)

CASA 360. Archaeological Methods and Research Design
5 units, Spr (Hodder, I)

CASA 373. Introduction to Archaeological Theory
5 units, Win (Hodder, I)

CLASSART 21Q. Eight Great Archaeological Sites in Europe
3-5 units, Aut (Shanks, M)

CLASSART 61. Archaeologies of the Greek Past
3-5 units, Aut (Staff)

CLASSART 81. Introduction to Roman Archaeology
3-5 units, Win (Staff)

CLASSART 105. The Body in Roman Art
3-5 units, Spr (Trimble, J)

CLASSART 113/213. Ten Things: Science, Technology, and Design—(Same as STS 112.)
4-5 units, Win (Shanks, M)

CLASSART 126. Alpine Archaeology
3-5 units, Spr (Hunt, P)

CLASSART 150/250. Archaeological Field Work in the Mediterranean
3 units, Spr (Staff)

GEOPHYS 140. Introduction to Remote Sensing
3 units, Aut (Zebker, H)

GEOPHYS 190. Near-Surface Geophysics
3 units, Aut (Staff)

GES 1. Dynamic Earth: Fundamentals of Earth Science
5 units, Aut (Egger, A), Spr (Hilley, G)

GES 49N. Field Trip to Death Valley and Owens Valley
3 units, Win (Mahood, G)

GES 102. Earth Materials
5 units, Aut (Brown, G)

GES 144. Fundamentals of Geographic Information Science (GIS)
4 units, Win (Seto, K)

GES 160. Statistical Methods for Earth and Environmental Sciences: General Introduction
3 units, Spr (Switzer, P)

GES 185. Volcanology
4 units, Spr (Mahood, G), alternate years, not given next year

GES 188/288. Analytical Perspectives on Archaeological Pottery
3-5 units, Aut (Carter, S)

ART AND ART HISTORY

Emeriti: (Professors) Keith Boyle, Kristina Branch, Elliot Eisner, Lorenz Eitner, Suzanne Lewis, Frank Lobdell, Dwight C. Miller, Nathan Oliveira, Richard Randell, Michael Sullivan, Paul V. Turner

Chair: Joel Leivick
Area Director for Art History: Pamela M. Lee
Area Director for Film and Media Studies: Kristine Samuelson
Area Director for Studio Art and Director of Graduate Studies for Studio Art: Enrique Chagoya
Director of Undergraduate Studies for Art History: Jody Maxmin
Director of Undergraduate Studies for Film and Media Studies: Scott Bukatman

Directors of Graduate Studies in Art History: Barbara Martinez-Ruiz, Bissera Pentcheva
Director of Graduate Studies in Studio Art: David Hannah
Director of Graduate Studies in Documentary Film: Kristine Samuelson (Autumn), Jan Krawitz (Winter and Spring)

Professors: Wanda M. Corn (American Art; on leave), David Hannah (Painting/Drawing: in Berlin Autumn), Matthew S. Kahn (Design), Jan Krawitz (Documentary Film; in Oxford Autumn), Michael Marrinan (18th- and 19th-century European Art), Kristine Samuelson (Documentary Film), Melinda Takeuchi (Japanese Art), Richard Vinograd (Chinese Art), Bryan Wolf (American Art)

Associate Professors: Scott Bukatman (Film Studies), Enrique Chagoya (Painting/Drawing/Printmaking), Paul DeMarinis (Electronic Media), Maria Gough (Modern Art; on leave), Pamela M. Lee (Contemporary Art), Jody Maxmin (Ancient Art; on leave Winter), Gail Wight (Electronic Media)

Assistant Professors: Pavle Levi (Film Studies), Jean Ma (Film Studies), Barbara Martinez-Ruiz (African Art), Bissera Pentcheva (Medieval Art)

Professor (Teaching): Joel Leivick (Photography)

Lecturers: Robert Dawson (Photography), John Edmark (Design), Lukas Felzmann (Photography)

Affiliated Professor: John H. Merryman (Art and Art History, Law; emeritus)

Fellows: Emine Fetvaci (Islamic Art), Ara Merjian (Modern Art), Elizabeth Kessler (Visual Culture)

Department Offices: Room 101, Cummings Art Building
Mail Code: 94305-2018
Phone: (650) 723-3404
Web Site: http://art.stanford.edu

Courses given in Art have the subject codes ARTHIST, ARTSTUDI, FILMSTUD, and FILMPROD. For a complete list of subject codes, see Appendix.

The department offers courses of study in: (1) the history of art, (2) the practice of art (studio), and (3) film and media studies, leading to the following degrees: B.A. degrees in Art with fields in: Art History and Studio Art; B.A. degrees in Film and Media Studies with fields in: Film History; Film and Culture; Avant Garde Aesthetics and Performance; Film, Media, and Technology; and Writing, Criticism, and Practice in Film and Media Studies; M.F.A. degrees with fields in: Design; New Genres; Painting; Photography; and Sculpture; an M.F.A. degree in Documentary Film and Video; Ph.D. degrees in Art with fields in: Art History and Humanities; and History of Art; and a joint Ph.D. in Art History and Humanities.

The undergraduate program is designed to help students to think critically about the visual arts and visual culture. Courses focus on the meaning of images and media, and their historical development, roles in society, and relationships to disciplines such as literature, music, and philosophy. Work performed in the classroom, studio, and screening room is designed to develop a student’s powers of perception, capacity for visual analysis, and knowledge of technical processes.

The Iris and B. Gerald Cantor Center for Visual Arts at Stanford University is a major resource for the department. The center offers a 22,000 object collection on view in rotating installations in 18 galleries, the Rodin Sculpture Garden, and special exhibitions, educational programs,
and events. Through collaborations with the teaching program, student internships, and student activities, the center provides a rich resource for Stanford students.

**ART HISTORY**

Over the past two decades the study of Art History has changed dramatically to include the study of art forms made far afield from the traditional core of Western Europe and to re-examine its objects in light of new critical frameworks. The Art History program promotes a plurality of approaches to the study of art by encouraging majors to construct a program of study drawn from the broad offerings of the Art History curriculum and the University at large.

**UNDERGRADUATE PROGRAMS**

**BACHELOR OF ARTS**

Art History majors are defined by a passion for the visual; for traditional fine arts, including painting, sculpture, architecture, prints, and the decorative arts; for the study of everyday objects, including advertisements, billboards, commercial signs, and visual culture; and for film, new media, and computer graphics. They share close observation and curiosity about how society represents itself. Students majoring in Art History pursue the ways in which cultures express themselves through the arts, and acquire the tools for visual analysis and historical understanding. They learn to analyze works of art in many media as they become proficient in cultural analysis and historical interpretation.

Majors combine courses in art, film, and visual culture with an area of concentration tailored to individual interests. The requirements are grouped into three clusters: foundation courses introduce students to visual analysis and provide an overview of the fields within Art History; distribution courses acquaint students with the art of different historical periods and geographical regions; individual areas of concentration, developed in consultation with a faculty adviser, allow students to pursue their specific interests. All majors are also required to take the junior seminar, offered each year in Autumn Quarter, in which they investigate methods and theories that have defined art historical scholarship. In their senior year, majors may elect to write an honors thesis, exploring a single topic in depth across several quarters of study in close collaboration with several professors.

Students who want to major in Art History declare the Art major with a field in Art History on Axess. All courses for the major must be taken for a letter grade.

**Foundation Courses**—Focus is on visual analysis, introducing students to the specialized vocabulary, forms of analysis, and principal concerns of Art History. ARTHIST 1, Introduction to the Visual Arts, provides training in art analysis and cultural interpretation; this course is required of all majors and should be taken early in a student’s career.

Other foundation courses introduce students to the broad concerns of Asian art (ARTHIST 2), architecture (ARTHIST 3), and film (FILMSTUD 4). In addition to ARTHIST 1, History of Art majors are required to take at least one other foundation course.

Majors are also required to complete at least one introductory Studio Art course using the traditional materials of painting, sculpture, drawing, photography, or printmaking.

**Distribution Courses**—In order for students to acquire a broad overview of different historical periods and different geographic regions, majors must take at least four art history courses distributed among the following categories: ancient and medieval; Renaissance and early modern; modern, contemporary, and the United States; Asia, Africa, and the Americas; and film studies.

**Area of Concentration**—The department encourages students to pursue their interests by designing an area of concentration tailored to their own intellectual concerns. This area of concentration provides the student with an in-depth understanding of a coherent topic in Art History. It must consist of five courses: two must be seminars or colloquia; four of the five courses must be in a single field or concentration constructed by the student in consultation with a faculty adviser.

There are no pre-defined areas of concentration; students create their own concentrations based on individual interests by focusing on topics, questions of genre, or historical or national traditions. Students with a strong interest in topics that cross disciplines may create an interdisciplinary concentration.

Students submit an area of concentration form, signed by their faculty adviser, during the Winter Quarter of the junior year. The form includes a brief statement defining the concentration and a list of the courses to be taken to complete it. Students must consult with their adviser in the Autumn Quarter of senior year to insure that all requirements for the major are being met.

**Sample Areas of Concentration**—

1. **Topical concentrations:** art and gender; art, politics, race, and ethnicity; art, science, and technology; urban studies; or any other concentration created by the student and approved by a faculty adviser.
2. **Genre concentrations:** architecture; painting; sculpture; film studies; prints and media; or decorative arts and material culture.
3. **Historical and national concentrations:** ancient and medieval; Renaissance and early modern; modern and contemporary; American; African; Asian; or the Americas.
4. **Interdisciplinary concentration:** students choosing the interdisciplinary concentration must take two upper-division courses outside Art History on topics related to their concentration; these courses are counted with three other courses within Art History to complete the concentration. Sample interdisciplinary areas of concentration include: art and literature, art and history; art and religion; art and economics; or any other interdisciplinary combination designed by the student and approved by a faculty adviser. The two outside courses for the interdisciplinary concentration are counted among the 13 courses required for the major.

**Junior Seminar**—This course is designed to introduce all majors to methods and theories underlying the practice of Art History. The seminar is offered annually in Autumn Quarter. Students are encouraged to take the seminar at the start of their junior year. The goals of the seminar are: to create a shared intellectual experience among all majors; provide majors with in-depth knowledge of their own discipline; and enrich the understanding that majors bring to other courses in Art History.

**Research**—An essential component of the major requires that students become familiar with works of art and how to write about them. This entails a familiarity with library research, the mechanics of art historical scholarship, the practice of focusing research on clearly defined problems, and the experience of presenting findings in written or oral form. Research requirements are designed to ensure that all majors in Art History leave Stanford with a mastery of these skills.

All majors are required to attend an orientation session, presented by the professional staff of the Art Library, that introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the major declaration. In addition, majors are permitted to place materials on reserve in the Art Library to facilitate research for seminars or other projects such as honors theses (see below).

All majors are required to include within their program of study at least two research-oriented seminars that entail preparation of a research paper, a formal presentation, or both. In some cases, students are allowed to substitute a colloquium for one of these seminars, although in such cases it is understood that the course requirements must include a substantial research component.

**HONORS THESIS**

The purpose of the honors thesis is to extend and deepen work done in an art history class; the topic should have focus and clear parameters. Typically, an honors thesis is not an exploration of a new area that the student has never studied before.

The minimum requirement for admission to the honors program is an overall GPA of 3.5, and at least 3.5 in Art History courses. Students wishing to write an honors thesis must announce their intention by submitting a
form signed by the thesis adviser (who need not be the student’s academic adviser) by February 1 of their junior year. It is recommended, but not mandatory, that the thesis adviser be on campus and in residence during the candidate’s senior year.

Candidates for the honors program must submit to the art history faculty a five-page thesis proposal, including bibliography and illustrations, and one completed paper that demonstrates the student’s ability to conceptualize and write about issues. This complete proposal must be submitted to the department’s undergraduate coordinator no later than the third week of Spring Quarter of the candidate’s junior year so that it can be read, discussed, and voted upon at the faculty’s regular meeting in early May. A candidate is accepted into the honors program by a simple majority.

Once admitted to the honors program, students work with their thesis advisers to define the scope of the study, establish a research and writing timetable, and enlist one other faculty member to serve on the thesis reading committee. The summer between junior and senior years is usually devoted to refining the topic and pursuing any off-campus research. Students may apply for UAR research grants to help finance trips or expenses relative to preparing the research for their honors thesis.

During the senior year, students may register for up to 10 units of ARTHIST 297, Honors Thesis Writing, 5 units of which may count towards the student’s concentration in Art History. To aid the process of research and writing, students preparing an honors thesis are paired with a graduate student mentor. Students should contact the graduate student mentor in their junior year as soon as they begin to think about writing an honors thesis. Through regular meetings, mentors guide students through the proposal process and the research and writing year.

Students and thesis advisers should plan their schedule of work so that a complete, final manuscript is in the hands of each member of the thesis reading committee by the beginning of the seventh week of the student’s final quarter at Stanford. The thesis adviser assigns a letter grade; both faculty readers must approve the thesis for honors before the student is qualified to graduate with honors.

MINOR IN ART HISTORY

A student declaring a minor in Art History must complete 25 units of course work in one of the following four tracks: Open, Modern, Asian, or Architecture. Upon declaring the minor, students are assigned an adviser with whom they plan their course of study and electives. A proposed course of study must be approved by the adviser and placed in the student’s departmental file. Only one class may be taken for credit outside of the Stanford campus (this includes the Stanford Overseas Studies Programs). All minors are required to attend an orientation session presented by the professional staff of the Art Library, which introduces the many tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the minor declaration.

Requirements for the Open Track: ARTHIST 1 plus five lecture courses, colloquia, or seminars in any field.

Requirements for the Modern Track: ARTHIST 1 plus five lecture courses, colloquia, or seminars in any aspect of 19th- to 20th-century art.

Requirements for the Asian Track: ARTHIST 2 plus five lecture courses, colloquia, or seminars in Asian art (ARTHIST 1 may be one of the five courses).

Requirements for the Architecture Track: ARTHIST 3 plus five lecture courses, colloquia, or seminars in architectural history (ARTHIST 1 may be one of the five courses).

GRADUATE PROGRAMS

MASTER OF ARTS

The Department of Art and Art History offers M.A. and Ph.D. degrees. The M.A. is granted as a step toward fulfilling requirements for the Ph.D. The department does not admit students who wish to work only toward the master’s degree.

The University’s basic requirements for the master’s degree are set forth in the “Graduate Degrees” section of this bulletin. Completing the University’s requirements for a B.A. degree in the History of Art, or equivalent training, is required of students entering a program of study for the M.A. The required curriculum for entering students is determined by the Director of Graduate Studies through an evaluation of transcripts and records during an individual meeting scheduled with each student prior to the opening of Autumn Quarter to discuss course deficiencies.

Requirements for the Degree — The requirements for the M.A. degree in the Art History are:

1. Units: completing a total of at least 45 units of graduate work at Stanford in the history of art in courses at the 200 level, including a seminar in art historiography/visual theory.
2. Languages: reading knowledge of two foreign languages, preferably German and French or Italian. Students in Chinese and Japanese art are ordinarily expected to demonstrate reading competence in modern and classical Chinese or Japanese depending on the student’s area of focus. Final determination is made in consultation with the student’s primary adviser.
3. Papers: submission for consideration by the faculty of two term papers from among those written during the year.
4. Area Coverage: demonstration to the faculty, by course work and/or examination, that the student has adequate knowledge of the major areas of the history of art.

DOCTOR OF PHILOSOPHY

The University’s basic requirements for the Ph.D. degree are set forth in the “Graduate Degrees” section of this bulletin. An expanded explanation of department requirements is given in the Art History Graduate Student Handbook available at http://www.stanford.edu/group/adgsa/.

Residence — To be eligible for the doctoral degree, the student must complete three years of full-time graduate work in Art History, at least two years of which must be in residence at Stanford.

Unit Requirements — To be eligible for the doctoral degree, the student must complete 135 units. Of these 135, the student must complete at least 100 units of graduate course work at the 200 level or above, including all required courses, with a minimum of 62 units in Art History lecture courses and seminars.

Collateral Studies — The student is required to take at least three courses in supporting fields of study (such as anthropology, classics, history, literature, or philosophy), determined in consultation with the department advisers. These courses are intended to strengthen the student’s interdisciplinary study of art history.

Graduate Student Teaching — As a required part of their training, all graduate students in Art History, regardless of their source of funding, must participate in the department’s teaching program. At least two one-quarter assignments in ARTHIST 1, 2, 3, or FILMSTUD 4 are required, with concurrent registration in the Seminar in Teaching Praxis (ARTHIST 610). Students receiving financial aid are required to serve as a teaching assistant for four quarters. Further opportunities for teaching may be available.

Admission to Candidacy — A graduate student’s progress is formally reviewed at the end of Spring Quarter of the second year. The applicant
for candidacy must put together a candidacy file showing that he/she has completed the requirements governing the M.A. program in the History of Art (see above), and at least an additional 18-24 units by the end of Winter Quarter of the second year. The graduate student does not become a formal candidate for the Ph.D. degree until he/she has fully satisfied these requirements and has been accepted as a candidate by the department.

Area Core Examination—All graduate students conceptualize an area core and bibliography in consultation with their primary adviser and two other Stanford faculty members, one of whom is drawn from a field other than Art History, or, if in Art History, has expertise outside of the student’s main area of interdisciplinary concentration. Students are required to pass an area core examination, in either written or oral form, sometime in the third year of study. To prepare for the exam, students may enroll for up to three five-unit reading courses (ARTHIST 620), no more than one per quarter.

Reading Committee—After passing the area core examination, each student is responsible for the formation of a Dissertation Reading Committee consisting of a principal adviser and three readers. Normally, at least two of the three readers are drawn from the department and one may come from outside the department.

Dissertation Proposal—By the beginning of the fourth year, students should have defined a dissertation subject and written a proposal in consultation with their principal adviser. To prepare the proposal, students may take one five-unit independent study course (ARTHIST 640) and apply for a funded Summer Quarter to research and write the proposal. The proposal is submitted to the Art History faculty at the beginning of the fourth year for comments. The student then meets with the adviser to discuss the proposal and faculty comments no later than 30 days after the submission of the proposal, at which time necessary revisions are determined.

Dissertation—A member of the Art History faculty acts as the student’s dissertation adviser and as chair of the reading committee. The final draft of the dissertation must be in all the readers’ hands at least four weeks before the date of the oral defense. The dissertation must be completed within five years from the date of the student’s admission to the candidacy for the Ph.D. degree. A candidate taking more than five years must apply for an extension of candidacy.

Oral Defense Examination—Each student arranges an oral examination with the four members of the reading committee and a chair chosen from outside the department. The oral examination consists mainly of a defense of the dissertation but may range, at the committee’s discretion, over a wider field. The student is required to discuss research methods and findings at some length and to answer all questions and criticisms put by members of the examining committee. At the end of the defense, the committee votes to pass or fail the student on the defense. The committee also makes recommendations for changes in the dissertation manuscript before it is submitted to the University as the final requirement for the granting of the Ph.D. degree in the History of Art. After incorporating the changes, the manuscript is given a final review and approval by the student’s principal adviser.

PH.D. MINOR

For a minor in History of Art, a candidate is required to complete 24 units of graduate-level art history courses (200 level or above), in consultation with a department adviser.

JOINT PH.D. IN ART HISTORY AND HUMANITIES

The department participates in the Graduate Program in Humanities leading to the joint Ph.D. in Art History and Humanities. For a description of this program, see the “Interdisciplinary Studies in Humanities” section of this bulletin.

PRACTICE OF ART (STUDIO)

UNDERGRADUATE PROGRAMS

BACHELOR OF ARTS

The studio program is designed to develop in-depth skills in more than one area. It emphasizes the expressive potential of an integration of media, often via a crossdisciplinary, interactive path. Through collaboration and connections with scientists, engineers, and humanities scholars, the program addresses a breadth of topical and artistic concerns central to a vital undergraduate education.

Medium-based courses in digital art, drawing, painting, photography, and sculpture, along with a basic design course, introduce students to visual fundamentals. The student is required to take courses at Level 1 before moving to the intermediate Level 2 where investigations of content are emphasized. At this level, the student focuses on a range of subject matter from historical motifs (figure, still life, landscape) to contemporary ideas in design. After fulfilling Level 2 requirements, the student selects courses at Level 3, which feature combined practices. Level 3 courses are designed to stretch the student’s understanding of materials and techniques. Experimental and challenging in nature, these courses cross area boundaries. Level 4 courses comprise a senior capstone experience. ARTSTUDI 249, Advanced Undergraduate Seminar, emphasizes the investigation of visual concepts interpreted by a single medium, by cross-practices, or by collaboration among students working in a variety of materials. This seminar gives the student an opportunity to be exposed to the work of other majors in a critique-based forum directed by a visiting artist or critic. Advanced courses with a particular focus such as design, photography, or painting are offered on a rotational basis. Independent study supervised by a member of the permanent faculty is also available to the advanced student.

Students are encouraged to move through the requirements for the major in the sequence outlined. Levels 1, 2, 3, and 4 describe a sequence of course choices, not to be confused with the years freshman, sophomore, junior, and senior. Students are exposed to a range of practices early in their development in order to have a good basis of comparison if they choose to concentrate on a particular medium. This sequence of courses also broadens the students’ skills and enables them to combine materials and methods.

The major program in the Practice of Art (Studio) must total 65 units and include the following:

1. Four Level 1 courses (12-13 units) from ARTSTUDI 60, 70, 80, 130, 140, 145, 167, 178, 179. Two courses must be completed before moving to Level 2.
2. Two Level 2 courses (6 units) from ARTSTUDI 131, 136, 141, 146, 160, 161, 166, 170, 177, 179A, 184 must be completed before taking Level 3 courses.
3. Three Level 3 courses (9 units) from ARTSTUDI 132, 134, 135, 148, 149, 169, 171, 172, 174, 176, 177A, 181, 271 are to be completed before taking Level 4 courses.
4. Four Level 4 courses (9 units) from ARTSTUDI 133, 142, 147, 248, 268, 269, 270.
5. Five art history courses (21 units). ARTHIST 1 is taken as the basic course, followed by four additional courses. At least one of the courses must be in the modern art series, ARTHIST 140-159.
6. Electives, any level (7-8 units). As many as 6 elective units may be earned from workshops, internships, and independent study projects, supervised by a member of the permanent faculty. All units must be approved by the adviser prior to taking the workshop, internship, or independent study.
7. Total units: 65. All required course work must be taken for a letter grade; courses may not be taken satisfactory/no credit. University units earned by placement tests or advanced placement work in secondary school are not counted within the 65 units.
8. Each undergraduate major is required to attend an Art Library orientation session no later than the quarter following the major declaration. Majors are to consult with the Art Library staff for scheduling information.
Studio Art majors are required to meet with both their adviser and the department’s undergraduate curriculum adviser during the first two weeks of each quarter to have course work approved and to make certain they are meeting degree requirements. The adviser’s role is important both in regard to guiding the student’s decisions within the program as well as in discussing plans for summer study and graduate work. An adviser is chosen by the student or assigned by the department.

Transfer Credit Evaluation—Upon declaring a Studio Art major, a student transferring from another school must have his or her work evaluated by a Department of Art and Art History adviser. A maximum of 13 transfer units are applied toward the 65 total units required for the Studio Art major. A student wishing to have more than 13 units applied toward the major must submit a petition to the adviser and then have his or her work reviewed by a studio committee.

MINORS

The minor program in the Practice of Art (Studio) must include the following:

1. Two Level 1 courses (6-7 units) from ARTSTUDI 160, 70, 80, 130, 140, 145, 167, 178, 179 before taking Level 2 courses.
2. Two Level 2 courses (6 units) from ARTSTUDI 131, 136, 141, 146, 160, 161, 166, 170, 177, 179A, 184 before taking Level 3 courses.
4. Three art history courses (13 units), including ARTHIST 1 and one course from the modern art series ARTHIST 140-159.
5. Total units: 31. All required course work must be taken for a letter grade; courses may not be taken satisfactory/no credit. University units earned by placement tests or advanced placement work in secondary school are not counted within the 31 units.
6. Each undergraduate minor is required to attend an Art Library orientation session no later than the quarter following the minor declaration. Minors are to consult with the Art Library staff for scheduling information.
7. Minors are required to meet with both their adviser and the department’s undergraduate curriculum adviser during the first two weeks of each quarter to have course work approved and to make certain they are meeting degree requirements.

OVERSEAS CAMPUS CREDIT

A minimum of 52 of the 65 units required for the Studio Art major and a minimum of 27 of the 31 units required for the Studio Art minor must be taken at the Stanford campus. In all cases, a student should meet with his or her adviser before planning an overseas campus program.

GRADUATE PROGRAMS

MASTER OF FINE ARTS

Programs for the M.F.A. degree are offered in painting, sculpture, new genres, photography, and product or visual design.

PROGRAM IN PAINTING, SCULPTURE, NEW GENRES, AND PHOTOGRAPHY

The program provides a demanding course of study designed to challenge advanced students. Participants are chosen for the program on the basis of work that indicates artistic individuality, achievement, and promise. Candidates should embody the intellectual curiosity and broad interests appropriate to, and best served by, work and study within a university context.

Admission Requirements for the M.F.A.—

1. Applicants must have a B.A. or B.S. from an accredited school. It is expected that the applicant have a strong background in studio art, either an undergraduate degree or at least three years of independent studio practice.
2. Applications and portfolios for the studio program must be submitted by January 16, 2007. Students accepted to the program are admitted for the beginning of the following Autumn Quarter. No applicants for mid-year entrance are considered.

3. Portfolio Specifications: 20 slides of creative work. Some of these can be drawings if relevant to the overall project. Send in a Kodak Universal carousel; no actual work is accepted. All slides must be labeled with the applicant’s name and an accompanying slide list must be included indicating the size, date, and medium of each work.

Requirements for the M.F.A. Degree—

1. Completing a minimum of two years (six quarters) of graduate work in residence or its equivalent at Stanford.
2. Completing 48 units of study. Students must discuss their programs of study with the department’s students services administrator to ensure that the most favorable registration arrangement is made.
3. Six quarters of the Master’s Project, which includes two weekly seminars (the Object Seminar and the Concept Seminar) and Studio Practice, which is an individual tutorial with a selected member of the faculty. In addition, three courses of academic electives are required in the first year. These courses can be chosen from a large variety of disciplines in consultation with the faculty adviser.
4. The student is expected to pass three faculty reviews: (1) at the end of the first quarter (anyone judged to be making inadequate progress is placed on probation and requires an additional review at the end of the second quarter), (2) at the end of the third quarter, and (3) at the time of the M.F.A. exhibition. The purpose of these reviews is to evaluate development and to assess the progress of the student.
5. During the final quarter in the program, students must write a thesis paper addressing the development of their work over the two-year period at Stanford. Participation in the M.F.A. exhibition at the end of the year is required.
6. All students, regardless of their source of funding, are required to assist with the department’s teaching program for a minimum of eight hours per week over the period of six quarters; the particulars of this assignment are at the department’s convenience.

Graduate students must remain in residence at Stanford for the duration of the program.

THE GRADUATE PROGRAM IN DESIGN

Working jointly, the departments of Art and Art History and Mechanical Engineering offer graduate degrees in product and visual design. A large physical environment, the Design Yard, provides professional caliber studio space and well equipped shops. Flexible programs may include graduate courses in fields such as engineering design, biotechnology, marketing, microcomputers, or the studio and art history curriculum. The program centers on a master’s project and may also include work in advanced art and design. The program is structured to balance independent concentration with rich utilization of the University and the community, and personal interaction with the students and faculty of the graduate Design program. Crossdisciplinary interaction is encouraged by a four-graduate Design faculty.

Admission Requirements for the M.F.A.—

1. Applicants must have a B.A. or B.S. from an accredited school. It is expected that the applicant have a strong background in studio art, either an undergraduate degree or at least three years of independent studio practice.
2. Applications and portfolios for the design program must be submitted by January 16, 2007. Students accepted to the program are admitted for the beginning of the following Autumn Quarter. No applicants for mid-year entrance are considered.
3. Portfolio Specifications: 12 slides or photographs of creative work. All slides must be labeled with the applicant’s name. If a carousel is sent, an accompanying slide list must be included indicating the size, date, and medium of each work; otherwise, slides should be labeled with the same information and sent in the standard cardboard box received from processing.
Requirements for the Degree—The M.F.A. degree with a specialization in design requires:
1. Completing a minimum of two years (six quarters) of graduate work in residence or its equivalent at Stanford.
2. Completing 54 units of course work chosen in consultation with an adviser. At least 18 of the 54 units must be in ARTSTUD 360A,B,C and ME 316 A,B,C.
3. Participating in a weekly seminar in which the student’s work is critiqued and discussed in detail.
4. Graduate students must remain in residence at Stanford for the duration of the program.

FILM AND MEDIA STUDIES

The Bachelor of Arts in Film and Media Studies provides an introduction to the study of film aesthetics, national cinematic traditions, modes of production, critical thinking, and avant garde aesthetics and performance. The major is designed for students who are interested in the role of cinema and related media within cultural and historical contexts.

UNDERGRADUATE PROGRAMS

BACHELOR OF ARTS

The Bachelor of Arts in Film and Media Studies provides an introduction to the study of film aesthetics, national cinematic traditions, modes of production, critical thinking, and avant garde aesthetics and performance. The major is designed for students who are interested in the role of cinema and related media within cultural and historical contexts.

FIELD OF CONCENTRATION

Advanced undergraduate courses are offered in five fields of concentration: film history, film and culture, film, media, and technology; writing, criticism, and practice; and avant garde aesthetics and performance. Working with a faculty adviser, students select at least six courses in their field from course offerings in Art and Art History and other departments across the University. These fields are declared on Axess; they appear on the transcript but not on the diploma.

SENIOR SEMINAR

FILMSTUD 290, Movies and Methods, offered once a year, represents the culminating intellectual experience for Film Studies majors choosing not to write an honors thesis. Honors thesis writers may also take the senior seminar. Seniors who may not be in residence in the quarter that the senior seminar is offered may enroll in the junior year. Movies and Methods provides majors with an opportunity to synthesize their previous work in Film Studies and work in an advanced setting with a faculty member. The senior seminar must be taken for a letter grade.

HONORS THESIS

Students who want to write an honors thesis should consult with a potential adviser by the beginning of junior year. The adviser must be a faculty member in residence during the student’s senior year who can oversee the student’s progress throughout the project.

The minimum requirements for admission to the honors program in the department are an overall GPA of 3.5 and at least 3.5 in Film and Media Studies courses. Students wishing to write an honors thesis must announce their intention by submitting a form signed by the thesis adviser, who need not be the student’s academic adviser, by February 1 of their junior year. It is recommended, but not mandatory, that the thesis adviser be on campus and in residence during the candidate’s senior year.

Candidiates for the honors program must submit to the Film and Media Studies faculty a 3-5 page thesis proposal outlining the themes of the thesis, a bibliography, a tentative schedule for research and writing, and one completed paper that demonstrates the student’s ability to conceptualize and write about ideas. This complete proposal must be submitted to the department’s undergraduate coordinator no later than the third week of Spring Quarter of the candidate’s junior year so that it can be read, discussed, and voted upon at the faculty’s regular meeting in early May. A candidate is accepted into the honors program by a simple majority.

Once admitted to the honors program, students work with their thesis advisers to research, organize, and write the thesis, and to enlist one other faculty member to serve on the thesis reading committee.

To aid the process of research and writing, students preparing an honors thesis are paired with a graduate student mentor. Students should contact the graduate student mentor in their junior year as soon as they begin to think about writing an honors thesis. Honors thesis writers may register for up to 10 units of FILMSTUD 199, Independent Study, while working on the thesis. Students may apply for UAR research grants to help finance trips or expenses relative to preparing the research for their honors thesis.

Students and thesis advisers should plan their schedule of work so that a complete, final manuscript is in the hands of each member of the thesis reading committee by the beginning of the seventh week of the student’s final quarter at Stanford. The thesis adviser assigns a letter grade; both faculty readers must approve the thesis for honors before the student is qualified to graduate with honors.

FILM AND MEDIA STUDIES MAJOR REQUIREMENTS

Number of courses

| Core courses | 9 |
| FILMSTUD 4 | 9 |
| FILMSTUD 102 | 9 |
| FILMSTUD 160 A,B,C | 9 |
| FILMSTUD 200 | 9 |

Total number of courses

16

FILM MINOR

A minor in Film Studies requires four core courses and three elective courses for a total of seven courses. The required core courses are: FILMSTUD 4, Introduction to Film Study; FILMSTUD 102, Theories of the Moving Image; one course from the film history sequence FILMSTUD 100 A,B,C; and either a course in a national cinema or an additional course in film history. Electives can be selected from courses in other departments approved for the Film Studies minor by the coordinator and core faculty for their stress on methods of film analysis. These may include courses in national cinemas, film genres, experimental and documentary film, or film theory.

Upon declaring the minor, students are assigned an adviser with whom they plan their course of study and electives. A proposed course of study must be approved by the adviser and placed in the student’s departmental file. Only one class may be taken for credit outside the Stanford campus, including Stanford Overseas Studies programs. Minors are required to attend an orientation session presented by the professional staff of the Art Library, which introduces the many tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the minor declaration.
GRADUATE PROGRAMS

MASTER OF FINE ARTS

PROGRAM IN DOCUMENTARY FILM AND VIDEO

The Master of Fine Arts program in documentary film production provides a historical, theoretical, and critical framework within which students master the conceptual and practical skills for producing nonfiction film and video.

The M.F.A. degree is designed to prepare students for professional careers in film, video, and digital media. Graduates are qualified to teach at the university level. The philosophy of the program is predicated on a paradigm of independent media that values artistic expression, aesthetics, social awareness, and an articulated perspective. Students become conversant with the documentary tradition as well as with alternative media and new directions in documentary. In addition to the training in documentary production, students graduate from the program with substantive research skills in film criticism and film analysis. The non-production courses provide an intellectual and theoretical framework within which creative work is realized. The dual emphasis on production and studies classes prepares students to undertake an academic position that typically requires the teaching of both film studies and media production.

DEPARTMENTAL REQUIREMENTS

A minimum of 72 units is required for the M.F.A. degree. In the production core, students are required to conceptualize and visualize their ideas in a series of writing and producing courses that focus on documentary story structure. These courses are taken in tandem with project-based production courses that provide training in the technical and conceptual aspects of cinematography, sound recording, and editing. An ongoing discussion of form and content is a signature component of the writing and production courses. The production core is complemented by a series of core film studies courses plus elective courses in the history, aesthetics, ideology, and theory of all genres of moving image media.

CURRICULUM

Core Production Courses (8 courses, 32 units)—Core courses must be taken in sequence.

- FILMPROD 400. Film/Video Writing and Directing
- FILMPROD 401. Nonfiction Film Production
- FILMPROD 402. Digital Video
- FILMPROD 403. Advanced Documentary Directing
- FILMPROD 404. Advanced Film and Video Production
- FILMPROD 405. Producing Practicum
- FILMPROD 406A,B. Documentary MFA Thesis Seminar I and II

Core Film Studies Courses (6 courses, 23 units)

- FILMSTUD 4. Introduction to Film Study
- FILMSTUD 302. Theories of the Moving Image
- FILMSTUD 315. Contemporary Issues in Documentary
- FILMSTUD 316. International Documentary
- FILMSTUD 402A,B. Documentary Perspectives I and II

Electives (17-18 units)—To be chosen in collaboration with the student’s adviser.

Art History (one course, 4-5 units)—Choose one lecture or seminar in the history of visual art, not including film studies. Minimum of one course.

Studio Art (one course, 3 units)—Choose from any design or photography course; ARTSTUDI 149, Collage; or ARTSTUDI 152, Constructed Art.

New Media (two courses, 6 units)

- ARTSTUDI 130. Interactive Art I
- ARTSTUDI 131. Sound Art I
- ARTSTUDI 133. Phenomena Art
- ARTSTUDI 134. Voice, Word, Glyph
- ARTSTUDI 135. Interactive Art II
- ARTSTUDI 136. Media Archaeologies
- ARTSTUDI 176. Web Projects
- ARTSTUDI 177. Experimental Video I
- ARTSTUDI 177A. Experimental Video II
- ARTSTUDI 178. Electronic Art I
- ARTSTUDI 181. The Art of the Archive
- ARTSTUDI 182. Art and the Politics of Media
- CS 448. Topics in Computer Graphics

Communication (one course, 4 units)

- COMM 216. Journalism Law
- COMM 217. Digital Journalism
- COMM 220. Digital Media in Society
- COMM 231. Media Ethics and Responsibilities
- COMM 236. Democracy and Communication of Consent
- COMM 244. Democracy, Press, and Public Opinion
- COMM 245. Media Entertainment and Journalism
- COMM 260. The Press and the Political Process
- COMM 269. Computers and Interfaces

ART EDUCATION

Information concerning the M.A. in Teaching, Doctor of Education, Ph.D. in Education, and Teaching Credential (Single Subject-Secondary) degrees and programs may be secured from the Office of the Dean of the School of Education.

COURSES

WIM indicates that the course satisfies the Writing in the Major requirements.

