Know the History of the Macintosh

<http://library.stanford.edu/mac/>

Deb in our office has an IMac and she is proud of it. This site features primary documents, such as memos tracing the evolution of the Macintosh mouse; images, such as technical drawings, stills from commercials, notes from user tests; and interviews with members of the Macintosh development team, technical writers, and founders of user groups. There you go, Deb. This one is for you.
