

Where we left off

- Variables in Belten High correlate with forms of participation in the peer social order, not parents' SES.
 - .'. The use of variation involves agency.
 - Class is reproduced in the peer social order.
 - Jocks and Burnouts are class-based, but not class-determined communities of practice.
- The local peer social order is embedded in the social geography of the larger conurbation.
 - Class, place and social types are co-constructed.

- A little question on the side: what are the boundaries of the speech community?
 - If the speech community is an aggregate of speakers with shared norms, which norms matter?
 - The variables under study have little meaning outside the context of the larger conurbation.
 - The speech community concept is useful only as a vague term, or for specifying the social scope of the study – the population and the social distinctions it comprises.

More fractal recursivity

Let me think. Okay. Us. You know like the burnout – (yeah bye - like the - wait bum me one) - the burnout chicks they they sit over here and then the like the jocks – chicks – they sit like around here and then (by that door?) no, like in the middle and then um (who are the jocky chicks who hang out in the courtyard?) I don't know just you know weirdos. And then there's like um the guys you know you know like weirdos that think they're cool – they just stand like on the steps and hang out at that little heater. (by the door yeah right) uuuu. (yeah) And then the poins are inside in the cafeteria because they're probably afraid to come out in the courtyard.

The category perspective

% Negative Concord

Which Jocks and Burnouts?

(ay) raising

Cruising

The overall gender correlation says something about how likely boys and girls are to act tough, anti-institutional.
It doesn't say that the variable 'means' male/female.

- Variation does not index just membership in a category, but associations with membership in that category.
 - Qualities
 - Activities
 - Stances
 - ...

Ochs, E. (1991). "Indexing gender." In A. Duranti & C. Goodwin (Eds.), *Rethinking Context*. Cambridge: Cambridge University Press.

Recurrent questions

- What does it mean to say this network represents the path of change?
- When does a change enter a community or a network cluster?
- To the extent that a chain shift moves through continuous vowel space, when is a change new?
 - Do speakers internalize processes (e.g. vowel fronting and backing) rather than individual changes?
 - In other words ... What is the variable?

Doonesbury □ Garry Trudeau

Local identity is never simply an association with a generic locale, but with a particular construction of that locale as distinct from some other(s).

- Even if you're Catholic, if you live in New York you're Jewish. If you live in Butte, Montana, you're going to be goyish even if you're Jewish. (Lenny Bruce)

- Jing you-zi 'Beijing Smooth Operator'
- Wei zui-zi 'Tianjin Talker'
- Baodingfu de gou tui-zi 'Baoding Henchman'

Zhang, Q. (2008). Rhotacization and the “Beijing Smooth Operator”: The social meaning of a linguistic variable. *Journal of Sociolinguistics*, 12(2), 201–222.

Beijing Rhotacization

- In fact, Beijingers are said to be smooth, the so-called ‘Beijing Smooth Operator’, mainly because Beijing speech has a lot of rhotacization. Beijingers are naturally gifted with gab, and with heavy r-sounding, then [Beijingers] appear to be smooth. Have you heard anybody saying the Cantonese have ‘oily accent, slippery tone?’ That’s because their tongues can’t curl.
 - (Liu, a 38-year-old male chief representative of a foreign bank)

The rhotacizing smooth operator

- ‘Beijing-flavor literature’: literary works that have a distinctive Beijing style in depicting unique cultural characters of Beijingers, their lives, living environments, and folk customs. e.g. Lao She (1899 – 1966)
- Rhotacization: One of the most salient and shared devices used to produce the unique ‘Beijing flavor’, one of the few accent features that can be represented in writing.

Zhang, Q. (2008). Rhotacization and the “Beijing Smooth Operator”: The social meaning of a linguistic variable. *Journal of Sociolinguistics*, 12(2), 201–222.

Iconization and ideology

The extensive use of ‘rhotacization’ **smoothes out the edges and corners of speech**; . . . [it] sounds **smooth and mellow**, and engenders a feeling of warmth and intimacy.

(Lü, Zhimin. 1994. *Hua Su Wei Yade Yishu: Jing Wei Xiaoshuo Tezheng Lun*. Beijing, China: Zhongguo Heping Chubanshe., Cited in Zhang 2008).

Irvine, J. T., & Gal, S. (2000). Language ideology and linguistic differentiation. In P. V Kroskrity (Ed.), *Regimes of language: Ideologies, politics, and identities* (pp. 35–83). Santa Fe NM: SAR Press.

- Although 'smoothness is hardly regarded as a virtue,' ... it functions as a form of social lubricant. Despite their diverse socio-economic and professional backgrounds, the literary instantiations of the folk icon share a set of characterological attributes centering on worldly wisdom, street smarts, slickness, remarkable urban versatility, and *savoir faire*. (Zhang 2008, p. 12).

Zhang, Qing. 2005. A Chinese yuppie in Beijing: Phonological variation and the construction of a new professional identity. *Language in society*, 34.431-66.

- These variables all show different patterns
 - Hence they don't 'mean' the same.
- The male and female yuppie and state personae are constructed in the combination of variables
- The yuppie speech style is essential to the construction of the cosmopolitan persona
 - Hence it plays a role in bringing about a new persona
 - The emergence of the new persona is part of social/economic change.

"The scales say 'alien overlord,' but the rolled-up sleeves say 'man of the people.'"

Benjamin Schwartz, The New Yorker

Style as Bricolage

The process of building a system out of a pre-constrained set of units.

Lévi-Strauss, Claude. 1962. *La pensée sauvage*. Paris: Librairie Plon.

Hebdige, D. (1984). *Subculture: The meaning of style*. New York: Methuen.

The sociolinguistic variable

- An alternation of form becomes a variable when the alternation displays a pattern.
- A variable becomes a sociolinguistic variable when social context is part of the pattern.
- At that point, the variable takes on meaning, and becomes a sign.

Questions that emerge

- Is the variable the segment or is it the process – fortition/hyperarticulation more generally?
- What is the relation between this indexical field and lenition/hypoarticulation?
- How does it intersect with other indexical fields?
- How important is the role of iconicity in variation?
- Where does this indexical field live?

Key properties of sociolinguistic variables

- ***Implicitness.*** Conveying something stylistically is less of a commitment, less face-threatening than putting it in a proposition, and it allows both speaker and interlocutor to leave things “unsaid”. This also allows the speaker to make small indexical moves, to try out the waters with less risk to face.
-
- ***Underspecification.*** Underspecification is a design feature of language more generally. It allows a small number of forms to serve a large number of purposes, it binds language to social action, and it lies at the core of language’s capacity for flexibility, nuance, creativity and change. In this sense, sociolinguistic variables are like other linguistic signs, as their specific meanings emerge only in context.
-
- ***Combinativeness.*** Variables do not occur alone, and are not interpreted on their own, but as components of holistic styles. Styles are what connect to social meaning through their relation to types, personae, or characterological figures (Agha 2003). The underspecification of variables allows them to bring meaning to styles, but only through a process of vivification as they contribute to the construction of these figures. The deployment of individual variables across styles expands their indexical range.

Eckert, P. in press. Variation, meaning and social change. In Nikolas Coupland, ed., Sociolinguistics: Theoretical debates. Cambridge University Press.

Things we might prefer to communicate non-propositionally

“I’m rich”

“I’m a regular guy”

“I’m cool”

“I’m smart”

“I’m gay”

“I’m sensitive”

“what you just said was stupid”

“I’m an authentic New Yorker”

“I’m a cool surfer dude”

...
