EEES 302. Challenges and Practices in Crossdisciplinary Research and Teaching
Required EEES core course. Pedagogical tools to present interdisciplinary concepts to a non-specialist audience.
1 unit, not given this year

EEES 400. Research in Earth, Energy, and Environmental Sciences
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EEES 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EAST ASIAN STUDIES (EASTASN) COURSES

UNDERGRADUATE COURSES IN EAST ASIAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

EASTASN 70SI. Critical Issues in U.S.-China Relations Today
Multidisciplinary approach to historical factors, current events, and key issues that drive relations between the United States and China today, including: economic reform and the current financial crisis; security concerns over Taiwan, North Korea and Tibet; energy and the environment; role of NGOs and media in society; and human rights and prospects for political liberalization. Guest lectures from faculty and personal experiences from individuals who have lived or worked in China.
2 units, Spr (Staff)

EASTASN 117. Health and Healthcare Systems in East Asia
(Same as EASTASN 217) China, Japan, and both Koreas. Healthcare economics as applied to East Asian health policy, including economic development, population aging, infectious disease outbreaks (SARS, avian flu), social health insurance, health service delivery, payment incentives, competition, workforce policy, pharmaceutical industry, and regulation. No prior knowledge of economics or healthcare required.
3-5 units, Win (Eggleston, K)

EASTASN 189K. Korea’s Relations with Major Neighboring Countries and Its Growing Role on a Global Stage
(Same as EASTASN 289K) Topics on Korea vary each year. Topics this year include South Korea's relations with the U.S., Japan, China, ASEAN and the EU. Focus is on South Korea's diplomatic practices during early 1990's to 2010 in dealing with pending issues with these countries and communities. In addition to required readings in English, supplemental basic readings in Korean, Japanese, and Chinese will be recommended.
3 units, Win (Staff)

EASTASN 191. Journal of East Asian Studies
(Staff)
1 unit, Aut (Wigen, K), Win (Wigen, K), Spr (Wigen, K)

GRADUATE COURSES IN EAST ASIAN STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

EASTASN 217. Health and Healthcare Systems in East Asia
(Same as EASTASN 117) China, Japan, and both Koreas. Healthcare economics as applied to East Asian health policy, including economic development, population aging, infectious disease outbreaks (SARS, avian flu), social health insurance, health service delivery, payment incentives, competition, workforce policy, pharmaceutical industry, and regulation. No prior knowledge of economics or healthcare required.
3-5 units, Win (Eggleston, K)

EASTASN 289K. Korea’s Relations with Major Neighboring Countries and Its Growing Role on a Global Stage
(Same as EASTASN 189K) Topics on Korea vary each year. Topics this year include South Korea's relations with the U.S., Japan, China, ASEAN and the EU. Focus is on South Korea's diplomatic practices during early 1990's to 2010 in dealing with pending issues with these countries and communities. In addition to required readings in English, supplemental basic readings in Korean, Japanese, and Chinese will be recommended.
3 units, Win (Staff)

EASTASN 300. Graduate Directed Reading
Independent studies under the direction of a faculty member for which academic credit may properly be allowed. For East Asian Studies M.A. students only.
1-7 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EASTASN 330. Core Seminar: Issues and Approaches in East Asian Studies
For East Asian Studies M.A. students only.
1 unit, Aut (Chang, G)

EASTASN 390. Practicum Internship
On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.
ECONOMICS (ECON) COURSES

UNDERGRADUATE COURSES IN ECONOMICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ECON 1A. Introductory Economics A
The economic way of thinking and the functioning of a market economy. The behavior of consumers and firms, markets for goods and inputs, and principles of international exchange. Applications and policy issues in economics. GER:DB-SocSci
1 unit, Aut (Taylor, J), Win (Wright, G), Sum (Staff)

ECON 1B. Introductory Economics B
Aggregate economic relationships, including output, employment, inflation, interest rates, and exchange rates. Short-run fluctuations and long-run issues in monetary and fiscal policy. Prerequisite: 1A. GER:DB-SocSci
5 units, Win (Amador Lopez, M), Spr (Clerici-Arias, M), Sum (Staff)

ECON 10. Silicon Valley Meets Wall Street
Seminar in applied economics with focus on the microcosm of Silicon Valley, how growth companies are originated, managed and financed from start-up to IPO. Round-table discussion format. Applicable to those students with an interest in technical innovation and business development. Enrollment limited to 10 students; selection based on short application. Priority given to juniors and seniors majoring in in Economics or Engineering.
1 unit, Aut (Shanahan, T)

ECON 11N. Understanding the Welfare System
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Welfare reform legislation and the devolution revolution. The transfer of responsibility for anti-poverty programs to the states. How does welfare reform change the welfare system and who is likely to be affected. Food stamps, AFDC, TANF, SSI, and Medicaid. Income transfer programs such as earned income tax credit and income taxes, and labor market regulations such as minimum wages and overtime rules. Economic principles to understand the effectiveness of these programs and their consequences on the behavior of families. Prerequisite: corequisite: ECON 1. Recommended: basic understanding of labor markets, taxes, and transfers.
2 units, Aut (MacCurdy, T)

ECON 13SC. Economic Policies of the Presidential Candidates
2 units, not given this year

ECON 17N. Energy, the Environment, and the Economy
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The relationship between environmental quality and production and consumption of energy. Can environmentally-friendly energy production and consumption compete with conventional sources? How to estimate and compare environmental impact costs of nonrenewable sources such as fossil fuels and nuclear power versus renewable sources such as solar and wind power. Implicit subsidies in conventional energy sources and the environmental costs of these subsidies. Regulatory and legal barriers to more environmentally friendly energy sources.
2 units, Spr (Wolak, F)

ECON 19N. The Economics of Cities
In most countries of the world, urban areas tend to have the highest per-worker productivity and generate most of the economic output and economic innovation. In this class, we will explore what economics has to say about the costs and benefits of urbanization. We will discuss a number of classic topics in urban economics, including agglomeration advantages, human capital externalities, the economics of congestion, and efficient economic development policies. Prerequisite: Econ 1A
2 units, not given this year

ECON 20N. Economy and Economics of Ancient Greece
3 units, not given this year

ECON 20SI. Sustainability from the Economic Perspective
In spite of its apparent universal popularity, environmental sustainability is a concept that is impossible to define objectively. Nevertheless, many aspects of economic activity reduce the quality of environmental services available to consumers. The local and global pollutants that result from the production and consumption of fossil fuels is perhaps the most generalized example of this phenomenon. However, virtually all aspects of modern economic activity degrade some aspect of available environmental services. Consequently, a major challenge to increasing the share of the world's population with a modern standard of living is the need to balance the adverse impacts of modern economic activity on growth of environmental services. This course will analyze the full range of mechanisms available to manage these tradeoffs. The course will focus on solutions from business, government, and the non-profit sectors. Guest speakers will include venture capitalists, consul
1-2 units, not given this year

ECON 50. Economic Analysis I
Individual consumer and firm behavior under perfect competition. The role of markets and prices in a decentralized economy. Monopoly in partial equilibrium. Economic tools developed from multivariable calculus using partial differentiation and techniques for constrained and unconstrained optimization. Prerequisites: 1A and MATH 51 (must be taken for a letter grade). GER:DB-Math
3 units, Aut (Tendall, M), Spr (Tendall, M), Sum (Staff)

ECON 51. Economic Analysis II
Neoclassical analysis of general equilibrium, welfare economics, imperfect competition, externalities, price of public goods, intertemporal choice and asset markets, risk and uncertainty, game theory, adverse selection, and moral hazard. Multivariate calculus used. Prerequisite: 50.
3 units, Aut (Clerici-Arias, M), Win (Scheuer, F), Sum (Staff)

ECON 52. Economic Analysis III
Long-run economic growth and short-run economic fluctuations. Focus on the macroeconomic tools of government: fiscal policy (spending and taxes) and monetary policy, and their effects on growth, employment, and inflation. Prerequisites: 1B, 50.
5 units, Win (Kurlat, P), Spr (Staff), Sum (Staff)

ECON 90. Introduction to Financial Accounting
(Same as ECON 190) How to read, understand, and use corporate financial statements. Oriented towards the use of financial accounting information (rather than the preparer), and emphasizes the reconstruction of economic events from published accounting reports.
5 units, Aut (Stanton, F), Win (Stanton, F)

ECON 91. Introduction to Cost Accounting
(Same as ECON 191) The use of internal financial data for managerial decision making.
5 units, Spr (Staff)

ECON 101. Economic Policy Analysis
Economic policy analysis, writing, and oral presentation. Topics vary with instructor. Limited enrollment. Prerequisites: 51 and 52, 102B, and two field courses. Some sections require additional prerequisites. WIM
3 units, Aut (Steiner, F), Win (Steiner, F), Spr (Steiner, F)

ECON 102A. Introduction to Statistical Methods
(Postcalculus) for Social Scientists
Description and examples of the use of statistical techniques relevant to economics. Basic rules of probability, conditional probability, discrete and continuous probability distributions. Point estimation, tests of hypotheses, confidence intervals, and linear
regression model. Prerequisite: MATH 41 or equivalent. GER:DB-Math
5 units, Aut (McKeon, S), Win (McKeon, S), Spr (McKeon, S)

ECON 102B. Introduction to Econometrics
5 units, Win (Harding, M), Spr (Mahajan, A)

ECON 102C. Advanced Topics in Econometrics
Identification and estimation of the effect of human capital variables on earnings (such as the return to education, tenure). The evaluation problem. Identification and estimation of social interactions. Topics: instrumental variable estimation, limited dependent variable models (probit, logit, and Tobit models), panel data techniques (fixed effect and random effect models, dynamic panel data models), introduction to non-parametric methods.
5 units, Spr (DeGiorgi, G)

ECON 103. Applied Econometrics
The construction and use of econometric models for analyzing economic phenomena. Students complete individual projects and core material. Topics vary with the instructor. Enrollment restricted to Juniors and Seniors. Limited enrollment. Prerequisites: 52, 102B.
5 units, not given this year

ECON 104. Econometrics Applied to Macroeconomics and Finance
Seminar in quantitative analysis of issues relating to the overall performance of the American and global economies. Emphasis on the recent economic crisis. Requires the execution and presentation of an original research paper using econometric techniques. Prerequisites: Econ 51, 52, 102B. Recommended: Econ 140.
Limited enrollment.
5 units, not given this year

ECON 106. World Food Economy
(Same as EARTHSYS 106, EESS 106) The interrelationships among food, populations, resources, and economic development. The role of agricultural and rural development in achieving economic and social progress in low-income nations. Emphasis is on public sector decision making as it relates to food policy.
5 units, Win (Naylor, R; Falcon, W)

ECON 111. Money and Banking
Money, banking, and other financial institutions at both micro and macro levels. Micro: alternative financial instruments, the determination of interest rates, the yield curve, and the role of banks and other capital market institutions in the intermediation process. Supply of money, regulation, and supervision. Macro: the choice of monetary policy by the central bank, the impact of monetary policy making institutions on this choice and the various channels through which monetary policy affects inflation and real variables in the economy. Emphasis is on the institutional structure of Federal Reserve System and the conduct of monetary policy in the U.S. Prerequisites: 50, 52.
5 units, Win (Schneider, K), Sum (Staff)

ECON 113. Economics of Innovation
(Same as PUBL POL 354) The modern, knowledge-based economy characterized by: rapid innovation; a dramatic increase in the rate of production of information and decline in the cost of producing it; and pervasive network externalities or increasing returns to scale. Emphasis is on the role of patents and alternative mechanisms for creating incentives for firms to innovate. Topics include: why there may be too much innovative activity; how patent laws may slow rather than help innovation; and the interaction between public and private sector innovation. Prerequisites: 51.102B.
5 units, Spr (Moser, P)

ECON 114. Economy and Economics of Ancient Greece
Cultural and political background for Athens of the 5th and 4th century BC. Athenian economy of the 4th century BC. Economic ideas of Plato, Aristotle, and Xenophon. Pros and Cons of utilitarianism in light of the ethical theories of Plato and Aristotle. Economy and economics of ancient Greece will be compared to the same of ancient China. There is an interesting parallel.
GER:EC-GlobalCom
5 units, Win (Ameniya, T)

ECON 115. European Economic History
Economic changes and growth in W. Europe from antiquity to the present. The transformation of Europe from an economically and culturally backward part of the world to the center of the pre-WW I world economy. Topics: the role of techniques and sciences, variations of the extent of market activities, institutional changes, international politics, demography. Prerequisites: 51, 52. GER:DB-SocSci
5 units, not given this year

ECON 116. American Economic History
(Same as AMSTUD 116) The American economy from colonial times to the present, illustrating the role of history in economic life. Topics: U.S. economic development in global and comparative context; slavery as an economic system; origins and consequences of the American technology and business organization; economics of the Great Depression and New Deal; post-World War II economic performance and social change; recent U.S. economic record in historical perspective. Prerequisite: 1A, GER:DB-SocSci, EC-AmerCul
5 units, Spr (Wright, G)

ECON 117. Economic History and Modernization of the Islamic Middle East
From the rise of Islam to the present. Transformation of region from economically advanced to underdeveloped. Role of religion in economic successes and failures. Current obstacles to development. Topics: Islamic economic institutions; innovation and change; political economy of modernization; interactions with other regions; and economic consequences of Islamism. Prerequisites: ECON 51, 52, 102B.
5 units, not given this year

ECON 118. Development Economics
The economic problems and policy concerns of developing countries. Theories of growth and development; inequality and poverty; credit and labor markets; health and education; politics and corruption. Emphasis is on economic models and econometric evidence rather than case studies. Prerequisites: 52, 102B. GER:EC-GlobalCom
5 units, Aut (Blimpo, M)

ECON 119. The Russian Economy
(Same as REES 119, REES 219) Brief introduction to the economic history of Russia, general overview of the modern Russian economy with analysis of its macroeconomic features and dynamics, industrial structure, and the major institutional features that are important for understanding Russian economic development. The period of transition from Soviet-type planned economy to a market economy and market reforms (1991-1998), the period of economic growth (1999-2007), and the economic development of Russia during the current global crisis of 2008- 2010. Analysis of Russia's social structure and social policy, labor markets, the regional structure of the economy, the role of the state, and major Russian industries (oil, metals, machinery). Emphasis on the specific institutional aspects that have shaped Russia's economic development.
4-5 units, not given this year

ECON 120. Socialist Economies in Transition
Privatization, restructuring, and institutional change in E. Europe and the former Soviet Union. Analysis of property rights, corporate governance, incentives, and resource allocation in socialist and transitional economies. Emphasis is on liberalization and privatization policies (including mass and voucher programs) as the primary instruments to induce changes in behavior. Prerequisite: 50. Recommended: 51.
5 units, not given this year

ECON 123. Regulation and Competition in Less Developed Countries
The economics and workings of public intervention, control and liberalization of markets in less developed countries. Topics: natural monopoly regulation; institutions and regulatory commitment; infrastructure; concessions; regulation and competition in network industries such as telecoms and electricity; liberalization of markets and competition policy; competition and efficiency; antitrust with a weak judiciary. Prerequisite: 51.
COURSES OF INSTRUCTION

5 units, not given this year

ECON 124. Contemporary Japanese Economy
Comparative and historical perspective. Micro and institutional aspects, such as firms, the employment system, corporate governance and financial institutions, and the macro economy. Elementary applications of macro- and microeconomics. Prerequisite: 50. GER:EC-GlobalCom

5 units, not given this year

ECON 126. Economics of Health and Medical Care
(Same as BIOMEDIN 156, BIOMEDIN 256, HRP 256) Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; socioeconomic status and epidemiology; economics of obesity. Graduate students with research interests should take ECON 248. Prerequisites: ECON 50 and ECON 102A or Stats 116 or the equivalent. Recommended: ECON 51.
5 units, Win (Kurz, M)

ECON 127. Economics of Health Improvement in Developing Countries
(Same as MED 262) Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of evidence. How should we improve health in developing countries? How do we evaluate the effects of interventions? Prerequisites: ECON 102A or Stats 116. Recommended: ECON 51.
5 units, Spr (Shoven, J)

ECON 135. Finance for MBAs
(Same as MS&E 245G) For graduate students and advanced undergraduates. The foundations of finance; applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on present value. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Corporate financial instruments including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 51, or ENGR 60, or equivalent; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.
3-5 units, Aut (Perez-Gonzalez, F), Win (Admati, A)

ECON 136. Market Design
Use of economic theory and analysis to design allocation mechanisms and market institutions. Course focuses on three areas of matching algorithms to solve assignment problems, with applications to school choice, entry-level labor markets, and kidney exchanges; the design of auctions to solve general resource allocation problems, with applications to the sale of natural resources, financial assets, and advertising; and the design of platforms and exchanges, with applications to internet market. Emphasis on connecting economic theory to practical applications. Students must write term paper. Prerequisites: recommended: 51.
5 units, Aut (Levin, J)

ECON 137. Information and Incentives
Effective decision models consider a decision maker's alternatives, information and preferences. The construction of such models in single-party situations with emphasis on the role of information. The theory evolves to two-party situations where parties have more information than the other. The general structure of such problems and the design of contracts to create compatible incentives between the parties. Situations involving moral hazard, adverse selection and signaling with a variety of applications. Prerequisite: 51.
5 units, Spr (McKeon, S)

ECON 138. Risk and Insurance
The nature of economic risk, its effect on allocation of resources and how public policy should be conducted in markets for risk. Preferences among risky prospects: expected utility theory and the theory of risk aversion. Allocation of risk using markets for contingent claims vs. insurance pools in economies with complete information. The functioning of insurance markets when information is asymmetric, under moral hazard and adverse selection. Can insurance markets function well in a competitive equilibrium and what should be public policy in markets such as medical insurance? Role of asset markets in allocating risk. Hedging strategies using futures markets, options and other derivative assets. The role of risk taking in the 2007-2008 financial crises. Prerequisite: 50.
5 units, Win (Kurz, M)

ECON 139D. Directed Reading
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 140. Introduction to Financial Economics
Modern portfolio theory and corporate finance. Topics: present value and discounting, interest rates and yield to maturity, various financial instruments including financial futures, mutual funds, the efficient market theory, basic asset pricing theory, the capital asset pricing model, and models for pricing options and other contingent claims. Use of derivatives for hedging. Prerequisites: 51, 102A.
5 units, Spr (Shoven, J)

ECON 141. Public Finance and Fiscal Policy
(Same as PUBLPOL 107) What role should and does government play in the economy? What are the effects of government spending, borrowing, and taxation on efficiency, equity and economic growth? The course covers economic analysis, statistical evidence and historical and current fiscal policy debates in the U.S. and around the world. Policy topics: budget surpluses/deficits; tax reform; social security, public goods, and externalities; fiscal federalism; public investment; and cost-benefit analysis. Prerequisites: 51, 52 (can be taken concurrently).
5 units, Spr (Boosin, M)

ECON 144. Family Economics
Topics at the intersection of economics and demography. Causes and consequences of historical trends such as the demographic transition, the increase in female labor force participation and its macroeconomic implications, the connection between economic development and family laws (child labor laws, women’s rights), and policies affecting families and children (such as parental leave policies, social security policy, education subsidies). Economic models of household bargaining, fertility choice, and intergenerational transfers. Prerequisites: 51.
5 units, not given this year

ECON 145. Labor Economics
5 units, Aut (Pencavel, J)

ECON 146. Economics of Education
How a decision to invest in education is affected by factors including ability and family background. Markets for elementary and secondary schooling; topics such as vouchers and charter schools, accountability, expenditure equalization among schools, and the teacher labor market. The market for college education emphasizing how college tuition is determined, and whether students are matched efficiently with colleges. How education affects economic growth, focusing on developing countries. Theory and empirical results. Application of economics from fields such as public economics, labor economics, macroeconomics, and industrial organization. Prerequisites: 50, 102B.
5 units, Win (Hoxby, C)

ECON 147. Economics of Human Resources
Issues in the economics of human beings including the organization of work inside firms, the link between family background and adult outcomes, the operation of some cooperative organizations, the economic analysis of inequality, and the association between health and income. Prerequisite: 51.
5 units, Win (Pencavel, J)

ECON 149. The Modern Firm in Theory and Practice
Combines the latest theory and empirics on the modern firm.
**ECON 150. Economic Policy Analysis**
(Same as PUBPOL 104, PUBPOL 204) The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of policy instruments, applications to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50, and 102B.
5 units, Win (Rosston, G; Clemens, J)

**ECON 153. Economics of the Internet**
Economic models and tools used to understand online market phenomena, such as network and platform economics, online transactions, advertising, auctions, information, communications, and networking. The contemporary economics literature on internet markets and mobile communications markets. Public policy issues in competition policy, communication policy, and support for innovation. Prerequisites: 51 and 102B.
5 units, Win (Bresnahan, T)

**ECON 154. Economics of Legal Rules and Institutions**
(Same as PUBPOL 106, PUBPOL 206) Design and consequences of laws, given alternative policy objectives. Welfarist approach to legal policy; deontological perspectives including Kant, Locke, Mill, and Rawls. Economic efficiency and agent rationality, law as mitigation of market and cognitive failures, effects of law on expectations and incentives, balancing costs of type I and type II legal errors. Empirical studies of law’s effects. Applications: property, tort, contract, antitrust, discrimination, crime, legal procedure. Examples chiefly from U.S. law, but analytical tools of general applicability. Prerequisite: ECON 50.
4-5 units, Aut (Owen, B)

**ECON 155. Environmental Economics and Policy**
Economic sources of environmental problems and alternative policies for dealing with them (technology standards, emissions taxes, tradable permits, pollution permits). Evaluation of policies addressing regional air pollution, global climate change, water allocation in the western U.S., and the use of renewable resources. Connections between population growth, economic output, environmental quality, and human welfare. Prerequisite: ECON 50. GER: DB-NatSci
5 units, Win (Gouldner, L)

**ECON 156. Marine Resource Economics and Policy**
(Same as EARTHSYS 156M) Economic, political, and institutional frameworks for understanding the causes and potential solutions to marine resource problems. Marine policy formation, implementation and evaluation. Applications include: offshore energy production, managing fisheries, marine spatial planning, protecting biodiversity, and ocean recreation. Prerequisite: Econ 1A.
5 units, not given this year

**ECON 157. Imperfect Competition**
The interaction between firms and consumers in markets that fall outside the benchmark competitive model. How firms acquire and exploit market power. Game theory and information economics to analyze how firms interact strategically. Topics include monopoly, price discrimination, oligopoly, collusion and cartel behavior, anti-competitive practices, the role of information in markets, anti-trust policy, and e-commerce. Sources include theoretical models, real-world examples, and empirical papers. Prerequisite: 51.
5 units, not given this year

**ECON 158. Regulatory Economics**
The history, economics, and legal background of the institutions under which U.S. industry is subject to government control. Topics: economics and practice of public utility regulation in the communications, television, transportation, energy, and postal delivery sectors and health and safety regulation. Emphasis on the application of economic concepts in evaluating the performance and policies of government agencies. Antitrust law will be introduced and discussed where necessary. Prerequisite: 51 or equivalent intermediate microeconomics course.
5 units, not given this year

**ECON 160. Game Theory and Economic Applications**
Introduction to game theory and its applications to economics. Topics: strategic and extensive form games, dominant strategies, Nash equilibrium, subgame-perfect equilibrium, Bayesian equilibrium, and behavioral game theory. The theory is applied to repeated games, voting, auctions, and bargaining with examples from economics and political science. Prerequisites: 51 and course in calculus.
5 units, Spr (Jackson, M)

**ECON 162. Monetary Economics**
Dynamic analysis of the role of money and monetary policy in the macro economy, using calculus. Topics: the exchange process and the role of money; inflation, the inflation tax, and hyperinflation; costs of inflation; monetary policy: rules vs discretion; inflation targeting; international monetary unions; the indeterminacy of floating exchange rates; money and interest-bearing government debt; the government's budget constraint and the coordination of monetary and fiscal policies; the effect of the national debt on consumption, savings, investment and output; time consistency of government policies; the financial crisis and unconventional monetary policy. Prerequisite: 52.
5 units, Aut (Haifstead, M)

**ECON 165. International Finance**
Introduction to international macroeconomics. Topics: intertemporal approach to the current account, international investment patterns, sovereign debt, crises in international financial markets, real and nominal exchange rate determination and exchange rate policy. Prerequisite: ECON 52.
5 units, Aut (Fitzgerald, D), Sum (Staff)

**ECON 166. International Trade**
Different sources of comparative advantage in production and trade among nations. Aggregate gains from trade, winners and losers from globalization. International migration, outsourcing and multinational companies. Trade policy and international trade agreements. Theory, empirical evidence, and real-life anecdotes. Lectures supplemented by in-class debates on current topics from the popular press. Prerequisite: 51.
5 units, Spr (Manova)

**ECON 167. European Monetary and Economic Integration**
The economics of the European Community and the internal market. Analysis of current competition, transportation, and factor market policies, including the problems of agriculture and unemployment. Fiscal harmonization and mercantilist rivalry. European Monetary Union (EMU): genesis, implementation, and consequences of a common currency and central bank. Foreign exchange and foreign trade. Prerequisites: 51, 52, or equivalents.
5 units, not given this year

**ECON 168. International Finance and Exchange Rates**
(Same as ECON 268) (Graduate students register for 268.) Monetary foundations of international exchange; the rules of the game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity game since Bretton Woods. Prerequisite for undergraduates: 50; recommended: 165.
5 units, Win (McKinnon, R)

**ECON 179. Experimental Economics**
Methods and major subject areas that have been addressed by laboratory experiments. Focus is on a series of experiments that build on one another. Topics include decision making, two player games, auctions, and market institutions. How experiments are used to learn about preferences and behavior, trust, fairness, and learning. Final presentation of group projects. Prerequisites: 50, 51, 102A.
COURSES OF INSTRUCTION

ECON 190. Introduction to Financial Accounting
(Same as ECON 90). How to read, understand, and use corporate financial statements. Oriented towards the use of financial accounting information (rather than the preparer), and emphasizes the reconstruction of economic events from published accounting reports. 5 units, Aut (Stanton, F), Win (Stanton, F)

ECON 191. Introduction to Cost Accounting
(Same as ECON 91). The use of internal financial data for managerial decision making. 5 units, Spr (Staff)

ECON 198. Junior Honors Seminar
(Same as PUBPOL 197) Primarily for students who expect to write an honors thesis. Weekly sessions discuss writing an honors thesis proposal (prospectus), submitting grant applications, and completing the honors thesis. Readings focus on writing skills and research design. Students select an advisor, outline a program of study for their senior year, and complete a prospectus by the end of the quarter. Enrollment limited to 25. 5 units, Spr (Rothwell, G)

ECON 199D. Honors Thesis Research
In-depth study of an appropriate question and completion of a thesis of very high quality. Normally written under the direction of a member of the Department of Economics (or some closely related department). See description of honors program. Register for at least 1 unit for at least one quarter. Meets first week of Autumn Quarter. 1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN ECONOMICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ECON 202. Core Economics: Modules 1 and 2
(Non-Economics graduate students register for 202N.) Open to advanced undergraduates with consent of instructors. Theory of the consumer and the implications of constrained maximization; uses of indirect utility and expenditure functions; theory of the producer, profit maximization, and cost minimization; behavior under uncertainty; partial equilibrium analysis and introduction to models of general equilibrium. Limited enrollment. Prerequisite: thorough understanding of the elements of multivariate calculus and linear algebra. 2-5 units, Aut (Segal, I)

ECON 202N. 202 For Non-Economics Ph.D. Students
Core Economics modules 1 and 2 for non-Economics Ph.D. students. 2-5 units, Aut (Handley, K)

ECON 203. Core Economics: Modules 5 and 6
(Non-Economics graduate students register for 203N.) Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities and public goods. The theory of imperfect competition: static Bertrand and Cournot competition, dynamic oligopoly, entry decisions, entry deterrence, strategic behavior to alter market conditions. Limited enrollment. Prerequisite: 202. 2-5 units, Win (Bernheim, D)

ECON 203N. 203 For Non-Economics Ph.D. Students
Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities, public goods, and asymmetric information. The theory of imperfect competition and other applications. Limited enrollment. Prerequisite: 202N or consent of instructor. 2-5 units, Win (Staff)

ECON 204. Core Economics: Modules 9 and 10
The theory of contracts, emphasizing contractual incompleteness and the problem of moral hazard. Incentive regulation. Competition with imperfect information, including signaling and adverse selection. The theory of resource allocation over time, competitive equilibrium, and intertemporal efficiency. Limited enrollment. Prerequisite: 203. 2-5 units, Spr (Jackson, M)

ECON 210. Core Economics: Modules 3 and 7
Dynamic economics applied to aggregate economic fluctuations and economic growth. Solving dynamic, stochastic rational expectation models using discrete time dynamic programming. Growth theory (neoclassical models, growth accounting, technical change, endogenous growth) using optimal control theory. Limited enrollment. 2-5 units, Aut (Amador Lopez, M; Klenow, P)

ECON 211. Core Economics: Modules 11 and 12
Investment theory and empirics, including adjustment costs and the q theory; consumption theory and empirics, focusing on the life-cycle model; and the labor market. Macro economics of financial markets. Limited enrollment. Prerequisite: 210. 2-5 units, Win (Piazzesi, M; Schneider, K)

ECON 212. Core Economics: Modules 4 and 8
General equilibrium with incomplete markets: precautionary savings; income, wealth, and consumption distribution; constrained efficiency. Endogenous market incompleteness: limited commitment; moral hazard, hidden income and hidden savings; recursive contracts. Optimal income taxation: the primal approach; taxation of capital income; optional taxation with heterogeneity; commitment and time inconsistency. Monetary theory and policy: time series techniques to characterize and evaluate policy; models with rational expectations and rigidities; the Lucas critique; time inconsistency; staggered price and wage setting; optimal policy rules; the term structure of interest rates. Limited enrollment. Prerequisites: 203, 211. 2-5 units, Spr (Taylor, J; Kurlat, P)

ECON 214. Development Economics I
Consumption smoothing and insurance. Lack of enforceability and imperfect (partial) insurance. Social networks and informal institutions. Evaluation of policy interventions in developing countries: joint liability and micro-credit. Institutions and the process of development. Climate change. Prerequisites: 202 or 202N, 270. 2-5 units, Win (DeGiorghi, G)

ECON 215. Economic Development
Microeconomic analysis of markets and institutions in developing countries. Topics: agriculture; insurance; credit and saving; health and nutrition; education; public service delivery. Emphasis is on empirical tests of and evidence for theoretical models. Prerequisites: 202 or 202N. 2-5 units, Spr (Staff)

ECON 216. Development Economics III
Use of quantitative theory to understand various aspects of the growth and development process. Emphasis on family and demographic issues and their importance for development. Theoretical models of fertility and marriage decisions, and their empirical relevance. Unified growth theories: demographic transition and industrial revolution. Family institutions such as marriage payments and polygamy. The political economy of family-related institutions, e.g. the evolution of women's and children's rights. Female labor supply and development. Theories of disease and development. Prerequisite: 202, 203, 204, 210, 211, 212, 270, 271, 272. 2-5 units, not given this year

ECON 217. Topics in Latin American Macroeconomics and Development
Banking systems, interest rates, regulatory policies, and the productivity of capital in developing countries. Controlling inflation: fiscal and monetary policies for macroeconomic stability. Currency crises, exchange rates, and the liberalization of foreign trade. Further applications to transitional socialist economies in Asia and E. Europe. 2-5 units, Win (Neumeyer, P)

ECON 220. Political Economy I
Positive and normative theories of political economy. Positive topics include direct democracy, electoral competition, legislative policy making, agenda setting, lobbying, comparative constitutions, and intergenerational politics, with applications to income taxation, redistribution, and the size of government. Normative topics include social choice theory with and without interpersonal comparisons, Pareto efficiency with public goods,
potential Pareto improvements, welfare measurement, cost benefit analysis, and analysis of economic policy reform.

2-5 units, not given this year

ECON 221. Political Economy II
Continuation of 220. Preparation for advanced research in applied political economy. Focus is on econometric methods (panel data, IV, treatment estimation, nonlinear models, random coefficients, duration models, factor analysis) with applications to economic and political development, economic voting, war and economic interdependence, corruption, legislative behavior, and social networks.

2-5 units, not given this year

ECON 224. Science, Technology, and Economic Growth
Upper-division undergraduates may enroll with consent of instructor. The roles played by the growth of scientific knowledge and technical progress in the development of industrial societies. Emphasis is on the interactions between science and technology, and the organizational factors which have influenced their effectiveness in contributing to productivity growth.

2-5 units, not given this year

ECON 225. Economics of Technology and Innovation
Theoretical and empirical analysis of innovation. Topics include optimal design of patents laws and alternative mechanisms to create incentives for innovation, such as technology transfer to developing countries, (compulsory) licensing, and patent pools. Emphasis on empirical analyses of both historical and contemporary data.

2-5 units, Spr (Moser, P)

ECON 226. U.S. Economic History
The role of economic history as a distinctive approach to the study of economics, using illustrations from U.S. history. Topics: historical and institutional foundations of the U.S. rise to world economic preeminence; economic causes and consequences of slavery; the origins and character of national systems of technology; the Great Depression of the 30s.

2-5 units, not given this year

ECON 227. European Economic History
European economic history from middle ages to the twentieth century. Topics: competing hypotheses in explaining long term trends in economic growth and cross-country differences in long-term economic growth; formation, function, and persistence of institutions and organizations; the role of institutions and organizations (e.g. apprenticeship, servitude, partnerships, cooperatives, social networks, share cropping, and communes) as solutions to contractual problems; the economics of migration; the changing economic role of the family. Use of economic theory in guiding hypothesis testing, as well as construction of new datasets and the execution of empirical analysis.

2-5 units, Aut (Abramitzky, R)

ECON 228. Institutions and Organizations in Historical Perspective
Emphasis is on the formative period from the 11th to 18th centuries. Formation, function, and evolution of institutions; alternative conceptual frameworks such as neoclassical, transaction cost economics, institutionalism, and Marxism and neo-Marxism; game theory, mechanism design, and contract theory. Institutions related to individualism, the organization of production, feudalism, mercantilism, and the state.

2-5 units, Win (Greff, A)

ECON 229. Topics in Economic History
Emphasis is on institutions and organizations, such as risk-sharing organizations, and property rights, such as patent laws and their effects on technological change and economic growth. Topics include: competing hypotheses for cross-country differences in long-term growth; the importance of institutions to economic growth; formation, function, and persistence of institutions and organizations; role of patent laws in creating incentives for innovation; informal networks as a mechanism to trade property rights; causes and effects of institutional change; tests of contract theory in history; and long-term migration and its effect on economic development.

2-5 units, not given this year

ECON 233. Advanced Macroeconomics I
Topics in the theory and empirics of economic growth.

2-5 units, Aut (Klenow, P)

ECON 234. Advanced Macroeconomics II
Modern macroeconomics of aggregate fluctuations in advanced economies, concentrating mainly on the U.S. Current research on sovereign debt, fiscal policy and financial flows, with emphasis on current events. The bulk of the entire course will involve the study of recent research papers.

2-5 units, Win (Hall, R; Amador Lopez, M)

ECON 235. Advanced Macroeconomics III
Current topics to prepare student for research in the field. Recent research in labor-market friction, reallocation, fluctuations, wage and price determination, innovation, and productivity growth. Research methods, presentations skills, and writing in advanced economics.

2-5 units, Spr (Kurlat, P)

ECON 236. Financial Economics I
Tools: solving choice problems and equilibrium models with multiple risky assets, many agents, and frictions. Applications: household finance (including housing and mortgage choice); risk sharing and financial innovation; economies; trading volume; international capital flows and financial market integration. Prerequisites: 210, 211, 212.

2-5 units, Win (Schneider, K; Piazzesi, M)

ECON 237. Financial Economics II
Topics in financial Economics. Discussion of recent academic papers on asset pricing. Student presentations and course paper requirement. Designed for second year PhD students in economics or finance.

2-5 units, Spr (Staff)

ECON 239D. Directed Reading
May be repeated for credit. 1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 241. Public Finance and Taxation I
Optimal taxation and design of tax/income transfer systems, including incidence and efficiency. Social welfare. Externalities and public goods. Local public economics, fiscal federalism, and education finance. Prerequisites: 202-204, 210, 270, 271, or equivalent with consent of instructor.

2-5 units, Win (Haxby, C; Scheuer, F)

ECON 242. Public Finance and Taxation II
Topics concerning dynamic taxation, including capital income taxation, taxation and saving, and corporate income taxation. Public expenditures, including government interventions in private insurance markets, adverse selection, optimal unemployment insurance design, and health economics. Prerequisites: 202, 203, 204, 210, 270, 271, or equivalent with consent of instructor. Recommended: 241.

2-5 units, Spr (Scheuer, F; Bernheim, D)

ECON 246. Labor Economics I

2-5 units, Aut (Pencavel, J)

ECON 247. Labor Economics II
Recent topics in applied micro, focusing on top papers from the last five years. Skill-biased technical change, discrimination, measurement management, pollution, culture, development and peer effects. Combination of student and faculty presentations. Additional sessions on general presentations, paper writing and research skills, as well as practical Stata sessions on estimation procedures and tricks. Short presentation of research idea required.

2-5 units, Win (Bloom, N)

ECON 248. Labor Economics III
Topics in current applied microeconomic research including skill-biased technical change, income distribution, program evaluation, job search, migration, consumption behavior. Student and faculty presentations
COURSES OF INSTRUCTION

2-5 units, not given this year

ECON 250. Environmental Economics
Theoretical and empirical analysis of sources of and solutions to environmental problems, with application to local pollution challenges and global environmental issues such as climate change. Topics include: analysis of market failure, choice of environmental policy instruments, integrating environmental and distortionary taxes, environmental policy making under uncertainty, valuing environmental amenities, and measuring promoting sustainable development.

2-5 units, Spr (Goulder, L; Sanders, N)

ECON 251. Natural Resource and Energy Economics
Management and provision non-renewable and renewable natural resources, with considerable attention to energy provision and use. Topics include: fisheries problems and policy; energy industry market structure, pricing, and performance; and policies to facilitate transitions from non-renewable to renewable energy. Prerequisites: 202, 203, 204, 271, and 272, or equivalents with consent of instructor.

2-5 units, Win (Goulder, L)

ECON 257. Industrial Organization I
Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; price discrimination; price dispersion and consumer search; differentiated products; the role of information in markets, including insurance and adverse selection; auctions; collusion and cartel behavior; advertising: entry and market structure; market dynamics; strategic behavior.

2-5 units, Aut (Einarv, L; Bresnahan, T)

ECON 258. Industrial Organization 2A
Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; collusion and cartel behavior; advertising; signaling; auctions; financial markets.

2-5 units, Win (Kastl, J; Bagwell, K)

ECON 259. Industrial Organization II B
Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; economics of antitrust and regulation, with focus on energy and environmental economics; the role of information asymmetries in markets: adverse selection and moral hazard, with focus on insurance and credit markets.

2-5 units, Win (Kastl, J; Bagwell, K)

ECON 260. Industrial Organization III
Current research and policy questions in industrial organization. Course combines lectures by the instructors with student presentations, with an emphasis on initiating dissertation research in industrial organization. Prerequisites: 257, 258.

2-5 units, Spr (Einarv, L; Bresnahan, T)

ECON 265. International Economics I
International macroeconomics and finance, emphasizing current research. The course is organized around the role of different types of frictions (in asset and goods markets) in explaining features of the international macroeconomy. Prerequisites: 202, 203, 204, 210, 211, 212.

2-5 units, Aut (Fitzgerald, D)

ECON 266. International Economics II
Commercial policies, unilateral trade policies, political economy of trade policy and the economics of trade agreements. Trade with perfectly and imperfectly competitive markets.

2-5 units, Win (Bagwell, K)

ECON 267. Topics in International Trade
Topics from the frontier of current international trade research, presented through recent theoretical and empirical papers. Firm heterogeneity in trade and firms’ export decisions. Different types of foreign direct investment. Multinational firms and the interaction between international trade and the theory of the firm. Institutional frictions and their effects on trade and FDI activity. Course goal is to prepare students for doing research in international trade and related fields.

2-5 units, Spr (Manova, K)

ECON 268. International Finance and Exchange Rates
(Same as ECON 168) (Graduate students register for 268.) Monetary foundations of international exchange; the rules of the game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity relationships. International capital flows and the current account. Global trade imbalances; China and Japan versus the U.S. Inflation versus exchange rate targeting in developing countries. Prerequisite for undergraduates: 50; recommended: 165.

5 units, Win (McKinnon, R)

ECON 270. Intermediate Econometrics I
Probability, random variables, and distributions; large sample theory; theory of estimation and hypothesis testing. Limited enrollment. Prerequisites: math and probability at the level of Chapter 2, Paul G. Hoel, Introduction to Mathematical Statistics, 5th ed.

2-5 units, Aut (Hong, H)

ECON 271. Intermediate Econometrics II
Linear regression model, relaxation of classical-regression assumptions, simultaneous equation models, linear time series analysis. Limited enrollment. Prerequisite: 270.

2-5 units, Win (Wolah, F)

ECON 272. Intermediate Econometrics III
Continuation of 271. Nonlinear estimation, qualitative response models, limited dependent variable (Tobit) models. Limited enrollment. Prerequisite: 271.

2-5 units, Spr (MacCurdy, T)

ECON 273. Advanced Econometrics I

2-5 units, Aut (Hong, H)

ECON 274. Advanced Econometrics II
(Formerly 273B) Possible topics: nonparametric density estimation and regression analysis; sieve approximation; local polynomial regression; spline regression; cross validation; indirect inference; resampling methods: bootstrap and subsampling; quantile regression; nonstandard asymptotic distribution theory; empirical processes; set identification and inference, large sample efficiency and optimality.

2-5 units, Win (Romano, J)

ECON 275. Time Series Econometrics
Stochastic processes and concepts such as stationarity, ergodicity, and mixing. Inference with heteroskedastic and autocorrelated time series; autoregressive and moving average models; unit root processes and asymptotic analysis of such; tests for structural change; vector autoregressive models; cointegration; impulse response analysis; forecasting; ARCH and GARCH volatility models. Prerequisites: 270, 271.

2-5 units, not given this year

ECON 276. Limited Dependent Variables
(Formerly 274.) Parametric and semi-parametric approaches to the estimation of econometric models with discrete or limited dependent variables. Maximum likelihood, nonlinear panel data, duration models, rank estimation and index models, Bayesian approaches and MCMC. Estimation of dynamic models with endogeneity, simulation methods and computationally intensive approaches. Estimation of social network models. Random matrix theory. Prerequisite: 273 or consent of instructor.

2-5 units, not given this year

ECON 278. Behavioral and Experimental Economics I
This is the first half of a two course sequence (along with Econ 279) on behavioral and experimental economics. The sequence has two main objectives: 1) Examine theories and evidence related to the psychology of economic decision making, 2) Introduce methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard
models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

ECON 279. Behavioral and Experimental Economics II
This is the second half of a two course sequence (along with Econ 278) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

2-5 units, Win (Staff)

ECON 281. Normative Decision Theory and Social Choice
Normative principles of behavior, especially in single-person decision trees. Objective and subjective expected utility. Savage, Anscombe-Aumann, and consequentialist axioms. State dependence. Multi-person extensions: social choice, ethics, opinion pooling, and rationalizability in non-cooperative games. Prerequisite: 202 or equivalent. (Hammond)

2-5 units, not given this year

ECON 282. Contracts, Information, and Incentives
Basic theories and recent developments in mechanism design and the theory of contracts. Topics include: hidden characteristics and hidden action models with one and many agents, design of mechanisms and markets with limited communication, long-term relationships under commitment and under renegotiation, property rights and theories of the firm.

2-5 units, Win (Segal, I)

ECON 283. Theory and Practice of Auction Market Design
Basics of auction theory. Combinatorial auctions. Auction message spaces. Robust auction design. Connections to matching theory. Applied auction design with practical applications. Applied topics may include auctions for Internet advertising, radio spectrum auctions, securities markets, commodities, and complex procurements. US incentive auctions and procurement for the Connect America Fund are likely applications for 2012. Prerequisite: 282 or consent of instructors.

2-5 units, Win (Milgrom, P)

ECON 285. Auctions, Bargaining, and Pricing
(Same as MGTECON 602.) Theory of auctions and related literature in bargaining and pricing. Key papers include Myerson and Satterthwaite on bargaining, Myerson on optimal auctions, and Milgrom and Weber's classic work. How markets with complicated preferences and constraints, limitations on the use of cash, or variations in contract details among bidders decisively impair the performance of simple market rules. Emphasis on matching markets such as the National Resident Matching Program, asset auctions such as the spectrum auctions. Literature on dynamic bargaining.

2-5 units, Aut (Niederle, M)

ECON 286. Game Theory and Economic Application
Solution concepts for non-cooperative games, repeated games, games of incomplete information, reputation, and experiments. Standard results and current research topics. Prerequisite: 203 or consent of instructor.

2-3 units, not given this year

ECON 287. General Equilibrium Theory
Existence, efficiency, and Walrasian equilibrium in exchange economies. Production, financial markets, incomplete markets, sequence economies with infinitely-lived agents. Prerequisites: 204 or consent of instructor.

2-5 units, not given this year

ECON 289. Advanced Topics in Game Theory and Information Economics
Topics course covering a variety of game theory topics with emphasis on market design, such as matching theory and auction theory. Prerequisites: Econ 285 or equivalent.

2-5 units, not given this year

ECON 290. Multiperson Decision Theory
Dents and faculty review and present recent research papers on basic theories and economic applications of decision theory, game theory and mechanism design. Applications include market design and analyses of incentives and strategic behavior in markets, and selected topics such as auctions, bargaining, contracting, and computation.

4 units, not given this year

ECON 291. Social and Economic Networks
Synthesis of research on social and economic networks by sociologists, economists, computer scientists, physicists, and mathematicians, with an emphasis on modeling. Includes methods for describing and measuring networks, empirical observations about network structure, models of random and strategic network formation, as well as analyses of contagion, diffusion, learning, peer influence, games played on networks, and networked markets.

2-3 units, Spr (Jackson, M)

ECON 299. Practical Training
Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 300. Third-Year Seminar
Restricted to Economics Ph.D. students. Students present current research. May be repeated for credit.

1-10 units, Aut (Bresnahan, T; Mahajan, A), Spr (Bresnahan, T; Mahajan, A)

ECON 301. Microeconomic Workshop
1-10 units, not given this year

ECON 310. Macroeconomic Workshop
1-10 units, Aut (Hall, R; Klenow, P; Taylor, J; Amador Lopez, M; Tertilt, M; Piazzesi, M; Schneider, K; Bloom, N; Kurlat, P), Win (Hall, R; Klenow, P; Taylor, J; Amador Lopez, M; Piazzesi, M; Schneider, K; Bloom, N; Kurlat, P), Spr (Hall, R; Klenow, P; Bloom, N; Kurlat, P)

ECON 315. Development Workshop
1-10 units, Aut (DeGiorgi, G; Mahajan, A; Bloom, N), Win (Mahajan, A; DeGiorgi, G), Spr (DeGiorgi, G; Mahajan, A)

ECON 325. Economic History Workshop
May be repeated for credit.

1-10 units, Aut (Greif, A; Wright, G; Abramitzky, R; Moser, P), Win (Greif, A; Wright, G; Moser, P; Abramitzky, R; Spr (Wright, G; Greif, A; Moser, P; Abramitzky, R)

ECON 341. Public Economics and Environmental Economics Seminar
Issues in measuring and evaluating the economic performance of government tax, expenditure, debt, and regulatory policies; their effects on levels and distribution of income, wealth, and environmental quality; alternative policies and methods of evaluation. Workshop format combines student research, faculty presentations, and guest speakers. Prerequisite: 231 or consent of instructor.

1-10 units, Aut (Boskin, M; Shoven, J; Hoxby, C; Bloom, N), Win (Boskin, M; Shoven, J; Bloom, N; Hoxby, C, Spr (Boskin, M; Shoven, J; Bloom, N; Hoxby, C)

ECON 345. Applications Workshop
1-10 units, Aut (MacCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Mahajan, A; Dupas, P; Bloom, N), Win (MacCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Mahajan, A; Hong, H; Dupas, P), Spr (MacCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Mahajan, A)

ECON 354. Workshop in Law and Economics
2-6 units, Aut (Polinsky, M), Win (Polinsky, M)

ECON 355. Industrial Organization Workshop
Current research in the field by visitors, presentations by students, and discussion of recent papers. Students write an original research
EDUC 100B. EAST House Seminar: Current Issues and Debates in Education
Education and Society Theme (EAST) House seminar. In fall quarter, faculty from around the University discuss the latest issues and research related to education. In winter quarter, current issues in international and comparative education, particularly in developing countries, are explored. In the spring, the seminar revolves around race and ethnicity, political activism, and higher education. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice.
1 unit, Win (Wotipka, C)

EDUC 100C. EAST House Seminar: Current Issues and Debates in Education
(Same as ASNAMST 100C) Education and Society Theme (EAST) House seminar. In fall quarter, faculty from around the University discuss the latest issues and research related to education. In winter quarter, current issues in international and comparative education, particularly in developing countries, are explored. In the spring, the seminar revolves around race and ethnicity, political activism, and higher education. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice.
1 unit, Spr (Wotipka, C)

EDUC 101. Introduction to Teaching and Learning
This course is designed to help undergraduates explore career interests in education; it is the core course for the Undergraduate Minor in Education, and fulfills requirements for Honors in Education. The course considers the philosophy, history, politics, professional practice and social structures of teaching in the United States. Students will read and discuss teaching theory and research, participate in learning activities and visit school teaching sites, as well as examine and analyze artifacts and models of teaching.
3-5 units, Aut (Wolf, J)

EDUC 102. Examining Social Structures, Power, and Educational Access
Goal is to prepare Education and Youth Development fellows for their work with adolescents in the Haas Center's pre-college summer programs and to define their role in addressing educational inequities in the summer programs and beyond.
2-3 units, Spr (Metz, M)

EDUC 103A. Tutoring: Seeing a Child through Literacy
(Same as EDUC 203A) Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center). GER:DB-SocSci
4 units, Aut (Juel, C)

EDUC 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices
(Same as AFRICAAM 106, CSRE 103B, EDUC 337) Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.
3-5 units, Spr (Ball, A)

EDUC 103C. Educational Policy, Diversity, and English Learners
Undergraduates engage in the real world of teaching. Historical and legal foundations, and materials, methods, and strategies for English and primary language development. Students tutor an
EDUC 104X. Conduct of Research with and in Communities
For undergraduates interested in service learning and research in community settings. The historical and theoretical underpinnings of community-based participatory research (CBPR), action research, community-embedded research, participant observation, and qualitative research.
3-4 units, not given this year

EDUC 105X. Introduction to Education Research for Undergraduates
EDUC 105X explores types and purposes of education research. Broadly, this seminar course is designed to support Stanford undergraduates in exploring academic and career interests in education; specifically, this course satisfies requirements for the Education Minor, and supports students considering application to the Education Honors Program. In this course we consider what defines education research, and what factors make for quality research. Each week we will read current research by School of Education scholars and welcome the researcher-authors as guest speakers to the class. Students will identify an education topic of interest and write an educational literature review to that topic.
3 units, Spr (Wolf, J)

EDUC 106. Interactive Media in Education
Workshop, (CTE)
3-5 units, not given this year

EDUC 109X. Educational Issues in Contemporary China
(Same as EDUC 309X) Reform such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.
3-4 units, not given this year

EDUC 110. Sociology of Education: The Social Organization of Schools
(Same as EDUC 310, SOC 132, SOC 332) Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.
4 units, Spr (Carter, P)

EDUC 111. The Young Adult Novel: A Literature For and About Adolescents
For undergraduates considering teaching or working with adolescents, and for those planning to apply to the coterminal program in the Stanford Teacher Education program (STEP). Students work together to define the genre of young adult novels. What they reveal about adolescence in America. How to read and teach young adult literature.
4 units, not given this year

EDUC 112X. Urban Education
(Same as AFRICAAM 112, EDUC 212X, SOC 129X, SOC 229X) (Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.
GER:DB-SocSci
3-4 units, Spr (Ball, A)

EDUC 113X. Gender and Sexuality in Schools
Issues at the intersection of queer theory and educational practice. Experiences, rights, and responsibilities of lesbian, gay, bisexual, transgender, intersex, queer, and questioning students and teachers as members of marginalized or majority cultures.
1-3 units, not given this year

EDUC 114N. Growing Up Bilingual
(F.Sem) (Same as CHICANST 14N, CSRE 14N) Stanford Introductory Seminar. This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.
3 units, Win (Valdes, G)

EDUC 115Q. Identities, Race, and Culture in Urban Schools
Preference to sophomores. How urban youth come to a sense of themselves as students, members of cultural and racial groups, and young people in urban America. The nature and interaction of racial and academic identities: how identity takes shape; how it has been conceptualized. The relation between identities and learning. Urban schools as contexts for identity development. Theoretical perspectives include psychology, sociolinguistics, sociology, anthropology, and education. Students shadow a high-school student in a public school and write a case study.
3 units, not given this year

EDUC 116X. Service Learning as an Approach to Teaching
History, theory, and practice. Topics include: responsive community partnerships, cultural awareness, the role of reflection, and best practices in service learning.
3 units, Spr (Mitchell, T)

EDUC 117. Research and Policy on Postsecondary Access
(Same as EDUC 417) The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center).
3 units, not given this year

EDUC 120C. Education and Society
(Same as EDUC 220C, SOC 130, SOC 230) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.
GER:DB-SocSci
4-5 units, NEXT YEAR

EDUC 120X. Sociology of Knowledge Creation
(Same as EDUC 320X, SOC 330) The sociology of knowledge creation explores systematic relationships between thought and social structure in order to examine how human beings construct, interpret, and view reality. How knowledge is socially constructed, patterned, and used, and how everyday and tacit forms of knowledge are achieved. Emphasis is on the creation and patterning of scientific paradigms, social science disciplines, and the field of education.
3-4 units, Aut (McFarland, D)

EDUC 121X. Hip Hop, Youth Identities, and the Politics of Language
(Same as AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, CSRE 121X, LINGUIST 155) Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.
3-4 units, Spr (Alim, H)

EDUC 122X. From Local to Global: Collaborations for International Environmental Education
(Same as EARTHSYS 123) A collaboration with three universities in Africa. Discourse and debate using Internet and mobile technology interactions. Topics include the global environment, climate change, sustainable development, and food security.
2 units, not given this year

EDUC 123X. Contexts that Promote Youth Development: Understandings of Effective Interventions
How psychology, medicine, public health, sociology, education, and public policy define and promote youth development. How to build the resilience and competencies of youth through safe, supportive environments for building social, emotional, and intellectual skills. How to design settings that best promote youth development.
2-4 units, not given this year
EDUC 124. Collaborative Design and Research of Technology-integrated Curriculum
Design models for the development of educational materials through a studio-based, curriculum development project. Teams work with a teacher or non-school educator to design and test technology-integrated curricula. Focus is on the role that technologies can play in teaching and learning in school and out-of-school contexts. Open to all.
3-4 units, not given this year

EDUC 126A. Introduction to Public Service Leadership
Offered through the Haas Center for Public Service. A foundation and vision for a future of public service leadership. Students identify personal values and assess strengths as leaders. The ethics of public service and leadership theory.
1-2 units, Win (Lobo, K)

EDUC 126B. Public Service Leadership Program Practicum
This course is for students in the Public Service Leadership Program offered through the Haas Center for Public Service. Designed as a follow-up course to EDUC 126A: Introduction to Public Service Leadership, the PSLP Practicum provides an opportunity for PSLP students to reflect on their own leadership experiences and to learn from each other's leadership experiences while continuing to build a community of peer service leaders. The PSLP Practicum will meet every other week throughout the quarter.
3 units, Win (Krumholz, J)

EDUC 130. Introduction to Counseling
(Same as PSYCH 148) The goal of counseling is to help others to create more satisfying lives for themselves. Clients learn to create and capitalize on unexpected events to open up new opportunities. The success of counseling is judged, not by the words and actions of the counselor, but by the progress that the client makes in the real world after counseling itself is ended. Students are encouraged to exert their full efforts within reasonable time limits to improve their competence. (PSE)
3 units, Win (Krumholz, J)

EDUC 131. Mediation for Dispute Resolution
(Same as PSYCH 152) Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.
3 units, Aut (Lobo, K), Win (Lobo, K), Spr (Lobo, K)

EDUC 131Q. Is Nationalism Dying?
(F.Dial) Stanford Introductory Dialogue. The 19th century has been depicted as the age of nationalism. The nation-state as a blueprint and mass schooling as a nation-state project emerged and diffused. The transformation of transnational masses into national citizens is a core dynamic of this seminar, with special attention to how schools functioned as laboratories for nationalism. Readings will include Benedict Anderson's Imagined Communities, and selected chapters from Eugene Weber's Peasants to Frenchmen and from Michael Schudson's The Good Citizen. In recent decades, questions have been raised about nationalism and the role of schools in promoting nationalism. Some of these questions emphasize a cosmopolitan narrative that valorizes humanity, while others have stressed multiculturalism and the valorization of diversity. These questions are anchored in a human rights discourse that leads to the second core dynamic of this seminar: the rise of a human rights regime, in particular its education
3 units, Win (Ramirez, F)

EDUC 134. Career and Personal Counseling
(Same as EDUC 234, PSYCH 192) Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.
3 units, Spr (Krumholz, J)

EDUC 136. World, Societal, and Educational Change: Comparative Perspectives
(Same as EDUC 306D, SOC 231) Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture. GER:DB-SocSci
4-5 units, Win (Ramirez, F)

EDUC 140. Honors Research
Provides opportunity for research in pursuit of senior honors theses.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 143. Boys' Psychosocial Development
(Same as HUMBIO 144) From early childhood through adolescence. Emphasis is on how boys' lives and experiences are embedded within their interpersonal relationships and social and cultural contexts. Interdisciplinary approach including perspectives from fields such as psychology, sociology, anthropology, family studies, and education. Prerequisite: Human Biology core, or Developmental Psychology, or consent of instructor. GER:EC-Gender
4 units, Spr (Chu, J)

EDUC 146X. Perspectives on the Education of Linguistic Minorities
Social, political, linguistic, and pedagogical issues associated with educating students who do not speak the language or language variety of the majority society. Focus is on the U.S.; attention to minorities elsewhere. American attitudes toward linguistic and racial minorities. Educational problems of linguistically different children and non-English- or limited-English-speaking children. Approaches to solving problems.
3-4 units, not given this year

EDUC 148X. Critical Perspectives on Teaching and Tutoring English Language Learners
Theoretical foundation for volunteer tutors of English language learners in urban environments working with children in school-based programs or adults in community-based settings.
3 units, Aut (Valdes, G), Win (Valdes, G), Spr (Valdes, G)

EDUC 149. Theory and Issues in the Study of Bilingualism
(Same as EDUC 249) Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. (SSPEP)
3-5 units, Aut (Valdes, G)

EDUC 165. History of Higher Education in the U.S.
(Same as AMSTUD 165, EDUC 265, HISTORY 158C) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP-APA)
3-5 units, Win (Labaree, D)

EDUC 170X. Preparation for Independent Public Service Projects
Open only to recipients of the Haas Summer Fellowship, which offers students the opportunity to initiate and carry out an innovative service project in collaboration with a community partner. Goal is to expand upon the work fellows did during the application process with respect to the feasibility and sustainability of their field projects.
2 units, Spr (Hawthorne, J)

EDUC 171. Early Childhood Education Practicum
Year-long seminar; restricted to students who participate in JumpStart, a service learning program. Training for activities in preschool classrooms. Background on issues related to: young children's cognitive, language, and social development; classroom management; literacy; math; science teaching; cultural diversity; and early childhood education programs. May be repeated for credit.
2-4 units, not given this year

EDUC 178X. Latino Families, Languages, and Schools
The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling. (SSPEP) (Valdés)
3-5 units, Spr (Valdes, G)
EDUC 179. Urban Youth and Their Institutions: Research and Practice  
(Same as EDUC 279) The determinants and consequences of urban life for youth, emphasizing disciplinary and methodological approaches, and the gap between the perspectives of state and local organizations and those of youth and their communities. The diversity of urban youth experiences with respect to ethnicity, gender, and immigration histories. Case studies illustrate civic-level and grassroots institutions, their structures, networks, and philosophies; historical and contemporary realities of urban youth for policy makers, educators, and researchers. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)  
4-5 units, not given this year

EDUC 179B. Youth Empowerment and Civic Engagement  
(Same as EDUC 279B) Focus is on youth development policies and practices: what makes them effective, and how they operate in broader institutional contexts. Research-based information; conceptual underpinnings; best learning from experience; and the perspective of expert youth workers, policymakers, and youth about what works.  
2-4 units, not given this year

EDUC 180. Directed Reading in Education  
For undergraduates and master's degree students. (All Areas)  
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 180S. Pre-field Course for Alternative Spring Break  
Limited to students participating in the Alternative Spring Break program. See http://asb.stanford.edu for more information.  
1 unit, Win (Staff)

EDUC 181. Multicultural Issues in Higher Education  
(Same as EDUC 381) The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.  
4 units, not given this year

EDUC 187X. Math Mentoring: Working in the Zone with Learners  
(Same as EDUC 397X) The course focuses on how the tutorial relationship can help students learn mathematics. The course will provide background theory and knowledge as well as provide practical approaches to tutoring, supports for targeting activities to students' needs, selection of materials and activities, and ways to assess the progress of the students and reflect on your own experience. Topics will include social theories of learning, teaching for understanding, and challenges of students who are English language learners. In addition to attending 4, two-hour workshop classes, 1 hour of tutoring is required each week. The course will also include days during the quarter for workshops and discussions following Friday tutoring sessions. Students will submit assignments on the Coursework site on weeks that the course does not meet. A 1 unit section of the course will run in Winter and Spring quarters.  
1-2 units, Win (Goldman, S; O'Connor, K)

EDUC 189X. Language and Minority Rights  
(Same as CHICANS 189W, CSRE 189W) Language as it is implicated in migration and globalization. The effects of globalization processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today's societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages. GER/EC-GlobalCom  
3 units, not given this year

EDUC 190. Directed Research in Education  
For undergraduates and master's students. May be repeated for credit. (all areas)  
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 191X. Introduction to Survey Research  
(Same as EDUC 291X) Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.  
3-4 units, Win (Rodriguez, E)

EDUC 193A. Listen Up! Core Peer Counseling Skills  
Topics: verbal and non-verbal skills, open and closed questions, paraphrasing, working with feelings, summarization, and integration. Individual training, group exercises, role play practice with optional video feedback. Sections on relevance to crisis counseling and student life. Guest speakers from University and community agencies. Students develop and apply skills in University settings.  
2 units, Aut (Martinez, A), Win (Martinez, A), Spr (Martinez, A)

EDUC 193B. Peer Counseling in the Chicano/Latino Community  
Topics: verbal and non-verbal attending and communication skills, open and closed questions, working with feelings, summarization, and integration. Salient counseling issues including Spanish/English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and Chicano/a student experience in University settings. Individual training, group exercises, role play, and videotaped practice.  
1 unit, Aut (Martinez, A)

EDUC 193C. Peer Counseling in the African American Community  
Topics: the concept of culture, Black cultural attributes and their effect on reactions to counseling, verbal and non-verbal attending, open and closed questions, working with feelings, summarization, and integration. Reading assignments, guest speakers, role play, and videotaped practice. Students develop and apply skills in the Black community on campus or in other settings that the student chooses.  
1 unit, Aut (Adams, C; Michael, L)

EDUC 193F. Psychological Well-Being on Campus: Asian American Perspectives  
Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.  
1 unit, Spr (Lin, O; Lee-Anderson, K; Brown, N)

EDUC 193N. Peer Counseling in the Native American Community  
Verbal and non-verbal communication, strategic use of questions, methods of dealing with strong feelings, and conflict resolution. How elements of counseling apply to Native Americans including client, counselor, and situational variables in counseling, non-verbal communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, the impact of family on personal development, gender roles, and the experience of Native American students in university settings. Individual skill development, group exercises, and role practice.  
1 unit, not given this year

EDUC 193P. Peer Counseling at the Bridge  
Mental health issues such as relationships, substance abuse, sexual assault, depression, eating disorders, academic stressors, suicide, and grief and bereavement. Guest speakers.  
1 unit, Aut (Martinez, A), Win (Martinez, A), Spr (Martinez, A)

EDUC 193S. Peer Counseling on Comprehensive Sexual Health  
Information on sexually transmitted infections and diseases, and birth control methods. Topics related to sexual health such as communication, societal attitudes and pressures, pregnancy, abortion, and the range of sexual expression. Role-play and peer-education outreach projects. Required for those wishing to counsel at the Sexual Health Peer Resource Center (SHPRC).  
1 unit, Aut (Yisrael, D), Win (Yisrael, D), Spr (Yisrael, D)

EDUC 196X. The Design of Technologies for Casual Learning  
(Same as EDUC 396X) Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as a prototype platform. The term casual is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in extreme informal learning circumstances (while on the go, any time and any place).
COURSES OF INSTRUCTION

The class builds on learning about and synthesizing knowledge, theory, and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

3 units, not given this year

EDUC 197. Education, Gender, and Development
(Same as SOC 134) Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes. (SSPEP/GER:EC-Gender
4 units, Spr (Wotipka, C)

EDUC 199A. Undergraduate Honors Seminar
Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.
3 units, Aut (Stevens, M)

EDUC 199B. Undergraduate Honors Seminar
Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.
1 unit, Win (Stevens, M)

EDUC 199C. Undergraduate Honors Seminar
Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.
1 unit, Spr (Stevens, M)

EDUC 245. Understanding Racial and Ethnic Identity Development
(Same as AFRICAAM 245, CSRE 245) African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications, 1st- and multiracial identity status, and types of white racial consciousness.
3-5 units, not given this year

EDUC 289. The Centrality of Literacies in Teaching and Learning
(Formerly EDUC 166.) Focus is on principles in understanding, assessing, and supporting the reading and writing processes, and the acquisition of content area literacies in secondary schools.
Literacy demands within particular disciplines and how to use oral language, reading, and writing to teach content area materials more effectively to all students. (STEP)
3 units, Sum (Staff)

GRADUATE COURSES IN EDUCATION

Primarily for graduate students; undergraduates may enroll with consent of instructor.

EDUC 147X. Human-Computer Interaction in Education
Required for students in the Learning Design and Technology Master's Program. Concepts underlying the design of human-computer interaction including usability and affordances, direct manipulation, systematic design methods, user conceptual models and interface metaphors, design languages and genres, human cognitive and physical ergonomics, information and interactivity structures, design tools, and environments. Studio/discussion component applies these principles to the design of interactive technology for teaching and learning.
3 units, not given this year

EDUC 176X. The Design of Technologies for Casual Learning - Lab
Lab. Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as a prototype platform. The term casual is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in extreme informal learning circumstances (while on the go, any time and any place). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.
1 unit, not given this year

EDUC 185. Master's Thesis
(all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 200A. Introduction to Data Analysis and Interpretation
(Formerly EDUC 150.) Primarily for master's students in the School of Education. Focus is on reading literature and interpreting descriptive and inferential statistics, especially those commonly found in education. Topics: basic research design, instrument reliability and validity, description statistics, correlation, t-tests, one-way analysis of variance, and simple and multiple regression.
4 units, Aut (Porteus, A), Win (Porteus, A)

EDUC 200B. Introduction to Qualitative Research Methods
(Formerly EDUC 151,) Primarily for master's students: An introduction to the core concepts and methods of qualitative research. Through a variety of hands-on learning activities, readings, field experiences, class lectures, and discussions, students will explore the processes and products of qualitative inquiry.
4 units, Aut (Pope, D), Win (Wolf, J)

EDUC 200C. Introduction to Statistical Methods in Education
(Formerly EDUC 160.) Basic techniques in descriptive and inferential statistics for educational research will be covered with an emphasis on rigorous preparation for intermediate and advanced courses. Topics include central tendency, variance, probability, distributions, confidence interval, t-test, F-test, correlation, regression, and analysis of variance. Non-parametric statistics and graphical principles for data representation will also be addressed. Students will also be introduced to STATA in preparation for subsequent higher level courses.
3-4 units, Aut (Hakuta, K)

EDUC 201. History of Education in the United States
(Same as AMSTUD 201, HISTORY 158B) How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching. (SSPEP)
3-5 units, not given this year

EDUC 202. Introduction to Comparative and International Education
Contemporary theoretical debates about educational change and development, and the international dimension of issues in education. Emphasis is on the development of students' abilities to make cross-national and historical comparisons of educational phenomena. (SSPEP/ICE)
4-5 units, Aut (Davidson, S; Buckner, E)

EDUC 202. Education Policy Workshop in International and Comparative Education
For students in International and Comparative Education. Practical introduction to issues in educational policy making, educational planning, implementation, and the role of foreign expertise/consultants in developing country contexts. (SSPEP/ICE)
3-4 units, not given this year

EDUC 203. The Anthropology of Education
Learning across situations, organizations, institutions, and cultures. How and when people learn and where, with whom and for what and how answers to these questions change across the lifespan. Schools in relation to other settings in which learning takes place for children, adolescents, and adults. Apprenticeship, mentorship, and learning through observation and imitation.
3-5 units, not given this year

EDUC 203A. Tutoring: Seeing a Child through Literacy
(Same as EDUC 103A) Experience tutoring grade school readers in a low income community near Stanford under supervision.
Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center).

4 units, Aut (Juel, C)

EDUC 204. Introduction to Philosophy of Education
How to think philosophically about educational problems. Recent influential scholarship in philosophy of education. No previous study in philosophy required. (SSPEP/ICE)

3 units, Aut (Callan, E)

EDUC 204A. Introduction to the Philosophical and Educational Thought of John Dewey
This course, which will have a seminar format, will entail close analytical reading (and intense and hopefully lively discussion) of primary sources - namely, some of the writings of John Dewey. These sources have been selected to give a fair overview of his work, but no one course can do Dewey full justice (he published more than 40 books and 800 journal articles). Dewey can be a difficult author to follow, but on the other hand there are passages of great force and beauty; and undoubtedly he has been of significant influence both in education and in philosophy. (It is important to note that Dewey himself regarded his work in philosophy and in education as being inextricably related.) Some special intellectual preparation is required, except a willingness to read carefully and appreciatively, but critically.

3 units, Aut (Phillips, D)

EDUC 204B. Philosophical Issues in Educational Research
Several decades ago epistemological issues (that is, philosophical issues pertaining to the nature of knowledge, and how knowledge-claims are established as likely to be true) were not the focus of much serious attention in the educational research literature. Most how to do research textbooks had a short and bland chapter on philosophy of science issues in educational research, and occasionally a president of AERA would take advantage of the presidential address to make some relevant remarks. In general, a positivistic orientation pervaded these contributions. Over the past two decades or so the situation has changed remarkably. For example, over this period the house journal of the AERA, Educational Researcher, has published scores of papers that raise epistemological issues; many of these papers have been written by researchers themselves (instead of philosophers), and a wide range of positions are represented in these sources. Epistemological/philosophy of science

3 units, Spr (Phillips, D)

EDUC 205. The Impact of Social and Behavioral Science Research on Educational Issues
Ways in which research intersects with educational policy and practice. Emphasis is on behavioral, social, and cognitive traditions. Topics include early childhood education, early reading, science education, bilingual education, school desegregation, class size reduction, classroom organization, violence and juvenile crime, and affirmative action in higher education. Policy debates and how research informs or fails to inform deliberations and decisions in these areas.

3 units, not given this year

EDUC 206A. Applied Research Methods in International and Comparative Education I: Introduction
Required for M.A. students in ICE and IEAPA. Orientation to the M.A. program and research project; exploration of resources for study and research. (SSPEP/ICE)

1 unit, Aut (Wotipka, C)

EDUC 206B. Applied Research Methods in International and Comparative Education II: Master's Paper Proposal
Required for M.A. students in ICE and IEAPA. Development of research skills through theoretical and methodological issues in comparative and international education. Preparation of a research proposal for the M.A. monograph. (SSPEP/ICE)

1-3 units, Win (Wotipka, C)

EDUC 206C. Applied Research Methods in ICE III: Data Collection and Analysis
Required for M.A. students in ICE and IEAPA. Practice in data collection and analysis. Preparation of the first draft of the M.A. monograph. (SSPEP/ICE)

1 unit, Spr (Wotipka, C)

EDUC 206D. Applied Research Methods in International and Comparative Education IV: Master's Paper Workshop
Conclusion of the M.A. program in ICE and IEAPA; required of M.A. students. Reviews of students' research in preparation for their master's monograph. (SSPEP/ICE)

3 units, Sum (Staff)

EDUC 207X. School: What Is It Good For?
(Same as HISTORY 258D) Focus is on authors who establish claims that the purposes, functions, impacts, and social roles of schooling promote human capital, citizenship, social reproduction, values transmission, social mobility, class equality, racial equality, social stratification, disciplinary power, and the pursuit of individual interests. Historical and sociological approaches.

3-4 units, Win (Labaree, D)

EDUC 208B. Curriculum Construction
The theories and methods of curriculum development and improvement. Topics: curriculum ideologies, perspectives on design, strategies for diverse learners, and the politics of curriculum construction and implementation. Students develop curriculum plans for use in real settings. Service Learning Course (certified by Haas Center). (CTE)

3-4 units, Win (Pope, D)

EDUC 208C. Curriculum: In Theory and Policy
Focus is on key works on the organization and structuring of learning in formal and informal educational settings in light of contemporary issues in curriculum theory, relation of theory and practice, and strategies of curriculum policy development and implementation.

4 units, Spr (Willinsky, J)

EDUC 209X. Policy, Organization, and Leadership Studies Seminar
Focus is on orienting students to a variety of educational topics pertaining to elementary, secondary, and higher education including program management, financial literacy, and effective communication.

1 unit, Spr (Salinas, N)

EDUC 210X. Policy, Organization, and Leadership Studies Internship Workshop
Forum for POLS students to link their academic learning to real world experience through in-class discussions, presentations, and reflective writing. Fall Quarter is focused on understanding the intern's role within the larger organization. Winter Quarter is outward looking with a focus on understanding the broader fields the students' organizations reside within. Spring Quarter focus is on students learning from and being prepared to teach others.

1-3 units, Aut (Salinas, N), Win (Salinas, N), Spr (Salinas, N)

EDUC 211X. Beyond Bits and Atoms - Lab
(Same as CS 402L) This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad.

1-3 units, Win (Blikstein, P), Spr (Blikstein, P)

EDUC 212X. Urban Education
(Same as AFRICAAM 112, EDUC 112X, SOC 129X, SOC 229X) Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

3-4 units, Spr (Ball, A)

EDUC 213X. Introduction to Teaching
Key concepts in teaching and learning. Student prior knowledge and preconceptions; facts, concepts, and the organization of knowledge; active learning; behavior and cognition; constructing knowledge; metacognition; motivation and affect; transfer; goals and objectives; zone of proximal development; input; organizing learning; modeling; feedback; practice; individual and group differences among students; and pedagogical content knowledge.

3-4 units, Aut (Borko, H)
EDUC 214X. Social Entrepreneurship
(Same as STRAMGT 367.) The efforts of private citizens to create effective responses to social needs and innovative solutions to social problems. New opportunities for applying business skills in the social sector. Concepts, practices, and challenges of social entrepreneurship in the U.S. and around the world. Frameworks and tools to be more effective in socially entrepreneurial.
4 units, not given this year.

EDUC 215X. International Human Rights and Education
Theory and practice. Focus is on how education may be seen as a human rights issue and a tool to educate citizens about their human rights. The history of human rights and the spread of the international human rights regime in terms of organizations and treaties. Issues include street and working children, language rights, and women's right to education.
4-5 units, not given this year.

EDUC 216X. Education, Race, and Inequality in African American History, 1880-1990
(Same as CSRE 216X, HISTORY 255E) Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.
3-5 units, not given this year.

EDUC 217. Philosophical and Methodological Issues in Educational Research
The role of causation in educational phenomena, and how to determine causal factors. Is educational research based on a positivistic paradigm? Randomized controlled experimental designs. Criteria for judging the rigor of qualitative modes of inquiry. Do Popperian or Deweyan approaches hold the key to resolving contentious issues? Does a postpositivist perspective hold promise?
3 units, not given this year.

EDUC 218. Topics in Cognition and Learning: Visualization
Topical seminar with changing topics on the psychological and social processes of learning. This year's course is on the use of visualizations for learning (e.g., maps, diagrams, art, sketches, videogames). Topics also include the psychological basis for why visualizations can be so effective. May be repeated for credit.
3 units, Aut (Schwartz, D)

EDUC 219E. The Creative Arts in Elementary Classrooms
For STEP Elementary only or for candidates in the Multiple Subjects program. Hands-on exploration of visual arts media and works of art.
1 unit, Aut (Freeman, S)

EDUC 220A. Introduction to the Economics of Education
The relationship between education and economic analysis. Topics: labor markets for teachers, the economics of child care, the effects of education on earnings and employment, the effects of education on economic growth and distribution of income, and the financing of education. Students who lack training in microeconomics, register for 220Y for 1 additional unit of credit. (SSPEP/APA)
4 units, not given this year.

EDUC 220B. Introduction to the Politics of Education
(Same as GSBBGEN 349.) The relationships between political analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, community power, the external environment of organizations, and the implementations of policy. Applications to policy analysis, implementation, and politics of reform. (APA)
4 units, Aut (Bettiger, E)

EDUC 220C. Education and Society
(Same as EDUC 120C, SOC 130, SOC 230) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.
4-5 units, NEXT YEAR

EDUC 220D. History of School Reform: Origins, Policies, Outcomes, and Explanations
(Same as HISTORY 255E) Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. (SSPEP/APA)
3 units, Aut (Labaree, D)

EDUC 220Y. Introduction to the Economics of Education: Economics Section
For those taking 220A who have not had microeconomics before or who need a refresher. Corequisite: 220A. (SSPEP/APA)
1-2 units, not given this year.

EDUC 221A. Policy Analysis in Education
Major concepts associated with the development, enactment, and execution of educational policy. Issues of policy implementation, agenda setting and problem formulation, politics, and intergovernmental relations. Case studies. Goal is to identify factors that affect how analysts and policy makers learn about and influence education. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)
4-5 units, Win (Staff)

EDUC 222. Resource Allocation in Education
Problems of optimization and design, and evaluation of decision experience. Marginal analysis, educational production functions, cost-effectiveness and cost-benefit analysis, constrained maximization, program evaluation. Introduction to linear programming for large-scale data analysis. Implications to model assumptions. (SSPEP)
4-5 units, Spr (Carnoy, M)

EDUC 223. Good Districts and Good Schools: Research, Policy, and Practice
Recent studies of districts and schools that exceed expectations in producing desired results for students. Research methodologies, findings of studies, theories of change in reforming schools and districts and efforts to implement results. Components of good schools and districts. Required project studies a school or district to determine goodness. (SSPEP/APA, CTE)
3-4 units, not given this year.

EDUC 224. Social Entrepreneurship and Social Innovation
(Same as STRAMGT 367). This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ entrepreneurial skills, such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all
2-4 units, not given this year.

EDUC 224A. Social Entrepreneurship and Social Innovation
(Same as STRAMGT 367). This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ entrepreneurial skills, such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all
EDUC 224B. Social Entrepreneurship and Social Innovation
(Same as STRAMGT 341.) Approaches for creating social value through a social enterprises including nonprofits, for-profits, and hybrid forms of organization. Perspectives include entrepreneur, CEO, funder, and board member. Topics include understanding the social entrepreneurship process; mobilizing economic and human resources; achieving social objectives with commercial vehicles; crafting alliances; managing growth; measuring and managing performance; governing for excellence. Case studies. Student teams carry out field-based research in a significant strategic or operational issue of a social enterprise
4 units, not given this year

EDUC 229B. Learning Design and Technology Seminar
Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)
1 unit, Win (Forssell, K)

EDUC 229C. Learning Design and Technology Seminar
Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)
1 unit, Spr (Forssell, K)

EDUC 229D. Learning Design and Technology Seminar
Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)
2-5 units, Sum (Staff)

EDUC 230X. Social Enterprise
(Same as STRAMGT 341.) Approaches for creating social value through a social enterprises including nonprofits, for-profits, and hybrid forms of organization. Perspectives include entrepreneur, CEO, funder, and board member. Topics include understanding the social entrepreneurship process; mobilizing economic and human resources; achieving social objectives with commercial vehicles; crafting alliances; managing growth; measuring and managing performance; governing for excellence. Case studies. Student teams carry out field-based research in a significant strategic or operational issue of a social enterprise
4 units, not given this year

EDUC 231X. Education Schools: Historical and Sociological Perspectives
(Same as HISTORY 258F) The lowly status of the education school in the United States is the issue that defines the starting point of this course. Topics include an exploration the historical development of this institution, its major social function, and the interaction between the two. The course touches on a variety of scholarly domains, including the history of education, sociology of education, higher education, and educational policy.
3-4 units, alternate years, not given this year

EDUC 233A. Counseling Theories and Interventions from a Multicultural Perspective
(Same as AFRICAAM 233A, CSRE 233A) In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.
3-5 units, not given this year

EDUC 233B. Adolescent Development and Mentoring in the Urban Context
Continuation of 233A. Topics include: developmental psychology and service learning; collaborating with the community; psychological research on altruism and prosocial behavior; volunteers' motivations; attributions about poverty, and the problem of prejudice.
3 units, not given this year

EDUC 234. Career and Personal Counseling
(Same as EDUC 134, PSYCH 192) Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.
2 units, Spr (Krumholz, J)
EDUC 235X. The Creative Arts in Schools and Classrooms
Students work alongside teachers and performing artists to plan and implement classroom activities with elementary school children to prepare them for a Lively Arts performance. Background theory in education and arts education. Students develop a follow-up classroom activity for children in their own art forms.
2 units, not given this year

EDUC 236X. Beyond Bits and Atoms: Designing Technological Tools
(Same as CS 402) Practicum in designing and building technology-enabled curricula and learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. How to design low-cost technologies, particularly for urban school in the US and abroad. The constructorist learning design perspective, critical pedagogy, and the application of complexity sciences in education.
3-5 units, Spr (Blikstein, P)

EDUC 240. Adolescent Development and Learning
How do adolescents develop their identities, manage their inner and outer worlds, and learn? Presuppositions: that fruitful instruction takes into account the developmental characteristics of learners and the task demands of specific curricula; and that teachers can promote learning and motivation by mediating among the characteristics of students, the curriculum, and the wider social context of the classroom. Prerequisite: STEP student or consent of instructor. (STEP)
5 units, Aut (Darling-Hammond, L)

EDUC 241S. Organizational Learning
(Same as OB 586.) How firms learn from their experiences and the opportunities created by flawed learning. Common mistakes in learning and barriers to the adoption of effective practices. How to avoid common mistakes and build organizations that learn more effectively to identify possible opportunities in markets. Concepts and findings from organization theory, psychology, decision theory, and statistics.
2 units, not given this year

EDUC 241X. Organizational Learning
Why firms do not learn from their experiences and the opportunities created by flawed learning. Common mistakes in learning and barriers to the adoption of effective practices. How to avoid common mistakes and build organizations that learn more effectively to identify possible opportunities in markets. Concepts and findings from organization theory, psychology, decision theory, and statistics. Readings include teaching notes, papers in psychology and organization theory, HBR articles, and Moneyball by Michael Lewis who discusses market-level mistakes in professional baseball.
4 units, not given this year

EDUC 242. Language Use in the Chicano Community
(Same as SPANLIT 206) The significance and consequences of language diversity in the culture and society of the U.S. Experiences of non-English background individuals through focus on Spanish-English bilingual communities.
3-5 units, not given this year

EDUC 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction
Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.

EDUC 244. Classroom Management and Leadership
Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP secondary only.
2 units, Aut (Haysman, C)

EDUC 244E. Elementary Classroom Leadership and Management
How to best manage a classroom. Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP elementary only.
1 unit, Sum (Staff)

EDUC 244F. Elementary Classroom Leadership and Management
Skills for developing a positive classroom learning environment. Theoretical issues and opportunities to acquire strategies and make links with practice teaching class. STEP elementary only.
1 unit, Aut (Rose, D)

EDUC 246A. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.
3 units, Sum (Staff)

EDUC 246B. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: guided observations, building classroom community, classroom interaction processes, topics in special education portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.
3 units, Aut (Lotan, R; Haysman, C; Fogo, B; Tovar, M)

EDUC 246C. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student. (STEP)
3 units, Win (Lotan, R; Haysman, C; Fogo, B; Tovar, M)

EDUC 246D. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.
2-7 units, Spr (Lotan, R; Haysman, C; Fogo, B; Tovar, M)

EDUC 246E. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.
3 units, Sum (Staff)

EDUC 246F. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.
3-7 units, Aut (Lit, I)

EDUC 246G. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community
engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

3 units, Win (Liu, I)

EDUC 246H. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

4 units, Spr (Liu, I)

EDUC 247. Moral Education
Contemporary scholarship and educational practice related to the development of moral beliefs and conduct in young people. The psychology of moral development; major philosophical, sociological, and anthropological approaches. Topics include: natural capacities for moral awareness in the infant; peer and adult influences on moral growth during childhood and adolescence; extraordinary commitment during adulthood; cultural variation in moral judgment; feminist perspectives on morality; the education movement in today's schools; and contending theories concerning the goals of moral education. (PSE)

3 units, not given this year

EDUC 248X. Issues of Curriculum and Pedagogy in Multicultural Classrooms
Debates concerning race, class, gender and sexuality, and ethnicity as they impact curriculum and practice in heterogeneous classrooms. How teachers and students can become agents of educational change. Sources include videos, scholarship, popular press, and voices of practitioners, students, and families. (SSPEP)

3-4 units, not given this year

EDUC 249. Theory and Issues in the Study of Bilingualism
(Same as EDUC 149) Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings.

3-5 units, Aut (Valdes, G)

EDUC 250A. Inquiry and Measurement in Education
Part of doctoral research core. The logic of scientific inquiry in education, including identification of research questions, selection of qualitative or quantitative research methods, design of research studies, measurement, and collection, analysis and interpretation of evidence.

3 units, Aut (Stevens, M; Loeb, S)

EDUC 250B. Statistical Analysis in Education: Regression
Primarily for doctoral students; part of doctoral research core; prerequisite for advanced statistical methods courses in School of Education. Basic regression, a widely used data-analytic procedure, including multiple and curvilinear regression, regression diagnostics, analysis of residuals and model selection, logistic regression. Proficiency with statistical computer packages.

4 units, Win (Bettinger, E)

EDUC 250C. Qualitative Analysis in Education
Primarily for doctoral students; part of doctoral research core. Methods for collecting and interpreting qualitative data including case study, ethnography, discourse analysis, observation, and interview.

4 units, Spr (Grossman, P; Wineburg, S)

EDUC 251B. Statistical Analysis in Educational Research: Analysis of Variance
Primarily for doctoral students. ANOVA models as widely used data analytic procedures, especially in experimental, quasi-experimental, and criterion-group designs. Topics: single-factor ANOVA; factorial between and within subjects and mixed design ANOVA (fixed, random, and mixed models); analysis of covariance; and multiple comparison procedures. Prerequisite: 250A or equivalent. (all areas)

4 units, not given this year

EDUC 251C. Statistical Analysis in Educational Research: Applied Multivariate Analysis

1-4 units, not given this year

EDUC 252. Introduction to Test Theory
Concepts of reliability and validity; derivation and use of test scales and norms; mathematical models and procedures for test validation, scoring, and interpretation. Prerequisite: STATS 190 or equivalent. (PSE)

3-4 units, Aut (Haertel, E)

EDUC 253X. Teaching the Unteachable: Teaching and Representing the Holocaust
(Same as HISTORY 237B) Theodore Adorno asked whether it was possible to write poetry after Auschwitz; whatever the answer, each year witnesses exponential growth in state-sponsored mandates to teach the Holocaust. How and to what end does catastrophe become curriculum? How to assess what students learn from these efforts. The Nazis’ efforts to teach for hate, and contemporary parallels. Historical and educational sources, especially films and memoirs.

3-5 units, not given this year

EDUC 254. Leadership in Diverse Organizations
(Same as OB 593) This course is designed to help students improve their capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. The course is based on the premise that diversity can present unique challenges and opportunities and thereby pushes students to develop crucial leadership skills, many of which are relevant across a variety of situations. The class will address two primary questions: 1) What social and psychological obstacles limit people’s ability to work effectively across identity-based differences? 2) What can you do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Students should be prepared to experiment with various conceptual and analytic skills inside and outside of the classroom. While the course focuses on dynamics of race and gender, there will be opportunities for students to explore themes across identity.

2 units, not given this year

EDUC 254X. Leadership in Diverse Organizations
How improve capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. Premise is that diversity presents challenges and opportunities that push students to develop crucial leadership skills, many of which are relevant across a variety of situations. What social and psychological obstacles limit people’s ability to work effectively across identity-based differences? What can people do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Focus is on dynamics of race and gender; attention to other dimensions of identity and difference in organizations, including sexual orientation, nationality, class, and religion.

4 units, not given this year

EDUC 255A. Experimental Research Designs in Educational Research
The course will cover the following topics: a) the logic of causal inference and the Fisher/Neyman/Rubin counterfactual causal model (Fisher, 1935; Heckman, 1979; Holland, 1986; Neyman, 1990; Rubin, 1978); b) randomized experiments; c) complex randomized experiments in education (cluster randomized trials, multi-site trials, staggered implementation via randomization, etc.); d) policy experiments with randomization; e) meta-analysis; and f) power in randomized experiments; g) the ethics and politics of randomized experiments.

3-5 units, Aut (Bettinger, E)

EDUC 255B. Causal Inference in Quantitative Educational and Social Science Research
(Same as SOC 257) Quantitative methods to make causal inferences in the absence of randomized experiment including the
use of natural and quasi-experiments, instrumental variables, regression discontinuity, matching estimators, longitudinal methods, fixed effects estimators, and selection modeling. Assumptions implicit in these approaches, and appropriateness in research situations. Students develop research proposals relying on these methods. Prerequisites: exposure to quantitative research methods; multivariate regression.

3-5 units, Win (Reardon, S)

EDUC 255C. Applied Quasi-Experimental Research in Education
(Same as SOC 258) Course will provide hands-on practice in analysis of data from experimental and quasi-experimental research designs, including a) instrumental variables estimators; b) regression discontinuity estimators; c) difference-in-difference estimators; d) matching estimators; e) fixed effects estimators; and f) panel data methods (including panel fixed models, lagged covariate adjustment models, growth models, etc.). Prerequisites: satisfactory completion of EDUC 255B, EDUC 257C or SOC 257.

3-5 units, Spr (Reardon, S)

EDUC 256. Psychological and Educational Resilience Among Children and Youth
(Same as HUMBIO 149) Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations.

4 units, not given this year

EDUC 256C. Negotiation and Influence
(Same as COMM 156, COMM 256) No matter how excellent your ideas, most significant achievements require the ability to communicate with and influence others. This course examines the theory, research, and practice of negotiation across a variety of settings. It provides multiple opportunities for students to develop negotiation skills through role-plays, exercises, and useful analytical frameworks. Topics include: distributive and integrative bargaining, psychological biases, lessons from game theory, principles of influence, multiparty negotiation, and the value of relationships and trust. The course meets intensively over a highly condensed period of time. Intended for graduate students and advanced undergraduates. No prerequisites. Limited enrollment; advance application required; see http://comm.stanford.edu/faculty/curhan

1-2 units, Aut (Staff), Win (Curhan, J), Spr (Staff)

EDUC 257A. Statistical Methods for Behavioral and Social Sciences
For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.

3 units, not given this year

EDUC 257B. Statistical Methods for Behavioral and Social Sciences
For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.

3 units, not given this year

EDUC 258. Literacy Development and Instruction
Literacy acquisition as a developmental and educational process. Problems that may be encountered as children learn to read. How to disseminate home, community, and school instruction from development.

3-5 units, Win (Juel, C)

EDUC 259X. Application of Hierarchical Linear Models in Behavioral and Social Research
The fundamental phenomenon of interest in educational research is the growth in knowledge and skills of individual students. Two facts - that children's growth is typically the object of inquiry and that such growth occurs in organizational settings - correspond to two of the most troublesome and persistent methodological problems in the social sciences: the measurement of change and the assessment of multi-level effects (also referred to as the unit of analysis problem). Although these two methodological problems have distinct, long-standing, and non-overlapping literatures, these problems, in fact, share a common cause - the inadequacy of traditional statistical techniques for the modeling of hierarchy.

