

# Spur Hi-Fi Prototype README

Picture this: you're scrolling on your phone, stuck in a rut on a Saturday afternoon. There's just nothing better to do. Or is there? Enter Spur. An all-in-one activity manager that turns your scrolling into: birdwatching, painting, pickleball, or any of the other activities we help you find and plan. Rally your friends, ditch your phone, and be of the moment, with Spur!

## To Run

To run this app, you must have a computer with command line access and a mobile device with Expo Go installed.

1. Download the repo using `git clone https://github.com/simrantan/spur-app.git`
2. `cd spur-app` and run `npm i`
3. Start the development server using `npx expo start`
4. Scan the QR code provided in the terminal. This will open the app in Expo Go on your phone!

We tried to deploy using eas (Expo Application Service), which generated this QR code. However, the eas deployment gave us un-debuggable issues, whereas local deployment works more consistently.
