CS 124/LINGUIST 180
From Languages to Information

DAN JURAFSKY
PROFESSOR OF COMPUTER SCIENCE
PROFESSOR OF LINGUISTICS
STANFORD UNIVERSITY
WINTER 2024

INTRODUCTION AND COURSE OVERVIEW
From Languages to Information

Automatically extracting meaning and structure from:

- Human language (news, social media, etc.)
- Social networks

Interacting with humans via language

- Web search
- Chatbots (= Dialogue Systems)
  - Question Answering
  - Recommendation Systems
Commercial World

- Apple
- OpenAI
- Google
- Meta
- Microsoft
- Amazon
- YouTube
- Instagram
Social World

Disaster Relief
Help teachers in the classroom
Use data from body-worn camera to improve Police-Community relations
Train mental health counselors
1. Extracting information from language
Information Retrieval

6,586,013,574 web searches every day (by one estimate)

Text-based information retrieval is likely the most frequently used piece of software in the world

How does it work? Can you build an IR engine?

*Programming Assignment 3: Search!*
Haiti Earthquake 2010
Classifying SMS messages

Mwen thomassin 32 nan pyron mwen ta renmen jwen yon ti dlo gras a dieu bo lakay mwen anfom se sel dlo nou bezwen

I am in Thomassin number 32, in the area named Pyron. I would like to have some water. Thank God we are fine, but we desperately need water.

Programming Assignment 2: Triage!
Lots of meaning is in **connotation**

"connotation: an idea or feeling that a word invokes in addition to its literal or primary meaning."

Extracting connotation is generally called **sentiment analysis**

*Programming Assignment 2: Sentiment*
A (fictional) application of sentiment analysis for toxicity intervention that shows how hard it can be!
Could we do that tone-check with ChatGPT?

Not yet!

- **Toxicity detection**: detecting hate speech, abuse, harassment, or other kinds of toxic language
- Widely used in online content moderation
- Problem: toxicity classifiers misfire on words for minority identities:
  - The word "blind": (Hutchinson et al., 2020)
  - The word "gay" (Dixon et al. 2018, Oliva et al., 2021)
- Result: censorship of speech by disabled people and others
Could we apply sentiment analysis for humanities or social science questions?
900,000 Yelp reviews online

A very bad (one-star) review:

The bartender... absolutely horrible... we waited 10 min before we even got her attention... and then we had to wait 45 - FORTY FIVE! - minutes for our entrees... stalk the waitress to get the cheque... she didn't make eye contact or even break her stride to wait for a response ...
What is the language of bad reviews?

Negative sentiment language
   horrible awful terrible bad disgusting

Past narratives about people
   waited, didn’t, was
   he, she, his, her,
   manager, customer, waitress, waiter

Frequent mentions of we and us
   ... we were ignored until we flagged down a waiter to get our waitress ...
Other narratives with this language

A genre using:

- Past tense, *we/us*, negative, people narratives

Texts written by **people suffering trauma**
- James Pennebaker lab at UT Austin
- Past tense is used for "distancing"
- Use of "we": seeking solace in community

**1-star reviews are trauma narratives!**

The lesson of reviews:

- **It’s all about personal interaction**
What about positive reviews?
Sex, Drugs, and Dessert

*addicted* to pepper shooters
garlic noodles... my *drug of choice*
the fries are *like crack*

*orgasmic pastry*
*sexy food*
*seductively seared fois gras*

NLP can be a tool for cultural analytics!
Sequence comparison is key to

- Finding genes
- Determining function
- Uncovering evolutionary processes

This is also how simple spell checkers work!

We'll learn: edit distance algorithms (Quiz 1)
Social Networks

The network formed by your friends or other relations offline or online

• Can we compute properties of these networks?
• Extract information from them?

