

# Preliminary IAM scenarios based on the RCP/SSP framework

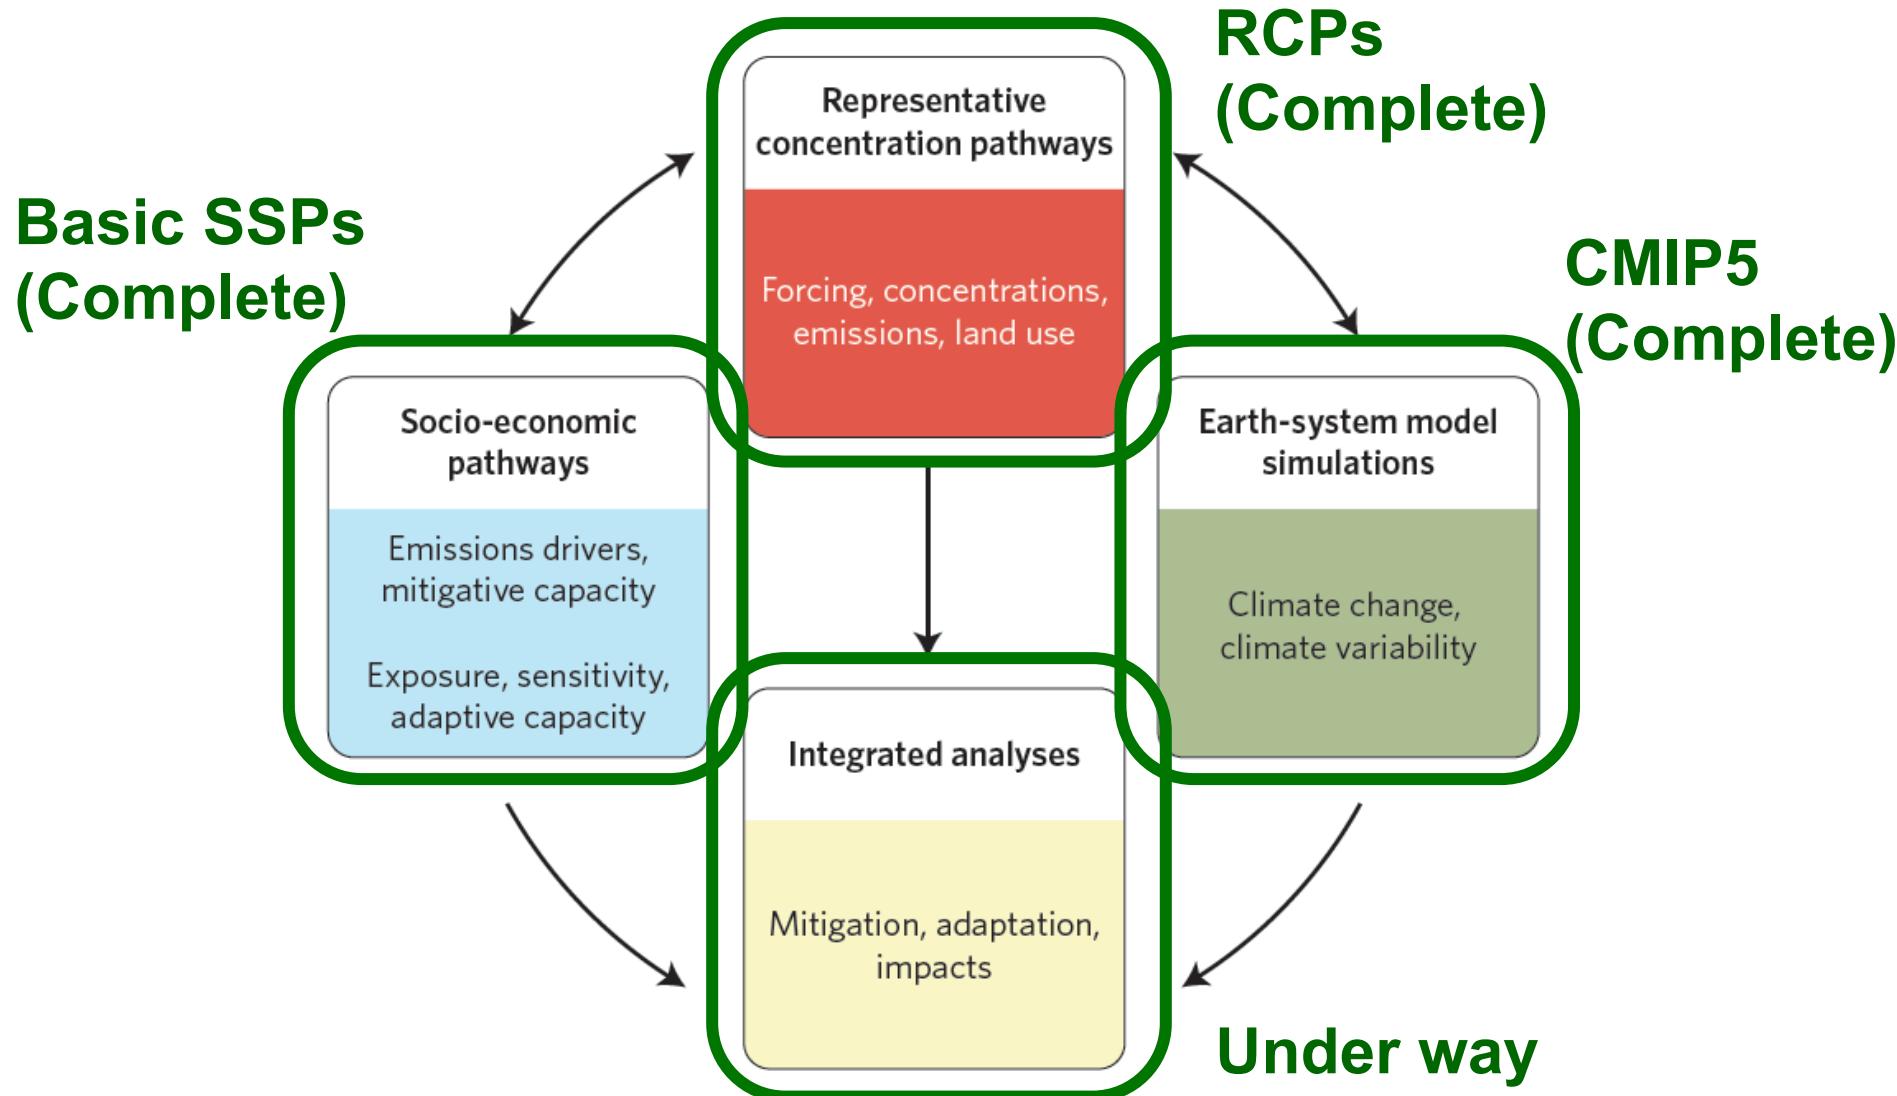

Keywan Riahi

International Institute for Applied Systems Analysis

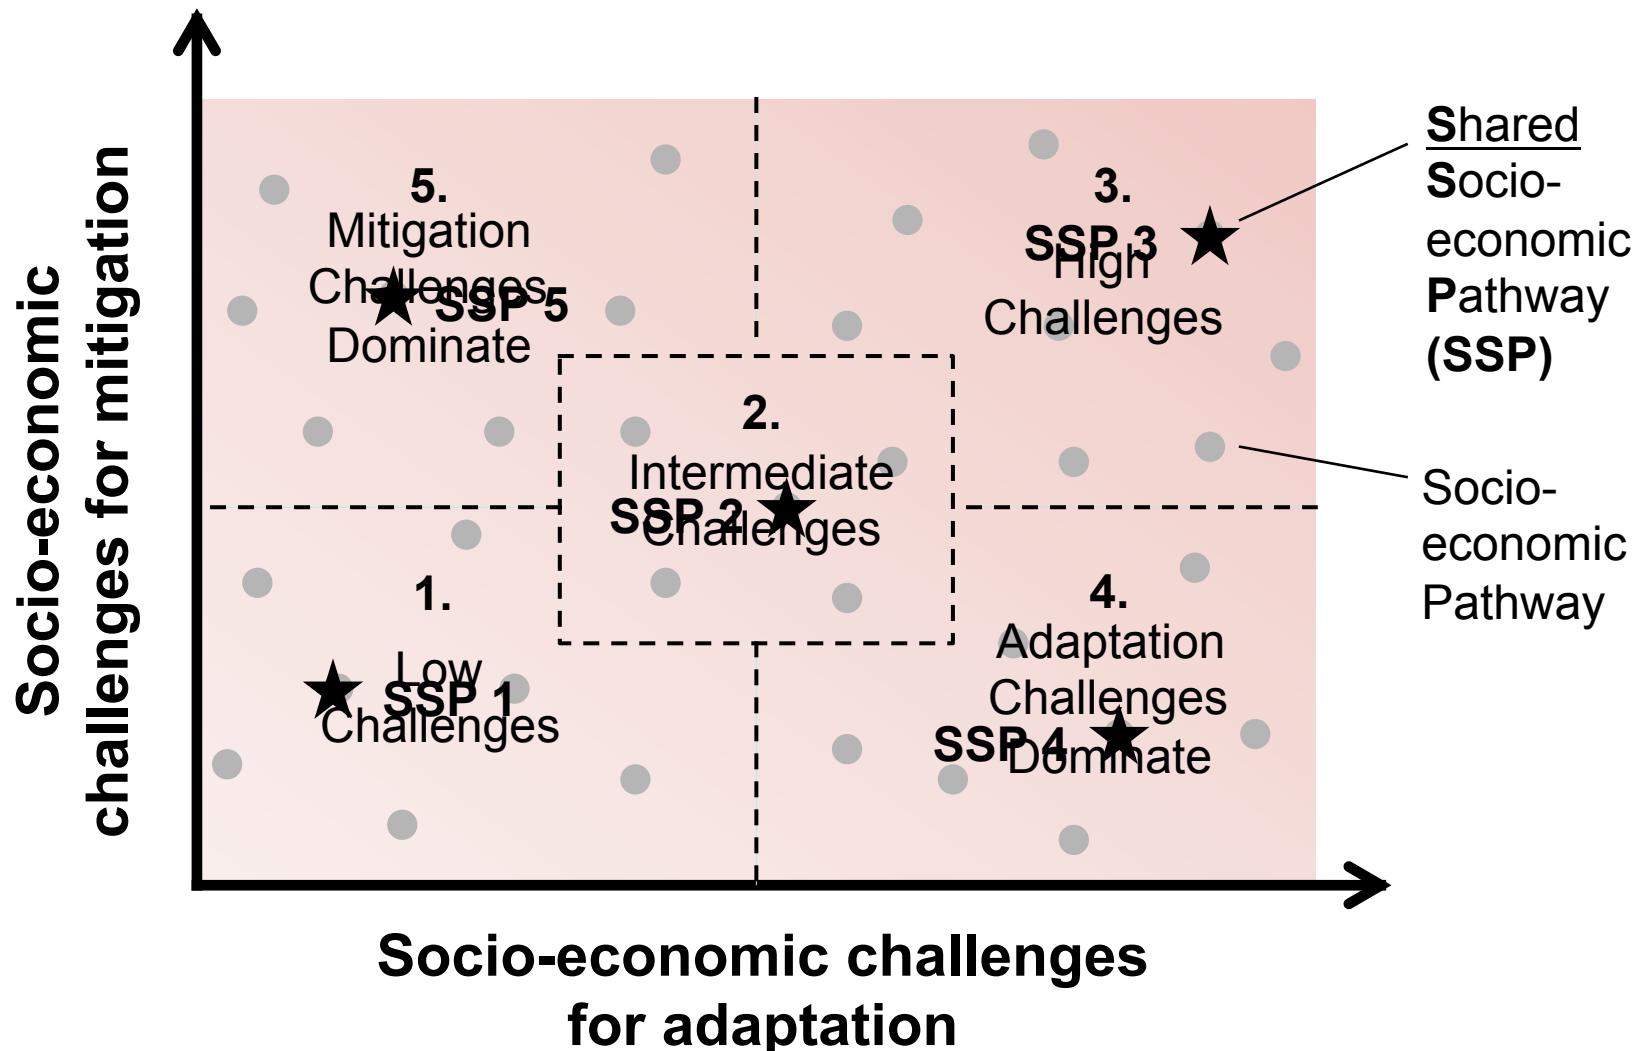

*CCI/IA Workshop  
31 July 2013*

*Snowmass, Colorado*

# The Parallel Process

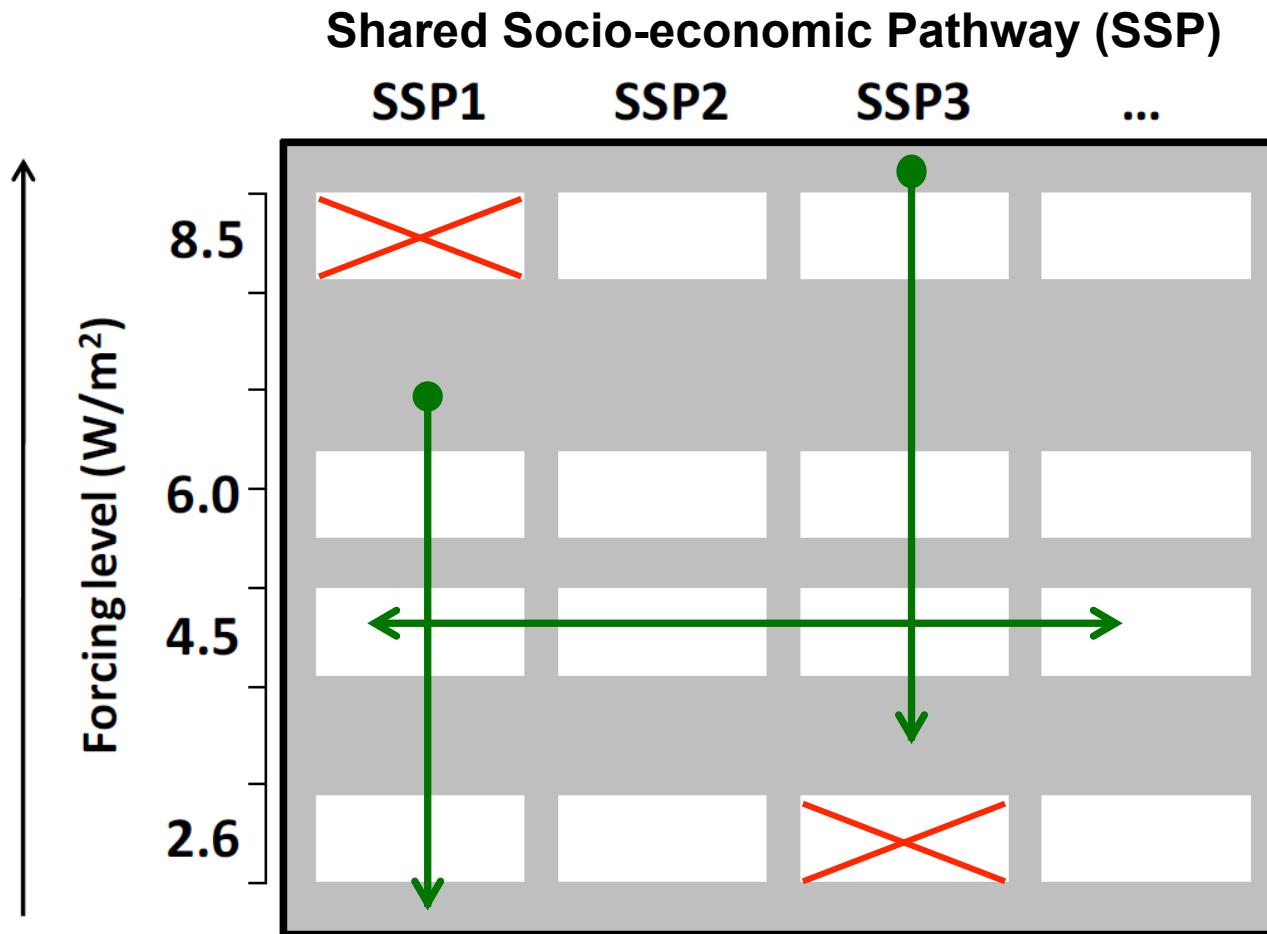

## Purpose two: New shared pathways

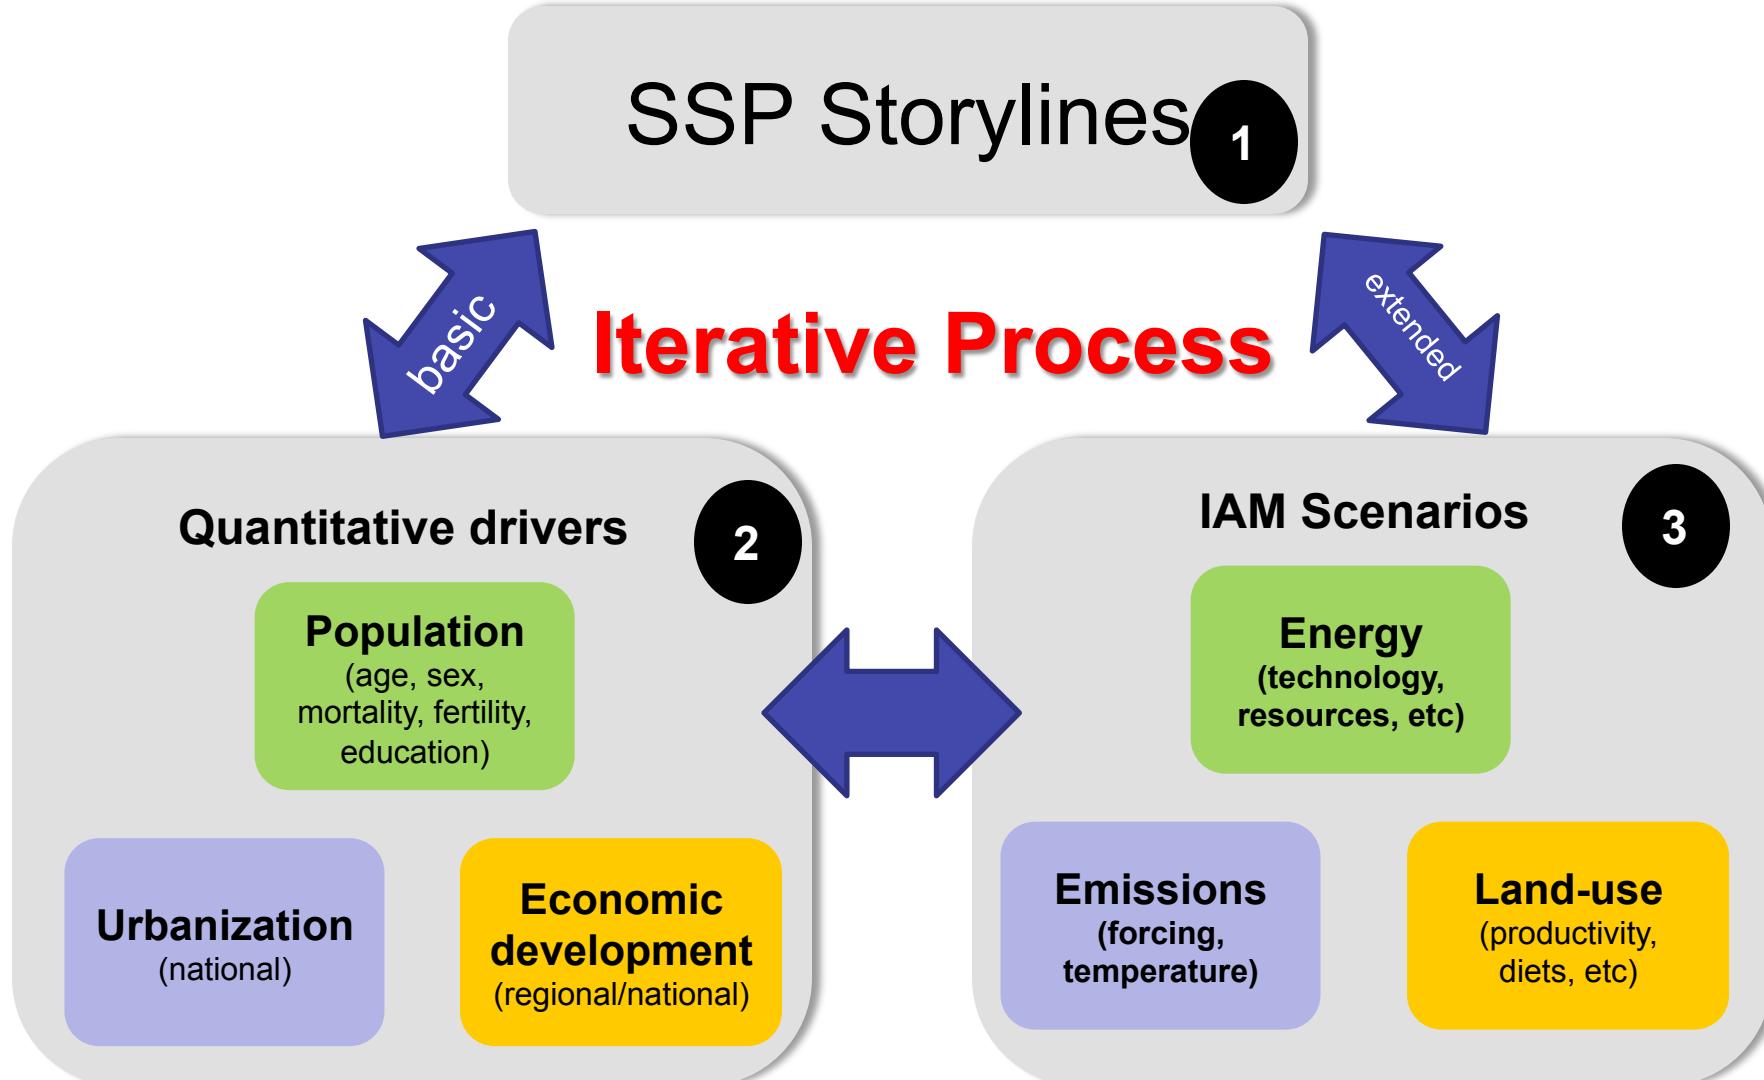

# Exploration of climate policy dimension Matrix architecture

**IAMs:**  
AIM (NIES)  
