HW8 (Due: Wed March 3) – piVC

1. Download the piVC client from http://theory.stanford.edu/~jasonaue/pivc
2. You can run piVC either by double-clicking on the JAR file (if your OS supports that), or issuing the command "`java -jar <path_to_jar_file>`".
3. Go to Settings > Change Server Address. Enter: "pivc.jasonland.com:4242".
4. Whenever you are ready to validate your annotations, click Compile.

If you haven't already done so, make sure to read the tutorial, which is also posted on that site. There are also some sample programs that you can peruse if desired.

Email your solutions to gary503@stanford.edu