HISTORY OF ART

BASIC

ARTHIST 1. Introduction to the Visual Arts—Multicultural rather than historical approach. GER:DB-Hum, WIM
5 units, Aut (Lee, P)

ARTHIST 2. Asian Art and Culture—The religious and philosophical ideas and social attitudes of India, China, and Japan and how they are expressed in architecture, painting, woodblock prints, sculpture, and in such forms as garden design and urban planning. GER:DB-Hum, EC-GlobalCom
5 units, Win (Vinograd, R)

ARTHIST 3. Introduction to the History of Architecture—From antiquity to the 20th century, mostly Western with some non-Western topics. Buildings and general principles relevant to the study of architecture. GER:DB-Hum
5 units, Spr (Beischer, T)

ARTHIST 99A. Student Guides at the Cantor Center for the Visual Arts—Open to all Stanford students. Introduction to museum administration; art registration, preparation, and installation; rights and reproductions of images; exhibition planning; and art storage, conservation, and security. Skill building in public speaking, inquiry methods, group dynamics, theme development, and art-related vocabulary. Students research, prepare, and present discussions on art works of their choice. 1 unit, Aut (Young, P)

OVERVIEW COURSES

THE CLASSICAL WORLD

ARTHIST 101/301. Archaic Greek Art—(Same as CLASSART 101/201.) The development of Greek art and culture from proto-geometric beginnings to the Persian Wars, 1000-480 B.C.E. The genesis of a native Greek style; the orientalizing phase during which contact with the Near East and Egypt transformed Greek art; and the synthesis of East and West in the 6th century B.C.E. GER:DB-Hum
4 units, Aut (Maxmin, J)

ARTHIST 102/302. Classical and 4th-Century Greek Art—(Same as CLASSART 102/202.) The formation of the classical ideal in 5th-century Athenian art, and its transformation and diffusion in the 5th and 4th centuries against changing Greek history, politics, and religion. GER: DB-Hum
4 units, not given this year (Maxmin, J)

THE MEDIEVAL WORLD

ARTHIST 105/305. Introduction to Medieval Art—Chronological survey of Byzantine and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments...
and more detailed examinations of individual monuments and works of art. Topics include devotional art, court and monastic culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals. GER:DB-Hum

4 units, not given this year (Pentcheva, B)

ARTHIST 105A/305A. Islamic Art around the Mediterranean — Art and architecture from Egypt, N. Africa, Spain, Italy, Greece, and Anatolia during the medieval and early modern periods. Continuities of artistic traditions and the development of regional styles around the Mediterranean. The earliest monuments of Islamic art, such as the Dome of the Rock and the Great Mosque in Damascus, through the artistic synthesis forged by the Ottoman Empire. GER:DB-Hum

4 units, Win (Fetvaci, E)

ARTHIST 106/306. Byzantine Art and Architecture, 300-1453 C.E. — Art-historical developments, and monuments and works of art. Topics include: the transition from naturalism to abstraction; imperial art and court culture; pilgrimage and cult of saints; and secular art and luxury objects. GER:DB-Hum

4 units, Win (Pentcheva, B)

4 units, Aut (Pentcheva, B)

ARTHIST 108/308. Virginity and Power: Mary in the Middle Ages — The most influential female figure in Christianity whose state cult was connected with the idea of empire. The production and control of images and relics of the Virgin and the development of urban processions and court ceremonies through which political power was legitimized in papal Rome, Byzantium, Carolingian and Ottonian Germany, Tuscany, Gothic France, and Russia. GER:DB-Hum

4 units, not given this year (Pentcheva, B)

EUROPE 1400-1900

ARTHIST 120/320. Art and Culture of Northern Europe in the 17th Century — Painting and graphic arts by artists in Flanders and Holland from 1600 to 1680, a period of political and religious strife. Historical context; their relationship to developments in the rest of Europe and contributions to the problem of representation. Preferences for particular genres such as portraits, landscapes, and scenes of everyday life; the general problem of realism as manifested in the works studied. GER:DB-Hum

4 units, Aut (Marrinan, M)

ARTHIST 121/321. 18th-Century Art in Europe, ca 1660-1780 — Major developments in painting across Europe including the High Baroque illusionism of Bernini, the founding of the French Academy, and the revival of antiquity during the 1760s, with parallel developments in Venice, Naples, Madrid, Bavaria, and London. Shifts in themes and styles amidst the emergence of new viewing publics. Artists: the Tiepolos, Gior dano, Batoni, and Mengs; Ricci, Pellegrini, and Thornhill; Watteau and Boucher; Chardin and Longhi; Reynolds and West; Hogarth and Greuze; Vien, Fragonard, and the first works by David. Additional discussion for graduate students. GER:DB-Hum

4 units, Spr (Marrinan, M)

ARTHIST 124/324. The Age of Naturalism, ca 1830-1874 — The origins, development, and triumph of naturalist painting in Europe. The creative tensions that emerged between traditional forms of history painting and the challenge of modern subjects drawn from contemporary life. Emphasis is on the development of open-air painting as an alternative to traditional studio practice, and to the rise of new imaging technologies, such as lithography and photography, as popular alternatives to the hand-wrought character and elitist appeal of high art. GER:DB-Hum

4 units, not given this year (Marrinan, M)

ARTHIST 126/326. Post-Naturalist Painting — How conceptual models from language, literature, new technologies, and scientific theory affected picture making following the collapse of the radical naturalism of the 1860s and 1870s. Bracketed in France by the first Impressionist exhibition (1874) and the first public acclamation of major canvases by Matisse and Picasso (1905), the related developments in England, Germany, Belgium, and Austria. Additional weekly discussion for graduate students. Recommended: some prior experience with 19th-century art. GER:DB-Hum

4 units, not given this year (Marrinan, M)

BRITAIN AND AMERICA 1600-1900

ARTHIST 132/332. American Art and Culture, 1528-1860 — The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others. GER:DB-Hum

4 units, not given this year (Corns, W)

MODERN EUROPE

ARTHIST 141/341. The Invention of Modern Architecture — The creation and development of new architectural forms and theories, from the late 18th to the early 20th centuries, mainly in Europe but also in America. Emphasis is on the responses to new materials, technologies, and social conditions, and how they shaped the architecture of the present. Recommended as preparation for 142. GER:DB-Hum

4 units, not given this year

ARTHIST 142/342. Varieties of Modern Architecture — The development of competing versions of modern and postmodern architecture and design in Europe and America, from the early 20th century to the present. Recommended: 141. GER:DB-Hum

4 units, not given this year

ARTHIST 145/345. European Modernism and the International Avant Garde, 1895-1945 — How modern and avant garde artists have interrogated the nature of signification or how form produces meaning; their relationship to revolutionary politics. Fauvism and cubism in Paris, German expressionism, Italian futurism, pittura metafisica, Berlin Dada, Mondrian and de Stijl in the Netherlands, suprematism, Russian constructivism, and surrealism. Vocabulary and analytical and visual tools to come up to grips with the works and debates in European modernism and the international avant garde. Readings include manifestos, artists’ writings, and art criticism. GER:DB-Hum

4 units, not given this year (Gough, M)

ARTHIST 145A/345A. Art of Postwar Europe — Major movements, themes, figures, and critical issues. Focus is on the art of France, Germany, Italy, and England as distinct from and intertwined with the aesthetic production of postwar U.S. The question of a political, engaged, or committed art and the status of the avant garde; the rise of consumer culture and the practice of everyday life. Recommended: some art history.

4 units, not given this year (Lee, P)

ARTHIST 145B/345B. Modern Art and the City: Painting, Architecture, and the European Avant Garde, 1910-1945 — Development of early 20th-century painting in relation to the European city. The historical avant garde and urban centers in which these movements arose. How, following the work of Cézanne and the Cubists, painters used painting as a laboratory for problems of space and architecture. Readings include Siegfried Krakauer, Georg Simmel, and Walter Benjamin. GER:DB-Hum

4 units, Aut (Merjian, A)
ARTHIST 147/347. Modern Sculptural Practices — The shift from a modernist conception of sculpture as object to one of sculpture as place or situation. Temporality in a medium traditionally assumed to be static. The advent of construction as a mode of sculptural production. Resistance to integral form and the declaration of process as a form of sculptural practice. GER:DB-Hum
4 units, not given this year (Gough, M)

MODERN AMERICA

ARTHIST 143A/343A. American Architecture — A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today’s globalized world. GER:DB-Hum
4 units, Win (Beischer, T)

ARTHIST 151/351. Transatlantic Modernism: Paris and New York in the Early 20th Century — Modernism in the American arts at home and abroad, emphasizing transatlantic expatriation, cultural politics, and creative alliances. Painters and sculptors are the focus. Literary figures who interacted with artists such as Gertrude Stein, William Carlos Williams, and Langston Hughes. Topics and artists: the Armory Show, Marcel Duchamp, Francis Picabia, Futurism, Fernand Léger, Alfred Stieglitz, Charles Demuth, Georgia O’Keeffe, Gerald Murphy, the Harlem Renaissance, John Storrs, and Floline Stettheimer. GER:DB-Hum
4 units, not given this year (Corn, W)

ARTHIST 153A/353A. American Art, 1900-1945 — Painting, sculpture, photography, and design. Focus is on the emergence of diverse cultural forms in the search for a modern, American form of artistic expression. Topics include: Robert Henri and the Ash Can school; the Armory Show; Marcel Duchamp, Francis Picabia, Futurism, Fernand Léger, Alfred Stieglitz, Charles Demuth, Georgia O’Keeffe, Gerald Murphy, the Harlem Renaissance, John Storrs, and Floline Stettheimer. GER:DB-Hum
4 units, Win (Marshall, J)

ARTHIST 154A/354A. Regionalism and the American Imagination — How tropes of local difference are produced in the common discourse of national identity, such that the regional margins are determined by the national center. Cultural icons related to the Midwest, South, and Southwest include: Grant Wood, The Wizard of Oz, In Cold Blood, folk art, Flannery O’Connor, Elvis, Georgia O’Keeffe, Pueblo Indians, and John Wayne. GER:DB-Hum
4 units, Spr (Marshall, J)

ARTHIST 158A/358A. History of Photography — From its invention in 1839 to the present. Emphasis is on the evolution of photography as a fine art. Photographs as a universal democratic art form to record familial events and express personal creativity. Development of photography as it relates to other art forms, journalism, architecture, portraiture, landscape, documentation, time, and personal expression. The technology of photography; photographic techniques. GER:DB-Hum
4 units, Aut (Dawson, R)

CONTEMPORARY EUROPE AND AMERICA

ARTHIST 178/378. Ethnicity and Dissent in United States Art and Literature — The role of the visual arts of the U.S. in the construction and contesting of racial, class, and gender hierarchies. Focus is on artists and writers from the 18th century to 1990s. How power, domination, and resistance work historically. Topics include: minstrelsy and the invention of race; mass culture and postmodernity; hegemony and language; memory and desire; and the borderlands. GER:DB-Hum, EC-AmerCul
4 units, not given this year (Wolf, B)

ASIA

ARTHIST 182/382. Arts of China, 900-1500: Cultures in Competition — The era from the Five Dynasties and Song to the mid-Ming period was marked by competition in cultural arenas such as between Chinese and formerly nomadic regimes, or between official court art modes and scholar-official and literati groups. Topics include: innovations in architectural and ceramic technologies; developments in landscape painting and theory; the proliferation of art texts and discourses; the rise of educated artists; official arts and ideologies of the Song, Liao, Jin, Yuan, and Ming regimes; new roles for women as patrons and cultural participants; and Chan and popular Buddhist imagery. GER:DB-Hum, EC-GlobalCom
4 units, Aut (Vinograd, R)

ARTHIST 184/384. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting — The changes marking the transition from medieval to early modern Japanese society generated a revolution in visual culture. This paradigm shift as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch. GER:DB-Hum
4 units, not given this year (Takeuchi, M)

ARTHIST 185/385. Art in China’s Modern Era — From the late Ming period to contemporary art periods. Topics: urban arts and print culture; commodification of art; painting theories; self-portrayals; court art, collection, and ideological programs; media and modernity in Shanghai; politics and art in the People’s Republic; and contemporary avant garde and transnational movements. GER:DB-Hum
4 units, not given this year (Vinograd, R)

ARTHIST 186/386. Theme and Style in Japanese Art — (Same as JAPANGEN 86.) Monuments in traditional Japanese architecture, sculpture, garden design, painting, prints, and pots, through the 19th century. Chronological framework emphasizes the role of these objects play in visualizing the ideals of the society they represent. GER:DB-Hum
4 units, Win (Takeuchi, M)

ARTHIST 187/387. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868 — (Same as JAPANGEN 87.) Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of artist and tension between the old and the new leading to the modernization of Japan. GER:DB-Hum, EC-GlobalCom
4 units, Spr (Takeuchi, M)

AFRICA

ARTHIST 190/390. African Art and Writing Traditions — Classic African graphic writings south of the Sahara in historical and social context. What makes an African graphic writing system; how they are used as visual art, and as markers of identity, religion, and moral philosophy. Civilizations include Mali, Asante, Yoruba, Ejahham, and Congo.
4 units, not given this year (Martinez-Ruiz, B)

ARTHIST 191/391. Afro-Atlantic Religion, Art, and Philosophy — Graphic writing and other forms of visual communication including ancient rastafari art and rock painting in Africa, and present-day forms in the Americas. The diversity of daily life, religion, social organization, politics, and culture with African origin in the diaspora. Focus is on major contemporary Afro-Atlantic religions including: Palo Monte and Abakua in Cuba; Ganga in the Dominican Republic; Revival, Obeah, and Kumina in Jamaica; Vodun in Haiti; and Candomble and Macumba in Brazil.
4 units, not given this year (Martinez-Ruiz, B)

ARTHIST 192/392. Introduction to African Art — Form, space, media, medium, and visual expression in African art. Rock art to contemporary art production. Majors works and art expression in terms of function and historical context. GER:DB-Hum
4 units, not given this year (Martinez-Ruiz, B)

ARTHIST 195/395. Introduction to Black Atlantic Visual Traditions — African cultural expression in the Americas. How politics, religion, and culture influence the art of the Black Atlantic. Focus is on the period when cultures were brought from Africa to the Americas through the slave trade and came into contact and conflict with western colonial powers. GER:DB-Hum 4 units, Win (Martinez-Ruiz, B)

SEMINARS AND COLLOQUIA

ARTHIST 203. Greek Art in Context — (Same as CLASSART 109.) The cultural contexts in which art served religious, political, commercial, athletic, sympotic, and erotic needs of Greek life. 5 units, Aut (Maxmin, J)

ARTHIST 204A. Appropriations of Greek Art — (Same as CLASSART 110.) The history of the appropriation of Greek art by Rome, the Renaissance, Lord Elgin, and Manet. 5 units, Spr (Maxmin, J)

ARTHIST 206A. Visualizing History in the Islamic World — Islamic courtly traditions of illustrating historical texts from the 13th to 17th centuries. Painting traditions of Islamic courts in comparative perspective; issues of production, patronage, aesthetics, and reception. Concepts of artistic transmission, writing history, and self-fashioning. How text and image combine to codify courtly visions of the past and present; how these books create collective memories for contemporary and future audiences. 5 units, Spr (Fetvaci, E)

ARTHIST 222. Chardin and Watteau: An Aesthetics of Touch — These 18th-century painters preferred everyday life subjects, still-lifes, and landscape; Watteau invented the fête galante as a new picture type. Common to their work is attention to the materials of art: surfaces, textures, and glazes of paint; graphic range of chalk, ink, and pencil; an objectness that signals the artist’s creative presence. Readings in contemporary theory and historical criticism frame an aesthetics of touch at odds with the eye-centered bias of Academic theory. Student presentations. Recommended: 121. 5 units, not given this year (Marrinan, M)

ARTHIST 226. Georges Seurat — Art and cultural context of the inventor of pointillism, associated with scientific discoveries about the nature of light. Dimensions of Seurat’s work that escape a purely scientific understanding; the psychological tenor of his imagery; his choice of subject matter; drawings that are neither colored nor dot-like in style; his interest in the traditions of art; and left-wing politics. 5 units, not given this year (Marrinan, M)

ARTHIST 229A. Representing Reality — Notions of realism and how artists and scientists define, visualize, and represent it. Artistic techniques for making pictures that mirror the visual world, including Renaissance perspective and Impressionist uses of light and color. How scientific representations shift the emphasis from imitation to preserving a chain of references to the represented phenomena. How the introduction of new technologies and novel theories change understandings and representations of reality in both disciplines. Contemporary and popular uses of the term, from virtual reality to reality TV. 5 units, Win (Kessler, E)

ARTHIST 232. Rethinking American Art — Painting and some sculpture of the 18th and 19th centuries, focusing on works in the de Young Museum. Each student studies a single work using documents of social and cultural history. Recent scholarship, genre, and the biography of objects as they shift in context and meaning over time. Weekly meetings at the de Young with Professor Margareta Lovell and UC Berkeley students. 5 units, Aut (Wolf, B)

ARTHIST 233. The Art Museum: History and Practice — Workshop. Contemporary museum culture emphasizing the collecting and exhibiting practices of art museums. Readings, field trips, and discussions with museum professionals. Each student creates a detailed proposal for a museum exhibition and presents it to a panel of faculty and curators. 5 units, not given this year

ARTHIST 234A. The Harlem Renaissance — African Americans artistic expression in the 20s that reflected changing conditions of urban modernity and racial identity. The forms and meanings of African American modernism; social politics of black self-representation and white patronage; and how high culture became the primary front in the struggle for racial uplift. Cultural figures include: Aaron Douglas, W.E.B. Du Bois, Marcus Garvey, Langston Hughes, Jacob Lawrence, Zora Neale Hurston, and Carl Van Vechten. Sources include painting, sculpture, music, and literature. 5 units, Aut (Marshall, J)

ARTHIST 242A. The City and Surrealism — Urban, literary, visual, and ideological circumstances that led to Surrealism’s formation in early 20th-century France; focus is on Paris. Surrealist attitudes towards architecture and urban space; the city’s role in Surrealist writing and painting. Sources include experimental novels by Breton and Aragon, photographs by Brassai, and manifestos that proposed a re-ordering of architectural monuments. Themes include: surrealist attitudes towards Marxism, materialism, and revolution; surrealist positions on Le Corbusier and rationalist architecture; Benjamin’s affinities to and differences with Breton’s Surrealism; and gendered spaces. 5 units, Win (Mijrian, A)

ARTHIST 249. Picasso and Cubism 5 units, not given this year (Gough, M)

ARTHIST 254. Utopia and Reality in Modern Urban Planning — (Same as URBANST 164.) Primarily for Urban Studies majors. Utopian urbanist thinkers such as Ebenezer Howard, Le Corbusier, and Frank Lloyd Wright who established the conceptual groundwork of contemporary urban planning practice. Research paper. GER:DB-Hum 5 units, Spr (Stout, F; Turner, P)

ARTHIST 281A. Making Art History in Republican China — The construction of modern art historical discourses under a new national regime and within an international context; the role of public institutions and media such as museums, art academies, and art journals in forming a new public role for art and art collecting; and the cultural politics of art production. 5 units, Aut (Vinograd, R)

ARTHIST 282A. Imagining the Imperial: Images of the Court in Late Ming Dynasty Public Culture — Themes of palace and court life popular in vernacular painting, print illustrated books, and fiction. Dimensions of the imperial palace and court in late Ming public imaginary, including strategies of historical displacement, disguised political critique, commerce in imperial objects, the taste for scandal, and mythologies of court life. 5 units, not given this year (Vinograd, R)

ARTHIST 283. Court Art in Ming and Qing Dynasty China — Seminar. Painting and other art production at the Ming and Qing dynasty courts: art institutions, collecting, court ideology and political agendas, thematic programs, and cultural regulation. GER:DB-Hum, EC-GlobalCom 5 units, not given this year (Vinograd, R)

ARTHIST 283A. Paris and Shanghai: Sites of Modernity — Offered in conjunction with the Stanford Humanities Laboratory. Visual perspective. A parallel reading of the two cities in the period 1860-1940 to define parameters of modernity and urbanity. Views of the respective cities including panoptic perspectives of the whole urban fabric to intimate interiors; media including lithography, photography, painting, film, and the printed word, emphasizing media combining word and image such as illustrated books and periodicals, newspaper advertisements, and silent cinema. 5 units, not given this year (Vinograd, R)
ARTHIST 284A. Art Discourses and Art Production in Late Ming China — The interplay of art theory, taste, and collecting with art production, especially painting from 1550-1664, in the context of regional and urban cultures.
5 units, not given this year (Vinograd, R)

ARTHIST 286. Shin-e: The Performance of Death in Japanese Actor Prints — Memorial prints, shin-e, issued upon the death of celebrated kabuki actors to celebrate the actor’s life and ask for patron support for his descendants. They often included the actor’s own death poem. Intellectual issues include the performative self in traditional Japan, the afterlife, commercialism of the theatrical milieu, lineage, fandom, and death protocols. Sources include a loan collection of more than 400 shin-e; students give intellectual shape to this material and present it as an exhibit at the Cantor.
5 units, not given this year (Takeuchi, M)

ARTHIST 287. Pictures of the Floating World: Images from Japanese Popular Culture — Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles. Prerequisites: 2, 186, 187, 188.
5 units, not given this year (Takeuchi, M)

ARTHIST 287A. The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime — The tea ceremony, a premodern multimedia phenomenon, integrates architecture, garden design, ceramics, painting, calligraphy, and treasured objects into a choreographed ritual wherein host, objects, and guests perform roles on a tiny stage. Aesthetic, philosophical, and political dimensions. The evolution of tea taste including its inception in Zen monasteries, use for social control during the 16th century, the development of a class of tea connoisseurs, and 20th-century manipulation by the emerging industrialist class.
5 units, Win (Takeuchi, M)

5 units, not given this year (Martinez-Ruiz, B)

5 units, not given this year (Martinez-Ruiz, B)

5 units, not given this year (Martinez-Ruiz, B)

ARTHIST 292A. Researching Africa: Problem and Theory in African Art 5 units, Win (Martinez-Ruiz, B)

ARTHIST 293. Latino American Avant Garde — African contribution to modern art practices in Latino America. Mexico, Brazil, and Cuba as models. Cultural and historical context.
5 units, not given this year (Martinez-Ruiz, B)

5 units, Aut (Martinez-Ruiz, B)

ARTHIST 297. Honors Thesis Writing — May be repeated for credit.
1-5 units, Aut, Win, Spr (Staff)

ARTHIST 298. Individual Work: Art History — For approved independent research with individual faculty members. Letter grades only.
1-15 units, Aut, Win, Spr (Staff)

ARTHIST 299. Research Project: Art History 1-15 units, Aut, Win, Spr (Staff)

GRADUATE SEMINARS

HISTORICAL STUDIES

ARTHIST 410. Aesthetics of the Icon — How medieval objects were experienced through sight, touch, sound, smell, and taste; how this multifaceted richness has been reduced to visual studies of medieval art. Focus is on the Byzantine icon to restore its synaesthetic power; how its performance is tied to culturally-specific modes of seeing. Byzantine liturgy, prayer, epigrams, and literary genres of description such as epikarya.
5 units, Win (Pentcheva, B)

ARTHIST 430A. Modernity and 19th-Century Visual Culture — The relationship between visuality and modernity; the privileged role played by seeing. Sources include paintings and literary texts organized around questions of perception. Topics include: visuality and the public sphere; landscape and depoliticized speech; genre and hegemony; race and identity; post-liberal and postmodern culture.
5 units, not given this year (Wolf, B)

ARTHIST 430B. Modernity and 19th-Century Visual Culture — Writing workshop and reading group. The relationship between publication and professionalization. Students submit publishable papers to an appropriate journal. Recommended: 430A.
5 units, not given this year (Wolf, B)

ARTHIST 432C,D. American Art: Theory and Practice — Theoretical writings on and historical interpretations of works of art as cultural artifacts. Prerequisite: consent of instructor.
3-5 units, not given this year (Corn, W)

ARTHIST 446. The Russian and Soviet Avant Garde 5 units, not given this year (Gough, M)

ARTHIST 447. Extreme Drawing — What happened to drawing in the mass-media-saturated environment of the 20s and beyond? The impact of advances in photolithographic reproduction, film, and radio. The role of drawing in urban environments and social spaces, and transgression of the medium’s traditional constraints through the introduction of montage, cut-outs, and unconventional supports. Focus is on the 20s (Le Corbusier, El Lissitzky, Klucis, Vesnin, and Leonidov), and the 50s-60s (Constant, Price, Archigram, Friedman, the NER group, and Superstudio).
5 units, not given this year (Gough, M)

ARTHIST 448. Theories and Practices of Abstraction — Focus is on Europe and the Americas: movements such as Orphism, Suprematism, Neoplasticism, Constructivism, concrete art, Concretismo, Neoconcretismo, Kineticism, Minimalism, op art, and neo-geo. The relative significance of form and historical context in the determination of meaning in abstract art. How abstract artists theorized their struggle against representation in relation to self-reflexivity, universalism, mysticism, socialism, utopia, scientific rationality, furniture, and interior design. Readings from artists under study, and Brett, Fer, Bois, Krauss, Wagner, Clark, Fried, Greenberg, Schapiro, Cooper, Lee, Mehring, Leja, Buchloh, and Foster.
5 units, not given this year (Gough, M)

ARTHIST 470. Globalization and Contemporary Art 5 units, not given this year (Lee, P)
ARTHIST 473. Minimalism: Seriality, Systems, Repetition—Minimalist or minimal art, primary structures, or ABC art in the 60s. New scholarship on the theories, criticism, and genealogies of minimalism in sculpture, painting, performance, music, and film. Considerations of the afterlife of minimalism in contemporary art. 5 units, not given this year (Lee, P)

ARTHIST 474. Media and Intermedia 5 units, not given this year (Lee, P)

ARTHIST 485. The Situation of the Artist in Traditional Japan—Topics may include: workshop production such as that of the Kano and Tosa families; the meaning of the signature on objects including ceramics and tea wares; the folk arts movement; craft guilds; ghost painters in China; individualism versus product standardization; and the role of lineage. How works of art were commissioned; institutions supporting artists; how makers purveyed their goods; how artists were recognized by society; the relationship between patrons’ desires and artists’ modes of production. 5 units, not given this year (Takeuchi, M)

CRITICAL STUDIES

ARTHIST 501. The Vision of Art History—How the project of art history connects to general issues of historical writing and evidence. Focus is on modes of vision, such as the perceptual, conceptual, and historical, and the clusters of related limitations they bring to the problem of art history. The overlapping areas of blindness inherent in art-historical scholarship. How options within the field are conditioned and shaped by the central, founding activity of the discipline. 5 units, Aut (Marrinan, M)

ARTHIST 507. Medieval Image Theory—The Middle Ages saw the development of a theoretical framework on visual representation in response to charges of idolatry. The defenders of religious images drew on the dogma of Incarnation; as the Virgin gave human flesh to the Logos/Christ, the image offered a material manifestation of the divine. Focus is on the change in perception and staging of the image. Early in the period, the icon or relic expressed the presence of the sacred; later in the period, visual representation was designed to trigger an emotional response that led the viewer to a union with the divine. 5 units, Aut (Pentcheva, B)

ARTHIST 512. The Time of the Object—How artists, art historians, philosophers, and critics have theorized the temporality of the art object. Topics: the origin of the work of art, duration, repetition, entropy, kineticism, the monument, the end of death of art, schizophrenia. Writers: Bergson, Deleuze, Focillon, Fried, Hegel, Heidegger, Jameson, Kubler, Krauss, Riegl. 5 units, Win (Lee, P)

ARTHIST 513. Methods and Historiography of Art History 5 units, Aut (Lee, P)

ARTHIST 516. Narrative Theory and Visual Form—The theoretical terrain of narrative studies in literary criticism and historiography. The critical implications of narrative analysis for the writing of history in general. Readings integrated with students’ current research projects. 5 units, Spr (Marrinan, M)

ARTHIST 521A. Material Culture Studies: Theories and Methodologies—The interdisciplinary roots of contemporary material culture studies, including: the Frankfurt School and British cultural studies; archaeology and ethnographic anthropology; psychoanalysis and feminist theory; and art history and connoisseurship. How objects mean differently than images, and what this thingness means for the practice of art history. Readings include Karl Marx, Theodor Adorno, Daniel Miller, Ian Hodder, Igor Kopytoff, Sigmund Freud, William Pietz, Jules Prown, James Deetz, Bill Brown, Alexander Nemerov, and Christina Kiaer. 5 units, Spr (Marshall, J)

RESEARCH

ARTHIST 600. Art History Bibliography and Library Methods 3 units, not given this year

ARTHIST 601. Graduate Studies in Art History—For first-year art history graduate students only. Fields, issues, and practices in art history. 2 units, Aut (Staff)

ARTHIST 610. Teaching Praxis 1-5 units, Aut, Win, Spr (Staff)

ARTHIST 620. Area Core Examination Preparation—For Art History Ph.D. candidates. Prerequisite: consent of instructor. 5 units, Aut, Win, Spr, Sum (Staff)

ARTHIST 640. Dissertation Proposal Preparation 5 units, Aut, Win, Spr, Sum (Staff)

ARTHIST 650. Dissertation Research 5 units, Aut, Win, Spr, Sum (Staff)

ARTHIST 660. Independent Study—For graduate students only. Approved independent research projects with individual faculty members. 1-15 units, Aut, Win, Spr, Sum (Staff)

ARTHIST 670. Dissertation Seminar—For graduate students writing and researching dissertations and dissertation proposals. How to define research projects, write grant proposals, and organize book-length projects. 3-5 units, not given this year (Staff)

PRACTICE OF ART

ARTSTUDI 14. Drawing for Non-Majors 2 units, Aut (Sparks, H), Win (Chang, J), Spr (Patton, K)

ARTSTUDI 16. Sculpture for Non-Majors 2 units, Aut (Bell, C)

ARTSTUDI 17. Photography for Non-Majors 2 units, Win (Ayofemi, B)

ARTSTUDI 60. Design I: Fundamental Visual Language—Formal elements of visual expression (color, composition, space, and process) through hands-on projects. Two- and three-dimensional media. Emphasis is on originality and inventiveness. Content is realized abstractly. Centered in design; relevant to visual art study and any student seeking to develop visual perception. (Level I) 3-5 units, Aut (Edmark, J; Kahn, M), Win, Spr (Edmark, J)

ARTSTUDI 70. Introduction to Photography—Critical, theoretical, and practical aspects of creative photography through camera and lab techniques. Field work. Cantor Art Center and Art Gallery exhibitions. 35mm camera required. (Level I) 4 units, Aut, Win, Spr (Dawson, R; Felzmann, L)

ARTSTUDI 80. Color—Hands-on study of color to develop color sensitivity and the ability to manipulate color to exploit its expressive potential. Guided experimentation and observation. Topics include color relativity, color and light, color mixing, color harmony, and color and content. (Level I) 3 units, not given this year

ARTSTUDI 130. Interactive Art I: Objects—The basics of sensors, processors, and actuators needed to create artworks that interact, record, and communicate. Emphasis is on the sculpture and interactive dimensions. (Level I) 3 units, Win (DeMarinis, P)

ARTSTUDI 131. Sound Art I—Acoustic, digital and analog approaches to sound art. Familiarization with techniques of listening, recording, digital processing and production. Required listening and readings in the history and contemporary practice of sound art. (Level II) 3 units, Aut (DeMarinis, P)

ARTSTUDI 136. Future Media—(Level II) 3 units, Spr (DeMarinis, P)
ARTSTUDI 137. Wireless — Technologies to scan the radio frequency signals that permeate the modern environment and to create art works that extend invisibly through space. Topics include spark telegraphy, Bluetooth and wireless networks, antennas, chips, encryption, propaganda, and surveillance. (Level II)
3 units, not given this year (DeMarinis, P)

ARTSTUDI 138. Sound and Image — Practices that combine audio and visual media. Topics include synesthesias, visual music, film soundtracks, and immersive multimedia practices that combine sound, music, still and moving images, projections, and performance.
3 units, Spr (DeMarinis, P)

ARTSTUDI 140. Drawing I — Introduction to functional anatomy and perspective as these apply to problems of drawing the form in space. Individual and group instruction as students work from still life set-ups, nature, and the model. Emphasis is on the development of critical skills and perceptual drawing techniques for those with little or no previous experience with pastels, inks, charcoal, conte, and pencil. Lectures alternate with studio work in the investigation of drawing fundamentals. (Level I)
3 units, Spr (DeMarinis, P)

ARTSTUDI 141. Drawing II — Intermediate/advanced. Observation, invention, and construction. Development of conceptual and material strategies, with attention to process and purpose. May be repeated for credit. Prerequisite: 40 or 140, or consent of instructor. (Level II)
3 units, Aut (Colburn, A), Spr (Hannah, D)

ARTSTUDI 145. Painting I — Introduction to techniques, materials, and vocabulary in oil painting. Still life, landscape, and figure are used as subject matter. Painting and drawing directly from life is emphasized. (Level I)
3 units, Aut (Hewicker, S), Win, Spr (Staff)

ARTSTUDI 146. Painting II — Symbolic, narrative, and representational self-portraits. Introduction to the pictorial strategies, painting methods, and psychological imperatives of Dürer, Rembrandt, Cézanne, Kahlo, Beckmann, Schiele, and Munch. Students paint from life, memory, reproductions, and objects of personal significance to create a world in which they describe themselves. Prerequisites: 140, 145, or consent of instructor. (Level II)
3 units, Win (Hannah, D), Spr (Staff)

ARTSTUDI 147. Painting III — Advanced painting with emphasis on the individual point of view. May be repeated for credit. Prerequisites: three quarters of 145, 146, or equivalent, or consent of instructor. (Level IV)
3 units, Spr (Chagoya, E)

ARTSTUDI 148. Printmaking — Introduction to printmaking using monotype, a graphic art medium used by such artists as Blake, Degas, Gauguin, and Pendergast. May be repeated for credit. Prerequisite: 40 or 140. (Level III)
3 units, Aut, Win, Spr (Chagoya, E)

ARTSTUDI 149. Collage — The generative principles of this characteristic 20th-century art form. Along with assemblage (its three dimensional equivalent) and montage (its counterpart in photography, film, and video), collage introduced crucial aesthetic issues of the modern and postmodern eras. Typically, collage creates an expressive visual language through juxtaposition and displacement, and through materiality, difference, and event. Issues of location (where it happens), object (what it is), process (how it is realized), and purpose (why it is). Prerequisites: 140, 145, or consent of instructor. (Level III)
3 units, not given this year (Hannah, D)

ARTSTUDI 151. Sculpture I — (Level I)
3 units, Aut (Labell, B), Win (Staff)

ARTSTUDI 152. Sculpture II — Three dimensional understanding of form, time, and space, and applications to topics such as installation, special materials and processes, and site-specific works. Demonstrations, slide lectures, and discussion of work. Technical and conceptual skills.
3 units, Spr (Staff)

ARTSTUDI 153. Priorities to advanced students. Technical procedures and the uses of primitive and hand-made photographic emulsions. Enrollment limited to 10. Prerequisites: 70, 170, 270, or consent of instructor. (Level III)
3 units, Spr (Staff)

ARTSTUDI 154. Digital Art in Public Spaces — Interventions in public space with focus on social networks, both on- and off-line. How individuals become participants in shared city-wide or personal-scale experiences. Digital and non-digital interventions to create dialogue with the public. Visiting artists and field research. Projects to engage and challenge uses of technology in public spaces. Final project is a collaborative installation or projection for public viewing. See http://www.stanford.edu/dept/art/SUDAC/. Prerequisites: 60 or 145, 70; Photoshop and Illustrator. (Level II)
3 units, not given this year

ARTSTUDI 155. Web Projects — Creating art works using the Internet as a medium. How the Web has been conceptualized as a mutable archive, multitude of communities, canvas and performance space, and medium through which one may perceive, act, and understand at a distance. Interactive works created using software such as Dreamweaver, Flash, HTML, and PHP. (Level II)
3 units, Spr (Staff)

ARTSTUDI 160. Design II: The Bridge — The historical spectrum of design including practical and ritual. The values and conceptual orientation of visual fundamentals. Two- and three-dimensional projects sequentially grouped to relate design theory to application, balancing imaginative and responsible thinking. Prerequisite: 60. (Level II)
3-6 units, Win (Kahn, M), Spr (Edmark, J)

ARTSTUDI 161. Catalysts for Design — Nature, science and technology as sources of design inspiration. Projects in natural pattern formation, biological growth and form, Fibonacci and the golden section, chaos, fractals, mechanics, and symmetry. Emphasis is on importance of creative synthesis to the design process. Projects take the form of physical constructions as opposed to renderings or computer models. Field trips. (Level II)
3-5 units, Aut (Edmark, J)

ARTSTUDI 166. Design in Motion — Design areas for which movement and transformation are essential. Experimentation with mechanical means such as linking, hanging, inflating, and rotating. Projects in lighting, tools and utensils, games, festival props, and quasi-architecture emphasizing the creation of works in which motion is a significant agent for aesthetic gratification. No background in mechanics required. (Level II)
3-5 units, not given this year

ARTSTUDI 167. Introduction to Animation — Projects in animation techniques including flipbook, collage, stop-motion such as claymation and puppet animation, rotoscoping, and time-lapse. Films. Computers used as post-production tools, but course does not cover computer-generated animation. (Level I)
3-5 units, Win (Edmark, J)

ARTSTUDI 169. Professional Design Exploration — Six to eight mature projects are stimulated by weekly field trips into significant areas of design activity or need. (Level III)
3 units, Spr (Kahn, M)

ARTSTUDI 170. Projects in Photography — Students pursue a topic of their own definition. Further exploration of darkroom and other printing techniques; contemporary theory and criticism. (Level II)
3 units, Aut (Fitzmann, L), Spr (Dawson, R)

ARTSTUDI 171. Color Photography — Intermediate. Topics include techniques, history, color theory, and perception of color. Contemporary color photography issues and concepts. Students work with color slides and negatives, digital color, and non-traditional techniques. Field trip to a color lab. Prerequisite: 70. (Level III)
3 units, Win (Dawson, R)

ARTSTUDI 172. Alternative Processes — Priority to advanced students. Technical procedures and the uses of primitive and hand-made photographic emulsions. Enrollment limited to 10. Prerequisites: 70, 170, 270, or consent of instructor. (Level III)
3 units, Spr (Staff)

