# Fiscal and Monetary Policy with Heterogeneous Agents

## Adrien Auclert

## Université Paris Dauphine Minicourse January 2024

**Workshop objective**: This workshop covers recent developments in the literature on monetary and fiscal policy with heterogeneous agents. The objective is twofold: 1) give you a solid understanding of the current state of literature and, through this application, 2) introduce you to state-of-the-art solution methods for general equilibrium heterogeneous-agent models. The hope is to equip you with the necessary knowledge and tools to conduct your own research in the area.

**Prerequisites.** A good grasp of macroeconomics at the level of a first-year PhD course (in particular dynamic programming, the standard 3-equation New Keynesian model, and the standard incomplete markets model); as well as basic familiarity with Python, is useful.

**Workshop material.** I will post all workshop material at the following link. This is also where you can download tutorials for the class:

http://web.stanford.edu/~aauclert/dauphinemini/

If you want to dig deeper, additional code and notebooks are available at:

https://github.com/shade-econ/nber-workshop-2023/

**Python preparation.** If you are relatively new to Python, I recommend having the Anaconda distribution of Python installed to make sure you have all necessary libraries. There are many outstanding resources you can find online, but two good introductory resources are the introductory lecture series at QuantEcon and the Python data science handbook.

If you are accustomed to Matlab or Julia, QuantEcon's Matlab-Python-Julia cheatsheet can be useful, as can NumPy for Matlab users (ignoring now-obsolete "matrix" class at the end).

**Preparing for the first class.** The first class will cover technical material on how to solve the standard incomplete markets model, including transition dynamics using the fake news algorithm. To prepare for this class, I recommend going through the material in "Standard Incomplete Markets Steady State" notebook. You can watch the videos associated with the lecture in the NBER workshop GitHub repo. If you want more advanced preparation, you should also go through the transition dynamics slide notebooks. For the in-class tutorials, you will need SSJ installed on your laptop.

**Other preparation.** Before each day, you are encouraged to read ahead the class lecture notes. The references provided in the syllabus may also be useful.

**Class plan.** The plan for each class is outlined below. This is just indicative; there may be small deviations from the plan.

| Time          | Room | Topic   |
|---------------|------|---|
| Friday Jan 12 | P501 | Methods and the canonical HANK model          |
| 1:45pm        |      | Solving the standard incomplete markets model |
| 3:15pm        |      | Break   |
| 3:00pm        |      | The canonical HANK model                      |
| 5:00pm        |      | End   |
| Monday Jan 15 | P508 | Fiscal policy                                 |
| 1:45pm        |      | Fiscal policy, part 1                         |
| 3:15pm        |      | Break   |
| 3:00pm        |      | Fiscal policy, part 2 + tutorial              |
| 5:00pm        |      | End   |
| Friday Jan 19 | P501 | Monetary policy                               |
| 1:45pm        |      | Monetary policy                               |
| 3:15pm        |      | Break   |
| 3:00pm        |      | Monetary policy topics + tutorial             |
| 5:00pm        |      | End   |
