Postdoctoral Positions immediately available:

1. To work on the exosome (EV) project (see ‘work in progress’ and related publications by following the Publication link). Prior experience of working with mice is a requirement and with exosomes a plus.

2. Extension of the ongoing antibiotic work. Search for potential small molecule libraries that can specifically inhibit the identified proteins involved in protecting bacteria against antibiotics. A strong bacterial molecular biology background is essential; experience in bioinformatics to identify regions specific to the bacterial proteins is desirable.