ARTSTUDI 174. Digital Art in Public Spaces — Interventions in public space with focus on social networks, both on- and off-line. How individuals become participants in shared city-wide or personal-scale experiences. Digital and non-digital interventions to create dialogue with the public. Visiting artists and field research. Projects to engage and challenge uses of technology in public spaces. Final project is a collaborative installation or projection for public viewing. See http://www.stanford.edu/dept/art/SUDAC/. Prerequisites: 60 or 145, 70; Photoshop and Illustrator. (Level II)
3 units, not given this year

ARTSTUDI 176. Web Projects — Creating art works using the Internet as a medium. How the Web has been conceptualized as a mutable archive, multitude of communities, canvas and performance space, and medium through which one may perceive, act, and understand at a distance. Interactive works created using software such as Dreamweaver, Flash, HTML, and PHP. (Level II)
3 units, Spr (Staff)
ARTSTUDI 177. Video Art I—Students create experimental video works. Conceptual, formal, and performance-based approaches to the medium. The history of video art since the 70s and its influences including experimental film, television, minimalism, conceptual art, and performance and electronic art. Topics: camera technique, lighting, sound design, found footage, cinematic conventions, and nonlinear digital editing. (Level II)
3 units, Aut (Hicks, A)

ARTSTUDI 177A. Video Art II—Advanced. Video, criticism, and contemporary media theory investigating the time image. Students create experimental video works, addressing the integration of video with traditional art media such as sculpture and painting. Nonlinearity made possible by Internet and DVD-based video. Prerequisite: 177 or consent of instructor. (Level III)
3 units, Win (Staff)

ARTSTUDI 178. Electronic Art I—Analog electronics and their use in art. Basic circuits for creating mobile, illuminated, and responsive works of art. Topics: soldering; construction of basic circuits; elementary electronics theory; and contemporary electronic art. (Level I)
3 units, Aut (Wight, G)

ARTSTUDI 179. Digital Art I—Contemporary electronic art focusing on digital media. Students create works exploring two- and three-dimensional, and time-based uses of the computer in fine art. History and theoretical underpinnings. Common discourse and informative resources for material and inspiration. Topics: imaging and sound software, web art, and rethinking the computer as interface and object. (Level I)
3 units, Win (Wight, G)

ARTSTUDI 179A. Digital Art II—Advanced. Interactive art works using multimedia scripting software. Experimental interfaces, computer installation work, and mobile technologies. Contemporary media art theory and practice. (Level II)
3 units, Spr (Wight, G)

ARTSTUDI 182. Art and the Politics of Media—How do the politics of media inform our use as a medium and tool for artists? Issues of surveillance, data collection and databases; advertising and personalized profiling; global networks and their attendant economies; search engines and filters; intellectual property and copyright law; and identity politics provide conceptual groundwork for creating art. (Level II)
3 units, not given this year (Wight, G)

ARTSTUDI 184. Art and Biology—The relationship between biology and art. Rather than how art has assisted the biological sciences as in medical illustration, focus is on how biology has influenced art making practice. New technologies and experimental directions, historical shifts in artists’ relationship to the living world, the effects of research methods on the development of theory, and changing conceptions of biology and life. Projects address these themes and others that emerge from class discussions and presentations. (Level II)
3 units, Win (Wight, G)

ARTSTUDI 185. Topics in Media Studies: Street Media—Literal and figurative meanings of street and how they provide potential to media technologies and invite innovative forms of artistic practice. Contemporary art as the juncture where street movements and new media collide. Small projects. (Level III)
3 units, not given this year

ARTSTUDI 246. Individual Work: Drawing and Painting—Prerequisites: two quarters of painting or drawing and consent of instructor.
1-15 units, Aut, Win, Spr (Staff)

ARTSTUDI 248. Advanced Printmaking—Continuation of monotype, dealing with advanced technical and aesthetic problems in the medium. Prerequisite: 148. (Level IV)
1-15 units, not given this year (Chagoya, E)

3 units, Spr (Staff)

ARTSTUDI 260. Individual Work: Design—May be repeated for credit.
1-15 units, Aut, Win, Spr (Staff)

ARTSTUDI 268. Design Synthesis—Mature semi-elective problems in composite and multimedia design areas. Prerequisites: any two design courses above 160. (Level IV)
4-6 units, Spr (Staff), not given this year

ARTSTUDI 269. Advanced Creative Studies—Seminar based on elective design projects in areas of individual specialization. May be repeated for credit. Prerequisite: consent of instructor. (Level IV)
1-15 units, Aut, Win (Kahn, M)

ARTSTUDI 270. Advanced Photography Seminar—Student continues with own work, showing it in weekly seminar critiques. May be repeated for credit. (Level IV)
1-5 units, Aut, Win, Spr (Leivick, J)

ARTSTUDI 271. The View Camera: Its Uses and Techniques—For serious students of photography who wish to gain greater control and refine skills in image making. 4x5 view cameras provided. Enrollment limited to 8. (Level III)
3 units, Win (Felzmann, L)

ARTSTUDI 272. Individual Work: Photography—Student continues with own work, showing it in weekly seminar critiques. May be repeated for credit.
1-5 units, Aut, Win, Spr (Staff)

ARTSTUDI 273. Individual Work: Digital Media—May be repeated for credit.
1-15 units, Aut, Win, Spr (Staff)

ARTSTUDI 274. Individual Work: Digital Art—May be repeated for credit.
1-15 units, Aut, Win, Spr (Staff)

ARTSTUDI 275. Photography IV 3 units, not given this year

ARTSTUDI 276. The Photographic Book—Grouping and sequencing photographic images to produce a coherent body of work with a thematic structure. (Level III)
3 units, Spr (Felzmann, L)

ARTSTUDI 310A,B,C. Directed Reading: Studio 1-15 units, A: Aut, B: Win, C: Spr (Staff)

ARTSTUDI 342. MFA Project: Studio—Two weekly seminars, studio practice, and individual tutorials. Object seminar: student work is critiqued on issues of identity, presentation, and the development of coherent critical language. Concept seminar: modes of conceptualization to broaden the base of cognitive and generative processes. May be repeated for credit. 1-15 units, Aut, Win, Spr (Staff)

ARTSTUDI 360A,B,C. Master’s Project: Design 1-15 units, Aut, Win, Spr (Staff)

COGNATE COURSES
See degree requirements above or the department’s student services office for applicability of these courses to a major or minor program. See sponsoring department for course description.

CEE 139. Design Portfolio Methods 3 units, Spr (Barton, J)

DRAMA 110. Cartographies of Race: The Institute for Diversity in the Arts at Stanford 5 units, Win (Elam, H)
art and art history

me 120. history and philosophy of design
3-4 units, spr (katz, b)

urbanst 113. introduction to urban design
5 units, win (staff)

film studies

introductory

filmstud 4. introduction to film study — formal, historical, and cultural issues in the study of film. classical narrative cinema compared with alternative narrative structures, documentary films, and experimental cinematic forms. issues of cinematic language and visual perception, and representations of gender, ethnicity, and sexuality. aesthetic and conceptual analytic skills with relevance to cinema. ger:db-hum
5 units, win (ma, j)

filmstud 100a/300a. history of world cinema i, 1895-1929 — from cinema’s precursors to the advent of synchronized sound. ger: db-hum
4 units, aut (bukatman, s)

filmstud 100b/300b. history of world cinema ii, 1930-1959 — the impact of sound to the dissolution of hollywood’s studio system. ger:db-hum
4 units, win (staff)

filmstud 100c/300c. history of world cinema iii, 1960-present — from the rise of the french new wave to the present. ger: db-hum
4 units, spr (ma, j)

filmstud 101/301. fundamentals of cinematic analysis — the close analysis of film. emphasis is on formal and narrative techniques in structure and style, and detailed readings of brief sequences. elements such as cinematography, mise-en-scène, composition, sound, and performance. films from various historical periods, national cinemas, directors, and genres. recommended: 4 or equivalent.
4 units, not given this year

filmstud 102/302. theories of the moving image — major theoretical arguments and debates about cinema: realism, formalism, poststructuralism, feminism, postmodernism, and phenomenology. prerequisites: arthist 1, filmstud 4. ger:db-hum, wim
4 units, win (levi, p)

filmstud 103/303. history of experimental film — the avant garde as locating cinematic art in spatio-temporal experiments against the background of film’s novelty in the early 20th century and movements towards an art derivative of literature and theater. how the avant gardes of europe, the u.s.s.r., and the u.s. produced films that opposed narrative cinematic conventions through a reflexive engagement with the medium’s metamorphic fluidity, film produced abstraction, political argument, an entry into the rhetoric of the unconscious and the realm of cognition, refusals of meaning, and explorations of perception.
4 units, not given this year

genre

filmstud 110/310. science fiction cinema — science fiction film’s sense of wonder depends upon the development and revelation of new ways of seeing. the american science fiction film’s emphasis on the fundamental activity of human perception and its exploration of other worlds, new cities, and other modes of being. science fiction as the hollywood genre most directly concerned with the essence of cinema itself, and such new technological spaces as the cyberspaces of the information age. ger:db-hum
4 units, not given this year (bukatman, s)

filmstud 111/311. the body in american genre film: from chaplin to the matrix — the american genre film as a mass form that shares elements with a carnivalesque, folk culture such as a rejection of polite-ness and piety, and an emphasis on the physical. genres include comedy, western, war, science fiction, musical, horror, melodrama, gangster, and cult, exploitation, and blaxploitation films. the place of the body onscreen. how does the body exist in relation to the world, other bodies, and the act of perception? what meaning does bodily movement have in relation to narrative? ger:db-hum
4 units, aut (bukatman, s)

filmstud 112/312. hollywood musicals, 1927-1944 — the sense of physical, emotional, aesthetic, and social liberation in early film musicals. musicals as a place for staging issues of identity, including the impact of african american and jewish culture, and gay reception and interpretation. attention to technologies of sound and color, the relation to broadway, and ethnic and aesthetic diversity. ger:db-hum, ec-amercul
4 units, not given this year (bukatman, s)

filmstud 112a/312a. hollywood musicals, 1945-1971 — musicals as the epiphal of filmic illusionism; the implications of their seduction of audiences; the meaning of spectacle. the era of cole porter, the arthur freed unit at mgm, the gene kelly/stanley donan collaborations, self-examination in vincente minnelli’s work, choreographers such as bob fosse and eugene loring, and 60s road-show broadway adaptations. ger:db-hum
4 units, not given this year (bukatman, s)

filmstud 114/314. comics: a lively art — history and aesthetics of comics in relation to emerging mass media and modernist and postmodernist aesthetic and narrative practices. focus is on innovators in humorous and dramatic strips, superheroes, undergrounds and independents, political commentary, and autobiography.
4 units, not given this year (bukatman, s)

filmstud 115/315. contemporary issues in documentary — issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. parallel focus on form and content. prerequisite: consent of instructor. ger:db-socsci
4 units, not given this year (krawitz, j)

filmstud 116/316. international documentary — historical, aesthetic, and formal developments of documentary through nonfiction films in europe, asia, latin america, and africa. ger:db-hum
4 units, win (samuelson, k)

author studies

filmstud 120b/320b. studies in authorship: the films of vincente minnelli — er:db-hum
4 units, not given this year (bukatman, s)

national cinemas

filmstud 130/330. italian cinema — the post-ww ii era. aesthetic and sociopolitical dimensions of neorealism; 60s cinema of economic miracle; and italian variations on popular film genres such as the spaghetti western. filmmakers include rossellini, de sica, visconti, pasolini, andantonioni. ger:db-hum
4 units, not given this year (levi, p)

filmstud 131/331. aesthetics and politics in east european cinema — from 1945 to the mid-80s, emphasizing polish, hungarian, czech, slovak, and yugoslav contexts. the relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the polish school, czech new wave, and new yugoslav film. thematic and aesthetic preoccupations of filmmakers such as wajda, jancso, forman, and kusturica. ger:db-hum
4 units, not given this year (levi, p)

filmstud 132/332. east asian cinema — social, historical, and aesthetic dimensions of the cinemas of japan, hong kong, taiwan, mainland china, and korea. topics such as nation and gender, form and genre, and local and transnational conditions of practice and reception. screenings include popular and art films from the silent to contemporary eras, including, zhang yimou, wong kar-wai, hou hsiao-hsien, ozu yasujiro, kurosawa akira, and im kwon-taek. ger:db-hum
4 units, spr (ma, j)

stanford bulletin, 2006-07 | 265
AESTHETICS
FILMSTUD 141/341. Cinematic Spectacle — The adoption of new technologies such as sound, color, or special effects; theories of the sublime and the grotesque. Spectacle as a vehicle for propaanda or pedagogy, and its relation to narrative and gender. The role of spectacle in experimental cinema and its deconstruction by Godard and others. Recommended: 4 or equivalent. GER:DB-Hum
4 units, not given this year

FILMSTUD 144/344. Experimental Video Workshop — Theory and practice of the moving image. Students work on video exercises and experiments as applied theory: attempts at practically implementing, verifying, or challenging ideas about sound, image, and performance. Prerequisites: FILMSTD 114 or equivalent, and consent of instructor.
4 units, Spr (Levi, P)

OTHER
FILMSTUD 152/352. Cinema-Machine — The film medium as culmination of the industrial and electronic revolutions of the 19th and 20th centuries, and the apotheosis of modernist impulses around the problematic of a perfect vision and visibility. The ideal of cinema in relation to its technological basis: the film apparatus as mechanical artifact, desiring machine, phenomenological toy, and instrument of knowledge. Screenings. GER:DB-Hum
4 units, Spr (Bukatman, S; Levi, P)

SEMINARS
FILMSTUD 230. Cinema and Ideology — The relationship between cinema and ideology from theoretical and historical perspectives, emphasizing Marxist and psychoanalytic approaches. The practice of political filmmaking, and the cinema as an audiovisual apparatus and socio-cultural institution. Topics include: dialectics; revolutionary aesthetics; language and power; commodity fetishism; and nationalism. Filmmakers include Dziga Vertov, Jean-Luc Godard, Bruce Conner, and Marco Ferreri. Theoretical writers include Karl Marx, Sergei Eisenstein, and Slavoj Zizek. Prerequisite: consent of instructor.
5 units, Aut (Levi, P)

FILMSTUD 290. Senior Seminar: Movies and Methods — Capstone course for majors. Historiography and theory. Topics vary year to year.
5 units, Win (Bukatman, S)

FILMSTUD 299. Independent Study: Film and Media Studies — May be repeated for credit.
1-15 units, Aut, Win, Spr (Staff)

GRADUATE SEMINARS
FILMSTUD 400. Cinema and Surrealist Imagination — Theoretical and practical approaches to cinema in the framework of ideas and aesthetic principles pursued by 20s and 30s European writers and artists associated with Dada and Surrealism. Forms of avant garde filmmaking and cine-writing engaged in a rebellion against reason and logic, and invested in explorations of the unconscious through automatism, onerism, chance, and visualization of desire. Writers include Breton, Bataille, and Artaud; filmmakers include Buñuel, Dali, Man Ray, and Duchamp.
5 units, not given this year

FILMSTUD 402A,B. Documentary Perspectives — Restricted to M.F.A. documentary film students. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.
5 units, not given this year

PRACTICE OF FILM
FILMPROD 101. Screenwriting — Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: ENGLISH 90, 190F, and consent of instructor.
5 units, Spr (Staff)

FILMPROD 114. Introduction to Film and Video Production — Hands-on. Techniques of film and video making including conceptualization, visualization, story structure, cinematography, sound recording, and editing.
5 units, Aut (Rosenblatt, J), Spr (Staff)

FILMPROD 400. Film/Video Writing and Directing — Restricted to M.F.A. documentary students. Emphasis is on the development of the research, conceptualization, visualization, and preproduction skills required for nonfiction filmmaking. Prerequisite: consent of instructor.
4 units, Aut (Samuelson, K)

FILMPROD 401. Nonfiction Film Production — Restricted to M.F.A. documentary students. 16mm production techniques and concepts. Final project is a short black-and-white film with multitrack sound design. Prerequisite: consent of instructor.
4 units, Aut (Rosenblatt, J)

FILMPROD 402. Digital Video — Restricted to M.F.A. documentary students. Fundamentals of digital storytelling. Working with small format cameras, interviewing techniques, and nonlinear editing skills. Prerequisite: consent of instructor.
4 units, Win (Krawitz, J)

FILMPROD 403. Advanced Documentary Directing — Restricted to M.F.A. documentary students. Further examination of structure, emphasizing writing and directing nonfiction film. Prerequisite: consent of instructor.
4 units, Spr (Samuelson, K)

FILMPROD 404. Advanced Film and Video Production — Restricted to M.F.A. documentary students. Techniques of visual storytelling and observational shooting. Final quarter of professional training in 16mm motion picture production. Prerequisite: consent of instructor.
4 units, Spr (Krawitz, J)

FILMPROD 405. Producing Practice — Restricted to M.F.A. documentary students. Advanced producing principles through the preproduction of the M.F.A. thesis project, including development of a professional film proposal. Practical training in fundraising. Prerequisite: consent of instructor.
4 units (Samuelson, K) not given this year

FILMPROD 406A. Documentary M.F.A. Thesis Seminar I — Restricted to M.F.A. documentary students. Production of film or video project. Focus is on shooting strategies, ethical challenges, and practical production issues. Prerequisite: consent of instructor.
4 units (Samuelson, K) not given this year

FILMPROD 406B. Documentary M.F.A. Thesis Seminar II — Restricted to M.F.A. documentary students. Editing and post-production of film or video project. Aesthetic choices (structure, narration, music), distribution, contracts, and audience. Prerequisite: consent of instructor.
4 units (Krawitz, J) not given this year

COGNATE COURSE
COMM 1B. Media, Culture, and Society
5 units, Win (Iyengar, S; Turner, F)

OVERSEAS STUDIES
BERLIN
ARTHIST 110V. Architecture and the City, 1871-1990: Berlin as a Nucleus of Modernity — (Same as HISTORY 229V, STS 119V, URBANST 143U.) GER:DB-Hum
4 units, Spr (Neckenig, F)

ARTHIST 141Y. The Industrial Revolution and its Impact on Art, Architecture, and Theory — (Same as STS 117V.) GER:DB-Hum

Web Site: http://asianlanguages.stanford.edu

Courses given in Asian Languages have subject codes CHINGEN, CHINLIT, JAPANGEN, JAPANLIT, and KORGEN. For a complete list of subject codes, see Appendix.

The Department of Asian Languages offers programs for students who want to engage with the cultures of China and Japan as articulated in language, linguistics, literature, film, and the newly developing field of cultural studies. Students emerge with a sophisticated understanding of culture as a dynamic process embodied in language and other representational forms, especially the verbal and visual forms that are central to humanistic study. Department faculty represent a broad range of research interests and specialties, and visiting scholars and postdoctoral fellows from the Stanford Humanities Center, the Freeman Spogli Institute for International Studies, the Freeman Spogli Institute for International Studies, the Freeman Spogli Institute for International Studies, the Freeman Spogli Institute for International Studies, the Freeman Spogli Institute for International Studies.
International Studies, and the Center for East Asian Studies add to the intellectual vitality of the department.

Asian Languages offers a full range of courses at the undergraduate and graduate levels. Undergraduate courses concentrate on language, literature, and other cultural forms from the earliest times to the present, covering traditional and contemporary topics from Confucian conceptions of self and society to inflections of gender in the twentieth century, from traditional arts such as Peking opera to recent developments in anime. Emphasis in classes is on developing powers of critical thinking and expression to serve students well no matter what their ultimate career goals. Graduate programs offer courses of study involving advanced language training, engagement with primary texts and other materials, and training in research methodologies and critical approaches.

Asian language skills provide a foundation for professional careers in fields such as business, diplomacy, education, and law. The department also offers opportunities for students who choose to double-major or minor in other academic disciplines, including anthropology, art, economics, education, history, linguistics, philosophy, political science, religious studies, and sociology.

The department accepts candidates for the degrees of Bachelor of Arts, Master of Arts, and Doctor of Philosophy in Chinese and Japanese. It also offers an undergraduate degree and a Ph.D. minor in Chinese or Japanese language and literature.

For information concerning other opportunities for study about Asian history, societies, and cultures, see the following departments and programs: Anthropological Sciences, Art and Art History, Business, Comparative Literature, East Asian Studies, Economics, History, Interdisciplinary Studies in Humanities, Law, Linguistics, Philosophy, Political Science, Religious Studies, and Sociology. Courses in Chinese, Japanese, and Korean language instruction are listed in the “Language Center” section of this bulletin. Students interested in Asian languages not listed should contact the Special Language Program at the Language Center.

UNDERGRADUATE PROGRAMS

BACHELOR OF ARTS

The B.A. degree is granted both in Chinese and in Japanese. The following courses and their prerequisites must be completed with a grade point average (GPA) of 2.0 or better:

1. Concentrations in Chinese:
   a) CHINGEN 91 and JAPANGEN 92
   b) Chinese language requirement:
      1) first-year modern Chinese (one of the following series: CHINLANG 1, 2, 3, or CHINLANG 1B, 2B, 3B, or CHINLANG 5)
      2) second-year modern Chinese (one of the following series: CHINLANG 21, 22, 23, or CHINLANG 21B, 22B, 23B, or CHINLANG 25)
      3) third-year modern Chinese (one of the following series: CHINLANG 101, 102, 103, or CHINLANG 101B, 102B, 103B, or CHINLANG 105) or beginning classical Chinese (CHINLIT 125, 126, 127)
   c) three courses offered by Asian Languages at the 100 level with one in each of the following areas, pre-modern China, modern China, and Chinese language/linguistics
   d) four other content courses dealing with China primarily at the 100 level, as approved by the undergraduate adviser
   e) CHINGEN 133 is the required Writing in the Major (WIM) course.

2. Concentrations in Japanese:
   a) CHINGEN 91 and JAPANGEN 92
   b) Japanese language requirement:
      1) first-year modern Japanese (one of the following series: JAPANLNG 1, 2, 3, or JAPANLNG 7B, 8B, 9B, or JAPANLNG 10)
      2) second-year modern Japanese (one of the following series: JAPANLNG 21, 22, 23, or JAPANLNG 17B, 18B, 19B, or JAPANLNG 20)
      3) third-year modern Japanese (one of the following series: JAPANLNG 101, 102, 103, or JAPANLNG 127B, 128B, 129B, or JAPANLNG 130)
      c) three courses offered by Asian Languages at the 100 level with one in each of the following areas, pre-modern Japan, modern Japan, and Japanese language/linguistics
      d) four other content courses dealing with Japan primarily at the 100 level, as approved by the undergraduate adviser
      e) JAPANGEN 138 is the required WIM course.

JAPANGEN 71N can be used to satisfy the Japanese language/linguistics area requirement. JAPANGEN 51/251 and JAPANLNG 130 are not counted toward the major. Students who complete third-year Japanese at KCJS satisfy the language requirement but are required to take a placement test if they wish to enroll in JAPANLNG 211, 212, 213.

Students who want to concentrate in Chinese or Japanese language/linguistics can substitute the four other content courses primarily at the 100 level with LINGUIST 1 and three other linguistic courses at the 100 level, as approved by the undergraduate adviser in consultation with the student’s academic adviser.

These requirements are in addition to the University’s basic requirement for the bachelor’s degree. Letter grades are mandatory for all required courses.

MINORS

The undergraduate minor in Asian Languages has been designed to give students majoring in other departments an opportunity to gain a substantial introduction to Chinese (Mandarin) or Japanese language, as well as an introduction to the culture and civilization of East Asia. The minor consists of:

1. Completion of one year of language study at the second-year level (that is, CHINLANG 21, 22, 23 or JAPANLNG 21, 22, 23 or 17B, 18B, 19B) for students with no previous training in Chinese or Japanese. Students who already have first-year competence in Chinese or Japanese must complete the third-year course (CHINLANG 101, 102, 103 or JAPANLNG 101, 102, 103 or 127B, 128B, 129B) after undertaking any training in the Department of Asian Languages. Students who already have a competence at the second-year level may fulfill the language component of the minor by taking three courses in the department using materials in either Chinese or Japanese. These courses may be language courses such as the third-year sequence mentioned above, or they may be advanced literature and linguistics courses, depending on the capabilities and interests of the student in question.

2. The core courses, CHINGEN 91, Traditional East Asian Civilization: China, and JAPANGEN 92, Traditional East Asian Civilization: Japan.

3. Two courses selected from among the department’s other offerings in the literature, linguistics, and civilization of a given minor area. All courses for the minor must be completed with a GPA of 2.0 or better.

MINOR IN LITERATURE

An undergraduate minor in Literature is offered through the Division of Literatures, Cultures, and Languages and includes courses offered through the Department of Asian Languages and the Language Center. See the “Division of Literatures, Cultures, and Languages” section of this bulletin for further details about the minor and its requirements.

MINOR IN MODERN LANGUAGES

An undergraduate minor in Modern Languages is offered through the Division of Literatures, Cultures, and Languages and includes courses offered through the Department of Asian Languages and the Language Center. See the “Division of Literatures, Cultures, and Languages” section of this bulletin for further details about the minor and its requirements.

HONORS PROGRAM

Majors with an overall grade point average (GPA) of 3.5 may apply for the honors program by submitting a senior thesis proposal to the honors committee during Winter or Spring Quarter of the junior year. The proposal must include a thesis outline, a list of all relevant courses the student has taken or plans to take, a preliminary reading list including a work or works in Chinese or Japanese, and the name of a faculty member who has agreed to act as honors supervisor.
If the proposal is approved, research begins in Spring Quarter of the junior year, when the student may enroll in CHINLIT 199 or JAPANLIT 199 for 2 units of credit for independent study. In Autumn Quarter of the senior year, honors students must enroll in DLCL 189, a 5-unit seminar that focuses on researching and writing the honors thesis. In Winter Quarter, students enroll for 5 units in a directed reading (CHINLIT 199 or JAPANLIT 199) with the thesis supervisor while writing the thesis, and the finished essay (normally about 15,000 words) is submitted to the committee no later than the end of the Winter Quarter in the senior year. 10-12 units of credit are granted for honors course work and the finished thesis.

COTERMINAL PROGRAMS

With department approval, students may be able to combine programs for the B.A. and M.A. degrees in Chinese or Japanese. Prospective applicants must consult with the graduate adviser. A Graduate Record Examination (GRE) score is not required. For details, see the “Graduate Degrees” section of this bulletin or http://registrar.stanford.edu/shared/publications.htm#Coterm.

EAST ASIAN STUDIES THEME HOUSE

EAST House, located at Governor’s Corner, is an undergraduate residence that houses 60 students and offers them opportunities to expand their knowledge, understanding, and appreciation of East Asia. Assignment is made through the regular undergraduate housing draw.

SUMMER PROGRAM

A nine-week summer program of intensive instruction is offered, on three different levels, in both Chinese and Japanese. The intensive courses provide the equivalent in instruction to regular academic-year courses. (See courses CHINLANG 5, 25, 105, and JAPANLNG 10, 20, 130, as described in the “Language Center” section of this bulletin.) For detailed information about these and other aspects of the summer program, inquire at the Language Center.

GRADUATE PROGRAMS

Admission — All students contemplating application for admission to graduate study must have a creditable undergraduate record. The applicant need not have majored in Chinese or Japanese as an undergraduate, but must have had the equivalent of at least three years of training in the language in which he or she intends to specialize, and must also demonstrate a command of English adequate for the pursuit of graduate study. Applicants should not wish merely to acquire or improve language skills, but to pursue study in one of the following fields: Chinese history (premodern), Chinese linguistics, Chinese literature, Chinese philosophy, Japanese cultural history, Japanese literature, and Japanese linguistics.

MASTERS OF ARTS

The M.A. is granted in Chinese and in Japanese. The normal length of study for the degree is two years. Applicants who wish to obtain only the M.A. and who do not intend to proceed to the Ph.D. are considered only if no financial aid is requested. Students who wish to spend the first year of graduate study at the Beijing or Yokohama centers must obtain department approval first. Candidates for the degree must be in residence at Stanford in California during the final quarter of registration. A thesis or an annotated translation of a text of suitable literary or historical worth is required for the M.A. degree. Under special circumstances, a paper approved by the graduate adviser may be substituted. The University’s basic requirements for the master’s degree, including a 45-unit minimum requirement, are given in the “Graduate Degrees” section of this bulletin. Department requirements are set forth below.

CHINESE

The candidate must:
1. Meet department’s requirements for the B.A. in Chinese or equivalent.
2. Complete the following course work: CHINLANG 103, CHINLIT 201, 221, 222, 223, 299; four courses in Chinese numbered between CHINLIT 230 and 292; and two upper-division or graduate-level courses in fields such as Chinese anthropology, art, history, philosophy, and politics as approved by the graduate adviser in consultation with the student’s individual adviser. Students may be exempted from CHINLANG 101, 102, 103, and CHINLIT 221, 222, 223 by passing examinations to demonstrate that they have attained equivalent language competence. Letter grades are mandatory for all required courses and their prerequisites.

JAPANESE

The candidate must:
1. Meet department’s requirements for the B.A. in Japanese or equivalent.
2. Complete the following course work: JAPANLNG 201, JAPANLNG 211-213, JAPANLIT 246, 247, 296, 299; four courses in Japanese numbered between JAPANLIT 260 and 298; one course in literary theory or methodology at the 100 level or higher; and two courses in fields such as Japanese anthropology, art, history, politics, linguistics, and religion, as approved by the graduate adviser in consultation with the student’s individual adviser. Students may be exempted from JAPANLNG 211, 212, 213, and JAPANLIT 246 by passing examinations to demonstrate that they have attained equivalent language competence. Letter grades are mandatory for all required courses and their prerequisites.

DOCTOR OF PHILOSOPHY

The Ph.D. degree is granted in Chinese and Japanese. Candidates for the degree are expected to acquire a thorough familiarity with Chinese or Japanese literature, an adequate command of both languages, and a comprehensive knowledge of East Asian history, social institutions, and thought. The University’s basic requirements for the Ph.D. are given in the “Graduate Degrees” section of this bulletin. Department requirements are set forth below.

ADMISSION TO CANDIDACY

Students admitted with a B.A. only are evaluated by the graduate faculty during the Autumn Quarter of their second year at Stanford. The evaluation is based on written work and at least a portion of the M.A. thesis or translation. If the faculty have serious doubts about a student’s ability to work for the Ph.D., they convey this to the student. During the subsequent Spring Quarter, the faculty formally decides whether a student should be admitted to candidacy for the Ph.D. or be terminated. In the case of a student who already has an M.A. in Chinese or Japanese when admitted to the department, the evaluation takes place in the Spring Quarter of the student’s first year. If a student goes to the Inter-University Program for Chinese Language Studies (IUP) at Tsinghua University or the Inter-University Center (IUC) for Japanese Language Studies in Yokohama (see “Study Abroad” below) during the first two years of study, the department may consider an extension for admission to candidacy. The timing of the evaluation of a student admitted with an M.A. in East Asian Studies is decided on an individual basis.

Admission to candidacy does not mean that the student has fulfilled all requirements for the degree except the dissertation, but that the department faculty consider the student qualified to pursue a program of study leading to the Ph.D. and that, subject to continued satisfactory progress, the student’s status in this department is secure.

REQUIREMENTS

A candidate must fulfill the following requirements:
1. Demonstrate a reading knowledge of French, German, or another appropriate language approved by the graduate adviser.
2. Complete two seminars at the 300 level. These seminars must be in different subjects.
3. Pass an examination in the supporting Asian language. A candidate whose field is Chinese is examined on his or her ability to read modern Japanese works relevant to his or her field of study. This requirement may be met by taking JAPANLNG 101, 102, 103, or JAPANLNG 127B, 128B, 129B, or 130, for letter grades. A candidate whose field is Japanese is examined on the ability to read classical Chinese works relevant to his or her field of study. This requirement may be met by taking CHINLANG 205, 206, and 207 for letter grades.
4. Pass a set of four comprehensive written examinations, one of which tests the candidate’s methodological competence in a discipline. The remaining three fields are chosen, with the approval of the graduate adviser in consultation with the student’s individual adviser, from the following: anthropology, art, Chinese literature, history, Japanese literature, linguistics, philosophy, and religion.
5. Demonstrate pedagogical proficiency by serving as a teaching assistant for a minimum of one quarter, and taking APPLING 201, The Learning and Teaching of Second Languages.

University Oral Examination — General regulations governing the oral examination are found in the “Graduate Degrees” section of this bulletin. The candidate is examined on questions related to the dissertation after acceptable parts of it have been completed in draft form.

Dissertation — The candidate must write a dissertation demonstrating ability to undertake original research based on primary materials in Chinese or Japanese.

PH.D. MINOR
A student taking a minor in Asian Languages must complete at least 30 units of work within the department at the 200 and 300 level, chosen in consultation with a department adviser. The student must elect either CHINLIT or JAPANLIT 201 unless the department is satisfied that work done elsewhere has provided similar training. The student must also pass a written examination in the Chinese or Japanese language.

STUDY ABROAD
Students interested in Japanese language, history, culture, and social organization are encouraged to apply to the Kyoto Center for Japanese Studies (KCJS), a two-semester academic program primarily for undergraduates wishing to do advanced work in the Japanese language and in Japanese studies.

In Spring Quarter, the Stanford Center for Technology and Innovation (SCTI), also in Kyoto, focuses on Japanese organizations and the political economy of research, development, and production of high technology and advanced industries, followed by an optional two-to-three month internship in an agency, firm, or laboratory in Japan. For information about either program in Kyoto, students should contact the Overseas Studies office in Sweet Hall.

Undergraduates interested in studying Chinese language, history, culture, and society are encouraged to apply to the Stanford Program in Beijing also offered through the Overseas Studies Program in Sweet Hall. This program is located at Peking University and is open Autumn and Spring quarters.

Students should take note of the Inter-University Program for Chinese Language Studies (IUP) at Tsinghua University (http://iup.iub@socrates.berkeley.edu; 510-642-3873) and the Inter-University Center (IUC) for Japanese Language Studies in Yokohama (http://www.stanford.edu/dept/IUC; stacey.campbell@stanford.edu; 650-725-1490). Stanford is a member of these consortia programs.

Students interested in the exchange program with the Department of Chinese at Peking University in Beijing should consult the chair of the department early in the academic year.

COURSES
WIM indicates that the course satisfies the Writing in the Major requirements.

Students interested in literature and literary studies should also consult course listings in the departments of Classics, Comparative Literature, English, French and Italian, German Studies, Slavic Languages and Literatures, and Spanish and Portuguese, and in the Program in Modern Thought and Literature.

Undergraduate and graduate majors should also consult the listings of the Division of Literatures, Cultures, and Languages.

Since unavoidable changes occasionally have to be made in course offerings after the Stanford Bulletin has gone to print, students are advised to consult the department each quarter.

For possible future offerings, see http://www.stanford.edu/dept/asianlang/courses/.

GENERAL
These courses are open to all undergraduates and graduate students, are taught in English, and do not require a knowledge of an Asian language.