GCAM (PNNL)  
IMAGE (PBL)  
MESSAGE (IIASA)  
REMIND (PIK)

# Key SSP elements (three main products + IAV variables)

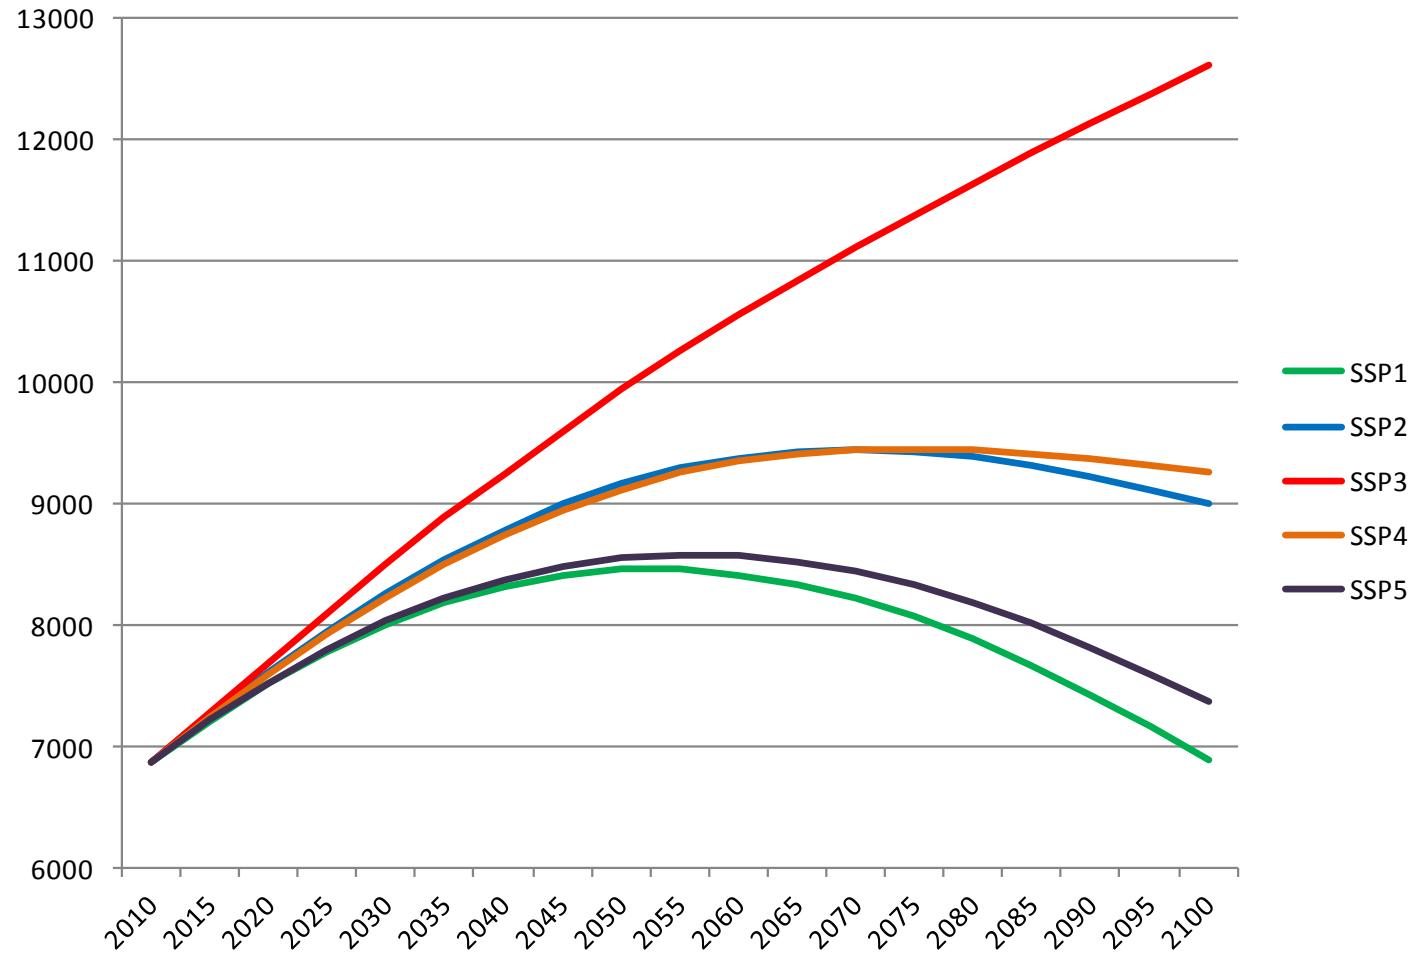

# SSP Process

- Conceptual framework and nature of basic SSPs established
- Quantification of key elements of basic SSPs has been completed
- Narratives were refined based on community review (paper needs still to be submitted)
- Preliminary IAM scenarios ready for cross-model comparison and revisions
- Fast-track IAV analyses based on SSPs coming out (ISI-MIP, AgMIP, etc)