4 units, not given this year

EDUC 260X. Understanding Statistical Models and their Social Science Applications
(Same as HRP 239, STATS 209) Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data, mediating and moderating variables. See http://www.stat.stanford.edu/~rag/stat209. Prerequisite: intermediate-level statistical methods

3 units, Win (Rogosa, D)

EDUC 262A. Curriculum and Instruction in English
Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP)

2 units, Sum (Staff)

EDUC 262B. Curriculum and Instruction in English
Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

3 units, Aut (Grossman, P)

EDUC 262C. Curriculum and Instruction in English
Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP)

3 units, Win (Grossman, P)

EDUC 263A. Curriculum and Instruction in Mathematics
The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win

2 units, Sum (Staff)

EDUC 263B. Curriculum and Instruction in Mathematics
The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win

3 units, Aut (Boaler, J)

EDUC 263C. Curriculum and Instruction in Mathematics
The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win

3 units, Win (Boaler, J; Dance, K)

EDUC 263E. Quantitative Reasoning in Mathematics I
First of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

2 units, Sum (Staff)
EDUC 263F. Quantitative Reasoning in Mathematics II
Second of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.
2-3 units, Aut (Murata, A)

EDUC 263G. Quantitative Reasoning in Mathematics III
Third of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.
2 units, Win (Alexander, A)

EDUC 264A. Curriculum and Instruction in World Languages
Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)
2 units, Sum (Staff)

EDUC 264B. Curriculum and Instruction in World Languages
Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.
3 units, Aut (Silva, M)

EDUC 264C. Curriculum and Instruction in World Languages
Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)
3 units, Win (Silva, M; Xu, X)

EDUC 264E. Methods and Materials in Bilingual Classrooms
Restricted to STEP elementary teacher candidates in the BCLAD program. Theories, research, and methods related to instruction of Spanish-English bilingual children, grades K-8. Approaches to dual language instruction, and pedagogical and curricular strategies for the instruction of reading, language arts, science, history, social science, and math in Spanish. Assessment issues and practices with bilingual students. In Spanish.
2 units, Aut (Poza, L)

EDUC 265. History of Higher Education in the U.S.
(Same as AMSTUD 165, EDUC 165, HISTORY 158C) Major periods of evolution, particularly since the mid-19th century. Prerequisite: Major periods of evolution, particularly since the mid-19th century. Prerequisite: 230A.
3-5 units, Win (Labaree, D)

EDUC 266X. Workshop in Practical Quantitative Research on Educational Policy and Inequality
Conceptual and technical skills for analyzing data concerning educational policy and inequality. How to design analytic strategies using available data sources. Interpreting and presenting results. Prerequisite: 250A.
3 units, not given this year

EDUC 267A. Curriculum and Instruction in Science
Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)
2 units, Sum (Staff)

EDUC 267B. Curriculum and Instruction in Science
Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)
3 units, Aut (Brown, B)

EDUC 267C. Curriculum and Instruction in Science
Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)
3 units, Win (Osborne, J)

EDUC 267E. Development of Scientific Reasoning and Knowledge
For STEP elementary teacher candidates. Theories and methods of teaching and learning science. How to develop curricula and criteria for critiquing curricula. Students design a science curriculum plan for a real setting. State and national science frameworks and content standards. Alternative teaching approaches; how to select approaches that are compatible with learner experience and lesson objectives. Focus is on the linguistic and cultural diversity of California public school students.
2 units, Aut (Diffenbaugh, P; Patterson, A)

EDUC 267F. Development of Scientific Reasoning and Knowledge II
Continuation of 267E. Development of scientific reasoning and pedagogical skills for supporting science instruction. Topics include: how children build scientific understandings and what that understanding might look and sound like in young children; what school science is and how concepts are connected to the doing of it; physical, life, and earth science constructs.
2 units, Spr (Osborne, J)

EDUC 267G. Integrating the Garden into the Elementary Curriculum
This mini-course uses the garden and kitchen environments to provide teacher candidates with real-world contexts in which to explore some of the key issues that children face in health, nutrition, and sustainability. Teacher candidates will gain an understanding of how to integrate the various themes with content areas and standards and an appreciation for the importance of addressing children's health needs in an era when the country is facing increased obesity and other health problems.
1 unit, Spr (Costanzo, R; Cool, J)

EDUC 268A. Curriculum and Instruction in History and Social Science
The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.
2 units, Sum (Staff)

EDUC 268B. Curriculum and Instruction in History and Social Science
The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.
3 units, Aut (Breakstone, J; Terra, L)

EDUC 268C. Curriculum and Instruction in History and Social Science
The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.
3 units, Win (Breakstone, J; Terra, L)

EDUC 268E. Elementary History and Social Science
Teaching and learning history and social science in the elementary grades. What is included in the discipline and why it is important to teach. The development of historical thinking among children. How students learn and understand content in these disciplines.
3-4 units, not given this year

EDUC 269. Analysis of Teaching
Student learning and the epistemology of school subjects as related to the planning and implementation of teaching, analysis of curriculum, and evaluation of performance and understanding. Readings and activities are coordinated with student teaching activities of participants. Prerequisite: STEP student or consent of instructor.
3 units, not given this year
EDUC 269X. The Ethics in Teaching
Goal is to prepare for the ethical problems teachers confront in their professional lives. Skills of ethical reasoning, familiarity with ethical concepts, and how to apply these skills and concepts in the analysis of case studies. Topics: ethical responsibility in teaching, freedom of speech and academic freedom, equality and difference, indoctrination, and the teaching of values.
1 unit, Win (Callan, E), Spr (Callan, E)

EDUC 270A. Learning to Lead in Public Service Organizations
For Haas Center student service organization leaders. (Davis)
3-5 units, not given this year

EDUC 270X. Youth Civic Development and Education
The course will examine recent research on the development of civic understanding and action among diverse populations of youth. The role of communities, schools, and media will be considered. The course will also address the question of how young people from all backgrounds can be educated for participatory citizenship in a democratic society.
3 units, Spr (Damon, W)

EDUC 271X. Education Policy in the United States
The course will provide students from different disciplines with an understanding of the broad educational policy context. The course will cover topics including a) school finance systems; b) an overview of policies defining and shaping the sectors and institutional forms of schooling; c) an overview of school governance and human-resource policy; e) school accountability policies at the federal and state levels; and f) school assignment policies and law, including intra- and inter-district choice policies, desegregation law and policy.
5 units, Spr (Loeb, S)

EDUC 272X. Understanding and Creating Value-Added Measures of Teacher Effectiveness
This seminar will explore a variety of approaches to measuring teacher effectiveness using student performance on state standardized tests. We will read the recent research literature on value-added estimation, addressing issues such as bias and measurement error. We also will use administrative data from two large districts to create and compare multiple value-added measures. The class assumes a comfort with OLS regression and basic programming in Stata.
4 units, not given this year

EDUC 273. Gender and Higher Education: National and International Perspectives
(Same as SOC 273) The effects of interactions between gender and the higher structures of education; policies seeking changes in those structures. Topics: undergraduate and graduate education, faculty field of specialization, rewards and career patterns, sexual harassment, and the development of feminist scholarship and pedagogy.
3 units, not given this year

EDUC 274X. School Choice: The Role of Charter Schools
(Formerly EDUC 153X.) Is school choice, including vouchers, charter schools, contract schools, magnet schools, district options, and virtual schools, a threat or an opportunity for public education? Focus is on the charter school movement nationally and in California as reform strategy. Roles and responsibilities of charter schools emphasizing issues of governance, finance, curriculum, standards, and accountability.
3 units, Win (Kushner, M)

EDUC 276. Educational Assessment
Reliability, validity, bias, fairness, and properties of test scores. Uses of tests to monitor, manage, and reform instruction. Testing and competition, meritocracy, achievement gaps, and explanations for group differences.
3 units, Spr (Haertel, E)

EDUC 277. Education of Immigrant Students: Psychological Perspectives
Historical and contemporary approaches to educating immigrant students. Case study approach focuses on urban centers to demonstrate how stressed urban educational agencies serve immigrants and native-born U.S. students when confronted with overcrowded classrooms, controversy over curriculum, current school reform movements, and government policies regarding equal educational opportunity.
3 units, Win (Lotan, R)

EDUC 278. Introduction to Issues in Evaluation
Open to master's and doctoral students with priority to students from education. Focus is on the basic literature and major theoretical and practical issues in program evaluation. Introduction to basic concepts and intellectual debates in the field: knowledge construction, purpose of evaluation, values in evaluation, knowledge utilization, professional standards of evaluation practice. Enrollment limited to 15. (SSPEP)
4 units, not given this year

EDUC 279. Urban Youth and Their Institutions: Research and Practice
(Same as EDUC 179) The determinants and consequences of urban life for youth, emphasizing disciplinary and methodological approaches, and the gap between the perspectives of state and local organizations and those of youth and their communities. The diversity of urban youth experiences with respect to ethnicity, gender, and immigration histories. Case studies illustrate civic-level and grassroots institutions, their structures, networks, and philosophies; historical and contemporary realities of urban youth for policy makers, educators, and researchers. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)
4-5 units, not given this year

EDUC 279B. Youth Empowerment and Civic Engagement
(Same as EDUC 179B) Focus is on youth development policies and practices: what makes them effective, and how they operate in broader institutional contexts. Research-based information; conceptual underpinnings; best learning from experience; and the perspective of expert youth workers, policymakers, and youth about what works.
2-4 units, not given this year

EDUC 281X. Technology for Learners
Does the use of technology improve learning? Many hope that technology will make learning easier, faster, or accessible to more learners. This course explores a variety of different approaches to designing tools for learning, the learning theories behind them, and the research that tests their effectiveness.
1-2 units, Aut (Forssell, K)

EDUC 282X. The Politics of Knowledge in the Twentieth Century United States
This course examines the relationship between social scientific knowledge and power in the modern United States. Topics include the emergence of social scientific disciplines, debates over objectivity, and professionalization. The course examines both how universities, philanthropic foundations, and the federal government have shaped knowledge production and how social science has influenced law, social and educational policy, and popular social thought.
3-5 units, not given this year

EDUC 283. Child Development In and Beyond Schools
(Formerly EDUC 144) How schools form a context for children’s social and cognitive development. Focus is on early and middle childhood. Transactional processes between children and learning opportunities in classroom contexts. Topics include: alternative theoretical perspectives on the nature of child development; early experience and fit with traditional school contexts; assessment practices and implications for developing identities as learners; psychological conceptions of motivational processes and alternative perspectives; the role of peer relationships in schools; and new designs for learning environments. Readings address social science and methodological issues. STEP Elementary only.
2 units, Aut (Hill-Bonnet, L; Merino, N)

EDUC 284. Teaching and Learning in Heterogeneous Classrooms
Teaching in academically and linguistically heterogeneous classrooms requires a repertoire of pedagogical strategies. Focus is on how to provide access to intellectually challenging curriculum and equal-status interaction for students in diverse classrooms. Emphasis is on group work and its cognitive, social, and linguistic benefits for students. How to prepare for group work, equalize participation, and design learning tasks that support conceptual understanding, mastery of content and language growth. How to assess group products and individual contributions. (STEP)
3 units, Aut (Lotan, R)
EDUC 285. Supporting Students with Special Needs
For STEP teacher candidates. Needs of exceptional learners, identification of learning differences and disabilities, and adaptations in the regular inclusion classroom. Legal requirements of special education, testing procedures, development of individualized education plans, and support systems and services. Students follow a special needs learner to understand diagnosis, student needs, and types of services.
2-3 units, Spr (Fur, E)

EDUC 286B. Second Language Acquisition Research
Major research findings and theories in second language acquisition. Second language research and theories in formal and informal settings where a second language is learned. (SSPEP)
4 units, Win (Hakuta, K)

EDUC 287X. Graduate Research Workshop on Psychological Interventions
(Same as PSYCH 274) Psychological research has the potential to create novel interventions that promote the public good. This workshop will expose students to psychologically 'wise' intervention research and to support their efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. The first part of the class will address classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. In the second part of the class, students will present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: Graduate standing in Psychology or Education, or consent of instructor.
3 units, Win (Walton, G; Cohen, G)

EDUC 288. Organization Studies: Theories and Analyses
(Same as SOC 366) Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies.
4-5 units, Aut (McFarland, D)

EDUC 290. Leadership: Research, Policy, and Practice
Conceptions of leadership that include the classroom, school, district office, and state capitol. The role of complexity; organizational leaders outside of schools past and present; and how that complexity permitted leadership to arise. Case studies.
(SSPEP/APA)
4 units, not given this year

EDUC 291. Learning Sciences and Technology Design
Research Seminar and Colloquium
Students and faculty present and critique new and original research relevant to the Learning Sciences and Technology Design doctoral program. Goal is to develop a community of scholars who become familiar with each other's work. Practice of the arts of presentation and scholarly dialogue while introducing seminal issues and fundamental works in the field.
1-3 units, Aut (Pea, R), Win (Schwartz, D), SPR (Goldman, S)

EDUC 291X. Introduction to Survey Research
(Same as EDUC 191X) Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.
3-4 units, Win (Rodriguez, E)

EDUC 292A. Acquisition of Japanese as a Second Language
(Same as JAPANLIT 292) Provides students with a broad overview of second language acquisition (SLA) research and introduces recent SLA studies on Japanese as a second language.
2-4 units, Aut (Ishida, M)

EDUC 292X. Academic Writing for Clarity and Grace
Students will acquire helpful writing strategies, habits, and critical faculties; increase their sense of writing as revision; and leave with them resources that will support them in their own lifelong pursuit of good writing. Students will work on revising their own papers and editing papers of other students. Class will focus on exercises in a variety of critical writing skills: framing, concision, clarity, emphasis, rhythm, action, actors, argument, data, quotations, and usage.
2-4 units, SPR (Labaree, D)

EDUC 293X. American Philosophy of Education
A century of classical writers in American philosophy, focusing on work on education, democracy, learning, and culture. Texts by Emerson, Peirce, James, Dewey, and Mead.
3-4 units, not given this year

EDUC 294X. History of the Learned Book
The course takes full advantage of the university library's Special Collections to examine the key historic works contributing to the advancement of learning and the organization of knowledge. Beginning with medieval manuscripts and progressing through all areas of human inquiry during the age of print, the course explores the economic and educational history of learned publishing in the West, while examining what these historic artifacts reveal about developments in the structure and authority, production and circulation, technology and aesthetics, of learning and knowledge.
3-5 units, not given this year

EDUC 295. Learning and Cognition in Activity
(Same as PSYCH 261A) Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.
3 units, not given this year

EDUC 296X. School Leadership
Can one person really make a difference for all the students in a school? Accurate or not, that's the expectation faced by school principals. This course will give students practice in translating school improvement ideas into practice and also help them develop a personal vision for school improvement. For students in POLS or MA/MBA program in School of Education.
3 units, not given this year

EDUC 297X. Teaching and Learning in Higher Education
(Same as CTL 297X) Open to master's and doctoral students in all disciplines. How teachers can promote lasting learning and ask which pedagogies are most effective in today's college classrooms. Readings analyze teaching and learning in diverse disciplines and institutional types. Students observe the instruction of a Stanford master teacher. Students write a paper about the instruction of the teacher they observe or prepare a syllabus and commentary for a course of their design.
3-4 units, Win (Ehrlich, T; Miller, B)

EDUC 298. Learning in a Networked World
(Same as CS 377L) Foundations, theories and empirical studies for interdisciplinary advances in how we conceive of the potentials and challenges associated with lifelong, life-wide and life-deep learning in a networked world given the growth of always-on cyberinfrastructure for supporting information and social networks across space and time with personal computers, netbooks, and mobiles.
3 units, not given this year

EDUC 299. Educating for Equity and Democracy
(Formerly EDUC 167.) Introduction to the theories and practices of equity and democracy in education. How to think about teaching and schooling in new ways; the individual moral and political reasons for becoming a teacher. (STEP)
2 units, Sum (Staff)

EDUC 301X. Workshop on Race, Ethnicity, and Language in Schools
(Same as LINGUIST 253A) The Workshop on Race, Ethnicity, and Language in Schools is a new School of Education initiative that examines the profound and enduring relationships between race, ethnicity, and language in education in the U.S. and elsewhere. The seminar brings together an interdisciplinary group of leading scholars and graduate students in language in education to address the role of race and ethnicity in a host of complex and controversial language educational issues that cut across the areas of practice, policy, and pedagogy.
1-4 units, SPR (Alim, H)

EDUC 302X. Incentives In Education
Seminar. Theoretical and empirical literatures from psychology
and economics that focus on group and individual incentives and their potential effects. Emphasis is on seminal experiments in psychology and the recent wave of economic field experiments that test the how individual incentives affect educational outcomes and intrinsic motivation.

1-4 units, not given this year

EDUC 303X. Designing Learning Spaces
Project-based. How space shapes personal interactions and affords learning opportunities In formal and informal settings. How to integrate learning principles into the design of spaces and develop a rubric to assess the impact on learning.
3-4 units, Win (Forsell, K)

EDUC 304X. Critical Theory and Pedagogy
The course samples the work of Critical Theory, proper, critical theory more generally, and critical pedagogy in the schools, as it draws on the educational consequences of a school of thought. The project of critical theory is examined in light of the curricular applications that it has inspired and the scholarly implications of studying education in this seemingly critical theoretical manner. Students will evaluate a particular curricular point of application of these related theoretical developments.
1-5 units, Win (Willinsky, J)

EDUC 305X. Deprivation and Alienation in Fiction and Education
This course seeks categories and procedures for the appreciation, description, analysis, and reorganization of people in difficult circumstances. Examples from the history of fiction and classic political economy are used to explore the strengths and weaknesses of various approaches. In depth attention to individual lives and daily struggles give fiction and economic theory more appropriately positive views of people without the advantages of schooling than most educational research. Readings include fiction by Defoe, Austen, Dickens, Harston, and Morrison and economic visions from Smith, Marx, Veblen, Keynes, and Galbraith.
3-4 units, Spr (McDermott, R)

EDUC 306A. Economics of Education in the Global Economy
Case material considers development problems in the U.S. and abroad. Discussion sections on economic aspects of educational development. (SSPEP/ICE)
5 units, Aut (Carnoy, M)

EDUC 306B. Politics, Policy Making, and Schooling Around the World
Education policy, politics, and development. Topics include: politics, interests, institutions, policy, and civil society; how schools and school systems operate as political systems; how policy making occurs in educational systems; and theories of development.
3-4 units, Spr (Russell, S; Buckner, E)

EDUC 306C. Political Economy of the Mind
Theories of political economy related to theories of the learning mind, emphasizing theories of genius. Readings from Pascal, Defoe, Smith, Balzac, Emerson, Marx, Veblen, Joyce, and Morrison. (SSPEP)
3-4 units, not given this year

EDUC 306D. World, Societal, and Educational Change: Comparative Perspectives
(Same as EDUC 136, SOC 231) Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.
4-5 units, Win (Ramirez, F)

EDUC 306Y. Economic Support Seminar for Education and Economic Development
Core economic concepts that address issues in education in developing and developed countries. Supply and demand, elasticity, discount rates, rate of return analysis, utility functions, and production functions. Corequisite: 306A. (Carnoy)
1 unit, Aut (Carnoy, M)

EDUC 307X. Organizing for Diversity: Opportunities and Obstacles in Groups and Organizations
Obstacles in organizations and groups that prevent people from participating, working effectively, and developing relationships in the context of diversity. How to create conditions in which diversity enhances learning and effectiveness? Experiential exercises; student's experiment with conceptual and analytic skills inside and outside of the classroom.
3-4 units, not given this year

EDUC 308X. Mobile Learning Technology for the Marginalized
Learning design principles as a basis for developing and evaluating mobile learning systems to address educational inequalities in underserved communities. Students analyze mobile learning scenarios, prototypes, and authoring tools while collaborating with research teams to develop a small-scale mobile empowerment scenario addressing education needs such as language, math, health, and civic life skills in developing countries.
1-3 units, not given this year

EDUC 309X. Educational Issues in Contemporary China
(Same as EDUC 109X) Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.
3-4 units, not given this year

EDUC 310. Sociology of Education: The Social Organization of Schools
(Same as EDUC 110, SOC 132, SOC 332) Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.
4 units, Spr (Carter, P)

EDUC 311X. Designing Learning for Development: Learning Theories, Technology Design and Social Change
Perspectives on learning and human development as they relate to prior technological interventions in the development sphere. Case studies in the international development context; historical perspective on learning and development. Methods of inquiry useful in a design process engaging technology within a development framework.
3 units, not given this year

EDUC 312A. Traditions of Microsociology
(Same as SOC 224A) The educational applications of sociological and social psychological theory and research to interaction processes in schools. Readings include: foundational works by Mead, Schutz, and Simmel; contemporary work by Goffman, Homans, Merton, Blau, and Harold. Readings span empirical settings such as work, classrooms, gangs, primate societies, and children's games. Topics: processes of influence, role differentiation, identity formation, social mechanisms, and intra/inter group dynamics of peer relations. Methods for observation and analysis of small groups. (SSPEP)
4 units, not given this year

EDUC 312B. Microsociology: Social Structure and Interaction
(Same as SOC 224B) How to interpret interpersonal situations using microsociological theories. Focuses on the role of intention, identity, routines, scripts, rituals, conceptual frameworks, talk and emotions in social interaction. Processes by which interactions reverberate outward to transform groups and social structures. Special consideration will be placed on organizational contexts like schools, workplaces and policy decision arenas.
4 units, not given this year

EDUC 314. Workshop in Economics of Education
Research by students and faculty engaged in problems in the economics of education. Prerequisites: advanced graduate training in economics theory and methodology; current ongoing research. May be repeated for credit. (SSPEP)
1-2 units, not given this year
EDUC 315X. Race and Ethnicity in Society and Institutions
(Same as SOC 347) Primarily for doctoral students. Major theories and empirical research. Emphasis is on schooling and race, racial identity, urban issues, and the impact of immigration on race relations.
1-5 units, not given this year

EDUC 316. Social Network Analysis
(Same as SOC 369) Introduction to social network theory, methods, and research applications in sociology. Network concepts of interactionist (balance, cohesion, centrality) and structuralist (structural equivalence, roles, duality) traditions are defined and applied to topics in small groups, social movements, organizations, communities. Students apply these techniques to data on schools and classrooms. (SSPEP)
4-5 units, Win (McFarland, D)

EDUC 317X. Workshop: Networks, Histories, and Theories of Action
(Same as SOC 317W) Yearlong workshop where doctoral students are encouraged to collaborate with peers and faculty who share an interest in researching the network dynamics, histories and theories of action that help explain particular social phenomena. Students present their own research and provide helpful feedback on others' work. Presentations may concern dissertation proposals, grants, article submissions, book proposals, datasets, methodologies and other texts. Repeatable for credit.
1-2 units, Aut (McFarland, D; Parigi, P), Win (McFarland, D; Parigi, P), Spr (McFarland, D; Parigi, P)

EDUC 318X. The Discourses of Teaching Reading
Students examine language, social relationships, and students' textual sense-making to further develop their conceptions of reading comprehension and their pedagogical practice as reading teachers. What it means to comprehend text; how classroom discourse matters in the development of textual understanding; and what understandings, purposes, and relationships should matter in classroom talk about text. Field work in which students facilitate small group text discussions for the duration of the quarter at a location of their choice.
3-5 units, not given this year

EDUC 319. Research on Teaching
Introduction and historical perspective to theory, methods, and substantive findings of research on teaching.
1-4 units, Win (Borko, H)

EDUC 320X. Sociology of Knowledge Creation
(Same as EDUC 120X, SOC 330) The sociology of knowledge creation explores systematic relationships between thought and social structure in order to examine how human beings construct, interpret, and view reality. How knowledge is socially constructed, patterned, and used, and how everyday and tacit forms of knowledge are achieved. Emphasis is on the creation and patterning of scientific paradigms, social science disciplines, and the field of education.
3-4 units, Aut (McFarland, D)

EDUC 321B. Analysis of Social Interaction
Purposive and experiential study of the social contexts of learning and teaching, with an emphasis on the theoretical and methodological frameworks that inform the study of social interaction. (SSPEP/ICE)
4 units, Win (McDermott, R)

EDUC 321X. Leading Social Change: Educational and Social Entrepreneurship
(Same as OB 350) (Same as OB 385) The course provides an overview of different approaches to leading change in the social sector, drawing primarily, but not exclusively, on case examples in education. While there is a substantial need for innovation and visionary leadership in sectors such as education, social entrepreneurs who want to drive change must appreciate the significant barriers and unique opportunities presented by non-market forces in these sectors. The course will equip students with an appreciation for different mechanisms of change and theories of action as well as some of the challenges of initiating and sustaining meaningful change in social sectors such as education. The course will draw on readings and case studies, and we will benefit from the wisdom of an inspirational group of guest lecturers. While the course will benefit any student concerned with making a positive impact in the world, it is particularly (although not exclusively) appropriate for students in the joint MA/MB
4 units, not given this year

EDUC 322. Discourse of Liberation and Equity in Schools and Societies
Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques. Prerequisite: graduate status or consent of instructor. (SSPEP)
3-5 units, not given this year

EDUC 323A. The Practice of Education Policy Analysis
Key issues in the K-12 education policy. Modern theories about the making of policy and its implementation. Preparation to do policy analysis in education. (SSPEP)
3 units, Spr (Kelemen, M)

EDUC 324X. The Ecology of Equality
This seminar is designed for doctoral students. One of the claims of American educational policy and practice is the desire to achieve equitable educational results across society. But what does equity really entail? This course will survey a range of research and literature that examines the landscape of myriad social institutions known to influence educational processes. The course will take an interdisciplinary approach to deconstructing the main issues arising from schools today and to discussing effective polices and practices.
4 units, not given this year

EDUC 325A. Proseminar 1
Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?
3 units, Aut (Carnoy, M; Willinsky, J)

EDUC 325B. Proseminar 2
Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?
3 units, Win (Boaler, J; Murata, A)

EDUC 325C. Proseminar 3
Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?
2-4 units, Spr (Antonio, A; Carter, P)

EDUC 327A. The Conduct of Qualitative Inquiry
Two quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll in 327C.
2-4 units, Spr (Antonio, A; Carter, P)

EDUC 327C. The Conduct of Qualitative Inquiry
For doctoral students. Students bring research data for analysis and writing. Preference to those who have completed 327A.
1-4 units, not given this year

EDUC 328X. Topics in Learning and Technology: Core Mechanics for Learning
(Same as COMM 180, COMM 280, CS 377H) Contents of the course change each year. The course can be repeated. In game
play, core mechanics refers to the rules of interaction that drive the game forward. This class will consider whether there are core mechanics that can drive learning forward, and if so, how to build them into learning environments.

3 units, Win (Schwartz, D)

EDUC 329X. Seminar on Teacher Professional Development
For master's and doctoral students. Theories, principles, and models of professional development. Issues include: different conceptions of teaching, practice, and development; what gets developed in professional development; pedagogies of professional development; structures to support teacher learning; evaluating professional development; and policy issues.

1-4 units, alternate years, not given this year

EDUC 330X. Teaching English Language Learners: Issues in Policy, Leadership, and Instruction
Current perspectives and research on issues facing educators serving the English language learner population. Issues include federal education legislation, civil rights law, national Common Core Standards, content and language proficiency standards assessment and accountability, school improvement models, school structure, community engagement, addressing issues of long-term English learners, programming for newcomer ELLs, early childhood education, and promoting bilingualism.

3-4 units, Spr (Hakuta, K)

EDUC 331A. Introduction to Research Design in Administration and Policy Analysis
Required for first-year APA doctoral students; SSPEP first-year doctoral students with consent of instructor. How to conduct literature reviews. How to use literature to frame and formulate problem statements, research questions, and conceptual frameworks. (APA)

3 units, not given this year

EDUC 332X. Theory and Practice of Environmental Education
Foundational understanding of the history, theoretical underpinnings, and practice of environmental education as a tool for addressing today's pressing environmental issues. The purpose, design, and implementation of environmental education in formal and nonformal settings with youth and adult audiences. Field trip and community-based project offer opportunities for experiencing and engaging with environmental education initiatives.

3 units, Spr (Ardoin, N)

EDUC 333A. Understanding Learning Environments
Advanced seminar. Theoretical approaches to learning used to analyze learning environments and develop goals for designing resources and activities to support effective learning practices.

3 units, Win (McDermott, R; Pea, R)

EDUC 333B. Imaging the Future of Learning
How to understand and forecast social, educational, technological trends; how to develop concepts and ideas for engaging learning and technology. Presentations of scenarios for future learning concepts from education, government, technology, business, and leisure sectors. Experiments with the research and visioning processes.

3 units, not given this year

EDUC 334A. Youth and Education Law Project: Clinical Practice
(Same as LAW 660A.) The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and coin

4 units, Win (Koski, W), Spr (Koski, W)

EDUC 334C. Youth and Education Law Project: Clinical Coursework
(Same as LAW 660C.) The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and coin

4 units, Win (Koski, W), Spr (Koski, W)

EDUC 334X. Education Advocacy Clinic
(Same as LAW 660X.) For students enrolled in the Education (M.A.) and Law (J.D.) joint degree program and those who already possess Law degrees only. Students participate in educational rights and reform work with clients and communities, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. May be repeated for credit. Prerequisite: consent of instructor.

2-10 units, Win (Staff), Spr (Staff)

EDUC 336. Language, Identity, and Classroom Learning
As contemporary research focuses on how people act and recognize each other, analyzing interaction while acknowledging identity allows for a dynamic examination of cultural interaction. Broad cultural categorization can be overly expansive in identifying the characteristics of large groups of individuals. 1-3 units, Aut (Brown, B)

EDUC 336A. Law and Public Policy: Issues in Implementation
(Same as LAW 636.) This seminar will focus on issues related to achieving successful implementation of the goals of legislation. It is widely recognized that the goals of legislation often are not realized and that the failure frequently rests in breakdowns in the implementation process and in agencies assigned the responsibility of implementing the legislation. In response to problems in implementation, the institutional context of public policy implementation is changing. One category of innovations, known by names such as management-based regulation and evidence-based social service delivery, gives broad discretion to street-level service providers but requires them to engage in rigorous monitoring and disciplined performance comparison. Another category applies market concepts to regulation or social services, for example, by creating tradable rights (e.g. pollution allowances) or vouchers (for schools, housing, or healthcare). These, and other, new approaches are affecting both the

3 units, Win (Staff)

EDUC 337. Race, Ethnicity, and Linguistic Diversity in Classrooms: Socio-cultural Theory and Practices
(Same as AFRICAAM 106, CSRE 103B, EDUC 103B) Focus is
on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

3-5 units, Spr (Ball, A)

EDUC 338X. Innovations in Education: Designing the teaching experience
Design Institute class; see http://dschool.stanford.edu. Immersive experiences and real world projects focused around issues facing the teaching profession. Human capital as a top priority for the U.S. and other educational systems. Topics include teacher career ladders, induction, retention, and teacher knowledge sharing.

3-4 units, not given this year

EDUC 339. Advanced Topics in Quantitative Policy Analysis
For doctoral students. How to develop a researchable question and research design, identify data sources, construct conceptual frameworks, and interpret empirical results. Presentation by student participants and scholars in the field. May be repeated for credit.

1-2 units, Aut (Loeb, S), Win (Reardon, S), Spr (Staff)

EDUC 340. Psychology and American Indian Mental Health
(Same as NATIVEAM 240) Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.

3-5 units, not given this year

EDUC 341X. Urban School System Reform
Strategies for large-scale reform of complex school systems. Case studies of urban school systems. Sources include approaches developed in management studies, organizational behavior, and school reform. Political and community contexts; the role of urban superintendents and administrators in creating reform strategies. Factors such as labor relations and the regulatory environment. Guest speakers.

4 units, not given this year

EDUC 342. Child Development and New Technologies
Focus is on the experiences computing technologies afford children and how these experiences might influence development. Sociocultural theories of development as a conceptual framework for understanding how computing technologies interact with the social ecology of the child and how children actively use technology to meet their own goals. Emphasis is on influences of interactive technology on cognitive development, identity, and social development equity.

1-3 units, Win (Barron, B; Goldman, S)

EDUC 343X. Navigating the Academic Profession
For DARE doctoral fellows only. The roles and responsibilities of faculty members in American colleges and universities in the 21st century. How to become productive faculty members within the higher education enterprise.

1-2 units, Aut (Gold, C)

EDUC 344. Child Development and Schooling
How the practices and activities of schooling influence the social, emotional, and cognitive development of children. Metatheoretical approaches (mechanistic, organicist, developmental contextualist metamodels) and methods of conducting research on schooling and development (experimental, survey, ethnographic, intervention). Topics: how teaching practices influence cognitive growth in academic domains; how the organizational structures of schools (grade related transitions, class organizations) fit or fail to fit developmental needs; how friendship groups create contexts for learning and can lead to different trajectories of development; and how grading and other evaluative practices influence motivational orientations. Focus is on elementary school years. (PSE)

3-4 units, not given this year

EDUC 346. Research Seminar in Higher Education
Required for higher education students. Major issues, current structural features of the system, the historical context that shaped it, and theoretical frameworks. The purposes of higher education in light of interest groups including students, faculty, administrators, and external constituents. Issues such as diversity, stratification, decentralization, and changes that cut across these groups. (APA)

4 units, Aut (Stevens, M)

EDUC 347. The Economics of Higher Education
Topics: the worth of college and graduate degrees, and the utilization of highly educated graduates; faculty labor markets, careers, and workload; costs and pricing; discounting, merit aid, and access to higher education; sponsored research; academic medical centers; and technology and productivity. Emphasis is on theoretical frameworks, policy matters, and the concept of higher education as a public good. Stratification by gender, race, and social class.

4 units, Win (Bettinger, E)

EDUC 348X. Policy and Practice in Science Education
Values and beliefs that dominate contemporary thinking about the role and practice of science education, what the distinctive features of science are, and the arguments for its value as part of compulsory education. Research on the conceptual and affective outcomes of formal science education, how the changing nature of contemporary society challenges current practice, and the rationale for an alternative pedagogy, curriculum and assessment.

3-4 units, alternate years, not given this year

EDUC 350A. Psychological Studies in Education
Required of first-year doctoral students in Psychological Studies; others by consent of instructor. Introduction to the doctoral program in Psychological Studies in Education and to faculty and student research. (PSE)

2 units, not given this year

EDUC 350C. Psychological Studies in Education
Individual research projects in a group context. (PSE)

1-2 units, not given this year

EDUC 351A. Statistical Methods for Longitudinal Data
(Same as STATS 222) Research designs and statistical procedures for time-ordered (repeated-measures) data. The analysis of longitudinal panel data is central to empirical research on learning and development. Topics: measurement of change, growth curve models, analysis of durations including survival analysis, experimental and non-experimental group comparisons, reciprocal effects, stability. See http://www-stat.stanford.edu/~rag/stat222/.

Prerequisite: intermediate statistical methods.

2-3 units, Spr (Rogosa, D)

EDUC 351B. Statistical Issues in Testing and Assessment
The new book by Howard Wainer, Uneducated Guesses: Using Evidence to Uncover Misguided Education Policies is the basis for this seminar. Also included will be supporting research literature and data analysis activities for topics such as college admissions, methods for missing data, assessment of achievement gaps, and the use of value-added analysis. See http://www-stat.stanford.edu/~rag/ed351B/.

3 units, not given this year

EDUC 352. Policy and Practice in Science Education
Individual research projects in a group context. (PSE)

1-2 units, not given this year

EDUC 353A. Problems in Measurement: Item Response Theory
Alternative mathematical models used in test construction, analysis, and equating. Emphasis is on applications of item
response theory (latent trait theory) to measurement problems, including estimation of item parameters and person abilities, test construction and scoring, tailored testing, mastery testing, vertical and horizontal test equating, and detection of item bias. Prerequisites: 252 and 257, or PSYCH 248 and 252, or equivalent. (PSE)

3 units, Win (Haertel, E)

EDUC 353C. Problems in Measurement: Generalizability Theory
Application to analysis of educational achievement data, including performance assessments. Fundamental concepts, computer programs, and actual applications. (PSE)

3 units, Spr (Haertel, E)

EDUC 354X. School-Based Decision Making
Leadership and organizational issues. Leadership as it plays out in the pragmatic demands and tensions of site-level decision processes. The interdependence of factors critical to school achievement and equity outcomes: governance and culture, instruction, resource alignment, inquiry, community engagement. The complexity of decisions in these arenas and the capacity-building process of leadership for results.

3-4 units, Win (Hageland, G)

EDUC 355X. Higher Education and Society
For undergraduates and graduate students interested in what colleges and universities do, and what society expects of them. The relationship between higher education and society in the U.S. from a sociological perspective. The nature of reform and conflict in colleges and universities, and tensions in the design of higher education systems and organizations.

3 units, not given this year

EDUC 356. Street History: Learning the Past in School and Out
(Same as HISTORY 337C) Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which throttles its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?

3-5 units, not given this year

EDUC 357X. Science and Environmental Education in Informal Contexts
There are ever-expanding opportunities to learn science in contexts outside the formal classroom, in settings such as zoos, museums, and science centers. How are issues around science and the environment presented in these contexts, how do people behave and learn in these contexts, and what messages do they take away? This course will cover the learning theories and empirical research that has been conducted in these settings. Case studies of nearby science centers will add an experiential dimension.

3-4 units, Win (Osborne, J; Ardoin, N)

EDUC 358X. Learning, Sharing, Publishing, and Intellectual Property
This course explores the legalities and economics entailed in sharing intellectual property (books, websites, games, journals, etc.) associated with learning at all age levels in the digital era. It assesses the implications of historical, contemporary, and innovative approaches to intellectual property in designing for learning and teaching, as well as for the place of knowledge in the society at large. The course considers new licensing agreements and economic models that apply to learning resources, software systems, research, archives, and data. And the course publishes its own open access and open source journal as a demonstration project. http://accesscourse.stanford.edu

1-4 units, Win (Willinsky, J)

EDUC 359A. Research in Science and Mathematics Education: Assessment and Evaluation
Historical and international perspectives. Emphasis is on trends and issues in contemporary American research and policy. Opportunity to develop and discuss dissertation plans. (CTE) (Shavelson)

2-4 units, Aut (Nandagopalan, K)

EDUC 359B. The History of Research in Science Education
For doctoral students interested in science education and literacy in school subjects.

2-3 units, Win (Brown, B)

EDUC 359C. Science Literacy
The changing debate over conceptions of the nature of science and the calls to broaden it. Themes, directions, limitations, and epistemological foundations of the body of research on the nature of science.

2-3 units, not given this year

EDUC 359E. Research on Mathematics Education
Comparative and cultural perspectives on mathematics teaching and learning practices in the U.S. mathematics education in the context of cultural and educational systems. Teaching and learning as an interactive system, classroom discourse and math talk, teacher professional development, classroom culture and norms, educational equity, and issues of curriculum and standards.

2-4 units, Aut (Murata, A)

EDUC 359F. Research in Mathematics Education: Conducting Inquiry
The focus of this seminar is an exploration of relationships between theory, research, and practice. At the center will be the participants’ own research studies in mathematics education that they will conduct throughout the 10 weeks of the course. These will be accompanied by focused readings that illustrate various issues within the research enterprise as well as give participants a broad perspective on the field of mathematics education.

2-4 units, not given this year

EDUC 360X. Developmental Psychopathology and Resilience
In this course students will learn about theoretical, methodological, and empirical issues pertaining to developmental psychopathology and resilience of children and adolescents. The course focuses on (1) current conceptual and empirical issues; (2) cognitive, affective, and motivational processes that underlie some of the most salient childhood mental health symptoms and disorders; (3) family, school, and cultural factors that contribute to developmental psychopathology and resilience; and (4) cutting-edge analytic methods that are currently employed in studies of developmental psychopathology and resilience.

3-4 units, Spr (Obradovic, J)

EDUC 361. Workshop: Networks and Organizations
(Same as SOC 361W) For students doing advanced research. Group comments and criticism on dissertation projects at any phase of completion, including data problems, empirical and theoretical challenges, presentation refinement, and job market presentations. Collaboration, debate, and shaping research ideas. Prerequisite: courses in organizational theory or social network analysis.

1-3 units, Aut (Powell, W), Win (Powell, W), Spr (Powell, W)

EDUC 362X. The Science Curriculum: Values and Ideology in a Contested Terrain
The issue of what should be taught in schools is a site of contestation where issues of beliefs, values and ideologies emerge. This course will use the school science curriculum and the history of its development to explore the common positions adopted and argued for in approaching curriculum development. Course will help students develop a knowledge of curriculum reform in school science and a deeper understanding of the arguments that have shaped its present form and their historical antecedents.

3-5 units, Spr (Osborne, J)

EDUC 363X. Stress Reactivity and Biological Sensitivity to Context
This class is designed to introduce students to two biological systems, the autonomic nervous system (ANS) and the hypothalamic-pituitary-adrenal (HPA) axis that help children respond to and cope with daily challenges, stressors, and adversities. We will examine: (1) how the ANS and HPA systems respond to daily stressors, as well as experiences of poverty, maltreatment, and neglect; (2) how different indices of stress reactivity independently and jointly relate to various domains of competence and psychopathology; and (3) how stress reactivity moderates contextual influences on children’s adaptation.

3-4 units, Aut (Obradovic, J)
EDUC 364. Cognition and Learning
Cognitive psychology is the study of human thought including topics including the nature of expertise, creativity, and memory. Emphasis is on learning. The role of cognitive psychology in helping people learn, and determining the most desirable type of learning and whether people have learned. Students design and conduct their own learning study.
3-4 units, alternate years, not given this year

EDUC 365. Social, Emotional, and Personality Development
Limited to doctoral students in PSE and those with a background in child and adolescent development. Developmental processes that account for psychological adaptation in social relationships, schools, and other interpersonal settings. Theoretical models of social, personality, and emotional development. Topics such as self-concept, empathy, motivation, aggression, and personality formation.
3 units, Win (Damon, W)

EDUC 366X. Learning in Formal and Informal Environments
How learning opportunities are organized in schools and non-school settings including museums, after-school clubs, community art centers, theater groups, aquariums, sports teams, and new media contexts. Sociocultural theories of development as a conceptual framework. Readings from empirical journals, web publications, and books. Collaborative written or multimedia research project in which students observe and document a non-school learning environment.
3 units, Spr (Barron, B)

EDUC 367. Cultural Psychology
(formerly 292.) The relationship between culture and psychological processes; how culture becomes an integral part of cognitive, social, and moral development. Both historical and contemporary treatments of cultural psychology, including deficit models, transcultural psychology, ecological niches, culturally specific versus universal development, sociocultural frameworks, and minority child development. The role of race and power in research on cultural psychology.
3-5 units, Spr (LaFromboise, T)

EDUC 368. Cognitive Development in Childhood and Adolescence
This course aims to broaden and deepen students’ understanding of cognitive development from the prenatal period through adolescence. It will examine various theoretical, methodological, and empirical issues pertaining to different domains of cognitive development, such as neurobiological plasticity, infant cognition, theory of mind, memory, language, and executive functions. Throughout the course, as we survey research findings, we will discuss (1) models researchers have employed in their study of cognitive development; (2) limitations of current research and directions for future research; and (3) translation of research findings for practitioners and policymakers.
3-4 units, Aut (Obradovic, J)

EDUC 369. Human Cognitive Abilities
(Same as PSYCH 133) Psychological theory and research on human cognitive abilities; their nature, development, and measurement, and their importance in society. Persistent controversies and new areas of research, recent perspectives on the nature-nurture debate and the roles of genetics, health and education in shaping HCAs. Prerequisite: PSYCH 1 or equivalent. (PSE)
3 units, not given this year

EDUC 370X. Theories of Cognitive Development
The contributions of Jean Piaget and Lev Vygotsky to the study of the developing mind of the child. Their theories, concepts, perspectives, empirical work, and lives. Topics: Piaget’s genetic epistemology, constructivism, and idea of sensorimotor through formal operational stages; Vygotsky’s cultural-historical approach, egocentric speech, and the relation between learning and development.
3 units, not given this year

EDUC 371X. Social Psychology and Social Change
(Same as PSYCH 265, PUBLPOL 305B) The course is intended an exploration of the major ideas, theories, and findings of social psychology and their applied status. Special attention will be given to historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research will also be discussed. Advanced undergraduates and graduate students from other disciplines are welcome.
2-3 units, Spr (Cohen, G)

EDUC 373X. Teaching in the Humanities-Research into Adolescent Literacy
Relatively little attention has been paid to the role of humanities courses in teaching both general and disciplinary skills in reading and writing. With the growth of small schools, more middle and high school teachers find themselves teaching ‘humanities’ courses. This seminar will explore what it means to teach the humanities, with special attention to how such courses can develop disciplinary reading and writing skills. Course will investigate how we develop tools to assess teaching and learning in the humanities.
3-5 units, not given this year

EDUC 374. Philanthropy and Civil Society
(Same as POLISCI 334, SOC 374) Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent books and articles. May be repeated for credit for a maximum of 9 units.
1-3 units, Aut (Powell, W), Win (Powell, W), Spr (Powell, W)

EDUC 375A. Seminar on Organizational Theory
(Same as MS&E 389, SOC 363A) The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.
3 units, Aut (Powell, W)

EDUC 375B. Seminar on Organizations: Institutional Analysis
(Same as SOC 363B) Seminar. Key lines of inquiry in organizational change, emphasizing network, institutional, and evolutionary arguments.
3-5 units, not given this year

EDUC 376. State Theory and Educational Policy
The relationship between political system structures and educational change by analyzing theories and interpretations of how political systems function, and the implications of these theories for understanding education. Classical and Marxist interpretations. (SSPEP/ICE)
4 units, not given this year

EDUC 377. Comparing Institutional Forms: Public, Private, and Nonprofit
(Same as GSBGEN 346, PUBLPOL 317, SOC 377) For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials.
4 units

EDUC 377B. Strategic Management of Nonprofits
(Same as STRAMGT 368). Strategic, governance, and management issues facing nonprofit organizations and their leaders in the era of venture philanthropy and social entrepreneurship. Development and fundraising, investment management, performance management, and nonprofit finance. Case studies include smaller, social entrepreneurial and larger, more traditional organizations, including education, social service, environment, health care, religion, NGOs, and performing arts.
4 units, Win (Meehan, W)

EDUC 377C. Strategic Issues in Philanthropy
(Same as GSBGEN 381). Theoretical and practical issues of strategic distinctions between traditional philanthropic entities, such as community, private, and corporate foundations, and contemporary models, such as funding intermediaries and venture philanthropy partnerships. Philanthropic strategies as they relate to foundation mission, grant making, evaluation, financial management, infrastructure, and board governance. Guest speakers include philanthropists, foundation presidents, and Silicon Valley business leaders.

</table>
| EDUC 392X. The Political Economy of Global Higher
Education

The course is intended to introduce students to the analysis of higher education and higher educational change in an international context, reviewing critically the current literature and showing how social scientists study higher education using qualitative and quantitative tools. The course will present a model of studying change, review political, sociological, and economic theories applied to higher education, and focus on four important case studies of higher education in the developing world: Brazil, Russia, India, and China, known also as the BRIC countries.

3-4 units, Win (Carnoy, M; Kuhns, K)

EDUC 393. Proseminar on Research in Education
Overview of the field of education for joint degree (M.B.A./M.A.) students. (SSPEP) (Strober)
4 units, Spr (Staff)

EDUC 394X. Research in Progress Seminar
This seminar will provide a forum where graduate students could discuss prospective research ideas, present ongoing research, and consider theoretical issues of broad interest to the field. In this research in progress seminar students are expected to present ongoing research and have a discussion about it – or a specific research article related to it --, with the purpose of eliciting feedback from the instructor and other seminar participants.
1 unit, Spr (Rodriguez, E)

EDUC 395. Scholarly Writing in Education and the Social Sciences
Focus is on producing articles for scholarly journals in education and the social sciences. Ethics and craft of scholarly publishing. Writing opinion articles for lay audiences on issues of educational and social import.
3-5 units, Win (Wineburg, S)

EDUC 396X. The Design of Technologies for Casual Learning
(Same as EDUC 196X) Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple Iphone as a prototype platform. The term casual is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in extreme informal learning circumstances (while on the go, any time and any place). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.
3 units, not given this year

EDUC 397X. Math Mentoring: Working in the Zone with Learners
(Same as EDUC 187X) The course focuses on how the tutorial relationship can help students learn mathematics. The course will provide background theory and knowledge as well as provide practical approaches to tutoring, supports for targeting activities to students' needs, selection of materials and activities, and ways to assess the progress of the students and reflect on your own experience. Topics will include social theories of learning, teaching for understanding, and challenges of students who are English language learners. In addition to attending 4, two-hour workshop classes, 1 hour of tutoring is required each week. The course will meet 4 times during the quarter for workshops and discussions following Friday tutoring sessions. Students will submit assignments on the Coursework site on weeks that the course does not meet. A 1 unit section of the course will run in Winter and Spring quarters.
1-2 units, Win (Goldman, S; O'Connor, K)

EDUC 398X. Market-Based Education Reforms
(Same as GSBGEN 577). This seminar course examines market-based education reforms and evidence on their impacts. Topics considered in depth will include public school choice, charter schools, vouchers, incentives for students and teachers, and accountability. We will pay special attention to the design and operation of education markets, the politics and legal challenges of market-based school reform, and methods for evaluating reform initiatives. The course will draw on cases both within the United States and internationally.
2 units, Win (Staff)

EDUC 399X. Mixed Methods Research
This advanced course will address the theory and practice of mixing inquiry methodologies in social inquiry. The course will cover: 1) selected roots of the contemporary interest in mixing methods, 2) conceptualizations of mixed methods design and analysis, and 3) challenges of mixed methods practice.
3 units, Spr (Rodriguez, E)

EDUC 401A. Mini Courses in Methodology: Statistical Packages for the Social Sciences
Statistical analysis using SPSS, including generating descriptive statistics, drawing graphs, calculating correlation coefficients, conducting t-tests, analysis of variance, and linear regression. Building up datasets, preparing datasets for analysis, conducting statistical analysis, and interpreting results.
1 unit, Aut (Chiatovich, T), Win (Chiatovich, T)

EDUC 401B. Mini Courses in Methodology: Stata
The computer as research tool. Statistical software Stata for data analysis, including t-tests, correlation, ANOVA, and multivariate linear regression.
1 unit, Aut (Arshan, N), Win (Arshan, N)

EDUC 402X. Formative Assessment of Literacy Learning and Performance
With the emergence of national standards and assessments, the role of classroom assessments has received diminished attention. Literacy acquisition - learning to read and write as facets of academic language - is critical through the grades and across content areas. This course will cover (1) the recent history of classroom assessment, (2) a conception of assessment as practical inquiry, (3) a review of performance-based assessment methods, and (4) practical implementation of the preceding ideas.
2 units, Aut (Calfee, R)

EDUC 405X. The Teaching of Literature: How We Teach & Why
(Same as ENGLISH 397X) This course is designed for graduate students in English and English Education who are interested in questions surrounding the teaching of literature at both the secondary and collegiate level. The course weaves together theoretical considerations of the purposes for teaching literature, including assumptions about the kinds of readings and readers literature teachers are trying to create, with investigation of pedagogical practices.
2-4 units, not given this year

EDUC 410. Second-Year Research Workshop
For second-year doctoral students in APA and ICE. Issues in conceptualizing and designing research in the social sciences: methodology and epistemology; research proposals; and findings by students and faculty. Prerequisites: 306A,B,C,D or equivalents.
(APA/ICE)
2-5 units, not given this year

EDUC 412X. Organization Studies Research Workshop
For graduate students whose research is rooted in organization theory. Participants to present and receive feedback on their work including paper drafts, proposals and dissertation chapter. Sources include recent scholarship. May be repeated for credit.
1-2 units, not given this year

EDUC 417. Research and Policy on Postsecondary Access
(Same as EDUC 117) The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center).
3 units, not given this year

EDUC 418. Foundations of Case Study Research
Rationales for case study research in academic organizations emphasizing colleges and universities; high schools and related organizational contexts. Methodological training in fieldwork through hands-on data collection and analysis from interviews and documents. For doctoral students developing qualifying papers or dissertation proposals; required for higher education doctoral students; APA, SSE, and C&TE students with consent of instructor. (APA)
3-5 units, not given this year

EDUC 419X. Academic Achievement of Language Minority Students
Emphasis is on the current state of knowledge in the research
EDUC 424. Introduction to Research in Curriculum and Teacher Education

Required for first-year CTE Doctoral students. How to conceptualize, design, and interpret research. How to read, interpret, and critique research; formulate meaningful research questions; evaluate and conduct a literature review; and conceptualize a study. Readings include studies from different research paradigms. Required literature review in an area students expect to explore for their qualifying paper. (Darling-Hammond)

2-3 units, Spr (Borko, H)

EDUC 435X. Research Seminar in Applied Linguistics

(Same as LINGUIST 293) For graduate students in the schools of Education and Humanities and Sciences who are engaged in research pertaining to applied linguistic topics in original research. Topics: language policies and planning, language and gender, writing and critical thinking, foreign language education, and social applications of linguistic science. (SSSEP)

1-4 units, not given this year

EDUC 453. Doctoral Dissertation

For doctoral students only. (all areas)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 465. Seminar in the Pedagogy of Teacher Education

For doctoral students interested in working in teacher education. Pedagogical approaches, including the use of modeling and simulations and hypermedia materials. Theoretical considerations of how teachers learn to teach.

3 units, not given this year

EDUC 466. Doctoral Seminar in Curriculum Research

Required of all doctoral students in CTE, normally during their second year in the program. Students present their ideas regarding a dissertation or other research project, and prepare a short research proposal that often satisfies their second-year review. (CTE)

2-4 units, Aut (Goldenberg, C)

EDUC 470. Practicum

For advanced graduate students. (all areas)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 480. Directed Reading

For advanced graduate students. (all areas)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 490. Directed Research

For advanced graduate students. (all areas)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 493. Workshop in Design and Analysis of Comparative Studies

A workshop for second-year and later students with data analysis or research design activities including dissertation planning or analysis. Readings and exercises developed around participating student research. Topics have included: multilevel data analysis, within-subjects designs, and implementation of matching methods for comparing non-equivalent groups. Various computing customs and simulations and hypermedia materials. Theoretical considerations of how teachers learn to teach.

3 units, not given this year

EDUC 496. Research in History and Social Science Education

(Same as HISTORY 464E) For doctoral students. Literature on historical learning and teaching and corresponding social sciences research designs, assessment, and curriculum evaluation.

3-5 units, not given this year

EDUC 801. TGR Project

For advanced graduate students. Instructor consent required. (all areas)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 802. TGR Dissertation

For advanced graduate students. Instructor consent required. (all areas)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ELECTRICAL ENGINEERING (EE)

UNDERGRADUATE COURSES IN ELECTRICAL ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

EE 14N. Things about Stuff

Preference to freshmen. The stories behind disruptive inventions such as the telegraph, telephone, wireless, television, transistor, and chip are as important as the inventions themselves, for they enable the broadly applicable scientific paradigms. Focus is on studying consumer devices; projects include building batteries, energy conversion devices and semiconductors from pocket change. Students may propose topics and projects of interest to them. The trajectory of the course is determined in large part by the students themselves. GER:DB-EngrAppSci

3 units, not given this year

EE 15N. The Art and Science of Engineering Design

The goal of this seminar is to introduce freshmen to the design process associated with an engineering project. The seminar will consist of a series of lectures. The first part of each lecture will focus on the different design aspects of an engineering project, including formation of the design team, developing a project statement, generating design ideas and specifications, finalizing the design, and reporting the outcome. Students will form teams to follow these procedures applicable to an engineering project. Each team will choose a product to design over the quarter. The second part of each lecture will consist of presentations from outside speakers, including founders of some of the most exciting companies in Silicon Valley, who will share their experiences about engineering design. On-site visits to Silicon Valley companies to showcase their design processes will also be part of the course. The seminar serves three purposes: (1) it introduces students to the design process of turning an idea into a final design, (2) it presents the GER:DB-EngrAppSci

3 units, not given this year

EE 17N. Engineering the Micro and Nano Worlds: From Chips to Genes

(F.Sem) Stanford Introductory Seminar. Preference to freshmen. The first part is hands-on micro- and nano-fabrication including the Stanford Nanofabrication Facility (SNF) and the Stanford Nanoelectronics Laboratory (SNL) and field trips to local companies and other research centers to illustrate the many applications; these include semiconductor integrated circuits (chips), DNA microarrays, microfluidic bio-sensors and microelectromechanical systems (MEMS). The second part is to create, design, propose and execute a project. Most of the grade will be based on the project. By the end of the course you will, of course, be able to read critically a New York Times article on nanotechnology. More importantly you will have experienced the challenge (and fun) of designing, carrying out and presenting your own experimental project. As a result you will be better equipped to choose your major. This course can complement (and differs from) the seminars offered by Profs Philip Wong and Hari Manohar GER:DB-EngrAppSci

3 units, Spr (Pease, B)

EE 19N. The Internet: how it works and the services it offers

(F.Sem) Stanford Introductory Seminar. The Internet is a universal communication system that spans the entire globe and enables a wide range of services. It is very loosely managed, yet it works very well. The goal of this seminar is two-fold: (i) to describe how the Internet infrastructure works (its underlying functions and protocols) and (ii) to explore the many services that it offers (e.g., browsing, social networking, VoIP, IPTV, etc.). Students will work in groups of two on projects related to Internet functions and services. GER:DB-EngrAppSci

3 units, Win (Tobagi, F)

EE 21N. What is Nanotechnology?

(F.Sem) Stanford Introductory Seminar. Nanotechnology is an often used word and it means many things to different people. Scientists and Engineers have some notion of what
nanotechnology is, societal perception may be entirely different. In this
course, we start with the classic paper by Richard Feynman (There's Plenty of Room at the Bottom), which laid down the
design and future of information. Then we discuss two classic
books that offer a glimpse of what nanotechnology is: Engines of
Creation: The Coming Era of Nanotechnology by Eric Drexler, and
Prey by Michael Crichton. Drexler's thesis sparked the imagina-
tion of what nano machinery might do, whereas Crichton's
popular novel channelled the public’s attention to this subject by
portraying a disastrous scenario of a technology gone astray. We
will use the scientific knowledge to analyze the assumptions and
predictions of these classic works. We will draw upon the latest
research advances to illustrate the possibilities and impossibilite

EE 22N. Medical Imaging Systems
(F,Sem) Stanford Introductory Seminar. Preference to freshmen.
The technology of major imaging modalities used for disease
diagnosis: x-ray, ultrasound, and magnetic resonance: their history,
societal impact, and clinical applications. Field trips to a medical
center and an imaging research lab. Term paper and presentation.
Prerequisites: high school physics and calculus. GER:DB-EngrAppSci
3 units, Win (Wong, P)

EE 25Q. Electric Automobiles and Aircraft
(S,Sem) (Same as AA 116N) Stanford Introductory Seminar.
Transportation accounts for nearly one-third of American energy
use and greenhouse gas emissions and three-quarters of American
oil consumption. It has crucial impacts on climate change, air
pollution, and future depletion, and national security. Students
wishing to address these issues will need to reconsider how we
move, finding sustainable transportation solutions. This course
will provide an introduction to the issue, covering the past and present
of transportation and its impacts; examining alternative fuel
proposals; and digging deeper into the most promising option:
battery electric vehicles. Energy requirements of air, ground, and
maritime transportation; reducing carbon emissions; and national
security. Students wishing to address these issues will need to reconsider how we
move, finding sustainable transportation solutions. This course will
provide an introduction to the issue, covering the past and present
of transportation and its impacts; examining alternative fuel
proposals; and digging deeper into the most promising option:

EE 26N. Green Electronics
(F,Sem) Stanford Introductory Seminar. Many green technologies
including hybrid cars, photovoltaic energy systems, efficient power
supplies, and energy-conserving control systems have at their heart
intelligent, high-power electronics. This freshman seminar
examines the technology at the heart of the green-tech revolution
and uses green-tech examples to teach the engineering principles
of modeling, optimization, analysis, simulation, and design. The
class will include a hands-on lab, readings, and discussion. Preference
given to freshman. GER:DB-EngrAppSci
3 units, Win (Dally, W)

EE 27N. Electronics Rocks
(F,Sem) Stanford Introductory Seminar. Electronics pervades our
lives, yet we often feel obliged to let a device function as it
was intended. This course is about not being intimidated by voiding
a warranty and modding some commercial gadget and about being
calculated enough to build something cool from scratch. To get
there, we will study the basics of how things work and learn how
to hack/mod and scratch build. Students will be mentored and
encouraged to work, in teams, to play with interesting electronics
and ultimately to develop a creative final project. GER:DB-EngrAppSci
3 units, Win (Kovacs, G)

EE 28N. What Is Information?
(F,Sem) Stanford Introductory Seminar. Information is everywhere
in our lives, from speaking and writing to web pages and social
networking, but what is it actually? How do we define it? Is it
physical? Can we measure it? Does it obey scientific laws? How
do we send it, store it, access it and manipulate it? Are there limits to it?
Will information technology save the planet or destroy it?
This freshman seminar will examine the history, science,
technology and future of information.
3 units, Spr (Miller, D)

EE 41. Physics of Electrical Engineering
(Same as ENGR 40P) How everything from electrostatics to
quantum mechanics is used in common high-technology products.
Electrostatics are critical in micro-mechanical systems used in
many sensors and displays, and Electromagnetic waves are
essential in all high-speed communication systems. How to
propagate energy on transmission lines, optical fibers, and in free
space. Which aspects of modern physics are needed to generate
light for the operation of a DVD player or TV. Introduction to
semiconductors, solid-state light bulbs, and laser pointers.
Hands-on labs to connect physics to everyday experience. Prerequisites:
Physics 43 GER:DB-EngrAppSci
3 units, Win (Solgaard, O)

EE 46. Engineering For Good: Save the World and Have Fun Doing It
Introductory course that provide immediate and positive impact on the world. Focus is on global health by learning from experts in this field.
Students work on real-world projects with help from members of
NGOs and social entrepreneurial companies as part of the hand-on
learning experience. Prerequisite: ENGR 40 or EE 122A or CS
106B or consent of instructor.
3 units, not given this year

EE 47. Press Play: Interactive Device Design
Introduction to the human-centered and technical workings behind
interactive devices ranging from cellphones and video controllers
to smart cars and appliances. Students build a working MP3 player
prototype of their own design, using embedded microcontrollers,
digital audio decoders and component sensors, and other electronic
hardware. Topics include electronics prototyping, interface
tooling, sensors and actuators, micro-controller development,
physical prototyping, and user testing. Prerequisite: CS106A and X
or consent of instructor.
3 units, Spr (Ju, W)

EE 48. Hacking Stuff
In this course, you will build miniature autonomous cars that
compete in a race against the clock. You will learn how to design a
complete system by bringing together the various disciplines of
electrical engineering such as control theory, circuit design,
microprocessor programming, and semiconductor device physics.
You will design, build and program each component of your
autonomous vehicle yourself and in doing so, you will be
introduced to the broad discipline of electrical engineering through
lab work. GER:DB-EngrAppSci
3 units, not given this year

EE 60N. Man versus Nature: Coping with Disasters Using
Space Technology
(F,Sem) (Same as GEOPHYS 60N) Stanford Introductory
Seminar. Preference to freshman. Natural hazards, earthquakes,
vollcanoes, floods, hurricanes, and fires, and how they affect people
and society; great disasters such as asteroid impacts that
periodically obliterate many species of life. Scientific issues,
political and social consequences, costs of disaster mitigation,
and how scientific knowledge affects policy. How spaceborne imaging
technology makes it possible to respond quickly and mitigate
consequences; how it is applied to natural disasters; and remote
sensing data manipulation and analysis. Offered every year, winter
quarter. GER:DB-EngrAppSci
4 units, Win (Zebker, H)

EE 100. The Electrical Engineering Profession
(Same as EE 100X) Lectures/discussions on topics of importance
to the electrical engineering professional. Continuing education,
professional societies, intellectual property and patents, ethics,
entrepreneurial engineering, and engineering management.
1-2 units, Aut (Dutton, R)

EE 100X. The Electrical Engineering Profession
(Same as EE 100) Lectures/discussions on topics of importance
to the electrical engineering professional. Continuing education,
professional societies, intellectual property and patents, ethics,
entrepreneurial engineering, and engineering management.
WIM 1-2 units, Aut (Dutton, R)

EE 101A. Circuits I
First of two-course sequence. Introduction to circuit modeling and
analysis. Topics include creating the models of typical components in
electronic circuits and simplifying non-linear models for

STANFORD BULLETIN, 2011-12 | 645
COURSES OF INSTRUCTION

restricted ranges of operation (small signal model); and using network theory to solve linear and non-linear circuits under static and dynamic operations. Prerequisite: Physics 43 GER:DB-EngrAppSci 4 units, Win (Wong, S)

EE 101B. Circuits II
Second of two-course sequence. MOS large-signal and small-signal models. MOS amplifier design including DC bias, small signal performance, multistage amplifiers, frequency response, and feedback. Prerequisite: 101A. GER:DB-EngrAppSci 4 units, Spr (Staff)

EE 102A. Signal Processing and Linear Systems I

EE 102B. Signal Processing and Linear Systems II

EE 108A. Digital Systems I

EE 108B. Digital Systems II
The design of processor-based digital systems. Instruction sets, addressing modes, data types. Assembly language programming, low-level data structures, introduction to operating systems and compilers. Processor microarchitecture, microprogramming, pipelining. Memory systems and caches. Input/output, interrupts, buses and DMA. System design implementation alternatives, software/hardware tradeoffs. Labs involve the design of processor subsystems and processor-based embedded systems. Prerequisite: 108A, CS 106B. GER:DB-EngrAppSci 3-4 units, Aut (Oluokun, O), Win (Kozyrakis, C)

EE 109. Digital Systems Design Lab
The design of integrated digital systems encompassing both customized software and hardware. Software/hardware design tradeoffs. Algorithm design for pipelining and parallelism. System latency and throughput tradeoffs. FPGA optimization techniques. Integration with external systems and smart devices. Firmware configuration and embedded system considerations. Enrollment limited to 23; preference to graduating seniors. Prerequisites: 108B, and CS 106B or X. GER:DB-EngrAppSci 4 units, Spr (Oluokun, O)

EE 114. Fundamentals of Analog Integrated Circuit Design

EE 116. Semiconductor Device Physics
The fundamental operation of semiconductor devices and overview of applications. The physical principles of semiconductors, both silicon and compound materials; operating principles and device equations for junction devices (diodes, bipolar transistor, photodetectors). Introduction to quantum effects and band theory of solids. Prerequisite: ENGR 40. Corequisite: 101B. GER:DB-EngrAppSci 3 units, Aut, Spr (Staff)

EE 122A. Analog Circuits Laboratory
Practical applications of analog circuits, including simple amplifiers, filters, oscillators, power supplies, and sensors. Design skills, computer-aided design, and circuit fabrication and debugging. The design process through proposing, designing, simulating, building, debugging, and demonstrating a project. Radio frequency and largely digital projects not suitable for EE 122. Prerequisite: ENGR 40 or equivalent. GER:DB-EngrAppSci 3 units, Aut, Spr (Kozyrakis, C)

EE 122B. Introduction to Biomedical Electronics
Key components of modern systems, their application in physiological measurements, and reduction to practice in labs. Fundamentals of analog/digital conversion and filtering techniques for biosignals, typical transducers (biopotential, electrochemical, temperature, pressure, acoustic, movement), and interfacing circuits. Issues of biomedical electronics (safety, noise). Prerequisite: EE122A or equivalent. 3 units, Spr (Kozyrakis, C)

EE 124. Introduction to Neuroelectrical Engineering
Fundamental properties of electrical activity in neurons, technology for measuring and altering neural activity, and operating principles of modern neurological and neural prosthetic medical systems. Topics: action potential generation and propagation, neuro-MEMS and measurement systems, experimental design and statistical data analysis, information encoding and decoding, clinical diagnostic systems, and fully implantable neural prosthetic systems design. Prerequisite: EE 101B and EE 102B. 3 units, Win (Shenoy, K)

EE 133. Analog Communications Design Laboratory
(Same as EE 233) Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminal EE students. Prerequisite: EE101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233. Recommended: EE114/214A. GER:DB-EngrAppSci 3-4 units, Win (Dutton, R)

EE 134. Introduction to Photonics
Photonics, optical components, and fiber optics. Conceptual and mathematical tools for design and analysis of optical communication, sensor and imaging systems. Experimental characterization of semiconductor diodes, lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors. Class project on confocal microscopy or other method of sensing or analyzing biometric data. Laboratory experiments. Prerequisite: 41 or equivalent. GER:DB-EngrAppSci 4 units, Spr (Ellerbee, A)

EE 136. Introduction to Nanophotonics and Nanostructures
Electromagnetic and quantum mechanical waves and semiconductors. Confining these waves, and devices employing such confinement. Localization of light and applications: metallic mirrors, photonic crystals, optical waveguides, microresonators, plasmonics. Localization of quantum mechanical waves: quantum
wells, wires, and dots. Generation of light in semiconductors: spontaneous and stimulated emission, lasers, and light emitting diodes. Devices incorporating localization of both electromagnetic and quantum mechanical waves such as resonant cavity quantum well lasers and microcavity-based single photon sources. System-level applications such as optical communications, biochemical sensing, and quantum cryptography. Prerequisite: familiarity with electromagnetic and quantum mechanical, and semiconductors at the level of EE 41 or equivalent. GER:DB-EngrAppSci

3 units, Win (Vuckovic, J)

EE 141. Engineering Electromagnetics

3 units, Aut (Hesselink, L)

EE 151. Sustainable Energy Systems
Energy demand is expected to grow by 30% by 2025, while at the same time the European Union is demanding a carbon footprint at 1990 levels. We examine energy flow in the US and Europe, and deduce from it a strategy for sustainable growth. Potential solutions include distributed small scale networked energy generation, solar energy, wind and water, as well as nuclear energy. A systems perspective allows optimization. Fundamental concepts will be demonstrated in class through hands-on experiments.

3 units, Win (Hesselink, L)

EE 168. Introduction to Digital Image Processing
Computer processing of digital 2-D and 3-D data, combining theoretical material with implementation of computer algorithms. Topics: properties of digital images, design of display systems and algorithms, time and frequency representations, filters, image formatting and display. Concepts and system applications, perspective morphing, and animation applications. Instructional computer lab exercises implement practical algorithms. Final project consists of computer animations incorporating techniques learned in class. Prerequisite: Matlab programming. GER:DB-EngrAppSci

3-4 units, Win (Zebker, H)

EE 169. Introduction to Bioimaging
Bioimaging is important for both clinical medicine, and medical research. This course will provide a introduction to several of the major imaging modalities, using a signal processing perspective. The course will start with an introduction to multi-dimensional Fourier transforms, and image quality metrics. It will then study projection imaging systems (projection X-Ray), backprojection based systems (CT, PET, and SPECT), systems that use beam forming (ultrasound), and systems that use Fourier encoding (MRI).

3 units, Spr (Pauly, J)

EE 178. Probabilistic Systems Analysis
(Same as EE 278A) Introduction to probability and statistics and their role in modeling and analyzing real world phenomena. Events, sample space, and probability. Discrete random variables, probability mass functions, independence and conditional probability, expectation and conditional expectation. Continuous random variables, probability density functions, independence and expectation, derived densities. Transforms, moments, sums of independent random variables. Simple random processes. Limit theorems. Introduction to statistics: significance, estimation and detection. Prerequisites: basic calculus and linear algebra. GER:DB-EngrAppSci

3-4 units, Aut (Weissman, I), Spr (Prabhakar, B)

EE 179. Analog and Digital Communication Systems
This course covers the fundamental principles underlying the analysis, design and optimization of analog and digital communication systems. Design examples will be taken from the most prevalent communication systems today: cell phones, Wi-Fi, radio and TV broadcasting, satellites, and computer networks. Analysis techniques based on Fourier transforms and energy/power spectral density will be developed. Mathematical models for random variables and random (noise) signals will be presented, which are used to characterize filtering and modulation of random noise. These techniques will then be used to design analog (AM and FM) and digital (PSK and FSK) communication systems and determine their performance over channels with noise and interference. Prerequisite: 102A. GER:DB-EngrAppSci

3 units, Spr (Staff)

EE 190. Special Studies or Projects in Electrical Engineering
Independent work under the direction of a faculty member. Individual or team activities involve lab experimentation, design of devices or systems, or directed reading.

1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S), Sum (Staff)

EE 191. Special Studies and Reports in Electrical Engineering
Independent work under the direction of a faculty member given for a letter grade only. If a letter grade given on the basis of required written report or examination is not appropriate, enroll in 190.

1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S), Sum (Staff)

GRADUATE COURSES IN ELECTRICAL ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

EE 202. Electrical Engineering in Biology and Medicine
Open to all. Primarily biological in nature, introduction to the physiological and anatomic aspects of medical instrumentation. Areas include patient monitoring, imaging, medical transducers, the unique aspects of medical electronic systems, the socioeconomic impact of technology on medical care, and the constraints unique to medicine. Prerequisite: familiarity with circuit instrumentation techniques as in 101B.

3 units, Spr (Poon, A)

EE 203. The Entrepreneurial Engineer
Seminar. For prospective entrepreneurs with an engineering background. Contributions made to the business world by engineering graduates. Speakers include Stanford and other engineering and M.B.A. graduates who have founded large and small companies in nearby communities. Contributions from EE faculty and other departments including Law, Business, and MS&E.

1 unit, Win (Melen, R)

EE 204. Business Management for Electrical Engineers and Computer Scientists
For graduate students with little or no business experience. Leading computer, high-tech, and Silicon Valley companies and their best practices. Tools and frameworks for analyzing decisions these companies face. Corporate strategy, new product development, marketing, sales, distribution, customer service, financial accounting, outsourcing, and human behavior in business organizations. Case studies. Prerequisite: graduate standing.

3 units, Spr (Gibbons, F; Siegel, M)

EE 212. Integrated Circuit Fabrication Processes
For students interested in the physical bases and practical methods of silicon VLSI chip fabrication, or the impact of technology on device and circuit design, or intending to pursue doctoral research involving the use of Stanford's Nanofabrication laboratory. Process simulators illustrate concepts. Topics: principles of integrated circuit fabrication processes, physical and chemical models for crystal growth, oxidation, ion implantation, etching, deposition, lithography, and back-end processing. Required for 410.

3 units, Aut (Plummer, J)

EE 214A. Fundamentals of Analog Integrated Circuit Design
(Same as EE 114) Analysis and simulation of elementary transistor
EE 224. Applied Quantum Mechanics I
Emphasis is on applications in modern devices and systems. Topics include: Schrödinger’s equation, eigenfunctions and eigenvalues, solutions of simple problems including quantum wells and tunneling, quantum harmonic oscillator, coherent states, operator approach to quantum mechanics, Dirac notation, angular momentum, coordinate and momentum operators, radially symmetric potential, angular momentum eigenstates, angular momentum operators, matrix diagonalization, perturbation theory, variational method, momentum, hydrogen atom, calculation techniques including operator approach to quantum mechanics, Dirac notation, angular eigenvalues, solutions of simple problems including quantum wells and tunneling, quantum harmonic oscillator, coherent states, and Fermi’s golden rule. Prerequisites: MATH 52 and 53, PHYSICS 65 (or PHYSICS 43 and 45). 3 units, Aut (Miller, D)

EE 223. Applied Quantum Mechanics II
Continuation of 222, including more advanced topics: quantum mechanics of crystalline materials, methods for one-dimensional problems, spin, systems of identical particles (bosons and fermions), introductory quantum optics (electromagnetic field quantization, coherent states), fermion annihilation and creation operators, interaction of different kinds of particles (spontaneous emission, optical absorption, and stimulated emission), quantum information and interpretation of quantum mechanics. Other topics in electronics, optoelectronics, optics, and quantum information science. Prerequisite: 222. 3 units, Win (Miller, D)

EE 225. Bio-chips, Imaging and Nanomedicine
(Same as MATSCI 382) The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-technologies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies. 3 units, Win (Wang, S; de la Zerda, A; Akin, D)

EE 228. Basic Physics for Solid State Electronics
Topics: energy band theory of solids, energy bandgap engineering, classical kinetic theory, statistical mechanics, and equilibrium and non-equilibrium semiconductor statistics. Prerequisite: course in modern physics. 3 units, not given this year

EE 231. Introduction to Lasers
How lasers work, including quantum transitions in atoms, stimulated emission and amplification, rate equations, saturation, feedback, coherence, optical oscillation, laser resonators, and optical beams. Limited to the first-year behavior; classical models for atomic transitions with little quantum mechanics background required. Prerequisites: electromagnetic theory to the level of 142, preferably 241, and some atomic or modern physics such as PHYSICS 70 or 130, 131. 3 units, not given this year

EE 232. Laser Dynamics
Continuation of 231, emphasizing dynamic and transient effects including spiking, Q-switching, mode locking, frequency modulation, frequency and spatial mode competition, and nonlinear pulse propagation, short pulse expansion, and compression. Prerequisite: 231. 3 units, Spr (Fejer, M)

EE 233. Analog Communications Design Laboratory
(Same as EE 133) Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementation. Labs include building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminal EE students. Prerequisite: EE 101B. Undergraduate students enroll in EE 133 and Graduate students enroll in EE 233. Recommended: EE 114/214A. 3-4 units, Win (Dutton, R)

EE 234. Photonics Laboratory
Photonics and fiber optics with a focus on communication and sensing. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors and photonic crystals. Prerequisite: EE 142 or equivalent. 3 units, Spr (Fejer, M)

EE 235. Guided Wave Optical Devices
Guided wave optics, optical waveguide devices, and integrated optics. Wave propagation in layered media, slab waveguides, and optical fibers. Rectangular waveguides. Optical waveguide technology. Coupled-mode theory. Numerical analysis of complex waveguides. Photonic crystals and surface plasmon optics. Physics and design of waveguide devices. Fiber sensors, waveguide gratings, waveguide modulators, directional couplers, ring filters. Prerequisite: electromagnetic theory to the level of 142 or equivalent. 3 units, not given this year

EE 237. Solar Energy Conversion
Basics of solar energy conversion in photovoltaic devices and solar thermal systems. Solar cell device physics: electrical and optical. Solar system issues including module assembly, inverters, and micro-inverters. Concentrated solar power. Students design solar cells. Prerequisite: EE 116 or EE 216. 3 units, not given this year

EE 242. Electromagnetic Waves
Continuation of 141. Maxwell’s equations. Plane waves in lossless and lossy media. Skin effect. Flow of electromagnetic power (Poynting’s theorem). Reflection and refraction of waves at planar boundaries. Snell’s law and total internal reflection. Reflection and refraction from lossy media. Guided waves. Parallel-plate and dielectric-slab waveguides. Hollow wave-guides, cavity resonators, microstrip waveguides, optical fibers. Interaction of fields with matter and particles. Antennas and radiation of electromagnetic energy. Prerequisite: 141 or PHYSICS 120. 3 units, Win (Fraser-Smith, A)
EE 234. Semiconductor Optoelectronic Devices
Semiconductor physics and optical processes in semiconductors. Operating principles and practical device features of semiconductor optoelectronic materials and heterostructures. Devices include: optical detectors (p-i-n, avalanche, and MSM); light emitting diodes; electroabsorptive modulators (Franz-Keldysh and QCSE), electrorefractive (directional couplers, Mach-Zehnder), switches (SEEDs); and lasers (waveguide and vertical cavity surface emitting). Prerequisites: semiconductor devices and solid state physics such as EE 216 or equivalent.

3 units, Win (Harris, J)

EE 247. Introduction to Optical Fiber Communications

3 units, Aut (Kahn, J)

EE 248. Fundamentals of Noise Processes
Fundamentals of statistic, Fourier analysis, statistical and quantum mechanics, and linear and nonlinear circuit theory. Thermal, quantum and 1/f noise in resistors, pn junctions, lasers, and parametric amplifiers. Energy efficiency (bit/photon) and spectral efficiency (bit/Hz) in coherent and single photon optical communications. Protocols and security in quantum cryptography. Decoherence of qubits in quantum computation. Prerequisites: elementary device circuit, and electromagnetic waves to the level of 101A.B and 242.

3 units, Aut (Yamamoto, Y)

EE 252. Antenna Theory

3 units, Win (Poorn, A)

EE 254. Principles of Radar Systems
Analysis and design. Radar equation and systems parameters, components of radar systems, radar cross-section and target characteristics, signal detection in noise, ambiguity function (with applications to measurement precision, resolution, clutter rejection, and waveform design); pulse compression waveforms, synthetic aperture radar, tracking and scanning radars, HF (OTHR) radar, radar environmental and remote sensing, radar astronomy. Prerequisite: senior or graduate standing.

3 units, not given this year

EE 257. Scientific Data Processing
(Same as GEOPHYS 258) Assimilation, processing, and modeling of large observational data sets. Solution of scientific and engineering problems, especially those requiring large amounts of data. Inverse methods and transform domain analysis for indirect measurements, implemented on digital computers using scientific languages. Large-scale computing, including hardware architectures, input/output and data bus bandwidth, programming efficiency, switches (SEQEDs) and lasers (waveguide and vertical cavity surface emitting). Prerequisites: any programming language. Recommended: EE261, EE178/278A, ME300 or equivalent.

3-4 units, not given this year

EE 261. The Fourier Transform and Its Applications
The Fourier transform as a tool for solving physical problems. Fourier series, the Fourier transform of continuous and discrete signals and its properties. The Dirac delta, distributions, and generalized transforms. Convolutions and correlations and applications; probability distributions, sampling theory, filters, and analysis of linear systems. The discrete Fourier transform and the FFT algorithm. Multidimensional Fourier transform and use in imaging. Further applications to optics, crystallography. Emphasis is on relating the theoretical principles to solving practical engineering and science problems. Prerequisites: Math through ODEs, Fourier series at the level of 102A, and linear algebra.

3 units, Aut (Googood, B), Win (Gill, J)

EE 262. Two-Dimensional Imaging
Time and frequency representations, two-dimensional auto- and cross-correlation. Fourier transform, rate conversion, and applications to measurement precision, resolution, clutter rejection, coordinate systems and the Hankel and Abel transforms, line integrals, impulses and sampling, restoration in the presence of noise, reconstruction and tomography, imaging radar. Tomographic reconstruction using projection-slice and layermarg methods. Students create software to form images using these techniques with actual data. Final project consists of design and simulation of an advanced imaging system. Prerequisite: EE261. Recommended: EE278B, EE279.

3 units, not given this year

EE 263. Introduction to Linear Dynamical Systems
(Same as CME 263) Applied linear algebra and linear dynamical systems with application to circuits, signals processing, communications, and control systems. Topics: least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: linear algebra and matrices as in MATH 103; differential equations and Laplace transforms as in EE 102A.

3 units, Aut (Lall, S)

EE 264. Digital Signal Processing
The fundamentals of digital signal processing techniques and their applications. Topics include review of two sided Z-transform, linear time invariant discrete-time systems, and sampling theory; A/D and D/A conversion, rate conversion, and oversampling techniques for ADC and DAC; filter design; quantization in digital filter implementation; discrete Fourier analysis; and parametric signal modeling. Prerequisite: EE102A and EE102B. Recommended: EE261, EE278B.

3 units, Aut (Schafer, R)

EE 265. Digital Signal Processing Laboratory
Applying 102A.B to real-world signal processing applications. Lab exercises use a programmable DSP to implement signal processing tasks. Topics: A/D conversion and quantization, sampling theorem, Z-transform, discrete-time Fourier transform, digital filter design and implementation, spectral analysis, rate conversion, wireless data communication, and OFDM receiver design. Prerequisites: 102A.B. Recommended: 261.

3-4 units, Win (Meng, T)

EE 268. Introduction to Modern Optics
Geometrical optics: ray matrices, Gaussian beams, optical instruments, and radiometry. Wave nature of light: Maxwell's equations, propagation through media with varying index of refraction (e.g., fibers). Interferometry: basic principles, practical systems, and applications.

3 units, Aut (Byer, R)

EE 271. Introduction to VLSI Systems
Provides a quick introduction to MOS transistors and IC fabrication and then creates abstractions to allow you to create and reason about complex digital systems. It uses a switch resistor model of a transistor, uses it to model gates, and then shows how gates and physical layout can be synthesized from Verilog or SystemVerilog descriptions. Most of the class will be spent providing techniques to create designs that can be validated, are
low power, provide good performance, and can be completed in finite time. Prerequisites: 101A and 108B: familiarity with transistors, logic design, Verilog, and digital system organization.

3 units, Aut (Mitra, S)

EE 272. Design Projects in VLSI Systems
Mixed signal design. Student teams create a small mixed-signal VLSI design using a modern design flow and CAD tools. The project involves writing a Verilog model of the chip, creating a testing/debug strategy for the chip, wrapping custom layout to fit into a std cell system, using synthesis and place and route tools to create the layout of your chip, and understanding all the stuff you need to do to tape-out a chip. Useful for those who plan to build a chip in their Ph.D. work. Prerequisites: EE 271 and experience in digital/analog circuit design.

3-4 units, Spr (Horowitz, M)

EE 273. Digital Systems Engineering
Electrical issues in the design of high-performance digital systems, including signaling, timing, synchronization, noise, and power distribution. High-speed signaling methods; noise in digital systems, its effect on signaling, and methods for noise reduction; timing conventions; timing noise (skew and jitter), its effect on systems, and methods for mitigating timing noise; synchronization issues and synchronizer design; clock and power distribution problems and techniques; impact of electrical issues on system architecture and design. Prerequisites: EE101A and EE108A. Recommended: EE114/214A.

3 units, Win (Weaver, J)

EE 276. Introduction to Wireless Personal Communications

3 units, Spr (Cox, D)

EE 278A. Probabilistic Systems Analysis
(Same as EE 178) Introduction to probability and statistics and their role in modeling and analyzing real world phenomena. Events, sample space, and probability. Discrete random variables, probability mass functions, independence and conditional probability, expectation and conditional expectation. Continuous random variables, probability density functions, independence and expectation, derived densities. Transforms, moments, sums of independent random variables. Simple random processes. Limit theorems. Introduction to statistics: significance, estimation and detection. Prerequisites: basic calculus and linear algebra.

3-4 units, Aut (Weissman, I), Spr (Prabhakar, B)

EE 278B. Introduction to Statistical Signal Processing
Review of basic probability and random variables, Random vectors and processes; convergence and limit theorems; IID, independent increment, Markov, and Gaussian random processes; stationary random processes; autocorrelation and power spectral density; mean square error estimation, detection, and linear estimation. Prerequisites: EE178/278A and linear systems and Fourier transforms at the level of EE102A,B or EE261.

3 units, Aut (El Gamal, A), Win (El Gamal, A)

EE 279. Introduction to Communication Systems
Analysis and design of communication systems; analog and digital modulation and demodulation, frequency conversion, multiplexing, noise and distortion; spectral and signal-to-noise ratio analysis, probability of error in digital systems, spread spectrum. Prerequisites: EE179 or EE261, and EE178/278A or EE278B.

3 units, Win (Cox, D)

EE 282. Computer Systems Architecture
Course focuses on how to build modern computing systems, namely notebooks, smartphones, and data centers, covering primarily their hardware architecture and certain system software aspects. For each system class, we cover the system architecture, processor technology, advanced memory hierarchy and I/O organization, power and energy management, and reliability. We will also cover topics such as interactions with system software, virtualization, solid state storage, and security. The programming assignments allow students to explore performance/energy tradeoffs when using heterogeneous hardware resources on smartphone devices. Prerequisite: EE108B. Recommended: CS 140.

3 units, Spr (Kozylarz, C)

EE 284. Introduction to Computer Networks
Structure and components of computer networks; functions and services; packet switching; layered architectures; OSI reference model; physical layer; data link layer; error control; window flow control; media access control protocols used in local area networks (Ethernet, Token Ring, FDDI) and satellite networks; network layer (datagram service, virtual circuit service, routing, congestion control, Internet Protocol); transport layer (UDP, TCP); application layer.

3 units, Aut (Tobagi, F)

EE 290A. Curricular Practical Training for Electrical Engineers
For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Nishimura, D), Win (Nishimura, D), Spr (Nishimura, D), Sum (Staff)

EE 290B. Curricular Practical Training for Electrical Engineers
For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Nishimura, D), Win (Nishimura, D), Spr (Nishimura, D), Sum (Staff)

EE 290C. Curricular Practical Training for Electrical Engineers
For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Nishimura, D), Win (Nishimura, D), Spr (Nishimura, D), Sum (Staff)

EE 290D. Curricular Practical Training for Electrical Engineers
For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 292E. Analysis and Control of Markov Chains
Finite-state and countable-state Markov chains. Controlled Markov chains and dynamic programming algorithms. Application to modeling and analysis of engineering systems. Prerequisites: EE263, EE178/278A.

3 units, not given this year

EE 292H. Engineering and Climate Change
The purpose of this seminar series is to help equip students and professionals with the tools to apply the engineering mindset to problems that stem from climate change, in order to consider and evaluate possible interventional, remedial and adaptive approaches. This course is not a crash course on climate change (established climate experts are better equipped for that), nor is it a crash course in policy, instead the course focuses on discovering and exploring climate problems that seem most likely to benefit from adding the engineering mindset as solutions are considered. In each weekly class, a guest speaker will deliver a brief introductory talk (20-30 minutes) in his/her area of expertise to set the framework in terms of climate, energy, resource, policy and public opinion, and then proceed to explore with the class some of
the problems that seem most amenable to engineering input. Reference material, made available as optional reading, will include quantitative and overv

1 unit, Aut (Field, L)

EE 292I. Insanely Great Products: How do they get built?
Great products emerge from a sometimes conflict-laden process of collaboration between different functions within companies. This seminar seeks to demystify this process via case-studies of successful products. Engineers and businesspeople will share their experiences in discussion with students. This year, the co-founder of Twitter will be one of our guests. Previous guests include: Apple, Intel, Facebook, and Genentech. To name a few. Students will have the opportunity to present product ideas to industry professionals (investors, developers, etc). Pre-requisites: None
1 unit, not given this year

EE 292J. Power Electronics
This power electronics overview course serves as a practical primer for specialists from other disciplines or an introduction for those wishing to investigate the field more deeply. The course covers a broad range of topics, including: power conversion circuit modeling and analysis, passive and active devices, converter topologies, control theory, power magnetics, and numerous applications. A field trip to the SLAC National Accelerator Laboratory creates a number of specially convened courses that are unique to high energy physics. Prerequisites: EE 101B.
3 units, Win (Staff)

EE 293A. Fundamentals of Energy Processes
(Same as ENERGY 293A) For seniors and graduate students. Thermodynamics, heat engines, thermoelectrics, biomass. Recommended: MATH 41, 43; PHYSICS 41, 43, 45 3-4 units, Aut (Brandt, A; Horne, K; Krevor, S)

EE 293B. Fundamentals of Energy Processes
(Same as ENERGY 293B) For seniors and graduate students. Fuel cells. Production of hydrogen: electrolytic, chemical, thermolysis, photolytic. Hydrogen storage: hydrides. Photoelectric converters; photo-thermovoltaic converters. Wind turbines. Recommended: EE 293A; MATH 41; PHYSICS 41, 43, 45 3 units, Win (Brandt, A; Gerritsen, M; Wilcox, J)

EE 300. Master’s Thesis and Thesis Research
Independent work under the direction of a department faculty. Written thesis required for final letter grade. The continuing grade ’N’ is given in quarters prior to thesis submission. See 390 if a letter grade is not appropriate.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 303. Autonomous Implantable Systems
How implantable systems can revolutionize health care in the coming decades. Potential applications include implantable sensors and monitoring devices for preventive and post-surgery monitoring; drug delivery systems that can be placed closer to cancer cells and are able to administer dosage automatically; medical robots that perform surgery inside patients with greater precision and less pain; and neural implants for brain-machine interface. Focus is on the analysis and design of remotely-powered, miniature implantable devices for those applications. Prerequisites: EE114/214A.
3 units, not given this year

EE 309. Semiconductor Memory Devices and Technology
Focus is on the device physics and operation principles of nonvolatile memory devices. Topics identified by the International Technology Roadmap for Semiconductors, emerging research devices sec-tion; see http://www.irts.net. Non-silicon-based devices such as carbon nanotubes, graphene, semiconductor nanowires, and molecular devices; and non-FET based devices such as single electron transistors (SET) and resonant tunneling diodes (RTD). How technology is translated into logic and memory devices are covered. Prerequisite: undergraduate device physics, EE 222, EE 216. Recommended: EE 212, EE 223, EE 228, EE 311, and EE 316 Offered Alternate years.
3 units, Spr (Wong, P)

EE 310. Integrated Circuits Technology and Design Seminar
State-of-the-art micro- and nanoelectronics, nanotechnology, advanced materials, and neuroscience for device applications. Prerequisites: EE216, EE316.
1 unit, Win (Nishi, H)

EE 311. Advanced Integrated Circuits Technology
What are the practical and fundamental limits to the evolution of the technology of modern MOS devices and interconnects? How are modern devices and circuits fabricated and what future changes are likely? Advanced techniques and models of MOS devices and back-end (interconnect and contact) processing. What are future device structures and materials to maintain progress in integrated electronic MOS (front-end and back-end) processes? Prerequisites: EE212, EE216 or equivalent.
3 units, not given this year

EE 312. Micromachined Sensors and Actuators
Solid-state sensors and actuators, focusing on the use of integrated circuit fabrication technology for their realization. Categories of sensors and actuators include biological, chemical, mechanical, optical, and thermal. Mechanicals of transduction, fabrication techniques, and relative merits of different technologies. Micromachining techniques for monolithic integration of active circuits with sensors or actuators. Directions for future research. Prerequisite: 212 or equivalent.
3 units, Win (Kovacs, G)

EE 313. Digital MOS Integrated Circuits
Looks a little more deeply at how digital circuits operate, what makes a gate digital, and how to cheat to improve performance or power. To aid this analysis we design two very different models for MOS transistors and choose the simplest one that can explain our circuit’s operation, using both hand and computer analysis. We explore static, dynamic, pulse-mode, and current mode logic, and show how they are used in SRAM design. Topics include sizing for min delay, noise and noise margins, power dissipation. The class uses memory design (SRAM) as a motivating example. DRAM and EEPROM design issues are also covered. Prerequisites: 101B, 108A. Recommended: 271.
3 units, Win (Patil, D)

EE 314. RF Integrated Circuit Design
Design of RF integrated circuits for communications systems, primarily in CMOS. Topics: the design of matching networks and low-noise amplifiers at RF, mixers, modulators, and demodulators; review of classical control concepts necessary for oscillator design including PLLs and PLL-based frequency synthesizers. Design of low phase noise oscillators. Design of high-efficiency (e.g., class E, F) RF power amplifiers, coupling networks. Behavior and modeling of passive and active components at RF. Narrowband and broadband amplifiers; noise and distortion measures and mitigation methods. Overview of transceiver architectures. Prerequisite: EE214B.
3 units, Spr (Rathegh, H)

EE 315A. VLSI Signal Conditioning Circuits
Design and analysis of integrated circuits for active filters, precision gain stages, and sensor interfaces in CMOS VLSI technology. Operational transconductance amplifiers; sampled-data and continuous-time analog filters. Analysis of noise and amplifier imperfections; compensation techniques such as correlated double sampling. Sensor interfaces for micro-electromechanical and biomedical applications. Layout techniques for analog integrated circuits. Prerequisites: EE214B.
3 units, Spr (Staff)

EE 315B. VLSI Data Conversion Circuits
Architectural and circuit level design and analysis of integrated analog-to-digital and digital-to-analog interfaces in CMOS VLSI technology. Fundamental circuit elements such as sampling circuits and voltage comparators. Circuits and architectures for Nyquist-rate and oversampling analog-to-digital and digital-to-analog conversion; digital decimation and interpolation filters. Examples of calibration and digital enhancement techniques. Prerequisite: EE 214B. Recommended: EE 315A.
3 units, Aut (Vleugels, K)

EE 316. Advanced VLSI Devices
In modern VLSI technologies, device electrical characteristics are sensitive to structural details and therefore to fabrication techniques. How are advanced VLSI devices designed and what future changes are likely? What are the implications for device electrical performance caused by fabrication techniques? Physical models for nanometer scale structures, control of electrical characteristics (threshold voltage, short channel effects, ballistic
transport) in small structures, and alternative device structures for VLSI. Prerequisites: 212 and 216, or equivalent.

3 units, Win (Wong, P)

EE 317. Micropatterning for Integrated Circuits
The fundamentals of generating submicron patterns in integrated circuit manufacturing. Technologies include the formation of submicron images of ultraviolet light, the resulting exposure of polymeric resists, the subsequent development of resist patterns and their transfer into functional circuit material patterns through plasma etching and other techniques. Use of phase-shifting masks and other wavefront-engineering approaches. Hands-on computer simulations. Prerequisites: 141 or equivalent, 212 or equivalent.

3 units, not given this year

EE 319. Advanced Nanoelectronic Devices and Technology
Recent advances in materials science, device physics and structures, and processing technology, to extend VLSI device scaling towards atomic and quantum-mechanical physics boundaries. Topics include: mobility-enhancement techniques; nanomaterial structures including tube, wire, beam, and crystal; conducting polymer; 3D FET; gate-wraparound FET; nonvolatile memory phenomena and devices; self-assembly; flash annealing; plasma doping; and nano patterning. Prerequisites: 216, 316.

3 units, not given this year

EE 320. Nanoelectronics
Focus is on the device physics and operation principles of nanoelectronic devices. Topics identified by the International Technology Roadmap for Semiconductors, emerging research devices section; see http://www.itrs.net. Non-silicon-based devices such as carbon nanotubes, graphene, semiconductor nanowires, and molecular devices; and non-FET based devices such as single electron transistors (SET) and resonant tunneling diodes (RTD). Logic and memory devices. Offered alternative years.

Prerequisites: undergraduate device physics, EE 222, 216.
Recommended: EE 223, 228, or 316.

3 units, alternate years, not given this year

EE 322. Molecular Electronics and Photonics
Physics of charge and energy transfer in molecular systems and connection with traditional mesoscopic transport theories. Analysis of molecular organic light-emitting diodes, photovoltaic cells and transistors. Technology and applications of molecular semiconductors. Prerequisite: 228 or equivalent.

3 units, not given this year

EE 327. Properties of Semiconductor Materials
Modern semiconductor devices and integrated circuits are based on unique energy band, carrier transport, and optical properties of semiconductor materials. How to choose these properties for operation of semiconductor devices. Emphasis is on quantum mechanical foundations of the properties of solids, energy bandgap engineering, semi-classical transport theory, semiconductor statistics, carrier scattering, electro-magneto transport effects, high field ballistic transport, Boltzmann transport equation, quantum mechanical transitions, optical absorption, and radiative and non-radiative recombination that are the foundations of modern transistors and optoelectronic devices. Prerequisites: EE216 or equivalent.

3 units, not given this year

EE 328. Physics of Advanced Semiconductor Devices
Principles governing the operation of modern semiconductor devices. Assumptions and approximations commonly made in analyzing devices. Emphasis is on the application of semiconductor physics to the development of advanced semiconductor devices such as heterojunctions, H-J bipolar transistors, H-J FETs, nanostuctures, tunneling, single electron transistor and photonic devices. Use of SENTARUS, a 2-D Poisson solver, for simulation of ultra-small devices. Examples related to state-of-the-art devices and current device research.

Prerequisite: 216. Recommended: 316.

3 units, Spr (Harris, J)

EE 329. The Electronic Structure of Surfaces and Interfaces
Physical concepts and phenomena for surface science techniques probing the electronic and chemical structure of surfaces, interfaces and nanomaterials. Microscopic and atomic models of microstructures; applications including semiconductor device technology, catalysis and energy. Physical processes of UV and X-ray photoemission spectroscopy. Auger electron spectroscopy, surface EXAFS, low energy electron diffraction, electron/photon stimulated ion desorption, scanning tunneling spectroscopy, ion scattering, energy loss spectroscopy and related imaging methods; and experimental aspects of these surface science techniques. Prerequisites: PHYSICS 70 and MATSCI 199/209, or consent of instructor.

3 units, not given this year

EE 331. Biophotonics: Light in Medicine and Biology
Current topics and trends in the use of light in medicine and for advanced microscopy. Course begins with a review of relevant optical principles (basic physics required). Key topics include: light-tissue interactions; sensing and spectroscopy; contrast-enhanced imaging; super-resolution and label-free microscopy; medical applications of light for diagnostics, in-vivo imaging, and therapy; nanophotonics and array technologies. Open to non-majors; programming experience (Matlab and/or C) required.

3 units, Win (Ellerbee, A)

EE 334. Micro and Nano Optical Device Design
Lecture and project course on design and analysis of optical devices with emphasis on opportunities and challenges created by scaling to the micrometer and nanometer ranges. The emphasis is on fundamentals, combined with some coverage of practical implementations. Prerequisite: 242 or equivalent.

3 units, not given this year

EE 336. Nanophotonics

3 units, Aut (Brongersma, M; Fan, S)

EE 340. Optical micro- and nano-cavities
Optical micro- and nano-cavities and their device applications. Types of optical cavities (microdisks, microspheres, photonic crystal cavities, plasmonic cavities), and their electromagnetic properties, design, and fabrication techniques. Cavity quantum electrodynamics; strong and weak-coupling regime, Purcell factor, spontaneous emission control. Applications of optical cavities, including low-threshold lasers, optical modulators, quantum information processing devices, and bio-chemical sensors.

3 units, Spr (Vuckovic, J)

EE 344. High Frequency Laboratory
Lecture/lab emphasizing lab. Techniques in the 1MHz-1GHz range useful in designing and measuring oscillators, amplifiers, and mixers. High frequency measurement techniques including s-parameter measurements, amplifier noise figure, and oscillator phase noise. Guest speakers from Lucent and Hewlett-Packard. Enrollment limited to 25. Prerequisites: transmission lines, Smith charts. Recommended: 314.

3 units, Aut (Scherer, D; Cox, D)

EE 345. Optical Fiber Communication Laboratory
Experimental techniques in optical fiber communications and networking. Experimental investigation of key optical communications components including fibers, lasers, modulators, photodiodes, optical amplifiers, and WDM multiplexers and demultiplexers. Fundamental optical communications systems techniques: eye diagrams, BER measurements, experimental evaluation of nonlinearity. Prerequisites: Undergraduate physics and optics.

3 units, alternate years, not given this year

EE 346. Introduction to Nonlinear Optics
Wave propagation in anisotropic, nonlinear, and time-varying media. Microscopic and macroscopic description of electric dipole susceptibilities. Free and forced waves-phasematching; slowly varying envelope approximation-dispersion, diffraction, space-time analogy; harmonic generation; frequency conversion; parametric amplification and oscillation; electro-optic light modulation; nonlinear processes in optical fibers. Prerequisites: 141, 242.

3 units, not given this year

EE 347. Optical Methods in Engineering Science
Design and understanding of modern optical systems. Topics:
geometrical optics; aberration theory; systems layout; applications such as microscopes, telescopes, optical processors. Computer ray tracing program as a design tool. Prerequisite: 268 or 366, or equivalent.

3 units, not given this year

EE 348. Advanced Optical Fiber Communications

3 units, Win (Kahn, J)

EE 349. Nano Optics and Grating Photonics
Coupled wave analysis of periodic structures, gratings structures for optical communications, wave-matter interactions with periodic media and photonic crystals, applications of periodic structures. Prerequisite: 268 or 366, or equivalent.

3 units, not given this year

EE 355. Imaging Radar and Applications
(Same as GEOPHYS 265) Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: surface deformation, polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisites: EE261. Recommended: EE254, EE278B, EE279. 3 units, not given this year

EE 356. Elementary Plasma Physics: Principles and Applications

3 units, not given this year

EE 359. Wireless Communications
This course will cover advanced topics in wireless communications for voice, data, and multimedia. Topics include: an overview of current and future wireless systems; wireless channel models including path loss, shadowing, and statistical multipath channel models; fundamental capacity limits of wireless channels; digital modulation and its performance in fading and intersymbol interference; techniques to combat fading including adaptive modulation, diversity, and multiple antenna systems (MIMO); techniques to combat intersymbol interference including equalization, multicarrier modulation (OFDM), and spread spectrum; and an overview of wireless network design. Prerequisite: 279 or instructor consent.

3-4 units, Aut (Goldsmith, A)

EE 360. Multiuser Wireless Networks and Systems
Design, analysis, and fundamental limits. Topics include multiuser channel capacity, multiple and random access techniques, interference mitigation, cellular system design, ad hoc wireless network design, sensor networks, green wireless networks, cognitive radios, and cross-layer design. Prerequisite: EE 359.

3 units, Win (Goldsmith, A)

EE 363. Linear Dynamic Systems
Continuation of 263. Optimal control and dynamic programming; linear quadratic regulator. Lyapunov theory and methods. Linear estimation and the Kalman filter. Perron-Frobenius theory. Examples and applications from digital filters, circuits, signal processing, and control systems. Prerequisites: 263 or equivalent; basic probability.

3 units, not given this year

EE 364A. Convex Optimization I
(Same as CME 364A) Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, EE178/278A.

3 units, Win (Boyd, S)

EE 364B. Convex Optimization II
(Same as CME 364B) Continuation of 364. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Substantial project. Prerequisite: 364A.

3 units, not given this year

EE 366. Introduction to Fourier Optics
Applications of Fourier theory to the analysis and synthesis of optical imaging and optical data processing systems. Propagation and diffraction of light, Fresnel and Fraunhofer approximations, Fourier transforming properties of lenses, image formation with coherent and incoherent light, transform functions of imaging systems, optical data processing, and holography. Prerequisite: familiarity with Fourier analysis. Recommended: 261.

3 units, not given this year

EE 368. Digital Image Processing
Image sampling and quantization color, point operations, segmentation, morphological image processing, linear image filtering and correlation, image transforms, eigenimages, multiresolution image processing, wavelets, noise reduction and restoration, feature extraction and recognition tasks, image registration. Emphasis is on the general principles of image processing. Students write and investigate image processing algorithms in Matlab. Term project. Prerequisites: EE261, EE278B.

3 units, Spr (Girod, B)

EE 369A. Medical Imaging Systems I
Imaging internal structures within the body using high-energy radiation studied from a systems viewpoint. Modalities covered: x-ray, computed tomography, and nuclear medicine. Analysis of existing and proposed systems in terms of resolution, frequency response, detection sensitivity, noise, and potential for improved diagnosis. Prerequisite: 261.

3 units, not given this year

EE 369B. Medical Imaging Systems II
Imaging internal structures within the body using non-ionizing radiation studied from a systems viewpoint. Modalities include ultrasound and magnetic resonance. Analysis of ultrasonic systems including diffraction and noise. Analysis of magnetic resonance systems including physics, Fourier properties of image formation, and noise. Prerequisite: 261.

3 units, Spr (Nishimura, D)

EE 369C. Medical Image Reconstruction
Reconstruction problems from medical imaging, including magnetic resonance imaging (MRI), computed tomography (CT), and positron emission tomography (PET). Problems include reconstruction from non-uniform frequency domain data, automatic deblurring, phase unwrapping, reconstruction from incomplete data, and reconstruction from projections. Prerequisite: 369B.

