Summer Institute for Middle School Teachers

Director: Kathryn Moler, Co-Director: David Goldhaber-Gordon
NSF NSEC Grant PHY-0425897
Center for Probing the Nanoscale, Stanford University

The Center for Probing the Nanoscale held its third annual Summer Institute for Middle School Teachers (SIMST) in June 2008 with the goal of fostering middle school students’ interest in science through teacher training. 15 teachers from local Middle Schools participated in an intensive week-long program of content lectures, hands-on activities and curriculum development exercises.

2008 SIMST teachers pose in front of Stanford’s Memorial Church.

Prof. Hari Manoharan and SIMST participant Sandy Miller are moving carbon monoxide molecules on top of a copper surface. Teachers interact with CPN investigators and students during lectures and hands-on activities.