CHINESE
CHINGEN 51. Chinese Calligraphy — Practice in writing Chinese characters with a brush, emphasizing standardized script and the composition of the characters and improving handwriting. Limited enrollment. May be repeated for credit. Prerequisite: CHINLANG 3 or equivalent.
1-2 units, Spr (Chuang, Y)

CHINGEN 73/173. Chinese Language, Culture, and Society — (Graduate students register for 173.) Topics include the origin of Chinese, development of dialects, emergence of the standard, preferred formulaic expressions, the evolution of writing, and language policies in greater China. Prerequisite: CHINLANG 1 or 1B, or equivalent. GER:DB-SocSci
4 units, Win (Sun, C)

CHINGEN 74Q. What is Modern Chinese? — Stanford Introductory Seminar. Preference to sophomores. Continuation of 73. Language planning, including corpus planning and status planning, in China from the late Imperial to the present. Difference standards for spoken and standard script Chinese and the arguments underlying them. Current policies and practices concerning standard Chinese, dialects, and minority languages in relation to political changes. Prerequisite: 73 or equivalent.
1-2 units, Spr (Sun, C)

CHINGEN 91. Traditional East Asian Civilization: China — Required for Chinese and Japanese majors. Introduction to Chinese culture in a historical context. Topics include political and socioeconomic institutions, religion, ethics, education, and art and literature. GER:DB-Hum, EC-GlobalCom
5 units, Aut (Zhou, Y)

CHINGEN 131/231. Chinese Poetry in Translation — (Graduate students register for 231.) From the first millennium B.C. through the 18th century. Traditional verse forms representative of the classical tradition; highlights of the most distinguished poets. History, language, and culture. Chinese language not required. GER:DB-Hum, EC-GlobalCom
4 units, Win (DiBello, M)

CHINGEN 132/232. Chinese Fiction and Drama in Translation — (Graduate students register for 232.) From early times to the 18th century, emphasizing literary and thematic discussions of major works in English translation. GER:DB-Hum, EC-GlobalCom
4 units, Win (Wang, J)

CHINGEN 133/233. Literature in 20th-Century China — (Graduate students register for 233.) Required for Chinese majors. The historical and cultural context of modern Chinese writing; critical approaches to its study. Themes include: the politics of representing gender and romance in literature; dislocations of colonial modernity; and political, cultural, and economic revolution. Sources include elite and popular fiction. In English. GER:DB-Hum, EC-GlobalCom, WIM
4 units, Aut (Wang, B)

CHINGEN 200. Directed Readings in Asian Languages — For Chinese literature. Prerequisite: consent of instructor. (Staff)
1-12 units, Aut, Win, Spr, Sum (Staff)

JAPANESE
2-5 units, Win (Dasher, R)

JAPANGEN 66. Modern Japanese Women Writers — 1868 to the present. Tropes and images of women including wise mothers, schoolgirls, ghosts, and dominatrices. How these writers defined femininity and the female body. Writers include Higuchi Ichiyo, Kurahashi Yumiko, Uno Chiyoko, and Tamura Toshiko. In English.
3-4 units, Win (Nakamura, M)
JAPANGEN 67/267. Masculinity Studies and Feminist Theory — (Graduate students register for 267.) Feminist theory to understand the origins, methodologies and trajectory of masculinity studies. Feminist writings that severed masculinity from men to reveal the constructed nature of male power and social, political, and sexual inequality. The history of masculinity studies, hegemonic and marginalized masculinities, notion of gender performativity, and mythopoetic and profeminist men’s movements, and feminist critiques. Constructions of masculinity intersecting with race, sexuality, nationalism, and colonialism. GER:DB-Hum
4 units, Spr (Mason, M)

JAPANGEN 71N. Language and Gender in Japan: Myths and Reality — Ideology and practice of gender in the Japanese society as reflected in and created by stylistic choices in the Japanese language. Past and present speech styles of women and men, speech situations, age, class, identities of the individual speakers and their relationships with others. How belief and reality are refracted through mass media and fictional representations. Comparisons with similar phenomena in other cultures. GER:DB-SocSci, EC-Gender
4 units, Win (Matsumoto, Y)

4 units, Aut (Reichert, J)

JAPANGEN 86. Theme and Style in Japanese Art — (Same as ART-HIST 186/386.) Monuments in traditional Japanese architecture, sculpture, garden design, painting, prints, and pots, through the 19th century. Chronological framework emphasizes the role of these objects play in visualizing the ideals of the society they represent. GER:DB-Hum
4 units, Win (Takeuchi, M)

JAPANGEN 87. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868 — (Same as ARTHIST 187/387) Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan. GER:DB-Hum, EC-GlobalCom
4 units, Spr (Takeuchi, M)

JAPANGEN 92. Traditional East Asian Civilization: Japan — Required for Chinese and Japanese majors. Introduction to Japanese culture in historical context. Focus is on shifting paradigms of gender relations and performance. Topics include ancient mythology, court poetry and romance, medieval war tales, and the theaters of Noh, Bunraku, and Kabuki. GER:DB-Hum, EC-GlobalCom
5 units, Win (Levy, I)

4 units, not given this year (Reichert, J)

JAPANGEN 137/237. Classical Japanese Literature in Translation — (Graduate students register for 237.) Prose, poetry, and drama from the 10th-19th centuries. Historical, intellectual, and cultural context. Works vary each year. May be repeated for credit with consent of instructor. GER:DB-Hum
4 units, Aut (Carter, S)

2-4 units, Spr (Reichert, J)

JAPANGEN 148/248. Modern Japanese Narratives: Literature and Film — (Graduate students register for 248.) Central issues in modern Japanese visual and written narrative. Focus is on competing views of modernity, war, and crises of individual and collective identity and responsibility. Directors and authors include Kurosawa, Mizoguchi, Ozu, Ogai, Akutagawa, Tanizaki, Abe, and Oe.
2-5 units, not given this year (Levy, I)

JAPANGEN 149/249. Screening Japan: Issues in Crosscultural Interpretation — (Graduate students register for 249.) Is the cinematic language of moving images universal? How have cultural differences, political interests, and genre expectations affected the ways in which Japanese cinema makes meaning across national borders? Sources include the works of major Japanese directors and seminal works of Japanese film criticism, theory, and scholarship in English. No Japanese language skills required. GER:DB-Hum
3-4 units, Aut (Levy, I)

JAPANGEN 200. Directed Reading in Asian Languages — For Japanese literature. Prerequisite: consent of instructor. (Staff)
1-12 units, Aut, Win, Spr, Sum (Staff)

CHINESE

CHINESE LANGUAGE COURSES

The following courses in Chinese language instruction represent a typical sequence for three years of Chinese language study. Majors and prospective majors should consult the requirements for a B.A. in Chinese above. For descriptions, other information, and additional courses including special emphasis, intensive, and summer courses, see the “Language Center” section of this bulletin.

CHINLANG 1,2,3. First-Year Modern Chinese
5 units, 1: Aut, 2: Win, 3: Spr (Zeng, H)

CHINLANG 21,22,23. Second-Year Modern Chinese
5 units, 21: Aut (Chung, M), 22: Win (Chung, M; Xia, Q), 23: Spr (Chung, M)

CHINLANG 101,102,103. Third-Year Modern Chinese
5 units, 101: Aut, 102: Win, 103: Spr (Wang, H)

CHINESE COURSES: ADVANCED UNDERGRADUATE AND GRADUATE

CHINLIT 125/205, 126/206, 127/207. Beginning Classical Chinese — (Graduate students register for 205, 206, 207.) Goal is reading knowledge of classical Chinese. Students with no background in classical Chinese who are taking 127 to satisfy Chinese major requirements must begin with 125. Basic grammar and commonly used vocabulary. Prerequisite: CHINLANG 23 or equivalent.
2-5 units, 125/205: Aut, 126/206: Win (Sun, C), 127/207: Spr (Zhou, Y)

CHINLIT 161/261A. Passion in Late Imperial Literature — (Graduate students register for 261A.) The treatment of romantic passion and related emotions in late imperial fiction and theater. Focus is on secondary literature. GER:DB-Hum
4 units, not given this year (Lewis, M)

CHINLIT 162/262. Tang Narrative — (Graduate students register for 262.) Major examples in translation of bian wen and chuan qi.
3-5 units, Spr (Lewis, M)

CHINLIT 191/291. The Structure of Modern Chinese — (Graduate students register for 291.) Focus is on syntax and semantics. Prerequisite: CHINLANG 3 or equivalent, or consent of instructor. GER:DB-SocSci
4 units, not given this year (Sun, C)
CHINLIT 192/292. The History of Chinese — (Graduate students register for 292.) Emphasis is on syntactic and semantic changes in the last 2,000 years and grammaticalization. Students use a computer corpus to do research on the history of Chinese. Prerequisite: 206 or consent of instructor. GER:DB-SocSci 4 units, not given this year (Sun, C)

CHINLIT 199. Individual Reading in Chinese — Asian Language majors only. Prerequisite: CHINLANG 103 or consent of instructor. Units by arrangement. (Staff) 1-4 units, Aut, Win, Spr, Sum (Staff)

GRADUATE

CHINLIT 200. Directed Reading in Chinese 1-12 units, Aut, Win, Spr, Sum (Staff)

CHINLIT 201. Proseminar: Bibliographic and Research Methods in Chinese Studies — Bibliographic and research methods in Chinese studies. Prerequisite: 127/207 or equivalent. 5 units, not given this year

CHINLIT 221. Advanced Classical Chinese: Philosophical Texts — Prerequisite: 207 or equivalent. 3-5 units, not given this year (Lewis, M)

CHINLIT 222. Advanced Classical Chinese: Historical Narration — Prerequisite: 127/207 or equivalent. 2-5 units, not given this year (Wang, J)

CHINLIT 223. Advanced Classical Chinese: Literary Essays — Readings and grammatical analyses of literary essays throughout imperial China. Prerequisite: CHINLIT 127/207 or equivalent. 2-5 units, Spr (Wang, J)

CHINLIT 224. Chinese Biographies of Women — Generic and historical analysis of the two-millennia long biographical tradition inaugurated by Liu Xiang, ca. 79-8 B.C.E. Chinese women’s history, intellectual history, historiography, and literary studies. Prerequisite: 127/207 or consent of instructor. 4 units, Spr (Zhou, Y)

CHINLIT 251. China and the World: Aesthetics, Ethics, and Literature — How 20th-century Chinese thinkers and writers envisioned themselves as citizens of the world. How they strove to build an autonomous nation and new culture by reconsidering traditional ethical life and aesthetic expressions. Aesthetics, ethics, and politics as being of one piece, manifest in writing and literature, in traditional Chinese thought. How writers infused new life into traditional thought and sensibility and made contributions to the global forum of modern culture. Prerequisites: undergraduate courses in history, philosophy, and literature. 5 units, Aut (Wang, B)

CHINLIT 263,264. Lyric (Shih) 2-4 units, not given this year

CHINLIT 266. Chinese Tz’u Poetry (Song Lyrics) — Highlights from the Northern and Southern Sung periods. Patterns of generic development correlated to social changes in historical context. Prerequisite: classical Chinese. 4 units, not given this year

CHINLIT 271. Traditional Chinese Fiction: Short Stories — Early times to Qing. Prerequisite: 127/207 or consent of instructor. 2-4 units, not given this year (Wang, J)

CHINLIT 272. Traditional Chinese Fiction: Novels — Major novels of late imperial China. Prerequisite: 127/207 or consent of instructor. 2-4 units, Win (Wang, J)

CHINLIT 273. Chinese Drama — Yuan, Ming, and Qing periods emphasizing literary not theatrical qualities. Prerequisite: 127/207 or consent of instructor. 2-4 units, not given this year (Wang, J)

CHINLIT 274. Chinese Drama — Yuan, Ming, and Qing periods emphasizing literary not theatrical qualities. Prerequisite: 127/207 or consent of instructor. 2-4 units, not given this year (Wang, J)

CHINLIT 278. Gender and Genre: Women Poets in Premodern China — Literary convention and cultural tradition contexts. 4 units, not given this year

CHINLIT 279. Master’s Thesis or Translation — A total of 5 units taken in one or more quarters. 1-5 units, Aut, Win, Spr, Sum (Staff)

CHINLIT 371. Seminar in Chinese Literary Criticism — Chinese critical texts in relation to Western literary theories. May be repeated for credit. Prerequisite: 127/207 or consent of instructor. 5 units, not given this year (Wang, J)

CHINLIT 373. Seminar on the Shi Ji — Sima Qian’s Shi Ji as history and literature. Prerequisite: 127/207 or consent of instructor. 2-5 units, Spr (Wang, J)

CHINLIT 378. Poetry of the Age of Disunion — The period between the Han and Tang dynasties. 3-5 units, Win (Lewis, M)

CHINLIT 379. Seminar in Chinese Syntax — May be repeated for credit. 4 units, not given this year

CHINLIT 391. Seminar in Chinese Syntax — (Same as LINGUIST 272.) Claims and analyses in the transformational syntax literature concerning the structure of modern Chinese; comparisons include Japanese and Korean. Basic literacy in modern transformational approaches. Topics include: Chinese clausal structure, and the syntax-phonology and syntax-semantics interfaces including the notion of logical form. Readings according to student interest. May be repeated for credit. 1-4 units, not given this year (Sells, P)

CHINLIT 399. Dissertation Research 1-12 units, Aut, Win, Spr, Sum (Staff)

CHINLIT 400. Advanced Language Training — For students in the Inter-University Program for Chinese Language Studies in Beijing or Taipei. For more information, contact the consortium office at UC Berkeley: (510) 642-3873. 1-15 units, Aut, Win, Spr (Staff)

JAPANESE

JAPANESE LANGUAGE COURSES

The following courses in Japanese language instruction represent a typical sequence for three years of Japanese language study. Majors and prospective majors should consult the requirements for a B.A. in Japanese above. For descriptions, other information, and additional courses including advanced, special emphasis, and summer intensive courses, see the “Language Center” section of this bulletin.

JAPANLNG 7B,8B,9B. First-Year Japanese Language, Culture, and Communication B 5 units, 7B: Aut, 8B: Win, 9B: Spr (Lipton, H)

JAPANLNG 17B,18B,19B. Second-Year Japanese Language, Culture, and Communication B 5 units, 17B: Aut, 18B: Win (Lowdermilk, M; Nakamura, K), 19B: Spr (Lowdermilk, M)

JAPANESE COURSES: ADVANCED UNDERGRADUATE AND GRADUATE

JAPANLIT 143/243. Reinscribing Loss: On Japanese Modernity and the Literature of Unclaimed Experience—(Graduate students register for 243.) Reconsideration of Freud’s theories on mourning and melancholia within the context of Japanese modernity. Literary and philosophical ways of dealing with a past experienced as a haunting loss. Readings include Freud and works by Japanese novelists from the 1900s to the 30s. What categories of memory and experiences of loss are rendered visible or made invisible by reinscriptions of psychoanalysis in modern Japanese literature?
2-4 units, Spr (O’Neill, D)

JAPANLIT 157. Points in Japanese Grammar — Meaning and grammatical differences of similar expressions, and distinctions that may not be salient in English. Prerequisite: JAPANLNG 18B or 22, or equivalent.
4 units, Spr (Matsumoto, Y)

JAPANLIT 170/270. The Tale of Genji and Its Historical Reception—(Graduate students register for 270.) Approaches to the tale including 12th-century allegorical and modern feminist readings. Influence upon other works including poetry, Noh plays, shorts stories, modern novels, and comic book (manga) retellings. Prerequisite for graduate students: JAPANLNG 129B or 103, or equivalent. GER:DB-Hum
4 units, not given this year (Carter, S)

JAPANLIT 177/277. Structure of Japanese — (Graduate students register for 277; same as LINGUIST 171/271.) Linguistic analysis of the major grammatical structures of Japanese. Prerequisites: two years of Japanese. Recommended: course in linguistics.
2-4 units, not given this year (Sell, P)

JAPANLIT 199. Individual Reading in Japanese—Asian Languages majors only. May be repeated for credit. Prerequisites: JAPANLNG 129B or 103, and consent of instructor.
1-4 units, Aut, Win, Spr, Sum (Staff)

GRADUATE

JAPANLIT 200. Directed Reading in Japanese
1-12 units, Aut, Win, Spr, Sum (Staff)

JAPANLIT 201. Proseminar: Introduction to Graduate Study in Japanese—Bibliographical and research methods; major trends in literary and cultural theory and critical practice. May be repeated for credit. Prerequisite: JAPANLNG 103 or 129B, or consent of instructor.
4-5 units, Win (Levy, I)

JAPANLIT 210. Japanese Tales of the Strange, 18th Century to the Present—Japanese texts dealing with strange, supernatural, or mysterious occurrences. Historical continuity and change in the representation of the strange. Readings include literary fiction by canonical authors, urban legends, popular ghost stories, local folklore, and critical readings from contemporaneous sources and recent theoretical analyses. Prerequisite: consent of instructor.
3-5 units, not given this year (Foster, M)

JAPANLIT 246. Introduction to Premodern Japanese — Readings from Heian, Kamakura, Muromachi, and early Edo periods with focus on grammar and reading comprehension. Prerequisite: JAPANLNG 129B or 103, or equivalent.
3-5 units, Aut (Carter, S)

JAPANLIT 247. Readings in Premodern Japanese — Edo and Meiji periods with focus on grammar and reading comprehension. May be repeated for credit. Prerequisite: 246 or equivalent.
2-5 units, Win (Reichert, J)

JAPANLIT 260. Japanese Poetry and Poetics—Heian through Meiji periods with emphasis on relationships between the social and aesthetic. Works vary each year. Prerequisites: 246, 247, or equivalent.
2-4 units, not given this year (Carter, S)

JAPANLIT 264. Academic Readings in Japanese I—Strategies for reading academic writings in Japanese. Readings of scholarly papers and advanced materials in Japanese in students’ research areas in the humanities and social sciences. Prerequisites: JAPANLNG 103, 129B, or equivalent; and consent of instructor.
2-4 units, Aut (Matsumoto, Y)

JAPANLIT 265. Academic Readings in Japanese II—Strategies for reading academic writings in Japanese. Readings of scholarly papers and advanced materials in Japanese in students’ research areas in the humanities and social sciences. May be taken independently of 264. May be repeated for credit. Prerequisites: JAPANLNG 103, 129B, or equivalent; and consent of instructor.
2-4 units, Win (Matsumoto, Y)

JAPANLIT 281. Japanese Pragmatics—Sociocultural and discourse factors reflected in the choice of linguistic forms, and their theoretical implications. Prerequisites: one year of Japanese and a course in linguistics, or two years of Japanese, or consent of instructor.
4 units, not given this year (Matsumoto, Y)

4 units, not given this year

JAPANLIT 289. Topics in Japanese Linguistics: Implications of Diversity in Language—Japanese from the viewpoint of inter- and intra-language diversity, and the theoretical and pedagogical implications. Topics include Japanese linguistic phenomena against the background of claimed universal principles, forms and styles, factors influencing variations, and how such diversity is an exploitation and reflection of the contexts in which the language is used. Prerequisites: JAPANLNG 102 or128B, and Linguistics courses.
2-4 units, not given this year (Matsumoto, Y)

2-4 units, not given this year (Matsumoto, Y)

JAPANLIT 296. Readings in Modern Japanese Literature—Works and topics vary each year. May be repeated for credit. Prerequisite: fourth-year Japanese or consent of instructor.
2-5 units, not given this year (Levy, I)

2-5 units, not given this year (Levy, I)

JAPANLIT 299. Master’s Thesis or Translation—A total of 5 units, taken in one or more quarters.
1-5 units, Aut, Win, Spr, Sum (Staff)

JAPANLIT 350. Japanese Historical Fiction—Authors include Mori Ogai, Akutagawa Ryunosuke, Tanizaki Jun’ichiro, Enchi Fumiko, Shiba Ryotaro, Fujisawa Shuhei, and Hiraiai Yumie. Genre theory, and historical and cultural context. Works vary each year. May be repeated for credit.
3-5 units, not given this year (Carter, S)

JAPANLIT 360. The Japanese Essay—The zuihitsu genre. Authors include Yoshida no Kenkô, Kinoshita Chôshôshi, Motoori Norinaga, Shiba Kôkan, Tachibana Nankei, and Higuchi Ichiyô. Works vary each year. May be repeated for credit. Prerequisite: 246.
3-5 units, Win (Carter, S)
JAPANLIT 381. Topics in Pragmatics and Discourse Analysis—Naturally occurring discourse (conversational, narrative, or written) and theoretical implications. Discourse of different age groups, expressions of identity and persona, and individual styles. May be repeated for credit.
3-5 units, not given this year (Matsumoto, Y)

JAPANLIT 395. Early Modern Japanese Literature—May be repeated for credit. Prerequisite: 247.
3-5 units, not given this year (Reichert, J)

JAPANLIT 396. Modern Japanese Literature—May be repeated for credit. Prerequisite: JAPANLNG 213.
3-5 units, Aut (Levy, J)

JAPANLIT 399. Dissertation Research—For doctoral students in Japanese working on dissertations. (Staff)
1-12 units, Aut, Win, Spr, Sum (Staff)

JAPANLIT 400. Advanced Language Training—For students at the Yokohama Center. For more information, see the program description under the “Inter-University Center for Japanese Studies in Yokohama” section in this bulletin.
1-15 units, Aut, Win, Spr (Staff)

KOREAN
KORGEN 172/273. Structure of Korean—(Graduate students register for 273; same as LINGUIST 172/273) The major grammatical structures of Korean including noun phrases, verb phrases, and simple and complex sentences. Prerequisite: first-year Korean.
3-4 units, Spr (Sells, P)

OVERSEAS STUDIES
Courses approved for the Asian Languages major and taught overseas can be found in the “Overseas Studies” section of this bulletin, or in the Overseas Studies office, 126 Sweet Hall.

ASTRONOMY COURSE PROGRAM

Emeriti: (Professors) Ronald N. Bracewell, Von R. Eshleman, Peter A. Sturrock, Robert V. Wagoner
Committee in Charge: Vahé Petrosian (Director), Roger W. Romani, Sarah Church
Professors: Roger Blandford (Physics, SLAC), Blas Cabrera (Physics), Steven Kahn (Physics, SLAC), Peter Michelson (Physics, SLAC), Vahé Petrosian (Physics, Applied Physics), G. Leonard Tyler (Electrical Engineering)
Associate Professors: Tom Abel (Physics, SLAC), Sarah Church (Physics), Roger W. Romani (Physics)
Assistant Professors: Steve Allen (Physics, SLAC), Risa Wechsler
Professor (Research): Philip H. Scherrer (Physics)
Program Offices: Varian, Room 316
Mail Code: 94305-4060
Phone: (650) 723-1439
Web Site: http://www.stanford.edu/dept/astro/

Astronomy courses are offered primarily through the Physics Department with subject code PHYSICS. For a complete list of subject codes, see Appendix.

Although Stanford University does not have a degree program in astronomy or astrophysics, teaching and research in various branches of these disciplines are ongoing activities in the departments of Applied Physics, Electrical Engineering, and Physics. For the convenience of students interested in astronomy, astrophysics, and cosmology, a course program for undergraduate and graduate study is listed below.

The program provides introductory courses for the student who wishes to be informed about the fields of astronomy without the need for pre-requisites beyond high school algebra and physics. Astronomy courses numbered below 100 are designed to serve this group of students.

Astronomy courses numbered 100-199 serve the student interested in an initial scientific study of astronomy. The courses numbered 200 and above are for graduate students and advanced undergraduates, subject to prior approval by the course instructor.

UNDERGRADUATE PROGRAMS

The University does not offer a separate undergraduate major in Astronomy. Students who intend to pursue graduate study in astronomy or space science are encouraged to major in physics, following the advanced sequence if possible, or in electrical engineering if the student has a strongly developed interest in radioscience. The course descriptions for these basic studies are listed under the appropriate department sections of this bulletin. Students desiring guidance in developing an astronomy-oriented course of study should contact the chair of the Astronomy Program Committee. The following courses are suitable for undergraduates and are recommended to students considering advanced study in astronomy or astrophysics:

PHYSICS 100. Introduction to Observational and Laboratory Astronomy;
PHYSICS 160. Introduction to Stellar and Galactic Astrophysics; PHYSICS 161, Introduction to Extragalactic Astrophysics and Cosmology; GES 222, Planetary Systems: Dynamics and Origins. Students planning study in astronomy beyond the B.S. are urged to take PHYSICS 260 and 262, Introduction to Astrophysics and to Gravitation, and to consider an undergraduate thesis (PHYSICS 169) or honors thesis in an astrophysics related area. The above-mentioned courses are required for physics majors who choose the curriculum with a concentration in astrophysics (see the “Physics” section of this bulletin). The student observatory, located in the hills to the west of the campus and equipped with a 24-inch and other small reflecting telescopes, is used for instruction of the observation-oriented courses.

MINORS

The minor program in Astronomy is described in the “Physics” section of this bulletin. The non-technical minor, intended for students whose major does not require the PHYSICS 40 series, requires 10 units of Physics courses (PHYSICS 21, 23, 25/26) and 9-10 units of Astronomy courses (PHYSICS 50 or 100, 3-4 units; PHYSICS 15, 16, 17, 6 units). The technical minor for other students consists of PHYSICS 70, 100, 160, 161, 164, 14 units in addition to the 40 series.

To be accepted to the minor program, students need to obtain an adviser selected from the faculty in the Astronomy Course Program. The minor declaration deadline is three quarters before graduation (that is, beginning Autumn Quarter if the student is graduating at the end of Spring Quarter). All courses for the minor must be taken at Stanford University, and a letter grade of “C” or better must be received for all units applied toward the minor.

GRADUATE PROGRAMS

Graduate programs in astronomy and astrophysics and related topics are carried out primarily in the Department of Physics but also the departments of Applied Physics and Electrical Engineering. Students should consult the course listings, degree requirements, and research programs of these departments for more detailed information. For graduate research opportunities, see the “Center for Space Science and Astrophysics” section of this bulletin and the Kavli Institute of Particle Astrophysics and Cosmology at http://kipac.stanford.edu.

Stanford is a member of a consortium using the Hobby Eberly telescope, a 10-meter-class telescope located at McDonald Observatory in Texas. Opportunities to do research projects using this telescope are available for graduate students.

Students planning to conduct research in astronomy and astrophysics are required to take PHYSICS 360, Physics of Astrophysics, and at least one of the following: PHYSICS 361, Stellar and Galactic Astrophysics, 362, Extragalactic Astrophysics and Cosmology, or 363, Solar and Solar-Terrestrial Physics. Students lacking a background in astrophysics, gravitation, and plasma physics should take PHYSICS 260 and 262, Introduction to Astrophysics and to Gravitation, and PHYSICS 312, Basic

Students interested in research programs in space physics involving spacecraft studies of the planets, their satellites, and their near-space environments should see the “Center for Space Science and Astrophysics” section of this bulletin.

COURSES

ELEMENTARY LECTURES

The following courses provide a descriptive knowledge of astronomical objects and astrophysics of the universe. PHYSICS 15, 16, and 17 are for students not majoring in the sciences and are taught in different quarters by different instructors, and may be taken individually or in any order.

PHYSICS 15. The Nature of the Universe
3 units, Sum (Staff)

PHYSICS 16. Cosmic Horizons
3 units, Win (Linde, A)

PHYSICS 17. Black Holes
3 units, Spr (Blandford, R)

PHYSICS 18N. Revolutions in Concepts of the Cosmos
2 units, Win (Abel, T)

OBSERVATORY

The following courses are intended to familiarize students with observational methods and analysis of astronomical data. PHYSICS 100 involves more advanced observations and is intended for students with some background in physics.

PHYSICS 50. Astronomy Laboratory and Observational Astronomy
3 units, not given this year

PHYSICS 100. Introduction to Observational and Laboratory Astronomy
4 units, Spr (Church, S)

ADVANCED UNDERGRADUATE

The following courses are for students with a more advanced knowledge of basic physics and mathematics, and form the core courses for a concentration in astrophysics for Physics majors.

EE 106. Planetary Exploration
3 units, Spr (Frazier-Smith, A)

PHYSICS 160. Introduction to Stellar and Galactic Astrophysics
3 units, Win (Romani, R)

PHYSICS 161. Introduction to Extragalactic Astrophysics and Cosmology
3 units, Spr (Michelson, P)

PHYSICS 169A,B,C. Independent Study in Astrophysics and Honors Thesis
1-9 units, A: Aut, B: Win, C: Spr (Staff)

GRADUATE

GES 222. Planetary Systems: Dynamics and Origins
3-4 units, Aut (Staff)

PHYSICS 260. Introduction to Astrophysics and Cosmology
3 units, Aut (Petrosian, V)

PHYSICS 262. Introduction to Gravitation
3 units, Win (Wagoner, R)

PHYSICS 301. Astrophysics Laboratory
3 units, not given this year

PHYSICS 312. Basic Plasma Physics
3 units, Win (Kosovichev, A)

PHYSICS 360. Physics of Astrophysics
3 units, Win (Abel, T)

PHYSICS 361. Stellar and Galactic Astrophysics
3 units, Spr (Petrosian, V)

PHYSICS 362. Advanced Extragalactic Astrophysics and Cosmology
3 units, not given this year

PHYSICS 363. Solar and Solar-Terrestrial Physics
3 units, not given this year

PHYSICS 364. Advanced Gravitation
3 units, Spr (Kachru, S)

PHYSICS 463. Special Topics in Astrophysics: Theoretical Cosmology
3 units, Spr (Wechsler, R)

ATHLETICS, PHYSICAL EDUCATION, AND RECREATION

Emeriti: (Professor) Wesley K. Ruff; (Athletic Director) Joseph H. Ruetz; (Associate Director) Robert C. Young; (Assistant Director) Shirley Schoof

Athletic Director: Bob Bowlsby
Senior Associate Athletic Director, External Relations: Darin Nelson
Senior Associate Athletic Director, Facilities, Operations, and Events: Ray Purpur
Associate Athletic Director, Development: Mike Izzo
Associate Athletic Director, Intercollegiate Sports and Championships: Earl Koberlein
Associate Athletic Director, Athletic Services: Scott Schuhmann
Associate Athletic Director, Physical Education, Recreation, and Wellness: Eric Stein
Senior Assistant Athletic Director, Media Relations: Gary Migdol
Senior Assistant Athletic Director, Strategic and Financial Management: Chuck Spielman
Assistant Athletic Director, Capital Planning: David Schinski
Assistant Athletic Director, Events and Operations: Carl Reed
Assistant Athletic Director, Facilities: Skip Braatz
Assistant Athletic Director, Marketing, Tickets: Bob Carruesco
Assistant Athletic Director, NCAA and Recruiting Services: Beth Goode
Assistant Athletic Director, Physical Education, Club Sports, Intramurals, and Recreation: Sherry Posthumus
Assistant Athletic Director, Student Services: Susan Burk
Assistant Athletic Director, Human Resources: Ron Coverson
Senior Lecturer: Anne Gould

Sport Directors: Al Acosta (Lightweight Crew, women), Craig Amerkhanian (Crew, men), John Dunning (Volleyball, women), Edrick Floreal (Track and Field, women), Lele Forood (Tennis, women), Thom Gielmi (Gymnastics, men), Walt Harris (Football), Lesley Irene (Field Hockey), Trent Johnson (Basketball, men), Jay Kehoe (Sailing), Skip Kenney (Swimming, men), John Kosty (Volleyball, men), Mark Marquess (Baseball), Lea Maurer (Swimming, women), Kerry McCoy (Wrestling), Lisa Milgram (Fencing), Caroline O’Connor (Golf, women), Heather Olson (Synchronized Swimming), George Pogosov (Fencing), Paul Ratcliffe (Soccer, women), Conrad Ray (Golf, men), John Rittman (Softball), Richard Schavone (Divinng), Bret Simon (Soccer, men), Kristen Smyth (Gymnastics, women), Mark Talbot (Squash, women), John Tanner (Water Polo, women), Peter Tegen (Cross Country), Michele Uhlfelder (Lacrosse), Taran VanDerveer (Basketball, women), John Vargas (Water Polo, men), Robert Weir (Track and Field, men), John Whitlinger (Tennis, men)

Sport Assistant Coaches: Jon Allbin (Crew, men), Jessica Allister (Softball), Jon Barnea (Water Polo, men), Rob Beccerra (Soccer, men), Ray Blake (Wrestling), Frankie Brennan (Tennis, women), A.J. Christoff (Football), Jay Cooney (Soccer, women), Denise Corlett (Volleyball, women), Carrie Davis (Crew, women), Bridget...
Those for women are basketball, crew, cross country, fencing, Nate Nelson (Football), Sarah Kate Noffsinger (Soccer, women), Doug Oliver (Basketball, men), Susan Ortewin (Water Polo, women), Jon Pascale (Soccer, men), Darrell Patterson (Football), Buzz Preston (Football), Sam Puryear (Golf, men), Kylee Reade (Lacrosse), J.D. Reive (Gymnastics, men), John Rembao (Track and Field), Nick Robinson (Basketball, men), Doug Sams (Football), Ken Shibuya (Volleyball, men), Charmin Smith (Basketball, women), Jordan Steele (Field Hockey), Dean Stotz (Baseball), Chris Swircek (Gymnastics, women), Dave Tipton (Football), Amy Tucker (Basketball, women), David Vidal (Cross Country/Track and Field), Tucker Waugh (Football), Shane Whildin (Swimming, women), Nicole Younts (Lightweight Crew, women)

From the founding of the University, Stanford’s leaders have believed physical activity is valuable for its own sake and complementary to the educational purpose of the University. The mission of the Department of Athletics, Physical Education, and Recreation is to offer the widest possible range of quality programs for athletic participation and physical fitness at all levels of skill and interest. Within the limitations of its resources, the department provides a broad range of instructional, recreational, and intramural competitive programs for all who wish to participate. The intrinsic value to the participant is the primary criterion by which the worth of the programs should be judged.

The goals of the department’s programs are to promote understanding of the value and role of physical activity as a significant dimension of the human condition, to develop performance skills in sport, to develop the interest of all undergraduate and graduate students. Only intercollegiate athletic competition. The diverse instructional program strives to accommodate the interests of all undergraduate and graduate students. Only intercollegiate varsity men’s and women’s teams are limited to undergraduates. Homogeneous skill groupings and limited class sizes enable the beginning student or the advanced performer to achieve success within the limits of individual motivation and potential. Skill level in, and knowledge about, a specific activity as well as available space are the only limitations to enrollment. Physically disabled students are encouraged to contact Eric Stein (elstein@stanford.edu) for enrollment advice.

Both men’s and women’s teams are affiliated with the Pacific Ten Conference, one of the premier athletic conferences in the nation. Additional or alternative intercollegiate athletic competition is available for all teams.

The Stanford Club Sports program provides competition in sports not included in the intercollegiate varsity program and instruction in classes or activities not included in the Physical Education program. It also develops student leadership in organizing, administering, and funding activities. The club program is actively supervised by the Director of Club Sports, but the emphasis is on student interest and leadership to initiate, organize, and conduct the respective clubs. Those students in clubs that meet the criteria for inclusion in the formal curriculum may apply for units of credit.

Students interested in intramural competition may receive information through the intramural web site: http://www.stanford.edu/group/Intramurals/. They may also receive information from the IM Office in Burnham Pavilion or through their campus residences. The program includes formal competition in league and tournament play for many different sports. Competing organizations, teams, and individuals are urged to check the web site at the beginning of each quarter to obtain registration and league information. Registration occurs on the second Thursday of each quarter, with mandatory captain meetings held on the same evening. Intramurals run Autumn, Winter, and Spring quarters.

The department provides facility use for faculty, staff, and students (and, for some activities, their immediate families) to participate in aquatics, conditioning, and sports for general recreation. Specific recreation hours for all the facilities are posted throughout the year at the respective facilities and at http://www.stanford.edu/dept/pe/.

The golf course and driving range are available for faculty, staff, and student use on a fee basis; information is available from the Golf Pro Shop.

Facilities

Athletic facilities are located throughout the campus. On the west side of campus are the Golf Course, the Golf Driving Range, the Red Barn Stables, Roble Field and Pool, the Sand Hill Intramural Fields, and the West Campus Tennis Courts. Centrally located is the Tresidder Fitness Center. On the east side of campus are the Arrillaga Center for Sports and Recreation, the Arrillaga Family Sports Center, Avery Aquatic Center, Burnham Pavilion, Cobb Track and Angell Field, the Ford Center for Sports and Recreation, the Manzanita Basketball Court, Maples Pavilion, the Stanford Stadium, Taube South Tennis Courts, and Taube Tennis Stadium. Off-campus facilities include the Morrison Boathouse, a sailing and rowing facility.

The curriculum and services

Both men’s and women’s teams are affiliated with the Pacific Ten Conference, one of the premier athletic conferences in the nation. Additional or alternative intercollegiate athletic competition is available for all teams.

Club sports

The Stanford Club Sports program provides competition in sports not included in the intercollegiate varsity program and instruction in classes or activities not included in the Physical Education program. It also develops student leadership in organizing, administering, and funding activities. The club program is actively supervised by the Director of Club Sports, but the emphasis is on student interest and leadership to initiate, organize, and conduct the respective clubs. Those students in clubs that meet the criteria for inclusion in the formal curriculum may apply for units of credit.

Intramural sports (IM)

Students interested in intramural competition may receive information through the intramural web site: http://www.stanford.edu/group/Intramurals/. They may also receive information from the IM Office in Burnham Pavilion or through their campus residences. The program includes formal competition in league and tournament play for many different sports. Competing organizations, teams, and individuals are urged to check the web site at the beginning of each quarter to obtain registration and league information. Registration occurs on the second Thursday of each quarter, with mandatory captain meetings held on the same evening. Intramurals run Autumn, Winter, and Spring quarters.

Recreation

The department provides facility use for faculty, staff, and students (and, for some activities, their immediate families) to participate in aquatics, conditioning, and sports for general recreation. Specific recreation hours for all the facilities are posted throughout the year at the respective facilities and at http://www.stanford.edu/dept/pe/.

The golf course and driving range are available for faculty, staff, and student use on a fee basis; information is available from the Golf Pro Shop.

Special recreational classes are offered through the Physical Education Program in areas such as spinning and golf.

Facilities

Athletic facilities are located throughout the campus. On the west side of campus are the Golf Course, the Golf Driving Range, the Red Barn Stables, Roble Field and Pool, the Sand Hill Intramural Fields, and the West Campus Tennis Courts. Centrally located is the Tresidder Fitness Center. On the east side of campus are the Arrillaga Center for Sports and Recreation, the Arrillaga Family Sports Center, Avery Aquatic Center, Burnham Pavilion, Cobb Track and Angell Field, the Ford Center for Sports and Recreation, the Manzanita Basketball Court, Maples Pavilion, the Stanford Stadium, Taube South Tennis Courts, and Taube Tennis Stadium. Off-campus facilities include the Morrison Boathouse, a sailing and rowing facility.

Curriculum and services

The diverse instructional program strives to accommodate the interests of all undergraduate and graduate students. Only intercollegiate varsity men’s and women’s teams are limited to undergraduates. Homogeneous skill groupings and limited class sizes enable the beginning student or the advanced performer to achieve success within the limits of individual motivation and potential. Skill level in, and knowledge about, a specific activity as well as available space are the only limitations to enrollment. Physically disabled students are encouraged to contact Eric Stein (elstein@stanford.edu) for enrollment advice.

Academic credit—Activity classes carry 1 unit of credit for satisfactory completion of work. Although there is no limitation on the number of activity classes in which a student may enroll, no more than 8 units of these activity classes (and/or other University activity classes) may be applied toward undergraduate graduation requirements (see the “Undergraduate Degrees” section of this bulletin).
Auditing—No auditing is allowed in activity classes. Faculty and staff may take an activity class as space is available with instructor consent after student enrollment is completed.

Class Fees—Fees are charged for enrollment in all physical education classes and club sports.

Class fees are payable only by check or money order payable to Stanford University. Cash is not acceptable. Fees are payable at the first, and are required by the second, class meeting for a student to remain in class. Late enrollees must submit fees no later than the second time they attend the class.

Full refund is given to students who drop a class during the first two weeks of classes and request a refund at that time. No refund is given if a student either neglects to request a refund under the conditions listed previously or drops the class after the second week.

Class Sign-ups precede Axess—Information on sign-up procedures can be found on the department’s web site at http://www.stanford.edu/dept/pe, or under Athletics in the Time Schedule. Students must attend the first class meeting. If accepted into the class, they can register for that class through Axess.