3 units, Aut (Pauly, J)

EE 371. Advanced VLSI Circuit Design
Design of high-performance digital systems, the things that cause them to fail, and how to avoid these problems. Topics will focus
COURSES OF INSTRUCTION

on current issues including: wiring resistance and how to deal with it, power and Gnd noise and regulation, clock (or asynchronous) system design and how to minimize clocking overhead, high-speed I/O design, energy minimization including leakage control, and structuring your Verilog code to result in high-performance, low energy systems. Extensive use of modern CAD tools.

Prerequisites: 271 and 313, or consent of instructor.

3 units, alternate years, not given this year

EE 373A. Adaptive Signal Processing

3 units, Win (Widrow, B)

EE 374. Inference in Graphical Models
Probabilistic models with sparse graphical structures, low-complexity inference algorithms, message passing and belief propagation. Generalized belief propagation, survey propagation. Learning graphical models, structural learning. Applications/examples include: Gaussian models with sparse inverse covariance; hidden Markov models (Viterbi and BCJR algorithms); Kalman filter; computer vision (segmentation, tracking, etc.); constraint satisfaction problems; machine learning (clustering, classification); communications. Prerequisite: EE178/EE278A, STATS 116, or CS 228. Recommended: 376A or STATS 217/218.

3 units, not given this year

EE 376A. Information Theory
(Same as STATS 376A) The fundamental ideas of information theory. Entropy and intrinsic randomness. Data compression to the entropy limit. Huffman coding. Arithmetic coding. Channel capacity, the communication limit. Gaussian channels. Kolmogorov complexity. Asymptotic equipartition property. Information theory and Kelly gambling. Applications to communication and data compression. Prerequisite: EE178/278A or STATS 116, or equivalent. 3 units, Win (Weissman, D)

EE 376B. Information Theory

3 units, Spr (Cover, T)

EE 378A. Statistical Signal Processing

3 units, not given this year

EE 378B. Inference, Estimation, and Information Processing
Techniques and models for signal and data information processing, with emphasis on incomplete data, non-ordered index sets and robust low-complexity methods. Linear models; regularization and shrinkage; dimensionality reduction; streaming algorithms; sketching; clustering, search in high dimension; low-rank models; principal component analysis. Applications include: positioning from pairwise distances; distributed sensing; measurement/traffic monitoring in networks; finding communities/cluster in networks; recommendation systems; inverse problems. Prerequisites: EE278B and EE263 or equivalent. Recommended but not required: EE378A.

3 units, not given this year

EE 379. Digital Communication
Modulation methods and bandwidth requirements, baseband and passband system analysis, minimum-probability-of-error and maximum-likelihood detection, error-probability analysis, intersymbol interference, maximum-likelihood sequence detection, equalization methods, orthogonal and frequency-division multiplexing. Prerequisite: EE102B, EE278B

3 units, NEXTYEAR

EE 380. Colloquium on Computer Systems
Live presentations of current research in the design, implementation, analysis, and applications of computer systems. Topics range over a wide range and are different every quarter. Topics may include fundamental science, mathematics, cryptography, device physical circuits, computer architecture, programming, programming languages, optimization, applications, simulation, graphics, social implications, venture capital, patent and copyright law, networks, computer security, and other topics of related to computer systems.

1 unit, Aut (Allison, D; Freeman, J), Win (Allison, D; Freeman, J), Spr (Allison, D; Freeman, J)

EE 382A. Advanced Processor Architecture
Provides in-depth coverage of fundamental architecture and implementation techniques for modern processor chips. Course covers topics such as advanced pipelining, superscalar execution, out-of-order processing, speculative execution, VLIW, data parallelism, multithreading, graphics processors, and multi-core chips. The students will become familiar with complex trade-offs between performance-power-complexity and the common techniques for addressing the challenges in historical and modern processors. A central part of EE382A is a group project on an open research question. Prerequisites: EE108B, CS140. Recommended: EE282, CS315A

3 units, not given this year

EE 382C. Interconnection Networks
The architecture and design of interconnection networks used to communicate from processor to memory, from processor to processor, and in swarms of other nodes. Topics include network topology, routing methods, flow control, router microarchitecture, and performance analysis. Enrollment limited to 30. Prerequisite: 282.

3 units, alternate years, not given this year

EE 384A. Internet Routing Protocols and Standards
Local area networks addressing and switching; IEEE 802.1 bridging protocols (transparent bridging, virtual LANs). Internet routing protocols: interior gateways (BGP); multicast routing; multiprotocol label switching (MPLS). Routing in mobile networks: Mobile IP, Mobile Ad Hoc Networks (MANET), Wireless Mesh Networks. Prerequisite: 284 or CS 144.

3 units, alternate years, not given this year

EE 384B. Multimedia Communication over the Internet
Applications and requirements. Traffic generation and characterization: voice encoding (G.711, G.729, G.723); image and video compression (JPEG, H.261, MPEG-2, H.263, H.264); TCP data traffic. Quality impairments and measures. Networking technologies: LAN technologies; home broadband services (ADSL, cable modems, PONs); and wireless LANs (802.11). Network protocols for multimedia applications: resource reservation (ST2+, RSVP); differentiated services (DiffServ); and real-time transport protocol (RTP, RTCP). Audio-video-data conferencing standards: Internet architecture (SDP, SAP, SIP); ITU recommendations (H.320, H.323 and T.120); and real-time streaming protocol (RTSP). Emphasis will be placed on advances in network infrastructure and new services (VoIP, IPTV, Peer-to-peer communications, etc.) Prerequisite: 284 or CS 144.
Recommended: 384A.
3 units, Spr (Tobagi, F)

EE 384C. Wireless Local and Wide Area Networks
Characteristics of wireless communication: multipath, noise, and interference. Communications techniques: spread-spectrum, CDMA, and OFDM. IEEE 802.11 physical layer specifications: FHSS, DSSS, IEEE 802.11b (CCX), and 802.11a/g (OFDM). IEEE 802.11 media access control protocols: carrier sense multiple access with collision avoidance (CSMA/CA), point coordination function (PCF), IEEE802.11e for differentiated services. IEEE 802.11 network architecture: ad hoc and infrastructure modes, access point functionality. Management functions: synchronization, power management and association. IEEE 802.11s Mesh Networks. IEEE 802.16 (WiMAX) network architecture and protocols; Physical Layer (OFDMA) and Media Access Control Layer. Current research papers in the open literature. Prerequisite: 284 or CS 244A.
3 units, alternate years, not given this year

EE 384E. Networked Wireless Systems
(Same as CS 244E) Design and implementation of wireless networks and mobile systems. The course will commence with a short retrospective of wireless communication and initially touch on some of the fundamental physical layer properties of various wireless communication technologies. The focus will then shift to design of media access control and routing layers for various wireless systems. The course will also examine adaptations necessary at transport and higher layers to cope with node mobility and error-prone nature of the wireless medium. Finally, it will conclude with a brief overview of other related issues including emerging wireless/mobile applications. Prerequisites: EE 284.
3 units, Win (Katti, S)

EE 384M. Network Science
Modern large-scale networks consist of (i) Information Networks, such as the Web and Social Networks, and (ii) Data Centers, which are networks interconnecting computing and storage elements for servicing the users of an Information Network. This course is concerned with the mathematical models and the algorithms used in Information Networks and Data Centers. Prerequisite: EE178/278A or CS365.
3 units, not given this year

EE 384S. Performance Engineering of Computer Systems & Networks
Modeling and control methodologies for high-performance network engineering, including: Markov chains and stochastic modeling, queueing networks and congestion management, dynamic programming and task/processor scheduling, networking, dimensioning, optimization, and simulation methods. Applications for design of high-performance architectures for wireline/wireless networks and the Internet, including: traffic modeling, admission and congestion control, quality of service support, power control in wireless networks, packet scheduling in switches, video streaming over wireless links, and virus/worm propagation dynamics and countermeasures. Enrollment limited to 30. Prerequisites: basic networking technologies and probability.
3 units, not given this year

EE 384X. Packet Switch Architectures
The theory and practice of designing packet switches, such as Internet routers, and Ethernet switches. Introduction: evolution of switches and routers. Output queued switches: motivation and methods for providing bandwidth and delay guarantees. Switching: output queuing, parallelism in switches, distributed shared memory switches, input-queued switches, combined input-output queued switches, how to make fast packet buffers, buffered crossbar switches. Scheduling input queued crossbars: connections with bipartite graph matching, algorithms for 100% throughput, practical algorithms and heuristics. Looking forward: Architectures and switches for data center networks. Prerequisites: EE284 or CS 244A. Recommended: EE 178/278A or EE 278B or STAT 116.
3 units, Spr (Prabhakar, B; McKeown, N)

EE 385A. Robust and Testable Systems Seminar
Student/faculty discussions of research problems in the design of reliable digital systems. Areas: fault-tolerant systems, design for testability, production testing, and system reliability. Emphasis is on student presentations and Ph.D. thesis research. May be repeated for credit. Prerequisite: consent of instructor.
1-4 units, Aut (McCluskey, E; Mitra, S), Win (McCluskey, E; Mitra, S), Spr (McCluskey, E; Mitra, S)

EE 386. Robust System Design
Causes of system malfunctions; techniques for building robust systems that avoid or are resilient to such malfunctions through built-in error detection and correction, prediction, self-test, self-recovery, and self-repair; case studies and new research problems. Prerequisites: 108A,B, 282.
3 units, alternate years, not given this year

EE 387. Algebraic Error Control Codes
Theory and implementation of algebraic codes for detection and correction of random and burst errors. Introduction to finite fields. Linear block codes, cyclic codes, Hamming codes, BCH codes, Reed-Solomon codes. Decoding algorithms for BCH and Reed-Solomon codes. Prerequisites: elementary probability, linear algebra.
3 units, not given this year

EE 388. Modern Coding Theory
Tools for analysis and optimization of iterative coding systems. LDPC, turbo and, RA codes. Optimized ensembles, message passing algorithms, density evolution, and analytic techniques. Prerequisite: 376A.
3 units, Spr (Montanari, A)

EE 390. Special Studies or Projects in Electrical Engineering
Independent work under the direction of a faculty member. Individual or team activities may involve lab experimentation, design of devices or systems, or directed reading.
1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S), Summer (Staff)

EE 391. Special Studies and Reports in Electrical Engineering
Independent work under the direction of a faculty member; written report or written examination required. Letter grade given on the basis of the report; if not appropriate, student should enroll in 390.
1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S), Summer (Staff)

EE 392F. Logic Synthesis of VLSI Circuits
Similar to former 318. Solving logic design problems with CAD tools for VLSI circuits. Exact and heuristic algorithms for logic synthesis. Representation and optimization of combinational logic functions (encoding problems, binary decision diagrams) and of multiple-level networks (algebraic and Boolean methods, don’t-care set computation, timing verification, and optimization); and modeling and optimization of sequential functions and networks (retooling), semicustom libraries, and library binding. Prerequisites: familiarity with logic design, algorithm development, and programming.
3 units, not given this year

EE 392J. Digital Video Processing
Spatio-temporal sampling, motion analysis, parametric motion models, motion-compensated filtering, and video processing operations including noise reduction, restoration, supersolution, deinterlacing and video sampling structure conversion, and compression (frame-based and object-based methods). Video segmentation and layered video representations, video streaming, compressed-domain video processing, and digital TV. Prerequisite: 368.
3 units, not given this year

EE 392N. INTELLIGENT ENERGY SYSTEMS
The key systems engineering steps for design of automated systems in application to of existing and future intelligent energy systems. Existing design approaches and practices for the energy systems. Every second lecture of the course will be a guest lecture discussing the communication system design for a certain type of energy system. They will alternate with guest lectures discussing the on-line analytical functions.
1 unit, not given this year

EE 392T. Seminar in Chip Test and Debug
Seminars by industry professionals in digital IC manufacturing test and silicon debug. Topics include yield and binspilt modeling, defect types and detection, debug hardware, physical analysis, and design for test/debug circuits. Case studies of silicon failures. Prerequisite: basic digital IC design (271 or 371).
EE 392V. Signal Processing in VoIP Systems

3 units, not given this year

EE 395. Electrical Engineering Instruction: Practice Teaching
Open to advanced EE graduate students who plan to make teaching their career. Students conduct a section of an established course taught in parallel by an experienced instructor. Enrollment limited. 1-15 units, Aut (Nishimura, D), Win (Staff), Spr (Nishimura, D)

EE 398A. Image and Video Compression
Replaces EE398. The principles of source coding for the efficient storage and transmission of still and moving images. Entropy and lossless coding techniques. Run-length coding and fax compression. Arithmetic coding. Rate-distortion limits and quantization. Lossless and lossy predictive coding. Transform coding. JPEG. Subband coding, wavelets, JPEG2000. Motion-compensated coding, MPEG. Students investigate image and video compression algorithms in Matlab or C. Term project. Prerequisites: EE261, EE278B.

3 units, Win (Girod, R)

EE 398B. Advanced Topics in Image, Video, and Multimedia Systems
Replaces previous EE398B Image Communication II. Lectures on selected advanced topics, given by instructor, staff, and invited speakers from industry and academia. Emphasis on systems aspects. Topics covered depend on students' interest. Relevant topics include, but are not limited to: videoconferencing, telepresence, digital TV broadcasting, HDTV, 3-d television, digital cinema, audio and video streaming over the Internet, IPTV, peer-to-peer media delivery, mobile media delivery, mobile augmented reality, content-based retrieval, visual search, image and video databases. Students implement and investigate advanced algorithms for image, video, and multimedia signal processing and communication. Term project. 3 units, not given this year

EE 400. Thesis and Dissertation Research
Limited to candidates for the degree of Engineer or Ph.D. 1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S), Sum (Staff)

EE 402A. Topics in International Technology Management
Theme for Autumn 2011 is Mobile Internet Technologies and Businesses in Asia. Recent innovations in location based services, mobile online games, payment solutions, etc., and challenges such as privacy, business models, and differing regulatory regimes in major Asian economies. Implications for US firms and researchers. 1 unit, Aut (Dashar, R)

EE 402S. Topics in International Advanced Technology Research
Theme for Spring 2011 is Recent Approaches to Chip-Level Integration. Survey of advanced research into 3D integration, CMOS on encapsulated MEMS, III-V on Si, multi-processor architectures, etc. Distinguished speakers from industry and universities. May be repeated for credit. Recommended: basic electronics.

1 unit, not given this year

EE 402T. Entrepreneurship in Asian High Tech Industries
Distinctive patterns and challenges of entrepreneurship in Asia; update of business and technology issues in the creation and growth of start-up companies in major Asian economies. Distinguished speakers from industry, government, and academia.

1 unit, Spr (Dashar, R)

EE 410. Integrated Circuit Fabrication Laboratory
Fabrication, simulation, and testing of a submicron CMOS process. Practical aspects of IC fabrication including silicon wafer cleaning, photolithography, etching, oxidation, diffusion, ion implantation, chemical vapor deposition, physical sputtering, and electrical testing. Students also simulate the CMOS process using process simulator TSSUPREM4 of the structures and electrical parameters that should result from the process flow. Taught in the Stanford Nanofabrication Facility (SNF). Preference to students pursuing doctoral research program requiring SNF facilities. Enrollment limited to 20. Prerequisites: 212, 216, consent of instructor.

3-4 units, Win (Saraswat, K)

EE 412. Advanced Nanofabrication Laboratory
Experimental projects and seminars on integrated circuit fabrication using epitaxial, oxidation, diffusion, evaporation, sputtering, and photolithographic processes with emphasis on techniques for achieving advanced device performance. May be repeated for additional credit. Prerequisites: ENGR341 or EE410 or consent of instructor.

3 units, Aut (Howe, R), Spr (Solgaard, O)

EE 414. RF Transceiver Design Laboratory
Students design, build, and test GHz transceivers using microstrip construction techniques and discrete components. The design, construction, and experimental characterization of representative transceiver building blocks: low noise amplifiers (LNAs), diode ring mixers, PLL-based frequency synthesizers, voltage-controlled oscillators (VCOs), power amplifiers (PAs), and microstrip filters and patch antennas. The characteristics of passive microstrip components (including interconnect). Emphasis is on a quantitative reconstruction of theoretical predictions and extensive experimental measurements performed with spectrum and network analyzers, time-domain reflectometers (TDRs), noise figure meter and phase noise analyzers. Prerequisites: EE 314, EE 344.

3 units, not given this year

EE 418. Topics in Neuroengineering
Neuroscience and electrical engineering, focusing on principles and theory in modern neural prosthetic systems (brain-computer or brain-machine interfaces). Electrical properties of neurons; information encoding, neural measurement techniques and technology, processing electronics, information decoding and estimators, and statistical data analysis. Prerequisites: EE 214B, EE 278B.

3 units, not given this year

EE 469B. RF Pulse Design for Magnetic Resonance Imaging
Magnetic resonance imaging (MRI) and spectroscopy (MRS) based on the use of radio frequency pulses to manipulate magnetization. Analysis and design of major types of RF pulses in one and multiple dimensions, analysis and design of sequences of RF pulses for fast imaging, and use of RF pulses for the creation of image contrast in MRI. Prerequisite: 369B.

3 units, not given this year

EE 476. Network Information Theory
Network information theory deals with the fundamental limits on information flow in networks and the optimal coding schemes that achieve these limits. It aims to extend Shannon's point-to-point information theory and the Ford-Fulkerson max-flow min-cut theorem to networks with multiple sources and destinations. The course presents the basic results and tools in the field in a simple and unified manner. Topics covered include: multiple access channels, broadcast channels, interference channels, channels with state, distributed source coding, multiple description coding, network coding, relay channels, interactive communication, and noisy network coding. Prerequisites: EE376A.

3 units, not given this year

EE 477. Universal Schemes in Information Theory

3 units, Aut (Weissman, I)

EE 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
ENERGY RESOURCES ENGINEERING (ENERGY) COURSES

UNDERGRADUATE COURSES IN ENERGY RESOURCES ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ENERGY 24. Making Molehills out of Mountains: Energy and Development in Appalachia
Preparation for Alternative Spring Break trip to examine the past, present, and future role of energy in Appalachia. Positive and negative impacts of energy production; meetings with energy industry leaders, community groups, and policymakers. The larger role of energy development and energy issues in society. May be repeated for credit.

1 unit, not given this year

ENERGY 101. Energy and the Environment
(Same as EARTHSYS 101) Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, electricity, pollution. Recommended: MATH 21 or 42. GER:DB-EngrAppSci
3 units, Win (Durlofsky, L)

ENERGY 102. Renewable Energy Sources and Green Energy Processes
(Same as EARTHSYS 102) The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible; but the rate at which energy can be drawn from them with today’s technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences. Recommended: MATH 21 or 42. GER:DB-EngrAppSci
3 units, Spr (Gerritsen, M; Monroe, I)

ENERGY 104. Transition to sustainable energy systems
This course explores the transition to a sustainable energy system at large scales (national and global), and over long time periods (decades). Explores the drivers of global energy demand and the fundamentals of technologies that can meet this demand sustainably. Focuses on constraints affecting large-scale deployment of technologies, as well as inertial factors affecting this transition. Problems will involve modeling global energy demand, deployment rates for sustainable technologies, technological learning and economics of technical change. Recommended: ENERGY 101, 102.
3 units, Spr (Benson, S; Brandt, A)

ENERGY 120. Fundamentals of Petroleum Engineering
3 units, Aut (Horne, R; Wilcox, J)

ENERGY 120A. Flow Through Porous Media Laboratory
Laboratory measurements of permeability and porosity in rocks. Applications to subsurface fluid mechanics. Course is intended as an accompaniment to Energy 120.
1 unit, Aut (Al-Akkar, M; Horne, R)

ENERGY 121. Fundamentals of Multiphase Flow
(Same as ENERGY 221) Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy’s law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities. GER:DB-EngrAppSci
3 units, Win (Tchelepi, H)

ENERGY 125. Modeling and Simulation for Geoscientists and Engineers
Hands-on. Topics include deterministic and statistical modeling applied to problems such as flow in the subsurface, atmospheric pollution, biological populations, wave propagation, and crustal deformation. Student teams define and present a modeling problem.
3 units, alternate years, not given this year

ENERGY 130. Well Log Analysis I
For earth scientists and engineers. Interdisciplinary, providing a practical understanding of the interpretation of well logs. Lectures, problem sets using real field examples: methods for evaluating the presence of hydrocarbons in rock formations penetrated by exploratory and development drilling. The fundamentals of all types of logs, including electric and non-electric logs.
3 units, Aut (Lindblom, R)

ENERGY 141. Seismic Reservoir Characterization
(Same as GEOPHYS 241A, ENERGY 241) (Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257, ERE246, GP112
3-4 units, Spr (Mukerji, T)

ENERGY 146. Reservoir Characterization and Flow Modeling with Outcrop Data
(Same as GEES 246, ENERGY 246) Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.
3 units, Aut (Graham, S; Tchelepi, H; Mukerji, T; Boucher, A)

ENERGY 153. Carbon Capture and Sequestration
(Same as ENERGY 253) CO2 separation from syngas and flue gas for gasification and combustion processes. Transportation of CO2 in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO2. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.
3-4 units, Aut (Wilcox, J; Benson, S)

On-the-job practical training under the guidance of on-site supervisors. Required report detailing work activities, problems, assignments and key results. Prerequisite: written consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 160. Modeling Uncertainty in the Earth Sciences
(Same as ENERGY 260) Whether Earth Science modeling is performed on a local, regional or global scale, for scientific or engineering purposes, uncertainty is inherently present due to lack of data and lack of understanding of the underlying phenomena. This course highlights the various issues, techniques and practical modeling tools available for modeling uncertainty of complex 3D/4D Earth systems. The course focuses on a practical breath rather than theoretical depth. Topics covered are: the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatial-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate) are covered through literature study. Extensive
SOFTWARE USE WITH SGEMS AND PETREL. PROJECT HOMEWORK. PREREQUISITES: ALGEBRA (CME 104 OR EQUIVALENT), INTRODUCTORY STATISTICAL ANALYSIS AND GRAPHICAL DISPLAY OF DATA, COMMON DISTRIBUTION MODELS, SAMPLING, AND REGRESSION. THE VARIAGRAM AS A TOOL FOR MODELING SPATIAL CORRELATION; VARIAGRAM ESTIMATION AND MODELING; INTRODUCTION TO SPATIAL MAPPING AND PREDICTION WITH KRIGING: INTEGRATION OF REMOTE SENSING AND OTHER ANCILLARY INFORMATION USING CO-KRIGING MODELS; SPATIAL UNCERTAINTY; INTRODUCTION TO GEOSTATISTICAL SOFTWARE APPLIED TO LARGE ENVIRONMENTAL, CLIMATOLOGICAL, AND RESERVOIR ENGINEERING DATABASES; EMPHASIS IS ON PRACTICAL USE OF GEOSTATISTICAL TOOLS. GER: DB-NATSCI
3-4 UNITS, NOT GIVEN THIS YEAR

ENERGY 161. STATISTICAL METHODS FOR THE EARTH AND ENVIRONMENTAL SCIENCES: GEOSTATISTICS
(SAME AS EESS 161, EARTHSYS 161) STATISTICAL ANALYSIS AND EXPERIMENTAL DESIGN; METHODS FOR THE ACQUISITION AND ANALYSIS OF ENVIRONMENTAL DATA; SAMPLING AND REGRESSION. THE VARIAGRAM AS A TOOL FOR MODELING SPATIAL CORRELATION; VARIAGRAM ESTIMATION AND MODELING; INTEGRATION OF FIELD AND REMOTE SENSING DATA; SPATIAL UNCERTAINTY; GEOSTATISTICAL SOFTWARE APPLIED TO LARGE ENVIRONMENTAL, CLIMATOLOGICAL, AND RESERVOIR ENGINEERING DATABASES; EMPHASIS IS ON PRACTICAL USE OF GEOSTATISTICAL TOOLS. GER: DB-NATSCI
3-4 UNITS, NOT GIVEN THIS YEAR

ENERGY 167. ENGINEERING VALUATION AND APPRAISAL OF OIL AND GAS WELLS, FACILITIES, AND PROPERTIES
(SAME AS ENERGY 267) APPRAISAL OF DEVELOPMENT AND REMEDIAL WORK ON OIL AND GAS WELLS; APPRAISAL OF PRODUCING PROPERTIES; ESTIMATION OF PRODUCIVE CAPACITY, RESERVES, OPERATING COSTS, DEPRECIATION, AND PROFITABILITY; VALUE OF FUTURE PROFITS, TAXATION, FAIR MARKET VALUE; ORIGINAL OR GUIDED RESEARCH PROBLEMS ON ECONOMIC TOPICS WITH REPORT. PREREQUISITE: CONSENT OF INSTRUCTOR. GER:DB-ENGRAPPSCI
3 UNITS, WIN (KOURT, W; PANDE, K)

ENERGY 175. WELL TEST ANALYSIS
LECTURES, PROBLEMS. APPLICATION OF SOLUTIONS OF UNSTEADY FLOW IN POROUS MEDIA TO TRANSIENT PRESSURE ANALYSIS OF OIL, GAS, WATER, AND GEOTHERMAL RESERVOIRS. PRESSURE BUILDUP ANALYSIS AND DRAWDOWN. DESIGN OF WELL TESTS. COMPUTER-AIDED INTERPRETATION. 3 UNITS, SPR (HORNE, R)

ENERGY 180. OIL AND GAS PRODUCTION ENGINEERING
(SAME AS ENERGY 280) DESIGN AND ANALYSIS OF PRODUCTION SYSTEMS FOR OIL AND GAS RESERVOIRS. TOPICS: WELL COMPLETION, SINGLE-PHASE AND MULTI-PHASE FLOW IN WELLS AND GATHERING SYSTEMS, ARTIFICIAL LIFT AND FIELD PROCESSING, WELL STIMULATION, INFLOW PERFORMANCE. PREREQUISITE: 120. GER:DB-ENGRAPPSCI
3 UNITS, NOT GIVEN THIS YEAR

ENERGY 191. OPTIMIZATION OF ENERGY SYSTEMS
(SAME AS ENERGY 291) INTRODUCTORY MATHEMATICAL PROGRAMMING AND OPTIMIZATION USING EXAMPLES FROM ENERGY INDUSTRIES. EMPHASIS ON PROBLEM FORMULATION AND SOLVING, SECONDARY COVERAGE OF ALGORITHMS. PROBLEM TOPICS INCLUDE OPTIMIZATION OF ENERGY INVESTMENT, PRODUCTION, AND TRANSPORTATION; UNCERTAIN AND IMMERTENT ENERGY RESOURCES; ENERGY STORAGE; EFFICIENT ENERGY PRODUCTION AND CONVERSION. METHODS INCLUDE LINEAR AND NONLINEAR OPTIMIZATION AS WELL AS MULTI-OBJECTIVE AND GOAL PROGRAMMING. TOOLS: MICROSOFT EXCEL AND AMPL, MATHEMATICAL PROGRAMMING LANGUAGE. PREREQUISITES: MATH 41, MATH 51, OR CONSENT OF INSTRUCTOR. PROGRAMMING EXPERIENCE HELPFUL (E.G., C/106A-B).
3 UNITS, WIN (BRANDT, A)

ENERGY 192. UNDERGRADUATE TEACHING EXPERIENCE
LEADING FIELD TRIPS, PREPARING LECTURE NOTES, QUIZZES UNDER SUPERVISION OF THE INSTRUCTOR. MAY BE REPEATED FOR CREDIT.
1-3 UNITS, AUT (STAFF), WIN (STAFF), SPR (STAFF), SUM (STAFF)

ENERGY 193. UNDERGRADUATE RESEARCH PROBLEMS
ORIGINAL AND GUIDED RESEARCH PROBLEMS WITH COMPREHENSIVE REPORT. MAY BE REPEATED FOR CREDIT.
1-3 UNITS, AUT (STAFF), WIN (STAFF), SPR (STAFF), SUM (STAFF)

ENERGY 194. SPECIAL TOPICS IN ENERGY AND MINERAL RESOURCES
MAY BE REPEATED FOR CREDIT.
1-3 UNITS, AUT (STAFF), WIN (STAFF), SPR (STAFF), SUM (STAFF)

ENERGY 199. SENIOR PROJECT AND SEMINAR IN ENERGY RESOURCES
INDIVIDUAL OR GROUP CAPSTONE PROJECT IN ENERGY RESOURCES ENGINEERING. EMPHASIS IS ON REPORT PREPARATION. MAY BE REPEATED FOR CREDIT.
1-4 UNITS, SPR (KOVSCEK, A; HORNE, R; SANDLER, J)

GRADUATE COURSES IN ENERGY RESOURCES ENGINEERING

ENERGY 201. LABORATORY MEASUREMENT OF RESERVOIR ROCK PROPERTIES
(SAME AS EESS 201) ADVANCED PROGRAMMING METHODOLOGIES FOR SOLVING COMPLEX PROBLEMS USING ALGORITHMS WITH PERVERSIVE APPLICATION ACROSS DISCIPLINES. OVERVIEW OF COMPUTER SYSTEMS FROM A PROGRAMMING PERSPECTIVE INCLUDING PROCESSOR ARCHITECTURES, MEMORY HIERARCHIES, MACHINE ARITHMETIC, PERFORMANCE TUNING TECHNIQUES. ALGORITHMS INCLUDE ITERATIVE, DIRECT LINEAR SOLVERS, FFT, AND DIVIDE AND CONQUER STRATEGIES FOR N-BODY PROBLEMS. SOFTWARE DEVELOPMENT; OTHER PRACTICAL UNIX TOOLS INCLUDING SHELL SCRIPTING, VIM/EMACS, GCC, MAKE, GDB, GPROF, VERSION CONTROL SYSTEMS AND LATEX. PREREQUISITES: CME 200/ME 300A, CME 211, AND CS 106X OR EQUIVALENT LEVEL OF PROGRAMMING IN C/C++.
3 UNITS, WIN (HENDERSON, N)

ENERGY 221. FUNDAMENTALS OF MULTIPHASE FLOW
(SAME AS ENERGY 121) MULTIPHASE FLOW IN POROUS MEDIA. WETTABILITY, CAPILLARY PRESSURE, INHIBITION AND DRAINAGE, LEVERETT J-FUNCTION, TRANSITION ZONE, VERTICAL EQUILIBRIUM. RELATIVE PERMEABILITIES, DURCY'S LAW FOR MULTIPHASE FLOW, FRACTIONAL FLOW EQUATION, EFFECTS OF GRAVITY, BUCKLEY-LEVERETT THEORETICAL RECOVERY PREDICTIONS, VOLUMETRIC LINEAR SCALES, BNB AND RUSELL ELASTICITY DETERMINATION OF RELATIVE PERMEABILITY, FRONTAL ADVANCE EQUATION, BUCKLEY-LEVERETT EQUATION AS A FRACTAL ADVANCE SOLUTION, TRACERS IN MULTIPHASE FLOW, ADSORPTION, THREE-PHASE RELATIVE PERMEABILITIES.
3 UNITS, WIN (TCHELEPI, H)

ENERGY 222. ADVANCED RESERVOIR ENGINEERING
LECTURES, PROBLEMS. GENERAL FLOW EQUATIONS, TENSOR PERMEABILITIES, STEADY STATE RADIAL FLOW, SKIN, AND SUCCESSION OF STEADY STATES. INJECTIVITY DURING FILL-UP OF A DEPLETED RESERVOIR, INJECTIVITY FOR LIQUID-FILLED RESERVOIRS. FLOW POTENTIAL AND GRAVITY FORCES, CONING. DISPLACEMENTS IN LAYERED RESERVOIRS. TRANSIENT RADIAL FLOW EQUATION, PRIMARY DRAINAGE OF A CYLINDRICAL RESERVOIR, LINE SOURCE SOLUTION, PSEUDO-STEADY STATE. MAY BE REPEATED FOR CREDIT.
PREREQUISITE: 221.
3 UNITS, SPR (DURLOSKY, L)

ENERGY 223. RESERVOIR SIMULATION
3-4 UNITS, WIN (DURLOSKY, L; TCHELEPI, H; GERRITSEN, M)

ENERGY 224. ADVANCED RESERVOIR SIMULATION
TOPICS INCLUDE MODELING OF COMPLEX WELLS, COUPLING OF SURFACE FACILITIES, COMPOSITIONAL MODELING, DUAL POROSITY MODELS, TREATMENT OF FULL TENSOR PERMEABILITY AND GRID NONORTHOGONALITY, LOCAL GRID REFINEMENT, HIGHER ORDER METHODS, STREAMLINE SIMULATION,
upsampling, algebraic multigrid solvers, unstructured grid solvers, history matching, other selected topics. Prerequisite: 223 or consent of instructor. May be repeated for credit.

3 units, Aut (Durlofsky, L; Tchelepi, H; Aziz, K)

ENERGY 225. Theory of Gas Injection Processes

3 units, Spr (Orr, F; Voskov, D)

ENERGY 226. Thermal Recovery Methods

3 units, not given this year

ENERGY 227. Enhanced Oil Recovery
The physics, theories, and methods of evaluating chemical, miscible, and thermal enhanced oil recovery projects. Existing methods and screening techniques, and analytical and simulation based means of evaluating project effectiveness. Dispersion-convection-ad sorption equations, coupled heat, and mass balances and phase behavior provide requisite building blocks for evaluation.

3 units, Spr (Castanier, L)

ENERGY 230. Advanced Topics in Well Logging
State of the art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Guest speakers on formation evaluation topics. Prerequisites: 130 or equivalent; basic well logging; and standard practice and application of electric well logs.

3 units, Spr (Lindblom, R)

ENERGY 240. Geostatistics for Spatial Phenomena
(Same as GES 240) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Multiple-point geostatistics and training image-based stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB and SGEMS software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, STATS 116, GES 161, or equivalent.

2-3 units, Win (Journel, A)

ENERGY 241. Seismic Reservoir Characterization
(Same as GEOPHYS 241; ENERGY 141) (Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112

3-4 units, Spr (Mukerji, T)

ENERGY 242. Topics in Advanced Geostatistics
(Same as EESS 263) Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches for estimating point statistics; kriging and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upsampling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran.

3-4 units, not given this year

ENERGY 246. Reservoir Characterization and Flow Modeling with Outcrop Data
(Same as GES 246, ENERGY 146) Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

3 units, Aut (Graham, S; Tchelepi, H; Mukerji, T; Boucher, A)

ENERGY 247. Stochastic Simulation
Characterization and inference of statistical properties of spatial random function models; how they average over volumes, expected fluctuations, and implementation issues. Models include point processes (Cox, Poisson), random sets (Boolean, truncated Gaussian), and mixture of Gaussian random functions. Prerequisite: 240.

3 units, not given this year

ENERGY 251. Thermodynamics of Equilibria
Lectures, problems. The volumetric behavior of fluids at high pressure. Equation of state representation of volumetric behavior. Thermodynamic functions and conditions of equilibrium, Gibbs and Helmholtz energy, chemical potential, fugacity. Phase diagrams for binary and multicomponent systems. Calculation of phase compositions from volumetric behavior for multicomponent mixtures. Experimental techniques for phase-equilibrium measurements. May be repeated for credit.

3 units, Aut (Orr, F; Bazargan, M)

ENERGY 252. Chemical Kinetics Modeling
Fundamentals of chemical reaction kinetics in homogeneous and heterogeneous reaction systems from a molecular perspective. Development and application of the theory of chemical kinetics, including collision, transition state, and surface reactivity approaches. Relationships between thermodynamics and kinetics to overall mechanism predictions. Introduction to Gaussian 03. Lab involves chemical modeling including ab initio electronic structure calculations (Hartree-Fock, configuration interaction, coupled cluster, and many-body perturbation theory) and thermodynamic predictions.

3 units, Win (Wilcox, J)

ENERGY 253. Carbon Capture and Sequestration
(Same as ENERGY 153) CO2 separation from syngas and flue gas for gasification and combustion processes. Transportation of CO2 in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO2. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.

3-4 units, Aut (Wilcox, J; Benson, S)

On-the-job training for master's degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignments, and key results. May be repeated for credit. Prerequisite: consent of adviser.

1-3 units, Sum (Staff)

ENERGY 259. Presentation Skills
For teaching assistants in Energy Resources Engineering. Five two-hour sessions in the first half of the quarter. Awareness of different learning styles, grading philosophies, fair and efficient grading, text design; presentation and teaching skills, PowerPoint slide design; presentation practice in small groups. Taught in collaboration with the Center for Teaching and Learning.

1 unit, not given this year

ENERGY 260. Modeling Uncertainty in the Earth Sciences
(Same as ENERGY 160) Whether Earth Science modeling is performed on a local, regional or global scale, for scientific or engineering purposes, uncertainty is inherently present due to lack of data and lack of understanding of the underlying phenomena. This course highlights the various issues, techniques and practical modeling tools available for modeling uncertainty of complex 3D/4D Earth systems. The course focuses on a practical breadth rather than theoretical depth. Topics covered are: the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate) are covered through literature study. Extensive software use with SGEMS and Petrel. Project homework.
Prerequisites: algebra (CME 104 or equivalent), introductory stat
3 units, Win (Caers, J)

ENERGY 267. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties
(Same as ENERGY 167) Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor.
3 units, Win (Kourt, W; Pande, K)

ENERGY 269. Geothermal Reservoir Engineering
Conceptual models of heat and mass flows within geothermal reservoirs. The fundamentals of fluid/heat flow in porous media; convective/conductive regimes, dispersion of solutes, reactions in porous media, stability of fluid interfaces, liquid and vapor flows. Interpretation of geochemical, geological, and well data to determine reservoir properties/characteristics. Geothermal plants and the integrated geothermal system.
3 units, not given this year

ENERGY 273. Special Topics in Petroleum Engineering
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 280. Oil and Gas Production Engineering
(Same as ENERGY 180) Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120.
3 units, not given this year

ENERGY 281. Applied Mathematics in Reservoir Engineering
The philosophy of the solution of engineering problems. Methods of solution of partial differential equations: Laplace transforms, Fourier transforms, wavelet transforms, Green’s functions, and boundary element methods. Prerequisites: CME 204 or MATH 131, and consent of instructor.
3 units, alternate years, not given this year

ENERGY 284. Optimization and Inverse Modeling
3 units, Aut (Caers, J)

ENERGY 285A. SUPRI-A Research Seminar: Enhanced Oil Recovery
Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-A group. May be repeated for credit. Prerequisite: consent of instructor.
1 unit, Aut (Staff)

ENERGY 285B. SUPRI-B Research Seminar: Reservoir Simulation
Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in SUPRI-B (reservoir simulation) program. May be repeated for credit. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff)

ENERGY 285C. SUPRI-C Research Seminar: Gas Injection Processes
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff)

ENERGY 285D. SUPRI-D Research Seminar: Well Test Analysis
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor. (Horne)
1 unit, Aut (Staff), Win (Staff)

ENERGY 285F. SCRF Research Seminar: Geostatistics and Reservoir Forecasting
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SCRF (Stanford Center for Reservoir Forecasting) program. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff)

ENERGY 285G. Geothermal Reservoir Engineering Research Seminar
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the geothermal energy group. Presentation required for credit. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff)

ENERGY 285H. SUPRI-HW Research Seminar: Horizontal Well Technology
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in SUPRI-HW (productivity and injectivity of horizontal wells) program. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff)

ENERGY 290. Numerical Modeling of Fluid Flow in Heterogeneous Porous Media
How to mathematically model and solve elliptic partial differential equations with variable and discontinuous coefficients describing flow in highly heterogeneous porous media. Topics include finite difference and finite volume approaches on structured grids, efficient solvers for the resulting system of equations, Krylov space methods, preconditioning, multi-grid solvers, grid adaptivity and adaptivity criteria, multiscale approaches, and effects of anisotropy on solver efficiency and accuracy. Implementation of MATLAB and application of commercial or public domain simulation packages. Prerequisite: CME 200, 201, and 202, or equivalents with consent of instructor.
3 units, not given this year

ENERGY 291. OPTIMIZATION OF ENERGY SYSTEMS
(Same as ENERGY 191) Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools: include MATLAB, Excel, and AMPL. Mathematical programming language. Prerequisites: MATH 41, MATH 51, or consent of instructor. Programming experience helpful (e.g. CS 106A-B).
3 units, Win (Brandt, A)

ENERGY 293A. Fundamentals of Energy Processes
(Same as EE 293A) For seniors and graduate students. Thermodynamics, heat engines, thermoelectrics, biomass. Recommended: MATH 41, MATH 43, PHYSICS 41, 43, 45
1-3 units, Aut (Brandt, A; Horne, R; Krevor, S)

ENERGY 293B. Fundamentals of Energy Processes
(Same as EE 293B) For seniors and graduate students. Fuel cells. Production of hydrogen: electrolytic, chemical, thermolytic, photolytic. Hydrogen storage: hydrides. Photoelectric converters; photo-thermovoltaic converters. Wind turbines. Recommended: EE 293A; MATH 41; PHYSICS 41, 43, 45
ENGR 301. The Energy Seminar
(Same as CEE 301) Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit.
1 unit, Aut (Benson, S), Win (Benson, S), Spr (Benson, S)

On-the-job training for doctoral students under the guidance of on-site supervisors. Students submit a report on work activities, problems, assignments, and results. May be repeated for credit.
Prerequisite: consent of advisor.
1-3 units, Sum (Staff)

ENGR 359. Teaching Experience in Energy Resources Engineering
For TAs in Energy Resources Engineering. Course and lecture design and preparation; lecturing practice in small groups. Classroom teaching practice in an Energy Resources Engineering course for which the participant is the TA (may be in a later quarter). Taught in collaboration with the Center for Teaching and Learning.
1 unit, Spr (Gerritsen, M)

ENGR 360. Advanced Research Work in Energy Resources Engineering
Graduate-level work in experimental, computational, or theoretical research. Special research not included in graduate degree program. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGR 361. Master's Degree Research in Energy Resources Engineering
Experimental, computational, or theoretical research. Advanced technical report writing. Limited to 6 units total. (Staff)
1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGR 362. Engineer's Degree Research in Energy Resources Engineering
Graduate-level work in experimental, computational, or theoretical research for Engineer students. Advanced technical report writing. Limited to 15 units total, or 9 units total if 6 units of 361 were previously credited.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGR 363. Doctoral Degree Research in Energy Resources Engineering
Graduate-level work in experimental, computational, or theoretical research for Ph.D. students. Advanced technical report writing.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGR 365. Special Research Topics in Energy Resources Engineering
Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGR 369. Practical Energy Studies
Students work on realistic industrial reservoir engineering problems. Focus is on optimization of production scenarios using secondary or tertiary recovery techniques. When possible, projects are conducted in direct collaboration with industry. May be repeated for credit.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGR 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGR 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGINEERING (ENGR) COURSES

UNDERGRADUATE COURSES IN ENGINEERING

ENGR 10. Introduction to Engineering Analysis
Integrated approach to the fundamental scientific principles that are the cornerstones of engineering analysis: conservation of mass, atomic species, charge, momentum, angular momentum, energy, production of entropy expressed in the form of balance equations on carefully defined systems, and incorporating simple physical models. Emphasis is on setting up analysis problems arising in engineering. Topics: simple analytical solutions, numerical solutions of linear algebraic equations, and laboratory experiences. Provides the foundation and tools for subsequent engineering courses.
GER:DB-EngrAppSci
4 units, Aut (Cappelli, M), Sum (Staff)

ENGR 14. Intro to Solid Mechanics
Introduction to engineering analysis using the principles of engineering solid mechanics. Builds on the math and physical reasoning concepts in Physics 41 to develop skills in evaluation of engineered systems across a variety of fields. Foundational ideas for the advanced solid mechanics courses such as ME80 or CEE101A. Interactive lecture sessions focused on mathematical application of key concepts, with weekly complementary lab session on testing and designing systems that embody these concepts. Limited enrollment, subject to instructor approval.
GER:DB-EngrAppSci
4 units, Aut (Sheppard, S), Win (Sheppard, S), Spr (Mitiguy, P)

ENGR 15. Dynamics
The application of Newton's Laws to solve static and dynamic problems, particle and rigid body dynamics, freebody diagrams, and writing equations of motion. 2-D and 3-D cases including gyroscopes, spacecraft, and rotating machinery. Solution of equations of motion and dynamic response of simple mechanical systems. Prerequisites: Calculus (differentiation and integration), E14 (statics and strength), and a mechanics course in physics (e.g., Physics 41). GER:DB-EngrAppSci
3 units, Aut (Mitiguy, P), Spr (Lew, A)

ENGR 20. Introduction to Chemical Engineering
(Same as CHEMENG 20) Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification.
Prerequisite: CHEM 31. GER:DB-EngrAppSci
3 units, Spr (Khosla, C)

ENGR 25B. Biotechnology
(Same as CHEMENG 25B) Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibiotics, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 41 or equivalent course.
GER:DB-EngrAppSci
3 units, Spr (Wang, C)

ENGR 25E. Energy: Chemical Transformations for Production, Storage, and Use
(Same as CHEMENG 25E) An introduction and overview to the challenges and opportunities of energy supply and consumption. Emphasis on energy technologies where chemistry and engineering play key roles. Review of energy fundamentals along with historical energy perspectives and current energy production technologies. In depth analyses of solar thermal systems, biofuels, photovoltaics and electrochemical devices (batteries and fuel cells). Prerequisites: high school chemistry or equivalent course.
GER:DB-EngrAppSci
3 units, Win (Robertson, C; Bent, S)

ENGR 30. Engineering Thermodynamics
The basic principles of thermodynamics are introduced in this course. Concepts of energy and entropy from elementary considerations of the microscopic nature of matter are discussed. The principles are applied in thermodynamic analyses directed towards understanding the performances of engineering systems. Methods and problems cover socially responsible economic generation and utilization of energy in central power generation plants, solar systems, refrigeration devices, and automobile, jet and gas-turbine engines.
GER:DB-EngrAppSci
ENGR 31. Chemical Principles with Application to Nanoscience and Technology
Preparation for engineering disciplines emphasizing modern technological applications of solid state chemistry. Topics include: crystallography; chemical kinetics and equilibria; thermodynamics of phase changes and reaction; quantum mechanics of chemical bonding, molecular orbital theory, and electronic band structure of crystals; and the materials science of basic electronic and photonic devices. Prerequisite: high school or college chemistry background in stoichiometry, periodicity, Lewis and VSEPR structures, dissolution/precipitation and acid/base reactions, gas laws, and phase behavior. GER: DB-NatSci
4 units, Aut (Zheng, X), Win (Mitchell, R), Sum (Staff)

ENGR 40. Introductory Electronics
Overview of electronic circuits and applications. Electrical quantities and their measurement, including operation of the oscilloscope. Basic models of electronic components including resistors, capacitors, inductors, and the operational amplifier. Frequency response of linear circuits, including basic filters, using phasor analysis. Digital logic fundamentals, logic gates, and basic combinatorial logic blocks. Lab assignments. Enrollment limited to 200. Lab. Prerequisite: PHYSICS 43. GER:DB-EngrAppSci
5 units, Aut (Howe, R), Spr (Wong, S)

ENGR 40N. Engineering Wireless Networks
A hands-on introduction to the design and implementation of modern wireless networks. Via a quarter long project on programmable radios, students will learn the fundamentals of wireless channels, encoding and decoding information, modeling of errors and error recovery algorithms, and the engineering of packet-switched networks. These concepts will be used to illustrate development schemes in EE and CS: the role of abstraction and modularity in engineering design, building reliable systems using imperfect components, understanding the limits imposed by energy and noise, choosing effective representations for information, and engineering tradeoffs in complex systems.
5 units, Spr (Katti, S)

ENGR 40P. Physics of Electrical Engineering
(Same as EE 41) How everything from electrostatics to quantum mechanics is used in common high-technology products. Electrostatics are critical in micro-mechanical systems used in many sensors and displays, and Electromagnetic waves are essential in all high-speed communication systems. How to propagate energy on transmission lines, optical fibers, and in free space. Which aspects of modern physics are needed to generate light for the operation of a DVD player or TV. Introduction to solid-state, semiconductors, solid-state light for the operation of a DVD player or TV. Introduction to space complexity analysis. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. GER:DB-EngrAppSci
3-5 units, Aut (Sahami, M), Win (Schwarz, K), Spr (Cain, G), Sum (Staff)

ENGR 70A. Programming Methodology
(Same as CS 106A) Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. GER:DB-EngrAppSci
4 units, Aut (Van Roy, B), Spr (Goel, A)

ENGR 70B. Programming Abstractions
(Same as CS 106B) Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the C++ language. GER:DB-EngrAppSci
3-5 units, Aut (Cain, G), Win (Robertson, E), Spr (Schwarz, K), Sum (Staff)

ENGR 80. Introduction to Bioengineering
(Same as BIOE 80) Overview of bioengineering focused on understanding the design and engineering of biomedical systems. Topics include: chemical properties of biological systems, rate and equilibrium properties of chemical reactions, cellular structure and communication, genetic programming of biological systems, and engineering balances and systems analysis. Application of these concepts to engineering biological systems for diverse areas, including health and medicine, biomaterials, and sustainability. Includes an introduction to MATLAB as a problem-solving tool and a team-based project emphasizing the responsible design of technologies.
4 units, Spr (Smolke, C)

ENGR 90. Environmental Science and Technology
(Same as CEE 70) Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environmental and engineering systems. GER:DB-EngrAppSci
3 units, Aut (Kopperud, R)

ENGR 100. Teaching Public Speaking
The theory and practice of teaching public speaking and presentation development. Lectures/discussions on developing an instructional plan, using audiovisual equipment for instruction, devising tutoring techniques, and teaching delivery, organization,
audience analysis, visual aids, and unique speaking situations. Weekly practice speaking. Students serve as apprentice speech tutors. Those completing course may become paid speech instructors in the Technical Communications Program. Prerequisite: consent of instructor.

5 units, Aut (Vassar, M), Win (Vassar, M), Spr (Vassar, M)

ENGR 102E. Technical/Professional Writing for Electrical Engineers
Required of Electrical Engineering majors. The process of writing technical/professional documents. Lectures, writing assignments, individual conferences. Corequisite for WIM: EE 100X or 108A.
1 unit, Aut (Scully, J)

ENGR 102M. Technical/Professional Writing for Mechanical Engineers
Required of Mechanical Engineering majors. The process of writing technical/professional documents. Lecture, writing assignments, individual conferences. Corequisite for WIM: ME 203.
1 unit, Aut (McDevitt, M), Win (McDevitt, M)

ENGR 103. Public Speaking
Priority to Engineering students. Introduction to speaking activities, from impromptu talks to carefully rehearsed formal professional presentations. How to organize and write speeches, analyze audiences, create and use visual aids, combat nervousness, and deliver informative and persuasive speeches effectively. Weekly class practice, rehearsals in one-on-one tutorials, videotaped feedback. Limited enrollment.
3 units, Aut (Vassar, M), Win (Vassar, M), Spr (Vassar, M)

ENGR 105. Feedback Control Design
Design of linear feedback control systems for command-following error, stability, and dynamic response specifications. Root-locus and frequency response design techniques. Examples from a variety of fields. Some use of computer aided design with MATLAB. Prerequisite: EE 102, ME 161, or equivalent.
GER:DB-EngAppSci
3 units, Win (Okamura, A)

ENGR 110. Perspectives in Assistive Technology
(Same as ENGR 210) Seminar and student team project. Medical, social, psychological, and technical challenges surrounding the design, development, and use of assistive technologies to improve the lives of people with disabilities. Guest speakers include professionals, clinicians, and individuals with disabilities. 1 unit for seminar attendance only. 3 units for students who pursue a team-based assistive technology project. Projects can be continued in ME113 or CS194 or as independent study in Spring Quarter. See [http://www.stanford.edu/class/engr110](http://www.stanford.edu/class/engr110) for course information.

Service Learning Course (certified by Haas Center).
1-3 units, Win (Jaffe, D, Nelson, D)

ENGR 115. Design the Tech Challenge
(Same as ENGR 215) Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See [http://techchallenge.thetech.org](http://techchallenge.thetech.org) for application information.
May be repeated for credit.
2 units, not given this year

ENGR 120. Fundamentals of Petroleum Engineering
(Same as ENERGY 120) Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media. Prerequisites:
GER:DB-EngAppSci
3 units, Aut (Horne, R, Wilcox, J)

ENGR 130. Science, Technology, and Contemporary Society
(Same as STS 101, STS 201) Key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as sociotechnical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice; and the social shaping and management of contemporary science and technology. GER:DB-SocSci
4-5 units, Aut (McGinn, R)

ENGR 131. Ethical Issues in Engineering
(Same as STS 115) Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; the ethics of whistle blowing; ethical conflicts of engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations; ethical issues arising from engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies, guest practitioners, and field research. Limited enrollment. GER:DB-Hum
4 units, Spr (McGinn, R)

ENGR 140A. Leadership of Technology Ventures
First of three-part sequence for students selected to the Mayfield Fellows Program. Management and leadership within high technology startups, focusing on entrepreneurial skills related to product and market strategy, venture financing and cash flow management, team recruiting and organizational development, and the challenges of managing growth and handling adversity in emerging ventures. Other engineering faculty, founders, and venture capitalists participate as appropriate. Recommended: accounting or finance course (MS&E 140, ECON 90, or ENGR 60).
3-4 units, Spr (Byers, T)

ENGR 140B. Leadership of Technology Ventures
Open to Mayfield Fellows only; taken during the summer internship at a technology startup. Students exchange experiences and continue the formal learning process. Activities journal. Credit given following quarter.
1-2 units, Aut (Seelig, T)

ENGR 140C. Leadership of Technology Ventures
Open to Mayfield Fellows only. Capstone to the 140 sequence. Limited enrollment. GER:DB-Hum

ENGR 145. Technology Entrepreneurship
How do you create a successful start-up? What is entrepreneurial leadership in a large firm? What are the differences between an idea and true opportunity? How does an entrepreneur form a team and gather the resources necessary to create a great enterprise? This class mixes mentor-guided team projects, in-depth case studies, research on the entrepreneurial process, and the opportunity to network and ask questions of Silicon Valley's top entrepreneurs and venture capitalists. For undergraduates of all majors who seek to understand the formation and growth of high-impact startups in areas such as information, green/clean, medical, and consumer technologies. No prerequisites. Limited enrollment. GER:DB-SocSci
4 units, Win (Eesley, C, Sum (Staff))

ENGR 150. Social Innovation and Entrepreneurship
(Same as ENGR 250) (Graduate students register for 250.) The art of innovation and entrepreneurship for social benefit. Project team develops, tests, and iteratively improves technology-based social innovation and business plan to deploy it. Feedback and coaching from domain experts, product designers, and successful social entrepreneurs. Limited enrollment; application required. See [http://sie.stanford.edu](http://sie.stanford.edu) for course information.
1-6 units, Aut (Behrman, W), Win (Behrman, W), Spr (Behrman, W)

ENGR 154. Vector Calculus for Engineers
(Same as CME 100) Computation and visualization using MATLAB: Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green's, divergence, and Stokes' theorems. Examples and applications drawn from various engineering fields. Prerequisites:
MATH 41 and 42, or 10 units AP credit. GER:DB-Math
5 units, Aut (Khayms, V)
ENGR 155A. Ordinary Differential Equations for Engineers
(Same as CME 102) Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and non-linear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: CME 100/ENGR 154 or MATH 51. GER:DB-Math 5 units, Win (Darve, E)

ENGR 155B. Linear Algebra and Partial Differential Equations for Engineers

ENGR 155C. Introduction to Probability and Statistics for Engineers
(Same as CME 106) Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, random variable, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR154 or MATH 51. GER:DB-Math 3-4 units, Win (Khayms, V), Sum (Staff)

ENGR 159Q. Japanese Companies and Japanese Society
(S,Sem) (Same as MATSCI 159Q) Stanford Introductory Seminar. Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SocSci 3 units, Spr (Sinclair, R)

ENGR 192. Engineering Public Service Project
Volunteer work on a public service project with a technical engineering component. Project requires a faculty sponsor and a community partner such as a nonprofit organization, school, or individual. Required report. See http://soe.stanford.edu/publicservice. May be repeated for credit. Prerequisite: consent of instructor. 1-2 units, not given this year

ENGR 199. Special Studies in Engineering
Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the section number corresponding to the particular faculty member. May be repeated for credit. Prerequisite: consent of instructor. 1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGR 199W. Writing of Original Research for Engineers
Technical writing in science and engineering. Students produce a substantial document describing their research, methods, and results. Prerequisite: completion of freshman writing requirements; prior or concurrent in 2 units of research in the major department; and consent of instructor. WIM for BioMedical Computation. 1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGR 202W. Technical Writing
How to write clear, concise, and well-ordered technical prose. Principles of editing for structure and style. Applications to a variety of genres in engineering and science. 3 units, Aut (Reichard, C), Win (Reichard, C), Spr (Reichard, C)

ENGR 204. Research Ethics for Engineers and Scientists
Explores ethical responsibilities of engineering and science researchers in relation to laboratory safety, data acquisition and management, experiments, and product design. Collaborative research, authorship and peer review, mentorship, human subjects research, funding applications and funded research, media accounts of research, and new and emerging technologies (e.g., in nanotechnology and bioengineering). Responsibilities of researchers toward society at large, and Stanford and government policies regarding the conduct of engineering and science research will also be addressed. Lectures, discussion, guest researchers, and real case studies. Primarily for graduate students and post-doctoral researchers in engineering and science. Limited enrollment. 1-2 units, Spr (McGinn, R)

ENGR 205. Introduction to Control Design Techniques
Review of root-locus and frequency response techniques for control system analysis and synthesis. State-space techniques for modeling, full-state feedback regulator design, pole placement, and observer design. Combined observer and regulator design. Lab experiments on computers connected to mechanical systems. Prerequisites: 105, MATH 103, 113. Recommended: Matlab. 3 units, Aut (Rock, S)

ENGR 206. Control System Design
Design and construction of a control system and working plant. Topics include: linearity, actuator saturation, sensor placement, controller and model order; linearization by differential actuation and sensing; analog op-amp circuit implementation. Emphasis is on qualitative aspects of analysis and synthesis, generation of candidate design, and engineering tradeoffs in system selection. Large team-based project. Limited enrollment. Prerequisite: 105. 3-4 units, not given this year

ENGR 207A. Linear Control Systems I
Introduction to control of discrete-time linear systems. State-space models. Controllability and observability. The linear quadratic regulator. Prerequisite: 105 or 205. 3 units, not given this year

ENGR 207B. Linear Control Systems II
Probabilistic methods for control and estimation. Statistical inference for discrete and continuous random variables. Linear estimation with Gaussian noise. The Kalman filter. Prerequisite: EE 263. 3 units, not given this year

ENGR 207C. Linear Control Systems III
Continuation of 207B. Introduction to stochastic control. Markov decision processes and stochastic dynamic programming. Separation of control and estimator design. Stochastic optimal control. Prerequisite: 207B. 3 units, not given this year

ENGR 209A. Analysis and Control of Nonlinear Systems
Introduction to nonlinear phenomena: multiple equilibria, limit cycles, bifurcations, complex dynamical behavior. Planar dynamical systems, analysis using phase plane techniques. Describing functions, Lyapunov stability theory, SISO feedback linearization, sliding mode control. Design examples. Prerequisite: 205. 3 units, Win (Rock, S)

ENGR 210. Perspectives in Assistive Technology
(Same as ENGR 110) Seminar and student team project. Medical, social, psychological, and technical challenges surrounding the design, development, and use of assistive technologies to improve the lives of people with disabilities. Guest speakers include professionals, clinicians, and individuals with disabilities. 1 unit for seminar attendance only. 3 units for students who pursue a team-based assistive technology project. Projects can be continued in ME113 or CS194 or as independent study in Spring Quarter.
ENGR 210A. Robust Control
Analysis and design techniques for multivariable feedback systems. Stability and robustness of feedback loops, passivity, and the small-gain theorem. Prerequisite: 207A or EE 263.
3 units, not given this year

ENGR 210B. Advanced Topics in Computation for Control
Recent developments in computational techniques for feedback control systems. The use of convex optimization to solve control problems in practice. Prerequisites: Background in convex optimization, such as EE 364, and background in control, such as ENGR 207B.
3 units, not given this year

ENGR 215. Design the Tech Challenge
(Same as ENGR 115) Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at http://techchallenge.thetech.org.
May be repeated for credit.
2 units, not given this year

ENGR 231. Transformative Design
(Same as ANTHRO 332) Project-based. How interactive technologies can be designed to encourage behavioral transformation. Topics such as self-efficacy, social support, and mechanism of cultural change in domains such as weight-loss, energy conservation, and safe driving. Lab familiarizes students with hardware and software tools for interaction prototyping. Students teams create functional prototypes for self-selected problem domains. Prerequisite: consent of instructor. Design Institute class; see http://dschool.stanford.edu.
3-5 units, Win (Roth, B; Dryer, M; Shanks, M)

ENGR 240. Introduction to Micro and Nano
Electromechanical Systems
Miniaturization technologies now have important roles in materials, mechanical, and biomedical engineering practice, in addition to being the foundation for information technology. This course will target an audience of first-year engineering graduate students and motivated senior-level undergraduates, with the goal of providing an introduction to M/NEMS fabrication techniques, selected device applications, and the design tradeoffs in developing systems. The course has no specific prerequisites, other than graduate or senior standing in engineering; otherwise, students will require permission of the instructors.
3 units, Spr (Howe, R)

ENGR 245. Technology Entrepreneurship and Lean Startups
Apply emerging entrepreneurship principles including the popular lean startups and customer development frameworks to prototype, test, and iterate your product while discovering if you have a profitable business model. Work and study in teams or, in rare cases, alone. Proposal required during first week of the quarter. Proposals can be software, physical good, or service of any kind. Projects are treated as real start-ups, so work will be intense. Perquisite; interest and passion in exploring whether a technology idea can become a real company.
3-4 units, Win (Hart, S)

ENGR 250. Social Innovation and Entrepreneurship
(Same as ENGR 150) (Graduate students register for 250.) The art of innovation and entrepreneurship for social benefit. Project team develops, tests, and iteratively improves technology-based social innovation and business plan to deploy it. Feedback and coaching from domain experts, product designers, and successful social entrepreneurs. Limited enrollment; application required. See http://sbi.stanford.edu for course information.
1-6 units, Aut (Behrman, W), Win (Behrman, W), Spr (Behrman, W)

ENGR 251. Work Seminar
Students participate in the Creating Research Examples Across the Teaching Enterprise (CREATE) writing program. Goal is for students to produce, through a peer reviewed process, 1,000 word statements describing their research in ways that are understandable and compelling to undergraduates and other novices in the field. Unit credit when the final approved statements appear on the CREATE web site.
1 unit, not given this year

ENGR 280. From Play to Innovation
Project-based and team-centered. Enhancing the innovation process with playfulness. The human state of play and its principal attributes and importance to creative thinking. Play behavior, and its development and biological basis. Students apply those principles through design thinking to promote innovation in the corporate world with real-world partners on design projects with widespread application.
2-4 units, Spr (Boyle, B; Brown, S; Thompson, S)

ENGR 290. Graduate Environment of Support
For course assistants (CAs) and tutors in the School of Engineering tutorial and learning program. Interactive training for effective academic assistance. Pedagogy, developing course material, tutoring, and advising. Sources include video, readings, projects, and role playing.
1 unit, Aut (Osgood, B; Locano, N)

ENGR 298. Seminar in Fluid Mechanics
Interdepartmental. Problems in all branches of fluid mechanics, with talks by visitors, faculty, and students. Graduate students may register for 1 unit, without letter grade; a letter grade is given for talks. May be repeated for credit.
1 unit, Aut (Staff), Win (Staff), Spr (Staff)

ENGR 299. Special Studies in Engineering
Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the corresponding section. Prerequisite: consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGR 311A. Women's Perspectives
Master's and Ph.D. seminar series driven by student interests. Possible topics: time management, career choices, health and family, diversity, professional development, and personal values. Guest speakers from academia and industry, student presentations with an emphasis on group discussion. Graduate students share experiences and examine scientific research in these areas. May be repeated for credit.
1 unit, Win (Sheppard, S)

ENGR 311B. Designing the Professional
Continuation of ENGR 311A.
1 unit, Spr (Sheppard, S; Evans, D)

ENGR 312. Science and Engineering Course Design
(Same as CTL 312) For students interested in an academic career and who anticipate designing science courses at the undergraduate or graduate level. Goal is to apply research on science learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement.
2-3 units, Win (Sheppard, S; Wright-Dunbar, R)

ENGR 313. Topics in Engineering Education
Master's and Ph.D. seminar series focused on teaching engineering courses based on research. Weekly, student-led group discussions follow engineering education and education literature. Topics include: best practices in teaching, theories on how people learn, education research methods, assessing learning, and evaluating teaching, all in an engineering context. May be repeated for credit.
1 unit, Spr (Sheppard, S)

ENGR 341. Micro/Nano Systems Design and Fabrication
Laboratory course in micro and nano fabrication technology that combines lectures on theory and fundamentals with hands-on training in the Stanford Nanofabrication Facility. Prerequisite: ENGR 240 or equivalent.
3-5 units, not given this year

ENGR 342. MEMS Laboratory II
Emphasis is on implementation of fabricated N/MEMS-based solutions. Student teams collaborate to develop, fabricate and test N/MEMS solutions proposed in E341. Design alternatives fabricated and tested in SNF with emphasis on manufacturability, assembly, test, and design. Limited enrollment. Prerequisite: ENGR 341.
3-4 units, not given this year
ENGLISH (ENGLISH) COURSES

UNDERGRADUATE COURSES IN ENGLISH

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ENGLISH 10AX. Fiction Writing
Introduction to short stories by past and contemporary masters. Basic elements of fiction writing: story structure, point of view, dialogue, exposition. Summer pre-class assignments include reading and online blog participation. Short story writing and feedback sessions, short writing workshops, and field trip to San Francisco. 2 units, Aut (Tanaka, S)

ENGLISH 11SI. Neil Gaiman: International Man of Mystery
Neil Gaiman is an author that transcends the boundaries of form, genre, and age. Add to that the fact he grew up in England and lives in America, and it becomes almost impossible to pin him down on any front. By examining his graphic novels, short stories, novels, children’s literature, and film, we will try our best to approach this living author from different angles and make sense of how he breaks down traditional barriers of classification. Along the way, we will examine the themes and style of a literary author that has managed to remain relevant in the modern, digital age. 2 units, Aut (Lunsford, A)

ENGLISH 21. Masterpieces of American Literature
(Same as AMSTUD 121, ENGLISH 121) (English majors and others taking 5 units, register for 121.) A survey of some of the definitive texts of American writing, such as Leaves of Grass, Benito Cereno, Adventures of Huckleberry Finn, The Waste Land, The Sun Also Rises, The Golden Apples, and The Crying of Lot 49. GER:DB-Hum 3-5 units, not given this year

ENGLISH 32. Technologies of Reading and Writing: The Nineteenth Century versus the Digital Age
(Same as ENGLISH 132) The nineteenth century was a critical period for technological development that accelerated forms of communication. As the telegraph replaced the letter, daily gossip columns replaced word of mouth, and photographs replaced the painted illustration, theories of writing and reading changed dramatically. Through texts such as Keats’s Letters, Shelley’s Frankenstein, Carroll’s Alice in Wonderland, and Stevenson’s Dracula, this course explores the effects of media on the creation, dissemination, and reception of literature. This course also facilitates comparative work by juxtaposing 19th-century media with contemporary technologies of writing and reading, such as emails, blogs, and wikis, and the impact of these technologies on the creation, dissemination, and reception of literature today. 3-4 units, Sum (Staff)

ENGLISH 36N. Lord Byron: Mad, Bad, and Dangerous to Know
(F,Sem) Stanford Introductory Seminar. The poetry, literary legacy, and significance of Lord Byron, a towering figure of European Romanticism. Emphasis on formal, aesthetic, and stylistic elements of the poetry, with additional topics to include modern celebrity, literary marketplace, scandal, and romantic heroism. GER:DB-Hum 3 units, Aut (Rovee, C)

ENGLISH 43. Introduction to African American Literature
(Same as AFRICAAM 43, AMSTUD 143, ENGLISH 143) (English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. We will engage some of the defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attuned to the invariably hybrid nature of this tradition, we will also devote attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history. GER:DB-Hum, EC-AmerCul 3-5 units, Aut (Rasberry, G)

ENGLISH 43A. American Indian Mythology, Legend, and Lore
(Same as NATIVEAM 143A, ENGLISH 143A) (English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, Black Elk Speaks. GER:DB-Hum 3-5 units, Aut (Fields, K)

ENGLISH 45F. The Human Love of Mystery: A Journey Through Detective Fiction
(Same as ENGLISH 145F) Reading and discussion of mystery and detective fiction from Sherlock Holmes through the Golden Age of Agatha Christie, to the hard-boiled private eye in Ross Macdonald’s Lew Archer novels. Topics include the independent female private eye and social changes that allowed her emergence; the definition of mystery and detective fiction to include Sophocles’ Oedipus Rex, Morrison’s Song of Solomon, and Freud’s theories; the enduring hold this genre has on imaginations; the fundamental concerns with justice and fear; and stimulation of the deep human fascination with the apparently inexplicable and the intellectual satisfaction of arriving at understanding. GER:DB-Hum 3-4 units, Sum (Staff)

ENGLISH 56N. Mixed Race in the New Millennium: Crossings of Kin, Faith & Culture
(F,Sem) (Same as AFRICAAM 56N, CSRE 56N) Stanford Introductory Seminar. Preference to freshmen. How literature, theater, graphic art and popular culture shape understandings of contemporary mixed race identity and other complex experiences of cultural hybridity. Course explores implications for racial identity, art, and politics for the new millennium. GER:DB-Hum 3 units, Win (Elam, M)

ENGLISH 62N. Eros in Modern American Poetry
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Anne Carson, treating love from Sappho to Socrates, shows how the Greeks derived their philosophy from the erotic poetic tradition. Readings include: Carson’s poetry which locates erotic desire in the larger context of the desire for knowledge; classic Japanese haiku masters such as Basho; and William Carlos Williams, Louise Bogan, and C.K. Williams. GER:DB-Hum 3 units, Win (Fields, K)

ENGLISH 64N. Growing Up in America
(F,Sem) (Same as PSYCH 29N) Stanford Introductory Seminar. Preference to freshmen. To what extent is it possible to describe an American experience? How are different people included in or excluded from the imagined community that is America? How do a person’s race, class, gender and sexuality affect his or her experience of American experience? How are different people included in or excluded from the modern, digital age? 3-4 units, Sum (Staff)

ENGLISH 68N. Mixed Race in the New Millennium: Crossings of Kin, Faith & Culture
(F,Sem) (Same as AFRICAAM 56N, CSRE 56N) Stanford Introductory Seminar. Preference to freshmen. How literature, theater, graphic art and popular culture shape understandings of contemporary mixed race identity and other complex experiences of cultural hybridity. Course explores implications for racial identity, art, and politics for the new millennium. GER:DB-Hum 3 units, Win (Elam, M)

ENGLISH 69J. The Most Important Writing in the World. The Epic of Gilgamesh
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. How literature, theater, graphic art and popular culture shape understandings of contemporary mixed race identity and other complex experiences of cultural hybridity. Course explores implications for race identity, art, and politics for the new millennium. GER:DB-Hum 3 units, Win (Fields, K)

ENGLISH 72N. The Hero’s Journey
(F,Sem) (Same as AMSTUD 72N) Stanford Introductory Seminar. Preference to freshmen. How literature, theater, graphic art and popular culture shape understandings of contemporary mixed race identity and other complex experiences of cultural hybridity. Course explores implications for race identity, art, and politics for the new millennium. GER:DB-Hum 3 units, Win (Fields, K)

ENGLISH 77N. Challenges of Early Reading
(F,Sem) (Same as PSYCH 177N) Stanford Introductory Seminar. Preference to freshmen. How literature, theater, graphic art and popular culture shape understandings of contemporary mixed race identity and other complex experiences of cultural hybridity. Course explores implications for race identity, art, and politics for the new millennium. GER:DB-Hum 3 units, Win (Fields, K)

ENGLISH 86N. Mark Twain and American Culture
(F,Sem) (Same as AMSTUD 68N) Stanford Introductory Seminar. Preference to freshmen. Mark Twain has been called our Rabelais,
our Cervantes, our Homer, our Tolstoy, our Shakespeare. Ernest Hemingway maintained that all modern American literature comes from one book by Mark Twain called The Adventures of Huckleberry Finn. President Franklin D. Roosevelt got the phrase New Deal from A Connecticut Yankee in King Arthur’s Court. Class discussions will focus on how Twain’s work illuminates and complicates his society’s responses to such issues as race, technology, heredity versus environment, religion, education, and what it means to be American. GER:DB

4 units, Aut (Fishkin, S)

ENGLISH 74N. Race and Ethnicity in Contemporary American Fiction: Boundaries and Boundary Crossings
(Same as ASNAMST 74N) The question of place and locality in studies of identity and racial formation. Goal is to engage and examine texts with a critical eye both toward the social contexts represented and toward current imaginative techniques that American writers of color offer to bring their fictional worlds to life. Theme of border hopping and boundary crossing in works by authors including Charles Johnson, Toni Morrison, Alejandro Morales, Julie Otsuka, Stephen Graham Jones, and Lan Samantha Chang. GER:DB-Hum

3 units, not given this year

ENGLISH 77N. Living in the Past: Italy in the Anglo-American Imaginative Tradition
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. A survey of the way in which British and American authors from Milton to Hellenga have portrayed Italian character and culture. Recommended as an ideal orientation course for students planning to attend the Bing Overseas Study Program in Florence. GER:DB-Hum

3 units, Aut (Evans, M)

ENGLISH 80Q. All the World’s a Stage: Dramatic Realism on the Threshold of the Modern World
(S,Sem) Stanford Introductory Seminar. Witness the relationship between heightened dramatic realism ---or empiricism---and unprecedented historical, scientific, religious and cultural changes occurring in the Early Modern world, a defining moment in explorations of uncharted realms of the self, the world, the universe, and artistic form. Readings include Shakespeare’s Othello and As You Like It; John Donne’s dramatic poetry; Marlowe’s Doctor Faustus; and Beckett’s Waiting for Godot. We will examine how these and other texts---point their readers and viewers toward the modern world through cognitive innovations in the art of perspective. Selected art, film adaptations, and modern literature to be included.

4-5 units, Win (Brooks, H)

ENGLISH 81N. Philosophy and Literature
(Same as CLASSGEN 81, COMPLIT 181, FRENGen 181, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, Win (Staff)

ENGLISH 87N. The Graphic Novel: Word, Image, Sound, Silence
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Traces the history of graphic narrative from its beginnings to contemporary times. Students will read a number of graphic narratives, carry out research on some aspect of these narratives, and write an essay, which will then be reworked and remediated into an oral presentation with multimedia support. Fulfills the WRITE 2 requirement GER:DB-Hum

4-5 units, Aut (Lunsford, A)

ENGLISH 90. Fiction Writing
The elements of fiction writing: narration, description, and dialogue. Students write complete stories and participate in story workshops. May be repeated for credit. Prerequisite: PWR 1 (waived in summer quarter).

5 units, Aut (Soileau, S), Win (Quade, K), Spr (Clark, H), Sum (Staff)

ENGLISH 91. Creative Nonfiction
(Formerly 94A.) Historical and contemporary as a broad genre including travel and nature writing, memoir, biography, journalism, and the personal essay. Students use creative means to express factual content.

5 units, Aut (Antopol-Johnson, M), Win (Hummel, M), Spr (Perham, B), Sum (Staff)

ENGLISH 92. Reading and Writing Poetry
Prerequisite: PWR 1. Issues of poetic craft. How elements of form, music, structure, and content work together to create meaning and experience in a poem. May be repeated for credit.

5 units, Aut (Ekiss, K), Win (Perham, B), Spr (Edwards, J)

ENGLISH 94. Writing Across Genres
For minors in creative writing. The forms and conventions of the contemporary short story and poem. How form, technique, and content combine to make stories and poems organic. Prerequisite: 90, 91, or 92.

5 units, Win (Ekiss, K), Spr (Ekiss, K)

ENGLISH 100A. Literary History I
First in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department’s account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas, and aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes. GER:DB-Hum

5 units, Aut (Greene, R; Summitt, J)

ENGLISH 100B. Literary History II
Second in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department’s account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas as well as aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes. GER:DB-Hum

5 units, Win (Castle; T; Hoxby, B; Richardson, J)

ENGLISH 100C. Literary History III
Third in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department’s account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas as well as aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes. GER:DB-Hum

5 units, Spr (Saldivar, R; Jenkins, N; Moretti, F)

ENGLISH 102. Chaucer
An introduction to Chaucer’s writings, including The Canterbury Tales, The Book of the Duchess, and The Parliament of Fowls. Readings in Middle English. No prior knowledge of Middle English or medieval literature is expected. GER:DB-Hum

5 units, Aut (Karnes, M)

ENGLISH 105. The Renaissance: English Literature from Sidney to Marvell
A survey of English Renaissance literature from Sidney and Spenser to Milton and Marvell, and including Marlowe’s Doctor Faustus and Shakespeare’s The Tempest. The course gives training in the reading of early modern poetry and prose, and considers what kind of cultural, social and political institution literature was in Renaissance England: who wrote it and why and for whom, what the pressures were on it, what expectations it fulfilled (or on occasion defeated), whose interests it served. GER:DB-Hum

5 units, Aut (Orgel, S)

ENGLISH 105H. Medievalism
This course examines the medievalism of nineteenth-century British writers, their adoption of medieval subjects and themes,
within the context of medieval literature. Leading questions cluster around three topics: Romance, Nation, and Space. Readings may include Marie de France's Lais, Sir Gawain and the Green Knight, Malory's Morte D'Arthur, Chaucer's House of Fame, Spenser's Faerie Queene, Scott's Ivanhoe, poems by Morris, R. Browning, D. G. Rossetti, and Hopkins, criticism by Arnold and Ruskin, and selections from Tennyson's Idylls of the Kings. GER:DB-Hum
5 units, Aut (Jarvis, C)

ENGLISH 115A. Shakespeare and Modern Critical Developments
Approaches include gender studies and feminism, race studies, Shakespeare's geographies in relation to the field of cultural geography, and the importance of religion in the period. GER:DB-Hum
5 units, Aut (Evans, M)

ENGLISH 116A. The Poetry of John Milton
5 units, Win (Evans, M)

ENGLISH 121. Masterpieces of American Literature (Same as AMSTUD 121, ENGLISH 21) (English majors and others taking 5 units, register for 121.) A survey of some of the definitive texts of American writing, such as Leaves of Grass, Benito Cereno, Adventures of Huckleberry Finn, The Waste Land, The Sun Also Rises, The Golden Apples, and The Crying of Lot 49. GER:DB-Hum
3-5 units, not given this year

ENGLISH 123. American Literature and Culture to 1855 (Same as AMSTUD 150) A survey of early American writings, including sermons, poetry, captivity and slave narratives, essays, autobiography, and fiction, from the colonial era to the eve of the Civil War. GER:DB-Hum, EC-AmerCul
5 units, Spr (Richardson, J)

ENGLISH 123D. American Literature, 1855 to World War I (Same as AMSTUD 123D) A survey of American writers from Whitman to T.S. Eliot, including Emily Dickinson, Mark Twain, Stephen Crane, Frank Norris, Kate Chopin, Theodore Dreiser, and Henry James. Topics include the tension between romance and realism, the impact of naturalism and modernism, as well as race, gender, and the literary evolution of the American language. GER:DB-Hum
5 units, not given this year

ENGLISH 123G. Mark Twain: A Fresh Look at an Icon and Iconoclast, 100 Years after His Death (Same as AMSTUD 123G) The vitality and versatility of a writer who has been called America's Kabelais, Cervantes, Homer, Tolstoy, Brecht, and Shakespeare. Journalism, travel books, fiction, drama, and sketches by Mark Twain; how Twain engaged such issues as personal and national identity, satire and social justice, imperialism, race and racism, gender, performance, travel, and technology. What are Twain's legacies in 2010, the centennial of his death, the 175th anniversary of his birth, and the 125th anniversary of his most celebrated novel? Guest speakers include actor Hal Holbrook. GER:DB-Hum, EC-AmerCul
3-5 units, not given this year

ENGLISH 125A. The Gothic Novel (Same as COMPLIT 125A) The Gothic novel and its relatives from its invention by Walpole in The Castle of Otranto of 1764. Readings include: Northanger Abbey, The Italian, The Monk, Frankenstein, Jane Eyre, Great Expectations, and Dracula. What defines the Gothic as it evolves from one specific novel to a mode that makes its way into a range of fictional types? GER:DB-Hum
3 units, not given this year

ENGLISH 132. Technologies of Reading and Writing: The Nineteenth Century versus the Digital Age (Same as ENGLISH 32) The nineteenth century was a critical period for technological development that accelerated forms of communication. As the telegraph replaced the letter, daily gossip columns replaced word of mouth, and photographs replaced the painted illustration, theories of writing and reading changed dramatically. Through texts such as Keats's Letters, Shelley's Frankenstein, Carroll's Alice in Wonderland, and Stoker's Dracula, this course explores the effects of media on the creation, dissemination, and reception of literature. This course also facilitates comparative work by juxtaposing 19th-century media with contemporary technologies of writing and reading, such as emails, blogs, and wikis, and the impact of these technologies on the creation, dissemination, and reception of literature today. -3-4 units, Sum (Staff)

ENGLISH 136E. Romantic Ruins
The idea of the ruin. Romanticism in theory, literary treatments of ruins, fragments, remnants and remains, and the problem of post-romantic reception and a tradition in ruins. GER:DB-Hum
3 units, Spr (Rovee, C)

ENGLISH 139A. Henry James
3 units, Spr (Ngai, S)

ENGLISH 139B. American Women Writers, 1850-1920 (Same as AMSTUD 139B) The ways in which female writers negotiated a series of literary, social, and intellectual movements, from abolitionism and sentimentalism in the nineteenth century to Progressivism and avant-garde modernism in the twentieth. Authors include Harriet Beecher Stowe, Harriet Jacobs, Rebecca Harding Davis, Emily Dickinson, Kate Chopin, Edith Wharton, Gertrude Stein, Willa Cather, and Charlotte Perkins Gilman. GER:DB-Hum
3 units, Win (Richardson, J)

ENGLISH 143. Introduction to African American Literature (Same as AFRICAAM 43, AMSTUD 143, ENGLISH 43) (English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. We will engage some of the defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of racial identity, and the emergence of black internationalism. Attuned to the invariably hybrid nature of this tradition, we will also devote attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history. GER:DB-Hum, EC-AmerCul
3-5 units, Aut (Rasberry, G)

ENGLISH 143A. American Indian Mythology, Legend, and Lore (Same as NATIVEAM 143A, ENGLISH 43A) (English majors and others taking 5 units, register for 143A,) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century, Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, Black Elk Speaks. GER:DB-Hum
3-5 units, Aut (Fields, K)

ENGLISH 145F. The Human Love of Mystery: A Journey Through Detective Fiction (Same as ENGLISH 45F) Reading and discussion of mystery and detective fiction from Sherlock Holmes through the Golden Age of Agatha Christie, to the hard-boiled private eye in Ross Macdonald's Lew Archer novels. Topics include the independent female private eye and social changes that allowed her emergence; the definition of mystery and detective fiction to include
Sophocles’ Oedipus Rex, Morrison’s Song of Solomon, and Freud’s theories; the enduring hold this genre has on imaginations; the fundamental concerns with justice and fear; and stimulation of the deep human fascination with the apparently inexplicable and the intellectual satisfaction of arriving at understanding. GER:DB-Hum

ENGLISH 145G. American Fiction since 1945
A survey of the American novel and short story since WWII focusing on themes of mass media and mass marketing, technology and information, poverty and prosperity, race and ethnicity. Included are works by Flannery O’Connor, Thomas Pynchon, Philip Roth, Raymond Carver, Maxine Hong Kingston, Sandra Cisneros and others. GER:DB-Hum
5 units, Win (McGurk, M)

ENGLISH 146. Development of the Short Story: Continuity and Innovation
Exploration of the short story form; ongoing evolution as diverse writers address love, death, desire. Maupassant, D.H. Lawrence, Woolf, Flannery O’Connor, Hurston, and others. Required for Creative Writing emphasis. All majors welcome. GER:DB-Hum
5 units, Spr (Tallent, E)

ENGLISH 146C. Hemingway, Hurston, Faulkner, and Fitzgerald
(Same as AMSTUD 146C) While Hemingway and Fitzgerald were flouting with the expatriate avant-garde in Europe, Hurston and Faulkner were performing anthropological field-work in the local cultures of the American South. Focus on the tremendous diversity of concerns and styles of four writers who marked America’s coming-of-age as a literary nation with their multifarious experiments in representing the regional and the global, the racial and the cosmopolitan, the macho and the feminist, the decadent and the impoverished. GER:DB-Hum, EC-AmerCul
5 units, Spr (Jones, G)

ENGLISH 150D. Women Poets
The development of women’s poetry from the 17th to the 20th century. How these poets challenge and enhance the canon, amending and expanding ideas of tone, voice and craft, while revising societal expectations of the poet’s identity. Poets include Katharine Philips, Letitia Barbauld, Elizabeth Barrett Browning, Charlotte Mew, Sylvia Plath, and Adrienne Rich. GER:DB-Hum
5 units, Win (Boland, E)

ENGLISH 150F. Going Long on the Short Poem
Why do we instinctively think of poems as short? Homer, Virgil, Chaucer, Milton, Pope. Wordsworth and T. S. Eliot wrote poems that are incredibly long. Taking a long view of short poetic forms in the Western tradition (from Callimachus to Elizabeth Bishop), we will assess the historical and artistic grounds for our inaccurate yet mythological judgment that a poem = short. By investigating the smallest unit that can still be called poem, we will test the concept of poem as such, asking what only a poem can do, what the point of a poem is. Why have great artists long chosen to go on to invest in short, small forms, when such artists could, just as well, make something impressively big. GER:DB-Hum
5 units, Aut (Putnam, P)

ENGLISH 151A. T. S. Eliot and 20th Century Poetry
An intensive introduction to the full range of Eliot’s work in poetry, drama, and prose criticism. Through close study of the most influential poetic and critic of his period we will also start to sketch out the formal shifts and thematic preoccupations of English poetry in the twentieth century. Major topics include: tradition and innovation; allusion; free verse and its alternatives; the city; wit and seriousness; time present and time past. GER:DB-Hum
5 units, Aut (Putnam, P)

ENGLISH 151B. John Berryman’s Dream Songs and His Archive
When John Berryman published the first volume of this Dream Songs in 1964, readers were baffled and intrigued by this stylistically radical work. Even his friend Robert Lowell was angered by the difficulty of this powerful, eccentric book, which won the Pulitzer Prize that year. Readings include The Dream Songs and the work of some of the writers that formed Berryman’s archive: Shakespeare, Freud, Hopkins, Yeats, Rilke, Frost, Hemingway, Williams, Lowell, Plath. GER:DB-Hum
5 units, Win (Fields, K)

ENGLISH 151C. Wastelands
Beginning with a sustained examination of T. S. Eliot’s The Waste Land, this class will explore the trope of ecological and/or spiritual devastation as it enters into other modernist (Hemingway, Cather, Faulkner, O’Neill) and postmodernist (Ballard, Atwood, McCarthy) projects, tracing this theme to its culmination in the contemporary zombie apocalypse. GER:DB-Hum
5 units, Spr (McGurk, M)

ENGLISH 152A. Mutually Assured Destruction: American Culture and the Cold War
(Same as AMSTUD 152A) The temperature of the early Cold War years via readings of Soviet and U.S. propaganda: documentary film and film noir; fiction by Bellow, Ellison, O’Connor, and Mailer; social theory by Arendt, the New York Intellectuals, and the Frankfurt School; and political texts such as Khrushchev’s Sources of Soviet Conduct, the Truman Doctrine, speech, and the National Security Council Report 68. Major themes include the discourse of totalitarianism, McCarthyism, strategies of containment, the nuclear threat, the figure of the outsider, and the counterculture, and the cultural shift from sociological to psychological idioms. GER:DB-Hum
5 units, not given this year

ENGLISH 152B. DuBois and American Culture
(Same as AFRICAM 152, AMSTUD 152B) His life and career. Focus on first half of his life from his Harvard doctoral dissertation to the end of the Harlem Renaissance in which he played a crucial role. Sources include his books on history and sociology, scholarly essays, novels, and journals that he edited. AAAS WIM course. GER:DB-Hum, EC-AmerCul
5 units, Spr (Elam, M)

ENGLISH 152G. Global Harlem Renaissance
(Same as AFRICAM 152G, AMSTUD 152G) Examination of the explosion of African American artistic expression during 1920s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of ¿vicious Modernism¿ as a ¿BangClash¿ that impacted and was impacted by political, cultural and aesthetic changes not only in the U.S. but Europe, the Caribbean and Latin America. Focus on the literature, graphic arts, and the music of the era in this global context. GER:DB-Hum, EC-AmerCul
5 units, not given this year

ENGLISH 154A. Narrative and Narrative Theory
An introduction to stories and storytelling—what is narrative? What is narrative fiction? How is it done, word by word, sentence by sentence? Must it be in prose? Can it be in pictures? How does storytelling change over time? Focus on various forms, genres, structures, and characteristics of narrative. GER:DB-Hum
5 units, Aut (Johnson, A), Win (Bender, J)

ENGLISH 154B. Critical Methods
Introduction to the different intellectual models which help us explain and interpret literary texts, genres, and movements.
5 units, Aut (Evans, M), Win (Elam, M), Spr (Jockers, M)

ENGLISH 156. Shakespeare
Reading and discussion of six plays of Shakespeare GER:DB-Hum
5 units, Aut (Orgel, S)

ENGLISH 164. Senior Seminar
Small-class format focused on the close reading of literary texts and analysis of literary criticism. This class answers the questions: How do literary critics do what they do? What styles and gambits make criticism vibrant and powerful? Goal is to examine how one goes about writing a lucid, intelligent, and convincing piece of literary criticism based on original research. WIM
5 units, Aut (Putnam, P), Win (Castle, T), Spr (Jarvis, C)

ENGLISH 170H. Textual Selves: Identity in Literature
A series of case studies, ranging from Augustine’s Confessions and Dante’s Divine Comedy to Graham Greene’s Quiet American and
Brecht's Galileo illustrating the way human identity has been represented in literary texts. GER:DB-Hum
ENGLISH 171. History of the English Language
(Same as LINGUIST 163) This course traces the history of the English language from its roots through its earliest written records into the present. It will trace the fundamental changes that English has undergone in terms of morphology, phonology, syntax, semantics, and vocabulary. It will also explore some of the social, cultural, and historical forces that affect language. The course emphasizes the pre-modern history of English. GER:DB-Hum
5 units, Spr (Karnes, M)

ENGLISH 172D. Introduction to Comparative Studies in Race and Ethnicity
(Same as CSRE 196C, PSYCH 155, SOC 146) How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. GER:DB-SocSci, EC-AmerCul
5 units, not given this year

ENGLISH 172E. The Literature of the Americas
(Same as AMSTUD 142, COMPLIT 142) This course offers a wide-ranging overview of the literatures of the Americas in comparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of nationhood, the twelfth-century avant-gardes, and distinctive modern episodes; the Harlem Renaissance, the Beats, magic realism, Noigandres, in unaccustomed conversation with each other. GER:DB-Hum, EC-AmerCul
5 units, Win (Greene, R; Saldivar, R)

ENGLISH 174H. The Triumph of the Normal: The English Novel from Bunyan to Orwell
Unlike French, Russian, North- and Latin-American novels, with their often oppositional or marginal heroes, the English novel has given a central role to the figure of the normal hero/ine, in the double sense of normative and widespread. We will try to uncover the social logic behind this choice, and follow the parallel evolution of novelistic style towards normal language. GER:DB-Hum
5 units, Spr (Moretti, F)

ENGLISH 181C. Shakespeare and Dickens
An exploration in the problems and stakes of reading two central but historically separated authors through one another. How theatrical are Dickens's novels and how much can we understand the theatrical, in Dickens, as a working-through of Shakespeare? How do the elements of performance manifest themselves in both? What substitutes for the role of narrator in Shakespearean drama? How can we understand these two authors as both paradigms of national writing -- defining normative British culture -- and as fundamentally eccentric? GER:DB-Hum
5 units, Win (Orgel, S; Woloch, A)

ENGLISH 183C. Feminism and American Literature
(Same as AMSTUD 183C, JEWISHST 153C) Exploration of the ways in which an eclectic group of American writers from the 19th century to the 20th have endeavored to enlarge the canvas on which women can paint their lives. Readings include stories, novels, journalism, poetry and drama that engage the social cultural, and political forces that can shape the kinds of futures students can imagine for themselves--forces that are further inflected by issues of race, ethnicity and class. GER:DB-Hum, EC-Gender
5 units, Win (Fishkin, S)

ENGLISH 183E. First Person: Autobiography and Memoir
Study of classic literary autobiographies and memoirs, including Gertrude Stein's Autobiography Of Alice B. Toklas; Ernest Hemingway's A Moveable Feast; and J.R. Ackerley's My Father And Myself, plus various more recent autobiographical experiments--e.g., graphic memoirs (Art Spiegelman's Maus and Alison Bechdel's Fun Home) as well as certain recent autobiographical films such as Capturing The Friedmans. GER:DB-Hum
5 units, not given this year

ENGLISH 184B. Text and Context in Humanities: Oedipus and His Vicissitudes
(Same as HUMNTIES 100) Tales of Modernity from Sophocles, Freud, Chekhov, Babel, and Woolf. Introduction to cross-disciplinary approach in humanities through foundational texts in the modern tradition. The main focus is on Sigmund Freud's Totem and Taboo (1913), alongside his ancillary writings. Contemporary social thought and historical scholarship provide the context (Georg Simmel, Norbert Elias, Karl Schorske, John Murray Cuddihy) while works of imaginative literature (Sophocles, Anton Chekhov, Isaac Babel, and Virginia Woolf) illuminate the significance of the Oedipus myth for understanding the inter-generational conflict in antiquity and modernity. GER:DB-Hum
3 units, not given this year

ENGLISH 185. Sex, Sacrifice, and Civilization: Baroque Opera and Tragedy
The revival of ancient tragedy in the Baroque opera house. The central mysteries of tragedy: knowledge of suffering, necessity of sacrifice, pleasure of pathos. How tragic drama and opera used poetry, dance, and music to sway the passions and prompt reflection. Greek myths of Medea, Iphigenia, Alceste, Idomeneo. Plays by Euripides and Racine; operas by Mozart, Gluck, and Charpentier. GER:DB-Hum
4-5 units, not given this year

ENGLISH 185F. Graphic Non-Fiction
Survey of the fusion of a new genre (creative non-fiction) and a revitalized medium (graphic storytelling) by reading journalism, biography, history, literary essay and memoir in graphic formats, we'll examine the results when serious artists and writers, often in collaboration, visually reinvent a genre. Sourced from the real world, the narratives we'll examine will have a power of human experience and historical significance that no fantasy or superhero character could ever hope to convey.
3 units, Aut (Johnson, A)

ENGLISH 186. Tales of Three Cities: New York, Chicago, Los Angeles
(Same as AMSTUD 186) How urban form and experience shape literary texts and how literary texts participate in the creation of place, through the literature of three American cities as they ascended to cultural and iconographical prominence: New York in the early to mid 19th century; Chicago in the late 19th and early 20th centuries; and Los Angeles in the mid to late 20th century. GER:DB-Hum
5 units, not given this year

ENGLISH 190. Intermediate Fiction Writing
May be taken twice for credit. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 90 or 91.
5 units, Aut (Clark, H), Win (Soileau, S), Spr (Clark, H)

ENGLISH 190F. Fiction into Film
Workshop for screenwriting students. Story craft, structure, and dialogue. Assignments include short scene creation, character development, and a long story. How fictional works are adapted to screenplays, and how each form uses elements of conflict, time, summary, and scene. Priority to seniors and Film Studies majors. Prerequisite: 90.
5 units, Win (Tanaka, S)

ENGLISH 190G. The Graphic Novel
Interdisciplinary. Evolution, subject matter, form, conventions, possibilities, and future of the graphic novel genre. Guest lectures. Collaborative creation of a graphic novel by a team of writers, illustrators, and designers. Prerequisite: consent of instructor.
5 units, Aut (Tanaka, S; Hutchins, S), Win (Tanaka, S; Hutchins, S)

ENGLISH 190T. Special Topics in Intermediate Fiction Writing
Focus on a particular topic or process. Work includes aspects of reading short stories and novels, writing at least 30-50 pages of fiction, and responding to peers' work in workshop. May be repeated for credit. Prerequisite: 90 or 91.
ENGLISH 190V. Reading for Writers
Taught by the Stein Visiting Fiction Writer. Prerequisite: 90.
5 units, Spr (Verghese, A)

ENGLISH 191. Intermediate Creative Nonfiction
Continuation of 91. Workshop. The application of advanced storytelling techniques to fact-based personal narratives, emphasizing organic writing, discovering audience, and publication. Guest lecturers, collaborative writing, and publication of the final project in print, audio, or web formats. Prerequisite: 91 or 90.
5 units, Aut (Kline, P), Win (Frisch, S), Spr (Hummel, M)

ENGLISH 191T. Special Topics in Intermediate Creative Nonfiction
Workshop. Continuation of 91. Focus is on forms of the essay. Works from across time and nationality for their craft and technique; experimentation with writing exercises. Students read and respond to each other's longer nonfiction projects. May be repeated for credit. Prerequisite: 91 or 90.
5 units, Spr (Hutchins, S; Tanaka, S)

ENGLISH 192. Intermediate Poetry Writing
May be taken twice. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 92.
5 units, Aut (Evans, J), Win (Ekiss, K), Spr (Perham, B)

ENGLISH 192V. The Occasions of Poetry
Taught by the Mohr Visiting Poet. Prerequisite: 92.
5 units, Win (Gluck, L)

ENGLISH 194. Individual Research
See section above on Undergraduate Programs, Opportunities for Advanced Work, Individual Research.
5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 195W. Writing Center Peer Tutor Seminar
(Same as PWR 195) For students selected to serve as peer writing tutors in the Stanford Writing Center and/or at other campus sites. Readings on and reflection about writing processes, the dynamics of writing and tutoring situations, tutoring techniques, learning styles, diversity, and ethics. Observation of tutoring sessions, written responses to readings, and other written work.
5 units, Spr (Bleakney, J)

ENGLISH 196A. Honors Seminar: Critical Approaches to Literature
Overview of literary-critical methodologies, with a practical emphasis shaped by participants' current honors projects. Restricted to students in the English Honors Program. Offered in conjunction with ENGLISH 196B. Honors Writing Workshop.
3 units, Aut (Rovee, C)

ENGLISH 196B. Honors Essay Workshop
Required of English honors students.
2 units, Aut (Obenzerger, H)

ENGLISH 197. Seniors Honors Essay
In two quarters.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGLISH 198. Individual Work
Undergraduates who wish to study a subject or area not covered by regular courses may, with consent, enroll for individual work under the supervision of a member of the department. 198 may not be used to fulfill departmental area or elective requirements without consent. Group seminars are not appropriate for 198.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 198L. Individual Work: Levinthal Tutorial
Undergraduate honors work individually with visiting Stegner Fellows in poetry, fiction, and if available, nonfiction. Students design their own curriculum; Stegner Fellows act as writing mentors and advisers. Prerequisites: 90, 91, or 92; submitted manuscript.
5 units, Win (Staff), Spr (Staff)

ENGLISH 199. Senior Independent Essay
Open, with department approval, to seniors majoring in non-Honors English who wish to work throughout the year on a 10,000 word critical or scholarly essay. Applicants submit a sample of their expository prose, proposed topic, and bibliography to the Director of Undergraduate Studies before preregistration in May of the junior year. Each student accepted is responsible for finding a department faculty adviser. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGLISH 233. Baroque and Neobaroque
(Same as COMPLIT 233, SPANLIT 293E) The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.
5 units, not given this year

ENGLISH 290. Advanced Fiction Writing
Workshop critique of original short stories or novel. Prerequisites: manuscript, consent of instructor, and 190-level fiction workshop.
5 units, Aut (Horack, B), Win (Tallent, E)

ENGLISH 291. Advanced Creative Nonfiction
Continuation of 191. Workshop. The application of advanced storytelling techniques to fact-based personal narratives, emphasizing organic writing, discovering audience, and publication. Guest lecturers, collaborative writing, and publication of the final project in print, audio, or web formats. Prerequisite: ENGLISH 191.
5 units, Spr (Hummel, M)

ENGLISH 292. Advanced Poetry Writing
Focus is on generation and discussion of student poems, and seeking published models for the work.
5 units, Spr (Evans, J)

ENGLISH 299D. Tooling Up for Digital Humanities
(Same as ENGLISH 399D, HISTORY 299D, HISTORY 399D) What are the digital humanities? The twenty-first century presents new opportunities in the humanities, such as unprecedented access to millions upon millions of digitized sources along with powerful technological tools to study those sources. Yet it also raises new challenges, such as the responsible and effective use of technology, and defining the nature of digital scholarship and communication. This workshop offers an introduction to fundamental concepts, methods, and issues within the growing field of digital humanities, including managing your online identity, digitizing sources, managing databases, text mining, spatial analysis, visualization, and pedagogy.
1 unit, not given this year

GRADUATE COURSES IN ENGLISH

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ENGLISH 201. The Bible and Literature
Differences in translations of the Bible into English. Recognizing and interpreting biblical allusion in texts from the medieval to modern periods. Readings from the Bible and from British, Canadian, American, and African American, and African literature in English.
5 units, Win (Parker, P)

ENGLISH 209. Paleography of Medieval and Early Modern Manuscripts
(Same as RELIGST 204) Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.
3-5 units, Win (Brown, G)

ENGLISH 218. Beyond the Blank Slate: Topics in Cognitive Science and Literature
A close look at the current field of cognitive approaches to literary study, using both literary texts and key debates in cognition and...
cultural Topics include: the narrative construction of reality; fiction, imagination, and play; art as a human universal; and the symbolic unconscious; the blank slates.

