

CS/BioE/Biophys/BMI/CME 279

Computational biology: Structure and organization of biomolecules and cells

Ron Dror
Stanford University

Sept 24, 2024

*Image credit:
Ansgar Philippsen*

Real-time class participation encouraged,
but you can join in person or virtually

- Lecture live stream available to enrolled students on Canvas
 - Go to Canvas page for course:
<https://canvas.stanford.edu/courses/195742>
 - Select “Panopto Course Videos” tab on the left-hand side
- If you’re feeling unwell or believe you have been exposed to COVID-19/flu, please attend class virtually
- If you’re not available during class time, please watch the recorded lecture before the next class

One-fifth of science Nobel Prizes relate to 3D structure/organization of biomolecules

Protein

DNA

RNA

- Biological structure is critical to:
 - Understanding how biology works
 - Diagnosing, preventing, and treating disease
 - Food and energy production (e.g., agriculture)

Computation plays a critical and rapidly growing role in this field

Nobel Prize (2013):
Computational models of
biomolecules

NEWS | 30 November 2020

**‘It will change everything’:
DeepMind’s AI makes
gigantic leap in solving
protein structures**

Google’s deep-learning program for determining the 3D shapes of proteins stands to transform biology, say scientists.

Dramatic growth of research and commercial activity (startups, acquisitions, etc.) in both physical simulation and machine learning approaches for determining and exploiting biomolecular structure and dynamics

Outline for this lecture

- What is structure?
 - Structure (and dynamics) at multiple spatial scales
- Why is structure important?
- Overview of topics we'll cover
- Recurrent themes
- Course logistics

What is structure?

In daily life, we use machines
with functional *structure* and *moving parts*

Cells and biomolecules (e.g., proteins) are also machines whose function depends on structure and moving parts

From *Inner Life of the Cell* | *Protein Packing*, XVIVO and Biovisions @ Harvard

What is structure?

**Structure (and dynamics)
at multiple spatial scales**

Protein structure

An adrenaline receptor
(the β_2 adrenergic receptor)

Protein dynamics

β_2 adrenergic receptor

Example: how LSD binds to its target

“Revealed: Why LSD Lasts So Long!”

David Goodsell

Intracellular dynamics (artist's rendition)

Janet Iwasa and Tomas Kirchhausen

Why is structure important?

To understand how a machine works, we need more than a list of its parts

Track Bike – DL 175

REF. NO.	IBM NO.	DESCRIPTION
1	156011	Track Frame 21", 22", 23", 24", Team Red
2	157040	Fork for 21" Frame
2	157039	Fork for 22" Frame
2	157038	Fork for 23" Frame
2	157037	Fork for 24" Frame
3	191202	Handlebar TTT Competition Track Alloy 15/16"
4		Handlebar Stem, TTT, Specify extension
5	191278	Expander Bolt
6	191272	Clamp Bolt
7	145841	Headset Complete 1 x 24 BSC
8	145842	Ball Bearings
9	190420	175 Raleigh Pistard Seta Tubular Prestavalve 27"
10	190233	Rim, 27" AVA Competition (36H) Alloy Prestavalve
11	145973	Hub, Large Flange Campagnolo Pista Track Alloy (pairs)
12	190014	Spokes, 11 5/8"
13	145837	Sleeve
14	145636	Ball Bearings
15	145170	Bottom Bracket Axle

- We want to know the shapes of these parts, how they move, and how they affect each other

Structure determines function

- Example: Motor protein (walks along microtubules, dragging load)

From *Inner Life of the Cell* | Protein Packing

Ribosome

-

Hashem et al., Nature 494:385-9, 2013

Structure determines function

- Example: G protein–coupled receptors (GPCRs)
 - Largest class of human drug targets
 - Function: allow the cell to sense and respond to molecules outside it

Structure-based drug design

- Almost all drugs act by binding to proteins and altering their function
- Using knowledge of structures, we can design drugs that bind tightly to the desired protein, alter behavior of the protein in a desired way, avoid binding to other proteins, etc.
- This requires solving challenging computational problems, even when a protein structure is already available

http://www.nih.gov/researchmatters/october2012/images/structure_l.jpg

Designing new biomolecular machines

- Protein design, RNA design, etc.
- Many applications within and beyond healthcare

Ingraham et al.,
Illuminating protein space
with a programmable
generative model. *Nature*
623:1070–1078 (2023)

Overview of topics we'll cover

Biomolecular structure prediction

- Example: Protein structure prediction (“folding”)
 - Given the sequence of amino acids that make up a protein, predict its 3D structure

Image source: <https://newenergyandfuel.com/wp-content/uploads/2014/09/Polypeptide-Chain.png>

AlphaFold
August 2021

RoseTTAFold
August 2021

Biomolecular structure prediction

- Usually harder: predict structures of other biomolecules (e.g., RNA), or of multiple biomolecules bound to one another

