OBI PLM enhancement: FTE Basis Column Selector

We have further refined the recent enhancement for Salary and Hours information on the Labor Schedule Details report (found on the Labor Schedule tab).

Now, when users click on the drop-down menu from the “FTE Format” for the column selector, they will have the option of selecting “Historical Job Standard Hours/Week” or “Historical Job FTE.” (Previously, users had to right-click while hovering their cursor over the column heading itself in order to see the FTE option.)

Note: Since FTE information is not always available, “Standard Hours” is the default choice on the report.