ENGLISH 230A. The Novel in Europe: The Age of Compromise, 1800-1848
(Same as COMPLIT 230A) The novel after the French revolution and the industrial take-off. Novelistic form and historical processes j; nation-building and the marriage market, political conservatism and the advent of fashion, aristocracy and bourgeoisie and proletariate; j focusing on how stylistic choices and plot structures offer imaginary resolutions to social and ideological conflicts. Authors will include Austen, Scott, Shelley, Stendhal, Pushkin, Balzac, Bronte.

ENGLISH 240. Sex and Violence in Jacobean Tragedy
The reign of James I saw one of the greatest flourishing of tragedy in history, yet it was a tragedy of a distinctive character: violent, macabre, melancholy, obsessed with sex and death. We will study this repertoire in all its aesthetic, performative and social dimensions. Plays by Shakespeare, Webster, Middleton, Beaumont and Fletcher, Ford, and Shirley. Film adaptations and opportunities for performance projects.

ENGLISH 257. Journalism and Imaginative Writing in America
(Same as AMSTUD 257, COMM 278) Walt Whitman spent twenty-five years as a journalist before publishing his first book of poems. Mark Twain was a journalist for twenty years before publishing his first novel. Topics include examination of how writers, backgrounds in journalism shaped the poetry or fiction for which they are best known; study of recent controversies surrounding writers who blurred the line between journalism and fiction. Writers include Whitman, Fanny Fern, Twain, Pauline Hopkins, Theodore Dreiser, Charlotte Perkins Gilman, Ernest Hemingway, Meridel LeSueur.

ENGLISH 261A. Geography, Time, and Trauma in Asian American Literature
(Same as AMSTUD 261A, ASNAMST 187) The notion that homes can be stable locations for cultural, racial, ethnic, and similarly situated identity categories. The possibility that there really is no place like home for Asian American subjects. How geography, landscape, and time situate traumas within fictional Asian American narratives.

ENGLISH 261E. Mixed Race Literature in the U.S. and South Africa
(Same as AFRICAAM 261E, AMSTUD 261E) As scholar Werner Sollors recently suggested, novels, poems, stories about interracial contacts and mixed race constitute an orphan literature belonging to no clear ethnic or national tradition. Yet the theme of mixed race is at the center of many national self-definitions, even in our U.S. post-Civil Rights and South Africa’s post-Apartheid era. This course examines aesthetic engagements with mixed race politics in these trans- and post-national dialogues, beginning in the 1700s and focusing on the 20th and 21st centuries.

ENGLISH 261F. Gender and Sexuality in Asian American Literature
(Same as AMSTUD 261F, ASNAMST 188) How writers and representations dialogue, challenge, resist, and complicate such formative constructions of gendered/sexual identities. How queer Asian Americans face multiple negations, that include potential expulsion from their own families and from various communities. Authors include Bharati Mukherjee, Russell Leong, Suki Kim, Shawn Wong, Louis Chu, Lawrence Chua, Catherine Liu, Jessica Hagedorn, Timothy Liu, Shani Mootoo, David Mura, among others. Secondary readings will include literary criticism, feminist and queer theory.

ENGLISH 262C. African American Literature and the Retreat of Jim Crow
(Same as AMSTUD 262C) After the unprecedented carnage of WWII, the postwar era witnessed the slow decline of the segregated Jim Crow order and the onset of landmark civil rights legislation. What role did African American literature and culture play in this historical process? What does this shift in racial theory and praxis mean for black literary production, a tradition constituted by the experience of slavery and racial oppression? Focus on these questions against the backdrop of contemporaneous developments: the onset of the Cold War, decolonization and the formation of the Third World, and the emergence of the new liberalism.

ENGLISH 262D. African American Poetics
(Same as AFRICAAM 262D, AMSTUD 262D) Examination of African American poetic expressive forms from the 1700s to the 2000s, considering the central role of the genre—from sonnets to spoken word, from blues poetry to new media performance—in defining an evolving literary tradition and cultural identity.

ENGLISH 262G. Globalization, Literature and the Environment
How does the study of world literatures help us to understand the globalization process? Globalization is often associated with recent social and economic shifts, but many scholars argue that its structures pre-date the history of colonialism. Turning to the natural world seems to provide a model to dismantle colonial and national boundaries and to speak in terms of shared planetary concerns such as global warming. Or does it? To examine these relations between globalization, empire, and ecology, we will turn to postcolonial writers in English from Africa, the Caribbean, South Asia, and the Pacific Islands and examine how they inscribe threats to the world environment. We will draw from diverse genres such as short stories, poetry, film, and the novel. Topics to be considered include indigenous and diasporic relationships to the land, plantation agriculture, gardening, nuclear militarization, oil drilling, and human and environmental sustainability.

ENGLISH 283A. The Paranoiac Imagination
Focus on paranoia as both an aesthetic concept and as metaphor for a suspicious mode of reading and interpreting literature. In addition to recent debates on paranoid reading (Jameson) versus repartitive reading (Sedgwick), surface reading, (Best and Marcus) versus symptomatic reading, (Althusser), we will examining conspiracy as a formal problem in a number of postwar American novels, poems, and films. Authors include Pynchon, DeLillo, Gibson, Tiptree Jr. (Alice Sheldon), and Spahr.

ENGLISH 301. Medieval Literature: Theory and Practice
Focus on medieval theories of composition and their practical applications beginning with rhetorical treatises that show how students were taught to read and write literature in the period and then focusing on literary texts that experiment, in form or content, with such prescriptions. Readings include works by Geoffrey of Vinsauf, John of Salisbury, Chaucer, Julian of Norwich, the Pearl-poet, and Langland.

ENGLISH 303. Experiment and the Novel
(Same as COMPLIT 353A) A double exploration of experiment in the novel from 1750 to 1900. Taking off from Zola's experimental fiction in the novel from Zola's experimental fiction in the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the novel from Zola's experimental fiction in the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the novel from Zola's experimental fiction in the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the novel from Zola's experimental fiction in the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the novel from Zola's experimental fiction in the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the novel from Zola's experimental fiction in the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the novel from Zola's experimental fiction in the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the novel from Zola's experimental fiction in the novel's aspect as scientific instrument.
ENGLISH 303F. Institutions of Enlightenment: The Invention of the Public Sphere
(Same as COMPLIT 331C) This course treats the cultural foundations upon which the Enlightenment instituted a public sphere and constituted its relationship to the private (or intimate) sphere. The aim is to explore the invention and naturalization of some of the most fundamental institutions of the Enlightenment -- institutions such as the public, the private, the market, public opinion, literature, and even more basic categories such as the individual, society, culture, knowledge, and politics.
5 units, Aut (Bender, J)

ENGLISH 305. 1900: Periodization and Literary History
The decades around 1900 have been claimed as both a beginning and an end in literary history. For Frank Kermode, 1900 has the look of a year that ends a saeculum; for Yeats, it was the year that Victorianism had been defeated. By focusing on literature written between, roughly, 1880 and 1915, we will ask how important the century is to disciplinary practice, what it means to read a text as Victorian or modernist, and how and period designations alter a critic's methods and concerns. Authors include Hopkins, James, Hardy.
5 units, Aut (Jarvis, C; Sullivan, H)

ENGLISH 308B. Gilded Age American Literature
Introduction to the creative innovations and the political tensions that stemmed from the formation of a multiculural society during the age of industrialization. We will attempt to place literary works in their historical and cultural contexts, while also surveying recent critical and theoretical developments in areas such as Realism, Naturalism, Regionalism, Minority and Race Studies, and so on.
5 units, Win (Jones, G)

ENGLISH 310. The Transatlantic Renaissance
(Same as COMPLIT 332) The emergence of a transatlantic culture in the early modern period. How is the Renaissance of Europe and England fashioned in a conversation with the cultural forms and material realities of the colonial Americas? And how do colonial writings expand and complicate the available understanding of the Renaissance? Readings in Columbus, More, Hakluyt, Spenser, Shakespeare, the Inca Garcilaso de la Vega.
5 units, Aut (Greene, B)

ENGLISH 314. Epic and Empire
(Same as COMPLIT 320A) Focus is on Virgil's Aeneid and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.
5 units, Spr (Parker, P)

ENGLISH 334B. Concepts of Modernity 2: The Study of Culture in the Age of Globalization
(Same as MTL 334B) A survey of 20th-century theory with focus on the concept of culture and methods of studying it from diverse disciplines including anthropology, anthropology, history, literary and cultural studies. Discussions will emphasize modernization, postmodernization and globalization processes in their relations to culture broadly understood, cultures in their regional, national and diasporic manifestations, and cultures as internally differentiated (high and low culture, subcultures, media cultures).
5 units, Win (Moya, P)

ENGLISH 344C. Shakespeare and Jonson from Stage to Book
A comparative study of Shakespeare and Jonson from script and performance to book, from actors, playhouses and audiences to authors, editors and readers.
5-5 units, Win (Orgel, S)

ENGLISH 345. Eighteenth-Century Satire
A study of the masterpieces of satire from eighteenth-century Britain with some attention to classical sources and contemporary analogues. What role does satire play in contemporary American culture? When does speech become too hot to handle? Do we have a requirement that people mean what they say? What is the role of invective in public discourse? Authors include: Horace, Juvenal, Jonathan Swift, Alexander Pope, Samuel Johnson, Frances Burney, Voltaire, George Orwell.
5 units, Win (Vermeule, B)

ENGLISH 356A. Emily Dickinson, American Artist
Emily Dickinson (1830-1886) was not a lily-livered homebody, but rather one of the most daring, mischievous, and ambitious artists that America has yet known. Aims of course are: with detailed attention to her poems and letters, investigation of the core themes and major artistic concerns of Dickinson’s life-work, comparing them with those of her contemporaries, many of whom she read; assessment of the key phases of Dickinson’s extensive influence on American poets and critics; and discovering why her work is currently at the heart of heated debates about right ways and wrong ways to read a poem.
5 units, Win (Putnam, P)

ENGLISH 360C. Recuperative Criticism
Consideration of a range of criticism which seeks to discover, rediscover or make the case for under-recognized, forgotten, out-of-fashion, peripheral, disorderly, too difficult, too popular, too old or too contemporary works of art. Is there a tradition of rules and patterns to such critical work, or should arguing for a new aesthetic object also entail new modes of argument itself? We will try to sketch out a genealogy and taxonomy for critical recuperation: its histories and chronology on the one hand; its forms, varieties and inner logic, on the other.
5 units, Spr (Woloch, A)

ENGLISH 360D. Freud and Literary Criticism
Examination of major writings by Freud with major ramifications for literary history and theory.--The Interpretation of Dreams, The 'Dora' and other case histories; The Psychopathology of Everyday Life, The 'Uncanny,' and so on-- with an eye toward understanding his intellectual influence and his usefulness to practical criticism.
5 units, Spr (Castle, T)

ENGLISH 363. The Bourgeois
(Same as COMPLIT 330) Goal is to define the ruling class of modern times. Social history (Weber, Hirschmann, Marx); literary texts (Defoe, Goethe, Gaskell); and Henrik Ibsen who produced an intransigent criticism of the bourgeois ethos.
5 units, not given this year

ENGLISH 364. Style
(Same as COMPLIT 364) The return of a term that was central in 20th-century criticism, and has all but disappeared in recent decades. Focus is on looking at concepts of style from various branches of linguistic and literary theory, and examination of some revealing examples in novels and films. Team taught with D.A. Miller from U.C. Berkeley.
5 units, not given this year

ENGLISH 365C. American Literature and Fascism
In 1928, Benito Mussolini, the rising fascist leader in Italy, published his Autobiography in America, and arguably for the United States, where many observers regarded him and his political movement as an exciting new development. Why were Americans fascinated by Mussolini and fascism? How did the fascist phenomenon play out in the American context? Why were some prominent American modernist writers especially compelled by the promise of regeneration, spiritual renewal, and total commitment offered by fascism? And why, by contrast, did many American writers envision the prospect of a fascist Europe as a threat to global peace and freedom, and as a struggle worth fighting for? This course will examine these and other questions via readings by Mussolini, T.S. Eliot, Ezra Pound, Ernest Hemingway, Hannah Arendt, Richard Wright, Roberto Bolaño, and Phillip Roth. Readings will also include a selection of historiographical and theoretical texts on fascism.
5 units, Aut (Rasberry, G)

ENGLISH 366C. Literature At Scale
The question of scale in literary and media-cultural analysis. What does it mean that poems and short stories are relatively small while novels are relatively big? Can we speak of the distribution of modern fiction along a quantitative stylistic continuum from minimalism (understatement) to maximalism (elaboration)? Alongside these objective quantities of culture, we will also consider scale as a matter of critical perspective; given that the attention span of criticism is highly variable, what can a self-consciousness of the question of scale bring to our critical practice?
5 units, Win (McGurl, M)

ENGLISH 372B. Milton and Blake
Epic questions, epic books. Paradise Lost. The First Book of Urizen. Milton, A Prophecy. Some attention to the visual tradition
surrounding these works, with a focus on the materialization of vision.

5 units, Spr (Gigante, D; Hoxby, B)

ENGLISH 373D. Shakespeare, Islam, and Others

5 units, not given this year

ENGLISH 384B. Romanticism and New Criticism

5 units, Spr (Rovee, C)

ENGLISH 390. Graduate Fiction Workshop
For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

3 units, Aut (Tallent, E), Win (Wolf, T), Spr (Johnson, A)

ENGLISH 392. Graduate Poetry Workshop
For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

3 units, Aut (Fields, K), Win (Boland, E), Spr (Di Piero, S)

ENGLISH 394. Independent Study
Preparation for first-year Ph.D. qualifying examination.

1-10 units, Sum (Staff)

ENGLISH 395. Ad Hoc Graduate Seminar
Three or more graduate students who wish to study a subject or an area not covered by regular courses and seminars may plan an informal seminar and approach a member of the department to supervise it.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGLISH 396. Introduction to Graduate Study for Ph.D. Students
Required for first-year graduate students in English. The major historical, professional, and methodological approaches to the study of literature in English.

5 units, Aut (Saldivar, R)

ENGLISH 396L. Pedagogy Seminar I
(Same as COMPLIT 396L) Required for first-year Ph.D. students in English, Modern Thought and Literature, and Comparative Literature. Preparation for surviving as teaching assistants in undergraduate literature courses. Focus is on leading discussions and grading papers.

2 units, Aut (Woloch, A)

ENGLISH 397A. Pedagogy Seminar II
Apprenticeship for second-year graduate students in English, Modern Thought and Literature, and Comparative Literature who teach in the Program in Writing and Rhetoric. Each student is assigned as an apprentice to an experienced teacher and sits in on classes, conferences, and tutorials, with eventual responsibility for conducting a class, grading papers, and holding conferences.

1 unit, Aut (Diogenes, M; Hunt, J; Bilsky, B)

ENGLISH 397W. What is the Future of English Studies?
Course begins by tracing the rise of English as a university discipline and then considers what the future holds. We will attempt to answer a series of deceptively simple questions: what is reading? what is writing? what should be our objects of study? what methods should we use to study them? and how do we teach these texts most effectively?

3-5 units, Aut (Lunsford, A)

ENGLISH 397X. The Teaching of Literature: How We Teach & Why
(Same as EDUC 405X) This course is designed for graduate students in English and English Education who are interested in questions surrounding the teaching of literature at both the secondary and collegiate level. The course weaves together theoretical considerations of the purposes for teaching literature, including assumptions about the kinds of readings and readers literature teachers are trying to create, with training of pedagogical practices.

2-4 units, not given this year

ENGLISH 398. Research Course
A special subject of investigation under supervision of a member of the department. Thesis work is not registered under this number.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 398L. Literary Lab
Gathering and analyzing data, constructing hypotheses and designing experiments to test them, writing programs [if needed], preparing visuals and texts for articles or conferences. Requires a year-long participation in the activities of the Lab.

5 units, Aut (Moretti, F; Jockers, M), Win (Moretti, F; Jockers, M), Spr (Moretti, F; Jockers, M)

ENGLISH 398R. Revision and Development of a Paper
Students revise and develop a paper under the supervision of a faculty member with a view to possible publication.

4-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 398W. Orals, Publication and Dissertation Workshop
For third- and fourth-year graduate students in English. Strategies for studying for and passing the oral examination, publishing articles, and for writing and researching dissertations and dissertation proposals. May be repeated for credit.

2 units, Aut (Woloch, A), Win (Woloch, A), Spr (Woloch, A)

ENGLISH 399. Thesis
For M.A. students only. Regular meetings with thesis advisers required.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 399D. Tooling Up for Digital Humanities
(Same as ENGLISH 299D, HISTORY 299D, HISTORY 399D) What are the digital humanities? The twenty-first century presents new opportunities in the humanities, such as unprecedented access to millions upon millions of digitized sources along with powerful technological tools to study those sources. Yet it also raises new challenges, such as the responsible and effective use of technology, and defining the nature of digital scholarship and communication. This workshop offers an introduction to fundamental concepts, methods, and issues within the growing field of digital humanities, including managing your online identity, digitizing sources, managing databases, text mining, spatial analysis, visualization, and pedagogy.

1 unit, not given this year

ENGLISH 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH FOR FOREIGN STUDENTS (EFSLANG) COURSES

UNDERGRADUATE COURSES IN ENGLISH FOR FOREIGN STUDENTS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

EFSLANG 197. Directed Study
1-3 units, Aut (Hubbard, P), Win (Staff), Spr (Staff), Sum (Staff)

EFSLANG 683P. Workshop in Pronunciation for International Students
(1-2 units). Provides support in the development of clear, comprehensible English pronunciation. Includes attention to individual sounds as well as stress, rhythm, and intonation. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

1-2 units, Sum (Staff)

EFSLANG 683R. Workshop in Reading and Vocabulary for
International Students
(1-2 units). Provides support in the development of English reading skills for academic purposes, including work on comprehension, speed, and critical interpretation, along with strategies for improving vocabulary. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.
1-2 units, Sum (Staff)

EFSLANG 683S. Workshop in Oral Communication for International Students
(1-2 units) Provides support in the development of listening and speaking skills in English, including academic listening, small group discussion, oral presentation, and intercultural communication. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.
1-2 units, Sum (Staff)

EFSLANG 683W. Workshop in Written Communication for International Students
(1-2 units). Provides support in the development of English writing skills for non-natives. Writing assignments are negotiated with the instructor and may include practice in composition, SAT or TOEFL writing, and writing university application essays and statements of purpose. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.
1-2 units, Sum (Staff)

GRADUATE COURSES IN ENGLISH FOR FOREIGN STUDENTS
Primarily for graduate students; undergraduates may enroll with consent of instructor.

EFSLANG 397. Directed Study
1-3 units, Aut (Hubbard, P), Win (Staff), Spr (Staff), Sum (Staff)

EFSLANG 688V. Intensive English and Academic Orientation for Stanford Visiting Scholars
Goal is to improve English proficiency and introduce the university environment. Writing, pronunciation, listening, discussion, oral presentation, and spoken usage. Enrollment limited to 14. 1-3 units, Sum (Staff)

EFSLANG 689E. Learning English on Your Own
Independent English language learning. Learning strategies and objectives, setting and maintaining practice schedules, and evaluating progress. Focus is on exploiting web-based resources. Individual meetings.
1 unit, Sum (Staff)

EFSLANG 689H. American Humor
Analysis of jokes, humorous stories, and situations through modern media. Practice in advanced listening comprehension and English idioms.
1 unit, Sum (Staff)

EFSLANG 689L. Living in the USA
Life and relationships outside the University classroom. Goal is to familiarize individual students with the cultural expectations and forms of language use in a variety of situations in the University community and in other social situations. Enrollment limited to 14.
1 unit, Sum (Staff)

EFSLANG 689P. Pronunciation
The sounds of English, and stress, intonation, and rhythm patterns important to natural-sounding speech. Enrollment limited to 14.
2 units, Sum (Staff)

EFSLANG 689T. Interacting in California's Vineyard Culture
Focuses on communicative skills in the context of California's renowned wine culture. Emphasis on the language of wine using appropriate terminology, and interacting knowledgeably with restaurant and retail wine staff. Topics include learning the fundamentals of vineyard techniques, varietal characteristics, tasting techniques, drinking and ordering etiquette. Course is co-taught by a wine expert and an ESL instructor. Class consists of a short interactive lecture, a communicative activity such as role playing, and a tasting of four specially selected wines. Participants must be at least 21 years old. Fee.
1 unit, Sum (Staff)

EFSLANG 689V. Vocabulary and Idiom
1 unit, Sum (Staff)

EFSLANG 689W. Working in the USA
The language and culture of the workplace. Goal is to familiarize international students with the cultural expectations of situations in the business setting and in social situations related to business.
1 unit, Sum (Staff)

EFSLANG 690A. Interacting in English
Strategies for communicating effectively in social and academic settings. Informal and formal language used in campus settings, including starting and maintaining conversations, asking questions, making complaints, and contributing ideas and opinions. Simulations and discussions, with feedback on pronunciation, grammar, and usage. Enrollment limited to 14.
1-3 units, Aut (Streichler, S), Win (Lockwood, R), Spr (Lockwood, R)

EFSLANG 690B. Academic Discussion
Skills for effective participation in classroom settings, seminars, and research group meetings. Pronunciation, grammar, and appropriateness for specific tasks. Feedback on language and communication style. Enrollment limited to 14. May be repeated once for credit. Prerequisite: 690A or consent of instructor.
1-3 units, Aut (Streichler, S), Win (Rylance, C), Spr (Lockwood, R)

EFSLANG 690C. Advanced Interacting in English
Communication skills for extended discourse such as storytelling and presenting supported arguments. Development of interactive listening facility and overall intelligibility and accuracy. Goal is advanced fluency in classroom, professional and social settings. Identification of and attention to individual patterned errors. May be repeated once for credit. Prerequisite: 690B or consent of instructor. Enrollment limited to 14.
1-3 units, Win (Lockwood, R)

EFSLANG 691. Oral Presentation
For advanced graduate students. Practice in academic presentation skills; strategy, design, organization, and use of visual aids. Focus is on improving fluency and delivery style, with videotaping for feedback on language accuracy and usage. Enrollment limited to 14. May be repeated once for credit.
1-3 units, Aut (Rylance, C), Win (Hubbard, P), Spr (Oman, A), Sum (Staff)

EFSLANG 692. Speaking and Teaching in English
For non-native speakers who must teach in English. Focus is on developing clarity, intelligibility, and effectiveness through weekly presentations simulating actual teaching assistant responsibilities. Enrollment limited to 14. May be repeated once for credit.
1-3 units, Aut (Rylance, C), Win (Streichler, S), Spr (Rylance, C)

EFSLANG 693A. Listening Comprehension
Strategies for effective listening in an academic setting, focusing on identifying key ideas in lectures. Practice in understanding words and phrases commonly encountered in classroom settings. Computer-based exercises for comprehension of rapid, natural speech. Enrollment limited to 14.
1-3 units, Aut (Lockwood, R)

EFSLANG 693B. Advanced Listening Comprehension, and Vocabulary Development
Listening strategies and vocabulary for understanding English in academic and non-academic contexts. Discussion and interpretation of communicative intent. Computer-based and video exercises across a range of genres; individual project. May be repeated once for credit. Prerequisite: 693A or consent of instructor.
1-3 units, Aut (Hubbard, P), Win (Hubbard, P), Spr (Hubbard, P)
EFSLANG 694. Communication Strategies in Professional Life
For advanced graduate students. Task-based practice of language appropriate for professional settings in industry and related teamwork. Simulation of the roles of manager, applicant, subordinate, and coworker. Prerequisite: 693A, or consent of instructor. Enrollment limited to 14.
1-3 units, Aut (Rylance, C), Spr (Rylance, C)

EFSLANG 695A. Pronunciation and Intonation
1-3 units, Aut (Mawson, C), Win (Mawson, C), Spr (Mawson, C), Sum (Staff)

EFSLANG 695B. Advanced Pronunciation and Intonation
Continuation of 695A, focusing on American English sounds, stress, rhythm, and intonation patterns. Emphasis is on self-monitoring, integrated with short presentations. Biweekly tape assignments and tutorials. Enrollment limited to 14. May be repeated for credit three times. Prerequisite: 695A.
1-3 units, Aut (Oman, A), Win (Oman, A), Spr (Mawson, C)

EFSLANG 696. Understanding American Humor
Recognizing rhetorical devices, jokes, and character types common to spoken humor in film and television programs. Crosscultural discussion. Prerequisites: 690B, 693B or consent of the instructor. Enrollment limited to 14.
1-3 units, Spr (Streichler, S)

EFSLANG 697. Writing Fundamentals
Focus is on improving grammatical accuracy and vocabulary, building fluency, and learning the structure and conventions of English correspondence, reports, and short academic papers. Enrollment limited to 14.
1-3 units, Aut (Rylance, C), Win (Lockwood, R), Spr (Lockwood, R)

EFSLANG 698A. Writing Academic English
Strategies and conventions for graduate writing. Emphasis is on fluency, organization, documentation, and appropriateness for writing tasks required in course work. Enrollment limited to 14. May be repeated once for credit.
1-3 units, Aut (Kevetch, A), Win (Lockwood, R), Spr (Rylance, C), Sum (Staff)

EFSLANG 698B. Advanced Graduate Writing
Focus on clarity, accuracy, and appropriate style. For graduate students experienced in English writing and currently required to write for courses and research. Class meetings and individual conferences. Prerequisite: 698A. Enrollment limited to 14. May be repeated once for credit.
1-3 units, Aut (Streichler, S), Win (Rylance, C), Spr (Streichler, S), Sum (Staff)

EFSLANG 698C. Writing and Presenting Research
For advanced graduate students completing major research projects. Revising and editing strategies for preparing papers, conference abstracts, and poster presentations. Adapting content and style to different audiences. Students present their research with participant feedback. Enrollment limited to 14. May be repeated once for credit. Prerequisite: 698B and 691 or consent of instructor.
1-3 units, Aut (Hubbard, P)

ENVIRONMENT AND RESOURCES (ENVRES) COURSES

GRADUATE COURSES IN ENVIRONMENT AND RESOURCES
Primarily for graduate students; undergraduates may enroll with consent of instructor.

ENVRES 200. Sustaining Action: Research, Analysis and Writing for the Public
(Same as EARTHSYS 200) Preference to graduate students and senior undergraduates in environmental, natural and social sciences, engineering, journalism. Students help produce and publish SAGE, an eco advice column, by choosing, researching, and answering questions about sustainable living submitted by Stanford alumni and the general public. Prerequisite: admission by application, available from instructor, thyaden@stanford.edu, and due 9/21/11 (Aut) or 3/28/12 (Spr). (Meets Earth Systems WIM requirement).
3 units, Aut (Hayden, T), Spr (Hayden, T)

ENVRES 210. Communication and Leadership Skills
(Same as BIO 388) Focus is on delivering information to policy makers and the lay public. How to speak to the media, Congress, and the general public; how to write op-eds and articles; how to package ideas including titles, abstracts, and CVs; how to survive peer review, the promotion process, and give a job talk; and how to be a responsible science advocate.
2 units, not given this year

ENVRES 215. Digital Storytelling for Researchers
A starting point in multimedia storytelling for graduate students who are actively involved in research. Students gain project-based experience in still photography, audio podcasting, online slideshows and web video production and editing, enabling them to record and report their own research stories from the lab and field. Enrollment limited, consent of the instructor required.
1-3 units, Win (Hayden, T)

ENVRES 220. Our Coastal Society: An interdisciplinary seminar on ocean/coastal themes
Utilizing guest speaker presentations from various academic and non-academic organizations, this seminar will explore marine science and policy for the Pacific Coast that informs natural resource as well as conservation decision-making and future challenges. Topics to be covered may include tuna and shark research along the California coast, kelp forest ecosystems, fisheries management, marine spatial planning, legislative advances such as the Marine Life Protection Act (MLPA), climate change threats to our coast, the importance of the US west coast in the context of Pacific Ocean ecosystem health, and others. Students enrolled in the course will be expected to attend all classes, actively participate in discussion following the guest lecture, and submit a short summary of each presentation.
1 unit, Win (Caldwell, M; Becker, A; Teneva, L)

ENVRES 225. E-IPER Current Topics Seminar
For E-IPER Ph.D and Joint M.S. students only. Weekly presentations of E-IPER students’ research and other program-related projects. Occasional guest speakers. Active participation including individual or team presentation and attendance required for credit. May be repeated once for credit.
1 unit, Aut (Doyle, H), Win (Doyle, H), Spr (Doyle, H)

ENVRES 260. Global Water: Challenges and Opportunities
Explores challenges in the global supply, quality, and accessibility of freshwater. Speakers from Stanford and outside organizations on key topics such as threats due to climate change, agriculture demands, challenges of urbanization, water and sanitation, as well as discussion of policy, market, technology, and other potential solutions. Weekly readings in advance of speaker. Active participation expected of all enrolled students; those enrolled for 2-3 units will have one or more additional written assignments and will facilitate one or more discussions.
1-3 units, Spr (Staff)

ENVRES 270. Graduate Practicum in Environment and Resources
Opportunity for E-IPER students to pursue areas of specialization in an institutional setting such as a laboratory, clinic, research institute, governmental agency, non-governmental organization, or multilateral organization. Meets US CIS requirements for off-campus employment with endorsement from designated school official.
1-9 units, Aut (Vitousek, P), Win (Vitousek, P), Spr (Vitousek, P), Sum (Staff)

ENVRES 277C. Specialized Writing and Reporting: Environmental Journalism
(Same as COMM 177C, COMM 277C) (Graduate students register for COMM / ENVRES 277C) Practical, collaborative, writing-intensive course in science-based environmental journalism. Science and journalism students learn how to identify and write
engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, how to cover the environment and science beats effectively, and how to build bridges between the worlds of journalism and science. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, ENVRES 200 or consent of instructor. Admissions by application only, available from hayden@stanford.edu and due 3/28/12.

4-5 units, Spr (Hayden, T)

**ENVRES 290. Capstone Project Seminar in Environment and Resources**
Required for E-IPER Joint M.S. students; optional for E-IPER Ph.D. students. Propose, conduct and publicly present final individual or team projects demonstrating the integration of professional (M.B.A., J.D., or M.D.) and M.S. in Environment and Resources degrees. Presentation and submission of final product required.
1-3 units, Aut (Vitousek, P; Standridge, N), Spr (Vitousek, P; Standridge, N)

**ENVRES 310. Environmental Forum Seminar**
Required core course for first year E-IPER Ph.D. students and all Joint M.S. students, other than Joint M.B.A./M.S. students; optional for Joint M.B.A./M.S. students and other graduate students with consent of instructor. Conceptual frameworks, analytical approaches, validity of conclusions from an interdisciplinary perspective. Participants attend various environmentally-focused seminars on campus selected by faculty and students, followed by student-facilitated discussions.
1-2 units, Aut (Root, T; Curran, L)

**ENVRES 315. Environmental Research Design Seminar**
Required core course for first year E-IPER Ph.D. students; optional for Joint M.S. students; other graduate students with instructor's permission. Series of faculty presentations and student-led discussions on interdisciplinary research design as exemplars of the research design theories discussed in ENVRES 320. Designing Environmental Research. Topics parallel the ENVRES 320 syllabus. Corequisite: ENVRES 320.
1-2 units, Win (Staff)

**ENVRES 320. Designing Environmental Research**
Required core course restricted to first year E-IPER Ph.D. students. Research design options for causal inference in environmentally related research. Major philosophies of knowledge and how they relate to research objectives and design choices. Identification of critical elements within a broad range of research designs. Evaluation of the types of research questions for which different designs are suited, emphasizing fit between objectives, design, methods, and argument. Development of individual research design proposals, including description and justification understandable to a non-specialist.
3-4 units, Win (Davis, J)

**ENVRES 330. Research Approaches for Environmental Problem Solving**
Required core course for first year E-IPER Ph.D. students. How to develop and implement interdisciplinary research in environment and resources. Assignments include development of research questions, a preliminary literature review, and a summer funding proposal. Course is structured on peer critique and student presentations of work in progress. Corequisite: ENVRES 398 with a faculty member chosen to explore a possible dissertation topic.
3 units, Spr (Vitousek, P; Ardoin, N)

**ENVRES 380. Collaborating with the Future: Launching Large Scale Sustainable Transformations**
(Same as ME 380) This project-based d.school class combines Design Thinking Processes, Behavioral Sciences, and elements of Diffusion Theory. Tools and theories introduced in class will be used to structure large-scale transformations that simultaneously create value on environmental, societal, and economic fronts. We encourage students to use this class as a launching pad for real initiatives. Primarily meant for Graduate Students. (Especially qualified/motivated Seniors will be considered). Admission to the class is through an application process which ends on March 3. Please find instructions and applications at https://dschool.stanford.edu/groups/largetransformations.

3-4 units, Spr (Banerjee, S; Staff, 1)

**ENVRES 398. Directed Individual Study in Environment and Resources**
Under supervision of an E-IPER affiliated faculty member on a subject of mutual interest. Joint M.S. students must submit an Independent Study Agreement for approval.
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**ENVRES 399. Directed Research in Environment and Resources**
For advanced graduate students. Under supervision of an E-IPER affiliated faculty member. Joint M.S. students must submit an Independent Study Agreement for approval.
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**ENVRES 410. Ph.D. Qualifying Tutorial**
For Ph.D. students only. Under supervision of an E-IPER affiliated faculty member.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**ENVRES 538. Environmental Science for Managers and Policy Makers**
(Same as LAW 608, OIT 538.) Fundamental science of ecosystems, climate and energy systems by building decision-support models for managing these systems, development of widely-applicable skills in model representation in a spreadsheet, optimization, and Monte Carlo simulation. This course is open only to students in the E-IPER Ph.D program or Joint M.S. in Environment and Resources program and is required for Joint M.B.A. with M.S. in Environment and Resources students. ENVRES 538 does not assume knowledge of environment science or proficiency in quantitative analysis beyond admission requirements for the MBA program. GSB students should register under OIT 538. GSB students planning to apply to the E-IPER joint M.S. program should take either OIT 538 or 539 in their first year.
4 units, Win (Plambeck, E)

**ENVRES 539. Advanced Environmental Science for Managers and Policy Makers**
(Same as LAW 619 and OIT 539.) Fundamental science of ecosystems, climate and energy. Spreadsheet modeling, optimization, and Monte Carlo simulation applied to resource management and environmental policy. Accelerated version of ENVRES 538 for students with background in modeling. Allocates more class time to environmental/energy science and implications for management and policy, and less class time to fundamentals of modeling/optimization/simulation. This course is open only to students in the E-IPER Ph.D. program or Joint M.S. in Environment and Resources program. ENVRES 539 does not assume knowledge of environmental science or proficiency in quantitative analysis beyond admission requirements for the MBA program. GSB students should register under OIT 539. GSB students planning to apply to the E-IPER joint M.S. program should take either OIT 538 or 539 in their first year.
4 units, Win (Plambeck, E)

**ENVRES 540. Environmental Science for Managers II**
Introduction to renewable sources of electricity and fuel, and is required for Joint M.B.A. with M.S. in Environment and Resources students. GSB students should register under OIT 540. Students are strongly encouraged, but not required, to take OIT/ENVRES 538 or OIT/ENVRES 539 prior to taking this course.
1 unit, Win (Plambeck, E)

**ENVRES 801. TGR Project**
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**ENVRES 802. TGR Dissertation**
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
ENVIRONMENTAL EARTH SYSTEM SCIENCE (EESS) COURSES

UNDERGRADUATE COURSES IN ENVIRONMENTAL EARTH SYSTEM SCIENCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

EESS 2. Earth System History (Same as EARTHSYS 2) The evolution of Earth's systems from formation to the present. Couplings and relationships among biosphere, lithosphere, hydrosphere, and atmosphere. Topics include the evolution of life, origin of the oceans, atmosphere and continents, and changes in climate. Modern climate change and anthropogenic effects. GER: DB-NatSci 3 units, Win (Chamberlain, P)

EESS 8. The Oceans: An Introduction to the Marine Environment (Same as EARTHSYS 8) For non-majors and majors in earth science or environmental science. Students will learn about the major ocean ecosystems and how they function both naturally and under the influence of human activities. Emphasis will be placed on the dominant organisms of each ecosystem and how they interact with each other and their physical and chemical environment. The types of ecosystems discussed will include coral reefs, deep-sea hydrothermal vents, coastal upwelling systems, blue-water oceans, estuaries, near-shore dead zones, etc. The course will incorporate a mix of lectures, multi-media presentations, and group activities. 3 units, Spr (Arrigo, K)

EESS 37N. Energy and the Environment on the Back of an Envelope (Same as EARTHSYS 37N) Preference to freshmen. How quantitative understanding of the Earth helps inform decisions about energy supply. How can enough energy be provided to support future growth and development throughout the world without damaging the natural environment? Focus is on simple quantitative observations and calculations that facilitate evaluation of potential solutions to this problem; algebra only, no calculus. GER: DB-NatSci 3 units, not given this year

EESS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration (Same as EARTHSYS 38N, GES 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include The Worst Journey in the World by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledding trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dubnar) GER: DB-NatSci 3 units, NEXTYEAR

EESS 39N. The Carbon Cycle: Reducing Your Impact (Same as EARTHSYS 39N) Preference to freshmen. Changes in the long- and short-term carbon cycle and global climate through the burning of fossil fuels since the Industrial Revolution. How people can shrink their carbon footprints. Long-term sources and sinks of carbon and how they are controlled by tectonics and short-term sources and sinks and the interaction between the biosphere and ocean. How people can shrink their carbon footprints. Held at the Stanford Community Farm. GER: DB-NatSci 3 units, not given this year

EESS 41N. The Global Warming Paradox (F.Sem) (Same as EARTHSYS 41N) Stanford Introductory Seminar. Preference to freshman. Focus is on the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Topics include: Earth's energy balance; detection and attribution of climate change; the climate response to enhanced greenhouse forcing; impacts of climate change on natural and human systems; and proposed methods for curbing further climate change. Sources include peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks. 3 units, Aut (Diffenbaugh, N)

EESS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough (Same as EARTHSYS 46N) Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's Changes in a California Estuary: A Profile of Elkhorn Slough. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management. 3 units, alternate years, not given this year

EESS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay (F.Sem) (Same as EARTHSYS 49N) Stanford Introductory Seminar. This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended. 3 units, Spr (Francis, C)

EESS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays (S.Sem) (Same as EARTHSYS 56Q) Stanford Introductory Seminar. Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay. GER: DB-NatSci 3 units, Spr (Dubnar, R)

EESS 57Q. Climate Change from the Past to the Future (S.Sem) (Same as EARTHSYS 57Q) Stanford Introductory Seminar. Preference to sophomores. Numeric models to predict how climate responds to increases in greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies. 3 units, Win (Chamberlain, P)

EESS 61Q. Food and security (S.Sem) (Same as EARTHSYS 61Q, INTNLREL 61Q) Stanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security. 3 units, Aut (Naylor, R; Stedman, S)

EESS 101. Environmental and Geological Field Studies in the Rocky Mountains (Same as EARTHSYS 100, GES 101) Three-week, field-based
program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.

3 units, Aut (Chamberlain, P)

EESS 105. Food and Community: New Visions for a Sustainable Future
(Same as EARTHYSYS 105) Service and research focused on providing healthy and environmentally friendly food for the under served in our community. Hands-on collaboration with the Stanford Glean student group, the Stanford Community Garden, and San Francisco nonprofits. Coverage of the broad spectrum from garden development to food dispersal to the needy. Design and implementation of projects that address an aspect of food and social justice, such as urban farming in low-income communities and sustainable food networks for the elderly. Service Learning Course (certified by Haas Center).

3-5 units, Aut (Chamberlain, P), Spr (Chamberlain, P)

EESS 106. World Food Economy
(Same as EARTHYSYS 106, ECON 106) The interrelationships among food, populations, resources, and economic development. The role of agricultural and rural development in achieving economic and social progress in low-income nations. Emphasis is on public sector decision making as it relates to food policy.

5 units, Win (Naylor, R; Falcon, W)

EESS 111. Biology and Global Change
(Same as BIO 117, EARTHYSYS 111) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing. GER: DB-NatSci

4 units, Win (Vitousek, P; Arrigo, K)

EESS 112. Human Society and Environmental Change
(Same as EARTHYSYS 112, HISTORY 103D) Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1A

4 units, Aut (Naylor, R; Frank, Z; Piccarro Gariazzo, R)

EESS 117. Earth Sciences of the Hawaiian Islands
(Same as EARTHSCI 117, EARTHYSYS 117) Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano origin, magma, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landfill stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.

4 units, alternate years, not given this year

EESS 131. Communicating Environmental Research Using Narratives and Stories
(Same as EESS 231, EARTHYSYS 131, EARTHYSYS 231) Creative strategies by which earth scientists can overcome impediments to scientific literacy. Construction of stories and narratives out of research. The role of imagination and cognitive perception in environmental issues. Barriers and problems that arise in risk and science awareness. Connections between environmentalism and environmental science. Environmental issues in fictional narrative. The responsible function for earth scientists in public debates. Reflections on the role of science in current and future issues likely to involve members outside of science. Priority given to students seeking degrees in the School of Earth Sciences.

1 unit, not given this year

EESS 134. Stable Isotopes in Biogeochemistry
(Same as EARTHYSYS 134, EARTHYSYS 234, EESS 234) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals. GER: DB-NatSci

3 units, not given this year

EESS 141. Remote Sensing of the Oceans
(Same as EARTHYSYS 141, EARTHYSYS 241, EESS 241) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER: DB-NatSci

3-4 units, alternate years, not given this year

EESS 143. Marine Biogeochemistry
(Same as EARTHYSYS 143, EARTHYSYS 243, EESS 243) Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget. GER: DB-NatSci

3-4 units, Win (Arrigo, K)

EESS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation
(Same as EARTHYSYS 146A, EARTHYSYS 246A, EESS 246A, GEOPHY 146A, GEOPHY 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

3 units, Win (Thomas, L; Diffenbaugh, N; Skinner, C), alternate years, not given next year

EESS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation
(Same as EARTHYSYS 146B, EARTHYSYS 246B, EESS 246B, GEOPHYS 146B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

3 units, Spr (Thomas, L; Diffenbaugh, N), alternate years, not given next year

EESS 147. Introduction to Physical Oceanography
(Same as CEE 164, CEE 262D) The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). GER: DB-NatSci

4 units, Win (Fong, D)

EESS 153. Soils and Nutrient Cycling in the Amazon Rainforest
(Same as EARTHYSYS 153, EARTHYSYS 253, EESS 253) Focus is on Amazon soils as dynamic but also as a non-renewable natural resource, especially in the impoverished soils. Course will cover the importance of the soils in the Amazon region rain forest
ecosystem sustainability and the geographic distribution of the main soils classes soils in the Amazon region. Additional topics include the chemical and mineralogical characteristics of these soils classes and the factors influencing elemental cycling within the terrestrial Amazon rain forest ecosystem.

3 units, Win (Staff)

**EESS 155. Science of Soils**
(Same as EARTHSYS 155) Physical, chemical, and biological processes within soil systems. Emphasis is on factors governing nutrient availability, plant growth and production, land-resource management, and pollution within soils. How to classify soils and assess nutrient cycling and contaminant fate. Recommended: introductory chemistry and biology. GER: DB-NatSci

4 units, Spr (Fendorf, S)

**EESS 156. Soil and Water Chemistry**
(Same as EARTHSYS 156, EARTHSYS 256, EESS 256) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology. GER: DB-NatSci

1-4 units, Win (Fendorf, S)

**EESS 160. Statistical Methods for Earth and Environmental Sciences: General Introduction**
(Same as EARTHSYS 160) Extracting information from data using statistical summaries and graphical visualization, statistical measures of association and correlation, distribution models, sampling, error estimation and confidence intervals, linear models and regression analysis, introduction to geostatistical software and spatial data with geostatistics, applications including environmental monitoring, natural hazards, and experimental design. GER: DB-Math

3 units, not given this year

**EESS 161. Statistical Methods for the Earth and Environmental Sciences: Geostatistics**
(Same as EARTHSYS 161, ENERGY 161) Statistical analysis and graphical display of data, common distribution models, sampling, and regression analysis. Introduction to geostatistics and spatial data with geostatistics, applications including environmental monitoring, natural hazards, and experimental design. GER: DB-NatSci

3-4 units, not given this year

**EESS 162. Remote Sensing of Land**
(Same as EARTHSYS 142, EARTHSYS 242, EESS 262) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

4 units, Win (Lambin, E)

**EESS 164. Fundamentals of Geographic Information Science (GIS)**
(Same as EARTHSYS 144) Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments. GER: DB-NatSci

4 units, Aut (Thomas, N; Carbajales, P)

(Same as EARTH-SYS 173, EARTHSYS 273, EESS 273) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation, Field trip to aquaculture farm and guest lectures.

3 units, Spr (Staff), alternate years, not given next year

**EESS 180B. Principles and Practices of Sustainable Agriculture**
(Same as EARTHSYS 180B) Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing.

3-4 units, Aut (Arcihy, J), Spr (Arcihy, J)

**EESS 181. Concepts of Urban Agriculture**
(Same as EARTHSYS 181, EARTHSYS 281, EESS 281) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use planning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Attendance at first class is mandatory. Enrollment is limited. Enrollment permissions will be determined after first class meeting.

3 units, Win (Matson, P)

**EESS 182. Current Issues in Sustainable Agriculture**
(Same as EARTHSYS 182, EARTHSYS 282, EESS 282) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers.

2 units, not given this year

**EESS 183. Food Matters: Agriculture in Film**
(Same as EARTHSYS 183, EARTHSYS 283, EESS 283) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

1 unit, Win (Staff)

**EESS 184. Climate and Agriculture**
(Same as EARTHSYS 184, EARTHSYS 284, EESS 284) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206.

3-4 units, Spr (Lobell, D)

**EESS 241. Remote Sensing of the Oceans**
(Same as EARTH-SYS 141, EARTHSYS 241, EESS 141) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER: DB-NatSci

3-4 units, alternate years, not given this year

**GRADUATE COURSES IN ENVIRONMENTAL EARTH SYSTEM SCIENCE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**EESS 158. Geomicrobiology**
(Same as EESS 258, EARTHSYS 158, EARTHSYS 258) How microorganisms shape the geochemistry of the Earth’s crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and
evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as ECE 274A.

3 units, Win (Francis, C)

EESS 201. Climate Change and the IPCC
(Same as EARTHSYS 201) The Intergovernmental Panel on Climate Change has begun work on its 5th Assessment Report, due in 2014. The Working Group II (WGII) contribution to the AR5 will have an increased focus on assessing vulnerability, impacts, and adaptation in the context of multiple stresses, assessing a broader range of impacts, including impacts on oceans systems, approaches for effectively managing the risks of climate change in the context of multiple stresses, and providing more information on the costs of climate change for different sectors and regions. Examination of the IPCC assessment process, as well as the current research on the range of issues that will be covered in the WGII report presented by Stanford faculty and Bay Area scientists involved in WGII.

I-2 units, Aut (Matson, P)

EESS 208. Topics in Geobiology
(Same as GES 208) Reading and discussion of classic and recent papers in the field of Geobiology. Co-evolution of Earth and life; critical intervals of environmental and biological change; geomicrobiology; paleobiology; global biogeochemical cycles; scaling of geobiological processes in space and time.

1 unit, Aut (Payne, J; Francis, C)

EESS 211. Fundamentals of Modeling
(Same as EARTHSYS 211) Simulation models are a powerful tool for environmental research, if used properly. The major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods. Emphasis is on gaining hands-on experience using the R programming language. Prerequisite:asic knowledge of statistics.

3 units, Aut (Lobell, D)

EESS 215. Earth System Dynamics
This is a graduate level course that examines the dynamics of the Earth System from an integrated perspective. Lectures introduce the physical, biogeochemical, ecological, and human dimensions of the Earth System, with emphasis on feedbacks, thresholds and tipping points. Human interactions with climate and land systems are emphasized in order to enable in-depth exploration of Earth System dynamics. Lab projects focus on a region of the globe for which rich coordinated data sources exist and complex Earth System dynamics dominate the environment.

4 units, Spr (Diffenbaugh, N; Lambin, E; Field, C)

EESS 216. Terrestrial Biogeochemistry
(Same as BIO 216) Nutrient cycling and the regulation of primary and secondary production in terrestrial, freshwater, and marine ecosystems; water-land and biosphere-atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminal students.

3 units, not given this year

EESS 217. Climate of the Cenozoic
For upper-division undergraduates and graduate students. The paleoclimate of the Cenozoic and how climate changes in the past link to the carbon cycle. Topics include long- and short-term records of climate on continents and oceans, evidence for and causes of hyperthermal events, how the Earth’s climate has responded in increased carbon dioxide in the atmosphere. Guest speakers, student presentations.

3 units, not given this year

EESS 220. Physical Hydrogeology
(Same as CEE 260A) (Formerly GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.

4 units, Aut (Gorelick, S)

EESS 221. Contaminant Hydrogeology
(Same as CEE 260C) (Formerly GES 231.) For earth scientists and engineers. Environmental and water resource problems involving contaminated groundwater. The processes affecting contaminant migration through porous media including interactions between dissolved substances and solid media. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and optimal aquifer remediation. Prerequisite: GES 230 or CEE 260A or equivalent.

4 units, Win (Gorelick, S)

EESS 231. Communicating Environmental Research Using Narratives and Stories
(Same as EESS 131, EARTHSYS 131, EARTHSYS 231) Creative strategies by which earth scientists can overcome impediments to scientific literacy. Construction of stories and narratives out of research data, the role of imagination and invention in communicating environmental issues. Barriers and problems that arise in risk and science awareness. Connections between environmentalism and environmental science. Environmental issues in fictional narratives. The responsible function for earth scientists in public debates. Reflections on the role of science in current and future issues likely to involve members outside of science. Priority given to students seeking degrees in the School of Earth Sciences.

1 unit, not given this year

EESS 234. Stable Isotopes in Biogeochemistry
(Same as EARTHSYS 134, EARTHSYS 234, EESS 134) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals.

3 units, not given this year

EESS 240. Advanced Oceanography
For upper-division undergraduates and graduate students in the earth, biologic, and environmental sciences. Topical issues in marine science/oceanography. Topics vary each year following or anticipating research trends in oceanographic research. Focus is on links between the circulation and physics of the ocean with climate in the N. Pacific region, and marine ecologic responses. Participation by marine scientists from research groups and organizations including the Monterey Bay Aquarium Research Institute.

3 units, not given this year

EESS 242. Antarctic Marine Geology
(Same as EARTHSYS 272) For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter.

3 units, NEXT YEAR

EESS 243. Marine Biogeochmecy
(Same as EARTHSYS 143, EARTHSYS 243, EESS 143) (Graduate students register for 243.) Processes that control the movement, concentration, and distribution of biologically useful elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget.

3-4 units, Win (Arrigo, K)

EESS 244. Marine Ecosystem Modeling
Practical background necessary to construct and implement a 2-dimensional (space and time) numerical model of a simple marine ecosystem. Computer programming, model design and parameterization, and model evaluation. Students develop and
refine their own multi-component marine ecosystem model.

3 units, alternate years, not given this year

**EESS 245. Advanced Biological Oceanography**
For upper-division undergraduates and graduate students. Themes vary annually but include topics such as marine bio-optics, marine ecological modeling, and phytoplankton primary production. Hands-on laboratory and computer activities, and field trips into local waters. May be repeated for credit.

3-4 units, Aut (Arrigo, K)

**EESS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation**
(Same as EARTHSYS 146A, EARTHSYS 246A, EESS 146A, GEOPHYS 146A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME 100 and PHYSICS 41.

3 units, Win (Thomas, L; Diffenbaugh, N; Skinner, C), alternate years, not given next year

**EESS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation**
(Same as EARTHSYS 146B, EARTHSYS 246B, EESS 146B, GEOPHYS 146B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

3 units, Spr (Thomas, L; Diffenbaugh, N), alternate years, not given next year

**EESS 250. Elkhorn Slough Microbiology**
(Formerly GES 270.) The microbial ecobiology and biogeochemistry of Elkhorn Slough, an agriculturally-impacted coastal estuary draining into Monterey Bay. The diversity of microbial lifetimes associated with estuarine physical/chemical gradients, and the influence of microbial activity on the geochemistry of the Slough, including the cycling of carbon, nitrogen, sulfur, and metals. Labs and field work. Location: Hopkins Marine Station.

3 units, Sum (Staff)

**EESS 253. Soils and Nutrient Cycling in the Amazon Rainforest**
(Same as EARTHSYS 153, EARTHSYS 253, EESS 153) Focus is on Amazon soils as dynamic but also as a non-renewable natural resource, especially in the impoverished soils. Course will cover the importance of the soils in the Amazon region rain forest ecosystem sustainability and the geographic distribution of the main soils classes soils in the Amazon region. Additional topics include the chemical and mineralogical characteristics of these soils classes and the factors influencing elemental cycling within the terrestrial Amazon rain forest ecosystem.

3 units, Win (Staff)

**EESS 253S. Hopkins Microbiology Course**
(Same as BIO 274S, BIOHOPK 274, CEE 274S) (Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory components: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

9-12 units, Sum (Staff)

**EESS 256. Soil and Water Chemistry**
(Same as EARTHSYS 156, EARTHSYS 256, EESS 156) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

1-4 units, Win (Fendorf, S)

**EESS 258. Geomicrobiology**
(Same as EESS 158, EARTHSYS 158, EARTHSYS 258) How microorganisms shape the geochemistry of the Earth’s crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

3 units, Win (Francis, C)

**EESS 259. Environmental Microbial Genomics**
The application of molecular and environmental genomic approaches to the study of biogeochemically-important microorganisms in the environment without the need for cultivation. Emphasis is on genomic analysis of microorganisms by direct extractio

3 units, alternate years, not given this year

**EESS 260. Advanced statistical methods for earth system analysis**
Introduction for graduate students to important issues in data analysis relevant to earth system studies. Emphasis on concepts and implementation (in R), rather than formal proofs. Likely topics include the bootstrap, non-parametric methods, regression in the presence of spatial and temporal correlation, measurement errors, extreme value distributions, and high-dimensional regressions. Topics subject to change each year. Prerequisites: Stats 110 or equivalent, EESS 211.

3 units, Win (Rajaratnam, B; Lobell, D)

**EESS 262. Remote Sensing of Land**
(Same as EARTHSYS 142, EARTHSYS 242, EESS 162) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

4 units, Win (Lambin, E)

**EESS 263. Topics in Advanced Geostatistics**
(Same as ENERGY 242) Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran.

3-4 units, not given this year

(Same as EARTHSYS 173, EARTHSYS 273, EESS 173) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon
farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures.

3 units, Spr (Staff), alternate years, not given next year

EESS 281. Concepts of Urban Agriculture
(Same as EARTHSYS 181, EARTHSYS 281, EESS 181) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use planning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Attendance at first class is mandatory. Enrollment is limited. Enrollment permissions will be determined after first class meeting. 3 units, Win (Matson, P)

EESS 282. Current Issues in Sustainable Agriculture
(Same as EARTHSYS 182, EARTHSYS 282, EESS 182) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers. 2 units, not given this year

EESS 283. Food Mapped: Agriculture in Film
(Same as EARTHSYS 183, EARTHSYS 283, EESS 183) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

1 unit, Win (Staff)

EESS 284. Climate and Agriculture
(Same as EARTHSYS 184, EARTHSYS 284, EESS 184) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206. 3-4 units, Spr (Lobell, D)

EESS 301. Topics in Environmental Earth System Science
Current topics, issues, and research related to interactions that link the oceans, atmosphere, land surfaces and freshwater systems. May be repeated for credit.

1 unit, Aut (Francis, C), Win (Chamberlain, P), Spr (Dunbar, R)

EESS 318. Global Land Use Change to 2050
An exploration of the fundamental drivers behind long term shifts in the demand for, and supply of, land for agriculture, forestry and environmental uses over the next four decades. Topics include trends in food and bioenergy demand, crop productivity on existing and potential croplands, water and climate constraints, non-extractive uses such as carbon sequestration, and the role of global trade and public policies. Students will lead discussions of weekly readings and perform simple numerical experiments to explore the role of individual drivers of long run global land use.

2 units, Win (Lobell, D)

EESS 322A. Seminar in Hydrogeology
Current topics. May be repeated for credit. Autumn Quarter has open enrollment. For Winter Quarter, consent of instructor is required.

1 unit, not given this year

EESS 322B. Seminar in Hydrogeology
Current topics. May be repeated for credit. Prerequisite: consent of instructor.

1 unit, Win (Gorelick, S)

EESS 323. Stanford at Sea
(Same as BIOHOPK 182H, BIOHOPK 323H, EARTHSYS 323) Graduate students register for 323H) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sitting research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

16 units, alternate years, not given this year

EESS 330. Advanced Topics in Hydrogeology
Topics: questioning classic explanations of physical processes; coupled physical, chemical, and biological processes affecting heat and solute transport. May be repeated for credit.

1-2 units, Win (Staff)

EESS 342. Geostatistics
Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

1-2 units, not given this year

EESS 342B. Geostatistics
Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

1-2 units, not given this year

EESS 342C. Geostatistics
Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

1-2 units, not given this year

EESS 363F. Oceanic Fluid Dynamics
(Same as CEE 363F) Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or a graduate class in fluid mechanics.

3 units, Spr (Thomas, L)

EESS 385. Practical Experience in the Geosciences
On-the-job training, that may include summer internship, in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training. May be repeated for credit.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EESS 398. Current Topics in Ecosystem Modeling
1-2 units, not given this year

EESS 400. Graduate Research
May be repeated for credit. Prerequisite: consent of instructor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EESS 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EESS 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICS IN SOCIETY (ETHICSOC) COURSES

UNDERGRADUATE COURSES IN ETHICS IN SOCIETY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ETHICSOC 8SI. What Are They Thinking?
How ethical is networking? Is there a difference between being a good Facebook friend and being a good friend? What should dating look like at Stanford? Is there really a hook-up culture on campus? How should parents fit in my life? Is it important to go into the lockstep march to adulthood immediately after college? Are you David Brooks' quintessential Organization Kid? Personal growth questions through discussion and dialogue. Student-initiated course. (AU)

1 unit, Aut (Sockness, B), Win (Sockness, B), Spr (Sockness, B)

ETHICSOC 9SI. Civil Liberties and Critical Issues in American Society
This class is a lecture series featuring guest speakers from various academic departments, the Stanford Law School, and public interest organizations from around the Bay Area. Issues that will
be addressed include prison reform, capital punishment, education reform, and other issues. Some of the speakers will include Professors Larry Marshall and Richard Ford of the Stanford Law School, as well as Richard Lee (Prop 19 advocate).

1 unit, not given this year

**ETHICSOC 10. Ethics in Theory and Practice**
(Same as PHIL 22) Weekly talks by Stanford faculty on important questions of ethics that arise in private and public life. These questions arise in all disciplines and are central to many of the main problems confronting humanity today. Such questions include: what is our obligation to future generations? are there any human rights? what is the appropriate role of religion in politics? is capital punishment ever justified? what are the ethical obligations of a researcher? should the university teach moral values? what principles of justice should govern the distribution of K-12 education? How do we measure human rights? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Christiano, John Rawls.

3 units, Win (McCaskey, J)

**ETHICSOC 170. Ethical Theory**
(Same as PHIL 170, PHIL 270) Major strands in contemporary ethical theory. Readings include Bentham, Mill, Kant, and contemporary authors. GER:DB-Hum, EC-EthicReas

4 units, Spr (Dannenberg, J)

**ETHICSOC 171. Justice**
(Same as IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality. GER:DB-Hum, EC-EthicReas

4-5 units, Aut (Danneberg, J)

**ETHICSOC 174A, Moral Limits of the Market**
(Same as PHIL 174A, PHIL 274A) Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient? if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Timmss, and empirical cases. GER:DB-Hum

4 units, not given this year

**ETHICSOC 174L. Betrayal and Loyalty, Treason and Trust**
(Same as ETHICSOC 274L, PHIL 174L, PHIL 274L) The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayals, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to highlight what may be, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around reading and discussion, and will be based on a reading list that will be provided at the beginning of the seminar.

2 units, Win (Staff)

**ETHICSOC 175M. The Ethics of War**
(Same as PHIL 90B) Issues both in contemporary just war theory and political philosophy. Relevant questions include: Can conscription ever be justified? If not, is there anything wrong with targeting poor people as part of efforts to recruit a 'volunteer' military? If, during war itself, combatants act in ways prohibited by the moral requirements governing war's conduct, then does it make any moral difference whether they were acting as ordered? And how do we identify these moral requirements in the first place? For example, what distinguishes a legitimate target from an illegitimate one? What determines whether military action is disproportionate? What, if anything, is morally distinctive about terrorism? Explores the complexities behind these questions and others, with a view to evaluating the potential answers to them.

4 units, not given this year

**ETHICSOC 176M. Equality and its Critics**
(Same as PHIL 276M) Explores the idea of equal rights and equal opportunity to participate in social and political life. Focuses on the practical and theoretical dimensions of these ideas and on the arguments and counterarguments for and against them.

3 units
norms span the globe, or stop at water's edge? Readings include Rawls, Scanlon, G.A. Cohen, Nagel, and Elizabeth Anderson.

4 units, not given this year

ETHICSOC 177M. Human Rights and Moral Question
(Same as ETHICSOC 277M, PHIL 177M, PHIL 277M) The proliferation of human rights in the discourse of international justice has raised a number of important questions in both moral and legal theory. What are human rights? How should they be conceptualized? Who ought to bear the duties associated with them? Can their protection justify military interventions into sovereign states? This course will cover topics in moral and legal theory surrounding human rights. The course has three main focuses. The first concerns the question of what these rights are. The second focus is on the various substantive moral justifications for the protection of human rights. The third is on the moral issues raised by the dominance of human rights in international law and relations: can any rights be universal? How are these rights to be framed in the light of cross-cultural values and claims about cultural dominance? A theme throughout will be the connections between these questions. The way we answer the question of what human rights are, and how they consider their distribution, impacts engagements with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism. GER:EC-EthicReas

4 units, Win (Mazor, J)

ETHICSOC 185M. Contemporary Moral Problems
(Same as PHIL 72) As individuals and as members of societies, we make choices that can be assessed from the moral point of view. What choices should we make, and how should we make them? Is it ok to buy iThings when others lack basic nutrition? Does a consumer have a moral obligation to conserve for future generations? How should the burdens of conservation be distributed? Engages with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism. GER:EC-EthicReas

5 units, Win (Dougherty, T)

ETHICSOC 190. Ethics in Society Honors Seminar
(Same as PHIL 178) For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.

3 units, Win (Sockness, B)

ETHICSOC 198. Community Engagement Internship
Restricted to Ethics in Society minors with the citizenship option. Opportunities for students to engage in community work via the Haas Center for Public Service. Students work with Haas Center staff to design an internship involving community-based research or supported by a Haas Center fellowship or community service work/study, or to serve for an academic year as a tutor in one of the Haas Center's several K-12 programs in East Palo Alto. May be repeated for credit.

3-5 units, not given this year

ETHICSOC 199. Independent Studies in Ethics in Society
May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 200A. Ethics in Society Honors Thesis
Limited to Ethics in Society honors students, who must enroll once in A and once in B.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 200B. Ethics in Society Honors Thesis
Limited to Ethics in Society honors students, who must enroll once in A and once in B.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 232T. Theories of Civil Society, Philanthropy, and the Nonprofit Sector
(Same as POLISCI 236) What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? The historical development and modern structure of civil society emphasizing philanthropy and the nonprofit sector. Readings in political philosophy, political sociology, and public policy.

5 units, Spr (Staff)

GRADUATE COURSES IN ETHICS IN SOCIETY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ETHICSOC 257. Moral Foundations of Capitalism
(Same as ETHICSOC 157) Preference to sophomores and juniors. An interdisciplinary examination of alternative and largely incompatible twentieth-century defenses of the morality of capitalism, with a concentration on economic, Objectivist, and Christian arguments, considered historically, economically, politically, and philosophically. Readings from Adam Smith, Karl Marx, authors for and against slavery, John Maynard Keynes, Theodore Roosevelt, Herbert Hoover, Austrian School economists, Milton Friedman, Dinesh D'Souza, and George Gilder. A reading of Ayn Rand's Atlas Shrugged. A concluding application of studied theories to a few recent public policy issues.

5 units, Win (McCaskey, J)

ETHICSOC 274L. Betrayal and Loyalty, Treason and Trust
(Same as ETHICSOC 174L, PHIL 174L, PHIL 274L) The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both religious and political, and also as an act of betrayal, social betrayal - betraying basic solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions of betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around the differing ideas of the morality of personal betrayal as well as the conceptualization of political betrayal.

2 units, Win (Staff)

ETHICSOC 277M. Human Rights and Moral Question
(Same as ETHICSOC 177M, PHIL 177M, PHIL 277M) The proliferation of human rights in the discourse of international justice has raised a number of important questions in both moral and legal theory. What are human rights? How should they be conceptualized? Who ought to bear the duties associated with them? Can their protection justify military interventions into sovereign states? This course will cover topics in moral and legal theory surrounding human rights. The course has three main focuses. The first concerns the question of what these rights are. The second focus is on the various substantive moral justifications for the protection of human rights. The third is on the moral issues raised by the dominance of human rights in international law and relations: can any rights be universal? How are these rights to be framed in the light of cross-cultural values and claims about cultural dominance? A theme throughout will be the connections between these questions. The way we answer the question of what human rights are, and how they consider their distribution, impacts engagements with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism. GER:EC-EthicReas

4-5 units, Spr (Staff)

ETHICSOC 278M. Justice and the Environment
(Same as ETHICSOC 278M, PHIL 278M, POLISCI 134L) Explores the normative questions that arise in environmental policy debates, including arguments over pollution permit markets, conservation regulations, and global warming mitigation efforts. What are the morally relevant ways in which the environment is different from other economic resources? How should the environment be valued? Why are our obligations to conserve for future generations? How should the burdens of conservation be distributed? Engages with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism. GER:EC-EthicReas

5 units, Win (Mazor, J)
would the environment be valued? What are our obligations to conserve for future generations? How should the burdens of should the environment be valued? What are our obligations to conserve for future generations? How should the burdens of conservation be distributed? Engages with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism.

5 units, Win (Mazor, J)

(Same as IPS 280) Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia, including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.

3-5 units, Spr (Cohen, D)

FAMILY MEDICINE (FAMMED)

COURSES

UNDERGRADUATE COURSES IN FAMILY MEDICINE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

FAMMED 199. Undergraduate Directed Reading and Research in Family and Community Medicine
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN FAMILY MEDICINE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

FAMMED 210. The Healer’s Art
Explores the human dimensions of medicine, creating a firm foundation for meeting the challenging demands of medical training and practice. A unique curriculum developed by Dr. Rachel Naomi Remen at UCSF and now offered at 70 U.S. medical schools and worldwide. (For details/evaluations see http://ishiprograms.org/programs-medical_educators.html). Medical students and faculty participate together in an innovative discovery model process that enables an in-depth sharing of experience, beliefs, aspirations and personal truths. Topics include deep listening, presence, acceptance, loss, grief, healing, relationship, encounters with awe and mystery, finding meaning, service, and self-care practices. No papers/exams. May be repeated for credit.

1 unit, Aut (Feldstein, B; Schillinger, E)

FAMMED 213. Medical Tai Chi
Tai chi as a recognized form of complimentary and alternative medicine. Intended to promote student health and well-being and to decrease stress, depression, and anxiety through the practice of tai chi. Weekly practices under the instruction of world-renowned 20th generation tai chi expert, Master Shu Dong Li. Includes analysis of the literature/research regarding health benefits of tai chi.

1 unit, Aut (Schillinger, E; Subrahmanian, K), Win (Schillinger, E; Subrahmanian, K), Spr (Staff)

FAMMED 219. Mind-Body Medicine
A small group experiential exploration of the interconnections among human capacities such as thought, emotion, belief, attitudes, and physical health. Review and practice of specific skills (including mindfulness exercises, meditation, imagery, visualization, body awareness, autogenics, and biofeedback) to enhance self-awareness, self-expression, and stress management. Readings relevant to mind-body medicine made available. Anticipated benefits to class participants include discovering and mobilizing their capacity to participate in valuable and proven methods of self knowledge and stress reduction, while dealing with the frustrations and alienation that many students experience in medical school and beyond.

1 unit, Win (Weinlander, E; Jones, E)

FAMMED 241. Assistantship in Family and Community Medicine
An in-depth experience with a family physician preceptor following the first year of the pre-clinical curriculum. The student applies during the first year to participate in the summer following completion. Application is through the Center for Family and Community Medicine (avjohn@stanford.edu). Placements with family physicians’ practices throughout California.

6-12 units, Aut (Grudzen, M; Schillinger, E)

FAMMED 243. Introduction to Integrative Medicine
(Same as ANES 243) Presentations by local, national, and international experts in various modalities of integrative medicine commonly used by patients in the US, including mind-body medicine (biofeedback, clinical hypnosis, meditation, yoga); traditional whole systems of medicine (traditional Chinese medicine, Ayurveda); biological therapies (botanical medicine, supplements, herbal medicine); manipulative therapies (chiropractic, massage); and acupuncture. Lectures focus on evidence supporting the potential value of various treatment modalities and explanations of both the traditional and proposed scientific mechanisms of actions. Most classes include an experiential portion.

1 unit, NEXTYEAR

FAMMED 244. Ethnicity and Medicine
(Same as HUMBIO 121E) Weekly lecture series. Linguistic, social class, and cultural factors that impact patient care. Culturally sensitive health care services and contemporary research issues involving minority and underserved populations. Topics include health care inequities and medical practices of African Americans, Asians, Latinos, Native Americans, immigrants, and refugees in both urban and rural settings. Only students taking the course for 3 units may earn a letter grade.

1-3 units, Spr (Garcia, R)

FAMMED 245. Women and Health Care
Lecture series. Topics of interest to women as health care consumers and providers. The historical role of women in health care; current and future changes.

1 unit, Aut (Grudzen, M; Schillinger, E)

FAMMED 252. Medicine & Horsemanship: An Outdoor, Equine Assisted Learning Course for Doctor-Patient Relationship
An outdoor experience working with horses to develop interpersonal skills for the clinician-patient and peer-peer relationship. A challenge throughout a clinical career is to conduct relationships with patients and colleagues in a manner that is professional, perceptive, confident, and authentic. Horses mirror and magnify our intentions and behaviors. Working with horses requires sensitivity to nonverbal cues, discrimination in the quality and amount of physical contact, and an awareness of one’s emotional state, all important skills for relating to patients. Horses give non-judgmental feedback about our personal communication and relationship styles and our ability to operate from a place of empathy and kindness. The course also teaches how to recognize subjectivity in judgment and how to overcome fear and immobility in the face of uncertainty. No riding is required and no previous horse experience is assumed. Open to anyone with direct patient care responsibility, space permitting. Limit

1 unit, Aut (Kane, B; Schillinger, E)

FAMMED 280. Early Clinical Experience in Family and Community Medicine
Provides an observational experience for pre-clinical students as determined by the instructor and student. Prerequisite: consent of instructor.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
FAMMED 299. Directed Reading in Family and Community Medicine
Students organize an individualized study program in family and community medicine. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FAMMED 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FAMMED 399. Graduate Research
Students interested in conducting research in a specific area of family and community medicine undertake investigations sponsored by the faculty instructor. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FEMINIST STUDIES (FEMST) COURSES

UNDERGRADUATE COURSES IN FEMINIST STUDIES
Primarily for undergraduates; graduate students may enroll with consent of adviser.

FEMST 101. Introduction to Feminist Studies
(Same as AMSTUD 107, CSRE 108, HISTORY 107) Introduction to interdisciplinary feminist scholarship, which seeks to understand the creation, perpetuation, and critiques of gender inequalities. Topics include the historical emergence of feminist politics and contemporary analyses of work and family, health and sexuality, creativity, and politics. Close attention to the intersections of race, gender, ethnicity, and sexuality and to international, as well as U.S., perspectives. Students learn to think critically about gender in the past, present, and future. GER:DB-SocSci, EC-Gender
4-5 units, Aut (Freedman, E)

FEMST 102. Contemporary Topics in Feminist & Queer Theories
(Same as FEMST 202) Introduction to the points of overlap and departure in the development of feminist and queer theories. Interdisciplinary perspectives on gender and sexuality in relation to current discussions of race, class, ethnicity, citizenship, and ability. Topics include the production of femininity and masculinity, human-animal transculturation, transgender subjectivities, diasporic sexualities and disability, and same-sex marriage. Course materials include theoretical texts as well as film, visual art, and literature. Preference to Feminist Studies majors.
4-5 units, not given this year

FEMST 103. Feminist Theories and Methods Across the Disciplines
(Same as FEMST 203, PHIL 153, PHIL 253) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research. GER:EC-Gender
4-5 units, Win (Longino, H)

FEMST 104A. Junior Seminar and Practicum
Preference to and required of Feminist Studies majors; others require consent of instructor. Feminist experiential learning projects related to critical studies in gender and sexuality. Identifying goals, grant proposal writing, and negotiating ethical issues in feminist praxis. Development of the relationship between potential projects and their academic focus in the major.
1 unit, Win (Coll, K)

FEMST 104B. Senior Seminar and Practicum
Required for Feminist Studies majors. Non-majors enrolled with consent of instructor. Students develop oral reports on their practicum and its relationship to their academic work, submit a report draft and revised written analysis of the practicum, and discuss applications of feminist scholarship. May be repeated once for credit.
2 units, Aut (Coll, K)

FEMST 105. Honors Work
(S)al
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FEMST 108. Internship in Feminist Studies
For non-majors. Supervised field, community, or lab experience in law offices, medical research and labs, social service agencies, legislative and other public offices, or local and national organizations that address issues related to gender and/or sexuality. One unit represents approximately three hours work per week. Required paper. May be repeated for credit. Service Learning Course (certified by Haus Center). Prerequisites: course in Feminist Studies, consent of program office, written consent of faculty sponsor, application.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FEMST 120. Introduction to Queer Studies
A historical overview of key theoretical developments in queer studies. Multidisciplinary perspective from a social constructionist approach to gender and sexual identity, which not only affects understandings of queer people, but straight as well. Examines how queer theory has been influential across disciplines and in popular culture, refining not only an understanding of gender and sexuality but also providing new critical perspectives for social theory more broadly. Engagement with contemporary debates and controversies in the public domain. GER:EC-Gender
4-5 units, NEXTYEAR

FEMST 120. Queer Raza
(Same as ILAC 287) Examination of cultural representations by U.S. Latin@s that explore the following questions: How is the mutual constitution of race/sex/class/gender theorized and represented? How is desire racialized? How is racial difference produced through sex acts and what is the function of sex in racial (self)formation? How to reconcile pleasure and desire with histories of imperialism and modernity with other structures of power? How do these texts reinforce or contest stereotypes and the ideal bodies of national identity? How do these texts produce queerness as a web of social relations?
3-5 units, Win (Yarbro-Bejarano, Y)

(Same as FEMST 238) Course offers an interdisciplinary feminist perspectives on the causes of gender violence, addresses multi-leveled approaches to ending gender violence and explores the relationship between violence against women and other forms of oppression such as racism, economic exploitation, heterosexism, and social class. Framework addresses institutional barriers maintaining this violence in our culture and how solutions must also be multidimensional. All students, women and men, are encouraged to become allies in this effort and will apply theoretical perspectives to campus service-learning projects. Limited enrollment. Prerequisite: consent of instructor. GER:EC-Gender
3-4 units, Aut (Baran, N)

FEMST 139. Rereading Judaism in Light of Feminism
(Same as JEWISHST 139) During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better understand contemporary Jewish life as influenced by feminism. GER:EC-Gender
4-5 units, NEXTYEAR

FEMST 140A. Destroying Dichotomies: Exploring Multiple Sex, Gender & Sexual Identities
Examination of sex, gender, sexual identities & expressions through studying the LGBTIQ (lesbian, gay, bisexual, transgender, queer, intersex) community using a sociological lens. Readings in feminist and queer theory, films, class presentations, and discussion. Thematic focus in valuing the diversity of human experience. Students will develop their skills in critical reading, writing and thinking about gender and sexuality.
3-5 units, Aut (Fogarty, A)

FEMST 140C. Gender Transgression
Exploration of gender as a category and (compulsory) identification. What happens when people challenge or refuse...
gender categories and stereotypes? Participating in conversations initiated in queer and feminist theory, anthropology, history, science, and popular culture, we will examine how gender works and consider the experiences, writing, and art of people who challenge it. Course culminates in an ethnographic research project. GER: EC-Gender
4-5 units, OCCASIONAL

FEMST 140D. LGBT History in the United States
(Same as HISTORY 257C) An introductory course on LGBT social, cultural, and political history in the United States. This course explores how categories of sexuality have changed over time, with particular emphasis on the relationship among homosexuality, heterosexuality, and transgenderism. Students will analyze how the intersections of race, class, and sexuality influenced the constitution of these categories and the politics of sexual relations. Historical and literary sources will be used to examine changes in LGBT experiences and identities, primarily in the twentieth century.
4-5 units, Spr (Davies Henderson, A)

FEMST 140H. New Citizen: Grassroots Movements for Social Justice in the U.S.
(Same as ANTHRO 169A, CHICANST 168, CSRE 168) Focus is on the contributions of immigrants and communities of color to the making of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.
5 units, Win (Coll. K)

FEMST 140M. Queer Popular Culture
Many identity issues of our time are played out in popular culture. This course investigates topics of queer gender and sexuality, and intersecting identity issues, in mainstream and 'underground' American popular culture and its reception over the last fifty years. Using critical theory texts on capitalism and identity to analyze examples drawn from popular music, film, tv, journalism, fashion, advertising, and online culture, we will consider queer culture, political debates, and Americans' changing views on identity and life. Midterm and final project.
4-5 units, Spr (Goldin-Perschbacher, S)

FEMST 140S. Sisterhood and Identity: The Histories, Stories & Rhetoric of Sororities
Explore the history, development, critique and praise of sororities. How are they advertised? Who joins them? What are the advertised benefits? How are sorority members discussed by outsiders? How do stereotypes of sorority life shape public perceptions of individuals and particular sororities? To consider these questions, we'll look at historical documents and analyze how groups described themselves as they were establishing; to consider current views, we'll also analyze recent documents (websites, books, etc.). We'll use both to consider how the rhetorical messages created by and about sororities shape public perceptions as well as individuals' experiences.
1-2 units, Win (Hanlon-Baker, P)

FEMST 140W. Black Women Playwrights, 1900-the present
(Same as AFRICAAM 176H, DRAMA 176H, DRAMA 336) From the rave reviews garnered by Angelina Weld Grimke's lynching play, Rachel to recent work by Lynn Nottage on Rwanda, black women playwrights have addressed key issues in modern culture and politics. We will analyze and perform work written by black women in the U.S., Britain and the Caribbean in the 20th and 21st centuries. Topics include: sexuality, surrealism, colonialism, freedom, violence, colorism, love, history, community and more. Playwrights include: Angelina Grimke, Lorraine Hansberry, Winsome Pinnock, Adrienne Kennedy, Suzan- Lori Parks, Nitoke Shange, Pearl Cleage, Sarah Jones, Anna DeVere Smith, Alice Childress, Lyda Diamond and Zora Neale Hurston.
4 units, Aut (Brody, J)

FEMST 153. Women and the Creative Imagination
(Same as FEMST 253) Examines the nature of artistic imagination, considering the relationship among muses, mentors and models for women engaged painting, music, theatre, film, creative writing, dance, etc. We will study how gender relations and sexual identity have affected women's art across various cultures, lands and times. We will critically examine gender roles in music, visual art and literature. Active student participation (in writing, discussion as well as in attendance at performances, exhibits and readings) is the heart of the class.
GER: DB-Hum, EC-Gender, WR
4-5 units, Aut (Miner, V)

FEMST 166. Feminist Theories of Knowledge
(Same as PHIL 184F, PHIL 284F) Feminist critique of traditional approaches in epistemology and alternative feminist approaches to such topics as reason and rationality, objectivity, experience, truth, the knowing subject, knowledge and values, knowledge and power.
GER: DB-Hum, EC-Gender
4 units, not given this year

FEMST 188N. Imagining Women: Writers in Print and in Person
(S, Sem) Stanford Introductory Seminar. Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Weekly meetings designated for book discussion and meeting with authors. Interest in writing and a curiosity about diverse women's lives would be helpful to students. Students will use such tools as close reading, research, analysis and imagination. Seminar requires strong voice of all participants. Oral presentations, discussion papers, final projects.
GER: DB-Hum, EC-Gender
4-5 units, Win (Miner, V)

FEMST 191Q. Writing Women's Lives
(F. Dial) Stanford Introductory Dialogue. Creative writing through dialogue focusing on probe about the lives of women in different cultures and generations. Novels, short stories, and micro-narrative including fiction and memoir. Students produce work using research, memory, imagination, and metaphor.
2 units, Aut (Miner, V)

FEMST 195. Directed Reading
May be repeated for credit (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FEMST 260. Seminar in Women's Health: Women and Disabilities
(Same as FEMST 360) Explores visible and invisible disabilities, women's psychological as well as physical health, issues of access, caretaking, self-definition and the diversity of disabled women's identities. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of physical assistance. Prerequisite: consent of instructor.
GER: DB-SocSci, EC-Gender
5 units, Spr (Krieger, S)

GRADUATE COURSES IN FEMINIST STUDIES
Primarily for graduate students; undergraduates may enroll with consent of instructor.

FEMST 202. Contemporary Topics in Feminist & Queer Theories
(Same as FEMST 102) Introduction to the points of overlap and departure in the development of feminist and queer theories. Interdisciplinary perspectives on gender and sexuality in relation to current discussions of race, class, ethnicity, citizenship, and ability. Topics include the production of femininity and masculinity, human-animal divisions, transgender subjectivities, diasporic sexualities, disability and sexuality, same-sex marriage. Course materials include theoretical texts as well as film, visual art, and literature. Preference to Feminist Studies majors.
4-5 units, not given this year

FEMST 203. Feminist Theories and Methods Across the Disciplines
(Same as FEMST 103, PHIL 153, PHIL 253) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research.
4-5 units, not given this year

FEMST 238. Violence Against Women: Theory, Issues, and Prevention
(Same as FEMST 138) Course offers an interdisciplinary feminist
perspectives on the causes of gender violence, addresses multi-leveled approaches to ending gender violence and explores the relationship between violence against women and other forms of oppression such as racism, economic exploitation, heterosexism, and social class. Framework addresses institutional barriers maintaining this violence in our culture and how solutions must also be multidimensional. All students, women and men, are encouraged to become allies in this effort and will apply theoretical perspectives to campus service-learning projects. Limited enrollment. Prerequisite: consent of instructor.

3-4 units, Aut (Baran, N)

FEMST 253. Women and the Creative Imagination (Same as FEMST 153) Examines the nature of artistic imagination, considering the relationship among muses, mentors and models for women engaged painting, music, theatre, film, creative writing, dance, etc. We will study how gender relations and sexual identity have affected women's art across various cultures, lands and times. We will critically examine gender roles in music, visual art and literature. Active student participation (in writing, discussion as well as in attendance at performances, exhibits and readings) is the heart of the class.

4-5 units, Aut (Miner, V)

FEMST 360. Seminar in Women's Health: Women and Disabilities (Same as FEMST 260) Explores visible and invisible disabilities, women's psychological as well as physical health, issues of access, caretaking, self-definition and the diversity of disabled women's identities. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of physical assistance. Prerequisite: consent of instructor.

5 units, Spr (Krieger, S)

FILM STUDIES (FILMSTUD) COURSES

UNDERGRADUATE COURSES IN FILM STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

FILMSTUD 4. Introduction to Film Study Formal, historical, and cultural issues in the study of film. Classical narrative cinema compared with alternative narrative structures, documentary films, and experimental cinematic forms. Issues of cinematic language and visual perception, and representations of gender, ethnicity, and sexuality. Aesthetic and conceptual analytic skills with relevance to cinema. GER:DB-Hum

5 units, Win (Levi, P)

FILMSTUD 6. Introduction to Digital Media Media beyond the horizon of cinema and television present unique problems of definition and analysis. Taking the digital - information represented as discrete values - as a reasonable approximation of the mechanics and fantasies of computation, course surveys theoretical approaches to code, networks, and cyberculture. Taking familiar formations like web sites and video games as objects by which to learn how thinkers have understood and envisioned emerging media from the mid-20th century to the present. Students to develop own methodological tools for becoming more critical users of digital media.

5 units, not given this year

FILMSTUD 7. Introduction to Television Studies Television is arguably the most influential and ubiquitous mass medium of the last half century. Because of its familiarity and popularity, it is also often the medium most overlooked, dismissed, and maligned. Drawing from the history of television and of television scholarship, this course builds a theoretical framework for understanding this pivotal cultural form. Course covers interdisciplinary approaches to studying TV texts, TV audiences, and TV industries, including questions of the boundaries of television (from independent and avant-garde video to convergence). In the process students develop methodological tools as critical television viewers.

5 units, not given this year

FILMSTUD 100A. History of World Cinema I, 1895-1929 (Same as FILMSTUD 300A) From cinema's precursors to the advent of synchronized sound. GER:DB-Hum

4 units, alternate years, not given this year

FILMSTUD 100B. History of World Cinema II, 1930-1959 (Same as FILMSTUD 300B) The impact of sound to the dissolution of Hollywood's studio system. GER:DB-Hum

4 units, Aut (Laderman, D)

FILMSTUD 100C. History of World Cinema III, 1960-Present (Same as FILMSTUD 300C) From the rise of the French New Wave to the present. GER:DB-Hum

4 units, Win (Ma, J)

FILMSTUD 101. Fundamentals of Cinematic Analysis (Same as FILMSTUD 301) The close analysis of film. Emphasis is on formal and narrative techniques in structure and style, and detailed readings of brief sequences. Elements such as cinematography, mise-en-scène, composition, sound, and performance. Films from various historical periods, national cinemas, directors, and genres. Prerequisite: FILMSTUD 4 or equivalent. Recommended: ART/THET 1 or FILMSTUD 102. GER:DB-Hum, WIM

4 units, Win (Ma, J)

FILMSTUD 102. Theories of the Moving Image (Same as FILMSTUD 302) Major theoretical arguments and debates about cinema: realism/formalism, poststructuralism, feminism, postmodernism, and phenomenology. Prerequisites: ART/THET 1, FILMSTUD 4. GER:DB-Hum

4 units, Spr (Levi, P)

FILMSTUD 113. Queer Film and Media (Same as FILMSTUD 313) According to identity politics, visibility is a key tactic in the fight for societal acceptance and civil rights. But how is sexuality visible? Course addresses this question by analyzing queer film and media since the 1970s, focusing primarily on explicit representations of GLBTQ characters and communities in US cinema, television, and cyberculture. Themes include positive images, AIDS, coming out, celebrity, and the gay market. Through queer theory and criticism, analysis of the contested relationships between spectators and texts, identity and commodities, realism and fantasy, activism and entertainment, desire and politics. GER:DB-Hum

4 units, not given this year

FILMSTUD 114. Comics (Same as FILMSTUD 314) The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCay, Kirby, Barry, Ware, and critical writings including McCloud, Eisner, Groensteen. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media. GER:DB-Hum

4 units, not given this year

FILMSTUD 115. Documentary Issues and Traditions (Same as FILMSTUD 315) Issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Parallel focus on form and content. GER:DB-SocSci

4 units, Aut (Kравитц, J)

FILMSTUD 116. International Documentary (Same as FILMSTUD 316) Historical, aesthetic, and formal developments of documentary through nonfiction films in Europe, Asia, Latin America, and Africa. GER:DB-Hum

4 units, not given this year

FILMSTUD 118. The Road Movie (Same as FILMSTUD 318) No doubt influenced by classical Hollywood, the road movie emerges as a distinct genre in the late 1960s, celebrating youth culture rebellion through an independent, anti-genre film sensibility. The course addresses these and other angles of the road movie. How does the road movie express American cultural values and historical preoccupations? How does
the road movie uniquely articulate issues of violence, sexuality, mobility and technology? How do international road movies differ from American road movies?

4 units, not given this year

**FILMSTUD 122. Kubrick**  
(Same as FILMSTUD 322) Thematic and stylistic richness of the cinema of Stanley Kubrick. Methodological approaches to the subject. Emphasis is on questions of close textual analysis, authorship and genre, and critique of ideology. Focus is on A Clockwork Orange. Other films include: 2001: A Space Odyssey, Barry Lyndon, Killer’s Kiss, and The Shining.

4 units, not given this year

**FILMSTUD 130. American Independent Film**  
(Same as FILMSTUD 330) Course explores the historical, aesthetic and social significance of the American independent film. The rise in popularity of American independent films since the 1980s proves that audiences do want to view innovative, sophisticated films. At the same time, film festival culture and Hollywood distribution companies have assimilated and packaged the ’indie’ film. Lecturers present a critical survey of the diverse range of American independent films, focusing on narrative experimentation from the 1960s through the 1990s.

4 units, Win (Laderman, D)

**FILMSTUD 131. CINEMATOGRAPH**  
(Same as FILMSTUD 331, SLAVGEN 185, SLAVGEN 285) The term cinematography, which literally means inscribing motion, tends to lose the graphic part in modern use. However, several influential film-makers not only practiced the art of inscribing motion but also wrote texts discussing the aesthetic premises of cinematographic art. This course explores theories of cinema as propagated by the following film-makers: Vertov, Eisenstein, Godard, Bresson, Antonioni, Pasolini, Tarkovsky, Greenaway, and Lynch. Selected key texts will be supplemented by screenings of classic films, indicative of each director's work.

3-5 units, Aut (Skakov, N)

**FILMSTUD 132. East Asian Cinema**  
(Same as FILMSTUD 332) Social, historical, and aesthetic dimensions of the cinemas of Japan, Hong Kong, Taiwan, mainland China, and Korea. Topics such as nation and gender, form and genre, and local and transnational conditions of production are included. Popular and art films from the silent to contemporary era, including, Zhang Yimou, Wong Kar-wai, Hou Hsiao-hsien, Ozu Yasujiro, Kurosawa Akira, and Im Kwon-taek.

4 units, not given this year

**FILMSTUD 135. History of Video Art**  
(Same as FILMSTUD 335) Focus is on artists who have contributed to the history of video art. Topics include: theoretical analyses of the medium; challenges to the performer-auditor dynamic (Dan Graham and Vito Acconci); feminist culture critique (Martha Rosler and Dara Birnbaum); closed-circuit installations and performances (Peter Campus and Joan Jonas); combinations of linguistic and bodily investigations (Bruce Nauman and Gary Hill); representations of girl culture (Sadie Benning); guerrilla television (TVTV and Ant Farm); image processing (Woody and Steina Vasulka); the turn toward cinematic installations (Stan Douglas and Douglas Gordon); and more recent trends (Cory Arcangel and Ryan Trecartin).

4 units, not given this year

**FILMSTUD 136. Gender and Sexuality in Chinese Cinema**  
(Same as FILMSTUD 336) Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required. GER:EC-Gender

4 units, Spr (Ma, J)

**FILMSTUD 137. European New Wave Cinemas**  
(Same as FILMSTUD 337) An exploration of the major currents, movements, and schools in the European cinema of the post-war era from the late 1940s to the 1970s. A mixture of historical, aesthetic, and theoretical concerns will inform the study of French New Wave, British Free Cinema, Italian cinema in the 1960s, the New German Cinema of the 1970s, and more. GER:DB-Hum

4 units, not given this year

**FILMSTUD 140. Film Aesthetics: Editing**  
(Same as FILMSTUD 340) Practical and theoretical approaches to editing and montage. The role of editing in film meaning, and cognitive and emotional impact on the viewer. Developments in the history and theory of cinema including continuity system, Soviet montage, French new wave, postwar and American avant garde. Aesthetic functions, spectacular effects, and ideological implications of montage. Film makers include Eisenstein, Godard, and Conner. GER:DB-Hum

4 units, not given this year

**FILMSTUD 145. Politics and Aesthetics in East European Cinema**  
(Same as FILMSTUD 345) From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Janco, Forman, and Kusturica.

GER:DB-Hum

4 units, not given this year

**FILMSTUD 150. Cinema and the City**  
(Same as FILMSTUD 350) Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international, national, and independent cinema, experimental cinema, documentaries, and musical sequences.

Recommended: 4 or equivalent. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

**FILMSTUD 153A. Transmedia TV**  
(Same as FILMSTUD 353A) Beginning from theoretical questions about the structure of media texts and their production, distribution, reception, and regulation, this course analyzes how the collision of broadcast and broadband is reshaping the media landscape. Course investigates the definition of television and its articulation across multiple platforms, including streaming video, online tie-ins, fan remixes, and web shows. Such convergence involves both intensified corporate consolidation and intensified viewer participation. As the boundary between producers and consumers of entertainment breaks down, course explores renegotiating the possibilities of the TV experience.

4 units, not given this year

**FILMSTUD 156. Copy This Class (The Art of the Remix)**  
(Same as FILMSTUD 356) Mashups, sampling, parodies, fan video, DIY media, memes: we are in the midst of an explosion in vernacular creativity that appropriates, celebrates, critiques, and transforms commercial entertainment. New digital technologies and Internet platforms support a developing ecology of remix that combines with unprecedented reach, richness, and cultural influence. At the same time, the value and legitimacy of this popular production is hotly contested on the basis of artistic merit, traditional literacies, and intellectual property. Course analyzes and engages in contemporary remix culture via precursors like appropriation art and hip hop, exploring theoretical questions about originality, capitalism, law, and digital media.

4 units, not given this year

**FILMSTUD 167. The Hollywood Musical**  
(Same as AMSTUD 167, FILMSTUD 367) The sense of physical, emotional, aesthetic, and social liberation in this most colorful of film genres. Musicals as a place for the staging of issues of identity, including the impact of African American and Jewish culture, and issues of gay reception and interpretation. Attention to technologies of sound and color, the relation to vaudeville and Broadway, and ethnic and aesthetic diversity. Musicals as the epitome of filmic illusionism and the Hollywood studio system; the implications of their seduction of audiences; the meaning of spectacle, the centrality of performance. Busby Berkeley, Fred Astaire, Judy Garland, Bob Fosse, Stanley Donen, Gene Kelly,
Vincente Minnelli. GER:DB-Hum
4 units, not given this year

FILMSTUD 170. The Cinematic Century
(Same as ARTHIST 170, ARTHIST 370) Few contemporary institutions and forms of representation have had a greater impact on the world than film. This class examines film history through institutions and practices as well as in formal developments in the medium in an international context but with an underlying interest in explaining the international forces that shaped Hollywood's rise. Through screenings of both documentary and fiction film, this class will suggest that the century just past be understood through the primary lens of the way cinema shaped its course.
4 units, Spr (Staff)

FILMSTUD 240A. History and Poetics of Cinematography
The history of cinematic devices and styles through the work of such cinematographers as Billy Bitzer, Eduard Tisse, Greg Toland, Kazuo Miyagawa, John Alton, James Wong Howe, Sergei Urusevsiki, Raoul Coutard, and Jack Cardiff.
5 units, not given this year

FILMSTUD 250A. Politics of Representation
Counterpointing viewpoints on media visibility drawn from identity politics and post-structuralist theory, course explores the questions entangled in negotiating a politics of representation: Can images show how things really are? Who is seen and who isn’t? Can interpretation go beyond stereotypes? How are we situated as media content and consumers? Focusing primarily on gender, race, sexuality, and their intersections, course analyzes specific invocations of these categories in film, television, and cybertext. Texts presenting opposing perspectives by theorists, critics, and activists to scaffold each example. Ultimate objective to explore how different media forms open or close possibilities for progressive representation, reception, and political change.
5 units, not given this year

FILMSTUD 251. Media in Transition
In a culture obsessed with new media, we are bombarded with hype about the present as a revolutionary phase of convergence. But everything old was once new, and pioneering media of the past also had to negotiate existing technologies, ideologies, and fantasies. This seminar is organized around case studies of transitional media moments from the long 20th century, including proto-cinema, ham radio, early television, hypertext, and digital film. In exploring the material and discursive aspects of remediation through theoretical, historical, and media archaeological readings, we will ask: what is a medium and how do they emerge and evolve.
5 units, not given this year

FILMSTUD 279. Asian American Experiences and Documentory Practice
(Same as ASNAVST 179, CSRE 179) Focus is on documentary cinema as a technology for understanding Asian Americans in the U.S. The social and historical context of the formation of the Asian American filmmaker, an authorial position that emerges in the 60s and 70s as part of the civil rights movement. Works include films by Loni Ding, Bob Nakamura and Curtis Choy; readings about the establishment of Asian American media industries and Asian American film criticism as a multi-genre. Social issue documentaries that represent new ethnographies of social experience including transnational adoption (Daughter From Danang), refugee experience (AKA Don Bonus), and sex tourism (The Women Outside). Readings include analyses of the implications of these works for cinema studies, ethnic studies, and the politics of film in everyday life. Experimental documentaries and their interrogation of the limits of the documentary form in representing identities and social problems. How does representation matter within and for Asian America GER:DB-Hum
5 units, not given this year

FILMSTUD 290. Movies and Methods
Open to graduate students and advanced undergraduates (permission of instructor required); capstone course for majors (senior seminar). Topics vary year to year. Focus is on historiography and theory.
5 units, Aut (Levi, P)

FILMSTUD 297. Honors Thesis Writing
May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

FILMSTUD 299. Independent Study: Film and Media Studies
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

GRADUATE COURSES IN FILM STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

FILMSTUD 218. Sexual Ethics in Cinema
Course focuses on romance, sex, desire and love in Hollywood and independent films. Examines various approaches to understanding the power of cinema to move and transform its subjects using film phenomenology and psychoanalytic approaches in the face-to-face encounter, haptic cinema and the shattering of the self and its assembly/reassembly--with attention to cultural, historical and social contexts framing the films' production and consumption. Advanced undergraduates and graduate students welcome.
5 units, not given this year

FILMSTUD 300A. History of World Cinema I, 1895-1929
(Same as FILMSTUD 100A) From cinema's precursors to the advent of synchronized sound.
4 units, alternate years, not given this year

FILMSTUD 300B. History of World Cinema II, 1930-1959
(Same as FILMSTUD 100B) The impact of sound to the dissolution of Hollywood's studio system.
4 units, Aut (Laderman, D)

FILMSTUD 300C. History of World Cinema III, 1960-Present
(Same as FILMSTUD 100C) From the rise of the French New Wave to the present.
4 units, Spr (Ma, J)

FILMSTUD 301. Fundamentals of Cinematic Analysis
(Same as FILMSTUD 101) The close analysis of film. Emphasis is on formal and narrative techniques in structure and style, and detailed readings of brief sequences. Elements such as cinematography, mise-en-scène, composition, sound, and performance. Films from various historical periods, national cinemas, directors, and genres. Prerequisite: FILMSTUD 4 or equivalent. Recommended: ARTHIST 1 or FILMSTUD 102.
4 units, Win (Ma, J)

FILMSTUD 302. Theories of the Moving Image
(Same as FILMSTUD 102) Major theoretical arguments and debates about cinema: realism/formalism, poststructuralism, feminism, postmodernism, and phenomenology. Prerequisites: ARTHIST 1, FILMSTUD 4.
4 units, Spr (Levi, P)

FILMSTUD 313. Queer Film and Media
(Same as FILMSTUD 113) According to identity politics, visibility is a key tactic in the fight for societal acceptance and civil rights. But how is sexuality visible? Course addresses this question by analyzing queer film and media since the 1970s, focusing primarily on explicit representations of GLBTQ characters and communities in US cinema, television, and cybertext. Themes include positive images, AIDS, coming out, celebrity, and the gay market. Through queer theory and criticism, analysis of the contested relationships between spectators and texts, identity and commodities, realism and fantasy, activism and entertainment, desire and politics.
4 units, not given this year

FILMSTUD 314. Comics
(Same as FILMSTUD 114) The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCoy, Kirby, Berry, Ware, and critical writings including McCloud, Eisner, Groensteen. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media.
4 units, not given this year

FILMSTUD 315. Documentary Issues and Traditions
(Same as FILMSTUD 115) Issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the
audience, and authorial voice. Parallel focus on form and content.

