Value Proposition

Problem/Solution

Design Values

Task Flow

## The Problem.

ASL speakers are challenged when it comes to communicating unknown words to one another. There is no intuitive platform that directly translates sign to meaning.

## Our Solution.

Provide a social educational platform that allows deaf signers to **define signs through video storytelling** and for learners to **solidify their understanding through additional context.**

# Introducing...

## **TrainGone!**

Express yourself beyond words.

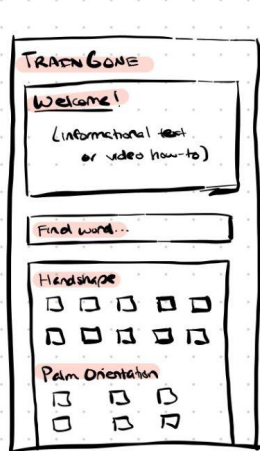

Our team name is an ASL idiom akin to the English idiom, “that ship has sailed”, meaning that the conversation subject has come and gone.

This highlights the value of our product for those “one and done” situations where you didn’t quite catch the signed word.

# Our Core Values

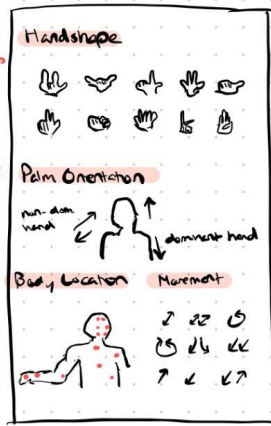

↑ home screen

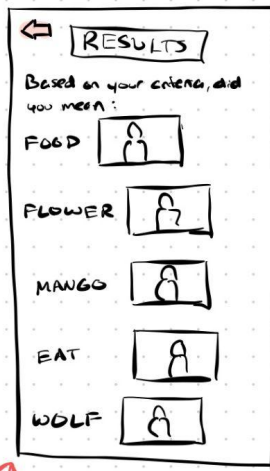

highlight one or multiple options in accordance with ASC parameters

Deaf-friendly visual icons

scroll down for reverse sign search function and to explore/browse videos

after filling out info, view suggested corresponding signs w/ video of sign

select word for more info about it

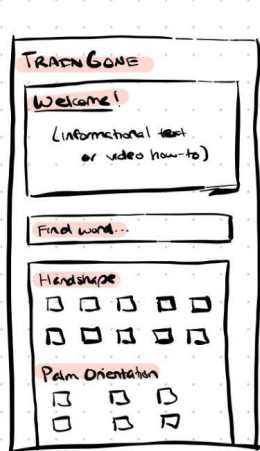

# Task Flow #1: Identify Word

color coded tags by parameter:

- Handshape
- Location
- Direction
- Palm Orientation