◦ We'll learn: Network algorithms (Quiz 9)
Help improve Police-Community Interaction (week 6)

Problems:
• A flood of videos show inappropriate use of force by police
• Black Americans suffer from much more negative interactions with police

Could natural language processing help?
• Quantify police-community interactions using body-worn cameras?
• Help develop officer training?
• Reduce the chances of violence?
• I'll talk about my work with Prof. Jennifer Eberhardt
2. Interacting with humans via language
Personal Assistants

The dark side: YouTube Radicalization

Caleb Cain was a college dropout looking for direction. He turned to YouTube.
ChatGPT (or LLAMA2-CHAT or Claude, etc): Large language models for chat

Act-as prompting and GAtt

I like anything to do with architecture. If it's relevant, suggest something related.

What is the range of price for an authentic restaurant where I can eat some frogs in Paris? Answer in one sentence only.

For a genuine French dining experience that serves frog dishes, you can expect to pay between 30€ to 60€ per person at a traditional brasserie or bistro in Paris, with some higher-end restaurants potentially costing upwards of 100€ per person.

And besides eating frogs, what do you recommend me to do in this city? Don't mention more than 3 things.

Sure, here are three things to do in Paris beyond eating frogs:
1. Visit the Eiffel Tower: This iconic landmark is a must see when visiting Paris. You can take the elevator to the top for breathtaking views of the city.
2. Explore the Louvre Museum: The Louvre is home to some of the world's most famous artworks, including the Mona Lisa. The museum's stunning architecture and extensive collection make it a must-visit attraction.
3. Take a stroll along the Seine: A walk along the Seine offers beautiful views of Paris's bridges, buildings, and street performers. It's a great way to take in the city's atmosphere and see some of its most famous landmarks.
Logistics: Instructor

Instructor: Dan Jurafsky (he/him)
Professor in CS and Linguistics

My office hours:
◦ Tuesday after class 4:30-5:45
◦ Margaret Jacks Hall 117

*How to pronounce my name

Let's think about the language modeling task.

Why is it so remarkable?

What makes language interpretation hard?
Ambiguity

Resolving ambiguity is hard
Ambiguity

There are at least half a dozen meanings of this sentence:

The chef made her duck

Go here and type (and vote for) some definitions

https://pollev.com/danjurafsky451
Ambiguity

The chef made her duck

The cook cooked waterfowl for a different woman X (person using "she/her" pronouns) to eat

The cook cooked waterfowl belonging to X

The cook cooked waterfowl belonging to the cook

The cook created the (plaster?) waterfowl that X owns

The cook caused X to quickly lower X's head or body

The cook uncovered the true identity of the cook's spy waterfowl

The cook waved their magic wand and turned X into undifferentiated waterfowl
The chef made her duck

The chef caused X to quickly lower her head or body
  Part of speech: “duck” can be a Noun or Verb

The chef cooked waterfowl for X (or belonging to X)
  Part of speech:
    “her” is possessive pronoun (“of her”)
    “her” is dative pronoun (“for her”)

The chef cooked waterfowl belonging to the chef (vs to X)
  Coreference
    “her” can refer to X or to the Chef

The chef made the (plaster) duck statue X (or the chef) owns
  Word Meaning: “make” can mean “create” or “cook”
More difficulties: Non-standard language, emojis, hashtags, names

chowdownwithchan #crab and #pork #xiaolongbao at @dintaifungusa... where else? 😂руч Note the cute little crab indicator in the 2nd pic 🦞❤️
Models and Tools

Regular Expressions

Edit distance and alignment

Neural word embeddings

Supervised classifiers
  ◦ Naive Bayes
  ◦ Logistic Regression
  ◦ Neural Networks

Neural Large Language Models

Network algorithms
  ◦ PageRank

Recommendation algorithms
  ◦ Collaborative filtering

Linguistic tools
  ◦ Sentiment lexicons
  ◦ Emotion lexicons

The GUS chatbot architecture
  (Siri, Alexa)

Neural chatbots (ChatGPT)
Core of modern NLP: Neural "word embeddings"

A word's meaning is a point in (say) 300-dimensional space

A 2-D visualization:
Problem: Embeddings reflect cultural bias!