4 units, not given this year

FILMSTUD 316. International Documentary
(Same as FILMSTUD 116) Historical, aesthetic, and formal developments of documentary through nonfiction films in Europe, Asia, Latin America, and Africa.

4 units, not given this year

FILMSTUD 318. The Road Movie
(Same as FILMSTUD 118) No doubt influenced by classical Hollywood, the road movie emerges as a distinct genre in the late 1950s, celebrating youth culture rebellion through an independent, anti-genre film sensibility. The course addresses these and other angles of the road movie. How does the road movie express American cultural values and historical preoccupations? How does the road movie uniquely articulate issues of violence, sexuality, mobility and technology? How do international road movies differ from American road movies?

4 units, not given this year

FILMSTUD 322. Kubrick
(Same as FILMSTUD 122) Thematic and stylistic richness of the cinema of Stanley Kubrick. Methodological approaches to the subject. Emphasis is on questions of close textual analysis, authorship and genre, and critique of ideology. Focus is on A Clockwork Orange. Other films include: 2001: A Space Odyssey, Barry Lyndon, Killer's Kiss, and The Shining.

4 units, not given this year

FILMSTUD 330. American Independent Film
(Same as FILMSTUD 130) Course explores the historical, aesthetic and social significance of the American independent film. The rise in popularity of American independent films since the 1980s proves that audiences do want to view innovative, sophisticated films. At the same time, film festival culture and Hollywood distribution companies have assimilated and packaged the indie film. Lecturers present a critical survey of the diverse range of American independent films, focusing on narrative experimentation from the 1960s through the 1990s.

4 units, Win (Laderman, D)

FILMSTUD 331. CINEMATO-GRAF
(Same as FILMSTUD 131, SLAVGEN 185, SLAVGEN 285) The term cinematography, which literally means inscribing motion, tends to lose the graphic part in modern use. However, several influential film-makers not only practiced the art of inscribing motion but also wrote texts discussing the aesthetic premises of cinematographic art. This course explores theories of cinema as propagated by the following film-makers: Vertov, Eisenstein, Godard, Bresson, Antonioni, Pasolini, Tarkovsky, Greenaway, and Lynch. Selected key texts will be supplemented by screenings of classic films, indicative of each director's work.

3-5 units, Aut (Skakov, N)

FILMSTUD 332. East Asian Cinema
(Same as FILMSTUD 132) Social, historical, and aesthetic dimensions of the cinemas of Japan, Hong Kong, Taiwan, mainland China, and Korea. Topics such as nation and gender, form and genre, and local and transnational conditions of practice and reception. Screenings include popular and art films from the country to contemporary eras, including, Zhang Yimou, Wong Kar-wai, Hou Hsiao-hsien, Ozu Yasujirō, Kurosawa Akira, and Im Kwon-taek.

4 units, not given this year

FILMSTUD 335. History of Video Art
(Same as FILMSTUD 135) Focus is on artists who have contributed to the history of video art. Topics include: theoretical analyses of the medium; challenges to the performer-spectator dynamic (Dan Graham and Vito Acconci); feminist culture critique (Martha Rosler and Dara Birnbaum); closed-circuit installations and performances (Peter Campus and Joan Jonas); combinations of linguistic and bodily investigations (Bruce Nauman and Gary Hill); representations of girl culture (Sadie Benning); guerrilla television (TVTV and Ant Farm); image processing (Woody and Steina Vasulka); the turn toward cinematic installations (Stan Douglas and Douglas Gordon); and more recent trends (Cory Arcangel and Ryan Trecartin).

4 units, not given this year

FILMSTUD 336. Gender and Sexuality in Chinese Cinema
(Same as FILMSTUD 136) Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required.

4 units, Spr (Ma, J)

FILMSTUD 337. European New Wave Cinemas
(Same as FILMSTUD 137) An exploration of the major currents, movements, and schools in the European cinema of the post-war era from the late 1940s to the 1970s. A mixture of historical, aesthetic, and theoretical concerns will inform the study of French New Wave, British Free Cinema, Italian cinema in the 1960s, the New German Cinema of the 1970s, and more.

4 units, not given this year

FILMSTUD 340. Film Aesthetics: Editing
(Same as FILMSTUD 140) Practical and theoretical approaches to editing and montage. The role of editing in film meaning, and cognitive and emotional impact on the viewer. Developments in theory and theory of cinema including continuity system, Soviet montage, French new wave, postwar and American avant garde. Aesthetic functions, spectatorial effects, and ideological implications of montage. Film makers include Eisenstein, Godard, and Conner.

4 units, not given this year

FILMSTUD 345. Politics and Aesthetics in East European Cinema
(Same as FILMSTUD 145) From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.

4 units, not given this year

FILMSTUD 350. Cinema and the City
(Same as FILMSTUD 150) Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions, industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent.

4 units, not given this year

FILMSTUD 353A. Transmedia TV
(Same as FILMSTUD 153A) Beginning from theoretical questions about the structure of media texts and their production, distribution, reception, and regulation, this course analyzes how the collision of broadcast and broadband is reshaping the media landscape. Course investigates the definition of television and its articulation across multiple platforms, including streaming video, online tie-ins, fan remixes, and web shows. Such convergence involves both intensified corporate consolidation and intensified viewer participation. As the boundary between producers and consumers of entertainment breaks down, course explores renegotiating the possibilities of the TV experience.

4 units, not given this year

FILMSTUD 356. Copy This Class (The Art of the Remix)
(Same as FILMSTUD 156) Mashups, sampling, parodies, fan video, DIY media, memes: we are in the midst of an explosion in vernacular creativity that appropriates, celebrates, critiques, and transforms commercial entertainment. New digital technologies and Internet platforms support a developing ecology of remix forms with unprecedented reach, richness, and cultural influence. At the same time, the value and legitimacy of this popular production is hotly contested on the basis of artistic merit, traditional literacies, and intellectual property. Course analyzes and engages in contemporary remix culture via precursors like appropriation art and hip hop, exploring theoretical questions about
originality, capitalism, law, and digital media.

4 units, not given this year

FILMSTUD 367. The Hollywood Musical
(Same as AMSTUD 167, FILMSTUD 167) The sense of physical, emotional, aesthetic, and social liberation in this most colorful of film genres. Musicals as a place for the staging of issues of identity, including the impact of African American and Jewish culture, and issues of gay reception and interpretation. Attention to technologies of sound and color, the relation to vaudeville and Broadway, and ethnic and aesthetic diversity. Musicals as the epitome of filmic illusionism and the Hollywood studio system; the implications of their seduction of audiences; the meaning of spectacle, the centrality of performance. Busby Berkeley, Fred Astaire, Judy Garland, Bob Fosse, Stanley Donen, Gene Kelly, Vincente Minnelli.

4 units, not given this year

FILMSTUD 404. Postwar American Avant Garde Cinema
History and theory of post-WW II American independent and experimental film. Emphasis is on issues of audiovisual form, structure, and medium specificity. Films and writings include Maya Deren, Stan Brakhage, Michael Snow, and Hollis Frampton.

5 units, not given this year

FILMSTUD 406. Montage
Graduate seminar in film aesthetics. Theoretical and practical approaches to editing/montage. Stylistics; semiotic, epistemological, and ideological functions of montage considered in film-historical contexts including: development of the continuity system of editing; flourishing of the Soviet montage school; and achievements of the post-war new waves. Filmmakers include D. W. Griffith, Sergei Eisenstein, Jean-Luc Godard, and Dusan Makavejev.

5 units, not given this year

FILMSTUD 407. The Still Moving Image
Tension and overlap between cinema and photography as technological media, beginning with Frankfurt school critiques of media theory, classical film, and photography theory through recent considerations of the post-cinematic age of digital and virtual images. How ideas of indexicality, medium specificity, memory, duration, narrativity, chance, stasis, repetition have informed accounts of the relationship of these media.

5 units, Win (Ma, J)

FILMSTUD 410A. Documentary Perspectives I
Restricted to M.F.A. documentary film students. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.

4 units, Win (Samuelson, K)

FILMSTUD 410B. Documentary Perspectives II
Restricted to M.F.A. documentary film students. Continuation of 410A. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.

4 units, not given this year

FILMSTUD 411. Animation
The fantasy of an image coming to life dates back centuries, and artists have long sought to imbue their images with liveliness, but it wasn't until the onset of the cinema that the fantasy was actualized. It is sometimes argued that animation is the ground against which cinema situates itself: the history of moving pictures begins with optical toys that greatly predate the invention of the cinema, and because cinema is increasingly dominated by films that are computer animated, in whole or in part. This course seeks to delve into the implications of animation, considering its underlying fantasies (in art and literature), its particular phenomenologies, its relation to the uncanny, its status as a pure cinema, and its place in film theory. Different modes of production and style will be explored, including realist animation, abstract animation; animistic animation; animated drawings, objects, and puppets; CGI, and live/animation hybrids. Films will be drawn from a wide range.

5 units, not given this year

FILMSTUD 430. Cinema and Ideology
The relationship between cinema and ideology from theoretical and historical perspectives, emphasizing Marxist and psychoanalytical approaches. The practice of political filmmaking, and the cinema as an audiovisual apparatus and socio-cultural institution. Topics include: dialectics; revolutionary aesthetics; language and power; commodity fetishism; and nationalism. Filmmakers include Dziga Vertov, Jean-Luc Godard, Bruce Conner, and Marco Ferreri. Theoretical writers include Karl Marx, Sergei Eisenstein, and Slavoj Zizek. Prerequisite: consent of instructor.

5 units, Aut (Levi, P)

FILMSTUD 440. Sound Technology
Development of sound technology and reproduction in context of modernity, with some emphasis on the crossings of sound and image in the history and theory of technological reproduction. Topics include phonography, recording, and mass culture (Adorno, Sterne, Thompson, Lastra); cinematic sound and music (Chion, Altman, Gorbman); filmic and compositional practices in the American avant-garde (Joseph, Kahn); acoustic ecology (Schafer). Weekly screenings or listening assignments.

5 units, not given this year

FILMSTUD 441. Theories of Cinematic Spectacle
How cinematic spectacle has been theorized; the adoption of new technologies such as sound, color, or special effects; theories of the sublime and the grotesque. Spectacle as a vehicle for propaganda or pedagogy, and its relation to narrative and gender. The role of spectacle in experimental cinema and its deconstruction by Godard and others. Recommended: 4 or equivalent.

5 units, not given this year

FILMSTUD 620. Area Core Examination Preparation
For Art History Ph.D. candidates. Prerequisite: consent of instructor.

5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FILMPROD 101. Screenwriting
Primarily for undergraduates; graduate students may enroll with consent of adviser.

FILMPROD 10AX. Filmmaking
Fundamentals of digital video production. Process of expressing ideas in an audio-visual medium from the concept stage through post-production. Examples of narrative, documentary, and experimental work screened and discussed. Hands-on experience in directing, shooting, editing on Final Cut Pro, sound design, and a fuller understanding of film production.

2 units, Aut (Krawitz, J)

FILMPROD 101. Screenwriting
(Same as FILMPROD 301) Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: 1) ENGLISH 90, 2) ENGLISH 190F or FILMPROD 104, and 3) consent of instructor.

5 units, Spr (Tobin, A)

FILMPROD 103. Adaptation
A close analysis of film adaptation, using various source materials to examine the demands form makes on content and the creative choices made in adaptation to film. Source materials will include plays, fiction, biography, history, graphic novels, and reference to video games and amusement park rides. A weekly film screening is a requirement of the course.

4 units, Win (Tobin, A)

FILMPROD 104. Visual Writing
A writing workshop that is an exploration of visual storytelling. Beginning with visual literacy, the class progresses from basic
cinematic techniques through scene exercises to revisions and ultimately to connecting scenes in order to build sequences of page scripts. Open to all majors; may substitute for ENGL 190F prerequisite for FP101.
4 units, Win (Tobin, A)

**FILMPROD 105. Screenwriting**
(Same as FILMPROD 101) Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: 1) ENGLISH 90, 2) ENGLISH 190F or FILMPROD 104, and 3) consent of instructor.
5 units, Spr (Tobin, A)

**FILMPROD 301. Screenwriting**
(Same as FILMPROD 101) Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: 1) ENGLISH 90, 2) ENGLISH 190F or FILMPROD 104, and 3) consent of instructor.
5 units, Spr (Tobin, A)

**FILMPROD 403. Advanced Documentary Directing**
Restricted to M.F.A. documentary students. Further examination of structure, emphasizing writing and directing nonfiction film. Prerequisite: consent of instructor.
4 units, Aut (Samuelson, K)

**FILMPROD 404. Advanced Film and Video Production**
Restricted to M.F.A. documentary students. Techniques of visual storytelling and observational shooting. Final quarter of professional training in 16mm motion picture production. Prerequisite: consent of instructor.
4 units, Spr (Samuelson, K)

**FILMPROD 405. Producing Practicum**
Restricted to M.F.A. documentary students. Advanced producing principles through the preproduction of the M.F.A. thesis project, including development of a professional film proposal. Practical training in fundraising. Prerequisite: consent of instructor.
4 units, Aut (Samuelson, J)

**FILMPROD 406A. Documentary M.F.A. Thesis Seminar I**
Restricted to M.F.A. documentary students. Production of film or video project. Focus is on shooting strategies, ethical challenges, and practical production issues. Prerequisite: consent of instructor.
4 units, Win (Samuelson, K)

**FILMPROD 406B. Documentary M.F.A. Thesis Seminar II**
Restricted to M.F.A. documentary students. Editing and post-production of film or video project. Emphasis is on aesthetic choices (structure, narration, music), distribution, contracts, and audience. Prerequisite: consent of instructor.
4 units, Spr (Krawitz, J)

**FRENCH GENERAL (FRENGEN) COURSES**

**UNDERGRADUATE COURSES IN FRENCH GENERAL**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**FRENGEN 146. Revolution! A Global History from 1640 to the Present**
(Same as HISTORY 104A) The modern world was born out of Revolution. To this day, dramatic political change is most often the result of Revolution. This course will explore how Revolution became a model for changing the course of history. From the English revolutions of the 1600's to the current upheavals in the Arab world, passing through the French, Russian, and Chinese revolutions, we will study how Revolution has been conceived, carried out, and reinvented around the world. GER:DB-Hum
4 units, Aut (Baker, K; Edelstein, D)

**FRENGEN 167. Social Animals, Social Revolutions and Social Networks**
(Same as BIO 167, CS 81G) We like to think of social networks as contemporary phenomena. But before Facebook, individuals organized themselves in social networks: before Twitter, revolutionaries used media to communicate and coordinate their messages. In fact, even animal societies are networked. Do all these social networks share certain properties? What can we learn by comparing them? These are some of the questions we will ask in this course, as we traverse the natural world and past societies before taking a fresh look at our modern social networks. GER:DB-NatSci
4 units, Spr (Gordon, D; Edelstein, D; Roberts, E)

**FRENGEN 172. Dream Visions: The Roman de la Rose**
(Same as FRENGEN 272, ITALGEN 172, ITALGEN 272) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.
3-5 units, not given this year

**FRENGEN 181. Philosophy and Literature**
(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum
4-5 units, Win (Staff)

**FRENGEN 192E. Images of Women in French Cinema: 1930-1990**
The myth of the feminine idol in French films in historical and cultural context. The mythology of stars as the imaginary vehicle
that helped France to change from traditional society to modern nation after 1945. Filmmakers include Renoir, Truffaut, and Nelly Kaplan. The evolution of the role of women in France over 60 years. Lectures in English; films in French with English subtitles. This course must be taken for either 3 units or 5 units; cannot be taken for 4 units. GER:DB-Hum, EC-Gender

3-5 units, Spr (Apostolides, J)

FRENGEN 204. Songs of Love and War: Gender, Crusade, Politics

Medieval love, satirical and Crusade lyrics in the Old Occitan, and Old French traditions. Focus on deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Also modern translation and reception of the troubadour tradition. Poets include Ovid, Bernart de Ventadorn, Bertran de Born, La Comtesse de Dia, Thibaut de Champagne, Sordello, Dante, Dante, Pound, and Neruda. GER:DB-Hum, EC-Gender

3-5 units, Win (Galvez, M)

FRENGEN 268. INTERPRETATION AND THEORY

(Same as DRAMA 167T, DRAMA 367) This course will present majors French authors whose work have help to create Literary and Drama Theory in America. Among the authors we will devote a special interest to the work of Roland Barthes, Jacques Derrida, Jacques Lacan and Alain Badiou. Parallelism between the interpretation of drama and the interpretation of painting will constitute the core of this course.

5 units, Aut (Apostolides, J)

GRADUATE COURSES IN FRENCH GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

FRENGEN 219. The Renaissance Body

The body as locus for desire, pleasure, disease, mortality, sexuality, and gender; and as canon of beauty and reflection of cosmic harmony. How literature presented the duality of the body, as an anatomical gaze in arts and medicine; how it staged the aesthetic, religious, philosophical, and moral issues related to such a promotion or deconstruction of the body. Does literature aim at representing the body, or use it as signifier for intellectual, emotional, and political ideas? Readings from Rabelais, Ronsard, Labé, Montaigne; medical texts and archival documents from http://rennaissancebodyproject.stanford.edu.

3-5 units, not given this year

FRENGEN 225. Introduction to Medieval French Literature

Introduction to the premodern period of French literature through the interpretation of canonical works (La Chanson de Roland; Béroul and Thomas, Tristan; selected lais of Marie de France; selected romans of Chrétien de Troyes; Le Roman de la Rose). Special attention will be given to the socio-cultural contexts in which these works were composed and first received, and to the emergence of the concept of writing as a self-defining act. We will study Old French language and the material aspects of a medieval work.

3-5 units, Aut (Galvez, M)

FRENGEN 237. Jean-Jacques Rousseau

A comprehensive and yet focused introduction to the work and life of the French 18th-century philosopher who undoubtedly had the strongest impact on posterity (occasionally comparing Rousseau with two other key-figures of French Enlightenment, Voltaire and Denis Diderot). Special attention will be paid to Rousseau’s reception history both as the inventor of new concepts and discourses (eg, vertu persécutée) that have shaped our understanding of social life up until the present day, and on a new type of sensibility mainly based on the capacity of compassion (pitié). This seminar, in its concluding sessions, will explore aspects of an aesthetic and political genealogy of our time.

3-5 units, Win (Gumbrecht, H)

FRENGEN 242. Women Mystics from the Middle Ages to the Present

(Same as ITALGEN 242) The predominantly female mystical experience or direct-embodied encounter with a spiritual reality that is difficult, perhaps impossible, to reduce to words, or to explain rationally. Sources include European texts from the Middle Ages to the present by women and men who attempt to convey the experience metaphorically, to interpret it theologically and philosophically, and to transmit it actively to others.

3-5 units, not given this year

FRENGEN 256E. Political Anthropology from Rousseau to Freud

A confrontation between ways of accounting for society in an individualistic framework: the social contract; political economy; individualistic sociology; society as crowd; mass psychology; and sociopolitical institutions. Creating a typology of the ways in which a given anthropology constrains conceptions of the social and political order. Writers include Rousseau, Hume, Smith, Constant, Tocqueville, Marx, Durkheim, Weber, and Freud.

3-5 units, not given this year

FRENGEN 272. Dream Visions: The Roman de la Rose

(Same as ITALGEN 172, ITALGEN 272) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of literature in the Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose. Investigates the Roman de la Rose through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.

3-5 units, not given this year

FRENGEN 278. European Nihilism

(Same as ITALGEN 278) This course will probe the thought of nothingness in various European writers and thinkers. The main authors include Giacomo Leopardi, Nietzsche, Michelstader, Heidegger, Beckett, and Emile Cioran.

3-5 units, Win (Harrison, R)

FRENGEN 288. Decadence and Modernism from Mallarme to Marinetti

(Same as ITALGEN 288) How the notion of decadence, initially a term of derision, shapes and underlies the positive terms of symbolism and modernism. Readings include theories of decadence and examples of symbolist and modernist texts that attempt to excorise decadent demons, such as lust, mysticism, and the retreat into artificiality. Authors include Huysmans, Poe, Mallarmé, Nietzsche, Nordau, d’Annunzio, Valry, Ungaretti, Marinetti, and Breton.

3-5 units, Aut (Witman, L)

FRENGEN 289. French and Italian Women Writers

(Same as ITALGEN 289) How does women’s writing evolve from the very early 20th century, when women’s liberation movements first began and WW I brought major social changes, to the flowering of feminine writing in the 70s and beyond? What is the relationship between women writers and filmmakers, and feminism? Is it legitimate to consider women writers in a separate category? To what extent does a reevaluation of women writers mean reconsidering modern literary history? Authors and filmmakers include Aleramo, Yourcenar, de Beauvoir, Banti, Duras, Cervanti.

3-5 units, not given this year

FRENGEN 301E. New Methods and Sources in French and Italian Studies

(Same as ITALGEN 301E) Based on student interest. Changes in research methods: the use of digitized texts, resources, and databases available through Stanford Libraries, gateways. Emphasis is on strategies for exploration of broad and specialized topics through new and traditional methods. Using a flexible schedule based on enrollment and the level of students, knowledge, may be offered in forms including a shortened version on the basics, independent study, or a syllabus split over two quarters. Unit levels adjusted accordingly.

1-4 units, Spr (Sussman, S)

FRENGEN 334. Introduction to Multispecies Theory in the Humanities and Social Sciences

(Same as ANTHRO 334A) This course will focus on such problems as: posthumanism and the emergence of non-anthropocentric human and social sciences, multispeciesism in the re-thinking of disciplines, redefinition of the concept of life in
the human and social sciences by including non-human subjects, animals and plants as others, rethinking the category of the social as a collective of humans and non-humans, nonintentional agency (as well as understanding of vitalism and animism), animal holocaust, multispecies art and living organisms as media in art (bio-art), ethics of compassion and the problem of the dignity of the non-human (including recent interest in the dignity of plants).

5 units, Spr (Domanska, E)

FRENGEN 356. Theories of the Novel
(Same as COMPLIT 322A) The novel as the literary genre most closely identified with the development of cultural modernity by literary historians and theorists. Critical models for defining the novel's poetics and cultural work. Critical readings such as texts by Lukacs, Bakhtin, Auerbach, Barthes, Armstrong, Gallagher, Bourdie, Macherey, Jameson, Said and Spivak. Tutor texts such as Defoe's Robinson Crusoe,Flaubert's Madame Bovary, and Woolf's To the Lighthouse.
3-5 units, not given this year

FRENGEN 369. Introduction to Graduate Studies: Criticism as Profession
(Same as COMPLIT 369, ITALGEN 369, GERLIT 369) Based on a survey of (and a conversation about) the history of academic Literary Criticism, and on presentation (and discussion) of contemporary theoretical positions, this seminar will try to enhance a reflecton on the conditions, difficulties, and rewards of Literary Criticism as a profession, and as an intellectual life form. Attention will be paid to the most relevant (and most pressing) institutional frame-conditions, but this attention will not prevent us from trying to explore a (seldom used) potential of eccentricity and freedom that has always been inherent to (although sometimes dormant in) Literary Criticism.
5 units, Aut (Gumbrecht, H)

FRENGEN 395. Philosophical Reading Group
(Same as COMPLIT 395A, ITALGEN 395) Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit.
1 unit, Aut (Gumbrecht, H), Win (Gumbrecht, H)

FRENCH LANGUAGE
(FRENLANG) COURSES

UNDERGRADUATE COURSES IN FRENCH LANGUAGE
Primarily for undergraduates; graduate students may enroll with consent of adviser.

FRENLANG 1. First-Year French, First Quarter
Proficiency-based. Development of discourse appropriate in French and Francophone contexts.
5 units, Aut (Hulstyn, M), Win (Howard, H), Spr (Howard, H)

FRENLANG 1A. Accelerated First-Year French, Part 1
Completes first-year language sequence in two rather than three quarters. Recommended for students with previous knowledge of French who place into 1A on the placement test or who are familiar with another Romance language. 2A fulfills the University foreign language requirement. Prerequisite: French placement test and consent of instructor.
5 units, Aut (Lasnier, M), Win (Lasnier, M)

FRENLANG 2. First-Year French, Second Quarter
Continuation of 1. Proficiency-based. Development of discourse appropriate in French and Francophone contexts. Prerequisite 1 or equivalent.
5 units, Aut (Kershaw, M), Win (Kershaw, M)

FRENLANG 2A. Accelerated First-Year French, Part 2
Continuation of 1A. Completes first-year language sequence in two rather than three quarters. Recommended for students with previous knowledge of French who place into 1A on the placement test or who are familiar with another Romance language. Fulfills the University foreign language requirement. Prerequisite: 1A, or French placement test and consent of instructor.
5 units, Win (Kershaw, M), Spr (Kershaw, M)

FRENLANG 3. First-Year French, Third Quarter
Continuation of 2. Proficiency-based. Development of discourse appropriate in French and Francophone contexts. Prerequisite: 2 or equivalent. Fulfills the language requirement.
5 units, Aut (Shapirshteyn, V), Win (Lasnier, M), Spr (Staff)

FRENLANG 5A. Intensive First-Year French, Part A
Same as FRENLANG 1. Accelerated. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.
5 units, Sum (Staff)

FRENLANG 5B. Intensive First-Year French, Part B
Same as FRENLANG 2. Continuation of 5A. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.
5 units, Sum (Staff)

FRENLANG 5C. Intensive First-Year French, Part C
Same as FRENLANG 3. Continuation of 5B. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Fulfills the University language requirement. Prerequisite 2 or 5B.
5 units, Sum (Staff)

FRENLANG 10. Beginning French Oral Communication
For students who have completed 2 or equivalent. Emphasis is on speaking skills, vocabulary, and pronunciation. May be repeated once for credit.
2 units, Aut (Dozer-Rabedeau, J), Win (Dozer-Rabedeau, J), Spr (Dozer-Rabedeau, J)

FRENLANG 15. Intermediate French Oral Communication
For students who have completed the first-year language requirement. May be repeated once for credit.
2 units, Aut (Dozer-Rabedeau, J), Win (Dozer-Rabedeau, J), Spr (Dozer-Rabedeau, J)

FRENLANG 15S. Intermediate Conversation: French in Everyday Life
Same content as 15. May be repeated once for credit. Prerequisite: one year of college French or equivalent.
3 units, not given this year

FRENLANG 20A. France and Francophonie
Second-year French conversation based on themes from the regions of France and the Francophone world. Intermediate-level speaking skills and advanced-level functions. Topics include travel, food, and crosscultural comparisons. Students returning from study abroad programs are encouraged to enroll. May be repeated once for credit. Prerequisite: 22C or equivalent.
2 units, Aut (Staff)

FRENLANG 20B. French Cinema
Second-year French conversation based on films. Intermediate-level speaking skills and advanced-level functions. Themes include: French filmmakers, stars, and trends. Required film viewing in and outside class in French. May be repeated once for credit. Prerequisite: 22C or equivalent.
2 units, Win (Staff)

FRENLANG 20C. Contemporary French Language
Second-year French conversation. Intermediate-level speaking skills and advanced-level functions for formal and informal situations. Useful for students planning to travel or study abroad. May be repeated once for credit. Prerequisite: 22C or equivalent.
2 units, Spr (Staff)

FRENLANG 21C. Second-Year French: Cultural Emphasis, First Quarter
Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentialational language and socio culturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: one year of college French or consent of coordinator.
4-5 units, Aut (Lasnier, M), Win (Kershaw, M), Spr (Dozer-Rabedeau, J)
FRENLANG 22C. Second-Year French: Cultural Emphasis, Second Quarter
Continuation of 21C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socio culturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: 21C or consent of coordinator.
4-5 units, Aut (Howard, H), Win (Dozer-Rabedeau, J), Spr (Kershaw, M)
FRENLANG 23C. Second-Year French: Cultural Emphasis, Third Quarter
Continuation of 22C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: 22C or consent of coordinator.
4-5 units, Aut (Dozer-Rabedeau, J), Win (Staff), Spr (Lasnier, M)
FRENLANG 24C. Second-Year French: Literary Texts
Proficiency oriented. Discussion, writing, reading, and listening comprehension based on literary texts. Prerequisite: 23.
3-4 units, not given this year
FRENLANG 24R. Second-Year French: International Relations, Political Science, and Economics Emphasis
Proficiency-based. Discussion, writing, reading, and listening comprehension based on political, economic, and social topics. Prerequisite: 23.
3-4 units, not given next year
FRENLANG 60A. Beginning French Conversation
(AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)
FRENLANG 60B. Intermediate French Conversation
(AU) (Staff)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)
FRENLANG 60C. Advanced French Conversation
(AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)
FRENLANG 60D. French Viticulture
See http://www.stanford.edu/class/frenlang60d/. Prerequisite: 21 or older. (AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)
FRENLANG 60E. French Cooking
(AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)
FRENLANG 60F. French Cinema
May be repeated for credit. (AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)
FRENLANG 60G. French Poetry
(AU)
1 unit, Aut (Staff), Win (Staff), Spr (Staff)
FRENLANG 60N. French cheese
1 unit, not given this year
FRENLANG 60P. Advanced Viticulture
Prerequisite: Completion of 60D. (AU)
1 unit, Win (de Castries, P), Spr (de Castries, P)
FRENLANG 60T. Teaching French Conversation
(AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)
FRENLANG 120. Advanced French Oral Communication
Speaking skills and functions including narration, description, supporting opinions, and hypothesizing about current events and issues in France. May be repeated once for credit. Prerequisites: 23C or equivalent, and consent of instructor.
3 units, Aut (Staff), Win (Staff), Spr (Staff)
FRENLANG 121. Introduction to French Texts
Readings of major literary figures and themes from medieval times to the present. Prerequisite: 23 or consent of coordinator. Recommended: 124.
3-4 units, not given this year
FRENLANG 122. Introduction to French Culture and Civilization
Discussion of French art, geography, history, political change, and social institutions. Prerequisite: 23 or equivalent.
3-4 units, not given this year
FRENLANG 123. French Creative Writing
Advanced. Model texts introduce students to genres and styles; review of grammar and vocabulary. Discussion of original writing by students. Prerequisite: 23 or equivalent.
3-4 units, not given this year
FRENLANG 124. Mastering Advanced French Grammar:
Grammar through Contemporary Literature and Culture
Required for students majoring or minoring in French; recommended for students planning to take literature courses. Review of difficulties in French. Grammatical and logical analysis. Prerequisite: 23C or equivalent.
3-4 units, Aut (Kershaw, M), Win (Lasnier, M), Spr (Howard, H)
FRENLANG 125. French Phonetics
For majors and other students who plan to enroll in advanced courses. Study and practice of the French language sound system. Language lab. Prerequisite: 23 or equivalent.
3-4 units, not given this year
FRENLANG 199. Language Specials
Prerequisite: consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN FRENCH LANGUAGE
Primarily for graduate students; undergraduates may enroll with consent of instructor.
FRENLANG 1G. Accelerated First-Year Business French, Part 1
For GSB students only. Limited enrollment.
4 units, not given this year
FRENLANG 2G. Accelerated First-Year Business French, Part 2
For GSB students only. Limited enrollment.
4 units, not given this year
FRENLANG 3G. Accelerated First-Year Business French, Part 3
For GSB students only. Limited enrollment.
4 units, not given this year
FRENLANG 205A. Intensive First-Year French for Stanford Grads, Part A
FRENLANG 205A. Same as FRENLANG 1. For Stanford graduate students only. Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units.
3-5 units, Sum (Staff)
FRENLANG 205B. Intensive First-Year French for Stanford Grads, Part B
For Stanford graduate students only. Continuation of 205A. Accelerated. Written exercises, compositions, conversational practice, and daily work. Prerequisite 205B or equivalent. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units.
3-5 units, Sum (Staff)
FRENLANG 205C. Intensive First-Year French for Stanford Grads - Part C
For Stanford graduate students only. Continuation of 205B. Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses
COURSES OF INSTRUCTION

for a total of 9 units. Prerequisite 205B or equivalent.
3-5 units, Sum (Staff)
FRENLANG 250. Reading French
For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year or reading proficiency in another Romance language.
4 units, Win (Staff)
FRENLANG 250S. Reading French
For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year or reading proficiency in another Romance language.
2-4 units, Sum (Staff)
FRENLANG 394, Graduate Studies in French Conversation
Prerequisite: consent of the instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)
FRENLANG 395, Graduate Studies in French
Prerequisite: consent of instructor.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

FRENCH LITERATURE
(FRENLT) COURSES

UNDERGRADUATE COURSES IN FRENCH LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.
FRENLT 38N. Coffee & Cigarettes: The Making of French Intellectual Culture
(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. This course will examine a quintessential French figure the intellectuel from a long-term historical perspective. We will observe how this figure was shaped over time by such other cultural types as the writer, the artist, the historian, the philosopher, and the moralist. Proceeding in counter-chronological order, from the late 20th to the 16th century, we will read a collection of classic French works. As this course is a gateway for French studies, special emphasis will be placed on oral proficiency. Prerequisite: students must have two years of college-level French (or equivalent).
3 units, Aut (Edelstein, D)
FRENLT 122. Nation in Motion: Film, Race and Immigration in Contemporary French Cinema
An examination of the current debates in France regarding national identity, secularism, and the integration of immigrants, notably from the former colonies. Course confronts films’ other media’s visual and discursive rhetorical strategies used to represent ethnic or religious minorities, discrimination, citizens’ resistance to government policies, inter-racial marriages, or women’s rights within immigrant communities. By embodying such themes in stories of love, hardships, or solidarity, the motion pictures make the movements and emotions inherent to immigration tangible: to what effect? GER:DB-Hum, WIM
3-5 units, Win (Allday, C)
FRENLT 124. Constructing the French
How did language, history and the arts (short stories, plays, films, and paintings) help to legitimize and popularize different visions of French identity and culture (many of which are still influential today)? Topics include the Other, French republicanism, the myth of the Grand Siècle, collaboration during WWII, colonialism, and verlan. Authors include Montaigne, Montesquieu, Voltaire, Rostand, Vercors, Hugo, Camus and Sarkozy! Readings and discussions in French.
3-5 units, Spr (Robert, Y)
FRENLT 130. Introduction to Medieval and Renaissance
French Literature
Introduction to the Middle Ages and the Renaissance. The birth of a national literature and its evolution. Literature as addressing cultural, philosophical, and artistic issues which question assumptions on love, ethics, art, and the nature of the self. Readings: epics (La Chanson de Roland), medieval romances (Tristan, Chrétiens de Troyes’ Yvain), post-Petrarchan poetics (Du Bellay, Ronsard, Labé), and prose humanists (Rabelais, Montaigne). Prerequisite: FRENLANG 124 or consent of instructor. GER:DB-Hum, WIM
4 units, Aut (Galvez, M)
FRENLT 131. Absolutism, Enlightenment, and Revolution in 17th- and 18th-Century France
The literature, culture, and politics of France from Louis XIV to Olympe de Gouges. How this period produced the political and philosophical foundations of modernity. Readings include Corneille, Molére, Racine, Lafayette, Voltaire, Diderot, Rousseau, Beaumarchais, and Gouges. Prerequisite: FRENLANG 124 or consent of instructor. GER:DB-Hum, WIM
4 units, Win (Apostolides, J)
FRENLT 132. Literature, Revolutions, and Changes in 19th- and 20th-Century France
Major literary genres, and social and cultural contexts. Focus is on the emergence of new literary forms such as surréalisme, nouveau roman, and nouveau théâtre. Topics of nationalism, decolonization, and feminism. Readings include Balzac, Baudelaire, Césaire, Colette, and Ionesco. Prerequisite: FRENLANG 124 or consent of instructor. GER:DB-Hum, WIM
4 units, Spr (Staff)
FRENLT 133. Literature and Society in Africa and the Caribbean
(Same as COMPLIT 141) The course is reading, analysis and discussion of some of the most representative texts by 20th century Francophone writers from a variety of locations: the French Caribbean, Africa North and South of the Sahara. These works convey the changing aspects of Francophone Africa and the French Caribbean societies and cultures: from oral to written, colonization and changes, tradition competing with modernity, particularly for women, building new identities immigration narrative. The course aims to broaden knowledge of the Francophone societies and cultures, as well as improve skills in speaking and writing in French. Lectures and discussions are conducted in French, most required readings and background material are in French as well. Reading in fiction, poetry and theater include Laye Camara, Ferdinand Oyono, Maryse Condé, Aimé Césaire, Leila Sebbar, Mariama Ba, and others. Prerequisite: FRENLANG 124 or consent of instructor. GER:DB-Hum, EC-GlobalCom, WIM
4 units, Win (Boyé, E)
FRENLT 159. Confessions in 19th-Century French Literature
Evolution of confessional mode in 19th-century first-person narrative. In what way the confessional mode of the Christian practice was preserved in literature and what changes it underwent in the narratives about the self. How did the religious crisis in 19th century France invest the literary confessions? The topics are confessors, conversion, sincerity, repentance, guilt. Authors include Saint Augustine, Rousseau, Musset, Constant, Sainte-Beuve, Fouché, Guizot, Lamartine, Verlaine, Nerval. Taught in French. GER:DB-Hum
3-5 units, not given this year
FRENLT 179. Le Roman au féminin: French Women Writers from the 90's and 00's
From Marie Darrieussecq's Truismes (1996) to Christine Angot, Virginie Despentes, Nothomb, or Marie NDiaye, women writers have been regularly stealing the show since the 1990's. What does it say about the French society? What do they say about contemporary France, and how? Do they transgress literary genres, carving out new literary spaces for unspoken points of views, or are they transcending the notion of écriture féminine that might too conveniently reduce their scandalous novels to a label? Prerequisite: FRENLT 130 (or higher) or consent of instructor. GER:DB-Hum
3-5 units, Spr (Allday, C)
FRENLT 189A. Honors Research
Senior honors students enroll for 5 units in Winter while writing
the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.
5 units, Win (Staff)

FREN LIT 189B. Honors Research
Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.
2 units, Spr (Staff)

FREN LIT 190Q. Parisian Cultures of the 19th and Early 20th Centuries
(S, Sem) Stanford Introductory Seminar. Preference to sophomores. Political, social, and cultural events in Paris from the Napoleonic era and the Romantic revolution to the 30s. The arts and letters of bourgeois, popular, and avant garde cultures. Illustrated with slides. Prerequisite: students must have two years of college-level French (or equivalent).
4 units, Spr (Bertrand, M)

FREN LIT 199. Individual Work
Restricted to French majors with consent of department. Normally limited to 4-unit credit toward the major. May be repeated for credit.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN FRENCH LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

FREN LIT 219. The Renaissance Body
The body as locus for desire, pleasure, death, mortality, sexuality, and gender; and as canon of beauty and reflection of cosmic harmony. How literature responded to the development of an anatomical gaze in arts and medicine; how it staged the aesthetic, religious, philosophical, and moral issues related to such a promotion or deconstruction of the body. Does literature aim at representing the body, or use it as signifier for intellectual, emotional, and political ideas? Readings from Rabelais, Scève, Ronsard, Labé, d'Aubigné, Montaigne, and medical texts.
3-5 units, not given this year

FREN LIT 222. The Political Unconscious of the Ancien Régime
The lasting influence in Europe of absolutism. Topics include political theories, the importance of court life, art as a political tool, modifications in human sensibility, literature, and social transformations.
3-5 units, not given this year

FREN LIT 225. Multicultural Molière
Molière's life and work as a point of departure for the notion of multiculturalism. Born in a bourgeois family, Molière was in contact with social milieus including the French peasantry for whom he wrote farces, and the court of Louis XIV for whom he provided spectacles at Versailles. Major plays, including Tartuffe, Le bourgeois gentilhomme, and Le malade imaginaire as the foil: lexically, the opposition has been with us, in France and England, for a good three and a half centuries; the tension even generated, many say, the foundational Don Quixote. In this seminar, we will be both reviewing the critical literature on the topic and looking closely at three works from the French tradition that may--or may not--document the transition from romance to novel: d'Urfé's L'Astrée, Sorel's Le Berger extravagant, and Lafaye's Le Princesse de Clèves.
3-5 units, Spr (Staff)

FREN LIT 238. Jean-Paul Sartre and Simone de Beauvoir
The course will examine the relation between the two thinkers, with special emphasis on the debate in France about the engaged intellectual. It will also explore the Sartre/Merleau-Ponty correspondence at the time of their quarrel around 1953, as well as the Sartre/Camus controversy. Readings include: Sartre's, Qu'est-ce que la littérature ?, Situations II, L'idiot de la famille; Beauvoir's, I, l'énorme sexe, Mémoires d'une jeune fille rangée, Les Mandarins, La Force des choses; Merleau-Ponty's Sartre et l'ultra-bolchévisme, in Parcours deux; and Adorno's paper Engagement, in Notes to Literature.
3-5 units, not given this year

FREN LIT 248. Literature, History, and Representation
(Same as COMPLIT 250) Literary works as historical narratives; texts which envision ways of reconstructing or representing an ancient or immediate past through collective or individual narratives. Narration and narrator, relation between individual and collective history; historical events and how they have shaped the narratives; master narratives; and alternative histories. Reading include Glissant, Césaire, Dadié, Cixous, Pérec, Le Clézio, Mokkedem, Benjamin, de Certeau, and White.
3-5 units, not given this year

FREN LIT 256. Mind and Body in 20th-Century French Fiction
How fiction articulates the tensions among the sensuous, the sensual, the embodied, and the aspiration to purity, abstraction, and transcendence. Focus on questioning dichotomies such as nature/culture, masculine/feminine, sacred/profane, and written word/voice. Authors include Gide, Camus, Butor, Duras, and Tournier.
3-5 units, not given this year

FREN LIT 263. French Theater Through the Ages
Today's most admired French plays were often deeply controversial when first performed. In this course, we will study a selection of plays that elicited heated arguments, from quarrels in the press to all out war in the auditorium. This will allow us to explore issues unique to different literary movements, as well as trans-historical questions concerning the political and moral value of theater. Authors include Cornelle, Molière, Beaumarchais, Chénier, Hugo, Jarry and Genet. Readings and discussions in French.
3-5 units, Win (Robert, Y)

FREN LIT 267. National Literatures, Littérature-monde: A New Comparatism
(Same as COMPLIT 267) This course will focus on the implications of a global francophonic, through discussion of texts produced in different francophone times and spaces. Among the topics to be explored: confrontation of inward/outward territories and the questions of otherness, identity and minority status, the relation between history and literature, transnationality, métissage of languages and transnationality. Readings include Montaigne and Calvin, Tzetan Todorov, Lise Gauvin, Aimé Césaire, Bernard Dadié, Edouard Glissant, Leila Sebbar and others.
3-5 units, not given this year

FREN LIT 276. From Romance to Novel: 17th-Century French Fiction
Modern literary historians aren't the only ones to have had difficulty conceptualizing the novel without using romance as a foil: lexically, the opposition has been with us, in France and England, for a good three and a half centuries; the tension even generated, many say, the foundational Don Quixote. In this seminar, we will be both reviewing the critical literature on the topic and looking closely at three works from the French tradition that may—or may not—document the transition from romance to novel: d'Urfé's L'Astrée, Sorel's Le Berger extravagant, and Lafayette's La Princesse de Clèves.
3-5 units, Spr (Staff)

FREN LIT 278. Special Topics (Francophone Literature): From Exoticism to a Discourse of Auto-Representation
(Same as AFRICAST 278, COMPLIT 278) Critical analysis of major issues relating to literatures in French language and outside France. Focus is on exoticism and self-representation, with an emphasis on the evolution of mentalities, new sensitivities and the role of literature in developing individual or collective identity. Readings include Le Clézio, Memmi, Malouf, Lopes, Schwarz-Bart, Delaygue, Glissant, Todorov, Kane and others. Primary sources, secondary sources and film. Taught in French.
3-5 units, not given this year

FREN LIT 280. Women in Print: Gender, Authorship, and Book Culture in Early Modern France
The relationships between gender, concepts of authorship, and early modern book culture in Renaissance France. What rhetorical, commercial, or textual strategies were used by printers, publishers, and writers, male and female alike, to create a new commodity, the female-authored book, and a new notion, that of female author, at a time when the phrase was still an oxymoron. Readings from Marguerite de Navarre, Helene de Cremone, Peretti du Guillot, Louise Labé, the Dame des Roches, and Marie de Gournay.
3-5 units, Aut (Alday, C)

FREN LIT 293A. Topics in French Literature and Philosophy
Five-week course. May be repeated for credit.
GENETICS (GENE) COURSES

UNDERGRADUATE COURSES IN GENETICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

GENE 25SI. The Art and Science of Beer
Colloquium-style lecture series. Topics include: basics of beer brewing, the science behind the brew, history of beer brewing, government regulation, regional traditions and techniques, American micro-brewing. Includes hands-on brewing experience.
1 unit, Spr (Staff)

GENE 104Q. Law and the Biosciences
(S.Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on human genetics; also assisted reproduction and neurosciences. Topics include forensic use of DNA, genetic testing, genetic discrimination, eugenics, cloning, pre-implantation genetic diagnosis, neuroscientific methods of lie detection, and genetic or neuroscience enhancement. Student presentations on research paper conclusions.
3 units, Win (Greenly, H)

GENE 109Q. Genomics: A Technical and Cultural Revolution
(Same as BIOMEDIN 109Q) Preference to sophomores. Concepts of genomics, high-throughput methods of data collection, and computational approaches to analysis of data. The social, ethical, and economic implications of genomic science. Students may focus on computational or social aspects of genomics.
3 units, not given this year

GENE 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN GENETICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

GENE 202. Human Genetics
Utilizes lectures and small group discussions to design a working knowledge of human genetics as applicable to clinical medicine and research. Basic principles of inheritance, risk assessment, and population genetics, illustrated by using clinical examples drawn from diverse areas of medical genetics practice including prenatal, pediatric, adult and cancer genetics. Practical aspects of molecular and cytogenetic diagnostic methods emphasized. Existing and emerging treatment strategies for single gene disorders also covered. Prerequisites: biochemistry; basic genetics.
4 units, Aut (Bustamante, C)

GENE 203. Advanced Genetics
(Same as BIO 203, DBIO 203) For graduate students in Biosciences programs; may be appropriate for graduate students in other programs. Focused on application of the genetics toolbox to problems in modern biology research. Topics covered include analytic methods, genetic manipulation, genome analysis, and human genetics. Lectures and faculty-led discussion sections with evaluation of papers. Students with minimal experience in genetics should prepare by working out problems in college level textbooks.
4 units, Aut (Stearns, T; Bustamante, C; Fire, A; Sidow, A)

GENE 206. Epigenetics
(Same as BIO 156, BIO 256, PATH 206) For graduate students in the Biosciences and upper level Biology undergraduates. Mechanisms by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. From the discovery of position-effect variegation in Drosophila in the 1920s to present-day studies of covalent modifications of histones and DNA methylation. Topics include: position effect, gene silencing, heterochromatin, centromere identity, genomic imprinting, histone code, variant histones, and the role of epigenetics in cancer. Prerequisite: BIO41 and BIO42, or GENE 203, or consent of instructor.
2 units, alternate years, not given this year

GENE 209. Current Topics in Human, Population, and Statistical Genomics
Intensive seminar/workshop. Topics, drawn from current and past literature, may include: assessing and population genetic analysis of genic and non-genic variation; genome-wide association mapping; reconstructing demographic history from genome sequence data; domestication genomics; host-pathogen genome evolution; detecting signatures of selection; experimental design in human genetics; linkage and association mapping; ethical and social issues in human, plant, and animal genetics research. Emphasis on analysis and logic or experimental and observational genomics research. Faculty-led discussion with evaluation of response papers, problem sets, and intensive course project. May be repeated for credit.
2 units, Win (Bustamante, C), Spr (Staff)

GENE 210. Genomics and Personalized Medicine
Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. 2 units lecture only; 3 units lecture and workshop. Prerequisite: GENE 202 or 203.
2-3 units, Spr (Staff)

GENE 211. Genomics
Genome evolution, organization, and function; technical, computational, and experimental approaches; hands-on experience with representative computational tools used in genome science; and a beginning working knowledge of PERL.
3 units, Win (Cherry, J; Sherlock, G)

GENE 212. Introduction to Biomedical Informatics Research Methodology
(Same as BIOE 212, BIOMEDIN 212, CS 272) Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedical. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: BIOMEDIN 210, 211, 214, 217 or consent of instructor.
3 units, Spr (Altman, R)

GENE 214. Representations and Algorithms for
Computational Molecular Biology
(Same as BIOE 214, BIOMEDIN 214, CS 274) Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology-based molecular dynamics, energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.

3-4 units, Aut (Altman, R)

GENE 215. Frontiers in Biological Research
(Same as BIOC 215, DBIO 215) Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker's primary research literature. Students meet with the speaker after the seminar to discuss their research and future direction, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research.

1 unit, Aut (Harbury, P; Villeneuve, A; Calos, M), Win (Harbury, P; Villeneuve, A; Calos, M)

GENE 218. Computational Analysis of Biological Images
(Same as PATH 218) Physical and computational tools for acquisition, processing, interpretation, and archiving of biological images. Emphasis is on digital microscopy.

2 units, not given this year

GENE 221. Current Issues in Aging
(Same as DBIO 221) Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203.

2 units, Spr (Staff), alternate years, not given next year

GENE 222. Method and Logic in Experimental Genetics
For graduate students only. How experimental strategies are applied to biological questions irrespective of discipline boundaries. Examples include purifying activities from complex mixtures, localizing molecules in space and time, discovering macromolecular interactions, inferring from sequence similarity, using structure to elucidate function, and applying genomics to biological problems. Weekly discussion of two representative papers selected by faculty and a student presentation of a third paper which illustrate principles of biochemistry and cell and molecular biology, and the historical context of important scientific advances.

3 units, Win (Baker, J; Pringle, J)

GENE 233. The Biology of Small Modulatory RNAs
(Same as MI 233, PATH 233) Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal.

2 units, alternate years, not given this year

GENE 234. Fundamentals of RNA Biology
(Same as MI 234, PATH 234) For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.

2 units, Aut (Fire, A; Chen, C)

GENE 235. C. Elegans Genetics
Genetic approaches to C. elegans, practice in designing experiments and demonstrations of its growth and anatomy. Probable topics include: growth and genetics, genome map and sequence, mutant screens that start with a desired phenotype, reverse genetics and RNAi screens, genetic duplications, uses of null phenotype non-null alleles, genetic interactions and pathway analysis, and embryogenesis and cell lineage. Focus of action, mosaic analysis, and interface with embryological and evolutionary approaches.

2 units, alternate years, not given this year

(Same as LAW 343) Open to clinical MD and graduate students. Explores the role of scientific experts in patent infringement litigation. In other areas of the law where scientific experts are used -- medical malpractice, environmental law, criminal law -- the science itself is often in dispute. In patent cases, however, the parties generally agree on the science. This affects the relationship between the lawyer and the expert and the substantive content of their interactions. Patent experts need to be able to explain science to the judge and jury. But they also must help the litigators choose which legal issues to press and which to concede, and to be aware of how the complications of the science might help, hurt, obscure or reveal how the law should be applied to the facts. The class examines judicial decisions and trial documents involving scientific evidence in patent litigation, followed by work in teams on final projects: simulations of expert testimony in a patent case. Simulati

3 units, Win (Morris, R)

GENE 244. Introduction to Statistical Genetics
(Same as STATS 345) Computational algorithms for human genetics research. Topics include: permutation, bootstrap, expectation maximization, hidden Markov model, and Markov chain Monte Carlo. Rationale: methods illustrated with existing implementations commonly used in population genetics research, disease association studies, and genomics analysis. Prerequisite: GENE 244 or consent of instructor.

3 units, alternate years, not given this year

GENE 245. Computational Algorithms for Statistical Genetics
(Same as STATS 345) Computational algorithms for human genetics research. Topics include: permutation, bootstrap, expectation maximization, hidden Markov model, and Markov chain Monte Carlo. Rationales and techniques illustrated with existing implementations commonly used in population genetics research, disease association studies, and genomics analysis. Prerequisite: GENE 244 or consent of instructor.

2 units, alternate years, not given this year

GENE 260. Supervised Study
Genetics graduate student lab research from first quarter to filing of candidacy. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GENE 271. Human Molecular Genetics
For genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows interested in the practice of medical genetics. Gene structure and function; the impact of mutation and polymorphism as they relate to developmental pathways and health and human disease; population based genetics; approaches to the study of complex genetic conditions; GWAS and genome sequencing technologies; gene therapy, proteomics, stem cell biology, and pharmacogenetics. Undergraduates require consent of instructor and a basic genetics course.

4 units, Aut (Kwan, A; Francke, U)

GENE 272. Introduction to Medical Genetics
For genetic counseling students, graduate students in genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Principles of medical genetics including taking a family history, modes of inheritance, and mathematical principles of medical genetics (Bayes theorem, population genetics). An additional problem set is required for 3 units.

2-3 units, Aut (Hudgins, L; Ormond, K)

GENE 273. Introduction to Clinical Genetics Testing
For genetic counseling students, graduate students in genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Uses a combination of case based approach
and didactic lectures to introduce the laboratory concepts of cytogenetics and molecular genetics, and illustrate common genetic conditions that are diagnosed through such testing, introducing students to skills in case preparation, management and presentation. An additional problem set is required for 3 units.

**GENE 274A. A Case Based Approach to Clinical Genetics**
For genetic counseling students, graduate students in genetics, medical students, residents and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.

2 units, Win (Hudgins, L; Kwan, A)

**GENE 274B. A Case Based Approach to Clinical Genetics**
For genetic counseling students, graduate students in genetics, medical students, residents, and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.

2 units, Spr (Staff)

**GENE 275. Role Play and Genetic Counseling Observations**
Students role play aspects of genetic counseling sessions and learn through clinical observations. Observation includes genetic counseling sessions in prenatal, pediatric, and cancer settings.

2 units, Aut (Kwan, A; Ormond, K)

**GENE 276. Genetic Counseling Clinical Rotations**
For genetic counseling students only. Supervised clinical experiences. May be repeated for credit. Prerequisite: GENE 275.

4-7 units, Aut (Ormond, K; Kwan, A), Win (Ormond, K; Kwan, A), Spr (Ormond, K; Kwan, A)

**GENE 278. Prenatal Genetic Counseling**
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial prenatal genetics rotation. Topics include prenatal genetic screening and diagnosis in the first and second trimesters, ultrasound, teratology, and genetic carrier screening.

1 unit, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

**GENE 279. Pediatric and Adult Genetic Counseling**
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial general genetics rotation. Topics include: common genetic conditions; assessment of child development and medical history in the context of a genetic workup; dysmorphology; development of a differential diagnosis; and resources for case management and family support.

1 unit, Aut (Kwan, A), Win (Kwan, A), Spr (Kwan, A), Sum (Ormond, K)

**GENE 280. Metabolic Genetic Counseling**
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their metabolic genetics rotation. Topics include: overview of metabolic diseases; common pathways; diagnosis, management, and treatment of metabolic disorders; and newborn screening.

1 unit, Aut (Kwan, A), Win (Kwan, A), Spr (Kwan, A), Sum (Ormond, K)

**GENE 281. Cancer Genetic Counseling**
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial cancer genetics rotation. Topics include: cancer biology and cytogenetics; diagnosis and management of common cancer genetic syndromes; predictive testing; psychology of cancer genetic counseling; and topics recommended by ASCO guidelines.

1 unit, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

**GENE 282A. Genetic Counseling Research Seminar**
For genetic counseling students only. Facilitated discussions on identifying a topic and mentor for genetic counseling departmental research projects.

1 unit, Win (Ormond, K)

**GENE 282B. Genetic Counseling Research Seminar**
For genetic counseling students only. Lectures and facilitated discussions on research methodology for genetic counseling departmental research projects. Prerequisite: GENE 282A.

1 unit, Spr (Staff)

**GENE 283. Genetic Counseling Research**
Genetic counseling students conduct clinical research projects as required by the department for graduation. May be repeated for credit. Pre- or corequisite: GENE 282.

1-8 units, Aut (Ormond, K; Kwan, A), Win (Ormond, K; Kwan, A), Spr (Ormond, K; Kwan, A), Sum (Ormond, K; Kwan, A)

**GENE 284. Medical Genetics Seminar**
Presentation of research and cases. Students enrolling for 2 units also attend and report on external seminars. May be repeated for credit.

1-2 units, Aut (Kwan, A), Win (Kwan, A), Spr (Staff)

**GENE 285A. Genetic Counseling Seminar**
Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Undergraduates may enroll in Autumn Quarter with consent of instructor.

2-3 units, Aut (Ormond, K)

**GENE 285B. Genetics Counseling Seminar**
Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Prerequisite: GENE 285A.

2-3 units, Win (Ormond, K)

**GENE 285C. Genetic Counseling Seminar**
Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Prerequisite: 285 A/B.

2-3 units, Spr (Staff)

**GENE 286. Advanced Genetic Counseling Seminar**
For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentation of cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Must be taken for 3 quarters. Prerequisites: GENE 285 A,B,C and 276.

2 units, Aut (Ormond, K; Kwan, A)

**GENE 286A. Advanced Genetic Counseling Seminar**
Continuation of GENE 286A. For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentations of cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Prerequisites: GENE 285 A,B,C and 276.

2 units, Win (Ormond, K; Kwan, A)

**GENE 299. Directed Reading in Genetics**
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
GENE 399. Graduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor. 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GENE 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GENE 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOLOGICAL AND ENVIRONMENTAL SCIENCES
(GES) COURSES

UNDERGRADUATE COURSES IN GEOLOGICAL AND ENVIRONMENTAL SCIENCES

Primarily for undergraduates; graduate students may enroll with consent of advisor.

GES 1A. Introduction to Geology: The Physical Science of the Earth
For non-majors or prospective majors in the Earth Sciences. Lectures, hands-on laboratories, and three one-day weekend field trips. Focus is on the physical and chemical processes of heat and mass transfer within the earth and its fluid envelopes, including deep-earth, crustal, surface, and atmospheric processes. Topics include the dynamics of and interactions between the inner earth, plate tectonics, surface processes, and atmospheric processes such as climate change and global warming. Only one of GES 1A, 1B, or 1C may be taken for credit. Prerequisites: MATH 19 or equivalent. GER: DB-NatSci 5 units, Aut (Hilley, G)

GES 1BN. Introduction to Geology: California Desert Field Geology
For non-majors and prospective majors or minors in the Earth Sciences. California’s Death Valley and Owens Valley are used as natural laboratories for studying active geologic processes that shape Earth’s surface (earthquakes, mountain building, volcanoes, glaciers) and for tracing a billion years of Earth history, climate change, and historic human impacts. Lectures on physical geology and hands-on laboratory exercises involving rock identification and interpretation. Use of topographic maps and remote sensing imagery provide the background necessary to appreciate the 6-day field trip to these desert areas during Spring Break. Camping and moderate hiking required. Only one of GES 1A, 1B, or 1C may be taken for credit. Recommended: high school chemistry. GER: DB-NatSci 5 units, not given this year

GES 1C. Introduction to Geology: Dynamic Earth
For non-majors or prospective majors in the Earth Sciences. Integrated lecture-lab includes hands-on activities and local field trips. Focus is on reading the dynamic geological landscape, with an emphasis on California’s primarily Bay Area geology. Topics include plate tectonics, earthquakes and volcanoes, Earth materials, geologic time, stream processes, and climate change over geologic time. Only one of GES 1A, 1B, or 1C may be taken for credit. GER: DB-NatSci 4 units, Spr (Staff)

GES 4. Evolution and Extinction: Introduction to Historical Geology
(Same as EARTHSYS 4) Introduction to the basic tools and principles geologists and paleontologists use to reconstruct the history of the Earth. Principles of stratigraphy, correlation, the geological timescale, the history of biodiversity, and the interpretation of fossils. The use of data from sedimentary geology, geochemistry, and paleontology to test theories for critical events in Earth history such as mass extinctions. Two half-day field trips. GER: DB-NatSci 4 units, Win (Payne, J)

GES 5. Living on the Edge
A weekend field trip along the Pacific Coast. Tour local beaches, geology, and landforms with expert guides from the Department of Geological and Environmental Sciences. Enjoy a BBQ dinner and stay overnight in cabins along the Santa Cruz coast. Get to know faculty and graduate students in the Earth Sciences. Requirements: One campus meeting and weekend field trip to Pacific Coast. Enrollment limited to 18. Freshman have first choice. 1 unit, Aut (Miller, E)

GES 7A. An Introduction to Wilderness Skills
Living, traveling, and working in the wilderness for those planning fieldwork in the backcountry. Local geology, environmental ethics, trip planning, first aid, and leadership techniques. Four mandatory weekend outings focus on backcountry travel, minimum impact camping, equipment use and maintenance, rock climbing, and navigation. 7A emphasizes wilderness travel and climbing. 7B emphasizes winter camping skills and backcountry skiing. Food, group, and major personal gear provided. Guest speakers. Fee. See http://www.stanford.edu/class/ges7, or email oep-teachers@lists.stanford.edu. 1 unit, Aut (Bird, D)

GES 7B. An Introduction to Wilderness Skills
Living, traveling, and working in the wilderness for those planning fieldwork in the backcountry. Local geology, environmental ethics, trip planning, first aid, and leadership techniques. Four mandatory weekend outings focus on backcountry travel, minimum impact camping, equipment use and maintenance, rock climbing, and navigation. 7A emphasizes wilderness travel and climbing. 7B emphasizes winter camping skills and backcountry skiing. Food, group, and major personal gear provided. Guest speakers. Fee. See http://www.stanford.edu/class/ges7, or email oep-teachers@lists.stanford.edu. 1 unit, Win (Bird, D)

GES 7C. Advanced Wilderness Skills
For students with prior backcountry experience. Backcountry skiing, mountaineering, climbing, first aid, and trip planning. Focus is on outdoor leadership experience and trip management techniques. Food, group, and major personal gear provided. Four mandatory weekend trips. Fee. See http://www.stanford.edu/class/ges7/, or email oep-teachers@lists.stanford.edu. Prerequisite: application. 1 unit, Spr (Bird, D)

GES 8. Oceanography: An Introduction to the Marine Environment
For non-majors and earth science and environmental majors. Topics: topography and geology of the sea floor; evolution of oceans; formed; circulation of ocean and atmosphere; nature of sea water, waves, and tides; and the history of the major ocean basins. The interface between continents and ocean basins, emphasizing estuaries, beaches, and continental shelves with California margin examples. Relationships among the distribution of inorganic constituents, ocean circulation, biologic productivity, and marine environments from deep sea to the coast. One-day field trip to measure and analyze waves and currents. GER: DB-NatSci 3 units, Sum (Staff)

GES 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration
(Same as EARTHSYS 38N, EESS 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include The Worst Journey in the World by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dunbar) GER: DB-NatSci 3 units, NEXT YEAR

GES 392. Forensic Geoscience: Stanford CSI
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Geologic themes, materials, and techniques indispensable to modern criminal investigations. Basic earth materials, their origin and variability, and how they can be used as evidence in criminal cases and investigations such as artifact provenance and...
environmental pollution. Sources include case-based, simulated forensic exercises and the local environments of the Stanford campus and greater Bay Area. Local field trips; research presentation and paper. GER: DB-NatSci
3 units, Spr (Maher, K)
GES 40N. Diamonds
Preference to freshmen. Topics include the history of diamonds as gemstones, prospecting and mining, and their often tragic politics. How diamond samples provide clues for geologists to understand the Earth's deep interior and the origins of the solar system. Diamond's unique materials properties and efforts in synthesizing diamonds. GER: DB-NatSci
3 units, alternate years, not given this year
GES 42N. Landscapes and Tectonics of the San Francisco Bay Area
Active faulting and erosion in the Bay Area, and its effects upon landscapes. Earth science concepts and skills through investigation of the valley, mountain, and coastal areas around Stanford. Faulting associated with the San Andreas Fault, coastal processes along the San Mateo coast, uplift of the mountains by plate tectonic processes, and landsliding in urban and mountainous areas. Field excursions; student projects.
4 units, not given this year
GES 43Q. Environmental Problems
(5,Sem) Stanford Introductory Seminar. Preference to sophomores. Complex and interdisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, and subsurface disposal of nuclear waste.
GER: DB-NatSci
3 units, Win (Loague, K)
GES 50Q. The Coastal Zone Environment
Preference to sophomores. The oceanographic, geological, and biological character of coastal zone environments, including continental shelves, estuaries, and coastal wetlands, with emphasis on San Francisco Bay. Five required field trips examine estuarine and coastal environments, and agencies and facilities that manage these resources. Students present original research. Prerequisite: beginning course in Biology such as BIOSCI 51, Chemistry such as CHEM 30 or 31, Earth Sciences such as GES 1 or 2, or Earth Systems such as EARTHSYS 10. GER: DB-NatSci
3 units, not given this year
GES 55Q. The California Gold Rush: Geologic Background and Environmental Impact
(5,Sem) Stanford Introductory Seminar. Preference to sophomores. Topics include: geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California; and environmental impact of the Gold Rush due to population increase, mining operations, and high concentrations of arsenic and mercury in sediments from hard rock mining and milling operations. Recommended: introductory geology. GER: DB-NatSci
3 units, Win (Bird, D)
GES 90. Introduction to Geochemistry
The chemistry of the solid earth and its atmosphere and oceans, emphasizing the processes that control the distribution of the elements in the earth over geological time and at present, and on the conceptual and analytical tools needed to explore these questions. The basics of geochemical thermodynamics and isotope geochemistry. The formation of the elements, crust, atmosphere and oceans, global geochemical cycles, and the interaction of geochemistry, biological evolution, and climate. Recommended: introductory chemistry. GER: DB-NatSci
3-4 units, Win (Stebbins, J)
GES 101. Environmental and Geological Field Studies in the Rocky Mountains
(Same as EARTHSYS 100, EESS 101) Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.
3 units, Aut (Chamberlain, P)
GES 102. Earth Materials: Introduction to Mineralogy
(Same as CEE 195) Techniques for mapping using GPS and differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow;
measurements and analysis of stress, elastic deformation and properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisites: GES 1, MATH 51, 52
3 units, Win (Pollard, D)

GES 115. Engineering Geology and Global Change
(Same as CEE 196) The application of geology and global change to the planning, design, and operation of engineering projects. Case histories taught in a seminar setting and field trips emphasize the impact of geology and global change on both individual engineering works and the built environment by considering Quaternary history and tectonics, anthropogenic sea level rise, active geologic processes, engineering properties of geologic deposits, site exploration, and professional ethics. Prerequisite: GES 1 or consent of instructor. GER: DB-NatSci
3 units, Spr (Holzer, T)

GES 119. A Solar System Odyssey: Introduction to Planetary Geology
How could planetary bodies such as Earth, Moon and Mars form so close together, with such similar starting products have such drastically different outcomes? Did Mars ever have standing water? Does Europa have a subsurface ocean teeming with life? In this course, you will study the formation and evolution of planets and moons, and how differences such as mass and composition have led to a diverse selection of terrain. Through our exploration of selected topics in planetary geology (volcanism, cratering, tectonics), we will actively debate contemporary controversies in planetary geology. GES 1 required or permission of the instructor.
3 units, Aut (Lawrence, K)

GES 120. Planetary and Early Biological Evolution Seminar
(Same as GES 220) Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.
2-3 units, not given this year

GES 121. What Makes a Habitable Planet?
(Same as GES 221) Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.
3 units, not given this year

GES 122. Planetary Systems: Dynamics and Origins
(Students with a strong background in mathematics and the physical sciences should register for 222.) Motions of planets and smaller bodies, energy transport in planetary systems, composition, structure and dynamics of planetary atmospheres, cratering on planetary surfaces, properties of meteorites, asteroids and comets, extrasolar planets, and planetary formation. Prerequisite: some background in the physical sciences, especially astronomy, geophysics, or physics.
3-4 units, Aut (Marley, M; Lissauer, J)

GES 123. Paleobiology
(Same as EARTHSYS 122) Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods. GER: DB-NatSci
4 units, alternate years, not given this year

GES 130. Soil Physics and Hydrology
3 units, Aut (Loague, K)

GES 131. Hydrologically-Driven Landscape Evolution
3 units, Win (Loague, K)

GES 150. Senior Seminar: Issues in Earth Sciences
Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review.
3 units, Aut (Bird, D)

GES 151. Sedimentary Petrography: Depositional Systems
Topics: weathering, erosion and transportation, deposition, origins of sedimentary structures and textures, sediment composition, diagenesis, sedimentary facies, tectonics and sedimentation, and the characteristics of the major siliciclastic and carbonate depositional environments. Lab: methods of analysis of sediments in hand specimen and thin section. Field trips. Prerequisites: 1, 102, 103. GER: DB-NatSci
4 units, alternate years, not given this year

GES 163. Introduction to Isotope Geochemistry
(Same as GES 263) Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to volcanology, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry.
3 units, Aut (Maher, K)

GES 170. Environmental Geochemistry
(Same as EARTHSYS 170) Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. GER: DB-NatSci
4 units, Win (Brown, G)

GES 171. Geochemical Thermodynamics
Introduction to the application of chemical principles and concepts to geologic systems. The chemical behavior of fluids, minerals, and gases using simple equilibrium approaches to modeling the geochemical consequences of diagenetic, hydrothermal, metamorphic, and igneous processes. Topics: reversible thermodynamics, solution chemistry, mineral-solution equilibria, reaction kinetics, and the distribution and transport of elements by geologic processes. Prerequisite: GES 102. GER: DB-NatSci
3 units, Aut (Bird, D)

GES 180. Igneous Processes
For juniors, seniors and beginning graduate students in Earth Sciences. Structure and physical properties of magmas; use of phase equilibria and mineral barometers and thermometers to determine conditions of magmatic processes; melting and magmatic lineages as a function of tectonic setting; processes that control magma composition including fractional crystallization, partial melting, and assimilation; petrogenetic use of trace elements and isotopes. Labs emphasize identification of volcanic and plutonic rocks in thin section and interpretation of rock textures. Prerequisite 102, 103, or consent of instructor.
4 units, Spr (Stebbins, J)

GES 181. Metamorphic Processes
For juniors, seniors, and beginning graduate students in Earth Sciences. Thermodynamics and phase equilibria of multiple component systems; use of phase equilibria to determine pressure and temperature of metamorphic assemblages; geochronology of metamorphic rocks; heat flow in the lithosphere; links between
tectonics and metamorphism; and the role of heat and mass transfer in the Earth's crust and mantle. Labs emphasize identification of metamorphic rocks and minerals for common pelitic and basic rocks and interpretation of rock textures. May be taken for 3 units without lab. Prerequisites: 102, 103, or consent of instructor. GER: DB-NatSci
3-5 units, not given this year

GES 182. Field Seminar on Continental-Margin Volcanism
For juniors, seniors, and graduate students in the earth sciences and archaeology. One weekend-long, and two one-day field trips to study Cenozoic volcanism associated with subduction and with passage of the Mendocino Triple Junction off the west coast of California: Mt. Lassen/Mt. Shasta/Modooc plateau; Clear Lake/Sonoma volcanics; Pinnacles National Monument. Andesite and basalt lavas, cinder cones, mixed magmas, blast deposit, debris avalanches, volcanic mudflows, hydrologic controls of springs in volcanic terrains, hydrothermal alteration and modern geothermal systems, Hg mineralization, obsidian source. Recommended: 1 or equivalent.
2 units, Aut (Mahood, G)

GES 183. California Desert Geology
1 unit, not given this year

GES 184. Field Seminar on Eastern Sierran Volcanism
For nonmajors and prospective majors in the earth sciences and archaeology. Four-day field trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada: basaltic lavas and cinder cones erupted along normal faults bounding Owens Valley, Long Valley caldera, postcaldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, subaqueous basaltic and silicic eruptions of Mono Basin, floating pumice blocks. If snow-level permits, silicic volcanism associated with the Bodie gold district. Recommended: 1 or equivalent.
1 unit, Spr (Mahood, G)

GES 185. Volcanology
For juniors, seniors, and beginning graduate students in earth sciences. Eruptive processes that create volcanic deposits and landforms; relation to physical properties of magmas. Volcanic hazards and the effects of eruptions on climate; volcanic-hosted geothermal systems and mineral resources. Required 4-day field trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada. Those taking the class for 4 units will complete a 3-hour weekly lab involving hand specimen and thin section identification and interpretation, which emphasizes recognizing types of lavas and products of explosive eruptions. Prerequisite: 1, for those taking the course for 3 units; 103 and 104 or equivalent for those taking the course for 4 units. GER: DB-NatSci
3-4 units, Win (Mahood, G)

GES 186. Geoarchaeology
For juniors, seniors, and beginning graduate students with interests in archaeology or geosciences. Geological concepts, techniques, and data in the study of artifacts and the interpretation of the archaeological record. Topics include: sediments and soils; sedimentary settings of site formation; postdepositional processes that disturb sites; paleoenvironmental reconstruction of past climates and landscapes using plant and animal remains and isotopic studies; raw materials (minerals, metals, stone, shells, clay, building materials) and methods used in sourcing; estimating age based on stratigraphic and radiometric techniques. Weekly lab and weekend field trip to local archaeological/geological site. GER: DB-NatSci
5 units, not given this year

GES 190. Research in the Field
Two to three-week long courses that provide students with the opportunity to collect data in the field as part of a team-based investigation of research questions or topics under the expert guidance of knowledgeable faculty and graduate students. Topics and locations vary. May be taken multiple times for credit. Prerequisites: GES 1, GES 102, GES 105.
2-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 191. GES Field Trips
Four- to seven-day field trips to locations of geologic and environmental interest. Includes trips offered during Thanksgiving and Spring breaks. May be repeated for credit. See http://pangea.stanford.edu/GES/undergraduates/courses/
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 192. Undergraduate Research in Geological and Environmental Sciences
Field-, lab-, or literature-based. Faculty supervision. Written reports. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 197. Senior Thesis
For seniors who wish to write a thesis based on research in 192 or as a summer research fellow. May not be repeated for credit; may not be taken if enrolled in 199.
3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 198. Special Problems in Geological and Environmental Sciences
Reading and instruction under faculty supervision. Written reports. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 199. Honors Program
Research on a topic of special interest. See Undergraduate Honors Program above. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN GEOLOGICAL AND ENVIRONMENTAL SCIENCES
Primarily for graduate students; undergraduates may enroll with consent of instructor.

GES 207. Journey to the Center of the Earth
(Same as GES 107, GEOPHYS 184, GEOPHYS 274) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter.
3 units, Win (Lawrence, J; Mao, W)

GES 208. Topics in Geobiology
(Same as EESS 208) Reading and discussion of classic and recent papers in the field of Geobiology. Co-evolution of Earth and life; critical intervals of environmental and biological change; geomicrobiology; paleobiology; global biogeochemical cycles; scaling of geobiological processes in space and time.
1 unit, Aut (Payne, J; Francis, C)

GES 209. Microstructures
Microstructures in metamorphic rocks reveal temperature, pressure, and rates of deformation in the crust and variations in its thermo-mechanical behavior. Topics include the rheology of rocks and minerals, strain partitioning, shear zones and brittle-ductile transition in the crust, mechanisms of foliation and lineation development, preferred crystallographic fabrics, and geochronologic methods useful for dating deformation. Labs involve microstructure analysis of suites of rocks from classic localities. 5 units for extra project.
3-5 units, Aut (Miller, E; Warren, J)

GES 210. Geologic Evolution of the Western U.S. Cordillera
The geologic and tectonic evolution of the U.S. Cordillera based on its rock record through time. This region provides good examples of large-scale structures and magmatic activity generated during crustal shortening, extension, and strike-slip faulting and affords opportunity to study crustal-scale processes involved in mountain building in context of plate tectonic motions.
2-3 units, not given this year

GES 211. Topics in Regional Geology and Tectonics
May be repeated for credit.
2-3 units, Aut (Miller, E), Win (Miller, E), Spr (Miller, E)
GES 212. Topics in Tectonic Geomorphology
For upper-division undergraduates and graduate students. Topics vary and may include coupling among erosional, tectonic, and chemical weathering processes at the scale of orogens; historical review of tectonic geomorphology; hillslope and fluvial process response to active uplift; measures of landscape form and their relationship to tectonic uplift and bedrock lithology. May be repeated for credit.
2 units, not given this year

GES 213. Topics in Sedimentary Geology
For upper division undergraduates and graduate students. Topics vary each year but the focus is on current developments and problems in sedimentary geology, sedimentology, and basin analysis. These include issues in deep-water sediments, their origin, facies, and architecture; sedimentary systems on the early Earth; and relationships among tectonics, basin development, and basin fill. May be repeated for credit.
2 units, by arrangement

GES 214. Topics in Paleobiology
For upper division undergraduates and graduate students. Topics vary each year; focus is on palaeontological, sedimentological, and geochemical approaches to the history of life. Topics may include: mass extinction events; evolutionary radiations; the history of global biodiversity; links between evolutionary history and primary producers and consumers; and the quality of the fossil record. Term paper. May be repeated for credit.
2 units, OCCASIONAL

GES 215. Structural Geology and Rock Mechanics
(Same as CEE 297R, GEOPHYS 251) Quantitative field and laboratory data integrated with solutions to boundary value problems of continuum mechanics to understand tectonic processes in Earth. Course that leads to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis, conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties; brittle deformation including fracture and faulting; model development and methodology. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.
4 units, Aut (Pollard, D)

GES 216. Rock Fracture Mechanics
Principles and tools of elasticity theory and fracture mechanics are applied to the origins and physical behaviors of faults, dikes, joints, veins, fractures, and other natural structures in rocks. Field observations, engineering rock fracture mechanics, and the elastic theory of cracks. The role of natural fractures in brittle rock deformation, and fluid flow in the earth's crust with applications to crustal deformation, structural geology, petroleum geology, engineering, and hydrogeology. Prerequisite: 215 or equivalent.
3-5 units, alternate years, not given this year

GES 217. Faults, Fractures, and Fluid Flow
Process-based approach to rock failure: the microstructures and overall architectures of the failure products including faults, joints, solution seams, and types of deformation bands. Fluid flow properties of these structures are characterized with emphasis on sealing and transmitting of faults and their role in hydrocarbon flow, migration, and entrapment. Case studies of fracture characterization experiments in oil and gas reservoirs, and waste repository sites. Guest speakers; weekend field trip. Prerequisite: first-year graduate student in Earth Sciences.
3 units, alternate years, not given this year

GES 220. Planetary and Early Biological Evolution Seminar
(Same as GES 120) Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.
2-3 units, not given this year

GES 221. What Makes a Habitable Planet?
(Same as GES 121) Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.
3 units, not given this year

GES 222. Planetary Systems: Dynamics and Origins
For students with a strong background in mathematics and the physical sciences; other should register for 122.) Motions of planets, moons, and small bodies; energy transport in planetary systems; meteorites and the constraints they provide on the formation of the solar system; asteroids and Kuiper belt objects; comets; planetary rings; planet formation; and extrasolar planets. In-class presentation of student papers.
3-4 units, Aut (Marley, M; Lissauer, J)

GES 223. Planetary Systems: Atmospheres, Surfaces, and Interiors
Focus is on physical processes, such as radiation transport, atmospheric dynamics, thermal convection, and volcanism, shaping the interiors, surfaces, and atmospheres of the major planets in the solar system. How these processes manifest themselves under various conditions in the solar system. Case study of the surface and atmosphere of Mars. Application of comparative planetary science to extrasolar planets and brown dwarfs. In-class presentation of student papers.
3 units, by arrangement

GES 224. Modeling Transport and Transformations in the Environment
An introduction to geochemical and reactive transport modeling using Geochemist's Workbench and other appropriate models. Students required to participate in a weekend-long short course at the beginning of the quarter. Throughout the quarter the students will use the principles and tools presented in the class to develop and analyze an environmental problem as part of a simulated consulting exercise. Topics covered include contaminant transport, mineral dissolution/precipitation and aquifer microbiology. Prerequisites: Either EESS 221 (CEE 260C) or EESS 220 (CEE 260A) and either GES 90, 170, or 171, or permission from instructors.
2-3 units, alternate years, not given this year

GES 237. Surface and Near-Surface Hydrologic Response
(Same as CEE 260B) Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology.
3 units, Aut (Loague, K)

GES 238. Soil Physics
Physical properties of the soil solid phase emphasizing the transport, retention, and transformation of water, heat, gases, and solutes in the unsaturated subsurface. Field experiments.
3 units, alternate years, not given this year

GES 240. Geostatistics for Spatial Phenomena
(Same as ENERGY 240) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Multiple-point geostatistics and training image-based stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB and SGeMS software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, STATS 116, GES 161, or equivalent.
2-3 units, Win (Journel, A)

GES 246. Reservoir Characterization and Flow Modeling with Outcrop Data
(Same as ENERGY 146, ENERGY 246) Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.
3 units, Aut (Graham, S; Tchelepi, H; Muckerji, T; Boucher, A)
COURSES OF INSTRUCTION

GES 249. Petroleum Geochemistry in Environmental and Earth Science
How molecular fossils in crude oils, oil spills, refinery products, and human artifacts identify their age, origin, and environment of formation. The origin and habitat of petroleum, technology for its analysis, and parameters for interpretation, including: origins of molecular fossils; function, biosynthesis, and precursors; tectonic history related to the evolution of life, mass extinctions, and molecular fossils; petroleum refinery processes and the kinds of molecular fossils that survive; environmental pollution from natural and anthropogenic sources including how to identify genetic relationships among crude oil or oil spill samples; applications of molecular fossils to archaeology; worldwide petroleum systems through geologic time. 3 units, alternate years, not given this year

GES 250. Sedimentation Mechanics
The mechanics of sediment transport and deposition and the origins of sedimentary structures and textures as applied to interpreting ancient rock sequences. Dimensional analysis, fluid flow, drag, boundary layers, open channel flow, particle settling, erosion, sediment transport, sediment gravity flows, soft sediment deformation, and fluid escape. Field trip required. 4 units, alternate years, not given this year

GES 251. Sedimentary Basins
Analysis of the depositional framework and tectonic evolution of sedimentary basins. Topics: tectonic and environmental controls on facies relations, synthesis of basin development through time in terms of depositional systems and tectonic settings. Weekend field trip required. Prerequisites: 110, 151. 3 units, Aut (Graham, S)

GES 252. Sedimentary Petrography
Siliciclastic sediments and sedimentary rocks. Research in modern sedimentary mineralogy and petrography and the relationship between the composition and texture of sediments and their provenance, tectonic settings, and diagenetic histories. Topics vary yearly. Prerequisite: 151 or equivalent. 4 units, alternate years, not given this year

GES 253. Petroleum Geology and Exploration
The origin and occurrence of hydrocarbons. Topics: thermal maturation history in hydrocarbon generation, significance of sedimentary and tectonic structural setting, principles of accumulation, and exploration techniques. Prerequisites: 110, 151. Recommended: GEOPHYS 223. 3 units, alternate years, not given this year

GES 254. Carbonate Sedimentology
Processes of precipitation and sedimentation of carbonate minerals with emphasis on marine systems. Topics include: geographic and bathymetric distribution of carbonates in modern and ancient oceans and environmental significance of carbonate grains and sedimentary textures; carbonate rocks and sediments as sources of geochemical proxy data; carbonate diagenesis; changes in styles of carbonate deposition through Earth history; carbonate depositional patterns and the global carbon cycle. Lab exercises emphasize petrographic and geochemical analysis of carbonate rocks including map and outcrop scale, hand samples, polished slabs, and thin sections. 3-4 units, Spr (Payne, J)

GES 255. Basin and Petroleum System Modeling
For advanced undergraduates or graduate students. Students use stratigraphy, subsurface maps, and basic well log, lithologic, paleontologic, and geochemical data to construct 1-D, 2-D, and 3-D models of petroleum systems that predict the extent of source-rock thermal maturity, petroleum migration paths, and the volumes and compositions of accumulations through time (4-D). Recent software such as PetroMod designed to reconstruct basin geohistory. Recommended: 251 or 253. 3 units, alternate years, not given next year

GES 256. Quantitative Methods in Paleobiology
Introduction to statistical methods relevant to the analysis of paleobiological data. Methods include principles of inference, linear and logistic regression, principal components analysis, time-series, and re-sampling methods. Palaeobiological problems include assessment of spatial and temporal patterns in biodiversity, selectivity of extinction and origination, and evolutionary trends. Readings, examples, and problems from the primary literature. Term paper. Prerequisite: Previous course in paleobiology or permission of the instructor. 3 units, OCCASIONAL

GES 257. Clastic Sequence Stratigraphy
Sequence stratigraphy facilitates integration of all sources of geologic data, including seismic, log, core, and paleontological, into a time-stratigraphic model of sediment architecture. Tools applicable to regional and field scales. Emphasis is on practical applications and integration of seismic and well data to exploration and field reservoir problems. Examples from industry data; hands-on exercises. 3 units, Spr (McHargue, T)

GES 258. Introduction to Depositional Systems
The characteristics of the major sedimentary environments and their deposits in the geologic record, including alluvial fans, braided and meandering rivers, aeolian systems, deltas, open coasts, barred coasts, marine shelves, and deep-water systems. Emphasis is on subdivisions; morphology; the dynamics of modern systems; and the architectural organization and sedimentary structures, textures, and biological components of ancient deposits. 3 units, Aut (Lowe, D)

GES 259. Stratigraphic Architecture
The stratigraphic architecture of deposits associated with a spectrum of depositional environments, using outcrop and subsurface data. Participants read and discuss selected literature. 1 unit, Aut (McHargue, T)

GES 260. Laboratory Methods in Organic Geochemistry
Knowledge of components in geochemical mixtures to understand geological and environmental samples. The presence and relative abundance of these compounds provides information on the biological source, depositional environment, burial history, biodegradation, and toxicity of organic materials. Laboratory methods to detect and quantify components of these mixtures. Methods for separation and analysis of organic compounds in geologic samples: extraction, liquid chromatography, absorption by zeolites, gas chromatography and gas chromatography-mass spectrometry. Student samples considered as material for analysis. Prerequisite: GES 249 or consent of instructor. 2-3 units, not given this year

GES 261. Physics and Chemistry of Minerals and Mineral Surfaces
The concepts of symmetry and periodicity in crystals; the physical properties of crystals and their relationship to atomic-level structure; basic structure types; crystal chemistry and bonding in solids and their relative stability; the interaction of x-rays with solids and liquids (scattering and spectroscopy); structural variations in silicate glasses and liquids; UV-visible spectroscopy and color of minerals; Raman spectroscopy; methods to detect and quantify components of these mixtures. 4 units, Spr (Brown, G)

GES 262. Thermodynamics and Disorder in Melts
The thermodynamic properties of crystalline, glassy, and molten silicates and oxides in light of microscopic information about short range structure and ordering. Measurements of bulk properties such as enthalpy, density, and their pressure and temperature derivatives, and structural determination by spectroscopies such as nuclear magnetic resonance and Mössbauer. Basic formulations for configurational entropy, heats of mixing in solid solutions, activities; and the energetics of exsolution, phase transitions, and nucleation. Quantitative models of silicate melt thermodynamics are needed to atomic-scale views of structure. A general view of geothermometry and geobarometry. Prerequisites: introductory mineralogy and thermodynamics. 3 units, alternate years, not given this year

GES 263. Introduction to Isotope Geochemistry
(Same as GES 163) Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry. 3 units, Aut (Maher, K)
GES 264. Mathematical Modeling in Biogeochemistry
The basics of translating a conceptual model into a numerical model is presented. Emphasis on building models, box modeling, methods of solving models. Lab exercises draw from examples in biogeochemistry, including modeling global biogeochemical cycles, sediment biogeochemistry, and microbial processes.
3 units, not given this year

GES 267. Solution-Mineral Equilibria: Theory
Procedures for calculating and evaluating the thermodynamic properties of reversible and irreversible reactions among rock-forming minerals and aqueous solutions in geologic systems. Emphasis is on the generation and utility of phase diagrams depicting solution-mineral interaction relevant to phase relations associated with weathering diagenetic, hydrothermal, and metamorphic processes, and the prediction of temperature, pressure, and the chemical potential of thermodynamic components compatible with observed mineralogic phase relations in geologic outcrops. Individual research topics. Prerequisite: 171.
3 units, OCCASIONAL

GES 272. Biomineralization
The functional properties of many animal and plant skeletons are dependent largely on mineralization. The relationship between mineralization processes and adaptation for all the animal phyllum is reviewed. The sedimentologic contribution of mineralized skeletons, especially in carbonate reefs and pelagic sediments is considered. Synthesis of organic matrix and the composite nature of many animal and plant skeletons, and their development and morphogenesis are described. The mechanisms of crystal nucleation and growth are considered. The macroevolutionary history of biomineralization, and mass extinctions and the diversification of well skeletonized groups in the geologic rock record are considered.
3 units, not given this year

GES 273. Isotope Geochemistry Seminar
Current topics including new analytical techniques, advances in isotopic measurements, and new isotopic approaches and systems.
1-3 units, Win (Maher, K)

GES 275. Electron Probe Microanalytical Techniques
The practical and theoretical aspects of x-ray generation and detection, and the behavior of electron beams and x-rays in solids. The basic principles needed to quantitatively analyze chemically complex geological materials. Operation of the JEOL 733 electron microprobe and associated computer software for quantitatively analyzing materials. X-ray chemical mapping. Enrollment limited to 8.
2-3 units, Win (Jones, R)

GES 277. Flood Basalts and Mass Extinctions
Recent work in geochronology and paleobiology supports the temporal coincidence of the eruption of continental flood basalts with mass extinction in the marine and terrestrial realms. The mechanisms and timescale of flood basalt eruptions, their likely environmental and biological consequences, and the evidence for flood basalt eruptions as the triggers of many mass extinction events. Sources include recent primary literature.
3 units, OCCASIONAL

GES 281. Principle of 40Ar/39Ar Thermochronometry
The 40Ar/39Ar method is based upon the K-Ar decay scheme and allows high precision geochronology and thermochronology to be performed with K-bearing minerals. Provides a detailed exploration of the method including all practical considerations and laboratory procedures for standardization and instrument calibration. A laboratory component allows practical experience in making measurements and interpreting results.
3-4 units, Spr (Grove, M)

GES 282. Interpretative Methods in Detrital Geochronology
Over the past decade, the number of studies that make use of isotopic provenance data has sky-rocketed. This type of data is now routinely used throughout the geosciences to solve a broad range of geologic problems. This seminar examines the state-of-the-art of existing interpretative methods for detrital geo/thermochronology data in provenance studies and critically examines their strengths and weaknesses. While this course will touch upon sampling approaches analytical aspects of data collection, focus is primarily upon data interpretation.
1-5 units, not given this year

GES 283. Thermochronology and Crustal Evolution
Thermochronology analyzes the competition between radioactive in-growth and temperature-dependant loss of radiogenic isotopes within radioactive mineral hosts in terms of temperature-time history. Coupled with quantitative understanding of kinetic phenomena and crustal- or landscape-scale interpretational models, thermochronology provides an important source of data for the Earth Sciences, notably tectonics, geomorphology, and petrogenesis. Focus on recent developments in thermochronology, specifically analytical and interpretative innovations developed over the past decade. Integrates the latest thermochronology techniques with field work in a small-scale research project focused upon crustal evolution.
4 units, Win (Grove, M)

GES 284. Field Seminar on Eastern Sierra Volcanism
For graduate students in the earth sciences and archaeology. Four-day trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada: basaltic lavas and cinder cones eroded along normal faults bounding Owens Valley, Long Valley caldera, postcaldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, subaqueous basaltic and silicic eruptions of Mono Basin, floating pumice blocks. If snow-level permits, silicic volcanism associated with the Bodie gold district. Recommended: 1 or equivalent.
1 unit, Spr (Mahood, G)

GES 285. Igneous Petrogenesis
Radiogenic isotopes, stable isotopes, and trace elements applied to igneous processes; interaction of magmas with mantle and crust; convergent-margin magmatism; magmatism in extensional terrains; origins of rhyolites; evidence times of magmas and magma chamber processes; granites as imperfect mirrors of their source regions; trace element modeling of igneous processes; trace element discriminant diagrams in tectonic analysis; phase equilibria of partial melting of mantle and crust; geothermometry and geobarometry. Topics emphasize student interest. Prerequisite: 180 or equivalent.
4 units, alternate years, not given this year

GES 290. Departmental Seminar in Geological and Environmental Sciences
Current research topics. Presentations by guest speakers from Stanford and elsewhere. May be repeated for credit.
1 unit, Win (Maher, K; Mao, W), Spr (Maher, K; Mao, W)

GES 291. GES Field Trips
Field trips for teaching and research purposes. Trips average 5-10 days. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 292. Directed Reading with Geological and Environmental Sciences Faculty
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 299. Field Research
Two-three week field research projects. Written report required. May be repeated three times.
2-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 310. Climate Change, Climate Variability, and Landscape Development
The impact of long-term climate change on erosional processes and the evolution of Cenozoic landscapes. Climate data that highlight recurring climate variability on inter-annual to decadal timescales. The behavior of climate on multi-decadal to tectonic timescales over which significant changes in topography take place. The effects of climate change and variability on landscape development, sedimentary environments, and the deposits of these events. May be repeated for credit.
1 unit, not given this year

GES 311. Interpretation of Tectonically Active Landscapes
Focuses on interpreting various topographic attributes in terms of horizontal and vertical tectonic motions. Topics include identification, mapping, and dating of geomorphic markers, deducing tectonic motions from spatial changes in landscape steepness, understanding processes that give rise to different
landscape elements, interrogating the role of climate and lithology in producing these landscape elements, and understanding relationships between tectonic motions, surface topography, and the spatial distribution of erosion. Consists of two one hour lectures per week and one laboratory section that helps students gain proficiency in Quaternary mapping and interpretation of topographic metrics.

