Overall Recommendations
Trunkate is super cute and has a really clear, friendly idea! The look is cohesive, with Trunk giving the app a warm personality. The "that's okay" and "want a smaller step today?" do a good job at making a mixed day feel fixable, which is important for busy students and professionals since everyone has an off day sometimes. We found a total of 55 violations. A lot of it was hard-coded data, like the streak going 5, 7, then 6, Upcoming disagreeing with Home, or a plan that doesn't reflect picking 15 min/day -- those are rated low because they're expected for a med-fi, but I would definitely clean them up before hi-fi so testers don't get distracted by numbers that don't make sense. Major patterns included: actions aren't often confirmed after, forms accept contradictory or empty input, visual hierarchy often gives too much weight to information that doesn't matter as much, and users get pushed forward with no way back. *Our biggest recommendation is to give people a clear way to say no to Trunk. Every suggestion should still have an option next to the main one, and anything you log should also be undoable. For busy people, an app that rearranges their schedule without asking might feel controlling. Our second recommendation is to make the plan's limits more visible. Show minutes per session and how long the whole plan is, and each step should lead with the step itself rather than the week range. Busy students / professionals plan around time because time is what they have least of, so letting them check their time against the plan easier will make them trust the Trunk AI more. Our third recommendation is to not assume a user's week went badly in the weekly review. Lastly, it would be great if the visuals could be more consistent throughout, to really polish what is shaping up to be a great product!*