Ask “Paris : France :: Tokyo : x”
  ° x = Japan

Ask “father : doctor :: mother : x”
  ° x = nurse

Ask “man : computer programmer :: woman : x”
  ° x = homemaker

What can we do about this problem? Week 5!
Evidence Based Pedagogy!
WHAT IS THE FLIPPED CLASSROOM?

The flipped classroom inverts traditional teaching methods, delivering instruction online outside of class and moving “homework” into the classroom.

THE INVERSION

The Traditional Classroom
Teacher’s Role: Sage on the Stage

LECTURE TODAY
Reading and questions due tomorrow

Homework

The Flipped Classroom
Teacher’s Role: Guide on the Side

ACTIVITY TODAY
WATCH lecture online tonight!

From (defunct) www.knewton.com/flipped-classroom/
Why the flipped classroom (1)

**Mastery learning**: Learn until you master

Benjamin Bloom, 1968
Bloom's mastery learning

Personalized, *goal-driven practice*, driven by *feedback*

1. Watch (and re-watch) lectures at your own pace and learn when it's best for you

2. Videos have embedded miniquizzes. If you get it wrong, it gives you feedback about why you misunderstood.

3. You have *infinite* chances at each weekly Tuesday Quiz, so you can go back to the lecture and retake them.

4. With programming assignments you can see your performance on the training and dev set to see what you might be doing wrong on the test set!
Why the videos have embedded quizzes: “summative” vs “formative” assessment

**Summative assessment**
- Final exams/midterms: goal is grading

**Formative assessment**
- Along the way: goal is for you to find out what you don’t know so you can learn
Why the flipped classroom (2)

Attention span: everyone spaces out during long lectures

“the class started 1:00. The student sitting in front of me took copious notes until 1:20. Then he just nodded off... motionless, with eyes shut for about a minute and a half, pen still poised. Then he awoke and continued his rapid note-taking as if he hadn’t missed a beat.”

Student remembered only the first 15-20 minutes
Why the flipped classroom (3)

**Active learning:** Be in charge of your learning
- Most important: programming assignments
- Active learning (“constructivism”), learning by doing

**Collaborative learning:** Learn from each other
- Use class time for group problem-solving
- “Small group active learning”
- You must do PA7 in groups of 4
- We encourage pair programming on PA1-6
cs124: Flipped classroom

1. **Prerecorded video lectures on video:**
   - About ~90 minutes/week of video lectures
   - Some people watch it speeded up

2. **Live sessions: (none are recorded)**
   - 4 required in-person lectures
   - 5 required in-class labs (“active learning”)
     - Lab #1 (Unix text tools) next Tuesday is **required in person**
     - Labs #2, #3, #4 are required but attendance extra credit (you can do at home).
     - Lab #5 March 5 (Git and PA7) is **required in person**
Logistics More Specifically

Online Video Lectures w/embedded non-graded questions (watch before class)

20 pages of reading a week (up to you when to read)

Weekly online Quizzes (due Tue of following week)

7 Python homeworks (due Fri of following week)

One midterm that is online and can be taken during an extended 24-hour period (Feb 29)
Learning Goals

At the end of this course, you will be able to:
Learning goals

Write efficient regular expressions to solve any kind of text-based extraction task
Learning goals

Apply the edit distance algorithm to all sorts of text sequence problems
Learning goals

Build a supervised classifier to solve problems like sentiment classification
Learning goals

Build a neural network and train it using stochastic gradient descent
Learning goals

Build a search engine
Learning goals

Build a recommendation engine
Learning goals

Build a computational model of word meaning (using lexicons and neural word embeddings)
Learning goals

Build a chatbot, both by prompting of a large language model, and by building dedicated components
Learning goals

Understand and implement PageRank and other social network functions
Learning goals