- Work in progress:
  - Continue vetting and development of SSP IAM scenarios
  - Define SPAs for refined stabilization analyses
  - Continue IAV analyses based on SSPs (multi year process)

# SSP Driver Quantifications

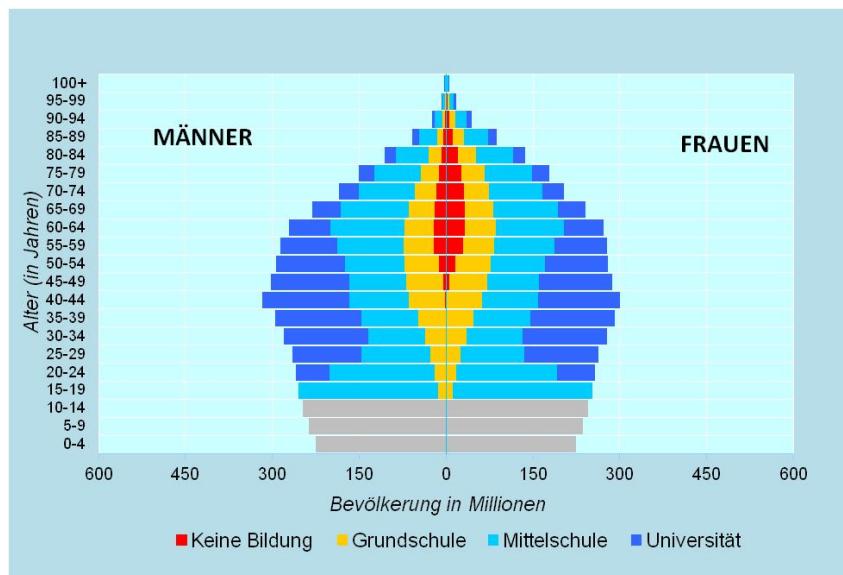

- Country level projections:
  - Population
    - IIASA
  - Urbanization
    - NCAR
  - Economy
    - OECD
    - IIASA
    - PIK
- Status: Available and in use by various IAM and IAV comparison projects