3 units, alternate years, not given this year

GES 315. Literature of Structural Geology
Classic studies and current journal articles. May be repeated for credit.
1 unit, Aut (Pollard, D), Win (Pollard, D)

GES 325. The Evolution of Body Size
(Same as BIO 325) Preference to graduate students and upper-division undergraduates in GES and Biology. The influence of organism size on evolutionary and ecological patterns and processes. Focus is on integration of theoretical principles, observations of living organisms, and data from the fossil record. What are the physiological and ecological correlates of body size? Is there an optimum size? Do organisms tend to evolve to larger size? Does productivity control the size distribution of consumers? Does size affect the likelihood of extinction or speciation? How does size scale from the genome to the phenotype? How is metabolic rate involved in evolution of body size? What is the influence of geographic area on maximum body size? 2 units, Win (Haddy, E; Payne, J)

GES 328. Seminar in Paleobiology
For graduate students. Current research topics including paleobotany, vertebrate and invertebrate evolution, paleoecology, and major events in the history of life on Earth.
1 unit, not given this year

GES 336. Stanford Alpine Project Seminar
Seminar on the geology of the Himalaya, Tibetan plateau, and India. Weekly student presentations on continental collision tectonics, structure, petrology, geomorphology, culture, and other topics of interest. Students create a guidebook of geologic stops in advance of field trip to northwestern India in summer 2011. May be repeated for credit.
1 unit, Aut (Staff), Win (Staff), Spr (Staff)

GES 340. Volatiles in the Mantle
Seminar to review and discuss current research in mineral physics, seismology, geochemistry, and geodynamics on understanding the distribution, form, and role of volatiles in Earth's mantle.
1-3 units, not given this year

GES 355. Advanced Stratigraphy Seminar and Field Course
Student-led presentations; poster-sized display on assigned topic; field trip.
1-3 units, OCCASIONAL

GES 381. Igneous Petrology and Petrogenesis Seminar
Topics vary by quarter. May be repeated for credit.
1-2 units, Spr (Mahood, G)

GES 382. Mantle Geochemistry
The mantle is the largest geochemical reservoir on Earth and is fundamental to a variety of plate tectonic processes, from convection to the generation of crust. This course reviews current knowledge of the mantle based on the geochemistry of rocks derived from the upper mantle. Focus is on ocean ridge, subduction zone and hotspot processes. The tools used for studying the mantle, such as radiogenic isotopes, trace elements, diffusion and partition coefficients, melting equations, and isotopes evolution models, will be explored in detail. Pre-requisites: basic geology, petrology and chemistry or consent of the instructor.
1-3 units, Win (Warren, J)

GES 384. Volcanology Seminar
Specialized and advanced topics vary by offering. May be repeated for credit.
1-2 units, OCCASIONAL

GES 385. Practical Experience in the Geosciences
On-the-job training in the geosciences. May include summer internship; emphasizes training in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training. (Staff)

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 399. Advanced Projects
Graduate research projects that lead to reports, papers, or other products during the quarter taken. On registration, students designate faculty member and agreed-upon units.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 400. Graduate Research
Faculty supervision. On registration, students designate faculty member and agreed-upon units.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYSICS (GEOPHYS)

UNDERGRADUATE COURSES IN GEOPHYSICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

GEOPHYS 20Q. Predicting Volcanic Eruptions
Preference to sophomores. The physics and chemistry of volcanic processes and modern methods of volcano monitoring. Volcanoes as manifestations of the Earth's internal energy and hazards to society. How earth scientists better forecast eruptive activity by monitoring seismic activity, bulging of the ground surface, and the discharge of volcanic gases, and by studying deposits from past eruptions. Focus is on the interface between scientists and policy makers and the challenges of decision making with incomplete information. Field trip to Mt. St. Helens, site of the 1980 eruption.
3 units, NEXTYEAR

GEOPHYS 50N. Planetary Habitability, World View, and Sustainability
(F.Sem) Stanford Introductory Seminar. Astrobiology and societal sustainability draw from most fields of physical and biological science. Class follows a historical format on the start of major scientific fields, and relates these sciences to the popular world view and the effect of world view on achieving sustainability. Simple experiments to see key results in a hands-on manner; how to improve experiments. How lack in insight in addition to the lack of equipment and computational methods limited the progress of science. Discussion of current astrobiology and sustainability topics in the popular press. Students pairs lead discussions on topics. Offered occasionally.
3 units, Spr (Staff)

GEOPHYS 60N. Man versus Nature: Coping with Disasters Using Space Technology
(F.Sem) (Same as EE 60N) Stanford Introductory Seminar. Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. Offered every year, winter quarter. GER:DB-EngrAppSci
4 units, Win (Zebker, H)

GEOPHYS 100. Directed Reading
(Staff)
1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 104. The Water Course
(Staff)
4 units, Win (Staff), Spr (Staff), Sum (Staff)
world water supply issues. Offered occasionally. GER: DB-NatSci
3 units, not given this year

**GEOPHYS 110. Earth on the Edge: Introduction to Geophysics**
Introduction to the foundations of contemporary geophysics. Topics drawn from four broad themes in: whole Earth geodynamics, geohazards, natural resources, and environment/sustainability. In each case the focus is on how the interpretation of a variety of geophysical measurements (e.g., gravity, seismology, heat flow, magnetism, electromagnetics, and geodesy) can be used to provide fundamental insight into the behavior of the Earth's complex geosystems. Prerequisites: CME 100 or MATH 51, or co-registration in either. Offered every year, autumn quarter. GER: DB-NatSci
3 units, Aut (Beroza, G; Lawrence, K)

**GEOPHYS 112. Exploring Geosciences with MATLAB**
How to use MATLAB as a tool for research and technical computing, including 2-D and 3-D visualization features, numerical capabilities, and toolboxes. Practical skills in areas such as data analysis, regressions, optimization, spectral analysis, differential equations, image analysis, computational statistics, and Monte Carlo simulations. Emphasis is on scientific and engineering applications. Offered every year, autumn quarter.
3 units, Spring (Makervji, T)

**GEOPHYS 113. Earthquakes and Volcanoes**
(Same as EARTHSYS 113) Earthquake location, magnitude and intensity scales, seismic waves, styles of eruptions and volcanic hazards, tsunami waves, types and global distribution of volcanoes, volcano forecasting. Plate tectonics as a framework for understanding earthquake and volcanic processes. Forecasting: earthquake resistant design; building codes; and probabilistic hazard assessment for non-majors and potential earth scientists. Offered every year, spring quarter. GER: DB-EngrAppSci
3 units, Spr (Beroza, G)

**GEOPHYS 120. Ice, Water, Fire**
Introductory application of continuum mechanics to ice sheets and glaciers, water waves and tsunamis, volcanoes, and fluid flow in porous media. Emphasis on underlying physical processes and mathematical description using balance of mass and momentum, combined with constitutive equations for fluids and solids. Prerequisites: CME 100 or MATH 52 and PHYSICS 41. Offered every year, winter quarter. GER: DB-NatSci
3 units, Win (Dunham, E)

**GEOPHYS 130. Introductory Seismology**
Introduction to seismology including: elasticity and the wave equation, P, S, and surface waves, dispersion, ray theory, reflection and transmission of seismic waves, seismic imaging, large-scale Earth structure, earthquake location, earthquake statistics and forecasting, magnitude scales, seismic source theory. Offered every year, Autumn quarter. (Beroza, G) GER: DB-NatSci
3 units, Aut (Beroza, G)

**GEOPHYS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation**
(Same as EARTHSYS 146A, EARTHSYS 246A, EESS 146A, EESS 246A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41. 3 units, Win (Thomas, L; Difffenbaugh, N; Skinner, C), alternate years, not given next year

**GEOPHYS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation**
(Same as EARTHSYS 146B, EARTHSYS 246B, EESS 146B, EESS 246B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor. 3 units, Spr (Thomas, L; Difffenbaugh, N), alternate years, not given next year

**GEOPHYS 150. Geodynamics: Our Dynamic Earth**
In this course we cover the dynamic forces acting upon the Earth. We will investigate how geophysical forces effect the bending of tectonic plates, the flow of heat, sea level topography, the breaking point of rocks, porous flow, and how faults store and release energy. Math 52 or CME 102, GP 107 or permission from instructor. Offered every year, spring quarter. GER: DB-NatSci
3 units, Spr (Lawrence, J)

**GEOPHYS 160. Introduction to SES Computing (ISESC)**
For beginning undergraduates and graduate students in the School of Earth Sciences. Computer concepts. What are computers and networks, and how do they work? Web page authoring. Introduction to scientific programming. Free computing tools for plotting data. Computer resources available to students in the school. An online repository of source codes useful for and developed by SES students, faculty, and staff. Specialists from around the school provide practical instruction and concrete examples of how to achieve basic computing needs. 2 units requires a class project: code development to be uploaded to the course's code repository. Offered every year, autumn quarter.
2-3 units, Aut (Lawrence, J)

**GEOPHYS 162. Laboratory Methods in Geophysics**
Lab. Types of equipment used in experimental rock physics. Principles and measurements of geophysical properties such as porosity, permeability, acoustic wave velocity, and resistivity through lectures and laboratory experiments. Training in analytical project writing skills and understanding errors for assessing accuracy and variability of measured data. Students may investigate a scientific problem to support their own research. Offered every other year, spring quarter.
2-3 units, not given this year

**GEOPHYS 170. Global Tectonics**
The architecture of the Earth's crust; regional assembling of structural or deformational features and their relationship, origin and evolution. The plate-tectonic cycle: rifting, passive margins, sea-floor spreading, subduction zones, and collisions. Case studies. Offered every other year, autumn quarter.
3 units, alternate years, not given this year

**GEOPHYS 171. Tectonics Field Trip**
Long weekend field trip to examine large-scale features in the crust. Destinations may include the San Andreas fault, Mendocino Triple Junction, Sierra Nevada, and western Basin and Range province. Offered every other year, spring quarter.
1-3 units, alternate years, not given this year

**GEOPHYS 181. Fluids and Flow in the Earth: Computational Methods**
(Same as GEOPHYS 200) Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Bolzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required. Offered every other year, winter quarter.
3 units, alternate years, not given this year

**GEOPHYS 182. Reflection Seismology**
(Same as GEOPHYS 222) The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration. Offered every other year, autumn quarter. GER: DB-NatSci
3 units, Aut (Levin, S)

**GEOPHYS 183. Reflection Seismology Interpretation**
(Same as GEOPHYS 223) The structural and stratigraphic
interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 222, or consent of instructor. Offered every other year, spring quarter.

<table>
<thead>
<tr>
<th>COURSES OF INSTRUCTION</th>
<th>1-4 units, Spr (Klemperer, S; Graham, S)</th>
</tr>
</thead>
</table>

**GEOPHYS 184. Journey to the Center of the Earth**
(Same as GES 107, GES 207, GEOPHYS 274) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter.

| 3 units, Win (Lawrence, J; Mao, W) |

**GEOPHYS 185. Rock Physics for Reservoir Characterization**
(Same as GEOPHYS 260) How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. Offered every other year, spring quarter.

| 3 units, alternate years, not given this year |

**GEOPHYS 186. Tectonophysics**
(Same as GEOPHYS 290) The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on planes in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms. Offered every other year, winter quarter.

| 3 units, alternate years, not given this year |

**GEOPHYS 187. Environmental Soundings Image Estimation**
(Same as GEOPHYS 211) Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoints, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See http://sep.stanford.edu/sep/prof/. Offered every year, autumn quarter.

| 3 units, Aut (Claerbout, J) |

**GEOPHYS 190. Near-Surface Geophysics**
Introduction to the integration of geophysical field measurements and laboratory measurements for imaging and characterizing the top 100 meters of Earth. Examples will focus on applications related to water resource management. The link between the measured geophysical properties of rocks, soils, and sediments, and their material properties. Forward modeling and inversion of geophysical data sets. Each week includes two hours of lectures; plus one two-hour lab that involves acquisition of field or lab data, or computer modeling/analysis of data. Pre-requisite: CME 100 or Math 51, or co-registration in either. Offered every year, spring quarter. GER:DB-EngrAppSci

| 3 units, Spr (Knight, R) |

**GEOPHYS 196. Undergraduate Research in Geophysics**
Field-, lab-, or computer-based. Faculty supervision. Written reports.

| 1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff) |

**GEOPHYS 197. Senior Thesis in Geophysics**
For seniors writing a thesis based on Geophysics research in 196 or as a summer research fellow.

| 3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff) |

**GEOPHYS 199. Senior Seminar: Issues in Earth Sciences**
Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review. For 2010-11, enroll in GES 150. Offered every year, autumn quarter.

| 3 units, Aut (Levin, S) |

**GRADUATE COURSES IN GEOPHYSICS**
Primarily for graduate students; undergraduates may enroll with consent of instructor.

**GEOPHYS 198. Honors Program**
Experimental, observational, or theoretical honors project and thesis in geophysics under supervision of a faculty member. Students who elect to do an honors thesis should begin planning it no later than Winter Quarter of the junior year. Prerequisites: department approval.

| 1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff) |

**GEOPHYS 200. Fluids and Flow in the Earth: Computational Methods**
(Same as GEOPHYS 181) Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Boltzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required. Offered every other year, winter quarter.

| 3 units, alternate years, not given this year |

**GEOPHYS 201. Frontiers of Geophysical Research at Stanford: Faculty Lectures**
Required for new students entering the department. Second-year and other graduate students may attend either for credit or as auditors. Department faculty and senior research staff introduce the frontiers of research problems and methods being employed or developed in the department and unique to department faculty and students: what the current research is, why the research is important, what methodologies and technologies are being used, and what the potential impact of the results might be. Offered every year, autumn quarter.

| 1 unit, Aut (Beroza, G) |

**GEOPHYS 202. Reservoir Geomechanics**
Basic principles of rock mechanics and the state of stress and pore pressure in sedimentary basins related to exploitation of hydrocarbon and geothermal reservoirs. Mechanisms of hydrocarbon migration, exploitation of fractured reservoirs, reservoir compaction and subsidence, hydraulic fracturing, utilization of directional and horizontal drilling to optimize well stability. Offered every other year, winter quarter.

| 3 units, Win (Zoback, M) |

**GEOPHYS 210. Basic Earth Imaging**

| Offered every year, autumn quarter. |

| 3-4 units, Aut (Claerbout, J; Clapp, R) |

**GEOPHYS 211. Environmental Soundings Image Estimation**
(Same as GEOPHYS 187) Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoints, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See http://sep.stanford.edu/sep/prof/.

| Offered every year, autumn quarter. |

| 3 units, Aut (Claerbout, J) |

**GEOPHYS 222. Reflection Seismology**
(Same as GEOPHYS 182) The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration. Offered every other year, autumn quarter.

| 3 units, Aut (Levin, S) |
GEOPHYS 223. Reflection Seismology Interpretation
(Same as GEOPHYS 183) The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 222, or consent of instructor. Offered every other year, spring quarter.
1-4 units, Spr (Klemperer, S; Graham, S)

GEOPHYS 224. Seismic Reflection Processing
Workshop in computer processing of seismic reflection data. Students individually process a commercial seismic reflection profile from field tapes to migrated stack, using interactive software on a workstation. Prerequisite: consent of instructor.
2 units, alternate years, not given this year

GEOPHYS 240. Borehole Seismic Modeling and Imaging
Seismic imaging between boreholes for applications to subsurface characterization, reservoir imaging, and reservoir monitoring. Topics include data acquisition, data analysis, data processing and imaging. Inversion models for transmitted, reflected, and diffracted waves for imaging velocity, attenuation, and anisotropy in heterogeneous media. Use of field datasets and field applications. Prerequisites: 160 or equivalent; familiarity with Matlab or other programming language. Offered every other year, spring quarter.

GEOPHYS 241A. Seismic Reservoir Characterization
(Same as ENERGY 141, ENERGY 241) (Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GE253/257; ERE246, GP112
3-4 units, Spr (Mukerji, T)

GEOPHYS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation
(Same as EARTHYS 146A, EARTHYS 246A, EESS 146A, EESS 246A, GEOPHYS 146A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat. Scale-dependent aspects of atmospheric and oceanic circulations. Emphasis is on the large-scale ocean circulation. Prerequisites: MATH 51 or CME100 and PHYSICS 41.
3 units, Win (Thomas, L; Diffenbaugh, N; Skinner, C), alternate years, not given next year

GEOPHYS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation
(Same as EARTHYS 146B, EARTHYS 246B, EESS 146B, EESS 246B, GEOPHYS 146B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.
3 units, Spr (Thomas, L; Diffenbaugh, N), alternate years, not given next year

GEOPHYS 251. Structural Geology and Rock Mechanics
(Same as CEE 297R, GES 215) Quantitative field and laboratory data integrated with solutions to boundary value problems of continuum mechanics to understand tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis, conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties; brittle deformation including fracture and faulting; model development and methodology. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.
4 units, Aut (Pollard, D)

On-the-job-training for master's and doctoral degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignment, and key results. May be repeated for credit. Prerequisite: written consent of adviser.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 257. Introduction to Computational Earth Sciences
Techniques for mapping numerically intensive algorithms to modern high performance computers such as the Center for Computational Earth and Environmental Science's (CEES) high productivity technical computing (HPTC). Topics include: debugging, performance analysis, and concepts of parallel programming; efficient serial and parallel programs; OpenMP, and MPI. Exercises using SMP and cluster computers. See http://pangea.stanford.edu/research/cees/. Recommended: familiarity with MATLAB, C, or Fortran. May be repeated for credit. Offered every other year, winter quarter.
2-4 units, not given this year

GEOPHYS 258. Scientific Data Processing
(Same as EE 257) Assimilation, processing, and modeling of large observational data sets. Solution of scientific and engineering problems, especially those requiring large amounts of data. Inverse methods and transform domain analysis for indirect measurements, implemented on digital computers using scientific languages. Large-scale computing, including hardware architectures, input/output and data bus bandwidth, programming efficiency, parallel programming techniques. Student projects involve analyzing real data by implementing an observational system such as tomography for medical and Earth observation uses, radar and matched filtering, multitemporal/multispectral studies, or migration processing. Prequisites: Programming with high level language. Recommended: EE261, EE178/278A, ME300 or equivalent.
3-4 units, not given this year

GEOPHYS 260. Rock Physics for Reservoir Characterization
(Same as GEOPHYS 185) How to integrate well log and laboratory data to determine the elastic properties of subsurface media and to predict seismic wave velocities, density, and attenuation. Topics include: rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. Offered every other year, spring quarter.
3 units, alternate years, not given this year

GEOPHYS 262. Rock Physics
Properties of and processes in rocks as related to geophysical exploration, crustal studies, and tectonic processes. Emphasis is on wave velocities and attenuation, hydraulic permeability, and electrical resistivity in rocks. Application to in situ problems, using lab data and theoretical results. Offered every year, autumn quarter.
3 units, Aut (Mavko, G)

GEOPHYS 265. Imaging Radar and Applications
(Same as GEOPHYS 185) How to use radar to determine the elastic properties of subsurface media and to predict seismic wave velocities, density, and attenuation. Topics include: rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. Offered every other year, spring quarter.
3 units, alternate years, not given this year

GEOPHYS 267. High-Performance Technical Computing
Prerequisites: EE178A (or equivalent). Computational Earth and Environmental Sciences (CEES) technical computing (TTC) courses combine high-performance computing with high level languages, including scientific computing software, mathematical libraries, data and computational models, and science and engineering visualization. TTP courses cover the fundamentals of high-performance computing: parallelizing the program source code, using efficient serial and parallel programs, OpenMP, and MPI. Exercises using SMP and cluster computers. See http://pangea.stanford.edu/research/cees/. Recommended: familiarity with MATLAB, C, or Fortran. May be repeated for credit. Offered every other year, spring quarter.
4 units, not given this year
GEOPHYS 270. Electromagnetic Properties of Geological Materials
Laboratory observations and theoretical modeling of the electromagnetic properties and nuclear magnetic resonance response of geological material. Relationships between these properties and water-saturated materials properties such as composition, water content, surface area, and permeability. Offered occasionally.
2-3 units, not given this year

GEOPHYS 274. Journey to the Center of the Earth
(Same as GES 107, GES 207, GEOPHYS 184) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter.
3 units, Win (Lawrence, J; Mao, W)

GEOPHYS 280. 3-D Seismic Imaging
The principles of imaging complex structures in the Earth subsurface using 3-D reflection seismology. Emphasis is on processing methodologies and algorithms, with examples of applications to field data. Topics: acquisition geometries of land and marine 3-D seismic surveys, time vs. depth imaging, migration by Kirchhoff methods and by wave-equation methods, migration velocity analysis, velocity model building, imaging irregularly sampled and aliased data. Computational labs involve some programming. Lab for 3 units. Offered every year, winter quarter.
2-3 units, Win (Biondi, B)

GEOPHYS 281. Geophysical Inverse Problems
Concepts of inverse theory, with application to geophysics. Inverses with discrete and continuous models, generalized matrix inverses, regularizing kernels, regularization, use of prior information, singular value decomposition, nonlinear inverse problems, back-projection techniques, and linear programming. Application to seismic tomography, earthquake location, migration, and fault-slip estimation. Prerequisite: MATH 103. Offered every other year, autumn quarter.
3 units, alternate years, not given this year

GEOPHYS 284. Hydrogeophysics
The use of geophysical methods for imaging and characterizing the top 100 meters of Earth for hydrogeologic applications. Includes material properties, forward modeling, data acquisition, inversion, and integration with other forms of measurement. Each week includes three hours of lectures; plus one-three-hour lab that involves acquisition of data at campus or nearby sites, or computer modeling of data. Offered occasionally.
3 units, OCCASIONAL

GEOPHYS 286. Global Seismology
This course investigates how waves propagate through the whole Earth. This course examines the questions: How do body waves and surface waves behave within the Earth?; and What does that tell us about the Earth? The course delves into both theory and how we apply that theory to understand seismic observations. Requirements: Math 52 or CME 102, GP130 or permission from instructor.
3 units, Win (Lawrence, J)

GEOPHYS 287. Earthquake Seismology
Seismic wave propagation in layered media, ray theory, Green's functions, seismic moment tensors, representation theorem, finite-source effects, kinematics and dynamics of earthquakes, and engineering aspects of seismology. Prerequisites: GEOPHYS 130 or equivalent. Offered every other year, spring quarter.
3-5 units, alternate years, not given this year

GEOPHYS 288A. Crustal Deformation
Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Deformation, stress, and conservation laws. Dislocation models of strike slip and dip slip faults, in 2 and 3 dimensions. Crack models, including boundary element methods. Dislocations in layered and elastically heterogeneous earth models. Models of volcanic deformation, including sills, dikes, and magma chambers. Offered every other year, autumn quarter.
3-5 units, Aut (Segall, P), not given next year

GEOPHYS 288B. Crustal Deformation
Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Viscoelasticity, post-seismic rebound, and viscoelastic magma chambers. Effects of surface topography and earth curvature on surface deformation. Gravity changes induced by deformation and elastogravitational coupling. Poro-elasticity, coupled fluid flow and deformation. Earthquake nucleation and rate-state friction. Models of earthquake cycle at plate boundaries. Offered every other year, winter quarter.
3-5 units, Win (Segall, P), not given next year

GEOPHYS 290. Tectonophysics
(Same as GEOPHYS 186) The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms. Offered every other year, winter quarter.
3 units, alternate years, not given this year

GEOPHYS 385A. Reflection Seismology
Research in reflection seismology and petroleum prospecting. May be repeated for credit.
1-5 units, Aut (Biondi, B; Clapp, R), Win (Biondi, B; Clapp, R), Spr (Biondi, B; Clapp, R), Sum (Staff)

GEOPHYS 385B. Environmental Geophysics
Research on the use of geophysical methods for near-surface environmental problems. May be repeated for credit.
1-5 units, Aut (Knight, R), Win (Knight, R), Spr (Knight, R), Sum (Staff)

GEOPHYS 385D. Theoretical Geophysics
Research on physics and mechanics of earthquakes, volcanoes, ice sheets, and glaciers. Emphasis is on developing theoretical understanding of processes governing natural phenomena.
1-5 units, Aut (Dunham, E), Win (Dunham, E), Spr (Dunham, E), Sum (Staff)

GEOPHYS 385E. Tectonics
Research on the origin, major structures, and tectonic processes of the Earth's crust. Emphasis is on use of deep seismic reflection and refraction data. May be repeated for credit.
1-5 units, Aut (Klemperer, S; Sleep, N), Win (Klemperer, S; Sleep, N), Spr (Klemperer, S; Sleep, N), Sum (Staff)

GEOPHYS 385J. Global Seismic Techniques, Theory, and Application
Topics chosen from surface wave dispersion measurement, 1D inversion techniques, regional tomographic inversion, receiver functions, ray theory in spherical geometry, seismic attenuation, seismic anisotropy, seismic focusing, reflected phases, stacking, and interpretations of seismic results in light of other geophysical constraints. May be repeated for credit.
1-5 units, Aut (Lawrence, J), Win (Lawrence, J), Spr (Lawrence, J), Sum (Staff)

GEOPHYS 385K. Crustal Mechanics
Research in areas of petrophysics, seismology, in situ stress, and subjects related to characterization of the physical properties of rock in situ. May be repeated for credit.
1-5 units, Aut (Zoback, M), Win (Zoback, M), Spr (Zoback, M), Sum (Staff)

GEOPHYS 385L. Earthquake Seismology, Deformation, and Stress
Research on seismic source processes, crustal stress, and deformation associated with faulting and volcanism. May be repeated for credit.
1-5 units, Aut (Beroza, G; Segall, P; Zoback, M), Win (Beroza, G; Segall, P; Zoback, M), Spr (Beroza, G; Segall, P; Zoback, M), Sum (Staff)

GEOPHYS 385S. Wave Physics
Theory, numerical simulation, and experiments on seismic and electromagnetic waves in complex porous media. Applications from Earth imaging and in situ characterization of Earth properties, including subsurface monitoring. Presentations by faculty, research staff, students, and visitors. May be repeated for credit.
1-5 units, Aut (Harris, J), Win (Harris, J), Spr (Harris, J), Sum (Staff)

GEOPHYS 385V. Poroelasticity
Research on the mechanical properties of porous rocks: dynamic problems of seismic velocity, dispersion, and attenuation; and quasi-static problems of faulting, fluid transport, crustal deformation, and loss of porosity. Participants define, investigate, and present an original problem of their own. May be repeated for credit.
1-5 units, Aut, Win, Sum (Staff)

GEOPHYS 385Z. Radio Remote Sensing
Research applications, especially crustal deformation measurements. Recent instrumentation and system advancements. May be repeated for credit.
1-5 units, Aut (Mavko, G), Win (Mavko, G), Spr (Mavko, G), Sum (Staff)

GEOPHYS 380. Research in Geophysics
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERMAN GENERAL (GERGEN)

UNDERGRADUATE COURSES IN GERMAN GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

GERGEN 38A. Introduction to Germanic Languages
(Same as GERLIT 138) The oldest attested stages of the Germanic language family, including Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian (Old Dutch), and Old High German. The linguistic relationships, prehistory, Germanic tribal groupings, and literature. GER:DB-Hum
4 units, not given this year

GERGEN 104N. Resistance Writings in Nazi Germany
(F,Sem) Stanford Introductory Seminar. Freshman and Sophomore Preference. This course focuses on letters and diaries written by resisters to the Nazi regime, in particular, Dietrich Bonhoeffer, Hans and Sophie Scholl, and James von Mollike. The course includes one resistance novel Every man dies alone by Hans Fallada. GER:DB-Hum
3 units, Win (Bernhardt, E)

GERGEN 122Q. The Culture of Pessimism in 19th- and 20th-Century Europe
European culture long relied on a narrative of inexorable human progress. Starting in the 19th century, this triumphantist narrative was shadowed by another tradition that rejected such trust in progress. The pessimistic tradition in Europe in literature, philosophy, the study of history, anthropology, and psychology; the distinction between pessimism in the fields of morality, culture, and intellectual life. Authors include Giacomo Leopardi, Arthur Schopenhauer, Laplanche, Kristeva, and Irigaray. GER:DB-Hum
3-5 units, not given this year

GERGEN 128N. Medicine, Modernism, and Mysticism in Thomas Mann's the Magic Mountain
(F,Sem) Stanford Introductory Seminar. Published in 1924, the Magic Mountain is a novel of education, tracing the intellectual encounters during a seven-year sojourn in a sanatorium set high in the Swiss Alps. It engages with the key themes of modernism: the relativity of time, the impact of psychoanalysis, the power of myth, and an extended dispute between an optimistic belief in progress and a pessimistic vision of human nature. Through its detailed discussion of disease (tuberculosis) this remarkable text connects the study of medicine to the humanities. GER:IHUM-3
4 units, Spr (Berman, R)

GERGEN 129. German Cinema
(Same as GERGEN 229) History of German cinema in the Weimar Republic, Nazi era, and the immediate aftermath of WWII. German thought, political valences, and social potential as portrayed in film.
3 units, not given next year

GERGEN 141. Fables of Retreat
Modern anti-heroes who assert themselves through feats of reduction and retreat. Writers include Rousseau, Tieck, Emerson, Thoreau, Melville, Dostoevsky, and Kafka.
3-5 units, not given this year

GERGEN 148. A Brief History of Misogyny
(Same as GERGEN 248) Genealogy of philosophical misogyny in 19th- and 20th-century German thought from German idealism. Authors include Schopenhauer, Nietzsche, Weininge, and the George circle. In English. GER:DB-Hum, EC-Gender
3-5 units, not given this year

GERGEN 160. Interiors and Interiority in the 19th Century
Interiority and the interior as focal points of 19th-century Europe. Domestic space, and its political dimensions and structures of feeling in 19th-century German literature, from the romance to the detective novel. Ideology of domesticity in German music, design, architecture, visual art, and science of the period. In German. GER:DB-Hum
4 units, not given this year

GERGEN 161. Wagnerian Echos: A Cultural History from Modernism to Popular Culture
(Same as MUSC 150G) The afterlives of mythological themes from the operas and music dramas of Richard Wagner (The Flying Dutchman, Tannhäuser, Lohengrin, Ring Cycle, Parsifal) in literature, modernist aesthetics, fascist politics, film, philosophy, and contemporary media. GER:DB-Hum
3-5 units, not given this year

GERGEN 168A. Freud and the Enterprise of Psychoanalysis
(Same as GERGEN 268A) This seminar explores psychoanalysis at the juncture of its multiple meanings: as a therapeutic practice; as a theory of the functioning of the human mind; as a method of textual interpretation; as a cultural critique and a genealogy attempting to account for the origins of morality, religion, art, and other social institutions. In addition to Freud's major works, readings include short writings by Nietzsche, Ferenczi, Lacan, Laplanche, Kristeva, and Irigaray. GER:DB-Hum
3-5 units, Win (Douvaldzi, C)

GERGEN 170A. Postwar: German Culture after World War II
(Same as GERGEN 270A) How did German culture react to WW II, the Holocaust, and the exile of Germans from E. Europe? Questions of representations, political debate, and the future of Germany in Europe. German cinema, architecture, and art related to the subject. Readings include: Adorno, Grass, Habermas, Kluge, Bachmann, Jelinek, and Beyer. Recommended: German, but not required.
3-5 units, not given this year

GERGEN 170Q. Prussia: Culture and Literature
(S,Sem) Stanford Introductory Seminar. This course traces the history and culture of a country that disappeared not too long ago, but about which most of us tent to know very little. On February 27, 1947, the Allied Control Council issues its decree no. 46, which dissolved Prussia in the interest of maintaining world peace and security and the restoration of political life in Germany on a democratic basis. Prussia, the Council continued, has since forever been a carrier of militarism and reaction in Germany. Many of the stereotypical images of Germany and German-ness, and certainly most negative images of Germany, from the spiked helmet to the iron cross, the Red Baron and the Blitzkrieg, are bound up with Prussia, its military and its ruling class. Prussia's militaristic culture not only brought on a series of increasingly brutal wars, while also often being a beacon of Enlightenment and religious tolerance; it brought together Germany's most traditional backwater with its most p
3-5 units, Spr (Daub, A)
GERGEN 174. Automatons, Puppets, and Cyborgs
(Same as GERGEN 274) Technological visions of the human from Romanticism through the present. How has human function been reconceptualized over the past 200 years? Nineteenth-century machinic figures as frightening but offering new social possibilities; the new human type of the early twentieth century; and contemporary explorations of the posthuman. Topics include work by Hoffmann, Kleist, Brecht, Lang, Junger, Kraftwerk, and Chaos Computer Club. In English.
3-5 units, Aut (Elswit, K)

GERGEN 177. Performing Mother Courage, Performing History
(Same as GERGEN 277) Bertolt Brecht's 1939 play Mother Courage and her Children opens us to ask how performances enact history, act upon it, and offer access. The first unit historicizes Mother Courage through primary texts and secondary sources. The second thinks critically about archiving and how we ask cultural artifacts to stand for particular times and places. The third turns to revivifications of Mother Courage and the potential future of the past. Written and practical work. In English. GER:DB-Hum
3-5 units, Spr (Elswit, K)

GERGEN 181. Philosophy and Literature
(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, FRENGEN 181, ITALGEN 181) Required gateway course for Philosophy and Literary Thought. Emphasis: crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum
4-5 units, Win (Staff)

GERGEN 183. Scenarios of Dissolution in the Modern Novel
(Same as GERGEN 283) How do novels capture chaos? 20th-century novels responding to catastrophes such as: the disintegration of the Austro-Hungarian monarchy (Musil, Roth); demise of the Third Reich (Mann); chaotic forces in an oppressive order (Bulgakov); corrosion of imperial confidence through fear of barbarian invaders (Coetzee); and transformation of masses into a mob destroying the body politic from within (Krasznahorkai).
GER:DB-Hum
4 units, not given this year

GERGEN 201. Conservative Critique
(Same as COMPLIT 234) An examination of conservative critiques of modernity in the early 20th century, including topics such as German nationalism, the war experience, responses to democracy, anti-liberalism, cultural pessimism in the decline of the West, crises of authority, technology, geopolitics, existentialism, and tradition. Readings from authors such as Oswald Spengler, Thomas Mann, Carl Schmitt, Ernst Jünger, Hugo von Hofmannsthal, Rudolf Borchardt. Consideration of conservative exile authors such as Leo Strauss and Hannah Arendt. Readings in either English or German. GER:DB-Hum
3-5 units, Aut (Berman, R)

GERGEN 205. Technologies of the Self
Important moments in the history of the discursive and rhetorical construction of the subject. Emphasis is on tensions between uniqueness and exemplariness, chronology and repetition, narrative and archive, and aesthetics and ethics of retrospection. Works by Augustine, Teresa of Avila, Montaigne, Rousseau, Goethe, Nietzsche, Joyce, Gide, Sartre, Leiris, and Barthes. Theoretical and critical essays including by Lejeune, Starobinski, De Man, Derrida, Martin, Koerner, Foucault, and Beaujour.
GER:DB-Hum
3-5 units, not given this year

GERGEN 212. The Invention of Experience
Experience viewed as a source of orientation irreducible to discursive knowledge in the 19th century. The encounter with art as the paradigm of experience; lived vs. cumulative experience; the modern crisis of experience; experiential openness and the authority conferred by experience. If it is neither pleasure nor knowledge sought in art, could it be experience? Role of Goethe in the cult of experience (Faust I, Elective Affinities). Montaigne, Hegel, Emerson, Rilke, Benjamin, Koselleck, and Gadamer. GER:DB-Hum
3-5 units, not given this year

GERGEN 221. Memory in the Modernist Novel
Preference to freshmen. The art of memory as one of the main characteristics of modernity. The relationship between memory and modernism through major narrative texts: Rainer Maria Rilke's The Notebooks of Malte Laurids Brigger; James Joyce's A Portrait of the Artist as a Young Man; and Marcel Proust's Combray. How memory helps to constitute personal identity. The metaphors used to define memory. Readings include theoretical and critical essays, and primary texts. GER:DB-Hum, DB-Hum
4 units, not given this year

GERGEN 221A. Modernism and the Jewish Voice in Europe
(Same as COMPLIT 247, SLAVGEN 221) Some of the most haunting literary voices of the 20th century emerged from the Jewish communities of Eastern and Central Europe. The Jewishness of the modernists is thematized, asking whether it contributed to shared attitudes toward text, history, or identity. Their works are situated in specific linguistic traditions: Yiddish, Hebrew, Russian, Polish, or German. Primary readings from Ansky, Bialik, Mandelstam, Babel, Schulz, Kafka, Celan; secondary readings in history, E. European literature, and theory, including Marx, Freud, Benjamin, and Arendt. GER:DB-Hum
3-4 units, not given this year

GERGEN 267. Freud and the Apostle Paul
(Same as GERGEN 367) Intersections between Freud's psychoanalysis of society and Paul's political theology. Emphasis is on the issues of love, law, justice, community, and language. Readings include Freud and Paul, and theoretical essays by Taubes, Badiou, Santner, Agamben, Assmann, Zizek, and Boyarin.
GER:DB-Hum
3-5 units, not given this year

GRADUATE COURSES IN GERMAN GENERAL
Primarily for graduate students; undergraduates may enroll with consent of instructor.

GERGEN 206. Narrative, Visuality, Memory
(Same as GERGEN 306) Moments in the history of the relationship between the verbal and the visual: the classical ars memoriae; the ekphrasis debates of the 18th century; the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winckelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, Joyce, and Proust.
3-5 units, not given this year

GERGEN 229. German Cinema
(Same as GERGEN 129) History of German cinema in the Weimar Republic, Nazi era, and the immediate aftermath of WWII. German thought, political valences, and social potential as portrayed in film.
5 units, not given next year

GERGEN 230. Truth in Art
Does art disclose an ultimate truth or does it help people avoid, endure, or affirm a truth which would otherwise be hard to bear? How modern thinking about art is defined by the tension between the idea that pleasure in art is disinterested and outside striving for true knowledge or ethical orientation and the idea that art offers some kind of deeper insight into people's place in the world. How these tensions play out in Kant, Schopenhauer, Nietzsche, Heidegger, and Adorno. In English.
3-5 units, not given this year

GERGEN 248. A Brief History of Misogyny
(Same as GERGEN 148) Genealogy of philosophical misogyny in 19th- and 20th-century German thought from German idealism. Authors include Schopenhauer, Nietzsche, Weininger, and the
George circle. In English.
3-5 units, not given this year

(Same as ARTHIST 457) Before and after the re-unification a
great number of artistic projects reflect the problems of political
memorial culture in Germany. The seminar will deal with art
works in public spaces, mostly in Berlin, by German and
international artists, from ‘drop sculptures’, and the decoration
programs of Federal buildings up to the Holocaust Memorial.
3-5 units, not given this year

GERGEN 268A. Freud and the Enterprise of Psychoanalysis
(Same as GERGEN 168A) This seminar explores psychoanalysis
at the juncture of its multiple meanings: as a therapeutic practice;
as a theory of the functioning of the human mind; as a method of
textual interpretation; as a cultural critique and a genealogy
attempting to account for the origins of morality, religion, art, and
other social institutions. In addition to Freud’s major works,
readings include short writings by Nietzsche, Ferenczi, Lacan,
Laplanche, Kristeva, and Irigaray.
3-5 units, Win (Dowvaldži, C)

GERGEN 270A. Postwar: German Culture after World War
II
(Same as GERGEN 170A) How did German culture react to WW
II, the Holocaust, and the exile of Germans from E. Europe?
Questions of representations, political debate, and the future of
Germany in Europe. German cinema, architecture, and art related
to the subject. Readings include: Adorno, Grass, Habermas, Kluge,
Bachmann, Jelinek, and Beyer. Recommended: German, but not
required.
3-5 units, not given this year

GERGEN 274. Automatons, Puppets, and Cyborgs
(Same as GERGEN 174) Technological visions of the human from
Romanticism through the present. How has human function been
reconceptualized over the past 200 years? Nineteenth-century
machinic figures as frightening but offering new social
possibilities; the new human type of the early twentieth century;
and contemporary explorations of the posthuman. Topics include
work by Hoffmann, Kleist, Brecht, Lang, Junger, Kraftwerk,
3-5 units, Aut (Elswit, K)

GERGEN 277. Performing Mother Courage, Performing
History
(Same as GERGEN 177) Bertolt Brecht's 1939 play Mother
Courage and her Children opens us to ask how performances enact
history, act upon it, and offer access. The first unit historicizes
Mother Courage through primary texts and secondary sources. The
second thinks critically about archiving and how we ask cultural
artifacts to stand for particular times and places. The third turns to
reinventions of Mother Courage and the potential future of the
past. Written and practical work. In English.
3-5 units, Spr (Elswit, K)

GERGEN 281. Hegel’s Aesthetics
This course will consider G.W.F. Hegel’s voluminous Aesthetics in
its totality, while placing the work into the wider context of
Hegel’s mature system. Part of the course will be devoted to
considering Hegel’s legacy in nineteenth and twentieth century
aesthetics, both within the Hegelian tradition and outside of it. All
readings and class discussions in English
3-5 units, Aut (Daub, A)

GERGEN 283. Scenarios of Dissolution in the Modern Novel
(Same as GERGEN 183) How do novels capture chaos? 20th-
century novels responding to catastrophes such as: the
disintegration of the Austro-Hungarian monarchy (Musil, Roth);
denial of the Third Reich (Mann); chaotic forces in an oppressive
order (Bulgakov); corrosion of imperial confidence through fear of
barbarian invaders (Coetzee); and transformation of masses into a
mob destroying the body politic from within (Krasznahorkai).
4 units, not given this year

GERGEN 291A. Oedipus, Hamlet, Moses: Archetypes of the
Hero
Texts that provided psychoanalysis with its foundational myths.
Oedipus, Moses, and Hamlet as archetypes of the hero related to
moments of emerging modernity: from mythos to logos,
polytheism to monotheism, and action to thought. The interplay
among knowledge, recognition, and desire; the role of sameness
and alterity in the constitution of personal, familial, and national
identities; and the relation between violence and the construction
of history. Readings include: Exodus, Sophocles, Shakespeare,
Freud, Aeschyulus, Euripides, Cavafy, Hofmannsth, and Wolf;
theoretical and critical essays by Laplanche, Lyotard, Lacan, de
Certeau, Kofman, Assmann, Said, and Cavell.
3-5 units, not given this year

GERGEN 306. Narrative, Visuality, Memory
(Same as GERGEN 206) Moments in the history of the
relationship between the verbal and the visual: the classical ar
memoriae; the ekphrasis debates of the 18th century; the
emergence of a new visuality and mnemonic art as structuring
principles for modernist narrative. Authors include Plato, Aristotle,
Cicero, Augustine, Winckelmann, Lessing, Diderot, Goethe,
Moritz, Flaubert, Rilke, Joyce, and Proust.
3-5 units, not given this year

GERGEN 367. Freud and the Apostle Paul
(Same as GERGEN 267) Intersections between Freud's
psychoanalysis of society and Paul's political theology. Emphasis
is on the issues of law, love, justice, community, and language.
Readings include Freud and Paul, and theoretical essays by
Taubes, Badiou, Santer, Agamben, Assmann, Žižek, and Boyarin.
3-5 units, not given this year

GERMAN LANGUAGE (GERLANG) COURSES

UNDERGRADUATE COURSES IN GERMAN LANGUAGE

Primarily for undergraduates; graduate students may enroll with
consent of adviser.

GERLANG 1. First-Year German, First Quarter
Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken.
5 units, Aut (Hartman, S), Win (Strachota, K), Spr (Nissler, P)

GERLANG 2. First-Year German, Second Quarter
Continuation of 1. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken. Prerequisite 1 or consent of instructor.
5 units, Aut (Pohlmann, J), Win (Hartman, S), Spr (Staff)

GERLANG 3. First-Year German, Third Quarter
Continuation of 2. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken. Fulfills the University language requirement. Prerequisite: placement test, 2 or consent of instructor.
5 units, Aut (Youngs, E), Win (Pohlmann, J), Spr (Staff)

GERLANG 5A. Intensive First-Year German, Part A
Part A and Part B equivalent of 1,2,3 combined. Only Stanford graduate students restricted to 9 units may register for 205A.B.
5 units, Sum (Staff)

GERLANG 5B. Intensive First-Year German, Part B
Continuation of 5A. Part A and Part B equivalent of 1,2,3 combined. Only Stanford graduate students restricted to 9 units may register for 205A.B. Prerequisite 5A or equivalent. Fulfill the University Foreign Language Requirement.
5 units, Sum (Staff)

GERLANG 10. Elementary German for Seniors and Graduate Students
Intensive. For students who need to acquire reading ability in German for the Ph.D. or for advanced research in their own field. 250 fulfills Ph.D. reading exam.
4 units, Win (Petig, W), Sum (Staff)

GERLANG 11P. Individually Programmed Beginning German
For those who wish to complete more or fewer than 5 units a quarter, have scheduling conflicts, or prefer to work independently.
Self-paced work with text and tapes; instructor available for consultation on a regular basis. 3-unit minimum for beginners. Conversational practice available for additional unit. May be repeated for credit.

1-12 units, Aut (Strachota, K), Win (Strachota, K), Spr (Staff)

GERLANG 20A. Beginning German Conversation
(AU)
1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Staff)

GERLANG 20B. Intermediate German Conversation
(AU)
1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Staff)

GERLANG 20C. Advanced German Conversation
(AU)
1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Staff)

GERLANG 20E. Fun Facts about Europe
(AU) (Staff)
1 unit, Win (Balint, L)

GERLANG 20K. Kuche Mitt (German Cooking Class)
(AU)
1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Staff)

GERLANG 20M. Mitt Movie Series
(AU) (Staff)
1 unit, Aut (Pohlmann, J), Win (Staff), Spr (Staff)

GERLANG 20P. Theme Projects
(AU)
1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Balint, L)

GERLANG 20T. Teaching German Conversation
(AU)
1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Balint, L)

GERLANG 21. Intermediate German I
Reading short stories, and review of German structure. Discussions in German, short compositions, videos. Prerequisite: placement test, 3 or consent of instructor.
4 units, Aut (Neely, F), Win (Staff)

GERLANG 21S. Intermediate German
Reading short stories, and review of German structure. Discussions in German, short compositions, videos. Prerequisite: one year of college German, or two years high school German or equivalent, or AP German.
4 units, Sum (Staff)

GERLANG 21W. Intermediate German I: German for Business and International Relations
Equivalent to 21, but focus is on business and the political and economic geography of Germany. CDs and videos. For students planning to do a business internship in a German-speaking country. Prerequisite: placement test, 3 or consent of instructor.
4 units, not given this year

GERLANG 22. Intermediate German II
Continuation of 21, with greater emphasis on reading and writing skills. Literary texts of major 20th-century writers in historical context. Prerequisite: placement test, 21 or consent of instructor.
4 units, Aut (Staff), Win (Petig, W), Spr (Staff)

GERLANG 22W. Intermediate German II: German for Business and International Relations
Equivalent to 22, but continuation of 21W. Recommended for students planning to do a business internship in a German-speaking country. Prerequisite: placement test, 21, 21W or consent of instructor.
4 units, Win (Staff)

GERLANG 23. One Hundred German Years
Hundert deutsche Jahre - Hones German language skills while introducing the history and culture of Germany as experienced by ordinary people over the course of the 20th century. Themes include Germans and money, foreigners, Hitler, the Wall, food, etc. Video series, parallel readings, discussion in German, writing, advanced usage. Prerequisite: placement test, 22, 22W or consent of instructor.
4 units, Aut (Strachota, K)

GERLANG 23C. Second Year German, Third Quarter
Continuation of 22.
4 units, Win (Staff), Spr (Staff)

GERLANG 99. Language Specials
Prerequisite: consent of instructor.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLANG 105. Advanced Business German
For students planning to work in a German-speaking country and for preparation of the International Business German exams. Case studies of typical business situations with accompanying videos, listening comprehension exercises, and class simulations. Business correspondence and reports in German. Prerequisite: placement test, 22 or consent of instructor.
4 units, Spr (Petig, W)

GERLANG 110. German Newspapers
For intermediate and advanced students. Articles from current newspapers and magazines, reading comprehension strategies with online news updates, and vocabulary. Writing practice if desired. May be repeated once for credit
3-4 units, not given this year

GERLANG 111. Television News from Germany
For intermediate and advanced students. Current news reports and features for listening comprehension and vocabulary. Extra listening, speaking, or writing practice for fourth unit.
3-4 units, not given this year

GERLANG 199. Individual Reading
Prerequisite: consent of instructor.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLANG 205B. Intensive First-Year German for Stanford Grads
Same as GERLANG 5B. For Stanford graduate students only. Stanford graduate students restricted to 9 units may take 205A and B for a total of 9 units.
4-5 units, Sum (Staff)

GERLANG 205A. Intensive First-Year German for Stanford Grads
Same as GERLANG 5A. For Stanford graduate students only. Stanford graduate students restricted to 9 units may take 205A and B for a total of 9 units.
4-5 units, Sum (Staff)

GERLANG 210. Elementary German for Graduate Students
Restricted to Stanford graduate students. Prerequisite: consent of instructor.
3-4 units, Sum (Staff)

GERLANG 250. Reading German
For undergraduates and graduate students with a knowledge of German who want to acquire reading proficiency. Readings from scholarly works and professional journals. Recommended for students who need to pass the Ph.D. reading exam. Prerequisite: one year of German, or 10, or equivalent.
4 units, Spr (Staff)

GERLANG 395. Graduate Studies in German
Prerequisite: consent of instructor.
2-3 units, Aut (Staff), Win (Staff), Spr (Staff)

GERLANG 399. Independent Study
Prerequisite: consent of instructor.
1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLANG 99. Language Specials
Prerequisite: consent of instructor.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLANG 105. Advanced Business German
For students planning to work in a German-speaking country and for preparation of the International Business German exams. Case studies of typical business situations with accompanying videos, listening comprehension exercises, and class simulations. Business correspondence and reports in German. Prerequisite: placement test, 22 or consent of instructor.
4 units, Spr (Petig, W)

GERLANG 110. German Newspapers
For intermediate and advanced students. Articles from current newspapers and magazines, reading comprehension strategies with online news updates, and vocabulary. Writing practice if desired. May be repeated once for credit
3-4 units, not given this year

GERLANG 111. Television News from Germany
For intermediate and advanced students. Current news reports and features for listening comprehension and vocabulary. Extra listening, speaking, or writing practice for fourth unit.
3-4 units, not given this year

GERLANG 199. Individual Reading
Prerequisite: consent of instructor.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERMAND COURSES IN GERMAN LANGUAGE
Primarily for graduate students; undergraduates may enroll with consent of instructor.

GERLANG 205A. Intensive First-Year German for Stanford Grads
Same as GERLANG 5A. For Stanford graduate students only. Stanford graduate students restricted to 9 units may take 205A and B for a total of 9 units.
4-5 units, Sum (Staff)

GERLANG 205B. Intensive First-Year German for Stanford Grads
Same as GERLANG 5B. For Stanford graduate students only. Continuation of 205A. Stanford graduate students restricted to 9 units may take 205A and B for a total of 9 units.
4-5 units, Sum (Staff)

GERLANG 210. Elementary German for Graduate Students
Restricted to Stanford graduate students. Prerequisite: consent of instructor.
3-4 units, Sum (Staff)

GERLANG 250. Reading German
For undergraduates and graduate students with a knowledge of German who want to acquire reading proficiency. Readings from scholarly works and professional journals. Recommended for students who need to pass the Ph.D. reading exam. Prerequisite: one year of German, or 10, or equivalent.
4 units, Spr (Staff)

GERLANG 395. Graduate Studies in German
Prerequisite: consent of instructor.
2-3 units, Aut (Staff), Win (Staff), Spr (Staff)

GERLANG 399. Independent Study
Prerequisite: consent of instructor.
1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERMAN LITERATURE (GERLIT)

UNDERGRADUATE COURSES IN GERMAN LITERATURE
Primarily for undergraduates; graduate students may enroll with consent of adviser.
GERLIT 16N. Music, Myth, and Modernity: Wagner's Ring Cycle and Tolkien's Lord of the Rings
(Same as MUSIC 16N) Preference to freshmen. Roots of Wagner's operatic cycle and Tolkien's epic trilogy in a common core of Norse, Germanic, and Anglo-Saxon mythology. The role of musical motive and characterization in Wagner's music dramas and the film version of Tolkien's trilogy. Music as a key element in the psychological, political, and cultural revision of ancient myth in modern opera and film. GER:DB-Hum, EC-GlobalCom
3 units, not given this year

GERLIT 118. Introduction to the Germanic Languages
(Same as GERLIT 218) A comparative survey of the seven oldest Germanic languages (Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian, Old High German). Lectures on comparative linguistics, runology, old Germanic poetry, historical syntax, and more.
3-5 units, Spr (Daura, A)

GERLIT 120. Law, Justice, and the Literary Imagination
Have law and poetry risen from the same bed, as Jakob Grimm suggested in his essay Von der Poesie im Recht? Are there intrinsic connections between the legal and the literary? We will explore the ways in which narrative and drama articulate the relationship between law and justice, and represent the crises of the legal system. The course aims at enhancing reading fluency and textual analysis skills. Readings include texts by Schiller, Kleist, Kafka, Wedekind, and Brecht. Taught in German.
4 units, Win (Douvaldzi, C)

GERLIT 120Q. Is God Dead?
(Same as COMPLIT 50Q) A consideration of Nietzsche's claim that God is dead in relation to other texts of German literature and philosophy. The status of religious faith in relation to modernity and secularization; religion and science; culture and faith. Readings in German include selections from sacred and liturgical texts; fictional depictions of religious experience; religion in poetry. German theories of religion. Authors to be studied include Rilke, Hesse, Schöder, Buber, Sachs, Haecker, Weber, Taubes, Ratzinger. GER:DB-Hum
3-5 units, not given this year

GERLIT 121. THE VIENNESE COFFEEHOUSE
This seminar examines the cultural and literary significance of fin de siècle Vienna's most enduring symbol: the Coffeehouse. What was the function of the café in aesthetic, literary and political debates central to Vienna at the turn of the century? How did coffeehouse and newspaper culture influence developments in modernist prose? Texts by Hermann Bahr, Arthur Schnitzler, Karl Kraus, Peter Altenberg, Felix Salten, Sigmund Freud, Egon Friedell, and Alfons Polgar, in English translation, original German texts available upon request.
3-5 units, not given this year

GERLIT 123N. The Brothers Grimm and Their Fairy Tales
(F,Sem) Stanford Introductory Seminar. Historical, biographical, linguistic, and literary look at the Kinder- und Hausmarchen of Jakob and Wilhelm Grimm. Readings from the fairy tales, plus materials in other media such as film and the visual arts. Four short essays, one or two oral reports. In German. GER:DB-Hum
4 units, Aut (Robinson, O)

GERLIT 124. Introduction to German Poetry
(Same as GERLIT 224) Introduction to the reading and interpretation of lyrical poetry from the 18th century to present. Major poets writing in German including Gryphius, Goethe, Hölderlin, Novalis, Eichendorff, Heine, Rilke, Lasker-Schüler, Trakl, Benn, Celan, Brecht, Enzensberger, and Falkner. Close reading technique. Interpretive tools and theoretical concepts. Poetic form, voice, figural language, and the interaction of sensory registers. In German. GER:DB-Hum
4 units, not given this year

GERLIT 127. Uncanny Literature in the Nineteenth Century
From ghost children and animated statues, the walking dead to machine women and doppelgangers, 19th-century German literature teems with things that go bump in the night. The history of this tradition of fantastic literature in Germany, its origins, main authors, and defining features. Authors include E. T. A. Hoffmann, Wilhelm Hauff, Friedrich Schiller, Joseph von Eichendorff and Jeremias Gotthelf. Readings and writing in German. GER:DB-Hum
4 units, not given this year

GERLIT 127A. The German Ballad
This course charts the history of the German ballad, from Goethe and Schiller, to Romantic and Realist poets - additional reading will attempt to contextualize the German ballad in the European context. Musical ballads and song arrangements will also be considered. GER:DB-Hum
3-5 units, Spr (Daura, A)

GERLIT 130. Brecht and Modern Aesthetics
Bertolt Brecht's poetic and dramatic works, and analysis of his contribution to modern paradigms of poetic and dramatic practice. Readings in German include poetry, dramas such as Baal, Im Dickicht der Staedte, Die Dreigroschenoper, Aufstieg und Fall der Stadt Mahagonny, Mutter Courage und ihre Kinder, and theoretical writings on lyric poetry and drama.
3-5 units, not given this year

GERLIT 131. Goethe: Poetic Vision and Vocation in the Age of Reason
Introduction to Goethe's major works, reading across genres of poetry, drama, the novel, and autobiography; critical writings on art, nature, and aesthetics. Central trends in Goethe's thought; the interrelatedness of poetic vision and philosophical thinking in his works. Goethe in relation to other intellectual and philosophical movements of the period, including romanticism. GER:DB-Hum
3-5 units, not given this year

GERLIT 132. Nineteenth-Century Literature and Culture
A study of literary movements in their philosophical and historical contexts. Romanticism, Realism, Naturalism. What changes defined German culture between the age of Napoleon to the eve of the First World War? How did Germany become a unified nation? The influence of thinkers such as Marx, Nietzsche and Freud. Taught in German.
4 units, Win (Berman, R)

GERLIT 133Q. Modernism and Fiction
Preference to sophomores. Innovative ideas and narrative forms in German modernism. International and specifically German features. Problems of narration. Texts such as Musil's Törlless, Mann's Tod in Venedig, Kafka's Die Verwandlung, and Broch's Pasenow. Close reading technique. Prerequisite: reading knowledge of German. GER:DB-Hum
4 units, not given this year

GERLIT 134. FREUD'S VIENNA
This course explores the intersections between literature, art, politics, psychoanalysis, and philosophy in turn of the century Vienna. Works by Hofmannsthall, Schnitzler, Bahr, Musil, Roth, Kraus, and Freud; shorter selections from Brentano, Herzl, Kraft-Ebbing, Loos, Mach, and Wittgenstein. (Replaces GerLit 133 for 2011/12) GER:DB-Hum
3-5 units, Spr (Douvaldzi, C)

GERLIT 135. Outsiders and Outcasts: introduction to German Prose Fiction
Close reading and discussion of literary works by Hebel, Tieck, Kleist, Hoffmann, Heine, Keller, Storm, R. Walser, and Kafka. Attention paid to writers' divergent responses to the artistic, ethical, and political challenges of modernity. Readings, discussion, and writing assignments in German. Length of assignments adjusted to students' linguistic competence. Prerequisite: German language sequence at Stanford or equivalent. GER:DB-Hum
4 units, not given this year

GERLIT 136. Berlin Topographies in the 20th Century
Development of Berlin's spatial imaginaries from the boulevards...
of the late 19th century to the Weimar Republic's urban agendas, and to the repeated reconstructions by the Nazis, the GDR and Berlin Republic. Sources: Walter Benjamin, Siegfried Kracauer, Berthold Brecht, Peter Weiss, Mascha Kaleko, Peter Schneider, Blixia Bargeld, Wolf Biermann, Christoph Hein, Monika Maron, Thomas Hetteche, and Wim Wenders. In German. GER:DB-Hum

4 units, not given this year

GERLIT 138. Introduction to Germanic Languages
(Same as GERGEN 38A) The oldest attested stages of the Germanic language family, including Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian (Old Dutch), and Old High German. The linguistic interrelationships, prehistory, Germanic tribal groupings, and literature. GER:DB-Hum

4 units, not given this year

GERLIT 139. Love, Marriage and Passion in German Literature of the 19th and 20th Centuries
(Same as GERLIT 339) The thesis that love relationships, in shifting social, cultural, and communication contexts, reflect and determine the dominant value system of a society. How the concepts of romantic, passionate, and tragic love evolved and competed with one another in texts by Goethe, Schlegel, Keller, Sacher-Masoch, Fontane, and Böll. In German. GER:DB-Hum

3-5 units, not given this year

GERLIT 148. Heart to Heart: Theories of Expression at the Turn of Two Centuries
(Same as GERLIT 248) Paradigms of expression around 1800 and 1900, from Empfindsamkeit (sensibility) to German Expressionism. The heart that overflows into speech in the works of Klopstock, Goethe, Tieck, and Kleist, and the reformulation a century later of this idea as avant garde practice and modernist credo. Readings of poets, philosophers, and artists on relationships between inside and out, heart and voice, emotion and language, and self and art. Discussion in English. GER:DB-Hum

3-5 units, not given this year

GERLIT 150C. Postwar German Culture and Thought: 1945 to the Present
(Same as GERLIT 250C) How German culture and thought confronted the legacy of National Socialism, German guilt, and the possibility of a new beginning. German culture and the memory of communism (the German Democratic Republic) after 1989. Fiction of Thomas Mann, Gunter Grass, Alexander Kluge, and Hans Ulrich Treichel; poetry of Paul Celan and Ingeborg Bachmann; philosophical essays of Martin Heidegger, Theodor Adorno, Jürgen Habermas; films of Rainer Werner Fassbinder, Florian Henkel (The Life of Others), and Oliver Hirschbiegel (Downfall).

3-5 units, not given this year

GERLIT 151. German Underworlds
(Same as GERLIT 251) German theories about what lies beneath: is it hell or the subterranean foundations that keep the world from collapsing? Cosmic architecture and the quest of the unknown in Kant, Novalis, Wagner, Marx, Freud, Kafka, and the films of Fritz Lang.

3-5 units, not given this year

GERLIT 163. Readings in 19th-Century German Literature
(Same as GERLIT 263) Works by Goethe, Tieck, Kleist, Hoffmann, Heine, Büchner, Grillparzer, Droste-Hülshoff, Stifter, and Keller. Their divergent responses to artistic, ethical, and political challenges of modernity. Prerequisite: GERLANG 3 or equivalent. In German. GER:DB-Hum

4 units, not given this year

GERLIT 189A. Honors Research
Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.

5 units, Win (Staff)

GERLIT 189B. Honors Research
Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.

2 units, Spr (Staff)

GERLIT 190. German Capstone: Reading Franz Kafka
This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetic in the work of contemporary writers. WIM

3-5 units, Win (Eshel, A)

GERLIT 197. Theories of Art after Idealism
(Same as GERLIT 297) Key responses to the failure of idealism to integrate artistic creation and aesthetic experience into a philosophical system. Works by Schopenhauer, Kierkegaard, Nietzsche, Dilthey, and Lukács.

3-5 units, not given this year

GERLIT 199. Independent Reading
36 hours of reading per unit, weekly conference with instructor. May be repeated for credit. Prerequisite: consent of instructor.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLIT 206. Narrative, Visuality, Memory
(Same as GERLIT 306) Moments in the history of the relationship between verbal and visual: the classical arts memoriae; the ekphrasis debates of the 18th century; and the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winkelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, and Proust. GER:DB-Hum

3-5 units, not given this year

GERLIT 210. Dionysus - Mythology and Poetry of a Nietzschean Inspiration
(Same as COMPLIT 256A, COMPLIT 356A, GERLIT 310) The Greek god Dionysus became, like Apollo, the symbol of poetic imagination. In the modern era he substituted the Apolline tradition, while Apollo assumed the characteristics of Dionysus. We will examine this central poctological motif in texts by authors including Euripides, Keats, Nietzsche, Pound, and Eliot. Open to advanced undergraduates.

3-5 units, Aut (Bohren, C)

GERLIT 223. Literary Diaries of Classic Modernity
(Same as COMPLIT 223) Focus is on self-analysis in works of key modern writers. Since Montaigne's Essais and Rousseau's Confessions, analysis of the self has been a central topic for modern literature. Texts include Baudelaire's Intimate Journals, Kafka's Diaries, Gide's Journals, Woolf's Moments of Being, Benjamin's Berlin Childhood, and Pavese's Diaries. Analysis of the self as polarizing between the imagination of a utopian childhood and self-deprivation.

3-5 units, not given this year

GERLIT 241. Deutsche Geistesgeschichte I: German Aesthetic Thought, 1790-1872
The seminal tradition of writing about art including the German idealists (Kant, Schelling, Hegel, and Schiller), romantics (Schlegel, Novalis, and Hoffmann), and Schopenhauer, Kierkegaard, and Nietzsche. In English.

GER:DB-Hum

4 units, not given this year

GRADUATE COURSES IN GERMAN LITERATURE
Primarily for graduate students; undergraduates may enroll with consent of instructor.

GERLIT 217. Hölderlin's Poetry
(Same as COMPLIT 217) A discussion of key poems by Friedrich Hölderlin with regard to themes including the utopian fatherland as mythological landscape; the idea of the Greek gods; the concept of poetry as event; and the emphatic now. The seminar also explores the relationship between the philosophy of history and poetic metaphor.

3-5 units, not given this year

GERLIT 218. Introduction to the Germanic Languages
(Same as GERLIT 118) A comparative survey of the seven oldest Germanic languages (Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian, Old High German). Lectures on comparative linguistics, runology, old Germanic poetry, historical syntax and more.

3-5 units, Spr (Robinson, O)
GERLIT 219. German Utopias and Dystopias in the 20th Century
This course investigates the fraught relationship of Geist and politics in 20th century visions of a utopian republic of letters, mostly from Germany's conservative intellectuals: The George-circle's idea of a secret German-Republic, the conservative revolution of Hugo von Hofmannsthal, Mann's Reflections of a Non-Political Man and the most influential such attempts at an aesthetic politics. Other texts instead interrogate and at times parody their attempts, for instance Hesse's Glass Bead Game and Arno Schmidt's Eghead Republic.
3-5 units, not given this year

GERLIT 224. Introduction to German Poetry
(Same as GERLIT 124) Introduction to the reading and interpretation of lyrical poetry from the 18th century to the present. Major poets writing in German including Grundy, Goethe, Hölderlin, Novalis, Eichendorff, Heine, Rilke, and Adorno. Close reading technique. Interpretive tools and theoretical concepts. Poetic form, voice, figural language, and the interaction of sensory registers. In German.
4 units, not given this year

GERLIT 232. Realistic Fictions
(Same as COMPLIT 239) Realistic narratives in nineteenth-century literature. Structures of representation, temporality, and closure. Reality, history and political economy. Realism, modernism, and twentieth-century revisions. Texts by authors such as Keller, Stifter, Fontane, Seghers, Lukacs, and Adorno.
3-5 units, not given this year

GERLIT 234. The Bildungsroman and Other Biographical Fictions
Life hermeneutics practiced in the psychological novel, Bildungsroman, and autobiography. Intersections, and contrasts among these genres. The origins of the notion of progress and its fictional translations; possibilities of historical and fiction closure; and the emergence of the novel's protagonist as a disciplinary subject. Authors include Auguste, Rousseau, Goethe, Moritz, and Keller.
3-5 units, Spr (Douswaldzi, C)

GERLIT 246. Memory, History, and the Contemporary Novel
(Same as GERLIT 241) How the watershed events of the 20th century, the philosophic linguistic turn, and the debate regarding the end of history left their mark on the novel. How does the contemporary novel engage with the past? How does it interest in memory and history relate to late- or postmodern culture of time or to political and ethical concerns? Novels by Toni Morrison, W. G. Sebald, J. M. Coetzee, Kazuo Ishiguro, and A. B. Yehoshua; theoretical works by Nietzsche, Freud, Heidegger, Hannah Arendt, Walter Benjamin, Fredric Jameson, Paul Ricoeur, Awishai Margalit, and Walter Ben Michaels.
3-5 units, Spr (Eshel, A)

GERLIT 248. Heart to Heart: Theories of Expression at the Turns of Two Centuries
(Same as GERLIT 148) Paradigms of expression around 1800 and 1900, from Empfindsamkeit (sensibility) to German Expressionism. The heart that overflows into speech in the works of Hugo von Hofmannsthal, Brecht, and Hofmann. The reformulation a century later of this idea as avant garde practice and modernist credo. Readings of poets, philosophers, and artists on relationships between inside and out, heart and voice, emotion and language, and self and art. Discussion in English.
3-5 units, not given this year

GERLIT 250A. Modern Drama
Problems of drama as genre, especially in relationship to problems of modernism. Transitions from classical and popular theater. New structures of action and conflict; epic theater; competition with film; transformed theatrical practices. Authors: Nestroy, Hauptmann, Hofmannsthal, Brecht, and Horvath. (Satisfied by enrollment in GERLIT 369 in 2008-09.)
3-5 units, not given this year

GERLIT 250B. German Romanticism and Its Repercussions
Works by Novalis, the Schlegel brothers, Tieck, Wackenroder, Hoffmann, Klingemann. Theory of the subject; transformative politics and conservative-religious retreat into inwardness; the fragment form and the novel; reflection, play, irony; the productive self-movement of language; the hieroglyph of nature; animating effects of Romantic desire and its impasses; interactions among literature, music, and painting. Ambivalent and critical responses to Romanticism (Hegel, Heine, Nietzsche) and recent revivals (Benjamin, Lacoue-Labarthe, Nancy, and Frank). Readings in German, discussion in English.
3-5 units, not given this year

GERLIT 250C. Postwar German Culture and Thought: 1945 to the Present
(Same as GERLIT 150C) How German culture and thought confronted the legacy of National Socialism, German guilt, and the possibility of a new beginning. German culture and the memory of communism (the German Democratic Republic) after 1989. Fiction of Thomas Mann, Günther Grass, Alexander Kluge, and Hans Ulrich Treichel; poetry of Paul Celan and Ingeborg Bachmann; philosophical essays of Martin Heidegger, Theodor Adorno, Jürgen Habermas; films of Rainer Werner Fassbinder, Florian Henkel (The Life of Others), and Oliver Hirschbiegel (Downfall).
3-5 units, not given this year

GERLIT 251. German Underworlds
(Same as GERLIT 151) German theories about what lies beneath: is it hell or the subterranean foundations that keep the world from collapsing? Cosmic architecture and the question of the inferno in Kant, Novalis, Wagner, Marx, Freud, Kafka, and the films of Fritz Lang.
3-5 units, not given this year

GERLIT 255. Middle High German
Introduction to medieval German language and culture. Readings include Hartmann von Aue and Gottfried von Strassburg; genres include Minnesang, epic, and romance. Grammar review; emphasis is on rapid and accurate reading.
3-5 units, not given this year

GERLIT 256. Old High German
Introduction to the grammar and the texts of the earliest attested stage of high German
3-4 units, not given this year

GERLIT 258. German Dialects
A survey of major dialects of the German speaking areas. Lectures on comparative linguistics, the history and nature of German dialect geography, sociolinguistic approaches. Prerequisite: GERLANG 3 or equivalent.
4 units, Win (Robinson, O)

GERLIT 262. Theodor Storm and the Problem of Poetic Realism
3-5 units, Win (Berman, R)

GERLIT 263. Readings in 19th-Century German Literature
(Same as GERLIT 163) Works by Goethe, Tieck, Kleist, Hoffmann, Heine, Büchner, Grillparzer, Drost-Hülshoff, Stifter, and Keller. Their divergent responses to artistic, ethical, and political challenges of modernity. Prerequisite: GERLANG 3 or equivalent. In German.
4 units, not given this year

GERLIT 272. Modern German Poetry: Rilke, George, Trakl
This course explores three seminal German poets of the early 20th century, Rainer Maria Rilke, Stefan George, and Georg Trakl. While focused on their work, the course will all also explore each poet's intellectual and social context, their relationship to the tradition, and their poetic politics. This course in taught entirely in German.
3-5 units, Win (Staff)

GERLIT 297. Theories of Art after Idealism
(Same as GERLIT 197) Key responses to the failure of idealism to integrate artistic creation and aesthetic experience into a philosophical system. Works by Schopenhauer, Kierkegaard, Nietzsche, Dilthey, and Lukács.
3-5 units, not given this year
GERLIT 298. Individual Work
Open only to German majors and to students working on special projects, including written reports for internships. Honors students use this number for the honors essay. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLIT 306. Narrative, Visuality, Memory
(Same as GERLIT 206) Moments in the history of the relationship between verbal and visual: the classical ars memoriae; the ephphrasis debates of the 18th century; and the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winkelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, and Proust.
3-5 units, not given this year

GERLIT 310. Dionysus - Mythology and Poetry of a Nietzschean Inspiration
(Same as COMPLIT 256A, COMPLIT 356A, GERLIT 210) The Greek god Dionysus became, like Apollo, the symbol of poetic imagination. In the modern era he substituted the Apolline tradition, while Apollo assumed the characteristics of Dionysus. We will examine this central poctological motif in texts by authors including Euripides, Keats, Nietzsche, Pound, and Eliot. Open to advanced undergraduates.
3-5 units, Aut (Bohrer, C)

GERLIT 339. Love, Marriage and Passion in German Literature of the 19th and 20th Centuries
(Same as GERLIT 139) The thesis that love relationships, in shifting social, cultural, and communication contexts, reflect and determine the dominant value system of a society. How the concepts of romantic, passionate, and pragmatic love evolved and competed with one another in texts by Goethe, Schlegel, Keller, Sacher-Masoch, Fontane, and Böll. In German.
3-5 units, not given this year

GERLIT 360. Introduction to Graduate Studies: Criticism as Profession
(Same as COMPLIT 369, FRENGEN 369, ITALGEN 369) Based on a survey of (and a conversation about) the history of academic Literary Criticism, and on presentation (and discussion) of contemporary theoretical positions, this seminar will try to enhance a reflection on the conditions, difficulties, and rewards of a profession and as an intellectual life form. Attention will be paid to the most relevant (and most pressing) institutional frame-conditions, but this attention will not prevent us from trying to explore a (seldom used) potential of eccentricity and freedom that has always been inherent to (although sometimes dormant in) Literary Criticism.
5 units, Aut (Gumbrecht, H)

GERLIT 399. Independent Study
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLIT 400. Dissertation Research
For graduate students in German working on dissertations only.
GERLIT 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLIT 298. Individual Work
Open only to German majors and to students working on special projects, including written reports for internships. Honors students use this number for the honors essay. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLIT 306. Narrative, Visuality, Memory
(Same as GERLIT 206) Moments in the history of the relationship between verbal and visual: the classical ars memoriae; the ephphrasis debates of the 18th century; and the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winkelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, and Proust.
3-5 units, not given this year

GERLIT 310. Dionysus - Mythology and Poetry of a Nietzschean Inspiration
(Same as COMPLIT 256A, COMPLIT 356A, GERLIT 210) The Greek god Dionysus became, like Apollo, the symbol of poetic imagination. In the modern era he substituted the Apolline tradition, while Apollo assumed the characteristics of Dionysus. We will examine this central poctological motif in texts by authors including Euripides, Keats, Nietzsche, Pound, and Eliot. Open to advanced undergraduates.
3-5 units, Aut (Bohrer, C)

GERLIT 339. Love, Marriage and Passion in German Literature of the 19th and 20th Centuries
(Same as GERLIT 139) The thesis that love relationships, in shifting social, cultural, and communication contexts, reflect and determine the dominant value system of a society. How the concepts of romantic, passionate, and pragmatic love evolved and competed with one another in texts by Goethe, Schlegel, Keller, Sacher-Masoch, Fontane, and Böll. In German.

For graduate students in German working on dissertations only.

GERLIT 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HEALTH RESEARCH AND POLICY (HRP) COURSES

UNDERGRADUATE COURSES IN HEALTH RESEARCH AND POLICY
Primarily for undergraduates; graduate students may enroll with consent of advisor.

HRP 89Q. Introduction to Cross Cultural Issues in Medicine
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Introduction to social factors that impact health care delivery, such as ethnicity, immigration, language barriers, and patient service expectations. Focus is on developing a framework to understand culturally unique and non-English speaking populations in the health care system. GER:EC-AmerCul

HRP 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN HEALTH RESEARCH AND POLICY
Primarily for graduate students; undergraduates may enroll with consent of instructor.

HRP 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis
(Same as MED 206, STATS 211) Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.
3 units, Win (Olkin, I; Ioannidis, J)

HRP 207. Introduction to Concepts and Methods in Health Services and Policy Research I
Primarily for medical students in the Health Services and Policy Research scholarly concentration. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines.
2 units, Aut (Haberland, C)

HRP 208. Introduction to Concepts and Methods in Health Services and Policy Research II
Primarily for medical students in the Health Services and Policy Research scholarly concentration; continuation of 207. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines. Recommended: 207.
2 units, Win (Haberland, C)

HRP 209. FDA’s Regulation of Health Care
(Same as LAW 458) Open to law and medical students; other graduate students by consent of instructor. The FDA’s regulatory authority over drugs, biologics, medical devices, and dietary supplements. The nature of the pharmaceutical, biotech, medical device, and nutritional supplement industries.
2-3 units, not given this year

HRP 210. Health Law and Policy
(Same as Law 313) Open to law, medicine, business, and graduate students. Focus this term is on the physician/patient relationship, medical ethics, and public health law.
3 units, Spr (Staff)

HRP 211. Law and the Biosciences
(Same as LAW 368) Legal, social, and ethical issues arising from advances in neuroscience, including effects upon law and society through improvements in predicting illnesses and behaviors, reading minds through neuroimaging, understanding responsibility and consciousness, treating criminal behavior, and cognitive enhancement. May be repeated for credit.
3 units, not given this year

HRP 212. Cross Cultural Medicine
Developing interpreting and behavioral skills needed to facilitate culturally relevant health care across all population groups. Discussions focus on explicit and implicit cultural influences operating in formal and informal medical contexts.
3 units, Spr (Staff)

HRP 214. Scientific Writing
Step-by-step through the process of writing and publishing a scientific manuscript. How to write effectively, concisely, and clearly. Preparation of an actual scientific manuscript. Students are encouraged to bring a manuscript on which they are currently working to develop and polish throughout the course.
2-3 units, Win (Sainani, K)
HRP 215. Scientific Writing for Basic and Translational Scientists
Teaches students in the basic sciences how to write clearly, concisely, and effectively. Focuses on the process of writing and publishing a scientific manuscript. 3 unit option requires work on a manuscript. Not intended for epidemiology graduate students. 2-3 units, Aut (Sainani, K)

HRP 216. Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research
Topics include: advanced aspects of study design and data analyses; development of health measurement instruments; methods of summarizing literature and quantifying effect sizes; and multivariable nature of health events in human populations. 3 units requires a term paper. Prerequisites: 225, and 258 or 261, or consent of instructor. 2-3 units, Spr (Staff)

HRP 220. BIOTECHNOLOGY LAW AND POLICY
(Same as LAW 440) Open to all law or medical students; other graduate students by consent of the instructor. Focuses on the biotechnology industry, with some discussion of the med tech or medical device industry and the pharmaceutical industry. The life cycle of a biotech firm, from a good idea to a start-up company to FDA approval and beyond. Guest speakers. In addition to a final exam, students are required to participate in a group project during the term, making law and business recommendations about a biotech firm. 3 units, Spr (Staff)

HRP 221. Law and the Biosciences: Genetics
(Same as LAW 480) Open to all law or medical students; other graduate students by consent of the instructor. Ethical, legal, and social issues arising primarily from advances in knowledge of human genetics. May also include a section on stem cell research. 3 units, Spr (Staff)

HRP 223. Epidemiologic Analysis: Data Management and Statistical Programming
The skills required for management and analysis of biomedical data. Topics include importing and exporting data from multiple database systems, visualizing and cleaning data, data management for multicenter projects, and data security. Introduction to applied statistical programming relevant to epidemiologic and clinical research. No previous programming experience required. 3 units, Aut (Balise, R)

HRP 225. Design and Conduct of Clinical and Epidemiologic Studies
Intermediate-level. The skills to design, carry out, and interpret epidemiologic studies, particularly of chronic diseases. Topics: epidemiologic concepts, sources of data, cohort studies, case-control studies, cross-sectional studies, sampling, estimating sample size, questionnaire design, and the effects of measurement error. Prerequisite: A basic/introductory course in statistics or consent of instructor. 3-4 units, Aut (Popat, R)

HRP 226. Advanced Epidemiologic and Clinical Research Methods
The principles of measurement, measures of effect, confounding, effect modification, and strategies for minimizing bias in clinical and epidemiologic studies. Prerequisite: 225 or consent of instructor. 3-4 units, Win (Popat, R)

HRP 228. Genetic Epidemiology
Provides framework for physicians, epidemiologists, and other scientists to interpret the literature and incorporate genetic information into human disease research. Topics include: common genetic measures, approaches to finding disease genes, study design and analysis issues, genome-wide association studies, and applications of new genomic technologies. Includes reading seminal papers in genetic epidemiology. 2 units, alternate years, not given this year

HRP 230. Cancer Epidemiology
Descriptive epidemiology and sources of incidence/mortality data; the biological basis of carcinogenesis and its implications for epidemiologic research; methodological issues relevant to cancer research; causal inference; major environmental risk factors; genetic susceptibility; cancer control; examples of current research; and critique of the literature. 3 units requires paper or project. Prerequisite: 225, or consent of instructor. 2-3 units, alternate years, not given this year

HRP 231. Epidemiology of Infectious Diseases
Principles of the transmission of the infectious agents (viruses, bacteria, rickettsiae, mycoplasma, fungi, and protozoan and helminth parasites). The role of vectors, reservoirs, and environmental factors. Pathogen and host characteristics that determine the spectrum of infection and disease. Endemicity, outbreaks, and epidemics of selected infectious diseases. Principles of control and surveillance. 3 units, Win (Maldonado, Y; Parsonnet, J)

HRP 236. Epidemiology Research Seminar
Weekly forum for ongoing epidemiologic research by faculty, staff, guests, and students, emphasizing research issues relevant to disease causation, prevention, and treatment. May be repeated for credit. 1 unit, Aut (Henderson, V), Win (Sieh, W), Spr (Staff)

HRP 238. Genes and Environment in Disease Causation: Implications for Medicine and Public Health
(Same as HUMBIO 159) The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor. 2-3 units, not given this year

HRP 239. Understanding Statistical Models and their Social Science Applications
(Same as EDUC 260X, STATS 209) Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data, mediating and moderating variables. See http://www-stat.stanford.edu/~rag/stat209. Prerequisite: intermediate-level statistical methods 3 units, Win (Rogosa, D)

HRP 240. Rethinking Global Health
(Same as MED 230) Challenges for those seeking to improve global health include contending with: a dynamic balance between infectious and chronic non-communicable disease that differs across and within countries; issues relating to the proximate and more removed causes of disease and illness, including nutrition, infrastructure, governance, economic development, and environmental changes; divergent proposed responses with arguments for particular courses of action appealing to cost-effectiveness, egalitarian, and rights-based principles. The course goal is to begin to make sense of these challenging issues, requiring data and evidence derived via multiple methodologies, critical thinking, and sound reasoning. Prerequisite: a course dealing with global health, such as HUMBIO 129S, or consent of instructor. 3 units, Spr (Staff)

HRP 241. Measuring Global Health
(Same as MED 231) Open to MD, graduate, and undergraduate students. Assessing the global burden of disease, its distribution among and within countries, its causes, and appropriate interventions requires rigorous quantitative approaches. This course develops skills in these areas by critically examining questions like: How do we know who is sick and where? How are risk factors incorporated into our projections of future disease trends? How do we combine mortality and morbidity in a meaningful way? What works for improving health efficiently? Workshops build familiarity with relevant data and their analysis. Prerequisite: Course in statistics, biostatistics, econometrics, or equivalent. 4 units, Spr (Bendavid, E; Goldhaber-Fiebert, J)

STANFORD BULLETIN, 2011-12 | 723
HRP 251. Design and Conduct of Clinical Trials
The rationale for phases 1-3 clinical trials, the recruitment of subjects, techniques for randomization, data collection and endpoints, interim monitoring, and reporting of results. Emphasis is on the theoretical underpinnings of clinical research and the practical aspects of conducting clinical trials.
3 units, Spr (Staff)

HRP 252. Outcomes Analysis
(Same as BIOMEDIN 251) Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.
3 units, Spr (Staff)

HRP 256. Economics of Health and Medical Care
(Same as BIOMEDIN 156, BIOMEDIN 256, ECON 126) Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care: measurement and valuation of health; socioeconomic status and epidemiology; economics of obesity. Graduate students with research interests should take ECON 248. Prerequisites: ECON 50 and ECON 102A or Stats 116 or the equivalent. Recommended: ECON 51.
5 units, Aut (Bhattacharya, J)

HRP 258. Introduction to Probability and Statistics for Clinical Research
Open to medical and graduate students; required of medical students in the Clinical Research Scholarly Concentration. Tools to evaluate medical literature. Topics include random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals, correlation, regression, analysis of variance, and survival analysis.
3 units, Spr (Staff)

HRP 259. Introduction to Probability and Statistics for Epidemiology
Topics: random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals. Correlation, regression, analysis of variance, and nonparametric tests. Introduction to least squares and maximum likelihood estimation. Emphasis is on medical applications. Differential between 3 and 4 units is the amount of out-of-class work required.
3-4 units, Aut (Sainani, K)

HRP 260A. Workshop in Biostatistics
(Same as STATS 260A) Applications of statistical techniques to current problems in medical science.
1-2 units, Aut (Olshen, R; Sabatti, C)

HRP 260B. Workshop in Biostatistics
(Same as STATS 260B) Applications of statistical techniques to current problems in medical science.
1-2 units, Win (Olshen, R; Sabatti, C)

HRP 260C. Workshop in Biostatistics
(Same as STATS 260C) Applications of statistical techniques to current problems in medical science.
1-2 units, Spr (Staff)

HRP 261. Intermediate Biostatistics: Analysis of Discrete Data
(Same as BIOMEDIN 233, STATS 261) Methods for analyzing data from case-control and cross-sectional studies: the x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenszel methods, stratification, tests for matched data; logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference.
3 units, Win (Sainani, K)

HRP 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis
(Same as STATS 262) Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard ratios, time-dependent variables, longitudinal data structures, profile plots, missing data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression.
3 units, Spr (Staff)

HRP 263. Advanced Decision Science Methods and Modeling in Health
(Same as MED 263) Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.
3 units, Spr (Staff)

HRP 268. Genetics and Reproductive Technologies
(Same as LAW 568) Examines the complex interrelationship among legal, political, ethical, and social issues shaping the intersection of genetics, reproductive technologies and reproductive rights. Issues discussed may include, but are not limited to: the commercialization of biological materials for health care; measurement and valuation of health; socioeconomic status and epidemiology; economics of obesity. Graduate students with research interests should take ECON 248. Prerequisites: ECON 50 and ECON 102A or Stats 116 or the equivalent. Recommended: ECON 51.
5 units, Aut (Bhattacharya, J)

HRP 274. Design for Service Innovation
(Same as MED 274) (Same as OIT 344) Open to graduate students from all schools and departments. An experiential course in which students work in multidisciplinary teams to design new services (including, but not limited to, web services) to address the needs of an underserved population of users. Students learn to identify the key needs of the target population and to design services to address these needs. Projects in 2012 will focus on services for young adult survivors of severe childhood diseases such as cystic fibrosis, rheumatoid arthritis, major cardiac repairs, organ transplants, genetic metabolic disorders, and cancer. The first wave of survivors is reaching young adulthood (ages 18-25). Many aspects of the young adult world are not yet user-friendly for them: applying to and entering college, adherence to required medication and diet, prospects for marriage and parenthood, participation in sports, driving, drinking, drugs, and more. The aspiration is to develop services to improve these young adults' lives.
4 units, Aut (Farahany, N)

HRP 280. Spanish for Medical Students
(Same as SPANLANG 121M) First quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on taking the medical history. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish speaking patients. Series can be taken independently, depending on the level of prior knowledge.
2 units, Win (Corso, I)

HRP 281. Spanish for Medical Students
(Same as SPANLANG 122M) Second quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on performing a physical examination. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.
2 units, Win (Corso, I)

HRP 282. Spanish for Medical Students
(Same as SPANLANG 123M) Third quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on different specialties and medical conditions. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.
independently, depending on the level of prior knowledge.
2 units, Spr (Staff)

HRP 283. Health Services Research Core Seminar
Presentation of research in progress and tutorials in the field of health services research.
1 unit, Aut (Haberland, C), Win (Haberland, C), Spr (Staff)

HRP 290. Advanced Medical Spanish Oral Communication
Enrollment limited to medical students. Designed to further develop linguistic skills, covering all medical specialties according to student needs. Sessions also include topics on patient education and diseases, such as diabetes, asthma, TB, and CVDs.
2 units, Aut (Corso, J), Win (Corso, J), Spr (Staff)

HRP 296. Current Topics in Bioethics
(Same as LAW 596) Explores the ethical, legal, and public policy issues arising from recent advances in biomedicine and the biosciences. Approaches to bioethical reasoning including casuistry, social justice, resource allocation, and individual rights in areas such as refusal of treatment conception. Topics include: the use of forensic genetics in criminal law, neuroscience and national security, race and ethnicity in genetic research, experimentation on human subjects and prisoners, privacy of medical and genetic information in the information age, synthetic biology, and do-it-yourself medical and genetic testing. No prior knowledge in science, medicine, philosophy or related disciplines is required.
3 units, Spr (Staff)

HRP 299. Directed Reading in Health Research and Policy
Epidemiology, health services research, preventive medicine, medical genetics, public health, economics of medical care, occupational or environmental medicine, international health, or related fields. May be repeated for credit. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HRP 351. Health Care Technology: From Innovators to Providers to Patients
(Same as GSBGEN 351) How health care businesses use biotechnology, medical technology and information technology to improve patient outcomes and manage costs. New technologies commercialized by innovator biotech and pharmaceutical companies, device manufacturers, diagnostics developers, and health IT companies, and adopted by hospitals and physicians in patient care and paid for by third-party payers. Case studies: how innovators finance and manage new product development; clinical trial management and gaining regulatory approval; strategies to drive product adoption; business models to drive innovation; clinical and business models for adopting new technology; organizational change; criteria for reimbursement and coverage decisions; selective provider network design to manage added costs; and IT-intensive business models. Guest speakers and panelists.
4 units, not given this year

HRP 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HRP 391. Health Care Regulation, Finance and Policy
(Same as PUBLPOL 231) (SAME AS LAW 348, MGTECON 331) Provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. Potential topics include: health reform, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), medical malpractice and quality regulation, pharmaceuticals, the corporate practice of medicine, regulation of fraud and abuse, and international comparisons.
3 units, Win (Bundorf, M; Kessler, D)

HRP 392. Analysis of Costs, Risks, and Benefits of Health Care
(Same as BIOMEDIN 432) (Same as MGTECON 332) For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. How do M.B.A. analytic tools apply in health services? Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application.
3 units, Win (Daughton, J)

HRP 399. Graduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HRP 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HRP 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY (HISTORY) COURSES

UNDERGRADUATE COURSES IN HISTORY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

HISTORY 4N. A World History of Genocide
(F, Sem) Stanford Introductory Seminar. Reviews the history of genocide from ancient times until the present. Defines genocide, both in legal and historical terms, and investigates its causes, consequences, and global dimensions. Issues of prevention, punishment, and interdiction. Main periods of concern are the ancient world, Spanish colonial conquest; early modern Asia; settler genocides in America, Australia, and Africa; the Armenian genocide and the Holocaust; genocide in communist societies; and late 20th century genocide. GER:DB-SocSci 3-5 units, Win (Naimark, N)

HISTORY 55. Disciplining the Colonial Body: Violence, Sex, and Resistance in Europe's Empires, 1830-2011
How did Europe maintain control over its vast empires? Explores how colonial institutions, law, hierarchies of race, class, and sex, and the practice of sciences like anthropology functioned as tools of imperial control. We will use primary sources such as novels, films, maps, memoirs, legal documents, and personal correspondence, as well as theorists of power such as Foucault and Said, to study the effects of imperial violence and control, resistance to it, and its continued importance in contemporary society.
5 units, Spr (Slobodkin, Y), ONCEONLY

HISTORY 88N. How We Remember the Past: Historical, Legal and Artistic Interpretation
(F, Sem) Stanford Introductory Seminar. Examines the similarities and differences between three different methods to remember (and interpret) the past: historical research, legal proceedings, and culture (mainly literature, cinema and the plastic arts). Looking at theoretical debates first, a historical specific example next (Spanish civil war and dictatorship, 1936-1975), we will ask under which circumstances is each method used to remember the past, and how do the results vary? Why do certain societies prefer one method to others? Does this preference depend on what is being recorded, on the availability of sources, on the conditions of those engaged in examining the past, their aim at doing so, etc.? The goal is not to learn about a specific event, time or place, but to think about the past in pluralistic ways. Students will each choose an example of their own to analyze and share with the class. Examples can refer to any moment in the past, or any region or human group as long as the student GER:DB-Hum
4-5 units, Aut (Herzog, T)

(SAME AS HISTORY 109. History majors and others taking 5 units, enroll in HISTORY 109.) Do human beings have certain inalienable rights? Are we obliged to help those in need? Examines the historical origins as well as the political, social, economic, legal, and cultural contexts of ideas about human rights and humanitarianism from the time of the Old Testament to the International Criminal Court. Class time will blend short lectures with town hall style discussions of subjects including slavery, torture, colonialism, genocide, and the work of NGO's.
3 units, Win (Daughton, J)
HISTORY 10A. Europe from Antiquity to 1500
(Same as History 110A. History majors and others taking 5 units, register for 110A.) Focus is on religion and politics. Issues include: the rise of Christianity and its impact on Rome; transformations of Catholicism and its institutions including the impact of barbarian tribes and the struggle between church and state; antisemitism, heresy, Crusades, and inquisition; courtey love; and scholasticism.

GER:DB-Hum
3 units, Aut (Miner, J)

HISTORY 10B. Early Modern Europe
(Same as History 110B. History majors and others taking 5 units, register for 110B.) Survey of early modern European history from the Reformation through the Enlightenment. Topics include sovereignty and the state, curfey life and manners, science and technology, the print and military revolutions, piety and religious practice, popular culture and village life, women and gender, witchcraft and sexual deviance, the rise of international trade, the history of consumption and material things, encounters with non-Western peoples and colonialism, and scholarship and the republic of letters. GER:DB-SocSci, EC-GlobalCom
3 units, Win (Fredona, R)

HISTORY 10C. Introduction to Modern Europe
(SAME AS HISTORY 110C. History majors and others taking 5 units, register for 110C.) From the late 18th century to the present. How Europeans responded to rapid social changes caused by political upheaval, industrialization, and modernization. How the experience and legacy of imperialism and colonialism both influenced European society and put in motion a process of globalization that continues to shape international politics today.
3 units, Spr (Daughton, J)

HISTORY 11N. The Roman Empire: Its Grandeur and Fall
(Same as CLASSHIS 24N) Preference to Freshmen. Prerequisite: IHUM 69A. Explore themes on the Roman Empire and its decline from the 1st through the 5th centuries C.E. What was the political and military glue that held this diverse, multi-ethnic empire together? What were the bases of wealth and how was it distributed? What were the possibilities and limits of economic growth? How integrated was it in culture and religion? What were the causes and consequences of the conversion to Christianity? Why did the Empire fall in the West? How suitable is the analogy of the U.S. in the 21st century? GER:IHUM-3
4 units, not given this year

HISTORY 11SC. How Is a Buddhist
Buddhism as a system of thought, a culture, a way of life, a definition of reality, a method for investigating it, and a mental, physical, and social practice. Buddhism as a total phenomenon. Readings, films, music, and art. How Buddhist practices constitute the world of the Buddhist.
2 units, not given this year

HISTORY 13N. Slavery and Rebellion in Ancient Rome: Spartacus in Legend and History
(F.Sem) (Same as CLASSHIS 23N) Stanford Introductory Seminar. Preference to freshmen. Spartacus and his army of slaves resisted the power of the Roman legions for two years and became the stuff of legend. Introduction to Roman history. Slavery in ancient Rome its psychological, social, and economic dimensions. Causes of Spartacus' rebellion; how the traumatic end of the rebellion gave rise to a legend popularized in Stanley Kubrick's 1960 film.
3 units, Aut (Saller, R)

HISTORY 13S. The Politics of Food in Early Modern England
A chronological and thematic look at the century of revolutions in England via case studies surrounding the purchase, consumption, and production of food, as well as culinary puns, metaphors, and allusions. Charts England's transition from an early modern monarchy and economy; through the Civil War and Interregnum of the 1640s and 1650s, when royalists, Ranters, and radicals contended over the nature of the ideal society; to the 1690s, when the Glorious Revolution ushered in a modernized commercialized society.
5 units, Spr (Chou, C), ONCEONLY

HISTORY 22S. Big Brother is Watching: The History of the Communist Secret Police
Who were the secret police, and what was their role in communist states and societies? How did they understand their most important tasks: political repression, surveillance, and preventative policing? Examines the secret police in the Eastern Block from the Bolshevik Cheka to the East German Stasi. Sources include interviews with secret police agents, photographs taken with hidden cameras, victims' memoirs, films, court records, and literature. Topics include totalitarianism, defection, surveillance technologies, interrogations, communism, culture, and state enemies.
5 units, Aut (Pucci, M), ONCEONLY

HISTORY 22SC. A Tale of Two Cities: London and San Francisco
San Francisco and London are two of the world's best-loved and most-visited cities. They have certain things in common: both are ports, situated on the edge of continents; both are major commercial and cultural centers; and both have been shaped by immigration. Their differences are more obvious than their similarities, however, and these differences are to a large extent explained by their very different histories. London was founded by the Romans and was, for a period in its recent history, the capital of an Empire on which the sun famously never set; San Francisco did not emerge as a city until well into the 19th century and even now has something of the character of a city state rather than a national or state capital. Though often considered one of the most European of American cities, San Francisco is in fact laid out on the typically American grid plan; the planning of London is, by contrast, chaotic, reflecting its long evolution and the lack of any effective central plan.
2 units, not given this year

HISTORY 30C. Culture and Society in Reformation England
(Same as History 136C. History majors and others taking 5 units, register for 130C.) Focuses on the appeal of both Reformed and Catholic ideas in the political and cultural contexts of early modern Europe. Topics include: the Lutheran revolt; the spread of Protestant ideas; Calvin's Geneva; the English Reformation; Tridentine reform and the Jesuits; toleration and the underground churches; wars and religious violence; and the making of European confessional identities. Sources include sermons, religious polemic, autobiographies, graphic prints, poetry, and music.
3 units, not given this year

HISTORY 30Q. English Society Through Fiction
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. England from the eighteenth century to the twentieth century through the reading of seven novels ranging from Henry Fielding's Joseph Andrews, to Evelyn Waugh's A Handful of Dust. Focus is on the novels themselves and the historical context of the novels to acquire a knowledge of British history over two hundred years. GER:DB-Hum
4 units, Spr (Sanksy, P)

(Same as ARTHIST 113. ARTHIST 113A. HISTORY 131) (Same as HISTORY 31. History majors and others taking 5 units, register for 131.) What did Leonardo actually know? How did he acquire that knowledge? Exploring Leonardo's interests and accomplishments in such fields as painting, architecture, engineering, physics, mathematics, geology, anatomy, and physiology, and more generally the nature of Renaissance science, art, and technology. Considers the relationship between the society of fifteenth century Italy and the work of the man from Vinci; why did the world produce a Leonardo? How might we use him to understand creativity, innovation, and invention in the Renaissance and beyond? What was his legacy and how did he become a myth? Designed both for students interested in the history of science, medicine, and technology and for students interested in the history and art of Renaissance Italy. GER:DB-Hum
3-5 units, not given this year

HISTORY 32A. Enlightenment and the Arts
(Same as HISTORY 32A. History majors and others taking 5 units, enroll in 132A.) Novels, poetry, music, paintings, and architecture, and what they reveal about the society that produced them.
3 units, Spr (Loungee Chappell, C)

HISTORY 33A. Blood and Roses: The Age of the Tudors
(Same as HISTORY 133A. History majors and others taking 5
units, register for 133A.) English society and state from the Wars of the Roses to the death of Elizabeth. Political, social, and cultural upheavals of the Tudor period and the changes wrought by the Reformation. The establishment of the Tudor monarchy; destruction of the Catholic church; rise of Puritanism; and 16th-century social and economic changes. GER:DB-Hum
3 units, not given this year

HISTORY 33B. Revolutionary England: The Stuart Age
(Same as HISTORY 133B. History majors and others taking 5 units, register for 133B.) From the accession of King James I in 1603 to the death of Queen Anne in 1714: a brutal civil war, the execution of one anointed king, and the deposition of another. Topics include the causes and consequences of the English Revolution, the origins of Anglo-American democratic thought, the rise and decline of Puritanism, and the emergence of England as an economic and colonial power. (Como)
3 units, not given this year

HISTORY 33S. The France of Louis XIV
Louis XIV's reign as the foundation of France's modern global eminence despite the imposition of governing practices that undermined France's chance of effective modernization. Sources include 17th-century documents and a computer simulation in game format to define the problems faced by the Sun King and his contemporaries in an era of economic, political, and social change. GER:DB-Hum
3 units, not given this year

HISTORY 34A. European Witch Hunts
(Same as HISTORY 134A. History majors and others taking 5 units, register for 134A.) After the Reformation, in the midst of state building and scientific discovery, Europeans conducted a series of deadly witch hunts, violating their own laws and procedures in the process. What was it about early modernity that fueled witch hunting? Witch trials and early modern demonology as well as historians' interpretations of events to seek answers to this question. GER:DB-Hum
5 units, not given this year

HISTORY 36N. Gay Autobiography
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Lorde. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers' experiences? GER:DB-Hum, EC-Gender
4 units, Spr (Stokes, L)

HISTORY 38A. Germany and the World Wars, 1870-1990
(Same as HISTORY 138A. Majors and others taking 5 units, enroll in 138A.) Germany's history from Bismarck's wars of unification through the end of the Cold War. The radicalizing relationship between international conflict, social upheaval, and state transformation with a focus on the clashes of the Second Empire, the road to WW I, interwar instability, the rise of Nazism, WW II, the Holocaust, the division of communist E. and capitalist W. Germany, and the fall of the Iron Curtain. GER:EC-GlobalCom
3 units, not given this year

HISTORY 39. Modern Britain and the British Empire
(Same as HISTORY 139. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain. GER:EC-GlobalCom
3 units, Win (Satta, P)

HISTORY 40. World History of Science, Technology and Medicine: From Prehistory to the Scientific Revolution
(Same as HISTORY 140. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehistoric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as material culture and religions. GER:DB-SocSci
3 units, Win (Proctor, R)

HISTORY 41A. The Emergence of Medicine: The Middle Ages and Renaissance
(Same as HISTORY 141A. History majors and others taking 5 units, register for 141A.) How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. GER:DB-SocSci
3 units, not given this year

HISTORY 41Q. Mad Women: Women and Mental Illness in U.S. History
(S,Sem) Stanford Introductory Seminar. Explores how gender and historical context have shaped the experience and treatment of mental illness in U.S. history. Why have women been the witches and whores of the past, and why have there historically been more women than men among the mentally ill? Topics include the relationship between historical ideas of femininity and insanity, the ways that notions of gender influence the definition and treatment of mental disorder, and the understanding of the historically embedded nature of medical ideas, diagnoses, and treatments. GER:DB-SocSci
3 units, Aut (Horn, M)

HISTORY 41S. Speed and Power and Work by the Hour: The Revolution of Western Industry
What was revolutionary about the Industrial Revolution? Did eighteenth and nineteenth century Europeans and Americans recognize radical changes in the way they personally lived? Or, are such historical phenomena only appreciated in hindsight? Examines the scope and meaning of the Industrial Revolution culturally, economically, and technically through paintings, news articles, novels, photographs, technical treatises, and production statistics from the era in question. Might today's technological changes be interpreted in the future as revolutionary?
5 units, Aut (Harris, B)

HISTORY 42. Darwin in the History of Life
(Same as HISTORY 142. History majors and others taking 5 units, register for 142.) Origins and impact of revolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropological and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-devo, neocatastrophism, and the new technological frontier of biomimicry. GER:DB-SocSci
3 units, Spr (Proctor, R)

HISTORY 44Q. The History of Women and Gender in Science, Medicine, and Engineering
(S,Sem) Stanford Introductory Seminar. Preference to freshmen. Section 1 focuses on the history of women in science, medicine, and engineering. Section 2 looks at transforming research institutions so that both men and women can flourish. Section 3 explores how sex and gender analysis can enhance creativity. We discuss concrete examples of how taking gender into account has yielded new research results. Stanford University currently has a multiple year collaboration with the European Commission for Gendered Innovations, and this class will be part of that project. This course fulfills the second level Writing and Rhetoric Requirement (WRITE 2) and will emphasize oral and multimedia presentation. GER:DB-Hum, EC-Gender
4-5 units, Win (Schiebinger, L)

HISTORY 45B. Africa in the Twentieth Century
(Same as HISTORY 145B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from
when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans. GER:DB-SocSci, EC-GlobalCom

3 units, Spr (Roberts, R)

HISTORY 47. History of South Africa (Same as AFRICAAM 47) (Same as HISTORY 147. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis. GER:DB-SocSci

3 units, Aut (Campbell, J)

HISTORY 47S. Saints and Sorcerer-Kings: History and the Epic in West Africa Combining historical memory with myth and folklore, West African historical epics tell the stories of fallen empires, great cities besieged by heroic warriors, conquering holy men, tyrants and sorcerers. What can these oral traditions tell us about West African history? How should we read them against other forms of evidence? Readings will include translations of epic poetry, medieval travelers’ accounts and West African chronicles, tomb inscriptions, and other sources.