Raphael Townshend, Stephan Eismann, Andrew Watkins, Ramya Rangan, Masha Karelina, Rhiju Das, and Ron Dror.
Geometric deep learning of RNA structure.
Science (August 2021)

Josh Abramson et al. Accurate structure prediction of biomolecular interactions with AlphaFold 3. *Nature* (May 2024)

Molecular dynamics simulations

0.00 us

Beta-blocker binding to the β_2 -adrenergic receptor

Tracking and movie: Robin Jia

Sigrist & Sabatini, Current Opinion in Neurobiology 22:1-8, 2011

- Including super-resolution microscopy

How molecules move about a cell: diffusion and cellular-level simulation

Video: Naomi Latorraca

We'll also cover important underlying computational methods

- Machine learning
 - Supervised and unsupervised
- Image analysis
- Sampling from probability distributions

**Previous familiarity with these concepts is
not required!**

Notes on course contents

- Course split roughly in two parts
 1. Atomic-level modeling of biomolecules
 2. Coarser-level modeling and imaging-based methods
- Focus will be on fundamentals, but most lectures will also cover topics of current research
- Some overlap in content with CS 274 (BIOE/BMI/GENE 214), but only about 20%.
 - This class (CS 279) is focused on structure. Much of CS 274 covers other bioinformatics topics.
 - Many students take both classes, in either order, or sometimes simultaneously.

Recurrent themes

Recurrent themes

- **Physics-based approaches** (modeling based on first-principles physics) vs. **data-driven approaches** (machine learning based on experimental data)
- Computation plays important role both in **structural interpretation of experimental data** and in **structural predictions in the absence** of such data
- Similarities and differences in methods employed at **different spatial scales**
- **Energy functions** (which associate an energy or potential with each possible structure)
- Recurring math concepts: **Fourier transforms, convolution, Monte Carlo methods**

Course logistics

Course website

- <https://cs279.stanford.edu>
- See “Course policies and evaluation criteria” document on website
- To view last year’s lecture slides, follow “Fall 2023” link on website
 - This year’s content will be similar but not identical

Course announcements

- We will use Ed Discussion for announcements and for answering students' questions
 - <https://edstem.org/us/courses/47160/discussion/>
- If you can't access this page:
 - Create an Ed account using your Stanford (SUNet) email address
 - If you still can't access the page, email cs279-aut2425-staff@lists.stanford.edu

Expected background

- Course is intended to be broadly accessible to students with *either* computational or biological backgrounds
- Assignments require coding in Python
 - You should have done some coding before.
 - You need not have used Python before, provided you're willing to learn.
 - Python and terminal tutorial: Friday at 10 am over Zoom. It will be recorded so that you'll be able to view it later as well.
- You should have some previous exposure to biology, chemistry, and physics (at least in high school)
- You should have studied math through elementary calculus
 - I'll teach some additional relevant math concepts (e.g, Fourier transforms), with a focus on basic ideas/intuition rather than on equations.

Assignments and Exam

- Assignments
 - First three cover specific topics.
 - Fourth is a more open-ended “project.”
 - First assignment is shorter than second and third. For the project, we expect only a bit more work than the second and third assignments.
 - See collaboration and chatbot policy under “Course policies” on web page.
- Exam covering key concepts

Lectures

- Lecture live streams and recordings available to enrolled students on Canvas
 - Go to Canvas page for course and select “Panopto Course Videos” tab on the left-hand side
 - Or click here: <https://canvas.stanford.edu/courses/195742>
- Lecture slides will be available on course website, along with optional reading material

Participate in class

- I encourage you to join the class in real time (in person or virtually) and ask/answer questions
 - This makes the class better for everyone
 - We'll do small-group discussions in class
- You can earn extra credit for participation
- For those who are not available during class time:
 - Please watch recording before next class
 - You can also earn extra credit by answering other students' questions on Ed Discussion, or by completing optional "Challenge Questions" on assignments. Extra credit is not required to earn an A in the class.

Participate in class

- If joining in person, raise your hand to ask/answer questions
 - Please state your name
- If joining virtually, post questions/answers as comments through Panopto's Discussion feature, so that a TA can share them
 - Please post these as public comments. Do *not* select “moderator only.”

Feedback welcome!

- I want to continue improving this course, and would appreciate your suggestions
- Please speak up when you don't understand something

Course staff

- Prof. Ron Dror
 - <http://drorlab.stanford.edu/rondror.html>
 - Office hours: After every class, outside the classroom or at <http://bit.ly/Ron-OH-2024>
- TAs:
 - Ari Glenn
 - Briana Sobecks
 - Carrie Chen
 - Chiho Im
 - Hannah Park
 - Ishaan Singh
 - Masha Karelina
 - Luci Bresette
 - Office hours and contact info at cs279.stanford.edu in the “Office Hours” section, or via <http://bit.ly/CS279-OH>
- The best way to get most questions answered is by posting on Ed Discussion