# Global population for five SSPs

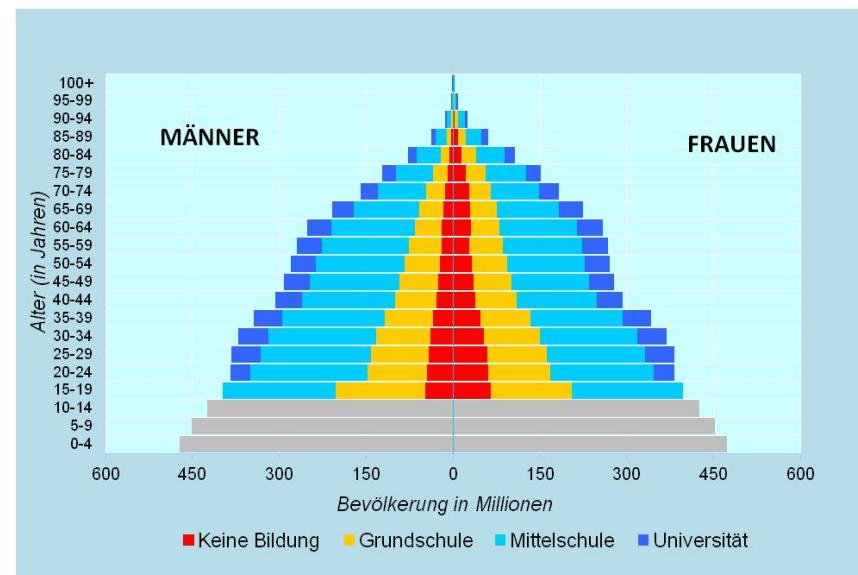

# World 2050

**SSP1 Pop=8673 Mio**

**SSP3 Pop=10603 Mio**

# Common interpretation of the SSPs

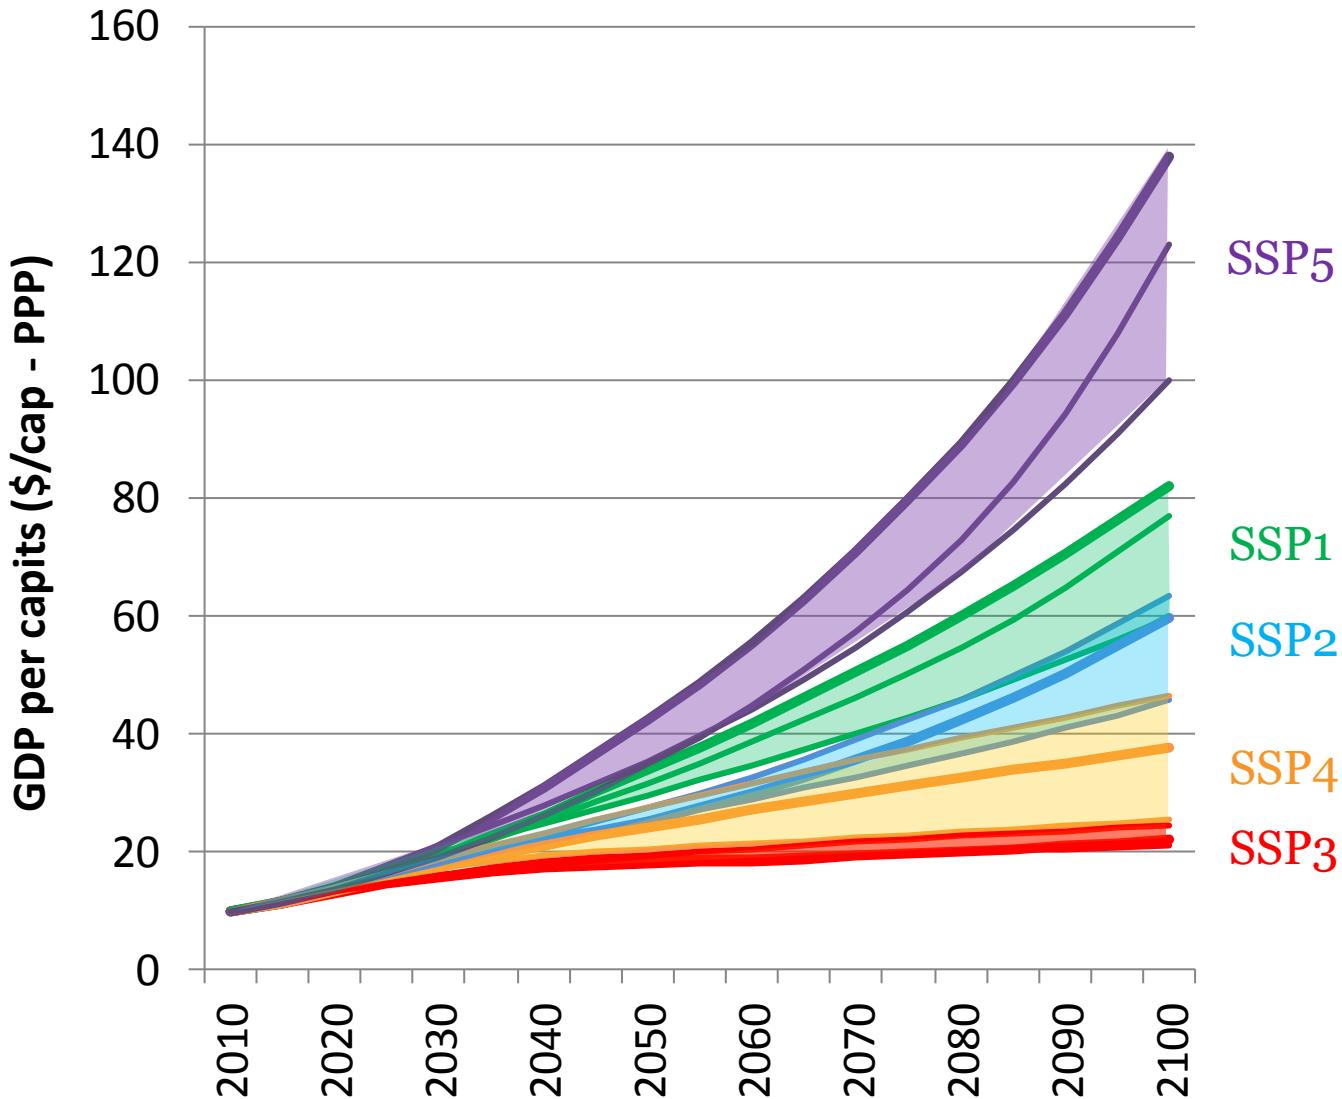

## OECD – IIASA - PIK

	Frontier TFP growth	Speed of convergence
SSP1: Sustainability	Medium high	High
SSP2: Middle of the road	Medium	Medium
SSP3: Fragmentation	Low	Low
SSP4: Inequality	Medium	Low Income: Low Middle Income: Medium High Income: Medium
SSP5: Conventional development	High	High

N.B. Quantitative interpretations and methodology differ between models, illustrating the uncertainties in making economic projections

