

# EE 267W Virtual Reality: WIM Assignment 5

**Due:** 05/14/2026, 11:59pm

## Instructions

This week's WIM assignment is a reading assignment. We will send you one or more project reports of your peers. Read them carefully and provide feedback and constructive criticism. The feedback should focus on syntactic aspects of the proposal, including writing style, grammar, and format, and also semantic aspects. The latter include the structure and flow of the arguments made in the writing, the quality of the listed references, and the feasibility of the milestones.

Specifically go through the introduction and related work sections in detail. Does the idea make sense and is it well motivated? Is the introduction clearly structured? Would a person who is technically savvy but knows nothing about this particular area or VR in general clearly understand what the idea is and what the project is trying to achieve? If not, give specific suggestions for how to improve the writing. Also go through the related work section in detail. Is the categorization of related work intuitive and meaningful? Is it clear what the benefits and limitations of each cluster of related work are? Is it clear how the proposed idea is related to previous work? Include suggestions for improvement!

Finally, also review the proposed structure of the rest of the report. Is this structure a good way for documenting this project? Are all components of a report/paper addressed, including a detailed technical description of the proposed algorithm/hardware/demo, a qualitative and quantitative evaluation, a direct comparison to previous work, a discussion section and a future work section? If any of these parts are missing, please comment on that.

Submit your revised project proposal by emailing it to the course staff mailing list. You can submit a simple text file with your comments and/or a pdf with comments and other markups.
