Subject: Language re Christian biology texts

John,

Good speaking with you.

Below is the standard language that we give to schools who submit biology/science course descriptions that include either the Bob Jones University Press or A Beka Books texts:

"In establishing and implementing the "a-g" subject area requirements, UC faculty's main interest is that students entering the University are well prepared to be successful at UC. The content of the course outlines submitted for approval is not consistent with the viewpoints and knowledge generally accepted in the scientific community. As such, students who take these courses may not be well prepared for success if/when they enter science courses/programs at UC."

Feel free to call back if you have further questions.

Roman