# Common interpretation of the SSPs

## OECD – IIASA - PIK

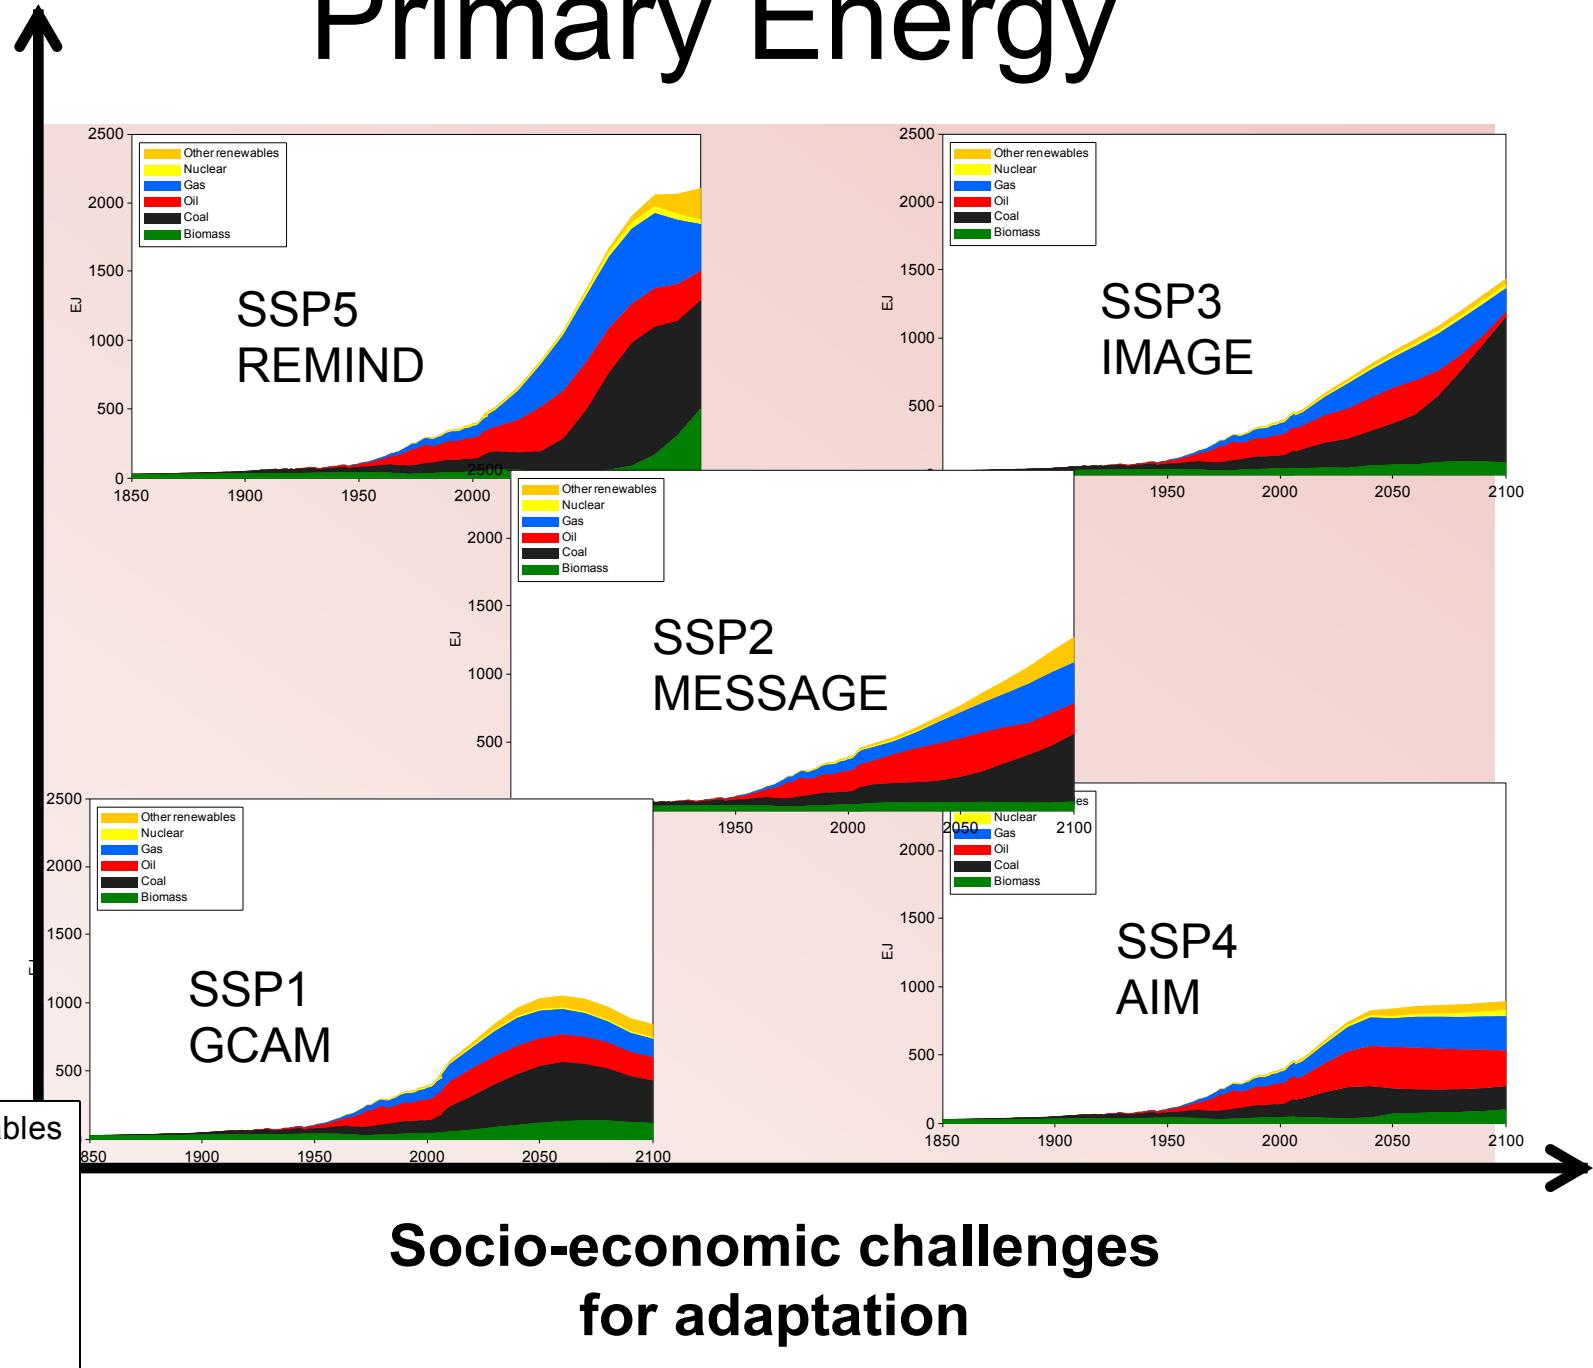

# Extension of Storylines for IAM modeling (eg assumptions for energy demand)

SSP Element	SSP 1			SSP 2			SSP 3			SSP 4			SSP 5		
	Country Income Groupings														
	Low	Med	High	Low	Med	High	Low	Med	High	Low	Med	High	Low	Med	High
<b>Non-climate Policies</b>															
Traditional Fuel Use	fast phase-out, driven by policies and economic development			Intermediate phase-out, regionally diverse speed			continued reliance on traditional fuels			continued some traditional fuel use among low income households			fast phase-out, driven by development priority		
<b>Energy Demand Side</b>															
Lifestyles	modest service demands (less material intensive)			medium service demands (generally material intensive)			medium service demands (material intensive)			low service demands			modest service demands		
Environmental Awareness	high			medium			low			low			high		
Energy Intensity of Services													medium (low for global)		
Industry	low			medium			high			high			low		
Buildings	low			medium			high			medium			low/medium		
Transportation	low			medium			medium			low/medium			low		
General Comments				some regional diversity

# Land-use and Land-cover change

## Cropland development: RCPs vs SSPs

# SSP IAM scenarios – next steps

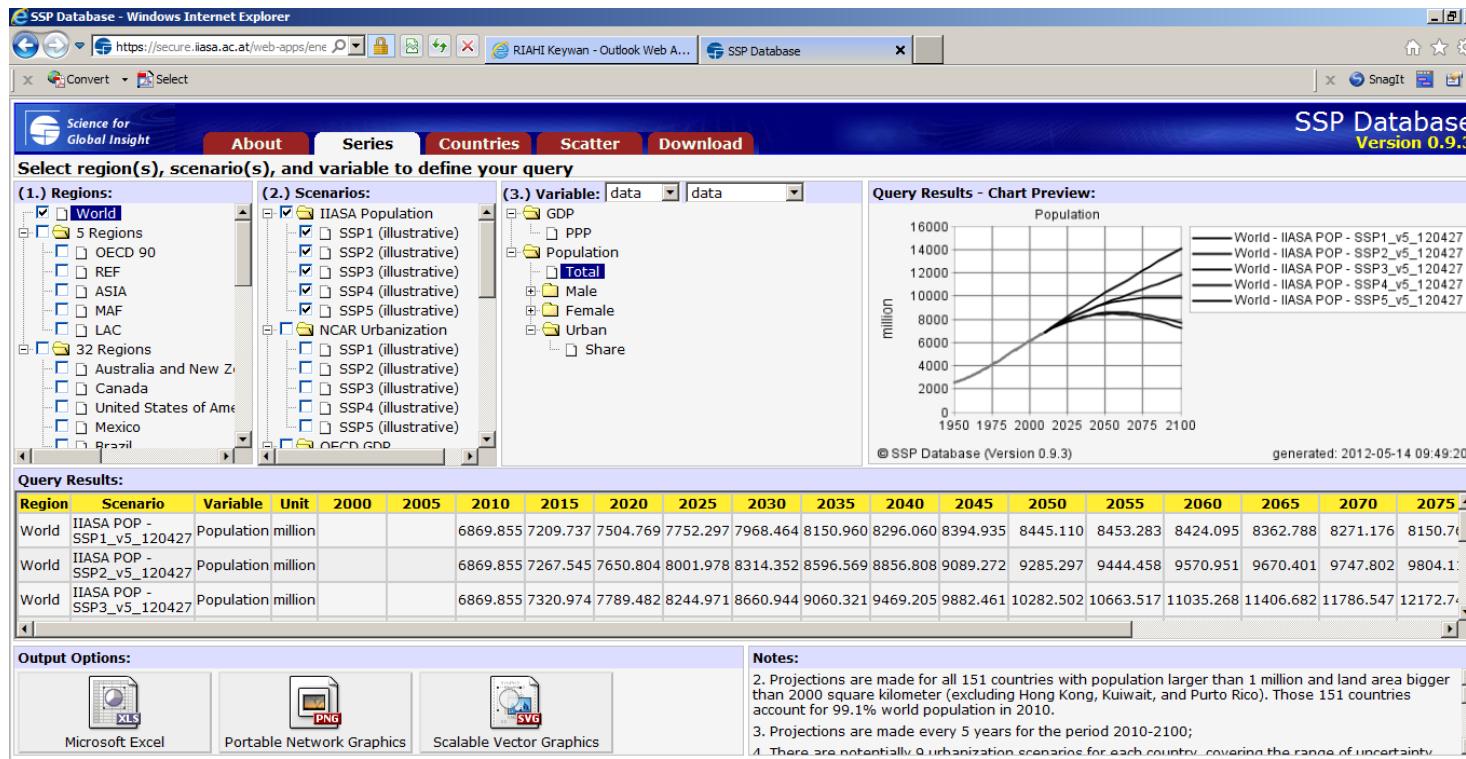