Deadline for Adding a Class—Students who have never appeared in a class may not enroll in that class after the fourth class meeting has passed. Students may add the class after the fourth meeting if they have been in attendance and, for whatever reason, did not get registered until the beginning of the fourth week (the University deadline for adding courses).

Equipment—Specific information on equipment and recommended class attire is available from the department or instructor.

Lockers—Lockers are available for rent to faculty/staff and students at the Arrillaga Family Sports Center and Roble Gym. The fee for faculty/staff is $20 per quarter or $50 per year. The fee for students is $15 per quarter or $35 per year.

COURSES

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum). See http://www.stanford.edu/dept/pe for further information on courses and sign-up procedures.

PHYSICAL EDUCATION AND SPORTS THEORY

ATHLETIC 72. Introduction to Fitness and Wellness — Step-by-step process of designing lifestyle to promote health. Fitness topics: include exercise design, anatomy, and recovery; fatigue; cramping; and performance. Wellness topics include the impact of stress, sleep, and cognitive processes on health.

1-2 units, Spr (Wilson, C)

ATHLETIC 74. Introduction to Nutrition and Fitness — How to discriminate between media hype and healthy information. Latest research in nutrition: the high protein myth, good versus bad fats, the importance of fiber, and how to maximize exercise performance with healthy food and water. Fundamentals of endurance exercise, stretching, and core strength exercises. A practical approach to decreasing body fat while increasing muscle mass and overall health.

1-2 units, Aut, Sum (Wilson, C)

ATHLETIC 75. Introduction to Nutrition — How to optimize nutrition for health and performance. Topics include macronutrients, fad diets, sugar addiction, low-calorie sweeteners, caloric restriction, and disease prevention.

1-2 units, Spr (Wilson, C)

ATHLETIC 123. Sports Nutrition with Clinical Applications — Principles governing fluid and energy balance under conditions of exercise stress and recovery; how these principles correlate to health and disease. Prerequisites: 74 (may be taken concurrently; HUMBIO 120, 155; or consent of instructor)

2 units, Spr (Wilson, C)

ATHLETIC 190. Analysis of Human Movement — Overview of skeletal and muscular anatomy. The mechanical principles of movement as related to efficient performance in aquatics, dance, and sports.

3 units, Win (Wilson, C)

LEADERSHIP OPPORTUNITIES IN PHYSICAL EDUCATION

ATHLETIC 85. Manager: Athletic Team — For student managers of intercollegiate teams. Prerequisite: consent of respective varsity team head coach. (AU)

1 unit, Aut, Win, Spr (Staff)

ATHLETIC 87. Outdoor Leadership — Skills needed to lead basic multi-day backpacking trips. Classroom sessions and wilderness trips. Topics include group dynamics and leadership, technical skills, and wilderness first aid. Class may require work over several quarters. See http://www.stanford.edu/group/spot/training/.

1 unit, Aut, Win, Spr (Staff)

AQUATIC ACTIVITY

ATHLETIC 83. Lifeguard Training — Priority to those wanting to guard at Stanford during the year. Lifeguard characteristics and responsibilities, recognition of hazards and emergencies, patron and facility surveillance, interaction with the public, rescue skills. Community first aid and CPR for the professional rescuer. Fee. Prerequisite: pass swim test (swimmer/advanced swimmer level).

2 units, Aut, Spr (Hornbeck, C)

ATHLETIC 99. Sailing, Beginning: Keelboat — Basic skills, theory, and techniques enable beginners to sail a 24’-30’ fixed keel boat with confidence. Emphasis is on safety and seamanship skills. Fee. (AU)

1 unit, Aut, Spr (Gross-Kehoe, A)

ATHLETIC 100. Sailing, Beginning: Dinghy — Skills, theory, and techniques to enable beginners to sail with confidence in small centerboard boats. Fee. (AU)

1 unit, Aut, Spr (Gross-Kehoe, A)

ATHLETIC 101. Sailing, Intermediate: Dinghy — Refine skills. Introduction to racing. Fee. Prerequisite: consent of instructor. (AU)

1 unit, Spr (Gross-Kehoe, A)

ATHLETIC 102. Sailing, Advanced: Dinghy — Refinement of heavy weather sailing skills, with emphasis on racing. Fee. Prerequisite: 101 or consent of instructor. (AU)

1 unit, Spr (Staff)

ATHLETIC 104. Sailing: Assistant Instructor (Beginning Level)

2 units, Aut, Spr (Gross-Kehoe, A)

ATHLETIC 105. Sailing: Assistant Instructor (Intermediate/Advanced Level)

2 units, Aut, Spr (Gross-Kehoe, A)

ATHLETIC 131. Swimming: Beginning — For non-swimmers or those who can swim about 10 yards but are not comfortable in deep water. Safety skills, front crawl, and back stroke. Additional strokes introduced as ability warrants. Fee. (AU)

1 unit, Aut (Neuhold-Huber, Z), Spr (Vargas, J), Sum (Neuhold-Huber, Z)

ATHLETIC 132. Swimming: Advanced Beginning — For those with limited swimming and safety skills. Safety skills, crawl, and elementary backstroke or back crawl. Introduction to sidestroke and breaststroke. Increase time and distance of swim. Prerequisite: ability to swim 25-50 yards on front and back. Fee. (AU)

1 unit, Aut (Whildin, S), Win, Spr, Sum (Neuhold-Huber, Z)

ATHLETIC 133. Swimming: Intermediate — Crawl, elementary backstroke, backstroke, and sidestroke. Safety skill work as needed. Introduction to or review of breaststroke. Open turns. Introduction to butterfly, flip turn, and conditioning. Prerequisites: crawl, elementary backstroke, backstroke; some sidestroke and breaststroke; ability to swim approximately 100-200 yards continuously by mixing strokes. Fee. (AU)

1 unit, Aut, Win (Neuhold-Huber, Z), Spr (Whildin, S), Sum (Neuhold-Huber, Z)
ATHLETIC 1. Aerobics, Step — A mix of creativity and aerobic training that is challenging, fun, and effective. Appropriate for all fitness levels. Emphasis is on cardiovascular health. Steps and risers are provided. Fee. (AU)

ATHLETIC 2. Abs and Glutes — Free weights and body weight to tone the torso and sculpt the lower body. Fee (AU)

ATHLETIC 3. Agility and Plyometrics — Introduction to plyometrics. Build explosiveness, power, speed, and agility through conditioning drills. Fee. (AU)

ATHLETIC 4. Agility and Plyometrics — Introduction to plyometrics. Build explosiveness, power, speed, and agility through conditioning drills. Fee. (AU)

ATHLETIC 5. Abs and Glutes — Free weights and body weight to tone the torso and sculpt the lower body. Fee (AU)

ATHLETIC 6. Abs and Glutes — Free weights and body weight to tone the torso and sculpt the lower body. Fee (AU)

ATHLETIC 7. Band, Sports Activity — (AU)

ATHLETIC 8. Body Blast and Sculpt — Full body workout to build lean muscle mass, increase strength, and improve muscle definition. Weights, bands, steps, and body bars. Fee. (AU)

ATHLETIC 9. Core Concentration — Exercises to build muscular strength and body core endurance, focusing on the abdomen and lower back. Stability ball exercises. Fee. (AU)

ATHLETIC 10. Core Concentration — Exercises to build muscular strength and body core endurance, focusing on the abdomen and lower back. Stability ball exercises. Fee. (AU)

ATHLETIC 11. Fencing: Beginning — The sport of swordsmanship develops quick hands, strong legs, and a strategic mind. Footwork, handwork, and bouting. Emphasis is on foil technique. All equipment provided. Fee. (AU)

ATHLETIC 12. Fencing: Beginning — The sport of swordsmanship develops quick hands, strong legs, and a strategic mind. Footwork, handwork, and bouting. Emphasis is on foil technique. All equipment provided. Fee. (AU)

ATHLETIC 13. Fencing: Advanced — Techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: consent of instructor, tryouts. Fee. (AU)

ATHLETIC 14. Fencing: Advanced — Techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: consent of instructor, tryouts. Fee. (AU)

ATHLETIC 17. Golf: Intermediate — Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 53 or equivalent. Fee. (AU)

ATHLETIC 18. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 19. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 20. Golf: Intermediate — Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 53 or equivalent. Fee. (AU)

ATHLETIC 21. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 22. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 23. Golf: Intermediate — Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 53 or equivalent. Fee. (AU)

ATHLETIC 24. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 25. Golf: Intermediate — Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 53 or equivalent. Fee. (AU)

ATHLETIC 26. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 27. Golf: Intermediate — Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 53 or equivalent. Fee. (AU)

ATHLETIC 28. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 29. Golf: Intermediate — Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 53 or equivalent. Fee. (AU)

ATHLETIC 30. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 31. Golf: Intermediate — Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 53 or equivalent. Fee. (AU)

ATHLETIC 32. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 33. Golf: Intermediate — Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 53 or equivalent. Fee. (AU)

ATHLETIC 34. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 35. Golf: Intermediate — Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 53 or equivalent. Fee. (AU)

ATHLETIC 36. Golf: Advanced — Understand and refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)

ATHLETIC 37. Field Hockey, Advanced for Women — Techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: consent of instructor, tryouts. Fee. (AU)

ATHLETIC 38. Field Hockey, Advanced for Women — Techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: consent of instructor, tryouts. Fee. (AU)

ATHLETIC 39. Field Hockey, Advanced for Women — Techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: consent of instructor, tryouts. Fee. (AU)

ATHLETIC 40. Field Hockey, Advanced for Women — Techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: consent of instructor, tryouts. Fee. (AU)

ATHLETIC 41. Field Hockey, Advanced for Women — Techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: consent of instructor, tryouts. Fee. (AU)

ATHLETIC 42. Field Hockey, Advanced for Women — Techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: consent of instructor, tryouts. Fee. (AU)

ATHLETIC 43. Field Hockey, Advanced for Women — Techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: consent of instructor, tryouts. Fee. (AU)

ATHLETIC 44. Field Hockey, Advanced for Women — Techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: consent of instructor, tryouts. Fee. (AU)
ATHLETIC 88. Pilates Mat — Movement with economy, grace, and balance. How to use the body to advantage, making the most of its strengths and correcting its imbalances. Pilates focuses on well designed movements performed in a balanced sequence. (AU)

1 unit, Aut, Win, Spr, Sum (Conniff, N)

ATHLETIC 89. Pilates II — For those who have mastered Pilates fundamentals. How to stretch, strengthen, streamline, and isolate the deep muscles of the body using small apparatus and techniques. Fee (AU)

1 unit, Aut, Win, Spr (Conniff, N)

ATHLETIC 90. Power Punch — Power kickboxing class. Punches, jabs, and kicks. Fee. (AU)

1 unit, Aut, Win, Spr (Staff)

ATHLETIC 91. Rock Body Bootcamp — Muscle-pushing, cardio-conditioning workout. Fee. (AU)

1 unit, Aut, Win, Spr (Staff)

1 unit, Aut, Win, Spr (Staff)

1 unit, Aut, Win, Spr (Staff)

1 unit, Aut, Win, Spr (Staff)

1 unit, Aut, Win (Simon, B)

ATHLETIC 114. Soccer: Intermediate/Advanced — For the player with club or high school experience. Small group offensive and defensive tactics. Drills and small-sided games. Fee. (AU)

1 unit, Aut (Simon, B), Spr (Becerra II, R)

ATHLETIC 115. Soccer: Advanced for Men — Techniques under pressure; small group and team tactics. Fitness for the soccer player. Prerequisites: consent of instructor, tryouts. Fee. (AU)

1 unit, Win (Simon, B)

ATHLETIC 116. Soccer: Advanced for Women — Techniques under pressure; small group and team tactics. Fitness for the soccer player. Prerequisites: consent of instructor, tryouts. Fee. (AU)

1 unit, Win (Ratcliffe, P)

ATHLETIC 117. Soccer, Indoor: Intermediate/Advanced — Smaller ball and playing area. Emphasis is on individual ball skills through small sided games. Fee. (AU)

1 unit, Win (Simon, B), Spr (Pascale, J)

ATHLETIC 141. Tennis: Beginning — Forehand, backhand, serve, and net play; rules and scoring. Fee. (AU)

1 unit, Aut, Win, Spr (Hodge, D), Sum (Boza, P)

ATHLETIC 142. Tennis: Low Intermediate — Fundamental strokes and their use in a game situation. Prerequisites: 141, or knowledge of rules and scoring and average ability in fundamental strokes but limited playing experience. Fee. (AU)

1 unit, Aut (Hodge, D), Win (Brennan, F), Spr (Hodge, D), Sum (Boza, P)

ATHLETIC 143. Tennis: Intermediate — Fundamental stroke review. Singles and doubles tactics. Prerequisites: 142 or average ability in fundamental strokes, and regular playing experience; NTRP rating of 3.0 or equivalent. Fee. (AU)

1 unit, Aut (Brennan, F), Win (Hodge, D), Spr (Brennan, F), Sum (Boza, P)

ATHLETIC 144. Tennis: Advanced — Drills emphasize footwork, serve and return, approach shots, volleys, lobs, and overheads. Strategy for competition in singles and doubles. Prerequisites: above average stroking and game playing ability; NTRP rating above 4.0 or equivalent. Fee. (AU)

1 unit, Aut, Win, Spr (Brennan, F), Sum (Boza, P)

ATHLETIC 146. Tennis: Analysis — Use of computer for analyzing tennis matches. Assist players and coaches by collecting data on player performance. Prerequisite: consent of instructor. Recommended: excellent knowledge of tennis, background in computers and statistics. Fee. (AU)

2 units, Aut, Win, Spr (Forood, L)

1 unit, Aut (Staff)

1 unit, Aut, Spr (Staff)

ATHLETIC 161. Volleyball: Advanced Sand — Refine and improve skills and game playing strategy in two- and four-person sand volleyball. Must have strong skills and general knowledge of team concepts. Prerequisite: 160 or consent of the instructor. Fee. (AU)

1 unit, Spr (Staff)

ATHLETIC 163. Volleyball: Intermediate — Drills to improve skills and game playing strategy. As ability indicates, more emphasis on team play and strategy. Fee. (AU)

1 unit, Aut (Corlett, D), Win (Staff)

ATHLETIC 164. Volleyball: Advanced — Refine all skills, emphasizing offensive and defensive team play. Fee. Prerequisites: strong skills and general knowledge of team concepts. Fee. (AU)

1 unit, Aut (Corlett, D), Win (Staff)

1 unit, Aut (Weir, R), Win (Irvine, L), Spr (Klemm, K)

ATHLETIC 175. Weight Training: Intermediate — Review of basic exercises and techniques. Emphasis is on individualized programs and learning the use of all available machines and free weights. Further discussion on exercise physiology. Prerequisite: 174 or thorough knowledge of basic weight training principles. Fee. (AU)

1 unit, Aut (Simon, B), Win (Staff), Spr (Simon, B)

ATHLETIC 176. Weight Training for Women — All levels welcome, but designed for the beginner. Techniques and equipment for weight training. Emphasis is on stretching, proper form and progressions, and injury prevention. The basics of the physiology of strength training and planning individual programs. Fee. (AU)

1 unit, Aut (Staff), Win (Staff), Spr (Irvine, L)

ATHLETIC 179. Wrestling: Beginning/Intermediate — Intercolligate wrestling. Conditioning, cultivating the spirit of one-on-one competition. Basic skills and high-level sequences of upper- and lower-body technique. Fee. (AU)

1 unit, Aut (Klemm, K), Spr (Staff)

ATHLETIC 186. Yoga — Beginning/intermediate. Focus is on an integrated and balanced body. Promotes increased flexibility; strengthens skeletal and muscular systems; improves circulation; releases tension and stress. Fee. (AU)

1 unit, Aut, Win, Spr, Sum (Conniff, N)

ATHLETIC 188. Yoga/Pilates Fusion — Fee. (AU)

1 unit, Aut, Win, Spr, Sum (Staff)

INTERCOLLEGIATE ATHLETIC TEAMS

ATHLETIC 9V. Baseball, Varsity Men — (AU)

1-2 units, Aut, Win, Spr (Marquess, M; Stotz, D)

ATHLETIC 11V. Basketball, Varsity Men — (AU)

1-2 units, Aut, Win (Johnson, T)

ATHLETIC 12V. Basketball, Varsity Women — (AU)

1-2 units, Aut, Win (VanDerveer, T)

ATHLETIC 19V. Crew, Varsity Men — (AU)

1-2 units, Aut, Win, Spr (Amerkhanian, C)

ATHLETIC 20V. Crew, Varsity Women — (AU)

1-2 units, Aut, Win, Spr (Staff)
ATHLETIC 22V. Cross Country, Varsity Men — (AU)
1-2 units, Aut (Tegen, P)

ATHLETIC 23V. Cross Country, Varsity Women — (AU)
1-2 units, Aut (Tegen, P)

ATHLETIC 31V. Diving, Varsity Men — (AU)
1-2 units, Aut, Win, Spr (Schavone, R)

ATHLETIC 32V. Diving, Varsity Women — (AU)
1-2 units, Aut, Win, Spr (Schavone, R)

ATHLETIC 41V. Fencing, Varsity Men — (AU)
1-2 units, Aut, Win (Milgram, L)

ATHLETIC 42V. Fencing, Varsity Women — (AU)
1-2 units, Aut, Win (Milgram, L)

ATHLETIC 45V. Field Hockey, Varsity Women — (AU)
1-2 units, Aut, Spr (Irvine, L)

ATHLETIC 48V. Football, Varsity — (AU)
1-2 units, Aut, Spr (Harris, W)

ATHLETIC 57V. Golf, Varsity Men — (AU)
1-2 units, Aut, Win, Spr (Ray, C)

ATHLETIC 58V. Golf, Varsity Women — (AU)
1-2 units, Aut, Win, Spr (O'Connor, C)

ATHLETIC 61V. Gymnastics, Varsity Men — (AU)
1-2 units, Aut, Win, Spr (Glielmi, T)

ATHLETIC 62V. Gymnastics, Varsity Women — (AU)
1-2 units, Aut, Win, Spr (Smyth, K)

ATHLETIC 81V. Lacrosse, Varsity Women — (AU)
1-2 units, Aut, Win, Spr (Uhlfelder, M)

ATHLETIC 107V. Sailing, Varsity Men — (AU)
1-2 units, Aut, Win, Spr (Kehoe, J)

ATHLETIC 108V. Sailing, Varsity Women — (AU)
1-2 units, Aut, Win, Spr (Kehoe, J)

ATHLETIC 110V. Ski Club Team — (AU)
1 unit, Win (Staff)

ATHLETIC 126V. Squash Club Team (Men) — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 153V. Track and Field, Varsity Men — (AU)
1-2 units, Aut, Win, Spr (Weir, R)

ATHLETIC 154V. Track and Field, Varsity Women — (AU)
1-2 units, Aut, Win, Spr (Floreal, E)

ATHLETIC 165V. Volleyball, Varsity Men — (AU)
1-2 units, Aut, Win, Spr (Kosty, J)

ATHLETIC 166V. Volleyball, Varsity Women — (AU)
1-2 units, Aut, Win, Spr (Dunning, J)

ATHLETIC 171V. Water Polo, Varsity Men — (AU)
1-2 units, Aut, Win, Spr (Vargas, J)

ATHLETIC 172V. Water Polo, Varsity Women — (AU)
1-2 units, Aut, Win, Spr (Tanner, J; Ortwein, S)

ATHLETIC 182V. Wrestling, Varsity — (AU)
1-2 units, Aut, Win, Spr (McCoy, K)

CLUB SPORTS

The Stanford Club Sports Program is affiliated with the department but is initiated, organized, and conducted by students. All clubs are coeducational except as specified. Clubs whose instructional classes meet the criteria for academic credit are scheduled for meeting times as published each quarter in the Time Schedule. For additional information, contact the Club Sports Director.

ATHLETIC 4C. Archery Club Team — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 5C. Badminton Club Team — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 15C. Canoe and Kayak Club — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 28C. Cycling Club Team — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 34C. Equestrian Club Team — (AU)
1 unit, Aut, Win, Spr (Bartsch, V)

ATHLETIC 69C. Horse Polo Club Team — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 71C. Ice Hockey Club Team (Men) — (AU)
1 unit, Aut, Win (Staff)

ATHLETIC 76C. Judo Club Team — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 79C. Lacrosse Club Team (Men) — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 93C. Rugby Club Team (Men) — (AU)
1 unit, Aut, Win, Spr (Griffin, P)

ATHLETIC 94C. Rugby Club Team (Women) — (AU)
1 unit, Aut, Win, Spr (Griffin, P)

ATHLETIC 98C. Running Club — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 110C. Ski Club Team — (AU)
1 unit, Win (Staff)

ATHLETIC 126C. Squash Club Team (Men) — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 140C. Tae Kwon Do Club — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 151C. Triathlon Club Team — (AU)
1 unit, Aut, Win, Spr (Staff)

ATHLETIC 157C. Ultimate Frisbee Club Team (Women) — (AU)
1 unit, Aut, Win, Spr (Staff)
BIOLOGICAL SCIENCES

Emeriti: (Professors) Winslow R. Briggs, Donald Kennedy, David D. Perkins,* Peter Ray, Robert Schimke, Norman K. Wessells, Dow O. Woodward, Charles Yanofsky,* (Professor, Research) R. Paul Levine*

Chair: Robert D. Simon

Associate Professors: Judith Frydman, Elizabeth A. Hadly, Dmitri Petrov, Michael A. Simon, Tim Stearns

Assistant Professors: Dominique Bergmann, William F. Burkholder, Guowei Fang, Or Gozani, Fiorenza Micheli, Mary Beth Mudgett, Mark J. Schnitzer, Kang Shen

Assistant Professor (Research): Anthony De Tomaso

Professor (Teaching): Carol L. Boggs

Lecturers: Shyamala D. Malladi, Timothy J. Meier, David Muir, James Watanabe

Consulting Professors: Kathryn Barton, Alfred M. Spormann

Electives  24

Total 23-25

BIOSCI 41*  4

BIOSCI 42*  5

BIOSCI or BIOHOPK 43*  5

BIOSCI 44X  4

BIOSCI or BIOHOPK 44Y (may be replaced by 4 units of 175H or 176H) 4

BIOSCI 54 (in combination with 55, substitutes for BIOSCI 44X,Y) 4

BIOSCI 55  6

Electives  23-25

Units  24

* Letter grade only.

Required Foundational Breadth Courses—Students may take up to two foundational breadth courses credit/no credit (CR/NC).

1. Introductory, organic, and physical chemistry with lab: CHEM 31X (or 31A,B), 35, 36, 37, 130, 131, 135 (or 171). For those interested in ecology and evolutionary biology, an advanced Mathematics course of 100-level or above may be substituted for 130.

2. General Physics: PHYSICS 21, 22, 23, 24; or 41, 43, 45; or 28, 29.

3. Math through calculus: MATH 19, 20, 21; or 41, 42.

4. One foundational breadth course in Mathematics, Statistics, or Computer Science: MATH 51 or beyond; BIOSCI 141*; BIOHOPK 174H*; PSYCH 10; STATS 60 or beyond; or CS 106A or X.

* If taken to fulfill the foundational breadth requirement, these courses do not count toward the 24 elective unit requirement.
Electives—Electives must be 100-level or above and selected from the offerings in the Department of Biological Sciences or from the list of approved out-of-department electives. This list may be obtained from the student services office. Stanford Introductory Seminars may not be used to fulfill this requirement.

The program for the junior and senior year should include a total of 24 elective units beyond the core. The courses making up these units must include at least one course from at least three of the following four central menu areas. The rest of the 24 units can include more courses from this central menu, other Biological Sciences courses, courses listed on the approved out-of-department elective list, or advanced courses for which menu courses are prerequisites. A complete central menu course listing including inactive and alternate year courses is available in the student services office. Active central menu courses are:

1. Molecular
   - BIOSCI 104. Advanced Molecular Biology
   - BIOSCI 113. Fundamentals of Molecular Evolution
   - BIOSCI 118. Genetic Analysis of Biological Processes
   - BIOSCI 133. Genetics of Prokaryotes
   - BIOSCI 134. Replication of DNA
   - BIOSCI 162. Advanced Microbial Genetics and Genomics
   - BIOSCI 188. Biochemistry II
   - BIOSCI 189. Biochemistry III
   - BIOSCI 230. Molecular and Cellular Immunology
   - CBIO 101. Cancer Biology
   - CEE 274A. Environmental Microbiology

2. Cell/Developmental
   - BIOSCI 118. Genetic Analysis of Biological Processes
   - BIOSCI 129A. Cellular Dynamics I: Cell Motility and Adhesion
   - BIOSCI 129B. Cellular Dynamics II: Building a Cell
   - BIOSCI 133. Genetics of Prokaryotes
   - BIOSCI 134. Replication of DNA
   - BIOSCI 154. Molecular and Cellular Neurobiology
   - BIOSCI 158. Developmental Neurobiology
   - BIOSCI 160. Developmental Biology
   - BIOSCI 162. Advanced Microbial Genetics and Genomics
   - BIOHOPK 183H. Environmental Cell & Developmental Biology
   - BIOSCI 230. Molecular and Cellular Immunology
   - CBIO 101. Cancer Biology
   - CEE 274A. Environmental Microbiology

3. Organismal
   - BIOSCI 112. Human Physiology
   - BIOSCI 120. General Botany
   - BIOSCI 124. Plant Physiological Ecology
   - BIOSCI 138. Ecology and Evolution of Plants
   - BIOSCI 153/PSYCH 120. Cellular Neuroscience
   - BIOSCI 154. Molecular and Cellular Neurobiology
   - BIOSCI 158. Developmental Neurobiology
   - BIOSCI 163. Neural Systems and Behavior
   - BIOHOPK 161H. Invertebrate Zoology
   - BIOHOPK 162H. Comparative Animal Physiology
   - BIOHOPK 167H. Nerve, Muscle, and Synapse
   - BIOHOPK 169H. Neurobiology and Behavior
   - BIOHOPK 171H. Ecological and Evolutionary Physiology
   - BIOSCI 213. Biology of Viruses
   - HUMBIO 140. Vertebrate Biology
   - MI 185. Topics in Microbiology

4. Ecology and Evolution
   - BIOSCI 101. Ecology
   - BIOSCI 113. Fundamentals of Molecular Evolution
   - BIOSCI 121. Biogeography
   - BIOSCI 124. Plant Physiological Ecology
   - BIOSCI 127/220. Ecology of Microorganisms
   - BIOSCI 136. Evolutionary Paleobiology
   - BIOSCI 138. Ecology and Evolution of Plants
   - BIOSCI 142. Topics in Theoretical Ecology
   - BIOSCI 143. Evolution
   - BIOSCI 144. Conservation Biology

   - BIOSCI 145. Behavioral Ecology
   - BIOHOPK 163H. Oceanic Biology
   - BIOHOPK 172H. Marine Ecology
   - BIOSCI 184. Principles and Practice of Biosystematics
   - CEE 274A. Environmental Microbiology

   1. May be used to satisfy either area I or area II requirement.
   2. May be used to satisfy either area II or area III requirement.
   3. May be used to satisfy either area I or area IV requirement.
   4. May be used to satisfy either area II or area IV requirement.
   5. May be used to satisfy either area I or area II or area IV requirement.

No more than 6 units from any combination of individual instruction courses (BIOSCI 175H, 176H, BIOSCI 198, 198X, 199, 199X, 290, 290X, 291, 300, or 300X) may be applied toward the total number of elective units. No more than 6 units applied toward the elective unit requirement may be taken CR/NC; this policy does not apply to transfer credit.

Students intending to pursue research careers in biology, especially in ecology, population genetics, or theoretical biology, should be aware that MATH 19, 20, 21, or MATH 41, 42 are minimum mathematics requirements for the B.S. degree in Biological Sciences. Substantial additional training in mathematics, including differential equations, linear algebra, and probability theory, is often highly advisable. Students should consult the Biological Sciences faculty to discuss individual needs.

Additionally, even though only two or three quarters of physics are required, students should be aware that many graduate and professional schools (for example, Medicine and Education) require a year of general physics with lab. Biological Sciences majors are therefore advised to take the one-year physics sequence PHYSICS 21, 22, 23, 24, 25, 26 if they plan to attend graduate or medical school.

For students considering residence at Hopkins Marine Station during the junior or senior year, or an overseas program, the department recommends fulfilling as many University General Education Requirements as possible in the first two years at Stanford.

**TYPICAL SCHEDULE FOR A FOUR-YEAR MINIMUM PROGRAM**

**FIRST YEAR**

<table>
<thead>
<tr>
<th>Subject and Catalog Number</th>
<th>Qtr. and Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 31X*</td>
<td>A W S</td>
</tr>
<tr>
<td>MATH 19, 20, 21. Calculus and Analytic Geometry</td>
<td>3 3 4</td>
</tr>
<tr>
<td>Freshman requirements or electives</td>
<td>8 8 6</td>
</tr>
<tr>
<td>Totals</td>
<td>15 15 17</td>
</tr>
</tbody>
</table>

* This schedule varies slightly if student takes CHEM 31A,B.

**SECOND YEAR**

| BIOSCI or BIOHOPK 43. Principles of Biology* | 5 |
| BIOSCI or BIOHOPK 44. Principles of Biology* | 5 |
| BIOSCI or BIOHOPK 44X. Core Experimental Laboratory | 4 |
| CHEM 130, 131, 135 (or 171). Organic and Physical Chemistry | 8 3 |
| General Education Requirements or electives | 3 5 8 |
| Totals | 16 17 17 |

* Letter grade only.

**THIRD YEAR**

| PHYSICS 21, 22, 23, 24. Introductory Physics | 4 4 |
| General Education Requirements or electives | 11 11 11 |
| Totals | 15 15 11 |

**FOURTH YEAR**

Electives | 15 15 15

**SPECIALIZATION TRACKS**

In addition to the undergraduate major program described above, the department offers these five specialization tracks for students wishing to concentrate their studies in particular areas of biology:

1. Biochemistry and Biophysics
2. Ecology and Evolution
3. Marine Biology
4. Molecular and Cellular Biology
5. Neurobiology
These tracks are declared on Axess as a field of study; they appear on the transcript but not on the diploma. Candidates for the B.S. degree in Biological Sciences with an area of specialization are expected to complete the departmental honors program as well as the set of requirements outlined below. Students in a specialization track are required to have their checklist signed by their adviser and submitted to the student services office by the end of their junior year. Students may petition in advance for the substitution of either equivalent or more advanced courses. Petitions are available in the department’s student services office.

**BIOCHEMISTRY AND BIOPHYSICS**

*Core Courses* (must be taken for a letter grade):

<table>
<thead>
<tr>
<th>Subject and Catalog Number</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOSCI 41</td>
<td>5</td>
</tr>
<tr>
<td>BIOSCI 42</td>
<td>5</td>
</tr>
<tr>
<td>BIOSCI or BIOHOPK 43</td>
<td>5</td>
</tr>
</tbody>
</table>

*Writing in the Major* (one of the following):

<table>
<thead>
<tr>
<th>Subject and Catalog Number</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOSCI 44X</td>
<td>4</td>
</tr>
<tr>
<td>BIOSCI or BIOHOPK 44Y</td>
<td>4</td>

Up to 6 units of teaching and/or research are allowed. Only one course can be taken credit/no credit.*

*Research Requirement—Admission to the departmental honors program, 10 units of BIOSCI 199 or 199X, Poster or Oral Presentation, Honors Thesis.*

For further information on the specialization tracks, including detailed descriptions of their requirements and deadlines, see [http://biology.stanford.edu/programs.html](http://biology.stanford.edu/programs.html).

**HONORS PROGRAM**

To graduate with departmental honors, a student must:

1. Submit an honors petition proposal to the department’s undergraduate research coordinator by the fifth Friday of the quarter, two quarters prior to graduation. For instance, students graduating Spring Quarter must submit petitions no later than mid-Autumn Quarter.

2. Complete at least 10 units of an approved (BIOSCI 199 or 199X) research project.

3. Obtain at least a 3.0 (B) grade point average (GPA) in all Biological Sciences major requirements taken at Stanford (foundational breadth, core, and elective courses). Grades earned from teaching (290 and 291) and research (BIOHOPK 175H, 176H; BIOSCI 199, 199X) are not computed into this GPA.

4. If graduating in June, participate in the Biological Sciences Honors Symposium by presenting a poster or giving an oral presentation. The symposium is usually at the end of May. If graduating Autumn, Winter, or Summer Quarter, produce a poster.

5. Complete and submit, by the end of the quarter of graduation, two signed and bound copies of an honors thesis approved by at least two readers (one of whom must be from the faculty of the Department of Biological Sciences and both must be Academic Council members). In addition, students must submit two copies of the honors thesis abstract (one paper copy and one electronic copy), which include student name, thesis title, research sponsor, and sponsor’s department.

Further information on the honors program is available in the office of the undergraduate research coordinator in Gilbert 118, as well as on the web at [http://biohonors.stanford.edu](http://biohonors.stanford.edu). Questions should be directed to the undergraduate research coordinator, Dr. Timothy Meier (gastrula@stanford.edu, 650-723-3767, Gilbert 118).

**TRANSFER STUDENTS**

Because of differences between Stanford undergraduate courses and prerequisites and those of many other institutions, transfer students may face problems not encountered by entering freshmen. Transfer students are urged to visit the student services office in Gilbert 108 during transfer orientation to obtain information on course credit evaluations. Course catalogs, syllabi, and/or lecture notes from the former institution are necessary in the evaluation and accreditation process. Transfer students are encouraged to find a faculty adviser soon after arrival.

All transfer courses intended to fulfill department requirements must be evaluated on Evaluation of Course Content forms (available in the student services office), which are kept in the student’s file. This department procedure is in addition to the Registrar’s process of having units earned at other institutions transferred for Stanford credit that appear on the Stanford transcript.

The department authorizes transfer credit only for courses whose content parallels the Stanford courses and that have comparable prerequisites (not merely a comparable course title). To substitute a course taken elsewhere for an upper-division Stanford course, course content must be approved by a department faculty member teaching in the area of the course. Submit as complete a course description as practical (including prerequisites and their descriptions) using the Evaluation of Course Content form available in the student services office before taking an off-campus course. Students must provide exams, reading lists, term papers, and other materials for the evaluation. Credit is not allowed for projects for which the student was paid, nor is credit allowed for work of a purely technical or clinical nature. Credit for natural history, culture biology, and similar courses is rarely appropriate and can be obtained only by meeting the same criteria outlined above. Academic performance is verified upon receipt of the official transcript. Semester units are not converted to quarter units; units awarded for transfer credit are determined by faculty evaluation.
MINORS

Students interested in the minor in Biological Sciences must declare the minor and submit their course plan online via Axess no later than two quarters prior to the student’s intended quarter of degree conferral. The Biological Sciences minor requires a minimum of six courses meeting the following criteria:
1. All courses must be taken for a letter grade.
2. All courses must be worth 3 or more units.
3. All courses, other than the Biological Sciences Core (41, 42, 43), must be at or above the 100-level. Stanford Introductory Seminars may not be used to fulfill this requirement.
4. Courses used to fulfill the minor may not be used to fulfill any other department degree requirements (minor or major).
5. At least one course from the Biological Sciences Core (41, 42 or 43) must be taken.
6. The Biological Sciences Core Laboratory (44X and 44Y) does not count towards the minor degree.
7. All courses must be Department of Biological Sciences elective courses or recognized out-of-department elective courses. See the out-of-department electives list available in the student services office or at http://biology.stanford.edu/programs_bs.html.
8. Elective credit for research (BIOSCI 199/199X) is limited to a maximum of 3 units.

REQUIREMENTS FOR PREHEALTH PROFESSIONS

Students who are not biology majors should take at least the following courses in Biological Sciences: 44X, 44Y; or 41, 42, 43, and such upper-division electives as may be recommended by Stanford’s Undergraduate Advising and Research, Sweet Hall.

COTERMINAL B.S. AND M.S. DEGREES

The Department of Biological Sciences admits a limited number of undergraduates to the coterminal B.S. and M.S. degree program in Biological Sciences. Students may apply to the program after they have earned a minimum of 120 units toward graduation (UTG) and at least one quarter prior to conferring the undergraduate degree; for example, if a student expects to have the B.S. conferred in Spring Quarter, the student must apply no later than during Winter Quarter. The application includes a statement of purpose, an unofficial Stanford transcript, official GRE score print-out, two letters of recommendation from faculty members in this department (if two such letters are not available, a letter from someone outside the department can be used in lieu of one of those), a program proposal listing the courses in which they intend to enroll to fulfill degree requirements, a course transfer form, and an application fee of $50. Students must meet all requirements for both the B.S. and M.S. degrees in Biological Sciences. Unit requirements for a coterminal program are 180 units for the bachelor’s degree and 45 units for the master’s degree.

Coterminal students are permitted to use course work taken up to two quarters immediately prior to their first graduate quarter toward their graduate degree.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

GRADUATE PROGRAMS

MASTER OF SCIENCE

For information on the University’s basic requirements for the M.S. degree, see the “Graduate Degrees” section of this bulletin.

The M.S. degree program offers general or specialized study to individuals seeking biologically oriented course work, and to undergraduate science majors wishing to increase or update their science background or obtain advanced research experience. Students who have majored in related fields are eligible to apply, but must complete, or have completed by the time of graduation, the equivalent of a Stanford B.S. in Biological Sciences. The M.S. program does not have an M.S. with thesis option.