Understand large language models and be able to prompt them, reason about what they can do, and reason about their social implications.
Learning goals

Work on computational projects in groups

PA1-6: Pair programming is encouraged
PA7: Must be done in groups of 3-4
This class is the undergrad intro to:

Win 2024: cs224N NLP w/Deep Learning (Hashimoto and Yang)
Spr 2024: cs224N NLP w/Deep Learning (Manning)
Win 2024: cs246 Mining Massive Data Sets (Leskovec)
Spr 2024: cs224C: NLP for Computational Social Science (Yang)
Spr 2024: cs224S Spoken Language Processing (Maas)
Fall 2023: cs329R Race and NLP (Jurafsky + Eberhardt)
Fall 2023: cs224V Conversational Virtual Assistants with Deep Learning (Lam)

Not this year: cs222U Natural Language Understanding (Potts)
Not this year: cs346 Ethical and Social Issues in NLP (Jurafsky)
Not this year: cs 329X: Human-Centered NLP (Yang)
Not this year: cs276 Information Retrieval and Web Search (Manning)
Should I take 124 or 224N?

**CS124 is designed for sophomores or juniors**
- It's gentle (I explain everything) and broad (covering many topics, not just NLP but also recommendation engines, IR, social networks)
- Mastery learning, quizzes, programming assignments with starter code and scaffolding.
- No research project, but a fun chatbot final homework

**CS224N and 224U are deeper, more focused, grad courses**
- They assume you are familiar with machine learning and will jump right into optimization
- More details of implementation and you will learn about and implement more advanced things
- 124 stops right before Transformers and attention; 224N will teach transformers and attention
- Learning via research: novel research projects as a large component

CS224?? (Human Centered NLP) and CS346 (Social and Ethical Issues in NLP) require 224N or 224U

CS224C: more applied focus, applying NLP to social science: (NLP for Computational Social Science)
(You should of course take all of them!!)
Syllabus

cs124.stanford.edu
Where do I find all the programming assignments and quizzes and readings?

Everything is on the webpage cs124.stanford.edu

Except the videos which are on Canvas Modules!

In other words:

◦ Lectures slides: webpage
◦ Lab instructions: webpage
◦ Tutorial information: webpage
◦ Programming assignments: webpage (points to git where they live)
◦ Weekly quizzes: webpage (points to gradescope where they live)
◦ Practice midterm: webpage
◦ Midterm: gradescope
◦ Videos: canvas
Coming up this week: Thursday

**Optional tutorial** on jupyter notebooks and PA0, getting ready for PA1

Come to class **with your laptops** and we'll go through PA0 together!

This tutorial will be led by amazing TA Jasper McAvity!!! But I and many other CAs will be there!
Action Items Before Thursdays class!

1) Read the syllabus webpage at cs124.stanford.edu

2) Look at PA0 (you can find it from the webpage)

3) Watch Canvas Videos on "PA0 Mac Setup" (or "PA0 Windows Setup"), also pointed to by webpage
Coming up next week (Tuesday)

"Unix for poets":
  grep
  sort

Key UNIX tools for dealing with text files and regular expressions.
Action Items before next Tuesday's class!

1) Watch the "week 1" videos on Canvas by Sunday (since the quiz is also due Tuesday)

3) Download this file to your laptop
   http://cs124.stanford.edu/nyt_200811.txt

4) If you don't know UNIX yet (haven't had cs107):
   ◦ For people using a Windows 10 machine, if you don't have Ubuntu on your machine:
     ◦ Watch the pa0 Windows video about how to download and install Ubuntu (it's pointed to from the website)
     ◦ Watch Chris Gregg's excellent UNIX videos here: Logging in, first 7 File System, and first 8 useful commands
PA1: Spam Lord!

Write regular expressions to spread evil* throughout the galaxy!

By extracting email addresses and phone numbers from the web!

jur a fs ky at st anford dot e d u

Goes live Friday 5pm!

*Just kidding; don't be evil