- Improve consistency with storylines
- Harmonization across major variables (develop clear-cut definitions)
- Define SPAs (climate policy dimension)
- Identify marker scenarios
- Organize hand-off to different communities and develop guidelines for SSP users (eg, plausible RCP/SSP combinations)
- Publication: Special Issue of Global Environmental Change

## SSP database:

<https://secure.iiasa.ac.at/web-apps/ene/SspDb>

The screenshot shows the SSP Database interface version 0.9.3. The top navigation bar includes tabs for About, Series, Countries, Scatter, and Download. The main area is titled "Select region(s), scenario(s), and variable to define your query". It features three panels: (1.) Regions (World, 5 Regions, OECD 90, REF, ASIA, MAF, LAC, 32 Regions), (2.) Scenarios (IIASA Population, NCAR Urbanization, SSP1, SSP2, SSP3, SSP4, SSP5), and (3.) Variable (data, GDP, PPP, Population, Total, Male, Female, Urban, Share). A chart preview titled "Query Results - Chart Preview: Population million" shows projected population growth from 1950 to 2100 for five SSP scenarios. Below the chart is a table of "Query Results" showing population data for the World across various scenarios and years. The bottom section includes "Output Options" for Microsoft Excel, Portable Network Graphics, and Scalable Vector Graphics, and a "Notes" section with projections and caveats.

