

Multicolor Super-Resolution Imaging of *Caulobacter* Protein Ultrastructures in 3D

Andreas Gahlmann, Jerod Ptacin, Ginni Grover, Sean Quirin, Alex Diezmann, Marissa Lee, Mikael Backlund, Rafael Piestun, Lucy Shapiro, and W. E. Moerner

A simple microscope setup uses two fixed phase masks to provide 3D over > 2 μm z range.

A flexible algorithm registers multicolor data to < 10 nm error, allowing us to accurately assess protein colocalization in live cells