5 units, Aut (McPherson, W)

HISTORY 48N. African American Women’s Lives (Same as AFRICAAM 54N) Preference to sophomores. The life of Nelson Mandela, South Africa’s president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. What advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet. GER:DB-Humed

4-5 units, not given this year

HISTORY 48Q. South Africa: Contested Transitions (S.Sem) (Same as AFRICAAM 48Q) Stanford Introductory Seminar. Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet. GER:DB-Humed, EC-GlobalCom

3 units, Win (Samoff, J)

HISTORY 49C. The SLAVE TRADE (Same as HISTORY 149C. History majors and others taking 5 units, enroll in 149C.) Slave trades and forms of slavery in W. Africa from 1000 to 1885; impacts on lives, social organization, and political structures. Slavery in Islam, the slave market in the Mediterranean and Middle East, and the Saharan slave trade. Slavery within Africa, growth of the Atlantic trade, the Middle Passage, and war and trade that produced slaves. Impact of the Industrial Revolution and European abolition movements on the use of slaves and warfare in Africa. The relationship between slavery and the European conquest of Africa.

3 units, not given this year

HISTORY 50A. Colonial and Revolutionary America (Same as HISTORY 150A. History majors and others taking 5 units, register for 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution. GER:DB-SocSci, EC-AmerCul

3 units, Aut (Winterer, C)

HISTORY 50B. 19th Century America (Same as AFRICAAM 50B) (Same as HISTORY 150B. History majors and others taking 5 units, register in 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture. GER:DB-SocSci, EC-AmerCul

3 units, Win (White, R)

HISTORY 50C. The United States in the Twentieth Century (Same as HISTORY 150C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War. GER:DB-SocSci, EC-AmerCul

3 units, Spr (Camarillo, A)

HISTORY 52S. Working for the Man: Historical Approaches to Workers and Business in American History, 1815-1940 How historians have investigated and interpreted workers and business in 19th and 20th century U.S. Explores subfields of labor history, class history and business history and ponders how to bring them together. Themes include the ideal worker, the modern business enterprise, unions, technology and work, the role of the state, and the interaction of work, class, and culture. Primary sources include diaries, letters, newspaper and magazine articles, advertisements, photos, films, oral histories, and legal, government, and corporate documents.

3 units, Win (Marine-Stweet, N), ONCEONLY

HISTORY 53S. Race Riots and Rebellions in 20th Century Urban America Race riots and rebellions are central to the story of urban America. The causes and outcomes of race riots and rebellions offer insight into the key themes, debates, and topics in U.S. Urban History. Topics include the Great Migration, immigration, lynching, racial violence, urbanization, civil rights, urban unrest, demographics, and race relations.

5 units, Win (Nichols, C), ONCEONLY

HISTORY 54. American Intellectual and Cultural History to the Civil War (Same as HISTORY 154. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include text images. GER:DB-Hum, EC-AmerCul

3 units, Spr (Winterer, C)

HISTORY 54N. African American Women’s Lives (Same as AFRICAAM 54N) Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality. GER:DB-Hum, EC-Gender

4-5 units, not given this year

HISTORY 54S. Prohibition in America A case study in the interplay between law, society, and culture in 20th century U.S. history. Topics include the women’s temperance movement, the Anti-Saloon League, the 18th Amendment and Volstead Act, Jazz Age night life, Al Capone and the war on crime, policing and civil liberties, the repeal of Prohibition, and origins of the War on Drugs. Sources include Supreme Court opinions, literary novels, mug shots, government reports, oral histories, autobiographies, political cartoons, pamphlets, photographs, and Hollywood films.

3 units, Spr (Mayeux, S), ONCEONLY
HISTORY 55S. Real Men and Dragon Ladies: Race and Sexuality in America, 1662-1965
(Same as CSRE 55S) How do race and sexuality mutually construct each other throughout American history? How do historians use primary sources to make historical arguments? Examines a variety of primary sources, including political pamphlets, legal documents, illustrations, and film. The historical trajectory we will follow examines the creation and elaboration of racial and sexual categories, from colonial slave codes and 19th century miscegenation laws, through modern urban culture and the GI Bill.
3 units, Aut (Heinz, A), ONECONLY

HISTORY 56N. Celluloid America: Explorations in Film and History
(F.Sem) Stanford Introductory Seminar. Explores the history and culture of the United States through film, examining both the history of this quintessentially American medium and the ways in which American history has been represented in movies. Topics include the invention of the moving picture technology, the creation of cinema language, the rise and fall of the Hollywood studio system, the emergence and evolution of film genres (westerns, romantic comedies, film noir, science fiction, Blaxploitation, etc.) the quest for overseas markets for American movies, race and film, and the future of movies in the digital age. Includes weekly class discussions and required screenings. Students will also complete short papers as well as final research projects on topics of their own choosing. GER:DB-Hum
3 units, Win (Campbell, J)

HISTORY 57. The Constitution: A Short History
(Same as POLSCI 128F) (Same as HISTORY 157. History majors and others taking 5 units, enroll in 157.) A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime. GER:DB-SocSci, EC-AmerCul
3 units, Win (Rakove, J)

HISTORY 59. Introduction to Asian American History
(Same as ASNAMST 59) (Same as HISTORY 159. History majors and others taking 5 units, register for 159.) The historical experience of people of Asian ancestry in the U.S. Immigration, labor, community formation, family, culture and identity, and contemporary social and political controversies. Readings: interpretative text, primary material, and historical fiction. GER:DB-SocSci, EC-AmerCul
3 units, Aut (Chang, G)

HISTORY 64C. From Freedom to Freedom Now!: African American History, 1865-1965
(Same as AFRICAM 64C) (Same as HISTORY 164C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music. GER:DB-SocSci, EC-AmerCul
3 units, not given this year

HISTORY 70. Culture, Politics, and Society in Latin America
(Same as HISTORY 170B. History majors and others taking 5 units, enroll in HISTORY 170B.) The course of Latin American history from the colonial era to the present day. Key issues such as colonialism, nationalism, democracy, and revolution will be examined critically in light of broad comparative themes in Latin American and world history. Sources include writings in the social sciences as well as primary documents, fiction, and film. GER:DB-SocSci, EC-GlobalCom
3 units, Aut (Iber, P)

HISTORY 70A. Colonial Latin America
(Same as HISTORY 170. History majors and others taking 5 units, register for 170.) 16th-19th centuries. Indigenous cultures. The arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations. Readings include primary and secondary sources. GER:DB-SocSci, EC-GlobalCom
3 units, Spr (Tortorici, Z)

HISTORY 75. MODERN MEXICO
(Same as HISTORY 175. History majors and others taking 5 units, enroll in HISTORY 175.) Mexico has produced the world’s richest man and wrenching poverty, tremendous drug-related violence and some of the world’s best-respected poets and writers. Explores how all this has been possibly by looking at the politics, culture, and economy of Mexico from the time of Porfirio Diaz and the twentieth century’s first great modern revolution to the present. Focusing on the problems of democracy and inequality, the course will draw from the social sciences, journalism, fiction, and film.
GER:DB-SocSci
3 units, Spr (Iber, P)

HISTORY 82C. The Making of the Islamic World, 600-1300
(Same as HISTORY 182C. Majors and other taking 5 units, register for 182C.) The History of Islam and Muslim peoples from 600-1300. Topics include Muhammad and his community; the early Arab conquests and empires; sectarian movements; formation of Islamic belief, thought, legal culture and religious institutions; transregional Sufi and learned networks; family and sexuality; urban, rural and nomadic life; non-Muslim communities; the development of Mediterranean and Indian Ocean trade; relations with Byzantium, the Latin West, China; the Crusades and the Mongols.
3 units, Win (Yacicioglu, A)

HISTORY 82N. Modern Islamic Movements
(F.Sem) Stanford Introductory Seminar. Muslim political mobilization in local and global settings. Topics include: Pan-Islam, the Muslim Brothers, Khomeinism, Hezbollah, al-Qaeda, the Taliban, and the geopolitics of social movements. GER:DB-Hum
3 units, Win (Crews, R)

HISTORY 84N. The American Empire in the Middle East since the Cold War: Afghanistan, Iraq, and Israel/Palestine
(F.Sem) Stanford Introductory Seminar. What were the traditional objectives of U.S. policy in the Middle East since the end of WW II? What forces shaped U.S. policy towards the Middle East? Did those interests and the means employed to pursue them change substantially after the demise of the Soviet Union? What has been the impact of U.S. policy on the region itself? The three principal cases to be examined are Afghanistan, Iraq, and Israel/Palestine.
GER:DB-SocSci, EC-GlobalCom
4-5 units, Aut (Beinin, J)

HISTORY 85B. Jews in the Modern World
(Same as HISTORY 185B. History majors and others taking 5 units, register for 185B.) Topics include the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in W. Europe; the transformation of Jewish life in E. Europe under the authoritarian Russian regime; colonialism in the Sephardic world; new ideologies (Reform Judaism and Jewish nationalisms); the persistence and renewal of antisemitism; the destruction of European Jewry under the Nazis; new Jewish centers in the U.S.; and the State of Israel.
3 units, Aut (Zipperstein, S)

HISTORY 91C. Early Imperial China
(Same as HISTORY 191C. History majors and others taking 5 units, register for 191C.) The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, religion, philosophy, and literature. Also examines the nature of empire as a distinctive political form. GER:DB-Hum
3 units, not given this year

HISTORY 91D. China: The Northern and Southern Dynasties
(Same as HISTORY 191D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden

HISTORY 91N. Mao Zedong: The Man Who Would Become China  
(FSem) Stanford Introductory Seminar. Preference to freshmen. His life, including early anthropological work, reinterpretation of Marxism, ascendance to power in the Chinese Communist Party, theory of guerrilla warfare, socioeconomic vision in the early People's Republic, the Great Leap Forward, derision during the Cultural Revolution, and repercussions of his death in 1976. No prior knowledge of Chinese history is necessary. GER:DB-SocSci 3-5 units, Spr (Mullany, T)  

HISTORY 92A. The Historical Roots of Modern East Asia  
(Same as HISTORY 392E) Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific, China was in social and political upheaval, and Japan had begun its march to empire. GER:DB-SocSci, EC-GlobalCom 4-5 units, not given this year  

HISTORY 93. Late Imperial China  
(Same as HISTORY 193. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism. GER:DB-Hum 3 units, Spr (Sommer, M)  

HISTORY 94B. Japan in the Age of the Samurai  
(Same as HISTORY 194B. History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai culture, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, National Studies, food culture, samurai activism, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community. GER:DB-Hum 3 units, Spr (Sommer, M)  

HISTORY 94S. Rebels, Boxers and Bandits: Violent Resistance in Late Imperial China  
(In the mid-19th century a man claiming to be Jesus Christ's younger brother led a rebellion that killed 20 million. In 1900, the Boxers United in Righteousness staged a bloody uprising. Bandits, something in Western women's clothing, raided across the country. How did these rebels, Boxers and bandits see themselves? How were they represented by others? What were their relations to the state? Do they mean anything? Are they important? 5 units, not given this year  

HISTORY 95. Modern Korean History  
(Same as HISTORY 195. History majors and others taking 5 units, register for 195.) Themes include status, gender, and monarchy in the Choson dynasty; intellectual life and social transformation in the 19th century; the rise of Korean nationalism; Japan's colonial rule and Korean identities; culture, economy, and society in colonial Korea; the Korean War, and the different state building processes in North and South after the Korean War. GER:DB-Hum, EC-GlobalCom 3 units, not given this year  

HISTORY 95C. Modern Japanese History  
(Same as History 195C. History majors and others taking 5 units, register for 195C.) Japan from the Tokugawa to the Heisei periods, including Japan's emergence from civil war into a two century long Great Peace, rapid modernization and imperial expansion from the end of the nineteenth century, war in Asia and the Pacific in the mid-twentieth century, and the postwar economic miracle and its aftermath. Emphasizes not a peculiarly Japanese story that happened to unfold in an era we call modern, but rather a peculiarly modern story as it unfolded in a place we call Japan. GER:DB-SocSci, EC-GlobalCom 3 units, Aut (Di Marco, F)  

HISTORY 95S. Chinese Capitalism in Historical Perspective: Commerce and Society in Early Modern China, 1600-1840  
Explores key themes in China's political and moral economy from the 17th century to the Opium War, and investigates the interplay of geography, sociopolitical structure, ideology, and culture in early modern Chinese commercial development. Offers an in depth introduction to a primary question in Chinese history and global history, why did China not follow the path of the West in early modern times? Sources include traditional Chinese writings on economy, Confucian classics, legal documents, contracts, and fictional writings. 3 units, Win (Qiao, Z), ONEONLY  

HISTORY 96. The Idea of India  
(Same as HISTORY 196. History majors and others taking 5 units, register for 196.) History and politics of the Indian subcontinent across two centuries of transformation. Topics: interactions among colonial power, nationalism, and modern institutions; S. Asia at the crossroads of world history in an age of empire, capitalism, and war; history and memory through political traditions, social movements, and religious experiences that shaped S. Asian modernity; from Edmund Burke to Gandhi; East India Company's statemaking to origins of nationality; Tagore to Iqbal; peasants and rebels to liberals and revolutionaries; decolonization and Partition. GER:DB-SocSci, EC-GlobalCom 3 units, not given this year  

HISTORY 98. The History of Modern China  
(Same as HISTORY 198. History majors and others taking 5 units, register for 198.) Major historical transformations including the decline of the last imperial dynasty, the formation of the first Chinese republic, WW II, the rise of Communism, China under Mao, post-Mao reforms, and the Beijing Olympics of 2008. GER:DB-SocSci 3 units, Win (Mullany, T)  

HISTORY 99B. The Construction of Modern China in Time and Space  
(SAME as HISTORY 198B. History majors and others taking 5 units, register for HISTORY 198B.) An analysis of modern China through sequentially examining the diverse regions that constitute it. Beginning from the geographic structures that divided the regions, and those that drew them together it will then study each region under several major rubrics: (1) their economic, cultural, and demographic characteristics; (2) the time and manner in which they were incorporated into China; (3) their long-term environmental development (water, control, desertification, etc.); and (4) how the above features shape many of the issues and tensions that define contemporary China. 3 units, Aut (Levis, M)  

HISTORY 102. The History of the International System since 1914  
After defining the characteristics of the international system at the beginning of the twentieth century, this course reviews the primary developments in its functioning in the century that followed. Topics include the major wars and peace settlements; the emergence of Nazism and Communism; the development of the Cold War and nuclear weapons; the rise of China, India, and the EU; and the impact of Islamic terrorism. The role of international institutions and international society will also be a focus as will the challenge of environment, health, poverty, and climate issues to the functioning of the system. GER:DB-SocSci, EC-GlobalCom 3 units, Spr (Naimark, N)  

HISTORY 103D. Human Society and Environmental Change  
(Same as EARTHSYS 112, EESS 112) Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1A 4 units, Aut (Naylor, R; Frank, Z; Pizarro Garaiasso, R)  

HISTORY 103E. History of Nuclear Weapons  
(Same as POLSCI 116) The development of nuclear weapons and policies. How existing nuclear powers have managed their relations with each other. How nuclear war has been avoided so far
and whether it can be avoided in the future. GER:DB-SocSci
5 units, Spr (Holloway, D)

HISTORY 104A. Revolution! A Global History from 1640 to the Present
(Same as FRENGEN 146) The modern world was born out of Revolution. To this day, dramatic political change is most often the result of Revolution. This course will explore how Revolution became a model for changing the course of history. From the English revolutions of the 1600's to the current upheavals in the Arab world, passing through the French, Russian, and Chinese revolutions, we will study how Revolution has been conceived, carried out, and re-invented around the world. GER:DB-Hum
4 units, Aut (Baker, K; Edelstein, D)

HISTORY 105. Gandhi, King, and Nonviolence
(Same as RELIGST 118) Lives, times, theory, and practice of Mohandas Gandhi and Martin Luther King, Jr.; their significance to issues of violence and nonviolence today. GER:DB-Hum
4 units, not given this year

HISTORY 106A. Global Human Geography: Asia and Africa
Global patterns of demography, economic and social development, geopolitics, and cultural differentiation, covering E. Asia, S. Asia, S.E. Asia, Central Asia, N. Africa, and sub-Saharan Africa. Use of maps to depict geographical patterns and processes. GER:DB-SocSci, EC-GlobalCom
5 units, not given this year

HISTORY 106B. Global Human Geography: Europe and Americas
Patterns of demography, economic and social development, geopolitics, and cultural differentiation. Use of maps to depict geographical patterns and processes. GER:DB-SocSci, EC-GlobalCom
5 units, Win (Lewis, M)

HISTORY 106C. Global Historical Geography
The sweep of human history through the medium of maps. The rise, expansion, and fall of kingdoms, empires, and other states; the spread of major religions; the paths of explorers, conquerors, and diseases; development and intensification of trade networks. Overview of the prehistoric period and ancient times, but focus is on the modern world. GER:DB-SocSci
5 units, not given this year

HISTORY 107. Introduction to Feminist Studies
(Same as AMSTUD 107, CSRE 108, FEMST 101) Introduction to interdisciplinary feminist scholarship, which seeks to understand the creation, perpetuation, and critiques of gender inequalities. Topics include the historical emergence of feminist politics and contemporary analyses of work and family, health and sexuality, creativity, and politics. Close attention to the intersections of race, gender, ethnicity, and sexuality and to international, as well as U.S., perspectives. Students learn to think critically about gender in the past, present, and future. GER:DB-SocSci, EC-Gender
4-5 units, Aut (Freedman, E)

HISTORY 108. Century of Violence: Mass Violence in the Twentieth Century to the Present
Explores the evolution, varieties and logic of mass violence in modern history. Examines social, political, ethnic national, revolutionary and religious violence, and efforts to curtail them. Begins with the emergence of genocide as an international issue; proceeds with colonial genocides in late 19th century Africa, and moves to the Armenian genocide in the Ottoman Empire; Nazi and Nazi inspired racial murder; Communist induced mass violence in the Soviet Union and Asia; ethnic cleansing in former Yugoslavia; the recent genocides in Rwanda and Sudan; and attempts to confront genocides and crimes against humanity in international courts and institutions. Students may not receive credit for both HUM 4B and HISTORY 108. GER:DB-SocSci
5 units, Aut (Weiner, A)

(SAME AS HISTORY 9. History majors and others taking 5 units, enroll in HISTORY 109.) Do human beings have certain inalienable rights? Are we obliged to help those in need? Examines the historical origins as well as the political, social, economic, legal, and cultural contexts of ideas about human rights and humanitarianism from the time of the Old Testament to the International Criminal Court. Class time will blend short lectures with town hall style discussions of subjects including slavery, torture, colonialism, genocide, and the work of NGO's. GER:DB-Hum
5 units, Win (Daughton, J)

HISTORY 110A. Europe from Late Antiquity to 1500
(Same as HISTORY 10A. History majors and others taking 5 units, register for 110A.) Focus is on religion and politics. Issues include: the rise of Christianity and its impact on Rome; transformations of Catholicism and its institutions including the impact of barbarian tribes and the struggle between church and state; antisemitism, heresy, Crusades, and inquisition; courtly love; and scholasticism. GER:DB-Hum
5 units, Aut (Miner, J)

HISTORY 110B. Early Modern Europe
(Same as HISTORY 10B. History majors and others taking 5 units, register for 110B.) Survey of early modern European history from the Reformation through the Enlightenment. (Same as HISTORY 110B. History majors and others taking 5 units, register for 110B.) Survey of early modern European history from the Reformation through the Enlightenment. Topics include sovereignty and the state, courtly life and manners, science and technology, the print and military revolutions, piety and religious practice, popular culture and village life, women and gender, human rights, deviance, the role of international trade, the history of consumption and material things, encounters with non-Western peoples and colonialism, and scholarship and the republic of letters. GER:DB-SocSci, EC-GlobalCom
5 units, Win (Freedona, R)

HISTORY 110C. Introduction to Modern Europe
(SAME AS HISTORY 10C. History majors and others taking 5 units, register for 110C.) From th Reformation to the Enlightenment. How Europeans responded to rapid social changes caused by political upheaval, industrialization, and modernization. How the experience and legacy of imperialism and colonialism both influenced European society and put in motion a process of globalization that continues to shape international politics today. GER:DB-Hum
5 units, not given this year

HISTORY 120B. The Russian Empire
From Peter the Great to the Bolsheviks. Russia as an empire; its varied regions, including the Caucasus, Central Asia, Ukraine, Poland, and the Baltics. Focus is on the politics and cultures of empire. Sources include novels, political tracts, paintings, music, and other primary sources. GER:DB-Hum
5 units, not given this year

HISTORY 120C. 20th-Century Russian and Soviet History
The Soviet polity from the 1917 Revolution to its collapse in 1991. Essentials of Marxist ideology; the Russian Empire in 1917. Causation in history; interpretations of the Revolution; state building in a socialist polity; social engineering through collectivization of agriculture, force-paced industrialization, and cultural revolution; terror as concept and practice; nationality policies in a multiethnic socialist empire; the routinization, decline, and collapse of the revolutionary ethos; and the legacy of the Soviet experiment in the new Russia. GER:DB-Hum
5 units, not given this year

HISTORY 125. Dark Century: Eastern Europe After 1990
Major historical trends in 20th-century E. European history. Empires and national movements. The creation of independent Eastern Europe after WW II; social movements and the emergence of dictatorships and fascism in the inter-war period. WW II, Stalinism, and destalinization in contemporary E. Europe. GER:DB-SocSci, EC-GlobalCom
5 units, Win (Jolluck, K)

HISTORY 130A. The Rise of Scientific Medicine in the United States, 1825-Present
Explores the history of medical institutions, ideas and practices in the United States form the early nineteenth century to the present. How are ideas of illness and health historically rooted and socially constructed? How did scientific and medical discoveries lead to the risk of scientific medicine, and how were these innovations adopted within the American cultural landscape? Topics include the transformation of therapeutics and technologies, medicine and

STANFORD BULLETIN, 2011-12 | 731
the scientific ideal in the U.S., gender and race and medicine, the history of public health, and the professionalization and specialization of American medical practice. GER:DB-SocSci

4-5 units, Spr (Horn, M)

(Same as ARTHIST 113, ARTHIST 113A, HISTORY 31) (Same as HISTORY 31. History majors and others taking 5 units, register for 131.) What did Leonardo actually know? How did he acquire that knowledge? Explores Leonardo’s interests and accomplishments in such fields as painting, architecture, engineering, physics, mathematics, geology, anatomy, and physiology, and more generally the nature of Renaissance science, art, and technology. Considers the relationship between the society of fifteenth century Italy and the work of the man from Vinci; why did this world produce a Leonardo? How might we use him to understand creativity, innovation, and invention in the Renaissance and beyond? What was his legacy and how did he become a myth? Designed both for students interested in the history of science, medicine, and technology and for students interested in the history and art of Renaissance Italy. GER:DB-Hum

3-5 units, not given this year

HISTORY 132. Ordinary Lives: A Social History of the Everyday in Early Modern Europe
What war meant for foot soldiers and the peasants across whose fields they marched. Ordinary people’s lives in the eras of Machiavelli, Shakespeare, the Reformation, and the scientific revolution. Topics include: birth, marriage, and death; city life and peasant culture; lay encounters with religious and intellectual ideas; war and crime; and gender and sexuality. GER:DB-Hum

5 units, not given this year

HISTORY 132A. Enlightenment and the Arts
(Same as HISTORY 32A. History majors and others taking 5 units enroll in 132A.) Gateway course for the History, Literature, and the Arts track of the History major. Novels, poetry, music, paintings, and architecture, and what they reveal about the society that produced them. GER:DB-Hum

5 units, Spr (Lougee Chappell, C)

HISTORY 133A. Blood and Roses: The Age of the Tudors
English society and state from the Wars of the Roses to the death of Elizabeth. Political, social, and cultural upheavals of the Tudor period and the changes wrought by the Reformation. The establishment of the Tudor monarchy; destruction of the Catholic church; rise of Puritanism; and 16th-century social and economic changes. GER:DB-Hum

5 units, not given this year

HISTORY 133B. Revolutionary England: The Stuart Age
(Same as HISTORY 33B. History majors and others taking 5 units, register for 133B.) From the accession of King James I in 1603 to the death of Queen Anne in 1714: a brutal civil war, the execution of one anointed king, and the deposition of another. Topics include the causes and consequences of the English Revolution, the origins of Anglo-American democratic thought, the rise and decline of Puritanism, and the emergence of England as an economic and colonial power. (Como) GER:DB-Hum

5 units, not given this year

HISTORY 134A. The European Witch Hunts
(Same as HISTORY 34A. History majors and others taking 5 units, register for 134A.) After the Reformation, in the midst of state-building and scientific discovery, Europeans conducted a series of deadly witch hunts, violating their own laws and procedures in the process. What was it about early modernity that fueled witch hunting? Examines witch trials and early modern demonology as well as historians’ interpretations of events to seek answers to this question. GER:DB-Hum

5 units, Spr (Stokes, L)

HISTORY 135. History of European Law, Medieval to Contemporary
(Same as HISTORY 335) From the fall of the Roman Empire to the establishment of the EU. How law changed over time. Sources and nature of law, organization of legal systems, and relationships between law and society, law and lawmaker, law and the legal professions. GER:DB-SocSci

4-5 units, Win (Hertzog, T)

HISTORY 137A. Europe, 1945-2002
Europe's transformation from the end of WW II to an expanded EU. Political, cultural, economic, and social history. Topics: postwar reconstruction, Cold War, consumer versus socialist culture, collapse of Communism, postcommunist integration. GER:DB-SocSci

5 units, not given this year

HISTORY 138A. Germany and the World Wars, 1870-1990
(Same as HISTORY 38A. Majors and others taking 5 units, enroll in 138A.) Germany’s history from Bismarck’s wars of unification through the end of the Cold War. The radicalizing relationship between international conflict, social upheaval, and state transformation with a focus on the clashes of the Second Empire, the road to WW I, interwar instability, the rise of Nazism, WW II, the Holocaust, the division of communist E. and capitalist W. Germany, and the fall of the Iron Curtain. GER:DB-SocSci

5 units, not given this year

HISTORY 139. Modern Britain and the British Empire
(Same as HISTORY 39. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world economy; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalim in an era of imperialism, and the weight of the past in contemporary Britain. GER:DB-Hum, EC-GlobalCom, EC-GlobalCom

5 units, Win (Satia, P)

HISTORY 140. World History of Science: From Prehistory to the Scientific Revolution
(Same as HISTORY 40. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehistoric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as material culture and religions. GER:DB-SocSci

5 units, Win (Proctor, R)

HISTORY 140A. The Scientific Revolution
What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding the nature of knowledge engaged in the creation of individuals and institutions, including: Copernicus, Galileo, Descartes, Newton, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe. GER:DB-Hum

5 units, not given this year

HISTORY 141A. The Emergence of Medicine: The Middle Age and the Renaissance
(Same as HISTORY 41A. History majors and others taking 5 units, register for 141A.) How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. GER:DB-SocSci

5 units, not given this year

HISTORY 142. Darwin in the History of Life
(Same as HISTORY 42. History majors and others taking 5 units, register for 142.) Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-
devo, neocatastrophism, and the new technological frontier of biomimicry. GER:DB-SocSci
5 units, Spr (Proctor, R)

HISTORY 144. Gender in Science, Medicine and Engineering
(Same as HISTORY 344) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What are the efforts underway globally to transform science, medicine, and engineering into fields where women can flourish? How have science and medicine studied and defined males and females? Can gender analysis spark creativity in human knowledge? GER:DB-SocSci, EC-Gender
4-5 units, not given this year

HISTORY 145A. Africa Until European Conquest
Episodes in African history from the earliest records up until European partition of the continent, focusing on how knowledge about the natural, social, and spiritual worlds was linked to the exercise of power. The effects of technological innovations on states and other forms of social complexity; use of religious beliefs and practices to legitimate or critique authority. The effects of slave trades and imperial conquest on these forms of authority. GER:DB-Hum, EC-GlobalCom
5 units, not given this year

HISTORY 145B. Africa in the 20th Century
(Same as HISTORY 45B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans. GER:DB-SocSci, EC-GlobalCom
5 units, not given this year

HISTORY 147. History of South Africa
(Same as AFRICAAM 147) (Same as HISTORY 47. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis. GER:DB-SocSci
5 units, Aut (Campbell, J)

HISTORY 149C. The Slave Trade
(Same as HISTORY 49C. History majors and others taking 5 units, enroll in 149C.) Slave trades and forms of slavery in W. Africa from 1000 to 1885; impacts on lives, social organization, and political structures. Slavery in Islam, the slave market in the Mediterranean and Middle East, and the Saharan slave trade. Slavery within Africa, the growth of the Atlantic trade, the Middle Passage, and war and trade that produced slaves. Impact of the Industrial Revolution and European abolition movements on the use of slaves and warfare in Africa. The relationship between slavery and the European conquest of Africa. GER:DB-SocSci
5 units, not given this year

HISTORY 150A. Colonial and Revolutionary America
(Same as AMSTUD 150A) (Same as HISTORY 50A. History majors and others taking 5 units, register for HISTORY 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution. GER:DB-SocSci, EC-AmerCul
5 units, Aut (Winterer, C)

HISTORY 150B. 19th-Century America
(Same as AFRICAAM 150B, AMSTUD 150B) (Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction;—and late 19th-century society and culture. GER:DB-SocSci, EC-AmerCul, WIM
5 units, Win (White, R)

HISTORY 150C. The United States in the Twentieth Century
(Same as AMSTUD 150C) (Same as HISTORY 50C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War. GER:DB-SocSci, EC-AmerCul
5 units, Spr (Camarillo, A)

HISTORY 154. American Intellectual and Cultural History to the Civil War
(Same as AMSTUD 154) (Same as HISTORY 54. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images. GER:DB-Hum, EC-AmerCul
5 units, Spr (Winterer, C)

HISTORY 157. The Constitution: A Brief History
(Same as POLISCI 128S) (Same as HISTORY 57. History majors and others taking 5 units, register for 157.) A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime. GER:DB-SocSci, EC-AmerCul
5 units, Win (Rakove, J)

HISTORY 158. The United States Since 1945
Focus is on foreign policy and politics with less attention to social and intellectual history. Topics include nuclear weapons in WW II, the Cold War, the Korean and Vietnam wars, Eisenhower revisionism, the Bay of Pigs and Cuban missile crisis, civil rights and the black freedom struggle, the waging of the cold war, the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime. GER:DB-SocSci, EC-AmerCul
4-5 units, not given this year

HISTORY 159. Introduction to Asian American History
(Same as AMSTUD 159) (Same as HISTORY 59. History majors and others taking 5 units, register for 159.) The historical experience of people of Asian ancestry in the U.S. Immigration, labor, community formation, family, culture and identity, and contemporary social and political controversies. Readings: interpretative texts, primary material, and historical fiction. (Chang)
5 units, Aut (Chang, G)

HISTORY 161. WOMEN IN MODERN AMERICA
(Same as AMSTUD 161, CSRE 162) Considers the political, economic, and social development of women in the United States during a long twentieth century. How have women been shaped or constrained by gendered conceptions of work, reproduction, education, family, and culture? Have all women reacted similarly to wars and depression or domestic and foreign policy? Through personal narratives and historical accounts, the course will answer these questions, observing how women negotiated gender, race, sexuality, and class difference to achieve greater opportunity and citizenship rights. GER:DB-SocSci, EC-Gender
4-5 units, Spr (Sharadelli, L)

HISTORY 163. A History of North American Wests
The history, peoples, and natural systems of a region that has never been contained within a single empire or nation state, but has been united by the movement of peoples, species, and things. Topics include smallpox, horses, gold, salmon, rivers, coal, and oil.
COURSES OF INSTRUCTION

GER:DB-SocSci
5 units, not given this year

(Same as AMSTUD 164C) (Same as HISTORY 64C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music. GER:DB-SocSci, EC-AmerCul
5 units, not given this year

HISTORY 165. Mexican American History through Film
Focus is on the 20th century. Themes such as immigration, urbanization, ethnic identity, the role of women, and the struggle for civil rights. GER:DB-Hum, EC-AmerCul
4-5 units, not given this year

HISTORY 166. Introduction to African American History: The Modern African American Freedom Struggle
(Same as AFRICAAM 166, AMSTUD 166) Focus is on political thought and protest movements after 1930. Individuals who have shaped and been shaped by modern African American struggles for freedom and justice. Sources include audiovisual materials. Research projects required for fifth unit. GER:DB-SocSci, EC-AmerCul
4-5 units, not given this year

HISTORY 166B. Immigration Debates in America, Past and Present
(Same as CSRE 166B, HISTORY 366B) Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America. GER:DB-SocSci
3-5 units, Win (McKibben, C), Sum (Staff)

HISTORY 168. American History in Film: Since World War II
U.S. society, culture, and politics since WW II through feature films. Topics include: McCarthyism and the Cold War; ethnicity and racial identity; changing sex and gender relationships; the civil rights and anti-war movements; and mass media. Films include The Best Years of Our Lives, Salt of the Earth, On the Waterfront, Raisin in the Sun, Medium Cool, and Broadcast News. GER:DB-Hum
3-4 units, Sum (Staff)

HISTORY 169. The Environmental History of North America
(Same as EARTHSYS 145) Concentrates on anthropogenic environmental change and its consequences for both the natural environment and human society. Human alteration of the continent began well before the arrival of Europeans, and many developments usually attributed as only colonial history are embedded in a wider environmental history. Begins with the Columbian Exchange and the demographic disaster that followed and ends with global climate change. GER:DB-SocSci
4-5 units, Spr (White, R)

HISTORY 170. Colonial Latin America
(Same as HISTORY 70A. History majors and others taking 5 units, register for 170.) 16th-19th centuries. Indigenous cultures, the European colonial enterprise and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations. Readings include primary and secondary sources. GER:DB-SocSci, EC-GlobalCom
5 units, Spr (Tortorici, Z)

HISTORY 170B. Culture, Society and Politics in Latin America
(Same as HISTORY 70. History majors and others taking 5 units, enroll in HISTORY 170B.) The course of Latin American history from the colonial era to the present day. Key issues such as colonialism, nationalism, democracy, and revolution will be examined critically in light of broad comparative themes in Latin American and world history. Sources include writings in the social sciences as well as primary documents, fiction, and film.
5 units, Aut (Iber, P)

HISTORY 175. Modern Mexico
(Same as HISTORY 75. History majors and others taking 5 units, enroll in HISTORY 175.) Mexico has produced the world’s richest man and wrenched poverty, tremendous drug-related violence and some of the world’s best-respected poets and writers. Explores how all this has been possibly by looking at the politics, culture, and economy of Mexico from the time of Porfirio Diaz and the twentieth century’s first great modern revolution to the present. Focusing on the problems of democracy and inequality, the course will draw from the social sciences, journalism, fiction, and film. GER:DB-SocSci
3 units, Spr (Iber, P)

HISTORY 181B. Formation of the Contemporary Middle East
(Formerly 187B.) The history of the Middle East since WW I, focusing on the eastern Arab world, Egypt, the Fertile Crescent, and the Arabian Peninsula, with attention to Turkey, Iran, and Israel. GER:DB-SocSci, EC-GlobalCom
5 units, Spr (Beinin, J)

HISTORY 182C. The Making of the Islamic World, 600-1300
(Same as HISTORY 82C. Majors and other taking 5 units, register for 182C.) The History of Islam and Muslim peoples from 600-1300. Topics include: Muhammad and his community; the early Arab conquests and empires; sectarian movements; formation of Islamic belief, thought, legal culture and religious institutions; transregional Sufi and learned networks; family and sexuality; urban, rural and nomadic life; non-Muslim communities; the development of Mediterranean and Indian Ocean trade; relations with Byzantium, the Latin West, China; the Crusades and the Mongols. GER:DB-SocSci
5 units, Win (Yavcigolu, A)

HISTORY 183. Modern Iran
Topics include: the Safavid and Qajar empires, European imperialism in Iran, the Iranian revolutions, Khomeinism, the Islamic Republic, recent film and literature, and the politics of Ahmadinejad. GER:DB-Hum
5 units, Aut (Crews, R)

HISTORY 185B. Jews in the Modern World
(Same as HISTORY 385C. JEWISHST 185B) (Same as HISTORY 85B. History majors and others taking 5 units, register for 185B.) Topics include the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in W. Europe; the transformation of Jewish life in E. Europe under the authoritarian Russian regime; colonialism in the Sephardic world; new ideologies (Reform Judaism and Jewish nationalism); the persistence and renewal of antisemitism; the destruction of European Jewry under the Nazis; new Jewish centers in the U.S.; and the State of Israel. GER:DB-Hum, EC-GlobalCom
3 units, Aut (Zipperstein, S)

HISTORY 187D. Zionism and Its Critics
(Same as JEWISHST 187D) Zionism from its genesis in the 1880s up to the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.
4-5 units, not given this year
HISTORY 191C. Early Imperial China
( Same as HISTORY 91C. History majors and others taking 5 units, register for 191C.) The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, religion, philosophy, and literature. Also examines the nature of empire as a distinctive political form. GER:DB-Hum
5 units, not given this year

HISTORY 191D. China: The Northern and Southern Dynasties
( Same as HISTORY 91D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization. GER:DB-Hum
5 units, not given this year

HISTORY 192. China: The Early Empires
How China was transformed as a consequence of its political unification by the Qin dynasty. The geographical reorganization of China in the process of unification. The changing nature of rule, society, military organization, kinship structure, religion, literary practice, law, and relations to the outside world. The nature of empire as a political system. GER:DB-Hum
3-5 units, not given this year

HISTORY 193. Late Imperial China
( Same as HISTORY 93. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism. GER:DB-Hum
5 units, Spr (Sommer, M)

HISTORY 194B. Japan in the Age of the Samurai
( Same as HISTORY 94B. History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai class, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, martial studies, food culture, samurai culture, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community, GER:DB-Hum
5 units, not given this year

HISTORY 195. Modern Korean History
( Same as HISTORY 95. History majors and others taking 5 units, register for 195.) Themes include status, gender, and mobility in the Choson dynasty; intellectual life and social transformation in the 19th century; the rise of Korean nationalism; Japan's colonial rule and Korean identities; culture, economy, and society in colonial Korea; the Korean War, and the different state building processes in North and South after the Korean War. GER:DB-Hum, EC-GlobalCom, EC-GlobalCom
5 units, not given this year

HISTORY 195C. Modern Japanese History
( Same as HISTORY 95C. History majors and others taking 5 units, register for 195C.) Japan from the Tokugawa to the Heisei periods, including Japan's emergence from civil war into a two century long Great Peace, rapid modernization and imperial expansion from the end of the nineteenth century, war in Asia and the Pacific in the mid-twentieth century, and the postwar economic miracle and its aftermath. Emphasizes not a peculiarly Japanese story that happened an era we call modern, but rather a peculiarly modern story as it unfolded in a place we call Japan. GER:DB-SocSci, EC-GlobalCom
5 units, Aut (Di Marco, F)

HISTORY 197. Southeast Asia: From Antiquity to the Modern Era
The history of S.E. Asia, comprising Indonesia, the Philippines, Malaysia, Singapore, Thailand, Vietnam, Burma, Cambodia, and Laos, from antiquity to the present. The spread of Indian cultural influences, the rise of indigenous states, and the emergence of globally linked trade networks. European colonization, economic transformation, the rise of nationalism, the development of the modern state, and the impact of globalization. GER:DB-Hum
5 units, not given this year

HISTORY 198. The History of Modern China
( Same as HISTORY 98. History majors and others taking 5 units, register for 198.) Major historical transformations including the decline of the last imperial dynasty, the formation of the first Chinese republic, WW II, the rise of Communism, China under Mao, post-Mao reforms, and the Beijing Olympics of 2008. GER:DB-SocSci, DB-SocSci, EC-GlobalCom
5 units, Win (Mullaney, T)

HISTORY 198B. The Construction of Modern China through Space and Time
( SAME as HISTORY 98B. History majors and others taking 5 units, register for HISTORY 198B.) An analysis of modern China through sequentially examining the diverse regions that constitute it. Beginning from the geographic structures that divided the regions, and those that drew them together it will then study each region under several major rubrics: (1) their economic, cultural, and demographic characteristics; (2) the time and manner in which they were incorporated into China (3) their long-term environmental development (water control, deforestation, desertification, etc.); and (4) how the above features shape many of the issues and tensions that define contemporary China. GER:DB-SocSci
5 units, Aut (Lewis, M)

HISTORY 198G. Beijing, Shanghai, and the Structure of China
China's modern history through the rivalry of its two most important cities. The course begins in the nineteenth century, contrasting Beijing, the classic imperial capital and a foreign foundation paradoxically celebrated as the embodiment of traditional China, with Shanghai, a treaty port and demographic/economic center of China, but identified as a foreign city. After following the cities' history through the warlord period, the Shanghai decade of Nationalist rule, and the Japanese occupation, the course examines the two cities' developments under Mao and Deng. The course concludes with a look at their current relations and roles, and the transformed nature of China's cities.
3-5 units, Sum (Staff)

HISTORY 201. Introduction to Public History in the U.S., 19th Century to the Present
( Same as HISTORY 301) Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. Service Learning Course (certified by Haas Center). GER:DB-SocSci
4-5 units, Aut (McKibben, C)

HISTORY 201D. The Changing Face of War: An Introduction to Military History
( Same as HISTORY 301D) Introduces students to the rich history of military affairs and, at the same time, examines the ways in which we think of change and continuity in military history. How did war evolve from ancient times, both in styles of warfare and perceptions of war? What is the nature of the relationship between war and society? Is there such a thing as a Western way of war? What role does technology play in transforming military affairs? What is a military revolution and can it be manufactured or induced? Chronologically following the evolution of warfare from Ancient Greece to present times, this course will continuously investigate how the interdependencies between technological advances, social change, philosophical debates and economic pressures both shaped and were influenced by war. GER:DB-SocSci
4-5 units, Win (Staff)
COURSES OF INSTRUCTION

HISTORY 202. International History and International Relations Theory
(Same as HISTORY 306E, POLISCI 216E, POLISCI 316) The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system. GER:DB-SocSci 5 units, not given this year

HISTORY 202G. Peoples, Armies and Governments of the Second World War
(Same as HISTORY 302G) Clausewitz conceptualized war as always consisting of a trinity of passion, chance, and reason, mirrored, respectively, in the people, army and government. Following Clausewitz, this course examines the peoples, armies, and governments that shaped World War II. Analyzes the ideological, political, diplomatic and economic motivations and constraints of the belligerents and their resulting strategies, military planning and fighting. Explores the new realities of everyday life on the home fronts and the experiences of non-combatants during the war, the final destruction of National Socialist Germany and Imperial Japan, and the emerging conflict between the victors. How the peoples, armies and governments involved perceived their possibilities and choices as a means to understand the origins, events, dynamics and implications of the greatest war in history. GER:DB-SocSci 4-5 units, Spr (Staff)

HISTORY 203E. Global Catholicism
Explores the rise of Catholicism as a global phenomenon, and investigates its multiple transformations as it spread to the Americas, Asia, and Africa. Topics will include the Reformation, Tridentine reform and the Jesuits, the underground churches in England and the Dutch Republic, the missions to Asia, the Spanish conquest of Latin America, conversion and indigenous religions, missionary imperialism and new religious movements in the non-European world. 5 units, Aut (Sena, M)

HISTORY 204B. History without Documents
(Same as HISTORY 304B) Can history be written about places and times for which are no written sources, or for people in literate societies who left no written traces? Practical training in historical methods for non-documentary sources, including oral traditions and history, archaeology, ecological sources, historical linguistics, ethnography, rituals, myths, songs, and art. GER:DB-Hum 4-5 units, Win (Hanretta, S)

HISTORY 204E. Origins of Totalitarianism
(Same as HISTORY 307E) Modern revolutionary and totalitarian politics. Sources include monographs on the medieval, Reformation, French Revolutionary, and Great War eras. Topics: the essence of modern ideology, the concept of the body national, state terror, charismatic leadership, gender assignments, private and public spheres, and identities. GER:DB-SocSci, EC-GlobaCom 4-5 units, Win (Weiner, A)

HISTORY 204F. The Modern Tradition of Non-Violent Resistance
(Same as AFRICAAAM 204F, CSRE 104F) During the twentieth century, peasants and menial laborers who comprised the majority of humanity launched liberation movements to secure citizenship rights. Mohandas K. Gandhi, Martin Luther King, Jr., and Nelson Mandela are among the leaders whose ideas continue to influence contemporary movements for global peace with social justice in a sustainable environment. 5 units, not given this year

HISTORY 204G. War, Culture, and Society in the Modern Age
(Same as HISTORY 304G) How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated. GER:DB-SocSci 5 units, not given this year

HISTORY 205A. The History of Information
(Same as HISTORY 305A) Examines the history of information from multiple perspectives such as the changing conceptions of facticity and evidence cross-culturally as well as a range of information technologies, from moveable type printing and telegraphy to text messaging and Twitter. Other topics include the ways in which information is shaped by the languages in which it is recorded, stored, and transmitted, and also the ways in which information infrastructures influence what is forgotten and lost. GER:DB-Hum 4-5 units, Spr (Mullaney, T)

HISTORY 206. History and Geography of Contemporary Global Issues
The historical background and geographical context of contemporary global issues and events. Texts are a world atlas and regular reading of The New York Times and The Economist. Topics vary according to what is happening in the world. Student presentations. GER:DB-SocSci 3 units, Aut (Lewis, M)

HISTORY 207. Biography and History
(Same as HISTORY 308) The relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, disguise, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt's Possession, Bernard Malamud's Dubin's Lives) that illuminate the intellectual underpinnings of biographical labor. GER:DB-Hum 4-5 units, not given this year

HISTORY 207C. The Global Early Modern
(Same as HISTORY 307C) In what sense can we speak of globalization before modernity? What are the characteristics and origins of the economic system we know as capitalism? When and why did European economies begin to diverge from those of other Eurasian societies? With these big questions in mind, the primary focus will be on the history of Europe and European empires, but substantial readings deal with other parts of the world, particularly China and the Indian Ocean. 4-5 units, not given this year

Changing contexts of women's lives and how women's actions have shaped and responded to those contexts. GER:DB-Hum, EC-Gender 3 units, not given this year

HISTORY 208A. Science and Law in History
(Same as HISTORY 308A) How the intertwined modern fields of science and law, since the early modern period, together developed central notions of fact, evidence, experiment, demonstration, objectivity, and proof. GER:DB-SocSci 4-5 units, not given this year

HISTORY 208B. Women Activists' Response to War
(Same as HISTORY 308B) Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina. GER:DB-Hum, EC-Gender 4-5 units, not given this year

HISTORY 208C. History of Death and Dying
The changing realities of, attitudes towards and ways of coping with death drawing on examples from Europe, Africa, the Caribbean, Latin America, and the United States. The role of death in shaping the modern world via the global slave trades, imperial conquest, pandemics, wars and genocides. Changing rituals relating to death, intellectual and philosophical debates about the personal and social meanings of death, and the political and personal consequences of particular ways and patterns of dying. 3 units, Aut (Hanretta, S)
HISTORY 208S. Facing the Past: The Politics of Retrospective Justice
Forms of injustice in history including slavery, genocide, ethnic cleansing, mass rape, forced religious conversion, and torture of prisoners. Mechanisms developed over the last century to define, deter, and alleviate the effects of such offenses, including war crimes tribunals, truth commissions, national apologies, and monetarization. Case studies explore the international field of retrospective justice, exploring the legal, political, and moral implications of confronting traumatic pasts. GER:DB-SocSci
5 units, Win (Campbell, J)

HISTORY 209C. Liberalism and Violence
5 units, not given this year

HISTORY 209D. Postcolonialism and Universalism
(Same as HISTORY 309A) Key texts and motifs from postcolonial theory: empire, class, exile, suffering, textuality, archive in juxtaposition to 20th-century philosophical questions about universal history and the relevance of humanist inquiry.
4-5 units, not given this year

HISTORY 209S. Research Seminar for Majors
Required of History majors. How to conduct original, historical research and analysis, including methods such as using the libraries and archives at Stanford and elsewhere, and working collaboratively to frame topics, identify sources, and develop analyses. Autumn quarter focuses on European Lit and Arts; winter quarter on U.S. History and Colonialism; spring quarter on modern Europe, ancient China and early modern Europe.
5 units, Aut (Campbell, J), Win (Hanretta, S), Spr (Hobbs, A)

HISTORY 210. The History of Occupation, 1914-2010
(Same as HISTORY 310) Examines the major cases of occupation in the twentieth century, from the first World War until the present, and issues of similarities, differences, and implications for contemporary policy making. Topics include European and Asian cases emerging from World War I and World War II, the Israeli occupation of the West Bank; the Soviet and American occupations of Afghanistan; and the American occupation of Iraq. Discussions will revolve around the problems, efficacy, and effects of occupation in historical perspective. GER:DB-SocSci
4-5 units, Win (Naimark, N)

HISTORY 211C. Saints in the Middle Ages
 Saints were indispensable heroes in the Middle Ages. Explores what specific functions they served in medieval society, and how those roles changed over a millennium. Critical and curious readings of both primary documents and scholarly research will address questions such as what is a saint; what makes a saint; and how can the politicized literary texts that narrated their lives be used as historical documents. Topics include saints and their hagiographers, miracles, relics, marian devotion, profiling the Holy, and gendered sanctity. GER:DB-Hum
5 units, Aut (Krettner, J)

HISTORY 211D. Law and Society in Medieval Italy
(Same as HISTORY 311D) Traces the historical development of law and legal institutions in medieval Italy. Focuses on the interdependence of jurisprudence, legal practice, and social forces. Topics include legal reasoning, citizenship, servitude and dependence, family and kinship, property and inheritance, women and gender, crime and deviance, faction and vendetta.
4-5 units, Win (Fredona, R)

HISTORY 212G. Economy and Society in Pre capitalist Europe
(Same as HISTORY 312G) What today we might classify as a strictly economic concern, the distribution and circulation of resources, was inseparable from ideas about social organization and cultural value. Examines how deeply the economy was connected in material and intellectual ways to government, religion, and culture in Europe from the fourth to the fourteenth centuries; how those economic structures have been represented and debated in modern scholarship; and how the history of premodern economies might inform the study of capitalism. Topics include the problem of poverty; forms and scales of exchange; slavery and serfdom; visible wealth; warrior, cleric, peasant, medieval microfinance, taxation and representation, and feudal logic. GER:DB-SocSci
4-5 units, Spr (Krettner, J)

HISTORY 214D. Mediterranean Crossroads: Power, Culture, and Religion in Medieval Sicily
Sicily in the Middle Ages was a Mediterranean crossroads, a dynamic and diverse kingdom in which Muslim and Christian, Viking and African, European and Eastern Cultures all came together. Explores the life and times of Frederick II (1194-1250). His claim to universal authority as a Christian emperor, yet ruled multireligious Sicily as king. He promoted crusading, yet was accused of being a heretic and a crypto Muslim. He spoke six languages and actively patronized the arts and sciences. Topics include: structures and influences that made such a figure possible; how he managed the tensions of governing a diverse and disparate empire; how religion and cultural production created and maintained his authority; how contemporaries and later generations reacted to this enigmatic emperor; why has he continued to generate such polarizing reactions; and how did Frederick become a figure revered by Nazis and multiculturalists alike.
5 units, Spr (Miner, J)

HISTORY 220G. Demons, Witches, and Priests: Religion and Popular Culture in Russia
(Same as HISTORY 320G) 19th and early 20th centuries. Peasants, parish priests, witches, possessed persons, calls and sects, old believers, saints, and women's religious communities. Nominally Christian, and members of the Orthodox Church, Russians embraced beliefs and customs that combined teaching from Church and folk traditions. GER:DB-Hum
4-5 units, Win (Kollmann, J)

HISTORY 221A. Men, Women, and Power in Early Modern Russia, 1500-1800
Social values, gender relations, and social change in an era of rapid change: challenges to established norms by new constructions of deviance (witchcraft, religious reform, and revolt) and new standards of civility; encounters with non-Russians and the construction of national consciousness. Social values as political ethos; patrimonial autocracy and the reality of female rule in the late 17th and 18th century. GER:DB-Hum, DB-Hum, EC-Gender
5 units, not given this year

HISTORY 221B. The Woman Question in Modern Russia
Russian radicals believed that the status of women provided the measure of freedom in a society and argued for the extension of rights to women as a basic principle of social progress. The social status and cultural representations of Russian women from the mid-19th century to the present. The arguments and actions of those who fought for women's emancipation in the 19th century, theories and policies of the Bolsheviks, and the reality of women's lives under them. How the status of women today reflects on the measure of freedom in post-Communist Russia. GER:DB-SocSci, EC-Gender
5 units, not given this year

HISTORY 221D. Historiography of the Soviet Union
(Same as HISTORY 321C) Major schools of interpretation of the Soviet phenomenon through works representative of a specific school, in chronological order, from the first major interpretation of the Soviet polity by Trotsky to postmodernist theories. GER:DB-SocSci
4-5 units, Aut (Weiner, A)

HISTORY 222. Honor, Law, and Modernity
How Europe evolved from medieval to modern; focus is on standards for conflict resolution emphasizing insults to honor. How attitudes towards the self and society, and the state's relationship to individuals, changed from the 16th to 18th centuries in Europe and Russia. Traditional concepts of honor and patterns of settling disputes contrasted to early modern concepts of honor, private life, civility, and crime and punishment. GER:DB-Hum

| **HISTORY 227. East European Women and War in the 20th Century**  
(Same as HISTORY 327) Thematic chronological approach through conflicts in the region: the Balkan Wars, WW I, WW II, and the recent wars in the former Yugoslavia. The way women in E. Europe have been involved in and affected by these wars compared to women in W. Europe in the two world wars. Women's involvement in war as members of the military services, the backbone of underground movements, workers in war industries, mothers of soldiers, subjects and supporters of war aims and propaganda, activists in peace movements, and objects of wartime destruction, dislocation, and sexual violation. GER:DB-SocSci, EC-Gender  
4-5 units, Aut (Jolluck, K) |
| **HISTORY 228. Circles of Hell: Poland in World War II**  
(Same as HISTORY 328) The experience and representation of Poland's wartime history from the Nazi-Soviet Pact of 1939 to the aftermath of Yalta in 1945. Nazi and Soviet ideology and practice regarding the Poles and the ways Poles responded, resisted, and survived. The self-characterization of Poles as innocent victims, their involvement or complicity in the Holocaust, thus engaging in a current debate in Polish society. GER:DB-SocSci  
5 units, not given this year |
| **HISTORY 229. Poles and Jews**  
(Same as HISTORY 329, JEWISHST 289, JEWISHST 389) Focus is on the period since WW I. The place of the Jews in interwar Poland, WW II, surviving Jews after the war, Polish memorialization of the Holocaust, the reality and mythology of Jews in the communist apparatus, the manipulation of anti-Semitism by the communist government, and post-communist movements toward reconciliation. Memory and national mythology emphasizing Polish wartime behavior and the relationship of Jews to communism. The sources and uses of stereotypes, and the state of Polish-Jewish relations today. GER:DB-Hum, DB-Hum, EC-GlobalCom  
4-5 units, Win (Jolluck, K) |
| **HISTORY 230A. The Witness in Modern History: Memoir, Reportage, Image**  
The rise of the witness as icon and debates about its reliability as a historical source. The power of eyewitness accounts to convict accused criminals, inspire indignation about war and genocide, and attract attention to humanitarian crises. Their notorious unreliability due to exaggeration and misapprehension. Sources include reportage, photography, and documentary film. Case studies include criminal cases, war, poverty, and natural disasters. GER:DB-Hum  
5 units, not given this year |
| **HISTORY 230D. Europe in the World, 1789-Present**  
(Same as HISTORY 330D) The European conquest of parts of Africa, Asia, and the South Pacific by European merchants, missionaries, armies, and administrators had significant, and often cataclysmic, effects on indigenous political alliances, cultural practices, and belief systems; But were the effects of expansion entirely one-sided? What impact did the experiences of colonialism have on European politics, culture, and Europe’s relations with the rest of the world? Explores how interaction between Europe and the rest of the world redefined the political, racial, sexual, and religious boundaries of both Europe and its colonies and gave rise to the more globalized society we live in today.  
4-5 units, not given this year |
| **HISTORY 230F. Self-Policing, Denunciation, and Surveillance in Modern Europe**  
(Same as HISTORY 330F) How individual actions impact state machineries of power. The motives, pressures, and consequences of everyday collaboration from the French Revolution to Nazi Germany and Soviet bloc police states; popular outrage over such practices in the aftermath of these regimes. The phenomenon of anticipatory compliance, as people tended to perceive less freedom of action than actually existed, and the reciprocal intensification of real and imagined restrictions. The malleability of personal values and interests as represented in diaries, memoirs, secondary sources, and film; variety of individual and national responses.  
4-5 units, not given this year |
| **HISTORY 232A. Power, Art, and Knowledge in Renaissance Italy**  
(Same as HISTORY 332A) Provides a fundamental understanding of the cultural and political imagination of the Italian Renaissance, with particular emphasis on Florence between 1300 and 1600 CE. Topics include political and social upheavals, radical shifts in religious practice and devotion, the commercial revolution in trade and banking, the rediscovery of classical philosophy and style, and the flowering of the literary and visual arts. GER:DB-Hum  
4-5 units, Aut (Fredona, R) |
| **HISTORY 232D. Europe in the World, 1789-Present**  
(Same as HISTORY 332D) English political and religious culture from the end of the Wars of the Roses to the age of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday world of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners. GER:DB-Hum

4-5 units, not given this year |
the history of sexuality, in particular prior to the 19th century. Tools for critiquing the heteronormativity of early modern sources and for reading those sources for evidence of sexual diversity. Readings include monographs and primary sources. GER:DB-SocSci, EC-Gender
4-5 units, not given this year

HISTORY 233C. Two British Revolutions
(Same as HISTORY 333C) Current scholarship on Britain, 1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II. GER:DB-Hum
4-5 units, not given this year

HISTORY 233E. From the Left Hegelians to Freud: Introduction to Late Modern Intellectual History
(Same as HISTORY 333E) Ever since the Napoleonic Wars, European culture, society and politics have experienced a series of dramatic transformations, changes that unleashed a myriad of intellectual theories and debates. Focuses on the nineteenth century, the age of grand theories such as Liberalism, Positivism, Nationalism, Socialism, and Marxism and examines them historically, including how European Socialists and members of the Russian intelligentsia, J.S. Mill, Marx, Durkheim, Weber, Freud, and others. GER:DB-Hum
4-5 units, Win (Dubnov, A)

HISTORY 233F. Political Thought in Early Modern Britain
(Same as HISTORY 333F) 1500 to 1700. Theorists include Hobbes, Locke, Harrington, the Levellers, and lesser known writers and schools. Foundational ideas and problems underlying modern British and American political thought. GER:DB-Hum
5 units, not given this year

HISTORY 233G. Catholic Politics in Europe, 1789-1992
What led to the creation of a specifically Catholic mass politics? How did these parties and movements interact with the Vatican and the wider Church? What accounts for political Catholicism’s involvement in clerical-fascist states and its important role in shaping the EU? Sources focus on monographs. Research paper using primary sources. GER:DB-SocSci
5 units, not given this year

HISTORY 233K. The Invention of the Modern Republic
(Same as HISTORY 333K) Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution.
4-5 units, not given this year

HISTORY 236. The Ethics of Imperialism
Can a commitment to liberty, progress, and universal rights be reconciled with imperialism? The ethical underpinnings of empire; how modern Europeans provided ethical and political justifications for colonial expansion. How European ideas were used to defend and justify inequality, violence, and genocide. The ethics of American-driven globalization and humanitariansim. Texts include primary sources, philosophical treatises, and historical studies. GER:DB-Hum
5 units, not given this year

HISTORY 236B. The Idea of Society
(Same as HISTORY 336B) Classic texts in social theory from the seventeenth century to the present. Readings include Locke, Smith, Hegel, Comte, and Durkheim, and Weber. GER:DB-Hum
4-5 units, Win (Baker, K; Sheehan, J)

HISTORY 236D. Cold War Europe
(Same as HISTORY 336D) Much more than a military and diplomatic confrontation, the Cold War was lived experience in Europe - shaping politics, society, culture and personal identity. Beginning at the end of World War II, traces the continent’s division into eastern and western Europe and the fall of the Iron Curtain. Sources include memoirs, propaganda, novels, and film, as well as new scholarship on the Cold War. GER:DB-Hum
4-5 units, Spr (Sheffer, E)

HISTORY 237. The Holocaust
(Same as HISTORY 337, JEWISHST 183, JEWISHST 383) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s, WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry. GER:DB-Hum
4-5 units, Aut (Zipperstein, S)

HISTORY 239F. Empire and Information
(Same as HISTORY 339F) How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, curricula, schemaa, and intelligence systems, to render geographies and social bodies legible, visible, and governable. GER:DB-Hum, EC-GlobalCom
4-5 units, not given this year

HISTORY 239H. Colonialism and Empire in Modern Europe
To better understand the history of modern Europe within a global context, explores the following questions: What impact did more than a century of colonialism have on the social lives, cultural attitudes, political loyalties, and intellectual world views of European women and men during the nineteenth century? What accounts for the resiliency of empire during a period of rapid global change that witnessed the rise of modern democracy, economic liberalism, ethnic nationalism, and international socialism? GER:DB-SocSci
5 units, not given this year

HISTORY 242G. Einstein: Science, Technology, and Culture
(Same as HISTORY 342G) Explores how Albert Einstein, a theoretical physicist who dealt with highly abstruse matters, could come to be named the Person of the Century. In addition to the specifics of Einstein’s life and work, topics will include the origins and reception of scientific ideas, the nature of scientific revolutions, science in popular culture, nationalism vs. internationalism in science, science and war, debates over the nature of reality, and the quest for the theory of everything. GER:DB-Hum
4-5 units, Win (Lagerstrom, L)

HISTORY 243C. 18th-Century Colonial Science and Medicine
(Same as HISTORY 343C) Explores the global exchange of knowledge, technologies, plants, peoples, disease, and medicines. Colonial sciences and medicines were important militarily and strategically for positioning emerging nation states in global struggles for land and resources. Considers primarily French, British, and Dutch in the West Indies, but also takes examples from Iberian, Jesuit, and other traditions in China and India. Readings treat science and medicine in relation to voyaging, colonialism, slavery, plants, and environmental exchange. GER:DB-SocSci
4-5 units, Spr (Schiebinger, L)

HISTORY 243D. Tobacco and Health in World History
(Same as HISTORY 343G) GER:DB-SocSci
4-5 units, Aut (Proctor, R)

HISTORY 243J. Climate Change in the West: A History of the Future
(Same as EARTHSYS 143J) Global warming is changing the American West. But this region is no stranger to environmental change and human adaption to harsh environments. How can history create more clear thinking about the current crisis and choices for the future? The long history of climate change in the West, as well as current warming, through scientific research, historical sources, environmental histories, and visions for the future, including plans for mitigation and adaption, scientific
COURSES OF INSTRUCTION

HISTORY 238S. Human Origins: History, Evidence, and Controversy
(Same as HISTORY 443A) Research seminar. Debates and controversies include: theories of human origins; interpretations of fossils, early art, and the oldest tools; the origin and fate of the Neanderthals; evolutionary themes in literature and film; visual rhetoric and cliché in anthropological dioramas and phylectic diagrams; the significance of hunting, gathering, and grandmothering; climatological theories and neocatastrophic geologies; molecular anthropology; the impact of racial theories on human origins discourse. Background in human evolution not required. GER:DB-SocSci
4-5 units, not given this year

HISTORY 244C. The History of the Body in Science, Medicine, and Culture
(Same as HISTORY 444C) The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic. GER:DB-SocSci, EC-Gender
4-5 units, not given this year

HISTORY 245E. Health and Society in Africa
(Same as HISTORY 347E) The history of disease, therapeutic and diagnostic systems, and the definition of health in precolonial, colonial, and postcolonial Africa. The social and political histories of specific epidemics, including sleeping sickness, influenza, TB, mental illness, and AIDS. The colonial contexts of epidemics and the social consequences of disease. GER:DB-SocSci, EC-GlobalCom
4-5 units, not given this year

HISTORY 245G. Law and Colonialism in Africa
(Same as HISTORY 348D) Law in colonial Africa provides an opportunity to examine the meanings of social, cultural, and economic change in the anthropological, legal, and historical approaches. Court cases as a new frontier for the social history of Africa. Topics: meanings of conflicts over marriage, divorce, inheritance, property, and authority. GER:DB-SocSci
4-5 units, Spr (Roberts, R)

HISTORY 248S. African Societies and Colonial States
(Same as HISTORY 448A) The encounter between African societies and European colonialism in the colony or region of their choice. Approaches to the colonial state; tours of primary source collections in the Hoover Institution and Green Librarians. Students present original research findings and may continue research for a second quarter. GER:DB-SocSci
4-5 units, not given this year

HISTORY 250A. History of California Indians
(Same as CSRE 117S, NATIVEAM 117S) Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system. GER:EC-AmerCul
5 units, not given this year

HISTORY 251C. The American Enlightenment
(Same as AMSTUD 251C) Eighteenth century America was like a laboratory for exciting new social, political, religious, scientific, and artistic theories that we collectively call the Enlightenment. With readings in original texts and studies of material culture, examines ways in which eighteenth century Americans applied Enlightenment thinking to some of the most important problems and questions of their time. What was the best kind of government, and how could this be known? What was the new world of America fundamentally different or the same as Europe, and did animals, plants, and people improve or worsen there? What creatures (children, apes, women, slaves) were considered unreasonable in the Age of Reason, and why? What was the place of religion and passion in the Age of Reason? GER:DB-Hum
5 units, not given this year

HISTORY 253D. Approaches to American Legal History
(Same as POLISCI 226U) Legal history, once primarily devoted to exploring legal doctrines and key judicial opinions and thus of interest mainly to legal scholars and lawyers, now resembles historical writing more generally; the study of legal ideas and practices is increasingly integrated with social, intellectual, cultural, and political history. Recent writings in American legal history; how the field reflects developments in historical writing; and how the use of legal materials affects understanding of American history.
3 units, Win (Rakove, J)

HISTORY 254. Popular Culture and American Nature
Despite John Muir, Aldo Leopold, and Rachel Carson, it is arguable that the Disney studios have more to do with molding popular attitudes toward the natural world than politicians, ecologists, and activists. Disney, as the central figure in the 20th-century American creation of nature. How Disney, the products of his studio, and other primary and secondary texts see environmentalism, science, popular culture, and their interrelationships. GER:DB-Hum
3 units, Aut (White, R)

HISTORY 255. Martin Luther King, Jr.: The Social Gospel and the Struggle for Justice
The religious and political thought of Martin Luther King, Jr., using the documentary resources of the King Institute at Stanford. His social gospel Christianity and prophetic message of radical social transformation. Readings include the forthcoming The Papers of Martin Luther King, Jr., Volume VI: Advocate of the Social Gospel. GER:DB-Hum
3 units, not given this year

HISTORY 255D. Racial Identity in the American Imagination
(Same as Africana 255, AMSTUD 255D, CSRE 255D, HISTORY 355D) Major historical transformations shaping the understanding of racial identity and how it has been experienced, represented, and contested in American history. Topics include: racial passing and racial performance; migration, immigration, and racial identity in the urban context; the interplay between racial identity and American identity; the problems of class, gender, and sexuality in the construction of racial identity. Sources include historical and legal texts, memoirs, photography, literature, film, and music. GER:DB-SocSci, EC-AmerCul
4-5 units, Win (Hobbs, A)

HISTORY 256. U.S.-China Relations: From the Opium War to Tiananmen
(Same as HISTORY 356) The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past. GER:DB-SocSci, EC-GlobalCom
4-5 units, not given this year

HISTORY 257C. LGBT History in the United States
(Same as Femst 140D) An introductory course on LGBT social, cultural, and political history in the United States. This course explores how categories of sexuality have changed over time, with particular emphasis on the relationship among homosexuality, heterosexuality, and transgenderism. Students will analyze how the intersections of race, class, and sexuality influenced the constitution of these categories and the politics of social relations. Historical and literary sources will be used to examine changes in LGBT experiences and identities, primarily in the twentieth century.
4-5 units, Spr (Davies Henderson, A)

HISTORY 258. Topics in the History of Sexuality: Sexual Violence
(Same as AMSTUD 258, CSRE 192E, HISTORY 358) Recent historical interpretations of sexual violence, with particular attention to the intersections of gender and race in the construction of rape, from early settlement through the twentieth century. Topics include the legal prosecution of rape in Early America; the racialization of rape in the U.S.; lynching and anti-lynching in the U.S.; and feminist responses to sexual violence. GER:DB-SocSci, EC-Gender
4-5 units, not given this year
HISTORY 258G. Women and Race in the American West, 1849-1950
(Same as CSRE 133) The western myth of the lone white cowboy gives little insight into women and people of color. However, race and gender are crucial to the U.S. West’s history, creating complex identities and social structures. The course examines lives of women of diverse races, in addition to the mythology surrounding icons such as pioneer mothers or Sacagawea. Using literature, art, work, and film, along with works by historians, to analyze the intersection of race and the relation between history and myth.
5 units, Win (Frink, B)

HISTORY 259A. Poverty and Homelessness in America
Service learning. Students participate in a two quarter internship at a local shelter for homeless individuals or families. Readings include historical, social science, and social commentary literature. Service Learning Course (certified by Haas Center). GER:DB-SocSci
4-5 units, not given this year

HISTORY 260. California’s Minority-Majority Cities
(Same as CSRE 260, HISTORY 360) Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center). GER:DB-SocSci, EC-AmerCul
4-5 units, Spr (McKibben, C)

HISTORY 261. Race, Gender, and Class in Jim Crow America
How African American life and labor were redefined from 1890-1954. Topics include family life, work, leisure patterns, transnational relations, cultural expressions emphasizing literature and music, resistance and social activism. Primary sources including visual materials, literature, and film; historical interpretations of the period. GER:DB-SocSci
5 units, not given this year

HISTORY 262G. The Pivotal Decade in U.S. History: 1960’s or 1970’s?
(Same as HISTORY 362G) Which had more lasting impact, the civil war of the 1960s or the conservative revolts of the 1970s? Should the 1970s supersede the 1960s as a pivotal moment when something happened of considerable importance to historians? Considers this debate of the decades comparatively and thematically, addressing topics including civil rights, foreign policy, electoral politics, popular culture, law, economics, labor, and social movement organizing. GER:DB-SocSci
4-5 units, Aut (Sbardellati, L)

HISTORY 263G. History Through a Life: The Allure of American Biography
(Same as HISTORY 363G) Considers the possibilities and limitations of exploring U.S. history through the genre of biography. Is a single life too narrow to explain why and how pivotal events in U.S. history, such as war, economic depression, social revolution, unfold? Or can one life illuminate the complexity of historical shifts? Readings will span U.S. history, exploring topics such as labor and racial civil rights, science and culture, women and sexuality, transnationalism and diplomacy, law and presidential politics. The craft of biography will be considered alongside biographical subjects. GER:DB-Hum
4-5 units, Spr (Sbardellati, L)

HISTORY 265. Writing Asian American History
(Same as HISTORY 365) Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper. GER:DB-SocSci, EC-AmerCul
5 units, not given this year

HISTORY 268E. American Foreign Policy and International History since 1941
(Same as AMSTUD 268E, HISTORY 368E) Major events and interpretations from WW II to the war in Iraq. Issues of race, expansionism and power; nuclear weapons; and war. GER:DB-SocSci
4-5 units, Spr (Bernstein, B)

HISTORY 272B. Frontiers of Iberian and Latin American Culture and History
(Same as HISTORY 372B, ILAC 272B, ILAC 372B) Analyzes the construction and deconstruction of communities and their internal and external frontiers in Iberia and Ibero-America from the early modern period to the early twentieth century by observing both historical and cultural artifacts (historical documents, novels, bibliography, etc.). Topics: the coming of nations, the making of state (or national) territory, the role assigned or taken on by immigrants, minorities and, in the American case, natives, and the persistence of areas now called borderlands or of groups now assigned to such (indeterminate) locations. GER:DB-SocSci
4-5 units, Aut (Surwillo, L; Herzog, T)

HISTORY 273. The European Expansion
(Same as HISTORY 373A) The relationship between European monarchies and their colonial domains from the 16th-18th centuries. Reasons for expansion, methods, and results. Case studies include the Spanish, Portuguese, Dutch, French, and English domains in Africa, Asia, and the Americas. Readings include primary and secondary sources.
4-5 units, not given this year

HISTORY 273G. Geographical Imagination & the Making of Brazil & the Hispanic-American States, 1750-1850
Explores the connections between geographical representation and the emergence of new independent states in South America by probing the importance of colonial geographic narratives in the making of independent, post-colonial identities. Focusing mainly on Brazil, but also comparing and contrasting Brazil to other Ibero-American republics, we will study maps not only as significant pieces of imperial and patriotic discourse, but also as visual and material objects that allow us to understand the diverse perceptions of territory of different agents and groups such as native peoples, maroon societies, settlers, missionaries, traders, bureaucrats, and naturalists. Topics include the continuities and discontinuities of territory, the influence of enlightened ideals, and the idealization of Amerindians as elements of the landscape. Provides a case study of how politics, printed culture, and the representation of native peoples were intertwined during a period of global imperial transformati GER:DB-SocSci
5 units, Win (Staff)

HISTORY 275G. Religion in Colonial Latin America and the Iberian World
(Same as HISTORY 375G) Examines the spiritual conquest of Latin America, the gap between ideal and lived behavior, and the nature of personal/shared experiences of piety by looking at instances of forced conversion, catechism and sacraments, mysticism and apparitions, funerary rituals, baroque piety, witchcraft, and ideas about marriage, sexuality, and religious tolerance. GER:DB-Hum
4-5 units, Aut (Tortorici, Z)

HISTORY 276E. Gender and Sexuality in Early Modern Iberian World
(Same as HISTORY 376E) Examines major theoretical approaches, methodological developments, and debates that have shaped the history of sexuality. We will use criminal/Inquisition cases and confessional manuals to better understand gender and sexuality in the early modern Iberian world. Focuses on European/African/indigenous conceptions of gender, marriage and bigamy, witchcraft and popular religious practices, convent life and mysticism, abortion and infanticide, gendered violence, solicitation, sodomy and bestiality, and the punishments meted out for illicit acts. GER:DB-Hum
4-5 units, Spr (Tortorici, Z)

HISTORY 279. Latin American Development: Economy and Society, 1800-2000
(Same as HISTORY 379) The newly independent nations of Latin America began the 19th century with economies roughly equal to, or even ahead of, the U.S. and Canada. What explains the economic gap that developed since 1900? Why are some Latin American nations rich and others poor? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice. GER:DB-SocSci, EC-GlobalCom
4-5 units, not given this year
HISTORY 281. Economic and Social History of the Modern Middle East
(Same as HISTORY 381) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market are combined with possible case studies of Egypt, Iran, and Palestine. GER:DB-SocSci
4-5 units, Aut (Beinin, J)

HISTORY 281A. Twentieth-Century Iraq: A Political and Social History
The colonial experience, creation of the modern Iraqi state, and transition to military dictatorship. Political movements, religious and tribal elements, and their relation to the state. Geopolitical context. GER:DB-SocSci
5 units, not given this year

HISTORY 281B. Modern Egypt
(Same as HISTORY 381B) From the mid-nineteenth century to the present. Topics: European imperialism, the political economy of cotton, rise of nationalism, gender and the nation, minorities, the coup of 1952, positive neutralism and the Cold War, and the neo-liberal reconstruction of Egypt. GER:DB-SocSci
4-5 units, Spr (Beinin, J)

HISTORY 282. The United States and the Middle East since 1945
(Same as HISTORY 382) Since the end of WW II. U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel. Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself? GER:DB-SocSci, EC-GlobalCom
4-5 units, not given this year

HISTORY 283. The New Global Economy, Oil, and Islamic Movements in the Middle East
(Same as HISTORY 383) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market combined with case studies of Egypt, Iraq, and Palestine. GER:DB-SocSci
4-5 units, not given this year

HISTORY 284F. Empires, Markets and Networks: Early Modern Islamic World and Beyond, 1500-1800
(Same as HISTORY 384F) Focuses on political regimes, economic interactions and sociocultural formations in the early modern Balkans and Middle East to Central and South Asia. Topics include complex political systems of the Ottoman, Safavid and Mughal empires; experiences of various Muslim, Christian, Jewish and Hindu, as well as urban, rural and nomadic communities; consolidation of transregional commerce and cultural exchange; incorporation of the Islamic world in the global economy; transimperial networks of the Muslim and Non-Muslim merchants, scholars and sultans. GER:DB-SocSci
4-5 units, Spr (Tayircioglu, A)

HISTORY 287D. Tel Aviv: Site, Symbol, City
(Same as HISTORY 387D, JEWISHST 287D, JEWISHST 387D) Tel Aviv, the first Israeli/Hebrew city, from a cultural history perspective combining high and low cultural artifacts, examining the symbolic constructions of the city as a site of Hebrew modernism and postmodernism. Topics include: the utopian origins behind the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv's coffee houses; as the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; the effects of contemporary globalization and the reconstruction of Tel Aviv as the symbolic site of Israeli post-nationalism. Sources include art, cinema, and literature, pop music and archival materials from Green Library's Eliasaf Robinson Collection. Hebrew reading knowledge, although helpful, is not required. GER:DB-Hum
4-5 units, Spr (Dubnov, A)

HISTORY 287E. Jewish Intellectuals and the Crisis of Modernity
(Same as HISTORY 387E, JEWISHST 287E, JEWISHST 387E) Intellectual responses of Jewish political thinkers, historians and authors to the age of extremes. Readings include Theodor Adorno, Herbert Marcuse, Eric Fromm, Hannah Arendt, Leo Strauss, Karl Popper, Isaiah Berlin, Tony Judt, and George Steiner. Analyses of enlightenment, nationalism, socialism and totalitarianism; their life stories, and their direct and indirect role in creating a transatlantic political discourse in postwar years. Contextualizes historically the fundamental features of Jewish intellectual activity after 1945. No prior knowledge of political science, philosophy and/or Jewish studies is required. GER:DB-Hum
4-5 units, Spr (Dubnov, A)

HISTORY 287S. Research Seminar in Middle East History
(Same as HISTORY 481, JEWISHST 287S, JEWISHST 481) Student-selected research topics. GER:DB-SocSci
4-5 units, not given this year

HISTORY 288. Palestine and the Arab-Israeli Conflict
(Same as HISTORY 388, IPS 388, JEWISHST 288, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin) GER:DB-Hum
4-5 units, not given this year

HISTORY 290G. Dilemmas of Modernity in Twentieth Century Japan
(Same as HISTORY 390G) Introduction to the historiography of twenty century Japan and thereby a basis for further research. Explores the Japanese experience of the twentieth century in its local and regional context and explains Japan as a compelling case study of both the broader logic and process of modernization and the tensions endemic to modernity that are thereby produced. 4-5 units, Spr (Di Marco, F)

HISTORY 291A. Archaeology and Modernity in Asia: The Excavation of Ancient Civilizations in Modern Times
(Same as HISTORY 391A) The interplay in Asia between antiquity and modernity, civilization and nation state, and national versus colonial science. The recent excavation of artifacts and places associated with Asian civilization such as the terracotta warriors in China and Angkor Wat in Cambodia. How Asian states have grappled with modernity and colonialism as they simultaneously dug up their ancient pasts. GER:DB-SocSci
4-5 units, not given this year

HISTORY 291B. The City in Imperial China
(Same as HISTORY 391B) The evolution of cities in the early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative cases from European history. Readings include primary and secondary sources, and visual materials.
3-5 units, not given this year

HISTORY 291D. Colonialism and Collaboration in East Asia
(Same as HISTORY 391D) The roles and problems of collaboration in the rise, sustenance, and fall of empires. Themes include conceptual definitions of collaboration and empire, collaboration of traditional elites, accommodation of religious communities, assimilation and collaboration, local intermediaries, and class and empire. Regional focus is East Asia; also cases from other colonial situations. GER:DB-SocSci
4-5 units, not given this year

HISTORY 291E. Maps, Borders, and Conflict in East Asia
(Same as HISTORY 391E) The nature of borders and border conflicts in N.E. Asia from the 17th to the early 20th century. Focus is on contact zones between China, Russia, Korea, and Japan. The geopolitical imperatives that drove states to map their terrain in variable ways. Cultural, diplomatic, and imperial contexts. European pressures and contributions to E. Asian cartography; the uses of maps in surveillance, diplomacy, identity, and war. Student projects focus on a contested border zone. GER:DB-SocSci
4-5 units, not given this year

HISTORY 292. The Two Koreas
(Same as HISTORY 392) Examines major themes and scholarly works to understand the origins, outbreak, and consequences of the Korean War. One focus will be the division of Korea into ROK and DPRK and their subsequent developments. Themes include
HISTORY 292D. Japan in Asia, Asia in Japan
(Same as HISTORY 392D) How Japan and Asia mutually shaped each other in the late 19th and 20th centuries. Focus is on Japanese imperialism in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia. GER:DB-SocSci, DB-SocSci, EC-GlobalCom
4-5 units, not given this year

HISTORY 292F. Traditional Korea: History and Culture
(Same as HISTORY 392F) Korea before 1800 and how iconic features of Korean tradition were created and reinforced. Themes include Korea's ancient kingdoms, the aristocracy and military in the Koryo dynasty, the print culture and Korean alphabet, ideologies and religions, the social status system and the life of women, the kingdom and court culture of the Choson dynasty, and Korea's place in premodern East Asia. The modern and contemporary debates.
4-5 units, not given this year

HISTORY 293B. Homosexuality in Historical and Comparative Perspective
(Same as HISTORY 393B) Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S. GER:EC-Gender
4-5 units, not given this year

HISTORY 293D. Empire and Cosmopolitanism: Traveling Ideas in Global Political Thought
(Same as HISTORY 393D) GER:DB-SocSci
4-5 units, not given this year

HISTORY 295F. Race and Ethnicity in East Asia
(Same as ASNAMST 295F, HISTORY 395F) Historical, cultural, political and theoretical perspectives. Commonly misunderstood as an ethnically homogeneous country, the People's Republic of China is home to 55 officially recognized minority groups, many of whom inhabit the strategic border regions of the country. How similar assumptions of ethnic and racial homogeneity in Taiwan, Japan, and Korea are being reexamined by scholars in disciplines including anthropology, history, and political science. GER:DB-SocSci
4-5 units, Aut (Mullaney, T)

HISTORY 295J. Chinese Women's History
The lives of women in the last 1,000 years of Chinese history. Focus is on theoretical questions fundamental to women's studies. How has the category of woman been shaped by culture and history? How has gender performance interacted with bodily desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S. GER:DB-Hum, EC-Gender
5 units, Win (Sommer, M)

HISTORY 296. Communism and Revolution in China
From the formation of the Chinese Communist Party (CCP) in 1921 through the 1949 founding of the People's Republic of China (PRC). Topics include: early theories of socialism in China; the relationship between Chinese communism and the Communist International and Soviet Union; agrarian reformulation of communism by Mao; the communist-nationalist civil war; the Communist Revolution of 1949; and the consolidation of communist power in the PRC. GER:DB-Hum
5 units, not given this year

HISTORY 298E. China-Taiwan-U.S. Triangular Relations from WW II through the Cold War
(Same as HISTORY 398E) The historical origins and evolution of the complex relations between China, Taiwan, and the U.S. Topics include Stilwell and his conflict with Chiang Kai-shek, the Chinese Civil War, the loss of China or the lost chance in China, the 228 Incident, the Korean War, Taiwan's undetermined status, Kimmen Bombardment, contests over China's UN seat, Nixon's visit to China, Taiwan's economic take-off and democratization under Chiang Ching-kuo. Emphasis is on extensive reading of declassified archival sources and new interpretations. GER:DB-SocSci
4-5 units, Aut (Staff)

HISTORY 299A. Senior Research I
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY 299X. Design and Methodology for International Field Research
(Same as HISTORY 399A) Problems involved in research abroad: ethical issues; safety; security and conduct; human subjects protocol. Methodologies of research: interviewing, networking, case studies, participant observation, large surveys.
1 unit, Spr (Kollmann, N; Roberts, R)

GRADUATE COURSES IN HISTORY
Primarily for graduate students; undergraduates may enroll with consent of instructor.

HISTORY 158B. History of Education in the United States
(Same as AMSTUD 201, EDUC 201) How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching. (SSPEP) 3-5 units, not given this year

HISTORY 158C. History of Higher Education in the U.S.
(Same as AMSTUD 165, EDUC 165, EDUC 265) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing
COURSES OF INSTRUCTION

organization of colleges and universities. (SSSEP-APA)

3-5 units, Win (Labaree, D)

HISTORY 237B. Teaching the Unteachable: Teaching and Representing the Holocaust
(Same as EDUC 253X) Theodore Adorno asked whether it was possible to write poetry after Auschwitz; whatever the answer, each year witnesses exponential growth in state-sponsored mandates to teach the Holocaust. How and to what end does catastrophe become curriculum? How to assess what students learn from these classes? The Nazis' efforts to teach for hate, and contemporary parallels. Historical and educational sources, especially films and memoirs.

3-5 units, not given this year

HISTORY 255E. Education, Race, and Inequality in African American History, 1880-1990
(Same as CSRE 216X, EDUC 216X) Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

3-5 units, not given this year

HISTORY 258D. School: What Is It Good For?
(Same as EDUC 207X) Focus is on authors who establish claims that the purposes, functions, impacts, and social roles of schooling promote human capital, citizenship, social reproduction, values transmission, social mobility, class equality, racial equality, social stratification, disciplinary power, and the pursuit of individual interests. Historical and sociological approaches.

3-4 units, Win (Labaree, D)

HISTORY 258E. History of School Reform: Origins, Policies, Outcomes, and Explanations
(Same as EDUC 220D) Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change: the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. (SSSEP/APA)

3-5 units, Aut (Labaree, D)

HISTORY 258F. Education Schools: Historical and Sociological Perspectives
(Same as EDUC 231X) The lowly status of the education school in the United States is the issue that defines the starting point of this course. Topics include an exploration the historical development of this institution, its major social function, and the interaction between the two. The course touches on a variety of scholarly domains, including the history of education, sociology of education, higher education, and educational policy.

3-4 units, alternate years, not given this year

HISTORY 272A. Spanish Nationalist Discourses from Franco to Zapatero: What does ‘plural Spain’ mean?
(Same as ILAC 204) Spanish nationalism and ‘patriotic affirmation’ discourses existing in contemporary Spain. Since the end of Francoism, Spanish nationalism has existed in a de-articulated and diffuse way, rather as a reaction against the challenge of stateless nationalisms than as a substantive doctrine. However, since the mid-1980s there has been a recovery of Spanish nationalist discourse, often labeled as ‘Constitutional patriotism’, whose main point is the insistence on History as the founding basis for the legitimacy of the present Spanish polity, as well as the vindication of the 1978 Constitution as the end-point of decentralization.

3-5 units, not given this year

HISTORY 301. Introduction to Public History in the U.S., 19th Century to the Present
(Same as HISTORY 201) Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. Service Learning Course (certified by Haas Center).

4-5 units, Aut (McKibben, C)

HISTORY 301D. The Changing Face of War: An Introduction to Military History
(Same as HISTORY 201D) Introduces students to the rich history of military affairs and, at the same time, examines the ways in which we think of change and continuity in military history. How did war evolve from ancient times, both in styles of warfare and perceptions of war? What is the nature of the relationship between war and society? Is there such a thing as a Western way of war? What role does technology play in transforming military affairs? What is a military revolution and can it be manufactured or induced? Chronologically following the evolution of warfare from Ancient Greece to present day so-called new wars, we will continuously investigate how the interdependencies between technological advances, social change, philosophical debates and economic pressures both shaped and were influenced by war.

4-5 units, Win (Staff)

HISTORY 302G. Peoples, Armies and Governments of the Second World War
(Same as HISTORY 202G) Clausewitz conceptualized war as always consisting of a trinity of passion, chance, and reason, mirrored, respectively, in the people, army and government. Following Clausewitz, this course examines the peoples, armies, and governments that shaped World War II. Analyzes the ideological, political, diplomatic and economic motivations and constraints of the belligerents and their resulting strategies, military planning and fighting. Explores the new realities of everyday life on the home fronts and the experiences of non-combatants during the war, the final destruction of National Socialist Germany and Imperial Japan, and the emerging conflict between the victors. How the peoples, armies and governments involved perceived their possibilities and choices as a means to understand the origins, events, dynamics and implications of the greatest war in history.

4-5 units, Spr (Staff)

HISTORY 304. Approaches to History
Required of first-year History Ph.D. students.

4-5 units, Aut (Baker, K)

HISTORY 304B. History without Documents
(Same as HISTORY 204B) Can history be written about places and times for which are no written sources, or for people in literate societies who left no written traces? Practical training in historical methods for non-documentary sources, including oral traditions and history, archaeology, ecological sources, historical linguistics, ethnography, rituals, myths, songs, and art.

4-5 units, Aut (Hamretta, S)

HISTORY 304G. War, Culture, and Society in the Modern Age
(Same as HISTORY 204G) How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated.

3 units, not given this year

HISTORY 305. Graduate Workshop in Teaching
Required of first-year History Ph.D. students. Perspectives on pedagogy for historians: course design, lecturing, leading discussion, evaluation of student learning, use of technology in teaching lectures and seminars. Addressing today’s classroom: sexual harassment issues, integrating diversity, designing syllabi to include students with disabilities.

1 unit, Spr (Kollmann, N)

HISTORY 305A. The History of Information
(Same as HISTORY 205A) Examines the history of information from multiple perspectives such as the changing conceptions of facticity and evidence cross-culturally as well as a range of information technologies, from moveable type printing and telegraphy to text messaging and Twitter. Other topics include the ways in which information is shaped by the languages in which it is recorded, stored, and transmitted, and also the ways in which information infrastructures influence what is forgotten and lost.

4-5 units, Spr (Mullaney, T)
HISTORY 306. Beyond Borders: Approaches to Transnational History
This core colloquium for the Transnational, International, and Global (TIG) field will introduce students to the major historiographical trends, methodological challenges, and theoretical approaches to studying and writing transnational histories.
4-5 units, Win (Frank, Z; Daughton, J)

HISTORY 306D. World History: Graduate Colloquium
How do historians engage the global scale in the classroom as well as in research? The world history canon including Toynebe, McNeill, Braudel, Wolf, and Wallerstein; contrasting approaches, recent research, and resources for teaching. Recommended: concurrent enrollment in HISTORY 306K.
4 units, Spr (Wigen, K; Lewis, M)

HISTORY 306E. International History and International Relations Theory
(Same as HISTORY 202, POLISCI 216E, POLISCI 316) The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system.
3 units, Win (Holloway, D)

HISTORY 306F. Identities and Identification in the Atlantic World
How identities and processes of identification changed in Europe, Africa, and the Americas during the early modern period and as a result of the engagement of the inhabitants of these three continents in the Atlantic world.
4-5 units, not given this year

HISTORY 306G. Colonial Law
Examines the relationship between law and colonialism in Latin America, Africa and Asia during both the early modern and the modern period. By reading some of the seminal works that have been published on this issue, we will seek to understand how law both facilitated and limited colonialism and how colonialism, in turn, had modified the legal systems that had existed previously. Attention will also be given to law an an acculturating agent and to the legal arena as a sphere for conflict resolution, negotiation, and identity formation.
4-5 units, not given this year

HISTORY 306K. World History Pedagogy Workshop
Students draft a syllabus and create a curriculum module for use in a world history lecture course. Corequisite: HISTORY 306D, recommended.
1 unit, Spr (Wigen, K; Lewis, M)

HISTORY 307A. Legal History Workshop
(Same as LAW 372.) Faculty and students from the Law school and the History department discuss research in the field of legal history. Guest speakers. Secondary literature relevant to the speaker's research. Undergraduates require consent of instructors.
4-5 units, Win (Hertzog, T; Gordon, R)

HISTORY 307C. The Global Early Modern
(Same as HISTORY 207C) In what sense can we speak of globalization before modernity? What are the characteristics and origins of the economic system we know as capitalism? When and why did European economies begin to diverge from those of other Eurasian societies? With these big questions in mind, the primary focus will be on the history of Europe and European empires, but substantial readings deal with other parts of the world, particularly China and the Indian Ocean.
4-5 units, not given this year

HISTORY 307E. Origins of Totalitarianism
(Same as HISTORY 204E) Modern revolutionary and totalitarian politics. Sources include monographs on the medieval, Reformations, French Revolutionary, and Great War eras. Topics: the essence of modern ideology, the concept of the body national, state terror, charismatic leadership, gender assignments, private and public spheres, and identities.
4-5 units, Win (Weiner, A)

HISTORY 308. Biography and History
4-5 units, not given this year

HISTORY 308A. Science and Law in History
(Same as HISTORY 208A) How the intertwined modern fields of science and law, since the early modern period, together developed central notions of fact, evidence, experiment, demonstration, objectivity, and proof.
4-3 units, not given this year

HISTORY 308B. Women Activists' Response to War
(Same as HISTORY 208B) Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.
4-5 units, not given this year

HISTORY 309E. History Meets Geography
Focus is on developing competence in GIS computer applications and applying it to historical problems. Previous experience with GIS not required. Recommended: complete the GIS tutorial in Branner Library before the course starts.
4-5 units, not given this year

HISTORY 309F. Historical Geography Colloquium: Maps in the Early Modern World
The significance of cartographic enterprise across the early modern world. Political, economic, and epistemological imperatives that drove the proliferation of nautical charts, domain surveys, city plans, atlases, and globes; the types of work such artifacts performed for their patrons, viewers, and subjects. Contributions of indigenous knowledge to imperial maps; the career of the map in commerce, surveillance, diplomacy, conquest, and indoctrination. Sources include recent research from Asia, Europe, and the Americas.
4-5 units, not given this year

HISTORY 310. The History of Occupation, 1914-2010
(Same as HISTORY 210) Examines the major cases of occupation in the twentieth century, from the First World War until the present, and issues of similarities, differences, and implications for contemporary policy making. Topics include European and Asian cases emerging from World War I and World War II, the Israeli occupation of the West Bank; the Soviet and American occupations of Afghanistan; and the American occupation of Iraq. Discussions will revolve around the problems, efficacy, and effects of occupation in historical perspective.
4-5 units, Win (Natmark, N)

HISTORY 311D. Law and Society in Medieval Italy
(Same as HISTORY 211D) Traces the historical development of law and legal institutions in medieval Italy. Focuses on the interdependence of jurisprudence, legal practice, and social forces. Topics include legal reasoning, citizenship, servitude and dependence, family and kinship, property and inheritance, women and gender, crime and deviance, faction and vendetta.
4-5 units, Win (Fredonia, J)

HISTORY 312G. Economy and Society in Precapitalist Europe
(Same as HISTORY 212G) What today we might classify as a strictly economic concern, the distribution and circulation of resources, was in the Middle Ages inseparable from ideas about social organization and cultural value. Examines how deeply the economy was connected in material and intellectual ways to government, religion, and culture in Europe from the fourth to the fourteenth centuries; how those economic structures have been
represented and debated in modern scholarship; and how the history of premodern economies might inform the study of capitalism. Topics include the problem of poverty; forms and scales of exchange; slavery and serfdom; visible wealth; warrior, cleric, peasant, medieval microfinance, taxation and representation, and feudal logic.

4-5 units, Spr (Kreiner, J)

HISTORY 313. Graduate Core Colloquium: Religion and the Narration of the Medieval Past, 1000-1500
Examines reigning interpretations of the transformations of the central Middle Ages and the transition to the Early Modern world in light of recent work on religion. How well do these broad syntheses accommodate new understandings of the institutions, material culture, movements, and spiritualities of western Christianity? Attention will also be given to religious dissidence and interactions with other religious traditions in medieval Europe and the Mediterranean.

4-5 units, Aut (Miller, M)

HISTORY 319B. Secularity
Classic theories of secularity. Is a secular world possible? How does, historically seen, the notion of the secular emerge, impose itself, and get challenged? Readings include Max Weber, E. Durkheim, R.A. Markus, Carl Schmitt, and Hans Blumenberg, and studies bearing on the Middle Ages, English monastic secularization, the French Revolution, and 20th-century political religions.

4-5 units, not given this year

HISTORY 320G. Demons, Witches, and Priests: Religion and Popular Culture in Russia
(Same as HISTORY 220G) 19th and early 20th centuries. Peasants, parish priests, witches, possessed persons, cults and sects, old believers, saints, and women's religious communities. Nonwestern Christian, and members of the Orthodox Church, Russians embraced beliefs and customs that combined teaching from Church and folk traditions.

4-5 units, Win (Kollmann, J)

HISTORY 321A. Classics of Russian Historiography
Main trends of Russian intellectual history as seen through major historians’ treatment of Muscovy: Romanticism, Slavophilism, Hegelianism, Populism, Social Democracy, New Idealism, and Marxism-Leninism.

4-5 units, not given this year

HISTORY 321B. Imperial Russian Historiography
(Same as HISTORY 221B) Major schools of interpretation of the Soviet phenomenon through works representative of a specific school, in chronological order, from the first major interpretation of the Soviet polity by Trotsky to postmodernist theories.

4-5 units, Aut (Weiner, A)

HISTORY 322. Early Modern Russia in European Context
4-5 units, not given this year

HISTORY 323. Art and Ideas in Imperial Russia
(Same as HISTORY 223) Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia.

4-5 units, not given this year

HISTORY 323B. Research Methodologies in Early Modern Russian History
4-5 units, not given this year

HISTORY 324B. Modern Afghanistan
(Same as HISTORY 224B) Politics, society, and culture in Afghanistan from the 19th century to the present. Topics include state building, tribal politics, Islamic law, geopolitics, the Taliban, and the post-Taliban disorder.