**Query Results:**

Region	Scenario	Variable	Unit	2000	2005	2010	2015	2020	2025	2030	2035	2040	2045	2050	2055	2060	2065	2070	2075
World	IIASA POP - SSP1_v5_120427	Population	million			6869.855	7209.737	7504.769	7752.297	7968.464	8150.960	8296.060	8394.935	8445.110	8453.283	8424.095	8362.788	8271.176	8150.71
World	IIASA POP - SSP2_v5_120427	Population	million			6869.855	7267.545	7650.804	8001.978	8314.352	8596.569	8856.808	9089.272	9285.297	9444.458	9570.951	9670.401	9747.802	9804.11
World	IIASA POP - SSP3_v5_120427	Population	million			6869.855	7320.974	7789.482	8244.971	8660.944	9060.321	9469.205	9882.461	10282.502	10663.517	11035.268	11406.682	11786.547	12172.71

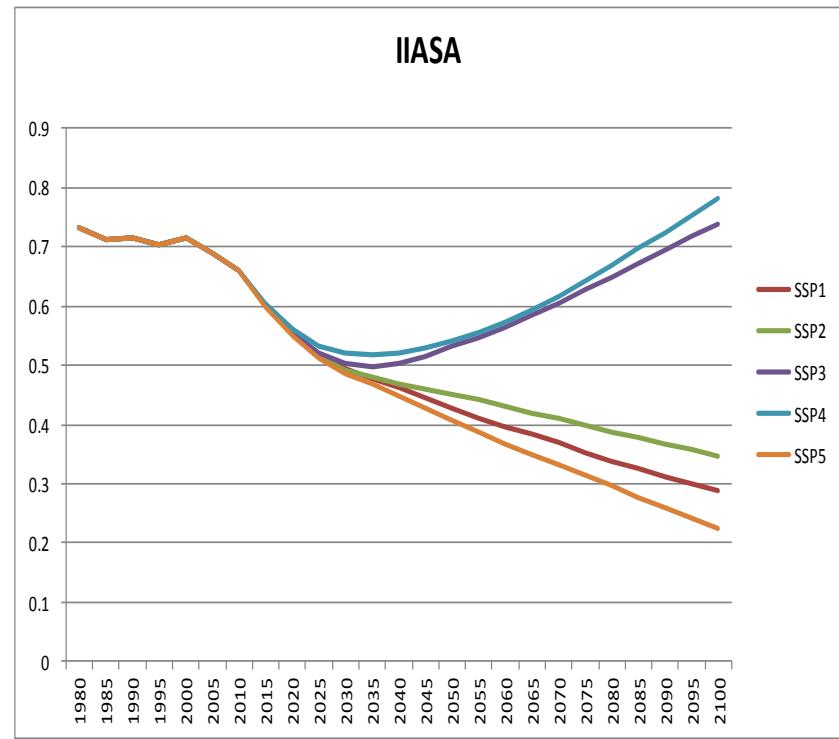

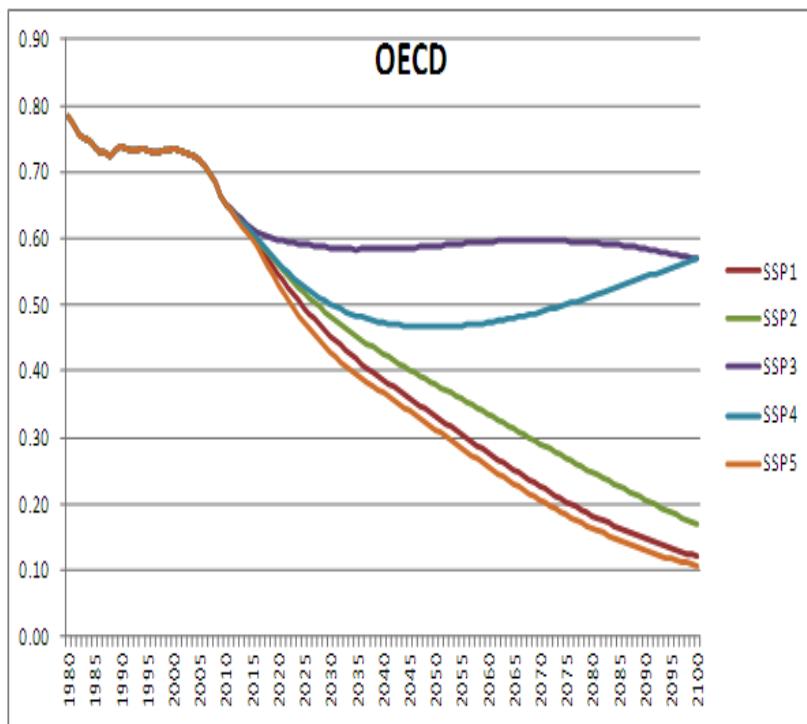

**Output Options:** Microsoft Excel, Portable Network Graphics, Scalable Vector Graphics

**Notes:**

- Projections are made for all 151 countries with population larger than 1 million and land area bigger than 2000 square kilometer (excluding Hong Kong, Kuwait, and Puerto Rico). Those 151 countries account for 99.1% world population in 2010.
- Projections are made every 5 years for the period 2010-2100;
- There are potentially 9 urbanization scenarios for each country, covering the range of uncertainty.

