# CS142 - Web Applications http://cs142.stanford.edu

## Mendel Rosenblum mendel@cs.stanford.edu

### Today: CS142 FAQ

- What is this course about?
- How is my course grade determined?
- Who is teaching the course?
- How do I communicate with the course staff?
- What kind of programming projects will I have do?
- What kind of computing environment do I need?
- Do I need to buy a textbook?
- Are the course lectures record on video?

#### **Course is about Web Applications**

Technologies used to **build** modern web applications

Note: CS14x (computer systems course in Computer Science department)

Full stack: Browser ⇔ Web server ⇔ Storage system

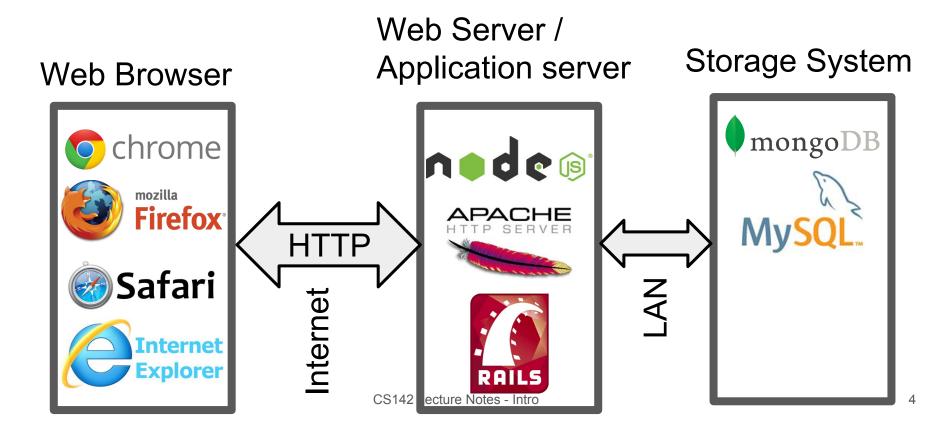

Goal: Learn how a web application is built and run

How to build a web application - learn by doing:

Use MERN stack (React.js, Node.js, Express.js, MongoDB)

Goal: Build a photo sharing web app and understand how it works!

#### Full Stack Web Application Architecture

### CS142 Technologies and Concepts

Browser environment:

- HTML/CSS/JavaScript Markup, separation of content & style, reuse
- Document object Model (DOM) Document structure

Browser software:

- Model View Controller, Single page applications, Responsive design React.js Backend communication:
- API design HTTP/AJAX/REST/GraphQL
- Cookies/Sessions Storage/Trust

Backend implementation:

- Web Server HTTP request processing Node.js
- DBMS Schema, Objects, CRUD, indexes, transactions MongoDB
- End-to-End Scale and Security

## Grading

55% Projects - 8 projects (Due on Thursdays - First due 4/11, last due 6/6) Projects 1-4: Learn technologies in front-end: HTML/CSS/React.js Projects 5-8: Building a Photo Sharing App using React.js/Node.js/MongoDB Later projects worth more and take more time

15% Midterm Exam - Wednesday, May 8, 7:30pm – 9:00pm Closed book, with limited note pages

30% Final Exam - **Tuesday, June 11, 8:30am – 11:30am** Closed book, with limited note pages Note: Latter part of the End-Quarter examination period

#### **Course Material and Grading**

- CS142 is different from introductory programming class
- Lectures cover many more concepts than are addressed in the programming projects
  - Lecture focused on concepts, not directly helping with project coding
- Exams focused on concepts presented in class but not used in projects
  - Possible to do well on all the projects and not get an A in the class
  - Need understanding beyond "magic incantations"

#### **Course Staff**

Instructor: Mendel Rosenblum (mendel@cs.stanford.edu)

#### Course Assistants (cs142-spr1819-staff@lists.stanford.edu)

Andrew Chang James Carroll Neel Ramachandran Sam Reamer Sho Arora

#### **Course Communication**

1. Piazza - <u>https://piazza.com/stanford/cs142</u>

Good for questions/comments where everyone can see the reply

Can also posts privately to course staff (Use for post containing code)

2. Email - <u>cs142-spr1819-staff@lists.stanford.edu</u>

Good for private communication with the course staff (CAs and myself)

3. Mendel Rosenblum - mendel@cs.stanford.edu

#### **CS142** Course Project Evolution

Largely driven by trends in industry

Cs142 started in Winter 2009: Ruby on Rails with a SQL relational database

Winter 2016: CS142 switched projects to the MEAN stack AngularJS - JavaScript-based browser framework for apps Node.js - JavaScript-based server engine MongoDB - An object database

Spring 2019: CS142 switched projects to the MERN stack React.js/Node.js/MongoDB Component-focused JavaScript-based framework (Similar to Vue.js/Angular)

#### **Project details**

- 1. HTML & CSS
- 2. JavaScript
- 3. Browser Document Object Model (DOM)
- 4. Learn React.js Single page application
- 5. Photo Sharing App
- 6. Backend server Node.js and MongoDB
- 7. Sessions state and validation
- 8. Photo App Scrumboard

Discussion sections will be scheduled on Friday, Monday, and Tuesday. No need to enroll. You can attend any section

#### Class software requirements

• A modern web browser

Chrome is strongly suggested, Internet Explorer (IE) is strongly discouraged

• Node.js

Installs fairly easily on modern OS environment (Linux, MacOS, Windows) npm (in Node.js install) is used for fetching assignments and dependencies

• MongoDB

Easy to install (for a DBMS) on modern OS environments

#### Stanford Honor Code

We want you to do the projects individually

## Questions?