The M.S. program consists of Department of Biological Sciences course work, approved out-of-department electives, and foundational breadth courses totaling at least 45 units at or above the 100-level, distributed as follows:
1. A minimum of 23 of the 45 units must be courses designated primarily for graduate students (typically at the 200-level or higher).
2. A minimum of 36 units must be Department of Biological Sciences courses, approved out-of-department electives, foundational breadth courses, and/or research and teaching.
   a) a maximum of 18 of the 36 units may be a combination of Biological Sciences research, directed reading, and/or teaching (BIOSCI 175H, 176H, 198X, 290, 291, 300, or 300X).
   b) a maximum of 9 units may be foundational breadth courses in chemistry, mathematics, statistics, computer science, and/or physics beyond the level required for the undergraduate degree in Biological Sciences and at least at the 100-level.
3. The remaining 9 units may be other Stanford course work that is relevant to a student’s professional development. Students are required to petition for courses that fall into this category.

Each candidate designs a coherent program of study in consultation with her or his department adviser. Although there are no specific courses required, program proposals must adhere to department parameters.

A program proposal, signed by the student’s adviser and approved by the chair of the M.S. committee, must be filed by the third week of the first quarter of enrollment. Students may take only 6 units CR/NC and must receive a grade of ‘B–’ or better in all courses taken for the degree.

To apply, students submit an application for admission to the M.S. program, three letters of recommendation, official transcripts, and official Graduate Record Examination (GRE) scores. The application is available online at http://gradadmissions.stanford.edu. Applicants should plan on taking the GRE at least six weeks prior to the application deadline to insure that the official scores are available when applications are evaluated. Applications are accepted for matriculation to Autumn Quarter only. Financial support for students in this program is not available from either the department or the University.

TEACHING CREDENTIALS

For information concerning the requirements for teaching credentials, consult the “School of Education” section of this bulletin or address an inquiry to the Credential Administrator, School of Education.

DOCTOR OF PHILOSOPHY

For information on the University’s basic requirements for the Ph.D. degree, see the “Graduate Degrees” section of this bulletin. Training for a Ph.D. in Biological Sciences is focused on learning skills required for being a successful research scientist and teacher, including how to ask important questions and then devise and carry out experiments to answer these questions. Students work closely with an established adviser and meet regularly with a committee of other faculty members to ensure that they understand the importance of diverse perspectives on experimental questions and approaches. Students learn how to evaluate critically pertinent original literature to stay abreast of scientific progress in their areas of interest. They also learn how to make professional presentations, write manuscripts for publication, and become effective teachers.

ADMISSIONS

Preparation for Graduate Study — Students seeking entrance to graduate study in Biological Sciences ordinarily should have the equivalent of an undergraduate major in Biological Sciences at Stanford. However, students from other disciplines, particularly the physical sciences, are also encouraged to apply. Such students are advised at the time of initial registration on how they should complete background training during the first year of graduate study. In addition to the usual basic undergraduate courses in biology, it is recommended that preparation for graduate work include courses in chemistry through organic chemistry, general physics, and mathematics through calculus.
**Application, Admission, and Financial Aid**—Prospective graduate students should apply online at http://gradadmissions.stanford.edu. The department’s program is divided into three separate tracks: ecology/evolution; integrative/organismal; and molecular/cellular/developmental/genetic. Included in these tracks is the option to conduct research at Hopkins Marine Station. These concentrations are reported to the department; they are not declared on Axess.

Applicants are required to take the Graduate Record Examination (GRE) general test. The GRE subject test in biology, in chemistry, or in biochemistry, cell and molecular biology, is only required for applicants interested in studying at Hopkins Marine Station. Applicants should plan on taking the GRE at least one month prior to the application deadline to ensure that the official scores are available when applications are evaluated.

Admission to the Ph.D. program is competitive and in recent years it has been possible to offer admission to only 10 percent of the applicants. Qualified applicants should apply for nationally competitive predoctoral fellowships, especially those from the National Science Foundation. Admitted students are normally offered financial support in the form of Stanford Graduate Fellowships, research assistantships, NIH traineeships, or Biological Sciences fellowships.

**GENERAL REQUIREMENTS**

The following requirements must be completed by all students:

1. **Course work** is planned in consultation with an advising committee assigned for a student’s track. In addition, students must take a course on the ethical conduct of research: BIOSCI 312 for the ecology/evolution track; MED 255 for the integrative/organismal and molecular/cellular/developmental/genetic tracks.

2. **Teaching experience** and training are part of the graduate curriculum. Each student assists in teaching one course in the department’s core lecture (41, 42, or 43) or lab (44X, 44Y) series, and a second course that can be either a core course or other Biological Sciences course. Three quarters of teaching are required for ecology, evolution, and population biology students.

3. **Graduate seminars** devoted to the discussion of current literature and research in particular fields of biology are an important means of attaining professional perspective and competence. Seminars are presented under individual course listings or are announced by the various research groups. Topics of current biological interest are presented by speakers from Stanford and other institutions. During the first year of study, graduate students are required to attend seminars and make one formal seminar presentation which must be evaluated by a minimum of two faculty members.

4. By **June 1,** each first-year student is expected to have selected a lab in which to perform dissertation research and to have been accepted by the faculty member in charge. Students and faculty must wait until **April 1** to discuss the choice of a dissertation lab.

5. **During second year,** students are required to write a dissertation proposal which is evaluated by a committee of three faculty (the dissertation advising committee) in an oral presentation. Advancement to candidacy depends on satisfactory completion of the dissertation proposal.

6. **Third year and beyond:** each student must meet with the advising committee beginning the third year, and each year thereafter prior to the end of the Spring Quarter. Advanced students are required to meet with their committee at least twice a year.

7. **Residency requirement:** a minimum of 135 units of graduate registration is required of each candidate.

8. **The doctoral dissertation** must be presented to an oral examination committee comprised of at least five faculty members. In addition, the final dissertation must be approved by the student’s reading committee, comprised of at least three faculty members and by a graduate degree progress officer in the Registrar’s Office. Upon completion of this final requirement, a student is eligible for conferral of the degree.

**TRACK SPECIFIC REQUIREMENTS**

In addition to the general requirements listed above, students must also complete requirements within their track.

**Molecular, Cellular, Developmental, and Genetics Students**—

1. **First year:**
   a) **Advising committee:** shortly after arrival, each entering student meets with the first-year advising committee. The committee reviews the student’s previous academic work and current goals and advises the student on a program of Stanford courses, some of which may be required and others recommended. Satisfactory completion of the core curriculum (below) is required of all students.
   b) **Core curriculum:** all students are required to take the following courses for a letter grade, unless previous course work has fulfilled these requirements:
      - BIOSCI 203. Advanced Genetics
      - BIOSCI 214. Cell Biology of Physiological Process
      - BIOSCI 301. Frontiers in Biology: satisfies first-year talk requirement; must be taken Autumn and Winter quarters.
      
      One of the following:
      - BIOC/SBIO 241. Biological Macromolecules
      - MCP 256. Molecular Physiology of Cells
      - MPHA 210. Signal Transduction
      Three additional courses in the student’s area of interest, or as advised by committee.
   c) **Lab rotations:** first-year students are required to complete rotations in three different laboratories.

   * Written petitions for exemptions to core curriculum and lab rotation requirements are considered by the advising committee and the chair of the graduate studies committee. Approval is contingent upon special circumstances and is not routinely granted.

2. **Second year:** each student must pass a qualifying exam.
   a) **Dissertation proposal:** during Winter and Spring quarters of the second year, the student must prepare a dissertation proposal that outlines the student’s projected dissertation research. An expert assessment of the current literature is expected. After submission of the proposal to the dissertation advising committee, an oral examination is held. The student’s adviser is a silent member of the examination committee; the other members of the dissertation advising committee can provide feedback.
   
   Advancement to candidacy is contingent upon satisfactory completion of the dissertation proposal and oral exam. The written proposal is due by March 31 and the oral defense must take place no later than May 1. Failure to complete these requirements on schedule results in the withholding of the graduate stipend.

3. **Third year and beyond, dissertation and dissertation defense:** a completed draft of the dissertation must be turned in to the student’s oral examination committee at least one month before the oral exam is scheduled to take place. See University guidelines for the composition of this committee in the “Graduate Degrees” section of this bulletin.

**Integrative/Organismal Students**—

1. **First year:** each entering student is assigned a first-year advising committee whose function is to develop a schedule of required and recommended courses and to meet once each quarter with the student during the first year.
   a) **Students are required to take:** BIOSCI 306, Current Topics in Integrative and Organismal Biology. Students specializing in integrative biology may also be asked to take appropriate graduate-level courses such as DBIO 210; MCP 215; NBIO 206, 216; or PSYCH 228.
   b) **First-year paper:** each student must prepare and submit a paper that is evaluated by the advising committee, before the end of Spring Quarter of their first year. This paper should be a step toward the development of a dissertation proposal and may consist of an analysis of new data or a literature review and synthesis. Evaluation is in written form by two faculty members.

2. **Second year:** the student is expected to write a major dissertation proposal. The proposal is evaluated by a committee of three faculty (the dissertation advising committee) in an oral presentation. This
is to be completed by the end of Spring Quarter of the second year. Advancement to candidacy depends on satisfactory completion of the dissertation proposal and oral exam.

3. Third year and beyond, dissertation and dissertation defense: a completed draft of the dissertation must be turned in to the student’s oral examination committee at least one month before the oral exam is scheduled to take place. See University guidelines for the composition of this committee in the “Graduate Degrees” section of this bulletin.

**Ecology, Evolution, and Population Biology Students** —

1. First year: each entering student is assigned a first-year advising committee whose function is to develop a schedule of required and recommended courses and to meet once each quarter with the student during the first year.
   a) Students are required to take BIOSCI 302, 303, 304, Current Topics and Concepts in Population Biology, Ecology, and Evolution.
   b) First-year paper: each student must prepare and submit a paper that is evaluated by the advising committee before the end of Spring Quarter of their first year. This paper should be a step toward the development of a dissertation proposal and may consist of an analysis of new data or a literature review and synthesis. Evaluation is in written form by two faculty members.

2. Second year: the student is expected to write a major dissertation proposal. The proposal is evaluated by a committee of three faculty (the dissertation advising committee) in an oral presentation. This is to be completed by the end of Spring Quarter of the second year. Advancement to candidacy depends on satisfactory completion of the dissertation proposal and oral exam.

3. Third year and beyond, dissertation and dissertation defense: a completed draft of the dissertation must be turned in to the student’s oral examination committee at least one month before the oral exam is scheduled to take place. See University guidelines for the composition of this committee in the “Graduate Degrees” section of this bulletin.

**COURSES**

Course and laboratory instruction in the Department of Biological Sciences conforms to the “Policy on the Use of Vertebrate Animals in Teaching Activities,” the text of which is available at http://www.stanford.edu/dept/DoR/rph/8-2.html.

**INTRODUCTORY**

**BIOSCI 1. Human Evolution and Environment** — Human genetic and cultural evolution and how people interact with their environments, from the ancestors of Australopithecus to current events. Issues include race, gender, and intelligence; pesticide and antibiotic resistance; abortion and contraception; ecosystem services; environmental economics and ethics; the evolution of religion; climate change; population growth and overconsumption; origins and spread of ideas and technologies; and the distribution of political and economic power. GER:DB-NatSci

3 units, Spr (Ehrlich, P)

**BIOSCI 2. Current Research Topics in Biological Sciences** — Primarily for sophomores interested in majoring in Biological Sciences. Weekly seminars by faculty: molecular biology and genetics; theory and mathematics in biology; ecology, physiology, and the environment; molecular and cellular aspects of neurobiology, immunology, and developmental biology; biological chemistry; behavioral biology; and evolution. May be repeated for credit.

1 unit, Aut, Win (Meier, T)

**BIOSCI 3. Frontiers in Marine Biology** — An introduction to contemporary research in marine biology, including ecology, conservation biology, environmental toxicology, behavior, biomechanics, evolution, neurobiology, and molecular biology. Emphasis is on new discoveries and the technologies used to make them. Weekly lectures by faculty from the Hopkins Marine Station.

1 unit, Aut (Somero, G)

1 unit, Aut (Block, B)

**BIOSCI 20. Introduction to Brain and Behavior** — (Same as HUMBIO 21.) Evolutionary principles to understand how the brain regulates behavior, described in physiological terms, and is influenced by behavioral interactions. Topics include neuron structure and function, transmission of neural information, anatomy and physiology of sensory and motor systems, regulation of body states, the biological basis of learning and memory, and behavioral abnormalities. GER:DB-NatSci

3 units, Aut (Fernald, R), alternate years, not given next year

**STANFORD INTRODUCTORY SEMINARS**

3 units, Aut (Walbot, V)

**BIOSCI 13N. Environmental Problems and Solutions** — Stanford Introductory Seminar. Preference to freshmen. Students do independent investigations of current environmental problems, analyzing differing views of them and discussing possible solutions. Each student gives two seminar presentations and leads two seminar discussions. Short, documented position papers are written for policy makers. GER:DB-NatSci

3 units, Spr (Ehrlich, P)

**BIOSCI 14N. Plants and Civilization** — Stanford Introductory Seminar. Preference to freshmen. The role of plants in the development of civilization. Topics: the use of forests, woodlands, and grazing lands; centers of origins and spread of crops; viticulture, and wine and beer making; the spice route; the use of plants as medicine; fungi in human affairs; the global spread of weeds; engineering plants for the future; the importance of tea, coffee, sugar, potatoes, natural dyes, and rubber in societal affairs and change. GER:DB-NatSci

3 units, Spr (Mooney, H)

**BIOSCI 15N. Environmental Literacy** — Stanford Introductory Seminar. Preference to freshmen. Lack of public understanding of the details of most environmental problems is cited as a cause of environmental deterioration. Good citizenship requires literacy about the elements of scientific and decision making processes that accompany most environmental issues: what can happen, what are the odds, how can the credibility of sources of expertise be assessed, which components of environmental debates deal with factual and theoretical issues, and which are political value judgments? Student-led discussions, peer review and term papers, and paper presentation. GER:DB-NatSci, WRITE-2

3 units, Win (Schneider, S)

**BIOSCI 21N. Evolutionary Basis of Animal Sexual Behaviors** — Stanford Introductory Seminar. Preference to freshmen. The genetic and evolutionary basis for innate sexual behavioral patterns in animals. Readings from primary scientific literature, and Olivia Judson’s Dr. Tatiana’s Sex Advice for All Creation. GER:DB-NatSci

3 units, Spr (Baker, B)

3 units, Aut (Hadly, E)
BIOSCI 25Q. The Molecular Basis of Genetic Disease — Stanford Introductory Seminar. Preference to sophomores. Focus is on two genetic diseases resulting from the production of protein molecules that are unable to fold into their native conformations, called conformational diseases: cystic fibrosis and amyotrophic lateral sclerosis or Lou Gehrig’s disease. Hypotheses and controversies surrounding the molecular basis of these disorders, and implications for novel therapeutics. Readings from research literature. GER:DB-NatSci
3 units, Spr (Kopito, R)

BIOSCI 26N. Maintenance of the Genome — Stanford Introductory Seminar. Preference to freshmen. Focus is on DNA repair systems which scan the genome to ensure genomic stability in the face of natural endogenous threats to DNA and those due to radiation and chemicals in the external environment. Redundancy of the genetic message ensured by complementary DNA strands facilitates recovery of information when one of the strands is altered. Predisposition to cancer often implicates a defective DNA repair gene. Relevance for oncology, aging, developmental biology, environmental health, and neurobiology. GER:DB-NatSci
3 units, Spr (Hanawalt, P)

3 units, Spr (Fang, G)

3 units, Spr (Gordon, D)

BIOSCI 33N. Conservation Science and Practice — Stanford Introductory Seminar. Preference to freshmen. What types of species and ecosystems are likely to survive human impact; which most merit protection, and what is the scientific basis for deciding? Scope and limitations of conservation and restoration practices? Global scale and case studies. Student presentations and research. GER:DB-NatSci
3 units, Spr (Daily, G)

CORE

BIOSCI 41, 42, 43. Principles of Biology — The principles of modern biological sciences, taken in sequence, preferentially in the sophomore year. Biological Sciences majors must take for a letter grade. Prerequisites: CHEM 31X (or 31A and B), 33, 35; MATH 19, 20, 21, or 41, 42.

BIOSCI 41L. Genetics, Biochemistry, and Molecular Biology — Emphasis is on macromolecules (proteins, lipids, carbohydrates, and nucleic acids) and how their structure relates to function and higher order assembly; molecular biology, genome structure and dynamics, gene expression from transcription to translation. GER:DB-NatSci
5 units, Aut (Simoni, R; Bergmann, D)

BIOSCI 42L. Cell Biology and Animal Physiology — Cell structure and function; principles of animal physiology (immunology, renal, cardiovascular, sensory, motor physiology, and endocrinology); neurobiology from cellular and developmental to neural regulation of physiology. GER:DB-NatSci
5 units, Win (Sapolsky, R; Jones, P; Cyert, M; Luo, L; Heller, C)

BIOSCI 43. Plant Biology, Evolution, and Ecology — Principles of evolution: macro- and microevolution and population genetics. Ecology: the principles underlying the exchanges of mass and energy between organisms and their environments; population, community, and ecosystem ecology; populations, evolution, and global change. Equivalent to BIOHOPK 43. GER:DB-NatSci
5 units, Spr (Gordon, D; Petrov, D)

BIOSCI 144X,Y. Core Experimental Laboratory — Two quarters of lab projects provide a working familiarity with the concepts, organisms, and techniques of modern biological research. Emphasis is on experimental design, analysis of data, and written and oral presentation of the experiments. Lab fee. Prerequisites: CHEM 31X, or 31A,B, and 33. Recommended: Biological Sciences or Human Biology core, and statistics; 44X,Y should be taken sequentially in same year. 44Y equivalent to BIOHOPK 44Y. WIM
4 units, X: Win, Y: Spr (Malladi, S)

BIOSCI 154. Genes, Genomes, and Proteins: Introduction to Advanced Independent Research Laboratory — Preference to sophomores. First of two-part sequence. For students interested in pursuing research-oriented careers in biological sciences. The impact of genomic information on experimental biology. Recently developed techniques at a conceptual level and examples of their application to biology. Emphasis is on primary scientific literature and hands-on analyses of genome information using online databases and computational tools. Topics include microarray analysis, the use of comprehensive genome-wide mutant collections, and investigation of the proteome. Limited enrollment. Prerequisite: consent of instructors. 54,55 substitutes for 44X,Y to fulfill Biological Sciences major lab requirement. GER:DB-NatSci, WIM
6 units, not given this year (Cyert, M; Stearns, T)

BIOSCI 55. Advanced Independent Research Laboratory — Preference to sophomores. Second of two-part sequence. For students interested in pursuing research-oriented careers in biological sciences. Project lab course using a modern research laboratory with cutting-edge technologies introduced in 54 to investigate gene and protein function on a genomic level to understand how cells work. Students design and execute original research projects using the yeast Saccharomyces cerevisiae to explore fundamental questions in eukaryotic cell biology. Limited enrollment. Prerequisite: 54, consent of instructors. 54,55 substitutes for 44X,Y to fulfill Biological Sciences major lab requirement. GER:DB-NatSci, WIM
6 units, not given this year (Cyert, M; Stearns, T)

BIOSCI 196A,B. Jasper Ridge Docent Training — Two quarter preparation for Stanford and community students to join the Jasper Ridge education program. Multidisciplinary environmental education; hands-on field research. Field ecology and the natural history of plants and animals, archaeology, geology, hydrology, land management, and research projects of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes, and attend continuing education classes available to members of the JRBP community after the course.
2 units, A: Win, B: Spr (Wilber, C; Vitousek, P)

HOPKINS MARINE STATION

For courses offered at the Hopkins Marine Station, see the “Hopkins Marine Station” section of this bulletin which follows immediately after this section. Many of the Hopkins Marine Station courses may be used to fulfill department major requirements.

INTERMEDIATE UNDERGRADUATE AND GRADUATE

3 units, Aut (Vitousek, P; Dirzo, R)
BIOSCI 102. Demography: Health, Development, Environment — (Same as HUMBIO 119.) Demographic methods and their application to understanding and projecting changes in human, infant, child, and adult mortality and health, fertility, population, sex ratios, and demographic transitions. Progress in human development, capabilities, and freedoms. Relationships between population and environment. Prerequisites: numeracy and basic statistics. GER:DB-SocSci 3 units, Spr (Tuljapurkar, S)

BIOSCI 104/200. Advanced Molecular Biology — Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Prerequisite: Biological Sciences core. GER:DB-NatSci 3 units, Spr (Fang, G)

BIOSCI 109A/209A. The Human Genome and Disease — (Formerly 109; same as HUMBIO 158.) The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. GER:DB-NatSci 3 units, Win (Heller, R)

BIOSCI 109B/209B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine — Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and then either through Asia to Australia or through northern Russia to Alaska down to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures from academia and pharmaceutical companies. Prerequisite: Biological Sciences or Human Biology core. GER: DB-NatSci 3 units, Spr (Heller, R)

BIOSCI 112/212. Human Physiology — (Same as HUMBIO 133.) The functioning of organ systems emphasizing mechanisms of control and regulation. Topics: structure and function of endothere and central nervous systems, cardiovascular physiology, respiration, salt and water balance, and gastrointestinal physiology. Prerequisite: Biological Sciences or Human Biology core. GER: DB-NatSci 4 units, Win (Garca, D)

BIOSCI 113/244. Fundamentals of Molecular Evolution — The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Prerequisites: Biological Sciences core or graduate standing in any department, and consent of instructor. GER:DB-NatSci 4 units, Spr (Petrov, D)

BIOSCI 117. Biology and Global Change — (Same as EARTHSYS 111, GEOPHYHS 117.) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biological Sciences or Human Biology core or graduate standing. GER: DB-NatSci 3 units, Win (Vitousek, P; Arrigo, K)

BIOSCI 118/218. Genetic Analysis of Biological Processes — Genetic principles and their experimental applications. Emphasis is on the identification and use of mutations to study cellular function. Prerequisite: Biological Sciences core. GER:DB-NatSci 5 units, Spr (Baker, B)

BIOSCI 120. General Botany — Introduction to plant development, structure, and function in an ecological and evolutionary context. Themes include comparative morphology, systematics and diversity, and broad-scale evolutionary trends. Prerequisites: Biological Sciences or Human Biology core, or consent of instructor. GER:DB-NatSci 3-5 units, not given this year

BIOSCI 121. Biogeography — Global distributions of organisms through the Phanerozoic, with emphasis on historical causes. Topics: plate tectonics, island biogeography, climatic change, dispersal, vicariance, ecology of invasions, extinction, gradients, diversity. GER:DB-NatSci 3 units (Hadly, E) alternate years, not given this year

BIOSCI 125. Ecosystems of California — Distribution, functioning, human utilization, and management through time. Prerequisite: 43, HUMBIO 2A, or EARTHSYS 10. GER:DB-NatSci 3 units, Spr (Mooney, H)

BIOSCI 129A. Cellular Dynamics I: Cell Motility and Adhesion — Cell motility emphasizing role of actin assembly and dynamics coupling actin organization to cell movement. Interaction of cells with extracellular matrix, and remodelling of extracellular matrix in development and disease. Directed cell migration by chemotaxis (neuronal path-finding, immune cells). Cell-cell adhesion, formation of intercellular junctions and mechanisms regulating cell-cell interactions in development and diseases. Emphasis is on experimental logic, methods, problem solving, and interpretation of results. Students present research papers. Prerequisite: Biological Sciences core. GER:DB-NatSci 4 units, Win (Nelson, W)

BIOSCI 132/232. Advanced Imaging Lab in Biophysics — (Same as BIOPHYS 232, MCP 232.) Laboratory and lectures. Microscopy, emphasizing hands-on experience with a range of apparatus and techniques. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Advanced topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, optical trapping, and fiber optic methods. Limited enrollment. Recommended: basic physics, Biological Sciences core or equivalent, and consent of instructor. GER:DB-NatSci 4 units, Spr (Block, S; Schnitzer, M; Smith, S; Sterns, T)

BIOSCI 133. Genetics of Prokaryotes — Genetic approaches for understanding cellular processes in bacteria, including metabolism, adaptive and stress responses, signal transduction, gene expression, genetic exchange and recombination, chromosome dynamics and evolution, cell division, motility, surface attachment, and developmental responses. Emphasis is on the power of effectively combining genetics with biochemistry, microbiology, and genomics. Prerequisite: Biological Sciences core. GER:DB-NatSci 4 units, Aut (Burkholder, W; Campbell, A)

BIOSCI 135. Biological Clocks — (Same as HUMBIO 186.) The biological basis for endogenous timekeeping in organisms from flies to human beings. How biological clocks are constructed at the molecular, tissue, and behavioral levels; how these clocks interact with other physiological systems and allow animals to anticipate changes in their environment. Applications of circadian rhythm principles to treating human disorders and diseases such as cancer. Prerequisite: Biological Sciences or Human Biology core, or consent of instructor. GER:DB-NatSci

3 units, Spr (Staff)

BIOSCI 136. Evolutionary Paleobiology — A paleontological approach to evolutionary theory. Topics: history of life, speciation, heterochrony, evolutionary constraint, coevolution, macroevolution, the Cambrian Explosion, mass extinctions, taphonomy, life on land, life in the sea, life in the air. GER:DB-NatSci

4 units, alternate years, not given this year (Hadly, E)

BIOSCI 137/237. Plant Genetics — Gene analysis, mutagenesis, and transposable elements; developmental genetics of flowering and embryo development; biochemical genetics of plant metabolism; scientific and societal lessons from transgenic plants. Prerequisite: Biological Sciences core or consent of instructor. GER:DB-NatSci

3 units, alternate years, not given this year (Walbot, V)

3 units, not given this year

BIOSCI 138A/238A. Plant Ecology Lab — Weekly lab sessions to design and conduct field research projects and read primary literature. Corequisite: 138.

2 units, not given this year

BIOSCI 139. Biology of Birds — How birds interact with their environments and each other, emphasizing studies that had impact in the fields of population biology, community ecology, and evolution. Local bird communities. Emphasis is on field research. Enrollment limited to 20. Prerequisites: 43 or equivalent, and consent of instructor. Recommended: birding experience. GER:DB-NatSci

3 units, Spr (Root, T)

BIOSCI 140. Population Biology of Butterflies — Field work on Euphydryas populations under study on campus and elsewhere in California. Course offered as participation in research when conditions permit; decisions not made until Winter Quarter. Prerequisites: 43 and consent of instructor.

2-5 units, Spr (Ehrlich, P)

BIOSCI 141. Biostatistics — (Same as STATS 141.) Statistical methods for biological data. Describing numerical and graphical data; introduction to probability and statistical inference, including hypothesis tests and confidence intervals. Intermediate statistical methods: comparing groups and analysis of variance; analyzing associations and linear and logistic regression; and methods for categorical data such as contingency tables and odds ratio. Content integrated with statistical computing in R. See http://www-stat.stanford.edu/~rag/stat141. GER:DB-Math

4-5 units, Aut (Rogosa, D), Win (Feldman, M)

BIOSCI 142/242. Topics in Theoretical Ecology — Issues include foraging theory, demography and life history theory, population dynamics and species interactions including ecosystem stability, ecological economics and marine reserve design, evolutionary theory, evolutionary ecology, and evolution of gender sexuality and family structure. Prerequisites: 43 or 101, calculus, and computer programming. Recommended: linear algebra and differential equations. GER:DB-NatSci

3 units, Win (Roughgarden, J)

BIOSCI 143/243. Evolution — The basic facts and principles of the evolution of all life. The logic of and evidence for the correctness of Darwin’s argument for evolution by natural selection. How Mendelian genetics was integrated into evolutionary thinking. The integration of physiological and ecological perspectives into the study of evolutionary adaptation within species. Species formation and evolutionary divergence among species. Patterns of evolution over long time scales. GER:DB-NatSci

3 units, Aut (Wan, W)

BIOSCI 144. Conservation Biology — (Same as HUMBIO 112.) Principles and application of the science of preserving biological diversity. Topics: sources of endangerment of diversity; the Endangered Species Act; conservation concepts and techniques at the population, community, and landscape levels; reserve design and management; conflict mediation. Case studies and local field trips. 3 units if taken without field trips. Prerequisites: BIOSCI 101, or HUMBIO 2A with consent of instructor. GER:DB-NatSci

3-4 units, Win (Boggs, C; Launer, A)

BIOSCI 145/245. Behavioral Ecology — Animal behavior from an evolutionary and ecological perspective. Topics: foraging, territoriality, reproductive behavior, social groups. Lecture/seminar format; seminars include discussion of journal articles. Independent research projects. Prerequisites: Biological Sciences or Human Biology core, or consent of instructor. Recommended: statistics. GER:DB-NatSci, WIM

4 units, Spr (Gordon, D)

BIOSCI 146. Population Studies — Series of talks by distinguished speakers introducing approaches to population and resource studies.

1 unit, Win (Feldman, M)

BIOSCI 147/247. Controlling Climate Change in the 21st Century — (Same as EARTHSYS 147/247, HUMBIO 116.) The science, economics, and environmental diplomacy of global climate change. Topics: the science of climate change, climate change and global environmental law; global economic approaches to carbon abatement, taxes, and tradable permits; joint implementation, consensus, and division in the EU; gaining the support of China, other developing countries, and U.S. corporations; alternative energy and energy efficiencies for less carbon-intensive electric power and transport. GER:DB-NatSci

3 units, Win (Schneider, S; Mastrandrea, M)

BIOSCI 149/249. Principles of Sleep Research — Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and consciousness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16. GER:DB-NatSci

4 units, Win (Heller, C)

BIOSCI 150/250. Human Behavioral Biology — (Same as HUMBIO 160.) Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness. GER:DB-NatSci

6 units, alternate years, not given this year. (Sapolsky, R)

BIOSCI 151. Mechanisms of Neuron Death — For Biology majors with background in neuroscience. Cell and molecular biology of neuron death during neurological disease. Topics: the amyloid diseases (Alzheimer’s), prion diseases (kuru and Creutzfeldt-Jakob), oxygen radical diseases (Parkinson’s and ALS), triplet repeat diseases (Huntington’s), and AIDS-related dementia. Student presentations. Enrollment limited to 15; application.

3 units, Aut (Sapolsky, R)

BIOSCI 152. Imaging: Biological Light Microscopy — (Same as MCP 222.) Survey of instruments which use light and other radiation for analysis of cells in biological and medical research. Topics: basic light microscopy through confocal fluorescence and video/digital image processing. Lectures on physical principles; involves partial assembly and extensive use of lab instruments. Lab. Prerequisites: some college physics, Biological Sciences core. GER:DB-NatSci

3 units, Spr (Smith, S)

BIOSCI 153. Global Climate Change — (Same as HUMBIO 132.) An ecological perspective into the study of evolutionary adaptation within species. Species formation and evolutionary divergence among species. Patterns of evolution over long time scales. GER:DB-NatSci

3 units, Winter (Feldman, M)

BIOSCI 154. Asia Pacific Environmental Studies — (Same as HUMBIO 154.) Environmental issues in the Asia Pacific region. Topics: the impact of global climate change, pollution, and ocean management. Topics vary. Prerequisites: consent of instructor. GER:DB-NatSci

3 units, Win (Feldman, M)

BIOSCI 155. Human Population Dynamics — (Same as HUMBIO 133.) Demography and the history of population growth. Topics include the history of human population growth, the connections between environment and population growth, and models for understanding population growth. Prerequisites: consent of instructor.

3 units, Win (Feldman, M)

BIOSCI 156. Agronomy: The Biology of Crop Production — (Same as HUMBIO 156.) The biology of crop production. Topics: soil biology, plant nutrition, plant reproduction, crop production, and plant disease. Prerequisites: consent of instructor.

3 units, Win (Feldman, M)

BIOSCI 157. Quantitative Analysis of Natural Language — (Same as HUMBIO 157.) An introduction to linguistic research methods and computational tools for linguistic analysis. Topics include corpus linguistics, computational lexicography, and the statistical analysis of language. Research topics vary. Prerequisites: consent of instructor.

3 units, Win (Feldman, M)

BIOSCI 158. Human Nutrition and Metabolism — (Same as HUMBIO 158.) Prerequisites: consent of instructor.

3 units, Win (Feldman, M)

BIOSCI 159. The History of Scientific Thought — (Same as HUMBIO 159.) The history of scientific thought. Topics: how scientific ideas and theories have developed over time, and how scientific ideas have been evaluated. Prerequisites: consent of instructor. GER:DB-NatSci

3 units, Win (Feldman, M)

BIOSCI 160. Cancer Biology — (Same as HUMBIO 160.) Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness. GER:DB-NatSci

6 units, alternate years, not given this year. (Sapolsky, R)

BIOSCI 161. The Neurobiology of Social Behavior — (Same as HUMBIO 161.) Prerequisites: consent of instructor. GER:DB-NatSci

3 units, Win (Sapolsky, R)

BIOSCI 162. The Neurobiology of Learning and Memory — (Same as HUMBIO 162.) Prerequisites: consent of instructor. GER:DB-NatSci

3 units, Win (Sapolsky, R)

BIOSCI 163. The Neurobiology of Development — (Same as HUMBIO 163.) Prerequisites: consent of instructor. GER:DB-NatSci

3 units, Win (Sapolsky, R)

BIOSCI 164. The Neurobiology of Aging — (Same as HUMBIO 164.) Prerequisites: consent of instructor. GER:DB-NatSci

3 units, Win (Sapolsky, R)
BIOSCI 153. Cellular Neuroscience: Cell Signaling and Behavior — (Same as PSYCH 120.) Neural interactions underlying behavior. Prerequisites: 1 or basic biology, GER:DB-NatSci
4 units, not given this year (Wine, J)

BIOSCI 154/254. Molecular and Cellular Neurobiology — (Same as NBIO 254.) For advanced undergraduates and graduate students. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Prerequisite for undergraduates: Biological Sciences core or equivalent, or consent of instructors. GER:DB-NatSci
4-5 units, Aut (Luo, L; Shen, K; Clandinin, T; Dolmetsch, R), alternate years, not given next year

BIOSCI 157/257. Plant Biochemistry — The biochemistry of plants relevant to their physiology and cell biology. Topics include: the biosynthesis, assembly, function, and regulation of cell walls; lipids; pigments; photoreceptors; transporters; and the response of plants to pathogens and stresses. Prerequisite: Biological Sciences core or equivalent, or consent of instructors. GER:DB-NatSci
3-4 units, not given this year (Mudgett, M)

BIOSCI 158. Developmental Neurobiology — For advanced undergraduates and coterminal students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and morphic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Prerequisite: 42 or equivalent. GER:DB-NatSci
4 units, Spr (McConnell, S; Shen, K; Garner, C), alternate years, not given next year

BIOSCI 159/259. Chromatin Biology in Health and Disease — Molecular principles of chromatin dynamics, such as modification and remodeling, in the regulation of nuclear functions, and the relationship of these activities to human diseases. Topics include the role of chromatin biology in gene expression, gene silencing, DNA damage responses and repair, DNA recombination, and epigenetics. The molecular mechanisms behind chromatin signaling networks, and their perturbations in disease processes. Students identify open questions in the field and design experimental strategies to address these issues. Prerequisite: Biological Sciences core. GER:DB-NatSci
4 units, Spr (Gozani, O; Chua, K)

BIOSCI 160. Developmental Biology — The principles of developmental biology. Focus is on the molecular mechanisms underlying the generation of diverse cell types and tissues during embryonic and post-embryonic development in animals. Prerequisite: Biological Sciences core. GER: DB-NatSci
4 units, not given this year (Simon, M; McConnell, S)

BIOSCI 162/262. Advanced Microbial Genetics and Genomics — (Same as GENE 262.) Genetic tools for studying the cell biology and behavior of bacteria. Case studies on genetic approaches in combination with biochemistry, microscopy, and genomics to study mechanisms of gene expression, signal transduction, cell cycle regulation, development, and pathogenesis. GER:DB-NatSci
4 units, Spr (Burkholder, W; Tan, M) alternate years, not given next year

BIOSCI 163/263. Neural Systems and Behavior — (Same as HUMBIO 163.) The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Prerequisites: BIOSCI 42, HUMBIO 4A, or equivalents. GER: DB-NatSci
4 units, alternate years, not given this year (Fernald, R)

BIOSCI 164/264. Biosphere-Atmosphere Interactions — Physiological, ecological, and physical aspects of ecosystem function, emphasizing how ecosystems influence and are influenced by the atmosphere. Prerequisites: 42, 43; or consent of instructor.
4 units, Win (Field, C; Berry, J)

BIOSCI 175. Tropical Ecology and Conservation — Field trip to a field station at Los Tuxtlas, Mexico; lectures at Stanford. How to address scientific questions concerning ecology and conservation. Field trip includes natural history observations and group research projects. Symposium based on project results. Recommended: 43, 101, and 141 or STATS 60.
5 units, Spr (Dirzo, R)

BIOSCI 180/280. Fundamentals of Sustainable Agriculture — (Same as EARTHSYS 180/280.) Ecological, economic, and social dimensions of sustainable agriculture in the context of a growing world population. Focus is on management and technological approaches, and historical content of agricultural growth and change, organic agriculture, soil and water resource management, nutrient and pest management, biotechnology, ecosystem services, and climate change. GER:DB-NatSci
3 units, Spr (Naylor, R; Daily, G), alternate years, not given next year

4 units, alternate years, not given this year (Feldman, M)

BIOSCI 183B/283B. Population Genetic Theory and Evolution II — Role of population size and random effects in evolution. Genomic data and how they are used to infer the processes of evolution. Introduction to population structure and expansion. Prerequisite: 183A/283A. GER:DB-NatSci
4 units, alternate years, not given this year (Feldman, M)

BIOSCI 184/284. Principles and Practice of Biosystematics — The principles and major operating procedures of systematic biology; the classification of organisms and of the relationships among them. Concepts and issues common to the study of all organisms; examples from particular groups of creatures. GER:DB-NatSci
4 units, not given this year

3 units, Aut (Kohler, J)

BIOSCI 189/289. Biochemistry II — (Same as CHEM 189, CHEMENG 189/289.) Metabolism. Glycolysis, gluconeogenesis, citric acid cycle, oxidative phosphorylation, pentose phosphate pathway, glycerone metabolism, fatty acid metabolism, protein degradation and amino acid catabolism, protein translation and amino acid biosynthesis, nucleotide biosynthesis, DNA replication, recombination and repair, lipid and steroid biosynthesis. Medical consequences of impaired metabolism. Therapeutic intervention of metabolism. Prerequisite: 188/288. GER:DB-NatSci
3 units, Win (Khosla, C)

UNDERGRADUATE, INVOLVING INDIVIDUAL WORK

Students majoring in Biological Sciences are encouraged to pursue directed reading and research opportunities. An introduction to research is provided by BIOSCI 2.