# Additional Slides

# Inequality across models Global GINI

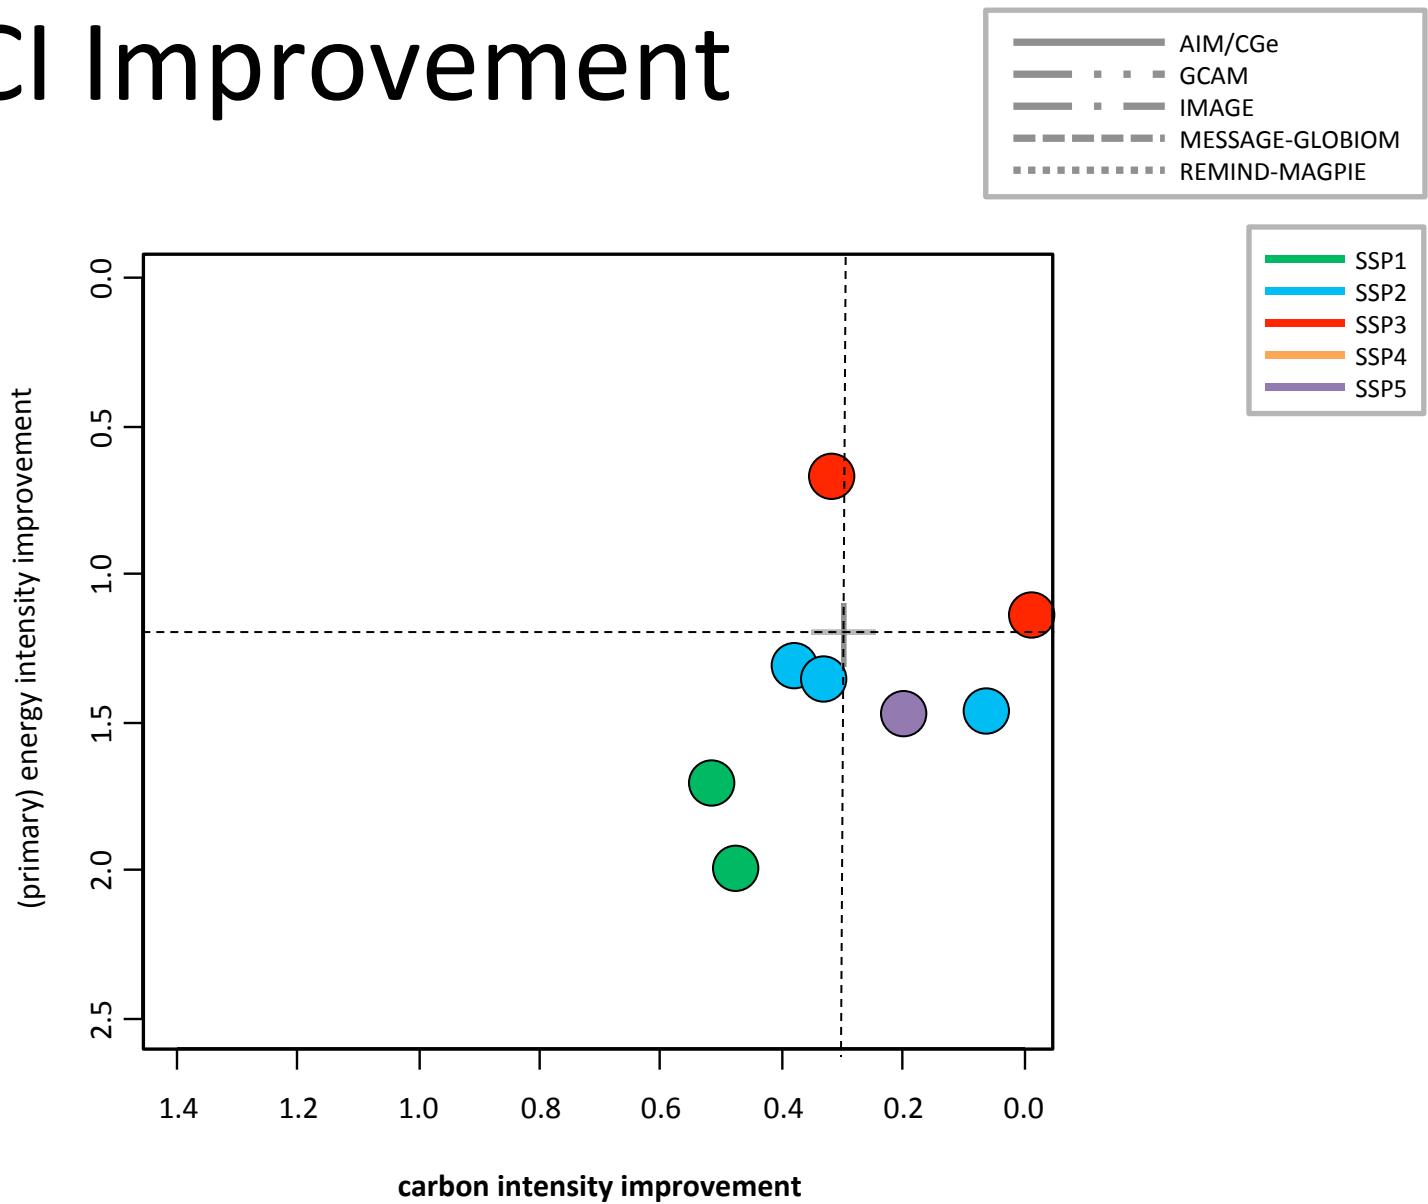

# Country Groupings

- For defining these scenarios we distinguish among three groups of countries:
- ***High Fertility Countries (HiFert)***: Countries with current level of fertility less than 2.9 children per woman (2005-2010).
- ***Low Fertility Countries (LoFert)*** Countries with current level of fertility less than or equal to 2.9 not belonging to Rich OECD countries (see below)
- ***High Income-OECD Countries (Rich-OECD)*** As per the definition of World Bank.

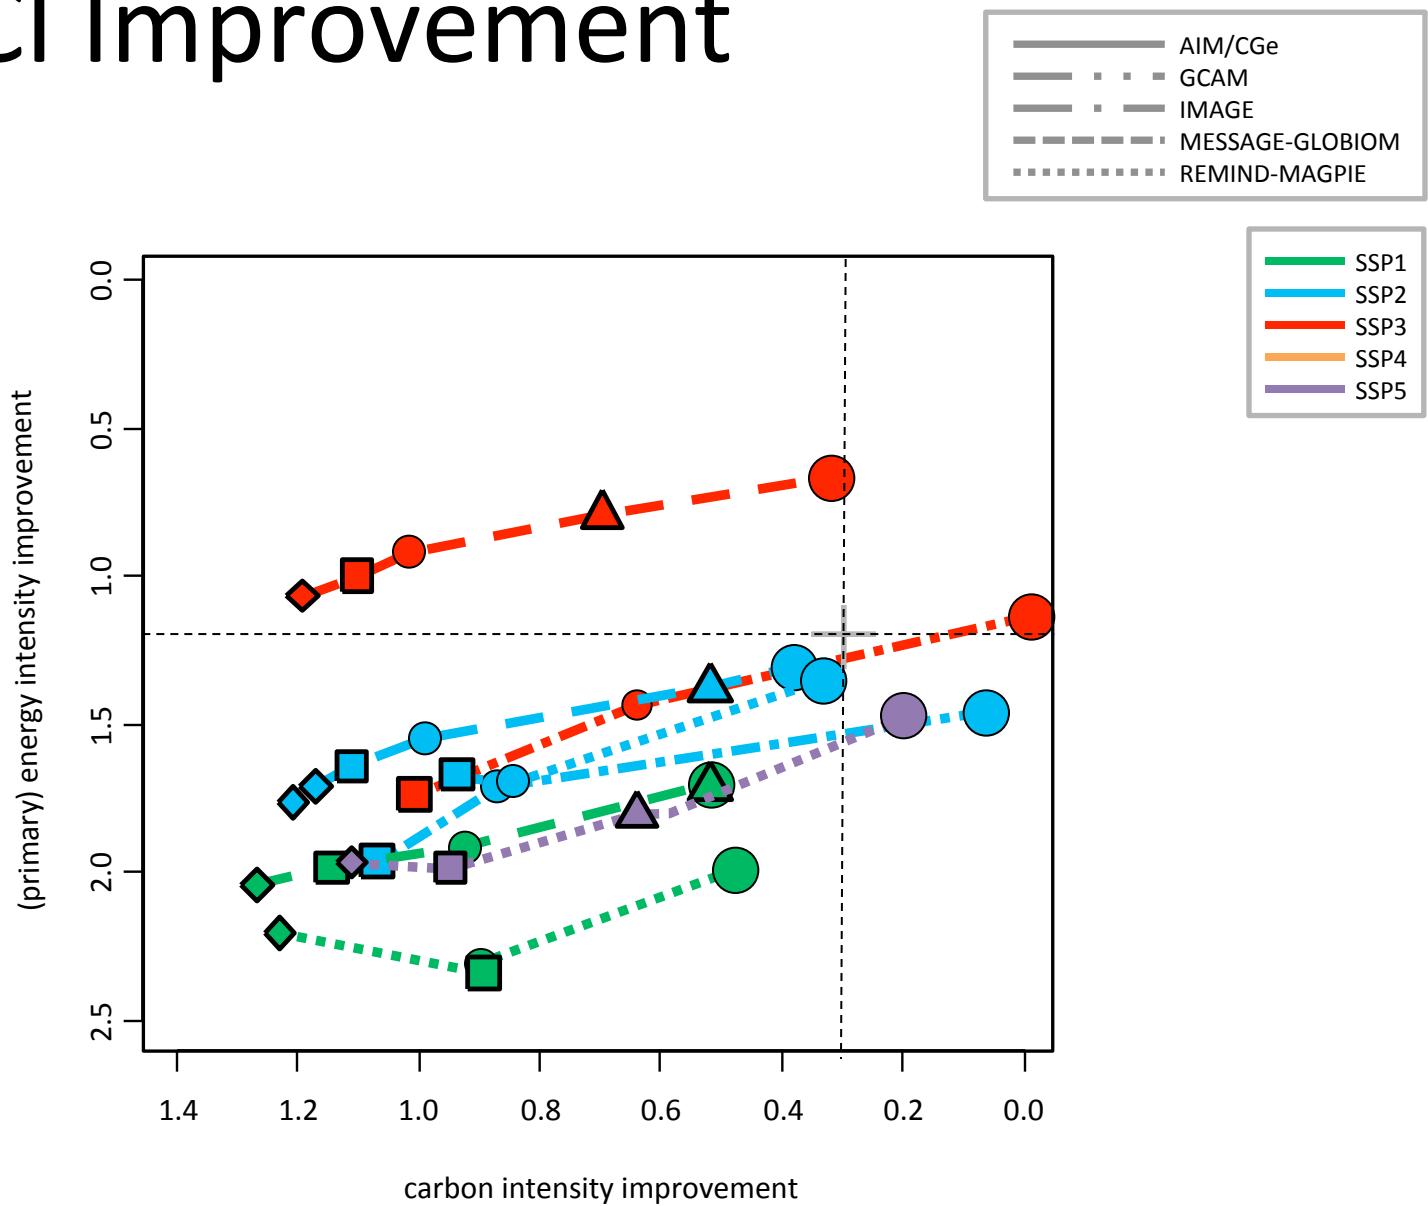

# Education Scenarios

- ***The fast track (FT)*** scenario is extremely ambitious; it assumes that all countries expand their school systems at the fastest possible rate, which would be comparable with best performers in the past such as Singapore and South Korea .
- ***The global education trend (GET)*** scenario is more moderately optimistic and assumes that countries will follow the average path of school expansion that other countries already somewhat further advanced in this process have experienced.
- ***The constant enrollment rate (CER)*** scenario assumes that countries only keep the proportions of cohorts attending school constant at current levels.
- ***The most pessimistic scenario, constant enrollment numbers (CEN)***, assumes that no more schools at all are being built and that the absolute number of students is kept constant, which under conditions of population growth means declining enrollment rates.