BIOSCI 191. Research in Bird Biology — Semi-independent field research in ornithology emphasizing ecological relationships. Projects involve research, planned and carried out by the student in consultation with the instructor. Results are written in publication format. Enrollment limited. Prerequisites: 43, concurrent or subsequent enrollment in 139, and consent of instructor. GER:DB-NatSci
3 units, Win, Spr (Ehrlich, P; Root, T)
BIOSCI 193. Undergraduate Journal Club — Weekly discussion, led by students and facilitated by faculty, for reading scientific literature and presenting papers. Contact Tim Meier (gastrula@stanford.edu) by the fifth week of the previous quarter if requesting a particular research topic. Minimum enrollment required. Prerequisites: Biological Sciences core and consent of instructor. Recommended: 199 or 199X.

1 unit, Aut, Win, Spr (Meier, T)

BIOSCI 198. Directed Reading in Biological Sciences — Individually arranged under the supervision of members of the faculty.

1-15 units, Aut, Win, Spr, Sum (Staff)

BIOSCI 198X. Out-of-Department Directed Reading — Individually arranged under the supervision of members of the faculty. Credit for work arranged with out-of-department faculty is restricted to Biological Sciences majors and requires department approval. See http://biohonors.stanford.edu for information on research sponsors, units, and credit for summer research, or email gastrula@stanford.edu for more information.

1-15 units, Aut, Win, Spr, Sum (Staff)

BIOSCI 199. Advanced Research Laboratory in Experimental Biology — Individual research taken by arrangement with in-department instructors. See http://biohonors.stanford.edu for information on research sponsors, units, and credit for summer research, or email gastrula@stanford.edu.

1-15 units, Aut, Win, Spr, Sum (Staff)

BIOSCI 199X. Out-of-Department Advanced Research Laboratory in Experimental Biology — Individual research by arrangement with out-of-department instructors. Credit for 199X is restricted to declared Biological Sciences majors and requires department approval. See http://biohonors.stanford.edu for information on research sponsors, units, petitions, deadlines, credit for summer research, and out-of-Stanford research, or email gastrula@stanford.edu.

1-15 units, Aut, Win, Spr, Sum (Staff)

ADVANCED UNDERGRADUATE AND GRADUATE

BIOSCI 203. Advanced Genetics — (Same as DBIO 203, GENE 203.) For graduate students in Bioscience programs; may be appropriate for graduate students in other programs. The genetic toolbox. Examples of analytic methods, genetic manipulation, genome analysis, and human genetics. Emphasis is on use of genetic tools in dissecting complex biological pathways, developmental processes, and regulatory systems. Faculty-led discussion sections with evaluation of papers. Students with minimal experience in genetics should prepare by working out problems in college level textbooks.

4 units, Aut (Stearns, T; Barsh, G; Sidow, A; Kim, S)

BIOSCI 205. DNA Repair and Genomic Stability — Interactions of endogenous and environmental mutagens with cellular DNA. Cellular responses to damaged DNA including molecular mechanisms for DNA repair, translesion DNA synthesis, and genetic recombination. Inducible repair responses and error-prone mechanisms. Human hereditary diseases that predispose to cancer. Relationships of DNA repair to mutagenesis, carcinogenesis, aging, and human genetic disease. Current research literature. Prerequisites: 41 and 118, or consent of instructor.

3 units, Spr (Ford, J; Hanawalt, P)

BIOSCI 206. Field Studies in Earth Systems — (Same as EARTH/SYS 189.) For advanced upper-division undergraduates and graduate students. Field-based, focusing on the components and processes by which terrestrial ecosystems function. Topics from biology, chemistry, ecology, geology, and soil science. Lecture, field, and lab studies emphasize standard field techniques, experimental design, analysis of data, and written and oral presentation. Small team projects test the original questions in the functioning of natural ecosystems. Admission by application; see Time Schedule. Prerequisites: BIOSCI 141 or GES 160, or equivalent.

5 units, Spr (Chiarillo, N; Fendorf, S; Matson, P; Miller, E; Field, C; Dirzo, R), alternate years, not given next year

BIOSCI 207. Life and Death of Proteins — How proteins are made and degraded in the cell. Discussion of primary literature. Case studies follow the evolution of scientific ideas, and evaluate how different experimental approaches contribute to our understanding of a biological problem. Topics: protein folding and assembly, mechanisms of chaperone action, sorting into organelles and the ubiquitin–proteasome pathway. Enrollment limited to 20.

3 units, not given this year (Frydman, J)

BIOSCI 211. Biophysics of Sensory Transduction — Neural and aneural mechanisms that organisms have evolved to detect physical cues from the environment. Sensory topics: vision, hearing, taste, olfaction, chemoreception, mechanoreception, electromagnetic sensing, and other modalities. Emphasis is on common and/or emergent biophysical themes, such as sensitivity, amplification, encoding, adaptation, and the molecular basis of cellular signaling. Interdisciplinary aspects of biology and physics. Student presentations. Prerequisites: undergraduate physics, calculus, and basic biology.

4 units, not given this year (Block, S)

BIOSCI 213. Biology of Viruses — Principles of virus growth, genetics, architecture, and assembly. The relation of temperate viruses and other epiphenomena to the virus cell. Prerequisite: Biological Sciences core. Recommended: 118.

3 units, Win (Campbell, A)

BIOSCI 214. Cell Biology of Physiological Processes — (Same as BIOC 224.) Mechanisms of membrane and cellular biogenesis in relation to physiological processes. Emphasis is on regulatory and signaling mechanisms involved in coordinating complex cellular phenomena such as cellular organization, function, and differentiation. Topics: cellular compartmentalization, transport and trafficking of macromolecules, organelle biogenesis, cell division, motility and adhesion, and multicellularity. Prerequisites: Biological Sciences core. Open to graduate and medical students. Undergraduates may enroll with consent of instructor and prerequisites Biological Science core and Biochemistry 205.

2-5 units, Win (Theriot, J; Kopito, R; Straight, A; Nelson, W)

BIOSCI 215. Biochemical Evolution — Biochemical viewpoints on the evolutionary process. Topics: prebiotic biochemistry and the origins of life; adaptive organization of metabolism; enzyme polymorphisms and other biochemical aspects of population genetics; macromolecular phylogeny and protein clocks. Prerequisites: Biological Sciences core or substantial equivalent.

3 units, Win (Watt, W)

BIOSCI 216. Terrestrial Biogeochemistry — Nutrient cycling and the regulation of primary and secondary production in terrestrial, freshwater, and marine ecosystems; land–water and biosphere–atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminous students.

3 units, Spr (Vitousek, P) alternate years, not given next year

BIOSCI 217. Neuronal Biophysics — Biophysical descriptions and mechanisms of passive and excitable membranes, ion channels and pumps, action potential propagation, and synaptic transmission. Introduction to dynamics of single neurons and neuronal networks. Emphasis is on the experimental basis for modern research applications. Interdisciplinary aspects of biology and physics. Literature, problem sets, and student presentations. Prerequisites: undergraduate physics, calculus, and biology.

4 units, Spr (Schnitzer, M)

BIOSCI 221. Methods of Theoretical Population Biology — Formulation and analysis of problems in population biology using theoretical and computational numerical methods. Topics include deterministic and stochastic models, structured populations, stability and bifurcations, and data-driven models with applications in ecology and genetics. No auditors. Prerequisites: recent courses in advanced calculus and linear algebra.

4 units, Spr (Taljapurkar, S)
BIOSCI 222. Exploring Neural Circuits — Seminar. The logic of how neural circuits control behavior; how neural circuits are assembled during development and modified by experience. Emphasis is on primary literature. Topics include: neurons as information processing units; simple and complex circuits underlying sensory information processing and motor control; and development and plasticity of neural circuits. Advanced undergraduates with background in physical science, engineering, and biological science may apply to enroll. Recommended: background in neuroscience.

  3 units, Win (Luo, L)

BIOSCI 230. Molecular and Cellular Immunology — For graduate students and advanced undergraduates. Components of the immune system: structure and functions of antibody molecules; cellular basis of immunity and its regulation; molecular biology and biochemistry of antigen receptors and signaling pathways; genetic control of immunity and disease susceptibility. Emphasis is on key experimental approaches. Extra unit for discussion section on immunology literature. Prerequisite for undergraduates: Biological Sciences or Human Biology core, or consent of instructor.

  4-5 units, Aut (Jones, P)

BIOSCI 258. Neural Development — For Ph.D. students. Seminar; students also attend BIOSCI 158 lectures. Topics: neural induction and patterning, cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior.

  4 units, Spr (McConnell, S; Shen, K; Garner, C), alternate years, not given next year

BIOSCI 261A. Advanced Topics in Behavioral Biology — Seminar. The biological roots of aggression, competition, cooperation, and altruism. Prerequisite: 150/250, and consent of instructor.

  3 units, Aut (Sapolsky, R), alternate years, not given next year

BIOSCI 261B. Advanced Topics in Behavioral Biology — Seminar. The biological roots of aggression, competition, cooperation, and altruism. Prerequisite: 150/250, and consent of instructor.

  3 units, Win (Sapolsky, R), alternate years, not given next year

BIOSCI 267. Molecular Mechanisms of Neurodegenerative Disease — (Same as NENS 267.) The epidemic of neurodegenerative disorders such as Alzheimer’s and Parkinson’s disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.

  4 units, alternate years, not given this year (Kopito, R; Reimer, R; Wyss-Coray, A)

BIOSCI 290. Teaching of Biological Sciences — Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. May be repeated for credit. Prerequisite: consent of instructor.

  1-5 units, Aut, Win, Spr (Staff)

BIOSCI 290X. Out-of-Department Teaching of Biological Science — May be repeated for credit. Prerequisite: consent of instructor.

  1-5 units, Aut, Win, Spr (Staff)

BIOSCI 291. Development and Teaching of Core Experimental Laboratories — Preparation for teaching the core experimental courses (44X and 44Y). Emphasis is on lab, speaking, and writing skills. Focus is on updating the lab to meet the changing technical needs of the students. Must be taken prior to teaching either of the above courses. May be repeated for credit. Prerequisite: selection by instructor.

  1-2 units, Aut, Win (Malladi, S)

PRIMARILY FOR GRADUATE STUDENTS

BIOSCI 300. Graduate Research — For graduate students only. Individual research by arrangement with in-department instructors.

  1-15 units, Aut, Win, Spr, Sum (Staff)

BIOSCI 300X. Out-of-Department Graduate Research — Individual research by arrangement with out-of-department instructors. Master’s students: credit for work arranged with out-of-department instructors is restricted to Biological Sciences students and requires approved department petition. See http://biohonors.stanford.edu for information on research sponsors, units, petitions, deadlines, credit for summer research, and out-of-Sanford research, or email gastrula@stanford.edu. May be repeated for credit.

  1-15 units, Aut, Win, Spr, Sum (Staff)

BIOSCI 301. Frontiers in Biology — Limited to and required of first-year Ph.D. students in molecular, cellular, and developmental biology. Current research in molecular, cellular, and developmental biology emphasizing primary research literature. Held in conjunction with the department’s Monday seminar series. Students and faculty meet weekly before the seminar for a student presentation and discussion of upcoming papers.

  1-3 units, Aut, Win (Bergmann, D; Gozani, O)

  1 unit, Aut (Feldman, M)

  1 unit, Win (Vitousek, P; Ehrlich, P)

  1 unit, Spr (Feldman, M)

BIOSCI 305. DNA Repair and Genetic Toxicology — Seminar. Literature review and discussion of current research, emphasizing experimental approaches for studying DNA damage processing in bacteria, yeast, and mammalian cells. Enrollment limited to graduate students and advanced undergraduate students doing research in this field. Prerequisite: consent of instructor.

  1-3 units, Win, Spr (Hanawalt, P)

BIOSCI 306. Current Topics in Integrative Organismal Biology — Limited to and required of graduate students doing research in this field. At Hopkins Marine Station.

  1 unit, Aut (Epel, D)

BIOSCI 312. Ethical Issues in Ecology and Evolutionary Biology — Focus is on ethical issues addressed in Donald Kennedy’s Academic Duty and others of importance to academics and scientists in the fields of ecology, behavior, and evolutionary biology. Discussions led by faculty and outside guests. Satisfies ethics course requirement for ecology and evolutionary biology. Prerequisite: graduate standing in the ecology and evolutionary biology or marine program, or consent of instructor.

  1 unit, Aut (Ehrlich, P)

BIOSCI 315. Seminar in Biochemical Evolution — Literature review and discussion of current topics in biochemical evolution and molecular evolutionary genetics. Prerequisite: consent of instructor.

  1-3 units, Spr (Watt, W)
BIOSCI 325. The Evolution of Body Size — (Same as GES 325.) The influence of organism size on evolutionary and ecological patterns and processes. Focus is on integration of theoretical principles, observations of living organisms, and data from the fossil record. What are the physiological and ecological correlates of body size? Is there an optimum size? Do organisms tend to evolve to larger size? Does productivity control the size distribution of consumers? Does size affect the likelihood of extinction or speciation? How does size scale from the genome to the phenotype? How is metabolic rate involved in evolution of body size? What is the influence of geographic area on maximum body size?

2 units, Aut (Hadly, E; Payne, J)

1-3 units, Aut, Win, Spr (Walbot, V)

BIOSCI 344. Advanced Seminar in Cellular Biology — Enrollment limited to graduate students directly associated with departmental research groups working in cell biology.

1 unit, Aut, Win, Spr (Burkholder, W; Cyert, M; Fang, G; Friedman, J; Kepito, R; Stearns, T)

BIOSCI 346. Advanced Seminar on Prokaryotic Molecular Biology — Enrollment limited to graduate students associated with departmental research groups in genetics or molecular biology.

1 unit, Aut, Win, Spr (Long, S; Campbell, A; Spormann, A; Grossman, A; Burkholder, W; Yanofsky, C),

BIOSCI 358. Advanced Topics in Biological Sciences — Restricted to doctoral and medical students in neurobiology labs. May be repeated for credit.

1-3 units, Aut, Win, Spr (McConnell, S; Baker, B; Luo, L; Shen, K; Fernald, R)

BIOSCI 383. Seminar in Population Genetics — Literature review, research, and current problems in the theory and practice of population genetics and molecular evolution. Prerequisite: consent of instructor.

1-3 units, Aut, Win, Spr (Feldman, M)

BIOSCI 384. Theoretical Ecology — Recent and classical research papers in ecology, and presentation of work in progress by participants. Prerequisite: consent of instructor.

1-3 units, Aut, Win, Spr (Roughgarden, J)

BIOSCI 385. Speaking About Science — Communication about science occurs in settings such as presenting scientific work to an audience of peers, communicating difficult concepts in a classroom, or describing a new finding to a reporter. Focus is on practice in speaking about science, emphasizing strategies for making difficult ideas easy to understand and integrating visual aids into oral presentations. Limited to Ph.D. students.

2 units, alternate years, not given this year (McConnell, S)

BIOSCI 388. Communication and Leadership Skills — (Same as IPER 210.) Focus is on delivering information to policy makers and the lay public. How to speak to the media, congress, and the general public; how to write op-eds and articles; how to package ideas including titles, abstracts, and CVs; how to survive peer review, the promotion process, and give a job talk; and how to be a responsible science advocate.

2 units, not given this year (Root, T)

BIOSCI 459. Frontiers in Interdisciplinary Biosciences — (Same as BIO 459, BIOE 459, CHEMENG 459, CHEM 459, PSYCH 459.) (Crosslisted in departments in the schools of H&S, Engineering, and Medicine; students register through their affiliated department; otherwise register for CHEMENG 459.) For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce background for non-experts. Registered students attend all pre-seminars; others welcome. See http://www.stanford.edu/group/biox/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.

1 unit, Aut, Win, Spr (Robertson, C)

COGNATE COURSES
See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the department’s student services office for applicability of these courses to a major or minor program.

CEE 274A,B. Environmental Microbiology
3 units, A: Aut, Sum (Staff); B: Spr (Sporrman, A)

DBIO 210. Developmental Biology
5 units, Spr (Staff)

SBC 241. Biological Macromolecules — (Same as BIO 241, BIO-PHYS 241.)
3-5 units, Aut (Herschlag, D; Puglisi, J)

OVERSEAS STUDIES
These courses are approved for the Biological Sciences major and taught overseas at the campus indicated. Students should discuss with their major advisers which courses would best meet individual needs. Descriptions are in the “Overseas Studies” section of this bulletin, or at the Overseas Studies Office, 126 Sweet Hall.

AUSTRALIA
BIOSCI 110Z. Coral Reef Ecosystems — (Same as CEE 168X, EARTHSYS 120X, HUMBIO 111X.) Two units only counted for Biological Sciences major. GER:DB-EngrAppSci
3 units, Aut, Win, Win (T; Paynter, T; Yanofsky, C),
3 units, Spr (Kopito, R; Stearns, T)

BIOSCI 110Z. Coastal Resource Management — (Same as CEE 168Y, EARTHSYS 121X, HUMBIO 111X.) Two units only counted for Biological Sciences major. GER:DB-EngrAppSci
3 units, Spr (Staff)

BIOSCI 111Z. Coastal Forest Ecosystems — (Same as CEE 168Z, EARTHSYS 122X, HUMBIO 111X.) Two units only counted for Biological Sciences major. GER:DB-EngrAppSci
3 units, Aut (Pole, M; Duke, N)

DIVISION OF MARINE BIOLOGY
HOPKINS MARINE STATION
Emeriti: (Professor) John H. Phillips, Jr.
Director: George N. Somero
Professors: Barbara A. Block, Mark W. Denny, David Epel, William F. Gilly, Stephen R. Palumbi, George N. Somero, Stuart H. Thompson
Assistant Professor: Fiorenza Micheli
Assistant Professor (Research): Anthony DeTomaso
Lecturer: James Watanabe
Station Offices: Oceanview Blvd., Pacific Grove, CA 93950
Phone: (831) 655-6200
Email: information@marine.stanford.edu
Web Site: http://hopskins.stanford.edu

Courses given in Marine Biology at the Hopkins Marine Station have the subject code BIOHOPK. For a complete list of subject codes, see Appendix.

The Hopkins Marine Station, located 90 miles from the main University campus in Pacific Grove, was founded in 1892 as the first marine laboratory on the west coast of North America. The modern laboratory facilities on the 11-acre campus on Cabrillo Point house ten faculty, all members of the Department of Biological Sciences. The Miller Library has a collection of literature in marine science. The Hopkins faculty offers undergraduate and graduate courses in biology which focus on the marine realm and involve topics including oceanography, environmental and comparative physiology, molecular evolution, biomechanics, cellular biology, conservation biology, and neurobiology and behavior. Most courses have laboratory sections that exploit the potential of working with readily available marine
plants and animals. Small class sizes encourage close student-faculty interactions. Undergraduates have opportunities to carry out research projects with Hopkins faculty during the academic year or summer months. Courses are offered in Winter, Spring, and Summer quarters.

**COURSES**

5 units, Spr (Denny, M; Palumbi, S; Watanabe, J)

**BIOHOPK 44Y. Core Experimental Laboratory** — Laboratory and field projects provide working familiarity with the concepts, organisms, and techniques of plant and evolutionary biology, and ecology. Emphasis is on hands-on experimentation in the marine environment, analysis of data, and written and oral presentation of the experiments. Lab fee. Equivalent to BIOSCI 44Y. Corequisite: BIOHOPK 43. GER: DB-NatSci, WIM

5 units, Spr (Denny, M; Palumbi, S; Watanabe, J)

**BIOHOPK 56H. History and Philosophy of Science** — The nature of scientific inquiry, its logic, historical patterns, and sociology. Emphasis is on the unique aspects of the biological sciences.

2 units, Spr (Somero, G)

**BIOHOPK 161H/261H. Invertebrate Zoology** — (Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips. Prerequisite: Biological Sciences core or consent of instructor. GER: DB-NatSci

5 units, Win (Watanabe, J)

**BIOHOPK 162H/262H. Comparative Animal Physiology** — (Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the course work with a more intensive research focus, with more units, is available. Prerequisite: Biological Sciences core or consent of instructor. GER: DB-NatSci

5-8 units, alternate years, not given this year (Block, B)

**BIOHOPK 163H/263H. Oceanic Biology** — (Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeochemistry, and global change. Lectures, discussion, and field trips. Recommended: PHYSICS 21 or 51, CHEM 31, Biological Sciences core, or consent of instructor. GER: DB-NatSci

4 units, Win (Denny, M; Somero, G)

**BIOHOPK 164H/264H. Marine Botany** — (Graduate students register for 264H.) Phytoplankton and oceanic productivity; macrophytes and nearshore ecology; marine angiosperms from taxonomical, physiological, and ecological perspectives. Lectures, lab. Prerequisite: Biological Sciences core or consent of instructor. GER: DB-NatSci

5 units, Win (Connor, J), alternate years, not given next year

**BIOHOPK 166H/266H. Molecular Ecology** — (Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms. GER: DB-NatSci

5 units, Win (Palumbi, S)

**BIOHOPK 167H/267H. Nerve, Muscle, and Synapse** — (Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, 135; calculus; or consent of instructor. GER: DB-NatSci

5 units, Spr (Gilly, W)

**BIOHOPK 168H/268H. Marine Pollution** — (Graduate students register for 268H.) Major pollutants in marine organisms; how they are affected and how they cope.

2 units, Spr (Epel, D)

**BIOHOPK 169H/269H. Neurobiology and Behavior** — (Graduate students register for 269H.) The neural mechanism responsible for generating animal behavior. Topics: sensory ecology, neronal excitability, synaptic plasticity, and neural circuits. Lectures, discussions, demonstrations, and lab. Prerequisite: Biological Sciences core or consent of instructor. GER: DB-NatSci

5 units, Win (Thompson, S)

**BIOHOPK 170H/270H. Topics in Marine Biology** — (Graduate students register for 270H.) Primary literature. Prerequisite: Biological Sciences core or consent of instructor. May be repeated for credit.

1 unit, Win (Staff)

**BIOHOPK 171H/271H. Ecological and Evolutionary Physiology** — (Graduate students register for 271H.) The interplay between environmental factors, such as temperature, light, nutrient supply, salinity, and oxygen availability, and adaptive change at the physiological level. Emphasis is on marine species and the roles played by physiological adaptations in establishing their distribution and performance. Prerequisite: Biological Sciences core or consent of instructor. GER: DB-NatSci

4 units, Win (Somero, G)

**BIOHOPK 172H/272H. Marine Ecology** — (Graduate students register for 272H.) Introduction to the principles of ecology as applied to life in the sea. Population dynamics, community ecology, and the effects of man on the oceans. Lectures, lab. Prerequisite: Biological Sciences core or consent of instructor. GER: DB-NatSci

5 units, Win (Micheli, F)

**BIOHOPK 173H/273H. Marine Conservation Biology** — (Graduate students register for 273H.) The science of preserving marine diversity. Goal is to introduce students to major conservation issues associated with marine ecosystems. Topics include decline of open ocean fisheries, salmon conservation, bycatch issues in fisheries, use of marine reserves, marine invasions, marine pollution, and global warming. Includes five lectures from other universities who specialize in marine conservation.

1-3 units, alternate years, not given this year (Block, B)

**BIOHOPK 174H/274H. Experimental Design and Probability** — (Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biological Sciences core or consent of instructor. GER: DB-NatSci, WIM

3 units, Spr (Watanabe, J)

**BIOHOPK 175H. Problems in Marine Ecology and Ecophysiology** — Field-based, emphasizing individual and small group research for advanced undergraduates. Students learn field and laboratory techniques to address ecological, ecophysiological, and biomechanical problems faced by marine organisms. Original research projects may be integrated with ongoing research programs in the Hopkins Marine Life Refuge. Prerequisites: Biological Sciences core, consent of instructor. GER: DB-NatSci, WIM

10 units, Spr (Somero, G; Epel, D)
BIOHOPK 176H. Experimental Neurobiology — Lab, emphasizing methods in the neurosciences, including electrophysiological, biochemical, molecular, behavioral, and histological techniques. Students work on individual original research projects under guidance of the faculty. Prerequisites: strong interest in neurobiology and previous relevant course work, consent of instructors. GER: DB-NatSci, WIM
6-12 units, Spr (Thompson, S)

BIOHOPK 178H/278H. Polar Biology — (Graduate students register for 278H.) Seminar. The deep sea is the largest, least understood fraction of the biosphere. Organisms living here possess diverse adaptations to allow life under high pressure. Recent discoveries in deep-sea biology including the biology of the hydrothermal vents, and the technology that makes these advances possible. Prerequisites: Biological Sciences core, consent of instructor.
2 units, Spr (Somero, G)

BIOHOPK 182H/323H. Stanford at Sea — (Graduate students register for 323H; same as EARTHSYS 323, GES 323.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the BioSci major. GER: DB-NatSci
16 units, Spr (Block, B; Dunbar, R; Micheli, F), alternate years, not given next year

BIOHOPK 184H/284H. Holistic Biology: Monterey Bay and the Sea of Cortez — (Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems from complementary points of view, including scientific, historical, philosophical, and literary. The work and writings of Ed Ricketts and John Steinbeck and historical and contemporary works concerning marine ecology and fisheries. Field work, laboratory studies with living invertebrates, and an individual research project. Course includes a component in Baja California, Mexico. Only 6 units may count towards the BioSci major. GER: DB-NatSci
16 units, alternate years, not given this year (Gilly, W)

BIOHOPK 186H/286H. Ocean Pollution: Land, Air, and Sea Interactions — (Graduate students register for 286H.) The scientific basis of environmental pollution; how organisms protect themselves against toxicants; how protection can be overcome; policy issues in government regulation of pollution.
3 units, Win (Epel, D)

BIOHOPK 198H. Directed Instruction or Reading — May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research. Credit for work arranged with out-of-department instructors restricted to Biological Sciences majors and requires department approval.
1-15 units, Aut, Win, Spr, Sum (Staff)

BIOHOPK 199H. Undergraduate Research — Qualified undergraduates undertake individual work in the fields listed under 300H. Arrangements must be made by consultation or correspondence.
1-15 units, Aut, Win, Spr, Sum (Staff)

BIOHOPK 290H. Teaching of Biological Science — Open to upper-division undergraduates and graduate students. Experience in teaching lab biology or serving as a lecture course assistant. Prerequisite: consent of instructor.
1-13 units, Win, Spr, Sum (Staff)

BIOHOPK 300H. Research — Graduate study involving original work undertaken with staff in the fields indicated:
B. Block: Comparative Vertebrate Physiology — biomechanics, metabolic physiology and phylogeny of pelagic fishes, evolution of endothermy.
M. Denny: Biomechanics — the mechanical properties of biological materials and their consequences for animal size, shape, and performance.
A. De Tomaso: Developmental and Comparative Immunology, Stem Cell Biology — evolution of self/non-self recognition systems.

W. Gilly: Neurobiology — analysis of giant axon systems in marine invertebrates from molecular to behavioral levels.
F. Micheli: Marine Ecology — species interactions and community ecology, scale-dependent aspects of community organization, marine conservation and design of multi-species marine protected areas, behavioral ecology.

J. Watanabe: Marine Ecology — kelp forest ecology and invertebrate zoology.
1-15 units, Aut, Win, Spr, Sum (Staff)

SUMMER PROGRAM

The summer program is open to advanced undergraduate, graduate students, and postdoctoral students, and to teachers whose biological backdrops, teaching, or research activities can benefit from a summer’s study of marine life. Applications and further information may be obtained by writing to Hopkins Marine Station, Pacific Grove, CA 93950. Completed applications should be submitted by April 15. Applications received later are considered if space is still available.

Summer Quarter is divided into two terms. It is possible to register for either term, or for the full quarter. Registration is possible for only one course during each term.

FIRST TERM

BIOHOPK 179H/279H. Subtidal Communities — (Graduate students register for 279H.) Lectures, lab, and field trips treating shallow water marine communities. Emphasis is on local habitats and the introduction of physical environmental parameters, community composition, aspects of the biology of constituent species, and methods for subtidal studies. Prerequisites: scuba certification, scuba equipment, ocean diving experience, and some background in biology. GER: DB-NatSci
6 units, Sum (Watanabe, J)

BIOHOPK 274. Hopkins Microbiology Course — (Same as BIOSCI 274S, CEE 274S, GES 274S.) Four-week, intensive. The interplay among molecular, physiological, ecological, evolutionary and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.
9-12 units, Sum (Spormann, A; Francis, C)

BIOHOPK 277H. Biomechanics, Ecological Physiology, and Genetics of Intertidal Communities — Introduction to the mechanical and physiological design of wave-swept organisms. How different abiotic stresses (wave exposure, wind speed, temperature, light) influence marine animals and plants, and adaptive responses to these stresses. Lab introduces methods for measuring environmental stress and organismal responses. Recommended: background in algology, intertidal ecology, or invertebrate zoology; basic physics and calculus.
4 units, Sum (Denny, M; Somero, G; Palambci, S)
alternate years, not given next year
SECOND TERM
BIOHOPK 180H/280H. Problems in Subtidal Ecology — (Graduate students register for 280H.) Group and individual research projects focus on shallow water marine communities. Daily lectures, SCUBA dives, labs. Prerequisites: SCUBA certification; advanced or comparable experience, or 179H. GER: DB-NatSci
6 units, Sum (Watanabe, J)

BIOPHYSICS PROGRAM

Emeritus: Harden M. McConnell (Chemistry)
Director: William I. Weis
Professors: Russ Altman (Genetics, Medical Informatics), Steve Block (Applied Physics, Biological Sciences), Steven Boxer (Chemistry), Axel Brunger (Molecular and Cellular Physiology), Douglas Brutlag (Biochemistry), Gilbert Chu (Oncology), Mark Davis (Microbiology and Immunology), Sebastian Doniach (Physics, Applied Physics), James Ferrell (Molecular Pharmacology), Gary Glover (Radiology), Philip C. Hanawalt (Biological Sciences), Daniel Herschlag (Biochemistry), Keith O. Hodgson (Chemistry), Chaitan Khosla (Chemical Engineering, Chemistry), Brian Kobikia (Molecular and Cellular Physiology), Eric Kool (Chemistry), Ron Kopito (Biological Sciences), Roger D. Kornberg (Structural Biology), Michael Levitt (Structural Biology), Richard Lewis (Molecular and Cellular Physiology), David B. McKay (Structural Biology), Uel J. McMahan (Neurobiology), Tobias Meyer (Molecular Pharmacology), W. E. Moerner (Chemistry), Norbert Pelc (Bioengineering, Radiology), Joseph D. Puglisi (Structural Biology), Stephen Quake (Bioengineering), Stephen J. Smith (Molecular and Cellular Physiology), Edward I. Solomon (Chemistry), James A. Spudich (Biochemistry, Developmental Biology), William I. Weis (Structural Biology), Richard N. Zare (Chemistry)
Associate Professors: Judith Frydman (Biological Sciences), K. Christopher Garcia (Microbiology and Immunology, Structural Biology), Pehr Harbury (Biochemistry), Craig Levin (Radiology), Vijay Pande (Chemistry), Julie Theriot (Biochemistry)
Assistant Professors: Xiaoyuan Chen (Radiology), Jennifer Cochran (Bioengineering), Miriam Goodman (Molecular and Cellular Physiology), Merritt Maduke (Molecular and Cellular Physiology), Jianghong Rao (Radiology), Mark Schnitzer (Biological Sciences, Applied Physics)
Program Offices: Fairchild Building D118
Mail Code: 94305-5126
Phone: (650) 723-7576
Email: biophysics@med.stanford.edu
Web Site: http://med.stanford.edu/biophysics/

Courses given in Biophysics have the subject code BIOPHYS. For a complete list of subject codes, see Appendix.

The Biophysics Program offers instruction and research opportunities leading to the Ph.D. in Biophysics. Students admitted to the program may perform their graduate research in any appropriate department.

GRADUATE PROGRAM

For information on the University’s basic requirements for the Ph.D. degree, see the “Graduate Degrees” section of this bulletin.

A small number of qualified applicants are admitted to the program each year. Applicants should present strong undergraduate backgrounds in the physical sciences and mathematics. The graduate course program, beyond the stated requirements, is worked out for each student individually with the help of appropriate advisers from the Committee on Biophysics. The requirements and recommendations for the Ph.D. degree include:

1. Training in physics or chemistry equivalent to that of an undergraduate physics or chemistry major at Stanford.
2. Completion of the following background courses or their equivalents at other institutions:
   a) CHEM 131, 171, 173, and 175
   b) BIOC 200, 201
3. Completion of the following courses or their equivalents:
   a) SBIO 241 and 242
   b) at least four additional graduate level courses in physical or biological science
   c) BIOPHYS 250
   d) MED 255
4. Opportunities for teaching are available during the first nine quarters, at the discretion of the advising committee.
5. The student must prepare a dissertation proposal defining the research to be undertaken, including methods of procedure. This proposal should be submitted by Winter Quarter of the third year, and it must be approved by a committee of at least three members including the principal research adviser and at least one member from the Biophysics Program. The candidate must defend the dissertation proposal in an oral examination. The dissertation reading committee normally evolves from the dissertation proposal review committee.
6. The student must present a Ph.D. dissertation as the result of independent investigation and expressing a contribution to knowledge in the field of biophysics.
7. The student must pass the University oral exam, taken only after the student has substantially completed the research. The examination is preceded by a public seminar in which the research is presented by the candidate.

COURSES

3 units, Win (Glover, G)

BIOPHYS 228. Computational Structural Biology — (Same as SBIO 228.) Interatomic forces and interactions such as electrostatics and hydrophobicity, and protein structure in terms of amino acid properties, local chain conformation, secondary structure, domains, and families of folds. How protein motion can be simulated. Bioinformatics introduced in terms of methods that compare proteins via their amino acid sequences and their three-dimensional structures. Structure prediction via simple comparative modeling. How to detect and model remote homologues. Predicting the structure of a protein from knowledge of its amino acid sequence. Via internet.
3 units, Aut, Spr (Levitt, M)

BIOPHYS 232. Advanced Imaging Lab in Biophysics — (Same as BIOSCI 232, MCP 232.) Laboratory and lectures. Microscopy, emphasizing hands-on experience with a range of apparatus and techniques. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Advanced topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, optical trapping, and fiber optic methods. Limited enrollment. Recommended: basic physics, Biological Sciences core or equivalent, and consent of instructor.
4 units, Spr (Block, S; Schnitzer, M; Smith, S; Stearns, T)

BIOPHYS 241. Biological Macromolecules — (Same as BIOC 241, SBIO 241.) The physical and chemical basis of macromolecular function. The forces that stabilize biopolymers with three-dimensional structures and their functional implications. Thermodynamics, molecular forces, and kinetics of enzymatic and diffusional processes, and relationship to their practical application in experimental design and interpretation. Biological function and the level of individual molecular interactions and at the level of complex processes. Case studies. Prerequisites: introductory Biochemistry and Physical Chemistry or permission of instructor.
3-5 units, Aut (Herschlag, D; Puglisi, J; McKay, D; Garcia, K.C.; Ferrell, J; Block, S; Pande, V; Weis, W)
BIOPHYS 242. Methods in Molecular Biophysics — (Same as SBIO 242.) The potential utility of physical approaches to research, and how to evaluate literature that incorporates these methods. Experimental methods in molecular biophysics from theoretical and practical standpoints. Emphasis on x-ray diffraction and nuclear magnetic resonance spectroscopy. Additional topics include fluorescence spectroscopy, circular dichroism, calorimetry, and separation methods. Prerequisite: Physical Chemistry or permission of instructor. 
3 units, Win (Weis, W; Puglisi, J)

BIOPHYS 250. Seminar in Biophysics — Required of Biophysics graduate students. Presentation of current research projects and results by faculty in the Biophysics program. May be repeated for credit. 
1 unit, Aut, Win (Weis, W)

BIOPHYS 297. Bio-Inorganic Chemistry — (Same as CHEM 297.) Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents. 
3 units, not given this year

BIOPHYS 300. Graduate Research — Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor. 
1-18 units, Aut, Win, Spr, Sum (Staff)

BIOPHYS 399. Directed Reading — Prerequisite: consent of instructor. 
1-18 units, Aut, Win, Spr, Sum (Staff)

COGNATE COURSES
See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program’s student services office for applicability of these courses to a major or minor program.

BIOSCI 205. DNA Repair and Genomic Stability 
3 units, Spr (Hanawalt, P; Ford, J)

ECON 126. Economics of Health and Medical Care — (Same as BIO-MEDIN 156/256.) 
5 units, Aut (Bhattacharyya, J)

MCP 256. How Cells Work: Energetics, Compartment, and Coupling in Cell Biology 
4 units, Spr (Maduke, M; Lewis, R)

CHEMISTRY*

Emeriti: (Professors) William A. Bonner, James P. Collman, Carl Djerassi, Harden M. McConnell, John Ross, Douglas A. Skoog, Eugene E. van Tamelen
Chair: Richard N. Zare 
Vice Chair: Wray H. Huestis 
Associate Professors: Christopher E. D. Chidsey, Justin Du Bois, Vijay S. Pande, T. Daniel P. Stack
Assistant Professors: Jennifer J. Kohler, Dmitry V. Yandulov
Lecturers: John A. Flygare, Hilary Hua, Christopher R. Moylan
Courtesy Professors: Stacey F. Bent, Curtis W. Frank, Daniel Herschlag
Courtesy Assistant Professors: James K. Chen, Karlene A. Cimprich, Thomas J. Wandless
Director of Undergraduate Laboratories: Christopher R. Moylan

Department Offices: 121 S. G. Mudd
Mail Code: 94305-5080
Phone: (650) 723-2501
Web Site: http://www.stanford.edu/dept/chemistry/

Courses given in Chemistry have the subject code CHEM. For a complete list of subject codes, see Appendix.

Chemistry is central to many scientific disciplines and plays an important role in the emerging areas of biotechnology and material science. Fluorescent imaging of biological molecules, modeling of protein folding, manipulation of carbon nanotubes, development of new oxidation and polymerization catalysts, and synthesis of organic molecules for probing ion-channels are all research areas that are pursued actively in the Chemistry department. The overarching theme of these pursuits is a focus at the atomic and molecular levels, whether this concerns probing the reactivity of molecules as small as dihydrogen or synthesizing large polymer assemblies. The ability to synthesize new molecules and materials and to modify existing structures allows the exploration of properties of well-defined systems through systematic modification. The Chemistry department has a long-standing tradition of encouraging undergraduate majors to become involved in research during the academic year and through the 10-week Bing Summer Research Program.

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

Entrance Preparation — Entrance credit in the preparatory subjects of chemistry, physics, and especially mathematics provides flexibility in creating a four-year schedule for students intending to major in Chemistry.

Minimum Requirements —
Chemistry option: University Writing and General Education Requirements; CHEM 31A and B or 31X, 33, 35, 36, 130, 131, 134, 136, 151, 153, 171, 173, 174, 175, 176; MATH 41, 42, 51, 53, or CME 100, 102, 104; PHYSICS 41, 43, 44, 45, 46.

Biological chemistry option: University Writing and General Education Requirements; CHEM 31A and B or 31X, 33, 35, 36, 130, 131, 134, 136, 151, 171, 173, 176, 184, 185, 188, 189; BIOSCI 41, 42, 44X; MATH 41, 42, 51, 53, or CME 100, 102, 104; PHYSICS 41, 43.

In addition, CS 106A and B are recommended for students planning graduate study. All degree courses must be taken for a letter grade. For further information on the undergraduate program, see http://www.stanford.edu/dept/chemistry/undergrad/.
### TYPICAL SCHEDULE FOR A FOUR-YEAR PROGRAM

#### FIRST YEAR

<table>
<thead>
<tr>
<th>Subject and Catalog Number</th>
<th>Qtr. and Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 31X. Chemical Principles</td>
<td>A W S</td>
</tr>
<tr>

*Elective courses must be used to complete the University Writing, General Education, and Language Requirements. They may also be used to broaden one’s background in science and nonscience areas and to provide an opportunity for advanced study in Chemistry. Courses offered by other departments that may be of interest to Chemistry majors include BIOSCI 41, 42, 43; CHEMENG 20, 120A,B; CS 106A, B; ENGR 1; ENGR 50; MATH 52, 106, 109, 113, 131; MATSCI 50; PHYSICS 110; STATS 60, 110, 116.*

### MINORS

Courses required for a minor are CHEM 33, 35, 36, 130, 131, 134, 151, 171; MATH 51; and PHYSICS 21, 23, 25, or 28, 29, or 41, 43, 45 (no substitutions). All courses must be taken for a letter grade.

### AMERICAN CHEMICAL SOCIETY CERTIFICATION

Students who wish to be certified as having met the minimum requirements of the American Chemical Society for professional training must complete, in addition to the above requirements, CHEM 188 and 189, and 6 units of CHEM 190.

### HONORS PROGRAM

A B.S. degree in Chemistry with honors is available to those students interested in chemical research. Admission to the honors program requires a scientific grade point average (GPA) of 3.3 and an overall GPA of 3.0 in all University courses. Beyond the standard B.S. course requirements for each track, 9 units of CHEM 190 research credit, 9 units of course work need to be completed during the junior and senior academic years. For students graduating after 2006-07, a thesis, approved by a Chemistry research adviser, needs to be completed during the senior year. The use of a single course for multiple requirements for honors, major, minor, or coterminal requirements is not allowed. Students who wish to be admitted to the honors program should register in the department student services office in the Mudd Chemistry building.

CHEM 190 research units towards honors may be completed, once accepted into the program, in any laboratory within Chemistry or with courtesy faculty in Chemistry. Other chemical research can be approved through a formal petitioning of the undergraduate studies committee. At least 3 units of CHEM 190 must be completed during the senior year. Participation in a summer research program in an academic setting between junior and senior years may be used in lieu of 3 units of CHEM 190. For each quarter, a progress report reflecting the units undertaken is required. This report must be signed by the Chemistry faculty adviser and filed in the department student services office in Mudd Chemistry before the last day of finals in the quarter during which the research is performed.

The 9 units of course work must be completed from courses approved by the undergraduate studies committee. At least six of these units need to be taken from following CHEM courses: 153, 174, 175, 188, 189, 221, 223, 225, 235, 251, 253, 255, 271, 273, 275, 297. Courses from Mathematics (MATH 114 or higher), Physics (PHYSICS 100 or higher), Engineering, and Structural Biology or Biochemistry in the School of Medicine can be used to fulfill this requirement.

### TEACHING CREDENTIALS

The requirements for certification to teach chemistry in the secondary schools of California may be ascertained by consulting the section on credentials under the “School of Education” section of this bulletin and the Credential Administrator of the School of Education.

### GRADUATE PROGRAMS

The University’s basic requirements for the M.S., M.A.T., and Ph.D. degrees are discussed in the “Graduate Degrees” section of this bulletin.

### GENERAL REQUIREMENTS

**Placement Examinations** — Each new graduate student must take placement examinations on entrance. These consist of three written examinations of two hours each in the fields of inorganic, organic, and physical chemistry, and cover such material as ordinarily is given in a rigorous one-year undergraduate course in each of these subjects. Students majoring in biophysical chemistry or chemical physics must take examinations in biophysical or chemical physics, physical chemistry, and organic or inorganic chemistry. All placement examinations are given the week before instruction begins in Autumn Quarter, and must be taken at that time. Each new graduate student meets with a member of the graduate study committee to define a program of courses based on results of the placement examinations.

Candidates for advanced degrees must have a minimum grade point average (GPA) of 3.0 for all Chemistry lecture courses as well as for all courses taken during graduate study. Required courses must be taken for a letter grade. Most course work ends in the second year of studies and students will then focus on full-time dissertation research. All prospective Ph.D. candidates, regardless of the source of financial support, are required to gain teaching experience as an integral part of graduate training. During the period in which a dissertation is being read by members of the faculty, candidates must be available for personal consultation until the dissertation has had final department approval.

### MASTER OF SCIENCE

The Master of Science is available only to current Ph.D. students or as part of a coterm program. Applicants for the M.S. degree in Chemistry are required to complete, in addition to the requirements for the bachelor’s degree, a minimum of 45 units of work and a M.S. thesis. Of the 45 units, approximately two-thirds must be in the department and must include at least 12 units of graduate-level lecture courses exclusive of the thesis. Of the 12 units, at least 6 units must be from CHEM 221, 223, 225, 251, 253, 255, 271, 273, 275, 276, or 297.

### DOCTOR OF PHILOSOPHY

Graduate students are eligible to become formal candidates for the Ph.D. degree after taking the department placement examinations, satisfactorily completing most of the formal lecture course requirements, and beginning satisfactory progress on a dissertation research project. They then file for admission to candidacy for the Ph.D. degree. This filing must be done before June of the second year of graduate registration.

After taking the departmental placement examinations, students select research advisers by first interviewing members of the Chemistry faculty about their research. Students then file an Application to Start Research form with the Department of Chemistry graduate study committee and begin research on their Ph.D. dissertation under the supervision of the adviser. All students in good standing are required to start research by the end of the Winter Quarter of the first year of graduate registration.

There is no foreign language requirement for the Ph.D. degree. Candidates for the Ph.D. degree are required to participate continually in the department colloquium (CHEM 300), and in the division seminar of the major subject. In addition, continuous enrollment in CHEM 301 is expected after the student has chosen a research supervisor. As part of graduate training, Ph.D. candidates are required to gain experience as teaching assistants.
Before candidates may request scheduling of the University oral examination, clearance must be obtained from the major professor and the chair of the department’s Graduate Study Committee. Conditions that must be fulfilled before clearance is granted vary with the different divisions of the department and may be ascertained by consulting the chair of the committee.

It is the policy of the department to encourage and support in every possible way the pursuit of research and other advanced work by qualified students. Information about faculty members with lists of their recent research publications is found in Chemistry at Stanford, the Directory of Graduate Research published by the American Chemical Society, and at http://www.stanford.edu/dept/chemistry/faculty.html.

COURSE REQUIREMENTS

Students may major in biophysical, inorganic, organic, or physical chemistry. All graduate students are required to take six graduate-level lecture courses (course numbers greater than 199) of at least 3 units each in chemistry or related disciplines (for example, biochemistry, electrical engineering, mathematics, pharmacology, physics, and so on), to be selected in consultation with their research adviser and the Graduate Study Committee. At least four of these courses should be taken by the end of the first year. Required courses must be taken for a letter grade.

In addition, students majoring in organic chemistry must take 3 units of CHEM 231 in the second year and 3 units of 233 in the second and third year. Students in physical or biophysical chemistry or chemical physics must take CHEM 271, 273, and 275 in the first year, and 2 units of CHEM 278 in the second and third year. Students majoring in inorganic chemistry must take 3 units of CHEM 258 in the second, third, and fourth year.

CHEMICAL PHYSICS

Students with an exceptionally strong background in physics and mathematics may, upon special arrangement, pursue a program of studies in chemical physics.

PH.D. MINOR

Candidates for the Ph.D. degree in other departments who wish to obtain a minor in chemistry must complete, with a GPA of 3.0 or higher, 20 graduate-level units in Chemistry including four lecture courses of at least 3 units each.

FELLOWSHIPS AND SCHOLARSHIPS

In addition to school fellowships and scholarships open to properly qualified students, there are several department fellowships in chemistry. Undergraduate scholarships are administered through the Financial Aid Office. Teaching assistantships and research assistantships are open to graduate students. Graduate fellowships, scholarships, and teaching assistantships are administered through the Department of Chemistry.

COURSES

WIM indicates that the course satisfies the Writing in the Major requirements.

Note—Lab fees are a minimum of $75 per quarter and are not refundable.

UNDERGRADUATE

CHEM 22N. Naturally Dangerous — Stanford Introductory Seminar. Preference to freshmen. Topics from Collman’s Naturally Dangerous: Surprising Facts About Food, Health, and the Environment. Designed for nonscientists, but also of interest to scientists and engineers. 2 units, Aut, Spr (Collman, J)

CHEM 24N. Nutrition and History — Stanford Introductory Seminar. Preference to freshmen. Intended to broaden the introductory chemistry experience. The biochemical basis of historically important nutritional deficiencies (vitamins, minerals, starvation, metabolic variants that predispose to disease) and environmental toxins is related to physiological action and the sociological, political, and economic consequences of its effect on human populations. Prerequisite: high school chemistry. Recommended: 31A, B, or 31X or 33. 2 units, Spr (Huestis, W)

CHEM 25N. Science in the News — Stanford Introductory Seminar. Preference to freshmen. Possible topics include: diseases such as avian flu, HIV, SARS, and malaria; environmental issues such as climate change, and atmospheric pollution, and human population; evolution; stem cell research; nanotechnology; and drug development. The scientific basis for these topics to have an intelligent discussion of societal and political implications. Sources include the popular media and scientific media for the non-specialist, especially those available on the web.

3 units, Aut (Andersen, H)

CHEM 27N. Lasers: The Light Fantastic — Stanford Introductory Seminar. Preference to freshmen. Introduction to lasers and their impact on everyday life. The operation of lasers using concepts of atomic and molecular energy levels, optics, and resonance. The use of lasers to produce guide stars for astronomy, sculpt the cornea, measure molecules in the ozone layer, transmit optical information over the web, measure the distance to the moon, and observe a single protein molecule in action. Prerequisites: CHEM 31A or X, or PHYSICS 23 and 25, or equivalents. GER: DB-NatSci

3 units, Win (Moerner, W)

CHEM 31A. Chemical Principles I — For students with moderate or no background in chemistry. Stoichiometry; periodicity; simple models of ionic and covalent bonding; dissolution/precipitation, acid/base, and oxidation/reduction reactions; gas laws; phase behavior; rates of reactions. Emphasis is on skills to address structural and quantitative chemical questions; lab provides practice. Recitation. Prerequisite: 31A. GER: DB-NatSci

4 units, Aut (Chidsey, C)

CHEM 31B. Chemical Principles II — Chemical equilibria; rates and mechanisms to reach equilibrium; thermochemistry, free energy, and relation to equilibrium; quantum concepts, and atomic and molecular orbital theory. Lab provides practice. Recitation. Prerequisite: 31A. GER: DB-NatSci

4 units, Win (Andersen, H)

CHEM 31X. Chemical Principles — Accelerated; for students with substantial chemistry background. Chemical equilibria concepts, equilibrium constants, acids and bases, chemical thermodynamics, quantum concepts, models of ionic and covalent bonding, atomic and molecular orbital theory, periodicity, and bonding properties of matter. Recitation. Prerequisites: high school chemistry and algebra. Recommended: high school physics. GER: DB-NatSci

4 units, Aut, Win (Waymouth, R; Fayer, M), Sum (Staff)

CHEM 33. Structure and Reactivity — Organic chemistry, functional groups, hydrocarbons, stereochemistry, thermochemistry, kinetics, chemical equilibria. Recitation. Prerequisite: 31AB, or 31X, or an AP Chemistry score of 4 or 5. GER: DB-NatSci

4 units, Win (Stack, T; Kohler, J), Spr (Wender, P), Sum (Staff)

4 units, Aut (Huestis, W), Spr (Du Bois, J), Sum (Staff)

CHEM 36. Organic Chemistry Laboratory I — Techniques for separations of compounds; distillation, crystallization, extraction, and chromatographic procedures. Lecture treats theory; lab provides practice. Limited enrollment Spring Quarter; preference to students who have completed CHEM 33. GER: DB-NatSci

3 units, Aut (Moylan, C), Spr (Hua, H), Sum (Moylan, C)

CHEM 110. Directed Instruction/Reading — Undergraduates pursue a reading program under supervision of a faculty member in Chemistry; may also involve participation in lab. Prerequisites: superior work in 31A, B, 31X, or 33; and consent of instructor and the Chemistry undergraduate study committee.

1-2 units, Aut, Win, Spr, Sum (Staff)
CHEM 111. Exploring Chemical Research at Stanford — Preference to freshmen and sophomores. Department faculty describe their cutting-edge research and its applications.

1 unit, Win (Kohler, J)

CHEM 131. Organic Polyfunctional Compounds — Aromatic compounds, poly saccharides, amino acids, proteins, natural products, dyes, purines, pyrimidines, nucleic acids, and polymers. Prerequisite: 35. GER: DB-NatSci 3 units, Aut (Pande, V), Win (Trost, B)

CHEM 134. Analytical Chemistry Laboratory — Methods include gravimetric, volumetric, spectrophotometric, and electrometric. Lab. Prerequisite: 130. GER: DB-NatSci, WIM 5 units, Spr (Moylan, C)

CHEM 135. Physical Chemical Principles — Terminal physical chemistry for non-chemistry majors. Emphasis is on portions of physical chemistry most useful for students of the life sciences. Introduction to chemical thermodynamics: rate laws, integration of rate laws, reaction mechanisms, enzyme kinetics, first, second, and third laws, thermochemistry, entropy, free energy, chemical equilibrium, osmotic pressure, other colligative properties. Prerequisites: 31A,B, or 31X, calculus. GER: DB-NatSci 3 units, Win (Pecora, R)

CHEM 136. Synthesis Laboratory — Advanced synthetic methods in organic and inorganic laboratory chemistry. Prerequisites: 35, 130. GER: DB-NatSci 3 units, Win (Yandulov, D)

CHEM 137. Special Topics in Organic Chemistry — (Formerly 181.) Chemical view of the biological processes of life. Topics include: structure and function of proteins, peptides, and nucleic acids; and how to use chemistry to mediate biological processes. GER: DB-NatSci 3 units, Win (Flygare, J)

CHEM 151. Inorganic Chemistry I — Theories of electronic structure, stereochemistry, and symmetry properties of inorganic molecules. Topics: ionic and covalent interactions, electron-deficient bonding, and molecular orbital theories. Emphasis is on the chemistry of the metallic elements. Prerequisites: 35. Recommended: 171. GER: DB-NatSci 3 units, Win (Stack, T)

CHEM 153. Inorganic Chemistry II — The theoretical aspects of inorganic chemistry. Group theory; many-electron atomic theory; molecular orbital theory emphasizing general concepts and group theory; ligand field theory; application of physical methods to predict the geometry, magnetism, and electronic spectra of transition metal complexes. Prerequisites: 151, 173. GER: DB-NatSci 3 units, Spr (Solomon, E)

CHEM 171. Physical Chemistry — Chemical thermodynamics; fundamental principles. Gibbssian equations, systematic deduction of equations, equilibrium conditions, phase rule, gases, solutions. Prerequisites: 31A,B, or 31X, 35; MATH 51. GER: DB-NatSci 3 units, Aut (Pande, V)

CHEM 173. Physical Chemistry — Introduction to quantum chemistry: the basic principles of wave mechanics, the harmonic oscillator, the rigid rotator, infrared and microwave spectroscopy, the hydrogen atom, atomic structure, molecular structure, valence theory. Prerequisites: MATH 51, 53; PHYSICS 51, 53, 55. GER: DB-NatSci 3 units, Win (Boxer, S)

CHEM 174. Physical Chemistry Laboratory I — Experimental investigations in spectroscopy, thermodynamics, and electronics. Students take measurements on molecular systems, design and build scientific instruments, and computer-automate them with software that they write themselves. Prerequisites: 134, PHYSICS 56. Corequisites: 173, MATH 53. GER: DB-NatSci 4 units, Win (Moylan, C)

CHEM 176. Physical Chemistry Laboratory II — Use of chemical instrumentation to study physical chemical time-dependent processes. Experiments include reaction kinetics, fluorimetry, and nuclear magnetic and electron spin resonance spectroscopy. Lab. Prerequisites: 173, 174, previous or concurrent enrollment in 175. GER: DB-NatSci 3 units, Spr (Dai, H)

CHEM 184. Biological Chemistry Laboratory — Modern techniques in biological chemistry including protein purification, characterization of enzyme kinetics, heterologous expression of His-tagged fluorescent proteins, site-directed mutagenesis, and single-molecule fluorescence microscopy. Prerequisite: 188. 4 units, Spr (Efrad, D; Kool, E; Zare, R)

CHEM 185. Biochemistry III — Advanced biophysical chemistry. Topics may include spectroscopy and other structure elucidation techniques, photochemistry, advanced quantum mechanics and statistical mechanics, and polymer structure and dynamics, emphasizing biological macromolecules and higher order systems. 3 units, not given this year

CHEM 188, Biochemistry I — (Same as BIOSCI 188/288, CHEMENG 188/288.) Chemistry of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties of proteins including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Pre- or corequisites: BIOSCI 41, CHEM 131, and CHEM 135 or CHEM 171. GER: DB-NatSci 3 units, Aut (Kohler, J)

CHEM 189. Biochemistry II — (Same as BIOSCI 189/289, CHEMENG 189/289.) Metabolism. Glycolysis, gluconeogenesis, citric acid cycle, oxidative phosphorylation, pentose phosphate pathway, glycogen metabolism, fatty acid metabolism, protein degradation and amino acid catabolism, protein translation and amino acid biosynthesis, nucleotide biosynthesis, DNA replication, recombination and repair, lipid and steroid biosynthesis. Medical consequences of impaired metabolism. Therapeutic intervention of metabolism. Prerequisite: 188/288. GER: DB-NatSci 3 units, Win (Khosla, C)

GRADUATE

CHEM 221. Advanced Organic Chemistry — Molecular orbital theory and orbital symmetry. Thermochemistry and thermochemical kinetics. Unimolecular reaction rate theory. Methods of determining organic reaction mechanisms from a theoretical and experimental point of view. Prerequisites: 137, 175. 3 units, Aut (Du Bois, J)

CHEM 223. Advanced Organic Chemistry — Continuation of 221 with emphasis on physical methods. Prerequisite: 221 or consent of instructor. 3 units, Win (Trost, B)
CHEM 225. Advanced Organic Chemistry — Continuation of 223. Organic reactions, new synthetic methods, conformational analysis, and exercises in the syntheses of complex molecules. Prerequisite: 223 or consent of instructor.
3 units, Spr (Wender, P)

CHEM 227. Topics in Organic Chemistry — Possible topics: synthetic organic chemistry, photochemistry, inorganic-organic chemistry, bio-organic chemistry, reaction mechanisms, stereochemistry, structural chemistry of organic and biological molecules. May be repeated for credit.
3 units, Aut (Du Bois, J)

1 unit, Aut, Win, Spr (Kohler, J)

CHEM 231. Organic Chemistry Seminar Presentation — Required of graduate students majoring in organic chemistry for the year in which they present their organic seminar. Second-year students must enroll all quarters.
1 unit, Aut, Win, Spr (Waymouth, R)

CHEM 233A,B,C. Creativity in Organic Chemistry — Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C.
1 unit, A: Aut; B: Spr; C: Spr (Waymouth, R)

CHEM 235. Applications of NMR Spectroscopy — The uses of NMR spectroscopy in chemical and biochemical sciences, emphasizing data acquisition for liquid samples and including selection, setup, and processing of standard and advanced experiments.
3 units, Win (Lynch, S)

CHEM 237. Electrochemistry — Principles of electrochemistry and their application to redox systems, electron transfer, electroanalysis, electrodeposition, electrocatalysis, batteries, and fuel cells. Prerequisite: 171 or equivalent.
3 units, Win (Chidsey, C)

CHEM 251. Advanced Inorganic Chemistry — Chemical reactions of inorganic compounds with focus on mechanisms of reactions mediated by inorganic and organometallic complexes. The structural and electronic basis of reactivity including oxidation and reduction; kinetics and thermodynamics of inorganic reactions. Prerequisite: one year of physical chemistry.
3 units, Aut (Yandulov, D)

CHEM 253. Advanced Inorganic Chemistry — Electronic structure and physical properties of transition metal complexes. Ligand field and molecular orbital theories, magnetism and magnetic susceptibility, electron paramagnetic resonance including hyperfine interactions and zero field splitting and electronic absorption spectroscopy including vibrational interactions. Prerequisite: 153 or the equivalent.
3 units, Win (Solomon, E)

3 units, Spr (Waymouth, R)

CHEM 258A,B,C. Research Progress in Inorganic Chemistry — Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.
1 unit, A: Win; B: Spr; C: Aut, Win (Yandulov, D)

CHEM 259. Inorganic Chemistry Seminar — Required of graduate students majoring in inorganic chemistry.
1 unit, Aut, Win, Spr (Solomon, E)

CHEM 271. Advanced Physical Chemistry — The principles of quantum mechanics. General formulation, mathematical methods, and elementary applications of quantum theory to the structure of atoms and molecules, including variational procedures, perturbation theory, operator and matrix methods, theory of angular momentum, and elements of the electronic structure of atoms. Prerequisite: 175.
3 units, Aut (Fayer, M)

CHEM 273. Advanced Physical Chemistry — Topics in advanced quantum mechanics: vibrations and rotations of polyatomic molecules (normal modes, anharmonicity, wavefunctions and energy levels of rigid rotations, vibration-rotation interaction), ab initio electronic structure theory (Hartree-Fock, configuration interaction, multiconfiguration self-consistent-field, and many-body perturbation theory techniques), angular momentum theory (operators and wavefunctions, Clebsch-Gordan coefficients, rotation matrices), time-dependent quantum mechanics (time evolution operator, Feynman path integrals, scattering theory, Born approximation, Lipmann-Schwinger equation, correlation functions), interaction of radiation and matter (semiclassical and quantum theories of radiation, transition probabilities, selection rules). Prerequisite: 271 or PHYSICS 230.
3 units, not given this year

CHEM 275. Advanced Physical Chemistry — The principles and methods of statistical mechanics from the ensemble point of view, statistical thermodynamics, heat capacities of solids and polyatomic gases, chemical equilibria, equations of state of fluids, and phase transitions. Prerequisite: 271.
3 units, Win (Pande, V)

CHEM 276. Advanced Physical Chemistry — Time-dependent statistical mechanics: ensemble theory for equilibrium and nonequilibrium systems; static and dynamic correlation functions for fluctuating equilibrium systems; the relationship of correlation functions, spectroscopy, and transport; dynamical models used in chemistry, including classical mechanics, quantum mechanics, Brownian dynamics, Smoluchowski dynamics, and Markov processes. Applications to topics in physical chemistry. Prerequisite: 275.
3 units, not given this year

CHEM 277. Topics in Physical Chemistry — Possible topics: structure elucidation using diffraction techniques, advanced statistical mechanics, crystal field theory, advanced quantum mechanics, magnetic relaxation, advanced thermodynamics, chemical applications of group theory. May be repeated for credit. Prerequisite: 275 or consent of instructor.
3 units, Spr (Pecora, R)

CHEM 278A,B. Research Progress in Physical Chemistry — Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written progress report (B).
1 unit, A: Win; B: Win (Pecora, R)

CHEM 279. Physical Chemistry Seminar — Required of graduate students majoring in physical chemistry. May be repeated for credit.
1 unit, Aut, Win, Spr (Dai, H)

CHEM 280. Single-Molecule Spectroscopy and Imaging — Theoretical and experimental techniques necessary to achieve single-molecule sensitivity in laser spectroscopy; interaction of radiation with spectroscopic transitions; systematics of signals, noise, and signal-to-noise; modulation and imaging methods; and analysis of fluctuations; applications to modern problems in biophysics, cellular imaging, physical chemistry, single-photon sources, and materials science. Prerequisites: 271, previous or concurrent enrollment in 273.
3 units, not given this year
CHEM 297. Bio-Inorganic Chemistry — (Same as BIOPHYS 297.) Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents.

3 units, not given this year

CHEM 299. Teaching of Chemistry — Required of all teaching assistants in Chemistry. Techniques of teaching chemistry by means of lectures and labs.

1-3 units, Aut, Win, Spr (Moylan, C)

CHEM 300. Department Colloquium — Required of graduate students. May be repeated for credit.

1 unit, Aut, Win, Spr (Du Bois, J)

CHEM 301. Research in Chemistry — Required of graduate students who have passed the qualifying examination. Open to qualified graduate students with consent of major professor. Research seminars and directed reading deal with newly developing areas in chemistry and experimental techniques. May be repeated for credit.

2 units, Aut, Win, Spr, Sum (Staff)

CHEM 309. Navigating Career Options for Ph.D. Chemists — Planning a post-graduate career. Topics include career options, job search strategies, job application process, long-term career planning, and minority issues in science careers. Workshops focused on developing professional skills working with CDC and CTL, and panel discussions with chemistry Ph.D.s working in a range of fields.

1 unit, Sum (Zare, R)

CHEM 459. Frontiers in Interdisciplinary Biosciences — (Same as BIOC 459, BIOE 459, BIOSCI 459, CHEMENG 459, PSYCH 459.) Crosslisted in departments of the schools of H&S, Engineering, and Medicine; students register through their affiliated department; otherwise register for CHEMENG 459.) For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://www.stanford.edu/group/biox/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.

1 unit, Aut, Win, Spr (Robertson, C)

RESEARCH AND SPECIAL ADVANCED WORK

CHEM 190. Introduction to Methods of Investigation — Limited to undergraduates admitted under the honors program or by special arrangement with a member of the teaching staff. For general character and scope, see 200. Prerequisite: 130. Corequisite: 300.

1-5 units, Aut, Win, Spr, Sum (Staff)

CHEM 200. Research and Special Advanced Work — Qualified graduate students undertake research or advanced lab work not covered by listed courses under the direction of a member of the teaching staff. For research and special work, students register for 200.

1-15 units, Aut, Win, Spr, Sum (Staff)

CLASSICS

Emeriti: (Professors) Mark W. Edwards, Marsh H. McCall, Jr.,* Susan Treggiari, Michael Wigodosky; (Professor, Teaching): Edward Spofford
Chair: Richard P. Martin
Graduate Director: Walter Scheidel
Undergraduate Director: Maud Gleason
Professors: Alessandro Barchiesi, Susanna Braund, Andrew M. Devine, Richard P. Martin, Ian Morris (Classics, History), Reviel Netz, Andrea Nightingale (Classics, Comparative Literature), Josiah Ober (Classics, Political Science), M. Rush Rehm (Classics, Drama), Walter Scheidel, Michael Shanks, Susan A. Stephens
Associate Professors: Joseph Manning, Jody Maximin (Art and Art History, Classics), Jennifer Trimble
Assistant Professors: Giovanna Ceserani, Grant Parker
Associate Professor (Teaching): Anastasia-Erasmia Peponi
Lecturers: Maud Gleason, Patrick Hunt, Norbert Lain
* Recalled to active duty.

Department Offices: Building 20, Main Quad
Mail Code: 94305-2080
Phone: (650) 723-0479
Email: msgsm@stanford.edu
Web Site: http://www.stanford.edu/dept/classics

Courses given in Classics have the subject codes CLASSART, CLASSGEN, CLASSGRK, CLASSHIS, and CLASSLAT. For a complete list of subject codes, see Appendix.

The study of Classics has traditionally centered on the literature and material culture of ancient Greece and Rome, including Greek and Latin language, literature, philosophy, history, art, and archaeology. At Stanford, Classics also explores ancient Egypt; ancient China and the modern world; the Iron Age, Hellenistic period, and late antique cultures; law; papyrology; and ancient science. The department’s faculty approach Classics from an interdisciplinary perspective that crosses geographical, temporal, and thematic territories. Studying ancient epic poetry can lead to looking at modern cinema afresh; ancient Athenian politics opens new perspectives on modern politics; and Roman studies present cultural parallels just as Latin illuminates the history of English and the Romance languages. In short, Classics at Stanford is an interdisciplinary subject concerned not only with Greek and Roman civilization but also with the interaction of cultures and societies that influenced the ancient Mediterranean basin and continue to influence human society across the globe.

UNDERGRADUATE PROGRAMS

The department offers eight options for degrees in Classics: Classical Studies; Classical Studies with a Philosophy and Literature Focus; Ancient History; Greek; Greek with Philosophy and Literature; Latin; Latin with Philosophy and Literature; and Greek and Latin. Each major can be completed in conjunction with a second major in the sciences or in other humanities departments. The department also offers minors in classical languages; history; and literature and philosophy.

BACHELOR OF ARTS

Those interested in majoring in Classical Studies, Classical Studies with a Philosophy and Literature Focus, Greek, or Latin are encouraged to declare at the beginning of their junior year, but are urged to discuss their plans with the undergraduate director as early as possible. Students who choose to major in Greek and Latin (option 8) should begin the curriculum as soon as possible, since it is difficult to complete the language requirements without an early start; those with no previous knowledge of Latin or Greek should begin study in the freshman year or as early as possible in the sophomore year.

To declare the major, a student must fill out the Declaration of Major on Axess and meet with the undergraduate director in the Department of
Classics. At that time, the undergraduate director assigns each student a department adviser who helps to prepare a program of study; students should meet with their advisers at least once a quarter. Each student’s progress towards fulfillment of the major requirements is recorded in a file kept in the main office. It is the student’s responsibility to work with his or her adviser in keeping this file up to date.

The B.A. degree may be earned by fulfilling the requirements for one of the following options:

1. **Classical Studies**: Courses counted for the degree must be taken for a letter grade. This track is declared on Axess. Students are encouraged to meet with the undergraduate director to discuss options for pursuing a period of study in the Mediterranean region. This major is recommended for students who wish to study the classical civilizations in depth but do not wish to study the languages to the extent required by options 2, 3, and 4. It is not suitable for students who wish to do graduate work in Classics or to teach Latin or Greek in high school, as the language work is insufficient for these purposes. Students must complete at least 60 units of approved courses including:
   - a) Classics majors seminar (CLASSGEN 176)
   - b) at least two courses in Latin or Greek at the 100 level or higher, or one course in one of the languages at the 100 level or higher plus the series 1, 2, 3, or 51 and 52 in the other language (or an equivalent approved by the department)
   - c) at least one course in each of the following groups:
     1) ancient history
     2) art and archaeology
     3) literature in translation
     4) science and philosophy
     5) religion or mythology

2. **Classical Studies with a Philosophy and Literature Focus**: Courses counted for the degree must be taken for a letter grade. This track is not declared on Axess. Students are encouraged to meet with the undergraduate director to discuss options for pursuing a period of study in the Mediterranean region. Students must complete at least 65 units of approved courses including:
   - a) Classics majors seminar (CLASSGEN 176)
   - b) one course in Classics in each of the following areas:
     1) ancient history
     2) art and archaeology
     3) literature in translation
     4) philosophy and history of science
     5) religion or mythology
   - c) two courses in Latin or Greek at the 100 level or higher, or one course in one of the languages at the 100 level or higher plus the series 1,2,3, or 51,52 in the other language.
   - d) Writing in the Major (WIM) in the Philosophy department (one introductory Philosophy course)
   - e) one course in each of the following areas:
     1) aesthetics, ethics, and social and political philosophy (PHIL 170 series)
     2) philosophy of language, mind, metaphysics, and epistemology (PHIL 180 series)
     3) history of philosophy (above 100 level)
   - f) PHIL 81. Philosophy and Literature
   - g) two related courses in Classics or Philosophy. Students may double count a Classics course in philosophy or ancient science for one of the two related courses provided that this course fulfills the Philosophy and Literature requirements and is approved by a member of the committee in Philosophy and Literature.
   - h) Philosophy and literature capstone seminar in the PHIL 194 series

3. **Ancient History Major**: at least 60 units of approved courses. Courses counted for the degree must be taken for a letter grade. This track is declared on Axess. Students are encouraged to meet with the undergraduate director to discuss options for pursuing a period of study in the Mediterranean region. Students must satisfy four requirements:
   - a) Writing in the Major (WIM) Requirement fulfilled by taking the Majors Seminar (CLASSGEN 176).
   - b) core requirements: majors must take at least three survey courses in ancient history
   - c) depth requirement: majors must take at least 40 units of ancient history and civilization courses, drawn from courses with CLASSHIS and CLASSGEN prefixes, IJHUM 31A,B. The Ancient Empires, may be counted toward this or the core requirement. Courses chosen must be approved in advance by the undergraduate director. With the approval of the instructor and the undergraduate director, students may substitute graduate seminars in ancient history for some of these courses.
   - d) breadth requirement: majors must take at least 4 units in each of the following areas: archaeology and art; comparative ancient civilizations; and historical and social theory. The courses chosen must be approved in advance by the undergraduate director, and are normally chosen from the list of areas below:
     1. archaeology and art: for example, any course with the CLASS ART prefix; CASA 1/201, 90, 301; ARTHIST 120A, 200, 200C.
     2. comparative ancient civilizations: majors must take a course on the ancient world outside the Mediterranean and western Asia, such as ANTHSCI 3, 7, 103, 141; HISTORY 192.
     3. historical and social theory: for example, CASA 1/201, 90; HIST- TORY 107, 206; SOC 1, 110, 113, 140, 142, 170.

4. **Greek**: Courses counted for the degree must be taken for a letter grade. This track is declared on Axess. Beginning courses in Greek, if required, may be counted towards the total of 60 units. Relevant courses in other departments of the humanities may count towards the major with the consent of the undergraduate director. Students are encouraged to meet with the undergraduate director to discuss options for pursuing a period of study in the Mediterranean region. Students must complete at least 60 units of approved courses including:
   - a) Classics majors seminar (CLASSGEN 176)
   - b) a minimum of 31 units in Greek courses at the 100 level or higher.
     It is recommended that one of these courses be CLASSGRK 175A, although this course should not be taken until students have completed three years of Greek.
   - c) at least one course in each of the following groups:
     1) history or archaeology
     2) literature in translation
     3) religion or philosophy
   - d) the introductory Latin sequence CLASSLAT 1,2,3, or 51,52, or one 100-level course in Latin (recommended)

5. **Greek with Philosophy and Literature**: Courses counted for the degree must be taken for a letter grade. This track is not declared on Axess. Students are encouraged to meet with the undergraduate director to discuss options for pursuing a period of study in the Mediterranean region. Students must complete at least 65 units of approved courses including:
   - a) Classics majors seminar (CLASSGEN 176)
   - b) one course in Classics in each of the following areas:
     1) history or archaeology
     2) literature in translation
     3) religion or philosophy
   - c) 31 units in Greek courses at the 100 level or higher.
       It is recommended that one of these courses be CLASSGRK 175A, although this course should not be taken until students have completed three years of Greek.
   - d) Writing in the Major (WIM) in the Philosophy department (one introductory Philosophy course)
   - e) one course in each of the following areas:
     1) aesthetics, ethics, and social and political philosophy (PHIL 170 series)
     2) philosophy of language, mind, metaphysics, and epistemology (PHIL 180 series)
     3) history of philosophy (above 100 level)
   - f) PHIL 81. Philosophy and Literature
   - g) two related courses in Classics or Philosophy. Students may double count a Classics course in philosophy or ancient science for one of the two related courses provided that this course fulfills the Philosophy and Literature requirements and is approved by a member of the committee in Philosophy and Literature.
   - h) Philosophy and literature capstone seminar in the PHIL 194 series