4-5 units, Win (Crews, R)

HISTORY 324F. The Caucasus and the Muslim World
The linkages connecting the societies of the Caucasus to Muslim communities in Iran, Russia, the Ottoman Empire and Turkey, S. Asia, and the Middle East.

4-5 units, not given this year

HISTORY 325C. Leaders and Leadership in Soviet and Post-Soviet Russia
(Same as HISTORY 225C) Analyzes the role of the supreme leader in the Soviet and post-Soviet systems; the role of personality and career trajectories in the making of Soviet leaders; leadership style, authority building, and power base; the problem of succession; and the impact and legacies of various leaders on the political system and culture.

4-5 units, Spr (Weiner, A)

HISTORY 326. Graduate Colloquium on Modern Eastern Europe
Readings and discussion of the recent historiography of Eastern Europe. Explores new trends and developments and considers topics still awaiting research.

4-5 units, Spr (Jolluck, K)

HISTORY 326C. Graduate Colloquium on Balkan History
Designed for History Ph.D. students to develop competence in the history and historiography of the modern Balkans, from the French Revolution to the present. Areas of study include the influence of empires on the region, the rise of nationalism and nation states, the dilemmas of independence, the emergence and decline of communism in the region, and the recurrence of war and ethnic conflict.

4-5 units, not given this year

HISTORY 327. East European Women and War in the 20th Century
(Same as HISTORY 227) Thematic chronological approach through conflicts in the region: the Balkan Wars, WW I, WW II, and the recent wars in the former Yugoslavia. The way women in E. Europe have been involved in and affected by these wars compared to women in W. Europe in the two world wars. Women's involvement in war as members of the military services, the backbone of underground movements, workers in war industries, mothers of soldiers, subjects and supporters of war aims and propaganda, activists in peace movements, and objects of wartime destruction, dislocation, and sexual violation.

4-5 units, Aut (Jolluck, K)

HISTORY 328. Circles of Hell: Poland in World War II
(Same as HISTORY 228) The experience and representation of Poland's wartime history from the Nazi-Soviet Pact of 1939 to the aftermath of Yalta in 1945. Nazi and Soviet ideology and practice regarding the Poles and the ways Poles responded, resisted, and survived. The self-characterization of Poles as innocent victims, and their involvement or complicity in the Holocaust, thus engaging in a current debate in Polish society.

3 units, not given this year

HISTORY 329. Poles and Jews
(Same as HISTORY 229, JEWISHST 289, JEWISHST 389) Focus is on the period since WW I. The place of the Jews in interwar Poland, WW II, surviving Jews after the war, Polish memorialization of the Holocaust, the reality and mythology of Jews in the communist apparatus, the manipulation of anti-Semitism by the communist government, and post-communist movement toward reconciliation. Memory and national mythology emphasizing Polish wartime behavior and the relationship of Jews to communism. The sources and uses of stereotypes, and the state of Polish-Jewish relations today.

4-5 units, Win (Jolluck, K)

HISTORY 330. Core Colloquium on Early Modern Europe: Ancien Régime
Topics in the social, political, and religious history of Western Europe, 1550-1789, with an emphasis on France. May be repeated for credit.

4-5 units, not given this year

HISTORY 330A. Core Colloquium on Early Modern Europe
Historiographical survey from the Renaissance to the Enlightenment. Topics include the Reformations, European expansion, state and nation building, invention and scientific discovery, intellectual history, and gender. In-depth reviews determined by student interests.

4-5 units, not given this year

HISTORY 330D. Europe in the World, 1789-Present
(Same as HISTORY 230D) The European conquest of parts of Africa, Asia, and the South Pacific by European merchants, missionaries, armies, and administrators had significant, and often...
cataclysmic, effects on indigenous political alliances, cultural practices, and belief systems. But were the effects of expansion entirely one-sided? What impact did the experiences of colonialism have on European politics, culture, and Europe’s relations with the rest of the world? Explores how interaction between Europe and the rest of the world redefined the political, racial, sexual, and religious boundaries of both Europe and its colonies and gave rise to the more globalized society we live in today.

4-5 units, not given this year

HISTORY 330F. Self-Policing, Denunciation, and Surveillance in Modern Europe
(Same as HISTORY 230F) How individual actions impact state machineries of power. The motives, pressures, and consequences of everyday collaboration from the French Revolution to Nazi Germany and police state surveillance over such practices in the aftermath of these regimes. The phenomenon of anticipatory compliance, as people tended to perceive less freedom of action than actually existed, and the reciprocal intensification of real and imagined restrictions. The malleability of personal values and interests as represented in diaries, memoirs, secondary sources, and film; variety of individual and national responses.

4-5 units, not given this year

HISTORY 331B. Core Colloquium on Modern Europe: The 19th Century
The major historical events and historiographical debates of the long 19th century from the French Revolution to WW I.

4-5 units, not given this year

HISTORY 331C. Core Colloquium on Modern Europe: The 20th Century
The historiography of 20th-century Europe. Topics include WW I, the Russian Revolution, National Socialism, and the EU.

4-5 units, Win (Satia, P)

HISTORY 331D. Core Colloquium on Modern Europe: Intellectual History
4-5 units, not given this year

HISTORY 332A. Power, Art, and Knowledge in Renaissance Italy
(Same as HISTORY 232A) Provides a fundamental understanding of the cultural and political imagination of the Italian Renaissance, with particular emphasis on Florence between 1300 and 1600 CE. Topics include political and social upheavals, radical shifts in religious practice and devotion, the commercial revolution in trade and banking, the rediscovery of classical philosophy and style, and the flowering of the literary and visual arts.

4-5 units, Aut (Fredonna, R)

HISTORY 332D. Rome: The City and the World, 1350-1750
(Same as HISTORY 232D) What lies beyond the ruins of an ancient city? The history of Rome from the Renaissance to the age of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday world of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners.

4-5 units, not given this year

HISTORY 332F. The Scientific Revolution
What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding the nature of knowledge engaged the attention of individuals and institutions including Copernicus, Galileo, Descartes, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe.

4-5 units, Aut (Riskin, J)

HISTORY 332G. When Worlds Collide: The Trial of Galileo
In 1633, the Italian mathematician Galileo was tried and condemned for advocating that the sun, not the earth, was the center of the cosmos. The Catholic Church did not formally admit that Galileo was right until 1992. Examines the many factors that led to the trial of Galileo and looks at multiple perspectives on this signal event in the history of science and religion. Considers the nature and definition of intellectual heresy in the sixteenth and early seventeenth centuries, and examines the writings of Galileo’s infamous predecessor Giordano Bruno (burned at the stake in 1600). Looks closely at documents surrounding the trial and related literature on Renaissance and Reformation Italy in order to understand the perspectives of various participants in this famous event. Focal point of seminar involves the examination of the many different histories that can be produced from Galileo’s trial.

What, in the end, were the crimes of Galileo?

4-5 units, not given this year

HISTORY 333. Reformation, Political Culture, and the Origins of the English Civil War
(Same as HISTORY 233) English political and religious culture from the end of the Wars of the Roses to the Civil War of the 1640s. Themes include the growth of the size and power of the state, Reformation, creation of a Protestant regime, transformation of the political culture of the ruling elite, emergence of Puritanism, and causes of the Civil War.

4-5 units, not given this year

HISTORY 333A. From Bacon to Hegel: Introduction to Early Modern Intellectual History
(Same as HISTORY 233A) Over the past three centuries, European culture, society and politics have experienced a series of dramatic transformations, changes that unleashed a myriad of intellectual theories and debates. From politics and science to justice and religion, new ideas altered all fields of European thought, as intellectuals sought to understand the turmoil around them. Examines the rise of scientific thought and utopias, the emergence of new visions of politics, the differences between key Enlightenment thinkers, the development of Romanticism, Liberalism, Hegelianism, and more. Readings include Bacon, Descartes, Hobbes, Vico, Voltaire, Rousseau, Burke, Tocqueville and others.

4-5 units, Aut (Dubnov, A)

HISTORY 333B. Early Modern Sexualities
(Same as HISTORY 233B) History of sexuality in early modern Europe. Normative sexuality, heterosexual transgressions, and minority sexualities. Theoretical approaches to and debates about the history of sexuality, in particular prior to the 19th century. Tools for critiquing the heteronormativity of early modern sources and for reading those sources for evidence of sexual diversity. Readings include monographs and primary sources.

4-5 units, not given this year

HISTORY 333C. Two British Revolutions
(Same as HISTORY 233C) Current scholarship on Britain,1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II.

4-5 units, not given this year

HISTORY 333E. From the Left Hegelians to Freud: Introduction to Late Modern Intellectual History
(Same as HISTORY 233E) Ever since the Napoleonic Wars, European culture, society and politics have experienced a series of dramatic transformations, changes that unleashed a myriad of intellectual theories and debates. Focuses on the nineteenth century, the age of grand theories such as Liberalism, Positivism, Nationalism, Socialism, and Marxism and examines them historically. Readings include French Utopian Socialists and members of the Russian intelligentsia, J.S. Mill, Marx, Durkheim, Weber, Freud, and others.

4-5 units, Win (Dubnov, A)

HISTORY 333K. The Invention of the Modern Republic
(Same as HISTORY 233K) Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution.

4-5 units, not given this year

HISTORY 335. History of European Law, Medieval to Contemporary
(Same as HISTORY 135) From the fall of the Roman Empire to the establishment of the EU. How law changed over time. Sources and nature of law, organization of legal systems, and relationships between law and society, law and lawmaker, law and the legal professions.

4-5 units, Win (Herzog, T)
HISTORY 336. Modern France
(Daughton)
4-5 units, not given this year

HISTORY 336B. The Idea of Society
(Same as HISTORY 236B) Classic texts in social theory from the seventeenth century to the present. Readings include Locke, Smith, Hegel, Comte, and Durkheim, and Weber.
4-5 units, Win (Baker, K; Sheehan, J)

HISTORY 336D. Cold War Europe
(Same as HISTORY 236D) Much more than a military and diplomatic confrontation, the Cold War was lived experience in Europe - shaping politics, society, culture and personal identity. Beginning at the end of World War II, traces the continent's division into eastern and western blocs, and ends with the fall of the Iron Curtain. Sources include memoirs, propaganda, novels, and film, as well as new scholarship on the Cold War.
4-5 units, Spr (Sheffer, E)

HISTORY 336E. Violence in History and Theory
Methodological challenges associated with defining and analyzing violence in late-19th- and 20th-century contexts. How people witnessed, coped with, and survived violent episodes. Cases of state violence, ethnic and religious conflict, warfare, genocide, and decolonization. The notion of everyday suffering in the contemporary world. Sources include anthropology, sociology, and history.
3-5 units, not given this year

HISTORY 337. The Holocaust
(Same as HISTORY 237, JEWISHST 183, JEWISHST 383) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s, WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.
4-5 units, Aut (Zimmerstein, S)

HISTORY 337C. Street History: Learning the Past in School and Out
(Same as EDUC 356) Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?
3-5 units, not given this year

HISTORY 338A. Graduate Colloquium in Modern British History, Part I
Influential approaches to problems in British, European, and imperial history. The 19th-century British experience and its relationship to Europe and empire. National identity, the industrial revolution, class formation, gender, liberalism, and state building. Goal is to prepare specialists and non-specialists for oral exams.
4-5 units, not given this year

HISTORY 338B. Modern Britain, Part II
Themes include empire and racism, the crisis of liberalism, the rise of the welfare state, national identity, the experience of total war, the politics of decline, and modernity and British culture.
4-5 units, not given this year

HISTORY 339D. Capital and Empire
(Same as HISTORY 239D) Can empire be justified with balance sheets of imperial crimes and boons, a calculus of racism versus railroads? The political economy of empire through its intellectual history from Adam Smith to the present; the history of imperial corporations from the East India Company to Wal-mart; the role of consumerism; the formation of the global economy; and the relationship between empire and the theory and practice of development.
4-5 units, Spr (Satia, P)

HISTORY 339F. Empire and Information
(Same as HISTORY 239F) How do states see? How do they know what they know about their subjects, cities, economies, and governments? How does knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, cultural schemata, and intelligence systems, to render geographies and social bodies legible, visible, and governable.
4-5 units, not given this year

HISTORY 339H. Modern European History in a Global Age
How scholars can write the history of modern Europe in a way that integrates global and transnational perspectives. Discussed the methodological challenges and merits of various approaches and reviews relevant theoretical and interdisciplinary models for how this can best be done. Topics include globalization, migration, internationalism, colonialism, post-colonialism, modern warfare, and the media.
4-5 units, not given this year

HISTORY 341A. The Emergence of Medicine: The Middle Ages and the Renaissance
How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. Students are required to attend the concurrent lectures of HISTORY 141A.
4-5 units, not given this year

HISTORY 342. Darwin in the History of Life
Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils; the discovery of deep time and uniformitarian geology; debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism; the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-devo, neocatastrophism, and the new technological frontier of biominery. Attendance at the lectures of HISTORY 142 is required.
4-5 units, Spr (Proctor, R)

HISTORY 342G. Einstein: Science, Technology, and Culture
(Same as HISTORY 242G) Explores how Albert Einstein, a theoretical physicist who dealt with highly abstruse matters, could come to be named the Person of the Century. In addition to the specifics of Einstein's life and work, topics will include the origins and reception of scientific ideas, the nature of scientific revolutions, science in popular culture, nationalism vs. internationalism in science, science and war, debates over the nature of reality, and the quest for the theory of everything.
4-5 units, Win (Lagerstrom, L)

HISTORY 343C. 18th-Century Colonial Science and Medicine
(Same as HISTORY 243C) Explores the global exchange of knowledge, technologies, plants, peoples, disease, and medicines. Colonial sciences and medicines were important militarily and strategically for positioning emerging nation states in global struggles for land and resources. Considers primarily French, British, and Dutch in the West Indies, but also takes examples from Iberian, Jesuit, and other traditions in China and India. Readings treat science and medicine in relation to voyaging, colonialism, slavery, plants, and environmental exchange.
4-5 units, Spr (Schiebinger, L)

HISTORY 343G. Tobacco and Health in World History
(Same as HISTORY 243G) 4-5 units, Aut (Proctor, R)

HISTORY 344. Gender in Science, Medicine and Engineering
(Same as HISTORY 144) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What are the efforts underway globally to transform science, medicine, and engineering into fields where women can flourish? How have science and medicine studied and defined males and females? Can gender analysis spark creativity in human knowledge?
4-5 units, not given this year

HISTORY 345A. Africa in the Era of the Slave Trade
The slave trade, including the trans-Saharan, Indian Ocean, and trans-Atlantic trades, constituted nearly a millennium of interaction with the wider world and set in motion transformations in African societies, politics, and cultures. Topics include the debates about slavery in Africa, the impact of the slave trade on African
societies, state formation, economic change, religious change, and household change in the period before the scramble for Africa in the late 19th century.

4-5 units, Win (Roberts, R)

HISTORY 345B. African Encounters with Colonialism
4-5 units, not given this year

HISTORY 346. The Dynamics of Change in Africa
(Same as AFRICAST 301A, POLISCI 246P, POLISCI 346P)
Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa’s engagement with globalization.

4-5 units, Win (Weinstein, J)

HISTORY 347E. Health and Society in Africa
(Same as HISTORY 245E) The history of disease, therapeutic and diagnostic systems, and the definition of health in precolonial, colonial, and postcolonial Africa. The social and political histories of specific epidemics, including sleeping sickness, influenza, TB, mental illness, and AIDS. The colonial contexts of epidemics and the social consequences of disease.

4-5 units, not given this year

HISTORY 348D. Law and Colonialism in Africa
(Same as HISTORY 245G) Law in colonial Africa provides an opportunity to examine the meanings of social, cultural, and economic change in the anthropological, legal, and historical approaches. Court cases as a new frontier for the social history of Africa. Topics: meanings of conflicts over marriage, divorce, inheritance, property, and authority.

4-5 units, Spr (Roberts, R)

HISTORY 351A. Core in American History, Part I
4-5 units, not given this year

HISTORY 351B. Core in American History, Part II
4-5 units, Aut (Winterer, C)

HISTORY 351C. Core in American History, Part III
4-5 units, not given this year

HISTORY 351D. Core in American History, Part IV
4-5 units, Win (White, R)

HISTORY 351E. Core in American History, Part V
Required of all first-year United States History Ph.D. students.

4-5 units, Spr (Camarillo, A)

HISTORY 351F. Core in American History, Part VI
Required of all first-year Ph.D. students in U.S. History.

4-5 units, not given this year

HISTORY 352B. History of American Law
(Same as LAW 318.) Modern history of American law, legal thought, legal institutions and the legal profession. Topics include law and regulation of corporate organizations and labor relations in the age of enterprise, law of race relations in the South and North, development of classical legalism, critiques of classical legalism, modern administrative state, organized legal profession, New Deal legal thought and legislation, legal order of the 50s, expansion of enterprise liability, civil rights movements from 1940, rights revolution of the Warren Court and Great Society.

5 units, Spr (Friedman, L)

HISTORY 353D. Approaches to American Legal History
(Same as LAW 651.) Legal history may once have been primarily devoted to exploring legal doctrines and key judicial opinions, and thus to be of interest mainly to legal scholars and lawyers. Now, the best writing in legal history resembles historical writing more generally, and the study of legal ideas and practices is increasingly integrated with social, intellectual, cultural, and political history. Examines recent writings in American legal history, ranging broadly across time and space to ask how the field reflects developments in historical writing more generally, and how the use of legal materials affects our understanding of major aspects of American history.

4-5 units, not given this year

HISTORY 355D. Racial Identity in the American Imagination
(Same as AFRICAAM 255, AMSTUD 255D, CSRE 255D, HISTORY 255D) Major historical transformations shaping the understanding of racial identity and how it has been experienced, represented, and contested in American history. Topics include: racial passing and racial performance; migration, immigration, and racial identity in the urban context; the interplay between racial identity and American identity; the problems of class, gender, and sexuality in the construction of racial identity. Sources include historical and legal texts, memoirs, photography, literature, film, and music.

4-5 units, Win (Hobbs, A)

HISTORY 356. U.S.-China Relations: From the Opium War to Tiananmen
(Same as HISTORY 256) The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past.

4-5 units, not given this year

HISTORY 358. Topics in the History of Sexuality: Sexual Violence
(Same as AMSTUD 258, CSRE 192E, HISTORY 258) Recent historical interpretations of sexual violence, with particular attention to the intersections of gender and race in the construction of rape, from early settlement through the twentieth century. Topics include the legal prosecution of rape in Early America; the racialization of rape in the U.S.; lynching and anti-lynching in the U.S.; and feminist responses to sexual violence.

4-5 units, not given this year

HISTORY 360. California's Minority-Majority Cities
(Same as CSRE 260, HISTORY 260) Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center).

4-5 units, Spr (McKibben, C)

HISTORY 362G. The Pivotal Decade in U.S. History: 1960's or 1970's?
(Same as HISTORY 262G) Which had more lasting impact, the civil war of the 1960s or the conservative revolt of the 1970s? Should the 1970s supersede the 1960s as a pivotal moment when something happened of considerable importance to historians? Considers this debate of the decades comparatively and thematically, addressing topics including civil rights, foreign policy, electoral politics, popular culture, law, economics, labor, and social movement organizing.

4-5 units, Aut (Sharadellati, L)

HISTORY 363G. History Through a Life: The Allure of American Biography
(Same as HISTORY 263G) Considers the possibilities and limitations of exploring U.S. history through the genre of biography. Is a single life too narrow to explain why and how pivotal events in U.S. history, such as war, economic depression, social revolution, unfold? Or can one life illuminate the complexity of historical shifts? Readings will span U.S. history, exploring topics such as labor and racial civil rights, science and culture, women and sexuality, transnationalism and diplomacy, and presidential politics. The craft of biography will be considered alongside biographical subjects.

4-5 units, Spr (Sharadellati, L)

HISTORY 365. Writing Asian American History
(Same as HISTORY 265) Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.

5 units, not given this year

HISTORY 366B. Immigration Debates in America, Past and Present
(Same as CSRE 166B, HISTORY 166B) Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-
building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America.

3-5 units, Win (McKibben, C), Sum (Staff)

HISTORY 368E. American Foreign Policy and International History since 1941
(Same as AMSTUD 268E, HISTORY 268E) Major events and interpretations from WW II to the war in Iraq. Issues of race, expansionism and power; nuclear weapons; and war.
4-5 units, Spr (Bernstein, B)

HISTORY 370. Graduate Colloquium on Colonial Latin American History
Sixteenth to nineteenth centuries. Indigenous cultures. The arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations.
4-5 units, not given this year

HISTORY 371. Graduate Colloquium: Explorations in Latin American Social History
(Same as HISTORY 470) How to use primary sources such as government records, estate inventories, and parish records for social history.
4-5 units, not given this year

HISTORY 372B. Frontiers of Iberian and Latin American Culture and History
(Same as HISTORY 272B, ILAC 272B, ILAC 372B) Analyzes the construction and deconstruction of communities and their internal and external frontiers in Iberia and Ibero-America from the early modern period to the early twentieth century by observing both historical and cultural artifacts (historical documents, novels, bibliography, etc.). Topics: the coming of nations, the making of state (or national) territory, the role assigned or taken on by immigrants, minorities and, in the American case, natives, and the persistence of areas now called borderlands or of groups now assigned to such (indeterminate) locations.
3-5 units, Aut (Surullo, L; Herzog, T)

HISTORY 373A. The European Expansion
(Same as HISTORY 273) The relationship between European monarchies and their colonial domains from the 16th-18th centuries. Reasons for expansion, methods, and results. Case studies include the Spanish, Portuguese, Dutch, French, and English domains in Africa, Asia, and the Americas. Readings include primary and secondary sources.
4-5 units, not given this year

HISTORY 375G. Religion in Colonial Latin America and the Iberian World
(Same as HISTORY 275G) Examines the spiritual conquest of Latin America, the gap between ideal and lived behavior, and the nature of personal/shared experiences of piety by looking at instances of forced conversion, catechism and sacraments, mysticism and apparitions, funerary rituals, baroque piety, witchcraft, and ideas about marriage, sexuality, and religious tolerance.
4-5 units, Aut (Tortorici, Z)

HISTORY 376E. Gender and Sexuality in Early Modern Iberian World
(Same as HISTORY 276E) Examines major theoretical approaches, methodological developments, and debates that have shaped the history of sexuality. We will use criminal/Inquisition cases and confessional manuals to better understand gender and sexuality in the early modern Iberian world. Focuses on European/African/indigenous conceptions of gender, marriage and hierarchy, witchcraft and popular religious practices, convent life and mysticism, abortion and infanticide, gendered violence, solicitation, sodomy and bestiality, and the punishments meted out for illicit acts.
4-5 units, Spr (Tortorici, Z)

HISTORY 378A. The Logic of Authoritarian Government, Ancient and Modern
(Same as POLISCI 346S) If authoritarianism is less economically efficient than democracy, and if authoritarianism is a less stable form of political organization than democracy, then why are there more authoritarian governments than democracies? To address this paradox, focus is on theoretical and empirical literature on authoritarian governments, and related literatures on the microeconomic analysis of property rights and credible commitments.
3 units, not given this year

HISTORY 378E. Political Economy of Development
(Same as POLISCI 440B) Required of Political Science Ph.D. students with comparative politics as a first or second concentration; others by consent of the instructor. The origins of political and economic institutions and their impact on long run outcomes for growth and democracy. Emphasis is on the analysis of causal models, hypothesis testing, and the quality of evidence.
3 units, Win (Haber, S)

HISTORY 379. Latin American Development: Economy and Society, 1800-2000
(Same as HISTORY 279) The newly independent nations of Latin America began the 19th century with economies roughly equal to, or even ahead of, the U.S. and Canada. What explains the economic gap that developed since 1900? Why are some Latin American nations rich and others poor? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice.
4-5 units, not given this year

HISTORY 381. Economic and Social History of the Modern Middle East
(Same as HISTORY 281) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market are combined with possible case studies of Egypt, Iraq, and Palestine.
4-5 units, Aut (Beinin, J)

HISTORY 381B. Modern Egypt
(Same as HISTORY 281B) From the mid-nineteenth century to the present. Topics: European imperialism, the political economy of cotton, rise of nationalism, gender and the nation, minorities, the coup of 1952, positive neutralism and the Cold War, and the neoliberal reconstruction of Egypt.
4-5 units, Spr (Beinin, J)

HISTORY 382. The United States and the Middle East since 1945
(Same as HISTORY 282) Since the end of WW II, U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel. Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself?
4-5 units, not given this year

HISTORY 383. The New Global Economy, Oil, and Islamic Movements in the Middle East
(Same as HISTORY 283) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market combined with case studies of Egypt, Iraq, and Palestine.
4-5 units, not given this year

HISTORY 384F. Empires, Markets and Networks: Early Modern Islamic World and Beyond, 1500-1800
(Same as HISTORY 284F) Focuses on political regimes, economic interactions and sociocultural formations in the early modern
Balkans and Middle East to Central and South Asia. Topics include complex political systems of the Ottoman, Safavid and Mughal empires; experiences of various Muslim, Christian, Jewish and Hindu, as well as urban, rural and nomadic communities; consolidation of transregional commerce and cultural exchange; incorporation of the Islamic world in the global economy; transimperial networks of the Muslim and Non-Muslim merchants, scholars and sultans.

4-5 units, Spr (Yavcioglu, A)

HISTORY 385A. Core in Jewish History, 17th-19th Centuries
(Same as JEWISHST 385A)
4-5 units, Aut (Rodrigue, A)

HISTORY 385B. Core in Jewish History, 20th Century
(Same as JEWISHST 385B)
4-5 units, Win (Zipperstein, S)

HISTORY 385C. Jews in the Modern World
(Same as HISTORY 185B, JEWISHST 185B) (Same as HISTORY 85B. History majors and others taking 5 units, register for 185B)
Topics include the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in Western Europe; the transformation of Jewish life in Eastern Europe under the authoritarian Russian regime; colonialism in the Sephardic world; new ideologies (Reform Judaism and Jewish nationalism); the persistence and renewal of antisemitism; the destruction of European Jewry under the Nazis; new Jewish centers in the U.S.; and the State of Israel.

5 units, Aut (Zipperstein, S)

HISTORY 387D. Tel Aviv: Site, Symbol, City
(Same as HISTORY 287D, JEWISHST 287D, JEWISHST 387D)
Tel Aviv, the first Israeli/Hebrew city, from a cultural history perspective combining high and low cultural artifacts, examining the symbolic constructions of the city as a site of Hebrew modernism and postmodernism. Topics include: the utopian origins and the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv’s coffee houses; the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; the effects of contemporary globalization and the reconstruction of Tel Aviv as the symbolic site of Israeli post-nationalism. Sources include art, cinema, and literature, pop music and archival materials from Green Library’s Eliahu Robinson Collection. Hebrew reading knowledge, although helpful, is not required.

4-5 units, Spr (Dubnov, A)

HISTORY 387E. Jewish Intellectuals and the Crisis of Modernity
(Same as HISTORY 287E, JEWISHST 287E, JEWISHST 387E)
Intellecual responses of Jewish political thinkers, historians and authors to the age of extremes. Readings include Theodor Adorno, Herbert Marcuse, Hannah Arendt, Leo Strauss, Karl Popper, Isaiah Berlin, Tony Judt, and George Steiner. Analyses of enlightenment, nationalism, socialism and totalitarianism; their life stories, and their direct and indirect role in creating a transatlantic political discourse in postwar years. Contextualizes historically the fundamental features of Jewish intellectual activity after 1945. No prior knowledge of political science, philosophy and/or Jewish studies is required.

4-5 units, Spr (Dubnov, A)

HISTORY 388. Palestine and the Arab-Israeli Conflict
(Same as HISTORY 288, IPS 388, JEWISHST 288, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Benin)

4-5 units, not given this year

HISTORY 390. Han Chinese and the Global White: The Production of Ethnoracial Majorities, East and West
4-5 units, not given this year

HISTORY 390A. Major Topics in Modern Chinese History: Qing/Republican Transition
Continuities and discontinuities in society, economy, politics, culture, and thought during the transition from the Qing dynasty to the republic. May be repeated for credit.

4-5 units, not given this year

HISTORY 390G. Dilemmas of Modernity in Twentieth Century Japan
(Same as HISTORY 290G) Introduction to the historiography of twentieth century Japan and thereby a basis for further research. Explores the Japanese experience of the twentieth century in its local and regional context and explains Japan as a compelling case study of both the broader logic and process of modernization and the tensions endemic to modernity that are thereby produced.

4-5 units, Spr (Di Mare, F)

HISTORY 391A. Archaeology and Modernity in Asia: The Excavation of Ancient Civilizations in Modern Times
(Same as HISTORY 291A) The interplay in Asia between antiquity and modernity, civilization and nation state, and national versus colonial science. The recent excavation of artifacts and places associated with Asian civilization such as the terracotta warriors in China and Angkor Wat in Cambodia. How Asian states have grappled with modernity and colonialism as they simultaneously dug up their ancient pasts.

4-5 units, not given this year

HISTORY 391B. The City in Imperial China
(Same as HISTORY 291B) The evolution of cities in the early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative cases from European history. Readings include primary and secondary sources, and visual materials.

3-5 units, not given this year

HISTORY 391C. Early Imperial China
The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, accommodation of religious communities, assimilation and collaboration, local intermediaries, and class and empire. Regional focus is East Asia; also cases from other colonial situations.

4-5 units, not given this year

HISTORY 391E. Maps, Borders, and Conflict in East Asia
(Same as HISTORY 291E) The roles and problems of collaboration in the rise, sustenance, and fall of empires. Themes include conceptual definitions of collaboration and empire, collaboration of traditional elites, accommodation of religious communities, assimilation and collaboration, local intermediaries, and class and empire. Regional focus is East Asia; also cases from other colonial situations.

4-5 units, not given this year

HISTORY 391E. Maps, Borders, and Conflict in East Asia
(Same as HISTORY 291E) The nature of borders and border conflicts in N.E. Asia from the 17th to the early 20th century. Focus is on contact zones between China, Russia, Korea, and Japan. The geopolitical imperatives that drove states to map their terrain in variable ways. Cultural, diplomatic, and imperial contexts. European pressures and contributions to E. Asian cartography; the uses of maps in surveillance, diplomacy, identity, and war. Student projects focus on a contested border zone.

4-5 units, not given this year

HISTORY 392. The Two Koreas
(Same as HISTORY 292) Examines major themes and scholarly works to understand the origins, outbreak, and consequences of the Korean War. One focus will be the division of Korea into ROK and DPRK and their subsequent developments. Themes include World War II in East Asia; Korean communist movements during Japanese colonial rule; the Cold War in East Asia; the roles of the U.S., China, and USSR in the Korean War; the ideas of key North and South Korean leaders, and the consolidation of the two Koreas after the Korean War.

4-5 units, not given this year

HISTORY 393. Law and Society in the Early Imperial Period
Connections between legal and social history. Ideology and political imperatives that drove states to map their terrain in variable ways. Cultural, diplomatic, and imperial contexts. European pressures and contributions to E. Asian cartography; the uses of maps in surveillance, diplomacy, identity, and war. Student projects focus on a contested border zone.

4-5 units, not given this year

HISTORY 393D. Japanese empire in Asia, Asia in Japan
(Same as HISTORY 293D) How Japan and Asia mutually shaped
each other in the late 19th and 20th centuries. Focus is on Japanese imperialist in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia.

**COURSES OF INSTRUCTION**

**HISTORY 392E. The Historical Roots of Modern East Asia**  
(Same as HISTORY 92A) Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific. China was in social and political upheaval, and Japan had begun its march to empire.

4-5 units, not given this year

**HISTORY 392F. Traditional Korea: History and Culture**  
(Same as HISTORY 292F) Korea before 1800 and how iconic features of Korean tradition were created and reinvented. Themes include Korea's ancient kingdoms, the aristocracy and military in the Koryo dynasty, the print culture and Korean alphabet, ideological and religious, the social status system and the life of women, the kingship and court culture of the Choson dynasty, and Korea's place in premodern East Asia. The modern and contemporary debates.

4-5 units, not given this year

**HISTORY 393. Frontier Expansion and Ethnic Statecraft in the Qing Empire**  
The legacy of the Qing dynasty in the territorial boundaries claimed by the People's Republic of China including the frontier zones that lie outside China proper. How the Qing acquired and ruled its frontier territories. Growth and migration of the Han Chinese population. How the dynasty's Manchu rulers managed ethnic difference. Consequences of Qing expansionism and ethnic statecraft for subject peoples and for the dynasty itself. At what point and by what processes did the Qing become China.

4-5 units, Spr (Sommer, M)

**HISTORY 393A. State, Society, and Economy in Qing Dynasty China**  
Historical scholarship on China during the Qing period, including the gentry, civil examinations, and the debate about social mobility; merchants, cities, and the debate about civil society/public sphere; taxation, local security, and famine relief; heterodox, collective violence, and rebellion; and rival approaches (neo-Malthusian, neo-conservative, and neo-Marxist) to understanding the high Qing economy.

4-5 units, not given this year

**HISTORY 393B. Homosexuality in Historical and Comparative Perspective**  
(Same as HISTORY 293B) Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S.

4-5 units, not given this year

**HISTORY 393C. Late Imperial China**  
A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

4-5 units, Spr (Sommer, M)

**HISTORY 393D. Empire and Cosmopolitanism: Traveling Ideas in Global Political Thought**  
(Same as HISTORY 293D)  
4-5 units, not given this year

**HISTORY 395B. Early Modern Japan: Revisiting the Cultural Turn**  
4-5 units, Aut (Wigen, K)

**HISTORY 395F. Race and Ethnicity in East Asia**  
(Same as ASNAMST 295F, HISTORY 295F) Historical, cultural, political and theoretical perspectives. Commonly misunderstood as an ethnically homogeneous country, the People's Republic of China is home to 55 officially recognized minority groups, many of whom inhabit the strategic border regions of the country. How similar assumptions of ethnic and racial homogeneity in Taiwan, Japan, and Korea are being reexamined by scholars in disciplines including anthropology, history, and political science.

4-5 units, not given this year

**HISTORY 395J. Gender and Sexuality in Chinese History**  
4-5 units, not given this year

**HISTORY 396D. Modern Japan**  
Introduces students to the major historical problems and historiographic trends in the study of modern Japan from the Meiji period to the present. Themes include approaches to late Meiji culture and politics, the formation of imperial subjects and citizens, agrarian society and politics, gender in modern Japan, empire and modernity, total war and transwar state and society, U.S. occupation, and postwar Japan.

4-5 units, not given this year

**HISTORY 398. History of Modern China**  
Major historical transformations including the decline of the last imperial dynasty, the formation of the first Chinese republic, WW II, the rise of Communism, China under Mao, post-Mao reforms, and the Beijing Olympics of 2008.

4-5 units, Win (Mullaney, T)

**HISTORY 398E. China-Taiwan-U.S. Triangular Relations from WW II through the Cold War**  
(Same as HISTORY 298E) The historical origins and evolution of the complex relations between China, Taiwan, and the U.S. Topics include Stilwell and his conflict with Chiang Kai-shek, the Chinese Civil War, the loss of China or the loss chance in China, the 228 Incident, the Korean War, Taiwan's undetermined status, Kinmen Bombardment, contests over China's UN seat, Nixon's visit to China, Taiwan's economic take-off and democratization under Chiang Ching-kuo. Emphasis is on extensive reading of declassified archival sources and new interpretations.

4-5 units, Aut (Staff)

**HISTORY 399A. Design and Methodology for International Field Research**  
(Same as HISTORY 299X) Problems involved in research abroad: ethical issues; safety; security and conduct; human subjects protocol. Methodologies of research: interviewing, networking, case studies, participant observation, large surveys.

1 unit, Spr (Kollmann, N; Roberts, R)

**HISTORY 399D. Tooling Up for Digital Humanities**  
(Same as ENGLISH 299D, ENGLISH 399D, HISTORY 299D) What are the digital humanities? The twenty-first century presents new opportunities in the humanities, such as unprecedented access to millions upon millions of digitized sources along with powerful technological tools to study those sources. Yet it also raises new challenges, such as the responsible and effective use of technology, and defining the nature of digital scholarship and communication. This workshop offers an introduction to fundamental concepts, methods, and issues within the growing field of digital humanities, including managing your online identity, digitizing sources, managing databases, text mining, spatial analysis, visualization, and pedagogy.

1 unit, not given this year

**HISTORY 399W. Graduate Directed Reading**  
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**HISTORY 401A. Spatial History: Concepts, Methods, Problems**  
Technical training in GIS, with modules taught by Stanford Spatial History Lab staff; conceptual work in the use of these techniques in spatial historical analysis. Students develop their own spatial history projects and produce beta versions of dynamic visualizations.

4-5 units, Win (Frank, Z)

**HISTORY 401B. Spatial History, Part II**  
Prerequisite: 401A.

4-5 units, not given this year

**HISTORY 406. Graduate Research Seminar on Colonial Law**  
Prerequisite: HISTORY 306G.
Medicine, and Culture
(Same as HISTORY 244C) The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic.
4-5 units, not given this year

HISTORY 445A. Research Seminar in African History
Primary sources such as government records and missionary archives. Students present work in progress. Prerequisite: consent of instructor.
4-5 units, not given this year

HISTORY 445B. Research Seminar in African History
Primary sources such as government records and missionary archives. Students present work in progress. Prerequisite: consent of instructor.
4-5 units, not given this year

HISTORY 446A. Grad Research Seminar: African Nationalism, Pan-Africanism & Beyond
African intellectual, political, social and cultural institutions confronting issues of sovereignty, authority, heterarchy, and power during the 19th and 20th centuries.
4-5 units, Win (Hanretta, S)

HISTORY 446B. Grad Research Seminar: African Nationalism, Pan-Africanism and Beyond
Prerequisite: 446A and consent of instructor.
4-5 units, Spr (Hanretta, S)

HISTORY 448A. African Societies and Colonial States
(Same as HISTORY 248S) The encounter between African societies and European colonialism in the colony or region of their choice. Approaches to the colonial state; tours of primary source collections in the Hoover Institution and Green Libraries. Students present original research findings and may continue research for a second quarter.
4-5 units, not given this year

HISTORY 452A. Graduate Research Seminar: American Cultural and Intellectual History, 1750-1900
Major methods and issues. Goal is to produce a research paper based on primary sources suitable for inclusion in a doctoral dissertation or submission to a peer-reviewed scholarly journal. Topics include: compiling primary and secondary source bibliographies; primary and secondary source issues; and how to articulate an argument. Students produce a prospectus by the end of Winter Quarter. Spring Quarter meetings to discuss outlines, drafts, and problems, culminating in presentation of papers in scholarly conference format.
4-5 units, Win (Winterer, C)

HISTORY 452B. Graduate Research Seminar: American Cultural and Intellectual History, Part 2
Prerequisite: HISTORY 452A
4-5 units, Spr (Winterer, C)

HISTORY 461A. Research Seminar on the Histories of Women, the Family, and Sexuality
Research design, research methods, and historical writing on topics in the histories of women, the family, or sexuality in the U.S. Prepares graduate students for dissertation work. Workshop model involves exchanging preliminary prospectus, outline, writing sample, and draft for peer responses. Article-length original paper based on primary sources, to be completed by the end of Spring Quarter.
4-5 units, not given this year

HISTORY 461B. Research Seminar on the Histories of Women, the Family, and Sexuality, Part II
Prerequisite: 461A.
4-5 units, not given this year

HISTORY 464E. Research in History and Social Science
Education
(Same as EDUC 496) For doctoral students. Literature on historical learning and teaching and corresponding social sciences research designs, assessment, and curriculum evaluation.
3-5 units, not given this year
HISTORY 470. Graduate Colloquium: Explorations in Latin American Social History
(Same as HISTORY 371) How to use primary sources such as government records, estate inventories, and parish records for social history.
4-5 units, not given this year

HISTORY 470A. Graduate Research Seminar: Latin American Social History
Students will write a seminar paper. Prerequisite: HISTORY 371.
4-5 units, not given this year

HISTORY 481. Research Seminar in Middle East History
(Same as HISTORY 287S, JEWISHST 287S, JEWISHST 481)
Student-selected research topics.
4-5 units, not given this year

HISTORY 481A. Research Seminar in Middle East History
4-5 units, Sum (Staff)

HISTORY 486. Research Seminar in History of the Ottoman Empire
Focuses on some of the major debates and themes of Ottoman studies under the light of current scholarship, major reference sources, and primary material in multiple genres (archival, literary, visual, etc.) and multiple languages (Turkish, Arabic, Greek, etc.) of the Ottoman world. Students are expected to write research seminar papers based on primary sources.
4-5 units, Spr (Yaycioglu, A)

HISTORY 486A. Graduate Research Seminar in Jewish History
(Same as JEWISHST 486A)
4-5 units, Win (Zipperstein, S)

HISTORY 486B. Graduate Research Seminar in Jewish History
(Same as JEWISHST 486B) Prerequisite: HISTORY 486A.
4-5 units, Spr (Zipperstein, S)

HISTORY 495A. Qing Legal Documents
How to use Qing legal documents for research. Winter: sample documents that introduce the main genres including: the Qing code and commentaries; magistrates’ handbooks and published case collections; and case records from Chinese archives. Spring: class meets occasionally; students complete research papers. Prerequisite: advanced reading ability in Chinese.
4-5 units, not given this year

HISTORY 497A. Maps and Gazetteers as Sources for East Asian History
For graduate students of early modern or modern East Asia. Includes weekends workshop on Chinese historical GIS with Harvard's Peter Bol. Students work with the Stanford Spatial History Lab to develop analytical techniques. Prerequisite: background in GIS.
4-5 units, not given this year

HISTORY 497B. Maps and Gazetteers as Sources for East Asian History, Part 2
Prerequisite: HISTORY 497A.
4-5 units, not given this year

HISTORY 498C. Japanese Colonial Archives
First part of a two quarter sequence. Graduate seminar on conducting research in modern Japanese history. Focus is on Japanese imperialism and colonialism in Asia, especially Korea. Different types of archives, from national and research libraries to online databases, and methods of research including oral history. Primary sources include government publications, classified police records, and media sources.
4-5 units, not given this year

HISTORY 499X. Graduate Research
Units by arrangement. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY 802. TGR Dissertation
Units by arrangement.
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY AND PHILOSOPHY OF SCIENCE (HPS) COURSES

UNDERGRADUATE COURSES IN HISTORY AND PHILOSOPHY OF SCIENCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

HPS 60. Introduction to Philosophy of Science
(Same as PHIL 60) 20th-century views on the nature of scientific knowledge. Logical positivism and Popper; the problem of induction; Kuhn, Feyerabend, and radical philosophies of science; subsequent attempts to rebuild moderate empiricist and realist positions. GER:DB-Hum
5 units, Win (Ryckman, T)

(Same as PHIL 61) Galileo's defense of the Copernican world-system that initiated the scientific revolution of the 17th century, led to conflict between science and religion, and influenced the development of modern philosophy. Readings focus on Galileo and Descartes. GER:DB-Hum
5 units, not given this year

HPS 154. The History of Scientific Methods, Pythagoras to Popper
(Same as PHIL 163H) History of scientific methods and associated science from ancient Greece to the 20th century. Case studies include Pythagoras, Plato, and Euclid; Aristotle; medieval science; scientific Renaissance of the 1540s; methodological clashes involving the Church, Galileo, Bacon, and Descartes; Newton; Faraday; Darwin; rise of statistical methods; beginnings of modern physics; Popper. The mutual influences of method and practice. What does and does not qualify as science. Recommended: background in history, philosophy, or a technical field such as mathematics, science, or engineering. GER:DB-Hum
4 units, Spr (McCaskey, J)

HPS 158. The Social History of Mental Illness
An Exploration of the variety of meanings of mental illness in the past, and the diagnostic, therapeutic, cultural and policy challenges historically posed by mental illness. The course focuses on the U.S. but is not limited to it. How has mental illness been defined in history? How has the mind been medicalized and managed? Topics include the rise of institutions for the mentally ill, the growth of the psychiatric profession and the relationship between psychiatry, deviance and anti-psychiatry, and gender and psychiatric norms. GER:DB-SocSci
5 units, Win (Horn, M)

HPS 199. Directed Reading
(Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN HISTORY AND PHILOSOPHY OF SCIENCE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

HPS 299. Graduate Individual Work
May be repeated for credit. (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HUMAN BIOLOGY (HUMBIO) COURSES

UNDERGRADUATE COURSES IN HUMAN BIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.
HUMBIO 2A. Genetics, Evolution, and Ecology
Introduction to the principles of classical and modern genetics, evolutionary theory, and population biology. Topics: micro- and macro-evolution, population and molecular genetics, bioinformatics, and ecology, emphasizing the genetics and ecology of the evolutionary process and applications to human populations. Required evening midterm, Monday, 7-9:00 PM. See syllabus for date. GER: DB-NatSci
5 units, Aut (Boggs, C; Durham, W; Francke, U)

HUMBIO 2B. Culture, Evolution, and Society
Introduction to the evolutionary study of human diversity. Hominid evolution, the origins of social complexity, social theory, and the emergence of the modern world system, emphasizing the concept of culture and its influence on human differences. Required evening midterm for 2B, Monday, 7-9:00 PM. See syllabus for date. GER: DB-NatSci
5 units, Aut (Klein, R; Wolf, A)

HUMBIO 3A. Cell and Developmental Biology
The principles of the biology of cells; principles of human developmental biology, biochemistry of energetics and metabolism, the nature of membranes and organelles, hormone action and signal transduction in normal and diseased states (diabetes, cancer, autoimmune diseases), drug discovery, immunology, and drug addiction. Prerequisite: college chemistry or completion of the HumBio chemistry lecture series during the fall quarter. Required evening midterm for 3A, Monday, 7-9:00 PM. See syllabus for date. GER: DB-NatSci
5 units, Win (Fuller, M; Kaiser, A; Nusse, R; Scott, M; Talbot, W)

HUMBIO 3B. Behavior, Health, and Development
Research and theory on human behavior, health, and life span development. How biological factors and cultural practices influence cognition, emotion, motivation, personality, and health in childhood, adolescence and adulthood. Required evening midterm, Monday, 7-9:00 PM. See syllabus for date. GER: DB-NatSci
5 units, Win (Lyons, D; Fernald, A)

HUMBIO 3Y. Practicum in Child Development
Practical experience at Bing Nursery School for 3.5 hours per week. Pre- or corequisite: 3B. (AU)
1 unit, Win (Peters, M)

HUMBIO 4A. The Human Organism
Organ system physiology; the principles of neurobiology and endocrinology, and the functions of body organs. The mechanisms of control, regulation, and integration of organ systems function. GER: DB-NatSci
5 units, Spr (Fernald, R; Heller, C)

HUMBIO 4B. Environmental and Health Policy Analysis
Connections among the life sciences, social sciences, public health, and public policy. The economic, social, and institutional factors that underlie environmental degradation, the incidence of disease, and inequalities in health status and access to health care. Public policies to address these problems. Topics include pollution regulation, climate change policy, biodiversity protection, health care reform, health disparities, and women’s health policy. GER: DB-NatSci
5 units, Spr (Gouldner, L; Baker, L)

HUMBIO 5. Human Origins
(Same as ANTHRO 6, ANTHRO 206) The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them. GER: DB-NatSci
5 units, not given this year

HUMBIO 21. Introduction to Brain and Behavior
(Same as BIO 20) Evolutionary principles to understand how the brain regulates behavior physiologically, and is also influenced by behavioral interactions. Topics include neuron function and structure, transmission of neural information, anatomy and physiology of sensory and motor systems, regulation of body states, the biological basis of learning and memory, and behavioral abnormalities. GER: DB-NatSci
3 units, alternate years, not given this year

HUMBIO 27. Traditional Chinese Medicine
The philosophy and history behind traditional Chinese medicine. Concepts such as Qi, Yin/Yang, meridians, Chinese organs, and the 5 elements. How these concepts are applied through techniques such as acupuncture, herbal medicine, Qi gong, and massage. How traditional Chinese medicine is understood from a scientific standpoint. Political and socioeconomic implications. Observation of an acupuncturist. Readings on the integration of Eastern and Western medicine and on traditional Chinese medicine.
1 unit, Spr (Goliam, B)

HUMBIO 82A. Qualitative Research Methodology
Goal is to develop knowledge and skills for designing and conducting qualitative research studies including purposes, conceptual contexts, research questions, methods, validity issues, and interactions among these facets. Each student designs a qualitative research study.
3 units, Win (Wolf, J), Spr (Wolf, J)

HUMBIO 82B. Advanced Data Analysis in Qualitative Research
For students writing up their own qualitative research. Students prepare a complete draft presenting their own qualitative research study including results, with reports drafted section by section, week by week. Class provides feedback, guidance, support.
3 units, Aut (Wolf, J)

HUMBIO 82Q. The Omnivore’s Dilemma - Or Is It?
(Same as ANTHRO 82Q) Stanford Introductory Seminar. The omnivore’s dilemma—making the right food choices from the vast number possible. The health implications of our food choices. Why we make these choices— the positive and negative influences of the food industry, research in nutritional science, and public health policies and the resulting confusion about what we should eat. Discussion-based class with readings including In Defense of Food by M. Pollan and primary reference materials. Introduction to the scientific literature in human nutrition.
3 units, Aut (Endemann, G)

HUMBIO 87Q. Women and Aging
(S,Sem) (Same as MED 87Q) Stanford Introductory Seminar. Preference to sophomores. Biology, clinical issues, social and health policies of aging; relationships, lifestyles, and sexuality; wise women and grandmothers. Sources include scientific articles, essays, poetry, art, and film. Service-learning experience with older women. Service Learning Course (certified by Haas Center). GER: EC-Gender
5 units, Spr (Winograd, C)

HUMBIO 90Q. Contemporary Issues in Human Experimentation
(S,Sem) (Same as MED 90Q) Stanford Introductory Seminar. Preference to sophomores. The guiding principles currently used to protect human subjects in terms of informed consent and protection of privacy; ethical issues relating to compensatory mechanisms for inherent risks; history of experimentation and at personal risk. The focus will be on everyday people who fought against injustices in approving such experimentation.
3 units, Aut (Constantinou, C)

HUMBIO 91Q. Neuroethology: The Neural Control of Behavior
(Sem) Stanford Introductory Seminar. Preference to sophomores. Animal behavior offers insights about evolutionary adaptations. The origins of the study of animal behavior and its development to the present. Discussion of original research papers. The use and misuse of parallels to observe animals in their natural habitat. GER: DB-NatSci
3 units, Aut (Fernald, R)

HUMBIO 96Q. Injustice, Advocacy and Courage: The Path of Everyday Heroes
(S,Sem) Stanford Introductory Seminar. This course will study the paradigm of people of courage, action and energy who have fought against injustice by advocating for causes against great odds and at personal risk. The focus will be on everyday people who have taken action, often at great personal risk, not for ambition, but because of their convictions and steadfast commitment to their
beliefs.
3 units, Win (Abrams, W)

HUMBIO 97Q, Sport, Exercise, and Health: Exploring Sports Medicine
(S,Sem) (Same as ORTHO 97Q) Stanford Introductory Seminar. Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.
3 units, Aut (Matheson, G), Win (Matheson, G), Spr (Matheson, G)

HUMBIO 99Q, Becoming a Doctor: Readings from Medical School, Medical Training, Medical Practice
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. For students considering medicine as a career. Goal is to acquaint students with medical school, training in medicine and surgery, and the practice of medicine and surgery. Topics include: how to pick a medical school and a residency; how medicine affects family life, especially children; the differences between surgical and medical specialties; the advantages and disadvantages among academic/teaching, pure research, group practice, HMO, hospital staff, or private practice; malpractice concerns; and financial considerations.
3 units, Aut (Zaroff, L)

HUMBIO 111. Human Dimensions of Global Environmental Change: Resilience, Vulnerability, and Environmental Justice
(Same as ANTHRO 173) The complexity of social and political issues surrounding global environmental change. Emphasis is on synergies precipitated by human-induced climatic change. Case studies and scenarios to explore the vulnerability and resilience in households, communities, regions, and nation-states most affected by extreme weather conditions. Their concerns, livelihood changes, and diverse responses of rural smallholders, indigenous communities, the state, and local and regional migrants. Central theme is environmental justice.
3 units, not given this year

HUMBIO 112. Conservation Biology
(Same as BIO 144) Principles and application of the science of preserving biological diversity. Topics: sources of endangerment of diversity; the Endangered Species Act; conservation concepts and techniques at the population, community, and landscape level; reserve design and management; conflict mediation, and if taken with ORTHO 97Q, a field trip and discussion component. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. GER: DB-NatSci
3-4 units, Win (Boggs, C; Launer, A)

HUMBIO 113. The Biologies of Humans and Plants
The biological interdependence of humans and plants, particularly the ways in which people have imposed selection pressures and ecological change on one another. Topics include: evolution and basic plant structure; plant characteristics and genetic variants allowing domestication; effects of plant domestication on human biology; plants in traditional and contemporary diets; and human influences on plant biology through genetic manipulation and environmental change. Class meetings center on discussing journal articles.
3 units, Aut (Preston, K)

HUMBIO 114. Environmental Change and Emerging Infectious Diseases
(Same as ANTHRO 177, ANTHRO 277) The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV. GER:DB-SocSci
3-5 units, Aut (Durham, W; Jones, J)

HUMBIO 116. Controlling Climate Change in the 21st Century
(Same as EARTHSYS 147, EARTHSYS 247) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems. GER: DB-NatSci
3 units, not given this year

HUMBIO 117. Conservation Medicine in Practice
(Same as ANTHRO 117A) Examination of the interconnectedness of the environment and human and animal health. Investigation of the ‘One World-One Health’ paradigm, by examining issues such as climate change and human health, ecological perturbation and infectious diseases, and the importance of new interdisciplinary approaches to combat disease emergence and spread. Seminars, from experts working in government, NGOs, public health, medicine and academia, will emphasize the importance of interdisciplinary approaches (medicine, epidemiology, anthropology, ecology, environmental science) in understanding health scenarios, and also upon the importance of using science and policy to improve public health.
4 units, Spr (Salkeld, D)

HUMBIO 118. Theory of Ecological and Environmental Anthropology
(Same as ANTHRO 90C) Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America. GER:DB-SocSci
5 units, Win (Bird, D)

HUMBIO 119. Demography: Health, Development, Environment
(Same as BIO 102) Demographic methods and their application to understanding and projecting changes in human infant, child, and adult mortality and health, fertility, population, sex ratios, and demographic transitions. Progress in human development, capabilities, and freedoms. Relationships between population and environment. Prerequisites: numeracy and basic statistics; Biology or Human Biology core; or consent of instructor. GER:DB-SocSci
3 units, Spr (Tuljapurkar, S)

HUMBIO 120. Health Care in America: An Introduction to U.S. Health Policy
Health policy and health care delivery from a historical and a current policy perspective. Introduces cost, quality, and access as measures of health system performance. Considers institutional aspects of health care reform.
4 units, Aut (Barr, D)

HUMBIO 120A. AMERICAN HEALTH POLICY
Issues in health care reform and the policy making process, the evolution of current systems, and theories underlying efforts for change. The national search for solutions to the problems of the uninsured, and the feasibility, options, and ramifications of alternative proposals for health care reform. Student presentations. Prerequisite: Human Biology core or equivalent, Human Biology 120, or consent of instructor.
3 units, Spr (Barr, D)

HUMBIO 121. Critical Issues in Child Health
Integrates picture of the physical and psychosocial health factors that result in a healthy child building on principles taught in the Human Biology core. Students apply basic human physiology to the physiology of the child to develop perspective on global pediatric health challenges and how the cultural context influences and defines the child living within it.
4 units, Aut (Adam, M), Spr (Adam, M)

HUMBIO 121E. Ethnicity and Medicine
(Same as FAMMED 244) Weekly lecture series. Linguistic, social class, and cultural factors that impact patient care. Culturally sensitive health care services and contemporary research issues involving minority and underserved populations. Topics include health care inequities and medical practices of African Americans,
Asians, Latinos, Native Americans, immigrants, and refugees in both urban and rural settings. Only students taking the course for 3 units may earn a letter grade.

1-3 units, Spr (Garcia, R)

HUMBIO 122. Beyond Health Care: Seeking Health in Society
(Same as PEDS 222) Available evidence at the national and cross-country level linking social welfare interventions and health outcomes. If and how non-health programs and policies could have an impact on positive health outcomes. Evaluation of social programs and policies that buffer the negative health impact of economic instability and unemployment among adult workers and their children. Examination of safety nets, including public health insurance, income maintenance programs, and disability insurance. Prerequisites: HUMBIO 4B or equivalent, and background in research methods and statistics.

3 units, Aut (Rodriguez, E)

HUMBIO 122M. Challenges of Human Migration: Health and Health Care of Migrants and Autochthonous Populations
(Same as PEDS 212) An emerging area of inquiry. Topics include: global migration trends, health issues/aspects of migration, healthcare and the needs of immigrants in the US, and migrants as healthcare providers: a new area of inquiry in the US. Class is structured to include: lectures lead by the instructor and possible guest speakers; seminar, discussion and case study sessions led by students.

3 units, Spr (Rodriguez, E)

HUMBIO 122S. Social Class, Race, Ethnicity, and Health
Examines health disparities in the U.S., looking at the patterns of those disparities and their root causes. Explores the intersection of lower social class and ethnic minority status in affecting health status and access to health care. Compares social and biological conceptualizations of race and ethnicity. GER:DB-SocSci, EC-AmerCul

4 units, Win (Barr, D)

HUMBIO 123. Obesity in America: Clinical and Public Health Implications
Interdisciplinary clinical, research, and policy approaches. The prevalence, predictors, and consequences of obesity and diabetes; biological and physiological mechanisms; clinical treatments including medications and surgery; and the relevance of behavioral, environmental, economic, and policy approaches to obesity prevention and control. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3-4 units, Win (Stafford, R; Rosas, L)

HUMBIO 124. Fat Nutrition and Current Health Concerns
Relationships between dietary fats and heart disease, cancer, obesity, diabetes, and fitness. Proposed benefits of omega-3 fats and antioxidants. Historical and economic influences on fat nutrition. Prerequisite: 3A; pre- or corequisite: 4A; preference to students who have completed 4A. Recommended: 130.

3 units, Spr (Endemann, G)

HUMBIO 125. Current Controversies in Women's Health
(Same as OBGYN 256) Interdisciplinary. Focus is on the U.S. Topics include: health research; bioethical, legal, and policy issues; scientific and cultural perspectives; social influences; environmental and lifestyle effects on health; and issues related to special populations. Guest lecturers; student debates. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:EC-Gender

2-3 units, Spr (Jacobson, M; Stefanick, M)

HUMBIO 126. Promoting Health Over the Life Course: Multidisciplinary Perspectives
Disease prevention and health promotion topics pertinent to different stages of the life span emphasizing healthy lifestyle and reducing risk factors in both individuals and communities. Focus is on scientific investigation, the application of behavioral science to risk reduction strategies, and the importance of health promotion as a social and economic imperative. Topics include: epidemiology of chronic diseases; social determinants of health, behavior change; obesity, nutrition, and stress; young adult, mid-life and aging health issues; health care delivery and public health system; workplace health programs; and environmental and international issues. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, Aut (Stefanick, M; Alles, W)

HUMBIO 127A. Community Health: Assessment and Planning I
Major determinants of health in a community. Working with community partners to identify health issues and plan programs and policies to prevent disease and promote health. Service learning component involving students in community health assessment techniques. Final grade given upon completion of HUMBIO 127B. Service Learning Course (certified by Haas Center). Prerequisite: 4B or equivalent, or consent of instructor.

4 units, alternate years, not given this year

HUMBIO 127B. Community Health: Assessment and Planning II
Continuation of 127A. Service learning course with emphasis on conducting community health assessment and planning projects in collaboration with community-based organizations. Service Learning Course (certified by Haas Center). Prerequisite: 4B or equivalent, 127A, or consent of instructor.

4 units, alternate years, not given this year

HUMBIO 128. Community Health Psychology
(Same as PSYCH 101) Social ecological perspective on health emphasizing how individual health behavior is shaped by social forces. Topics include: biobehavioral factors in health; health behavior change; community health promotion; and psychological aspects of illness, patient care, and chronic disease management. Prerequisites: HUMBIO 3B or PSYCH 1, or equivalent.

4 units, Win (Hayney, C)

HUMBIO 129. Critical Issues in International Women's Health
Women's lives, from childhood through adolescence, reproductive years, and aging. Economic, social, and human rights factors, and the importance of women's capacities to have good health and manage their lives in the face of societal pressures and obstacles. Emphasis is on life or death issues of women's health that depend on their capacity to negotiate or feel empowered, including maternal mortality, violence, HIV/AIDS, reproductive health, and sex trafficking. Organizations addressing these issues. A requirement of this class is participation in public blogs. Prerequisites: Human Biology core or equivalent or consent of instructor. GER:EC-Gender

4 units, Aut (Murray, A), Win (Murray, A)

HUMBIO 129P. International Health Policy: Comparative Health Care Systems
Together we will learn how six advanced, capitalist countries developed near-universal health care systems, and how they have been coping with the pressures of costs, aging, and chronicity. My perspective is ironic and anthropological. Each is a tribal nation with deeply held convictions about justice and rationing, dark moments of history, rhetorics, and actual organization & financing of services, not unlike the 7th tribal nation that surrounds and frames our study. These days, countries who outperform the U.S. ironically strain to be more American without compromising equity, efficiency, and budget limits.

3 units, Aut (Light, D)

HUMBIO 129S. Global Public Health
The class is an introduction to the fields of international public health and global medicine. It focuses on resource poor areas of the world and explores major global health problems and their relation to policy, economic development and human rights. The course is intended for students interested in global health, development studies, or international relations, and provides opportunities for in-depth discussion and interaction with experts in the field.

4 units, Win (Wise, P)

HUMBIO 130. Human Nutrition
The study of food, and the nutrients and substances therein. Their action, interaction, and balance in relation to health and disease. Emphasis is on the biological, chemical, and physiological processes by which humans ingest, digest, absorb, transport, utilize, and excrete food. Dietary composition and individual choices are discussed in relationship to the food supply, and to political, economic, religious, and social economic diversity. The relationships between nutrition and disease; ethnic diets; vegetarianism; nutritional deficiencies;
COURSES OF INSTRUCTION

HUMBIO 132. Functional Anatomy of Exercise
Interdisciplinary: physiology, pathology, and biomechanics. Anatomy of the body, major joints in the context of exercise and movement emphasizing adaptations that occur with intensity and nature of exercise, age, and disease. Students will work in cooperative groups in the Stanford Human Performance Lab to conduct projects and experiments relating to biomechanics, exercise physiology, and anatomy of the athlete. Enrollment limited to 40. Prerequisite: HumBio 139 or consent of instructor.
4 units, Spr (Garza, D)

HUMBIO 133. Human Physiology
(Same as BIO 112, BIO 212) The functioning of organ systems emphasizing mechanisms of control and regulation. Topics: structure and function of endocrine and central nervous systems, cardiovascular physiology, respiration, salt and water balance, exercise, and gastrointestinal physiology. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology or Human Biology core. GER: DB-NatSci
4 units, Win (Garza, D)

HUMBIO 135. Exercise Physiology
How body systems respond to the stress of acute exercise and adapt to chronic exercise training. How the cardiovascular system adapts to optimize oxygen delivery and utilization, how muscles generate force and hypertrophy in response to training, how metabolic/biochemical pathways are regulated to support the increased energy demand of exercise. Theories on the causes of fatigue and muscle soreness, and on what limits human performance. Applied topics such as the effects of aging, gender, and environmental conditions on exercise capacity will also be discussed. Prerequisite: Human Biology core, Biology core, or equivalent, or consent of instructor.
4 units, Aut (Friedlander, A)

HUMBIO 135S. Applied Topics in Exercise Physiology and Metabolism
Focus on scientific research related to exercise physiology, sports performance, impacts of aging and environmental physiology. Discussions of controversial topics in physiology and interpretation of conflicting data. Student presentations. Summary paper. A requirement of this class is participation in public blogs. Enrollment limited to 10. If class is full, contact instructor for application. Prerequisites: HB135 or consent of instructor.
3 units, Spr (Friedlander, A)

HUMBIO 139. Sports Medicine
Sports, exercise, health, and medicine throughout the human performance continuum. Exercise as therapy; injuries and illnesses that result from sports and exercise; and the use of technology in modern sports science. Sources include physiology, nutrition, and biomechanics. Medical problems exacerbated or caused by exercise and sport; maximizing performance in elite athletes; and population-based issues such as exercise and its relationship to health, drugs in sport, and aging. Prerequisite: Biology or Human Biology core, or consent of instructor. GER: DB-NatSci
4 units, Aut (Garza, D)

HUMBIO 140. Sex Differences in Human Physiology and Disease
(Same as OBGYN 240, MED 240) Chromosomal and hormonal influences on cells, tissues, and organs that underlie the development of reproductive organs and sexual dimorphism of the neuroendocrine system. Effects of endogenous and exogenous sex hormones and environmental factors that differ between men and women on the musculoskeletal, neurological, cardiovascular, and immunological systems over the life course, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women and with aging in men). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor GER:EC-Gender
2-3 units, Win (Stefanick, M)

HUMBIO 142. Adolescent Development
Underlying changes and their consequences in everyday functioning. Physical, cognitive, social, and sexual development; how these changes influence the emerging sense of identity, autonomy, and intimacy. Contexts in which adolescents move such as family, friends and peers, school, and workplace. Focus is on normal development of boys and girls; attention to problem outcomes including eating disorders, depression, and teen pregnancy. Prerequisite: 3B or PSYCH 1, or consent of instructor.
4 units, NEXT YEAR

HUMBIO 142M. Special Topics in Adolescent Mental Health
Includes the study of aspects of common disorders seen in adolescent populations, such as prevalence, developmental course, gender differences, theoretical explanations, and therapeutic interventions. Topics will include mood/anxiety disorders, eating disorders, learning disabilities and ADHD, sexual risk behaviors, developmental disorders, substance abuse, and self-harm. Goals of this course include getting students to think critically about the unique mental health needs of adolescents, collaborating on devising ways to improve the way our society meets those needs, and strengthening writing and communication skills applicable to this area of inquiry.
4 units, Aut (Medoff, L), alternate years, not given next year

HUMBIO 143. Adolescent Sexuality
Developmental perspective. Issues related to scientific, historical, and cultural perceptions; social influences on sexual development; sexual risks and the limitations and future directions of research. Sexual identity and behavior, sexually transmitted diseases including HIV, pregnancy, abortion, gay and lesbian youth, sex education and condom availability in schools, mass media, exploitative sexual activity, and difficulties and limitations in studying adolescent sexuality. Legal and policy issues, gender differences, and international and historical trends. Prerequisite: Human Biology core or equivalent, or consent of instructor.
4 units, Win (Medoff, L)

HUMBIO 144. Boys’ Psychosocial Development
(Same as EDUC 143) From early childhood through adolescence. Emphasis is on how boys’ lives and experiences are embedded within their interpersonal relationships and social and cultural contexts. Interdisciplinary approach including perspectives from fields such as psychology, sociology, anthropology, family studies, and education. Prerequisite: Human Biology core, or Developmental Psychology , or consent of instructor. GER:EC-Gender
4 units, Spr (Chu, J)

HUMBIO 145L. The Biology and Evolution of Language
(Same as ANTHRO 171, ANTHRO 271) Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language and speech, the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites. GER: DB-NatSci
4-5 units, Win (Fox, J)

HUMBIO 146. Culture and Madness: Anthropological Approaches to Psychiatric Illness
(Same as ANTHRO 181, ANTHRO 281) Interdisciplinary. Culture and social context on the identification, course, and outcome of psychiatric illness. What is known from psychiatry about the nature of illness as a biomedical process and from anthropology about the life course of illness within particular settings. Prerequisite: Human Biology core or equivalent or consent of instructor.
3-5 units, Aut (Luhrmann, T)

HUMBIO 146D. Developmental Disabilities: From Biology to Policy
(Same as PEDS 246) Changes in science and societal attitudes have resulted in an increased prevalence of individuals with disabilities in our communities. This course focuses on Down syndrome, cerebral palsy, Fragile X, autism. Topics include medical and social definitions of disability; the impact of attitudes, beliefs, and values; advances in biological sciences that may lead to novel therapies to improve functioning; and federal policies, laws, and regulations such as IDEA that increase opportunities for community participation. A field experience complements

758 | STANFORD BULLETIN, 2011-12
HUMBIO 148. Kinship and Marriage
The courses compares selected societies in Africa, Asia, and South Asia with the aim of discovering the nature of human kinship systems. GER:DB-SocSci, EC-Gender
4 units, Win (Wolf, A)

HUMBIO 148W. Women, Fertility, and Work
(Same as ANTHRO 151, ANTHRO 251) How do choices relating to bearing, nursing, and raising children influence women’s participation in the labor force? Cultural, demographic, and evolutionary explanations, using crosscultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places. GER:DB-SocSci, EC-Gender
5 units, not given this year

HUMBIO 149. Psychological and Educational Resilience Among Children and Youth
(Same as EDUC 256) Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations.
4 units, not given this year

HUMBIO 149L. Longevity
(Same as NENS 202, PSYCH 102) Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists. GER:DB-SocSci
4 units, Win (Carstensen, L; Rando, T)

HUMBIO 150A. Assisted Reproductive Technologies
(Same as DBIO 202, OBGYN 202) Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation. Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors.
1-3 units, Win (Staff)

HUMBIO 151. Introduction to Epidemiology
Principles of epidemiology: the distribution and determinants of disease; the control of health problems; and the medical detective work required to understand disease outbreaks. Case studies from developed and developing countries to explore the use of epidemiological techniques in describing disease dynamics of human, emerging and zoonotic (animal to human) diseases such as SARS, Lassa fever, and influenza; the impacts of changes in policy, law, and behavior on disease control and eradication, such as hepatitis vaccination; and modern challenges in epidemiology such as global disease transmission, environmental change, and bioterrorism threats.
4 units, Aut (Saltkeld, D)

HUMBIO 152. Viral Lifestyles
Contemporary topics related to microorganism. Relevance of microbiomolecular disciplines beyond molecular biology and medicine. Public health implications of human/viral interactions, and the human behaviors that bring about such interactions. The ecological role played by viruses and their role in environmental health. Prerequisite: familiarity with biological systems, evolutionary biology, and microbiology.
3 units, not given this year

HUMBIO 153. Parasites and Pestilence: Infectious Public Health Challenges
Parasitic and other pestilence of public health importance. Pathogenesis, clinical syndromes, complex life cycles, and the interplay among environment, vectors, hosts, and reservoirs in historical context. Public health policy initiatives aimed at halting disease transmission. World Health Organization tropical disease targets including river blindness, sleeping sickness, leishmaniasis, schistosomiasis, mycobacterial disease (tuberculosis and leprosy), malaria, toxoplasmosis, dracunculiasis, and intestinal helminthes. Guest lecturers with expertise in disease control. Prerequisite: Human Biology core or equivalent, or consent of instructor.
4 units, Win (Smith, D)

HUMBIO 154. Cancer Epidemiology
Epidemiological methods relevant to human research in cancer. The concepts of risk; case control, cohort, and cross-sectional studies; clinical trials; bias; confounding; interaction; screening; and causal inference. Social, political, economic, and ethical controversies surrounding cancer screening, prevention, and research. Prerequisite: Human Biology core or equivalent, or consent of instructor.
4 units, Win (Fisher, P)

HUMBIO 155B. The Vaccine Revolution
(Same as MI 115B) Advanced seminar. Human aspects of viral disease, focusing on recent discoveries in vaccine development and emerging infections. Journal club format: students choose articles from primary scientific literature, write formal summaries, and synthesize them into a literature review. Emphasis is on analysis, experimental design, and interpretation of data. Oral presentations. Enrollment limited to 10. Prerequisites: HUMBIO 155H, MI 155V.
6 units, Aut (Siegel, R)

HUMBIO 155H. Humans and Viruses I
(Same as MI 155H) Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis is on host pathogen interactions and policy issues. Topics: polio and vaccination, smallpox and eradication, yellow fever and history, influenza and genomic diversity, rubella and childhood infections, adenovirus and viral morphology, ebola and emerging infection, lassa fever and immune response.
6 units, Aut (Siegel, R)

HUMBIO 156. Global HIV/AIDS
(Same as MED 256) Public health, policy, and research issues. Identify resources at Stanford, and from government, NGOs, and pharmaceutical, advocacy, and international organizations. Sources include biomedical, social, and behavioral sciences. Emphasis on student projects which feature methodologies in the development and design of Operational Research and Implementation Science in AIDS/TB and Malaria in response to PEPFAR and Global Fund programs. Guest lectures. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER: DB-NatSci, EC-GlobalCom
3 units, Aut (Katzenstein, D)

HUMBIO 156A. Human Developmental Biology and Medicine
(Same as DBIO 156) The biological, medical, and social aspects of normal and abnormal human development. Topics: in vitro fertilization and embryo transfer; gene and cell therapy; gametogenesis; pattern formation in the nervous system and limb development; gene and grand multiple pregnancies; prematurity, in utero effects of teratogens; sex determination and differentiation; growth control; gigantism and dwarfism; neural tube defects; cardiac morphogenesis; progress in the developmental biology of human; limited enrollment. Prerequisites: Human Biology or Biology core, or consent of instructor.
3-4 units, NEXTYEAR

HUMBIO 157. The Biology of the Stem Cells
(Same as DBIO 257) The role of stem cells in human development and potential for treating disease. Guest lectures by biologists, ethicists, and legal scholars. Prerequisites: 2A-B, or consent of instructor.
3 units, not given this year

HUMBIO 158. The Human Genome and Disease
(Same as BIO 109A, BIO 209A) The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications.
Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor, or coterm in Biology: 109A/209A or 109B/209B may count toward degree program but not both. GER: DB-NatSci

3 units, Win (Heller, R)

HUMBIO 158G. Genomics, Bioinformatics and Medicine (Same as BIOC 158, BIOC 258) Molecular basis of inherited human diseases. Diagnostics approaches: simple Mendelian diseases and complex, multifactorial diseases. Genomics: functional genomics, epigenetics, gene expression, SNPs, copy number and other structural genomic variations involved in disease. Novel therapeutic methods: stem cell therapy, gene therapy and drug developments that depend on the knowledge of genomics. Personal genomics, pharmacogenomics, clinical genetics and their role in the future of preventive medicine. Prerequisites: BIO 41 or HUMBIO 2A or consent of instructor. Those with credit in BIOC 118 not eligible to enroll. Course webpage: http://biochem158.stanford.edu/

4 units, Aut (Brudag, D)

HUMBIO 159. Genes and Environment in Disease Causation: Implications for Medicine and Public Health (Same as HRP 238) The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor.

2-3 units, not given this year

HUMBIO 160. Human Behavioral Biology (Same as BIO 150, BIO 250) Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness. GER: DB-NatSci

5 units, Spr (Sapolsky, R), alternate years, not given next year

HUMBIO 161. The Neurobiology of Sleep (Same as BIO 149, BIO 249) Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena induced in sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16. GER: DB-NatSci

4 units, Win (Heller, C), alternate years, not given next year

HUMBIO 162. Clinical Neuroscience in Women's Health Mental health from the perspectives of neuroscience, psychology, human physiology, and feminist studies. Major depression, bipolar, and obsessive compulsive disorders; how the female reproductive system affects the clinical presentation and course of these disorders. Eating disorders, substance abuse and dependence, and sexual trauma within a biopsychosocial model. Pharmacologic and therapeutic treatment of illnesses. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:EC-Gender

4 units, not given this year

HUMBIO 163. Neural Systems and Behavior (Same as BIO 163, BIO 263) The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-specific behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A. GER: DB-NatSci

4 units, Aut (Fernald, R), alternate years, not given next year

HUMBIO 166. Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context

The class examines the array of forces that affect the foods human beings eat, and when, where, and how we eat them, including human labor, agriculture, environmental sustainability, politics, animal rights/welfare, ethics, policy, culture, economics, business, law, trade, and ideology, and psychology. The class addresses the impact of current policies and actions that might be taken to improve human nutrition and health; macro-scale influences on food, nutrition, and eating behavior.

4 units, Win (Robinson, T; Gardner, C)

HUMBIO 167. The Art of Vision This course concerns eyes and art. It asks how eyes are built, how they process visual information, and how they are affected by diseases that are major problems in our society. These topics are illustrated through fine art and famous artists, and we explore the implications of both normal and abnormal vision for art. There are short diversions into animal eyes and the role of vision in music, literature, and sports. GER: DB-NatSci

3 units, Win (Marmor, M)

HUMBIO 170. Justice, Policy, and Science

The role of science in civil rights, justice, policy, criminal justice, evidence, education, and disabled rights.

5 units, NEXTYEAR

HUMBIO 171. The Death Penalty: Human Biology, Law, and Policy

Combines academic study with student participation in forensic research and case investigation, including DNA evidence, psychological and physiological development, mental and physical disabilities, and witness interviews. The philosophy, structure, and application of capital punishment in the U.S. Goal is to examine and challenge the issues involved in the death penalty from the perspective of involvement in a real case. Course not taught from a preconceived belief or political or philosophical agenda except to involve students in an intellectual challenge of policy and philosophy. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, Spr (Abrams, W)

HUMBIO 172B. Children, Youth, and the Law How the legal rights of children and adolescents in America are defined, protected, and enforced through the legal process within the context of their developmental needs and competing societal interests. Topics: origins and definitions of children's rights; adoption; custody; the juvenile justice system; education; informed consent; health care; protection from harm and child welfare; due process; and privacy and freedom of expression. Interactive, using hypotheticals for discussion and analysis. A and B alternate annually; students may take one or both. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, Aut (Abrams, W)

HUMBIO 173. Science, Innovation and the Law

The interaction of science, business and law: how scientific ideas are protected by law; the rights of those who invent, develop, and finance scientific discovery; and how ideas are commercialized and brought to market. What kinds of research, discovery, and innovation are protected; who has rights that can be protected; what kinds of rights can be protected, and the kinds of protections that apply; how inventions are commercialized; and the success and failure of businesses based on scientific discovery. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, NEXTYEAR

HUMBIO 174. Foundations of Bioethics

Classic articles, legal cases, and foundational concepts. Theoretical approaches derived from philosophy. The ethics of medicine and research on human subjects, assisted reproductive technologies, genetics, cloning, and stem cell research. Ethical issues at the end of life. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:EC-EthicReas

3 units, Win (Magnus, D)

HUMBIO 175. Health Care as Seen Through Medical History, Literature, and the Arts

The differences between disease as pathology and as the patient's experience. Topics include: patient-doctor relationships; medical technology; the changing focus on illness; gender issues; love, sex, and illness; mental illness; sick children; and death and dying. Limited enrollment.

3 units, Aut (Zaroff, L)
HUMBIO 175S. Novels and Theater of Illness
Illness and disease through novels and plays by authors including Shakespeare, Miller, Sophocles, Hemingway, and Camus. How sickness involves the patient, family, community, and state. Limited enrollment.
3 units, Spr (Zaroff, L)

HUMBIO 178. Ethics and Politics of Public Service
(Same as CSRE 178, ETHICSOC 133, PHIL 175A, PHIL 275A, POLisci 133) Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in cross-cultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. GER:DB-SocSci
5 units, Win (Mitchell, T)

HUMBIO 179. Spirituality and Healing
(Same as ANTHRO 115) This course considers the puzzle of symbolic healing. How have societies without the resources of modern medicine approached healing? Why do these rituals have to be carried out by the world's religions? We explore shamanism, spirit possession, prayer, and the role of placebo in modern biomedicine. Students will do ethnographic work and practical explorations along with more traditional scholarly approaches to learning.
3-5 units, not given this year

HUMBIO 180. Human Osteology
(Same as ANTHRO 175, ANTHRO 275) The human skeleton. Focus is on identification of fragmentary skeletal material. Analytical methods include forensic techniques, archaeological analysis, paleopathology, and age/sex estimation. Students work independently in the laboratory with the skeletal collection. GER:DB-NatSci
5 units, Spr (Klein, R; Codding, B)

HUMBIO 182. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years
(Same as ANTHRO 18, ARCHLGY 12, EARTHsys 21) Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis. GER:DB-NatSci
3-5 units, Aut (Bird, D)

HUMBIO 183. Astrobiology and Space Exploration
Evolution in the context of space and time, focusing on the emergence of life in a planetary context on Earth and possibly elsewhere. The evolution of intelligence and the search for it elsewhere. The biological, psychological, sociological, and philosophical issues of human space exploration. Integrates information from astronomers, astrophysics, biochemistry, chemistry, evolutionary biology, geology, palentology, physiology, psychology, and sociology. Guest lectures by scientists and astronauts from NASA, SETI, Stanford, and other universities. Prerequisite: two college-level science courses such as Human Biology core, or consent of instructor. GER:DB-NatSci
3-4 units, Win (Roathschild, L)

HUMBIO 185. Vertebrate Biology
(Same as BIOE 161) Study of structure, function, evolution and behavior of vertebrate animals. Consideration of vertebrate origins and examination of classes of vertebrates. Physiology, morphology, behaviors and evolutionary relationships are treated in each vertebrate group, as these relate to overall evolutionary trends within vertebrates. Topics: swimming behaviors in sharks and bony fishes, olfaction and vision in fishes, sex determination in amphibians, reptiles, birds and mammals, navigation in sea turtles and birds, evolution and biomechanics of flight in pterosaurs birds and bats, vocalization in whales and birds, temperature adaptation in reptiles, birds and mammals.
3 units, Win (Porzsig, E)

HUMBIO 187. Human Diversity: A Linguistic Perspective
(Same as ANTHRO 123A) The diversity and distribution of human language and its implications for the origin and evolution of the human species. The origin of existing languages and the people who speak them. Where did current world languages come from and how can this diversity be used to study human prehistory? Evidence from related fields such as archaeology and human genetics. Topics: the origin of the Indo-European languages, the peopling of the Americas, and evidence that all human languages share a common origin. GER:DB-SocSci, EC-GlobalCom
3 units, Spr (Ruhlen, M)

HUMBIO 193. Research in Human Biology
Independent research conducted under faculty supervision, in junior or senior year, normally but not necessarily in pursuit of an honors project. May be taken for a maximum 3 quarters of credit. Prerequisite: Faculty approval; application available in student services office.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

HUMBIO 194. Honors
Completion of the honors project, normally taken in the student's final quarter. First component: the honors thesis, a final paper providing evidence of rigorous research, fully referenced, and written in an accepted scientific style. Second component: participation in the honors symposium, including a 10-minute oral presentation followed by a brief question and answer session. Prerequisites: 193 or 199, and acceptance into the honors program.
1/2 units, Aut (Staff), Win (Staff), Spr (Staff)

HUMBIO 197. Human Biology Internship
Limited to and required of Human Biology majors. A supervised field, community, or lab experience of student's choosing, pre-approved by Human Biology faculty and student advisers, and initiated at least three quarters prior to graduation. Participation in a poster session on the internship experience is required during the first quarter that the student is in residence at Stanford after completion of the internship. May be repeated for credit. Prerequisite: Human Biology core.
1-4 units, Aut (Staff), Win (Boggs, C), Spr (Staff)

HUMBIO 198. Senior Tutorial in Human Biology
Reading for Human Biology majors in exceptional circumstances and under sponsorship of Human Biology associated faculty. Students must apply through Human Biology student services before registering. Reading list, paper, and evaluation required. May be repeated for credit.
1-5 units, Aut (Boggs, C), Win (Boggs, C), Spr (Staff)

HUMBIO 199. Directed Reading/Special Projects
Human Biology majors must obtain a sponsor from the Human Biology associated faculty or the Academic Council. Non-majors and students who have not declared must obtain a sponsor only from the Human Biology associated faculty. Students must complete application in student services office.
1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

HUMBIO 200. Teaching of Human Biology
For upper division undergraduates and graduate students. Practical experience in teaching Human Biology or serving as an assistant in a lecture course. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

HUMANITIES AND SCIENCES (HUMSCI) COURSES

UNDERGRADUATE COURSES IN HUMANITIES AND SCIENCES

Primarily for undergraduates; graduate students may enroll with consent of adviser.
ILAC 114N. Lyric Poetry
(F, Sem) Stanford Introductory Seminar. Preference to freshmen. For students with at least two years of language preparation. Focus is on principal elements and expressive devices of lyric poetry: multi-dimensional use of language, denotation, connotation, image, metaphor, symbol, paradox, irony, meaning, idea, rhythm, and meter. Readings include the best of major poets of Spain and Latin America: Becquer, Rosalía de Castro, Rubén Darío, Unamuno, Antonio Machado, García Aída Lorca, Neruda, and Gabriela Mistral. Bilingual in English and Spanish with an emphasis on Spanish.

3-5 units, Aut (Preadmore, M)

ILAC 117N. Film, Nation, Latinidad
(Same as CHICANST 117N, CSRE 117N) Examination of films from Spain, Mexico, and Latina/o USA that expand, trouble, contest, parody, or otherwise interrogate notions of national identity. Filmmakers may include Lourdes Portillo, Alejandro González Iñárritu, John Sayles, María Novaro, Pedro Almódovar, and Gregory Nava.

3-4 units, not given this year

ILAC 118N. Slavery and Freedom, Madness and Reason in Brazil; the Fiction of Machado de Assis
(F, Sem) Stanford Introductory Seminar. Praised by Woody Allen and Salman Rushdie as the greatest Brazilian novelist of the 19th Century, Machado de Assis (1839-1908) became a recent pop star of world literature. To Harold Bloom, he is a kind of Machiavelli, as the grandson of freed slaves in Brazil, who deserved to be included in Bloom's book Genius: A Mosaic of One Hundred Exemplary Creative Minds. In his texts, a paradoxical combination of guilt and innocence, jealous and love challenges the reader to make risk choices wisely. This course presents Machado de Assis masterpieces: the novel The Posthumous Memoirs of Bras Cubas (1881), and Don Casmurro (1900), the short novel The Alienist (1882) and a selection of his short stories. Key critical concepts and an overview of his reception in Brazil and in the US will support our discussions. GER: IHUM-3

3-5 units, Spir (Librandi Rocha, M)

ILAC 120. Introduction to Literary and Scholarly Research
Strategies and tactics for research and writing in the humanities; focus is on the Spanish-speaking world. How to write a research proposal; how to conduct research online and in the library; annotated bibliographies; bibliographical essays; rhetorical strategies; and common logical fallacies. (Meets Writing-in-the-Major requirement) WIM

3-5 units, Win (Surwillo, L)

ILAC 121. NARRATIVES OF AFFECT
A growing number of contemporary Latin American novels and films focus on precarious forms of life and narratives of care, beyond the disciplinary discourses of medicine and psychiatry. This course takes stock of these narratives to explore the literary dimension of care. Parting from theorizations of affect, we explore varieties of emotions, modes of care, and caring identities, as well as the emphasis on human-animal and human-plant relations. Authors and film directors may include: Mario Bellatin, Alejandro Zambra, Alan Pauls, Sergio Chejfec, Lina Meruane, Diáne Eltit, Mario Cohn, Gaston Duprat, Lucrecia Martel. Taught in Spanish

3-5 units, Win (Briceno, X)

ILAC 130. Introduction to Iberia: Cultural Perspectives
The historical dynamics, linguistic plurality, and social complexity of the Iberian world. Topics include: empire, independence Civil war; republicanism; the crisis at the end of the century; the year 198; the civil war; dictatorships, Franco, and Salazar. Major figures include Larra, Espronceda, Béquer, Rosalía de Castro, Verdaguer, Galdós, Maragall, Unamuno, Valle-Inclán, Machado, and Lorca. GER:DB-Hum

3-5 units, Spr (Surwillo, L)

ILAC 131. Introduction to Latin America: Cultural Perspectives
Major theoretical debates about the construction of Latin American identities, from the 19th century to the present. Readings by writers, poets, philosophers, and historians, including Roderick Retamar, O’Gorman, Vasconcelos, Henríquez-Ureña, Ramos, Paz, Carpentier, Lezama Lima, Borges, and Fuentes. GER:DB-Hum
ILAC 136. Modern Iberian Literatures
Survey of modern Iberian literatures (Spanish, Catalan, Basque, Galician and Portuguese) through major canonical authors. Community building, tolerance, the ethics of memory, the value of human purpose as a tool for survival are some of the issues explored in works by Garcia Lorca, Sergio Manrique, and Manuel Rivas. Recommended GER:DB-Hum
3-5 units, Win (Librandi Rocha, M)

ILAC 145. A Reader of Early Modern Spain (Same as ILAC 255) Cervantes was an astute reader of the literature, culture, and politics of his age. This class is both a study of sixteenth and early seventeenth-century Iberia seen through Cervantes the reader and an introduction to early modern reading practices, methods of manuscript and book production, and histories of textual reception and circulation. Although readings include selections from Cervantes's works, the course examines lyric poetry, popular prose, political treatises, literary criticism, and drama from other early modern authors as well. GER:DB-Hum
3-5 units, Spr (Kimmel, S)

ILAC 157. Medieval and Early Modern Iberian Literatures
This survey of the literatures and cultures of medieval and early modern Iberia covers different kinds of literary texts, including lyric and epic poetry, frame tales, Renaissance prose, and Baroque drama, as well as selections from Muslim, Jewish, and Christian philosophical and theological works. Though the focus is on close reading and analytical skills in Spanish, the class also serves as an introduction to the non-ethnic hodgepodge that is Iberian history from the eighth through the seventeenth century. GER:DB-Hum
3-5 units, Aut (Kimmel, S)

ILAC 158. New Lat American Short Stories and Films (1980-2009): a Survey (Same as ILAC 258, ILAC 278B) The short story is one of the most popular literary forms and in Latin America it enjoyed the double tradition of its vernacular origins and the influence of European models. Focus will be in the modern short story from the Sixties to the present with attention on works by Borges, Garro, Cortazar, Pionati, Fuentes, Onetti, Somers, Benedetti, Arreola, along with a parallel examination of short films, some of them adaptations of short stories. ILAC 278B approved in place of ILAC 278A. GER:DB-Hum
3-5 units, Aut (Raffinelli, J)

ILAC 161. Modern Latin American Literature
From independence to the present. Topics include romantic allegories of the nation; modernism and postmodernism; avant-garde poetry; regionalism versus cosmopolitanism; indigenous and indigenist literature; magical realism and the literature of the boom; Afro-Hispanic literature; and testimonial narrative. Authors may include: Boli-var, Bello, Gomez de Avellaneda, Isaacs, Sarmiento, Machado de Assis, Dario, Marti, Gaspar, Vallejo, Huidobro, Borges, Cortizar, Neruda, Guillon, Ruflo, Ramos, Garcia-Marquez, Lispector, Bolano. GER:DB-Hum
3-5 units, Win (Briceno, X)

ILAC 189A. Honors Research
Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DCLL 189.
5 units, Win (Staff)

ILAC 189B. Honors Research
Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DCLL 189.
2 units, Spr (Staff)

ILAC 193. The Cinema of Pedro Almodovar
Pedro Almodovar is one of the most recognizable auteur directors in the world today. His films express a hybrid and eclectic visual style and the blurring of borders between mass and high culture. Special attention is paid to questions of sexuality and the centering of usually marginalized characters. This class studies Pedro Almodovar's development from his directorial debut to the present, from the shocking value of the early films to the award-winning mastery of the later ones. Prerequisite: ability to understand spoken Spanish. Readings in English. Midterm and final paper can be in English. Majors should write in Spanish. GER:DB-Hum
3-5 units, Spr (Resina, J)

ILAC 193Q. Spaces and Voices of Brazil through Film (S,Sem) (Same as PORTLANG 193Q) Stanford Introductory Seminar. The manners in which a country is perceived and defined itself is a result of many complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed throughout times, but has conserved some clear pervasive defining traits. This course is an introduction to the history, culture, politics and artistic production of Brazil as seen through feature films, documentaries and some complementary readings. Movies include, among others, Banana is my Business, Black Orpheus, Olga, They Don't Use Black-Tie, City of God, Central Station, Gaijin, and Four Days in September among others. In English. GER:DB-Hum, EC-GlobalCom
3-4 units, Aut (Wiedemann, L)

ILAC 199. Individual Work
Open only to students in the department, or by consent of instructor.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ILAC 201. Gender, Body, Nation, & the Interpretation of Contemporary Catalan Literature & Art
The notions of gender, body, and nation are adequate interpretive tools in order to read the otherization processes that affect Catalan cultural identity as portrayed in contemporary literature and art. In this seminar we will review, in the first place, a number of critical contributions dealing with Post-Franco cultural identity construction, such as Josep-Anton Fernandez's Another Country and his contributions to Callasques, gallines i maricons, which link sexual and national subordination; Katryn Crameri's Language, the Novelist and National Identity in Post-Franco Catalonia, which explores the ties between language and national identity; and Stewart King and Irene Boada's essays on the possibility of using postcolonial criticism in reading the Catalan scenario. Secondly, in light of the concepts of body, gender, and nation we will analyze a number of literary and artistic productions belonging to different fields: a) prose (a selection of short stories by Carme Riera and Quim Monzo); b) film (City of God, Basque 24, Gaijin, and Four Days in September)
3-5 units, not given this year

ILAC 204. Spanish Nationalist Discourses from Franco to Zapatero: What does 'plural Spain' mean? (Same as HISTORY 272A) Spanish nationalism and 'patriotic affirmation' discourses existing in contemporary Spain. Since the end of Francoism, Spanish nationalism has existed in a de-articulated and diffuse way, rather as a reaction against the challenge of stateless nationalisms than as a substantive doctrine. However, since the mid-1980s there has been a recovery of Spanish nationalist discourse, often labeled as 'Constitutional patriotism', whose main point is the insistence on History as the founding basis for the legitimation of the present Spanish polity, as well as the vindication of the 1978 Constitution as the end-point of democratic transition.
3-5 units, not given this year

ILAC 214. Crypto-Muslim Culture in Early Modern Spain (Same as RELIGST 220B) What is known about the secret religious practice and culture of the Moriscos, Spain's large minority community of Muslim converts to Christianity (1500-1609)? What role did their handwritten literature (largely Islamic
texts written in Castilian but copied out in Arabic script) play in the formation and maintenance of their culture? What can these Crypto-Muslim communities teach us regarding the place of Muslim culture in Western Europe today? The course will be taught in English; knowledge of Spanish and/or Arabic script is useful but not necessary.

3-5 units, not given this year

ILAC 215. PORTUGAL, EMPIRE, AND ISLAM
(Same as ILAC 278C) Focus is on literature related to Portugal's early modern empire in Muslim Africa and Asia. Readings in Portuguese. Authors include Luís de Camões, Gomes Eanes de Zubarra, Miguel de Castanhoso, Frenao Mendes Pinto, and Joao de Barros. ILAC 278C approved in place of ILAC 278 or 278A

3-5 units, Win (Barletta, V)

ILAC 229. The work of Luis Martin Santos in Mid-Twentieth Century Spain
(Same as COMPLIT 218) First published in 1962, Tiempo de Silencio is the only book that the young psychiatrist Luis Martin Santos finished during his lifetime, and, although largely overlooked (even in Spain) until the present day, one of the great European novels of the 20th century. It brings to a complex convergence the evocation of Spain's decadent and run-down post-Civil War society with high-modernist literary procedures and (an implicit parodic) philosophical analysis.

3-5 units, not given this year

ILAC 237. Viewing Modern Barcelona
An overview of Barcelona's modern history since the 19th century expansion through the 1992 Olympics to the 21st century's challenges of globalization. At the crossroads of an active traffic of goods, people, and cultures, this cosmopolitan city in Spain is also the capital of Catalonia, home of a millennial European culture. The interdisciplinary seminar will acquaint students with salient aspects of the history of this city, its role in Spain's modernization and democratization as well as its tensions with the state. Attention will be given to city planning, the architecture of Gaudi, Picasso's, Miro's and Dali's art, the politics of bilingualism and literature about the city. (Taught in English.)

3-5 units, Aut (Restina, J)

ILAC 240E. Borges and Philosophy
Analysis of the Argentine author's literary renditions of philosophical ideas. Topics may include: time, free will, infinity, authorship and self, nominalism vs. realism, empiricism vs. idealism, skepticism, peripheral modernities, postmodernism, and Eastern thought. Close reading of short stories, poems, and essays from Labyrinths paired with selections by authors such as Augustine, Berkeley, James, and Lao Tzu. The course will be conducted in English; Spanish originals will be available. Satisfies the capstone seminar requirement for the major in Philosophy and Literature. GER:DB-Hum

3-5 units, not given this year

ILAC 242. POETRY WORKSHOP IN SPANISH
Latin American and Spanish poetry approached through elements of craft. Assignments are creative in nature and focus on lyric subgenres (e.g. ode, elegy, prose poetry) and formal elements of poetry (e.g. meter, rhythm, rhetorical figures, and tropes). Students write original poems over the course of the quarter. No previous experience with creative writing is required. Authors include Dari-o, Machado, Jimenez, Vallejo, Huidobro, Salinas, Pales Matos, Lorca, Aleixandre, Cernuda, Neruda, Girondo. Course is offered every other year. Enrollment limited. Prerequisite: 100-level course taught in Spanish or equivalent. Enrollment limited to 10 students.

3-5 units, Spr (Santana, C)

ILAC 247E. Magical Realism and Globalization
Is magical realism a genre, a style, a politics, or a label for elaborate fiction from the Third World? Seminal works and their role in the 20th century. Topics include: postcolonial discourse, myth and truth, tradition versus modernity, and realism versus fantasy. Novels, plays, and short stories by Garcia Márquez, Rushdie, and Morrison; films by Schondorff and Begnigni; essays by Roh and Carpentier. GER:DB-Hum

3-5 units, not given this year

ILAC 250. Latin America at the End of the Cold War
Systematic study of the cultural transformations in Latin America before and after the fall of the Berlin Wall. Comparisons between works that respond to the defining moments of the conflict (Neruda, Cardinal) and texts that reflect on its later, residual stage. Fiction: Sin remedio by Antonio Caballero, Literatura nazi en América by Roberto Bolaño, and Pasado Perfecto by Leonardo Padura. Film: Hijos de la guerra fria by Gonzalo Justiniano. Theoretical readings by Jorge Castañeda, Michael Reid, and Jean Franco.

3-5 units, not given this year

ILAC 259. Military, Intelligence, Las Madres de Plaza de Mayo & Tlatelolco: Film & Politics 1968-2009
An examination of how contemporary Latin American cinema (in documentaries and feature films) has focused on several historical pockets of the Continent: the Dirty War, the Falkland Islands war, the Tlatelolco Massacre, the Vladivideos and corruption in Peru, the Disappeared, as part of the historical reconstruction of the recent past. Films: La deuda interna, Rojo Amanecer, La historia oficial, Por esos ojos, La noche de los lápices, Mariposa Negra, Cautiva, Hijos/Figli and others.

3-5 units, not given this year

ILAC 262. The Literature of Elena Poniatowska
Detailed reading of the major works of Elena Poniatowska, one of the most innovative and important Mexican women writers in the XXth. pony over the XXI century, Mexico has developed a unique testimonial journalistic genre and the literary novel as expressions of society. Readings include: La noche de Tlatelolco (1971) to El tren pasa primero (2006, Romulo Gallegos Prize) and Leonora (Biblioteca Breve Award, 2011). Elena Poniatowska will visit Stanford to celebrate her 80th birthday. Taught in Spanish.

3-5 units, Win (Ruffinelli, J)

ILAC 264. VISIONS OF THE ANDES
(Same as ILAC 364) What visions and images of the Andes circulate in Latin American literature? How are they constructed? How is their value accrued? The course explores the visual economy of the Andes in representative literary texts of the 20th century, vis-a-vis critical discourses about Andean culture. Topics: visual culture and identity, iconography and the word/image tension, nature vs. culture, debates on utopia, indigenismo, mestizaje and hybridity. Authors may include: Pablo Neruda, Gabriela Mistral, Martín Chambi, José Carlos Mariategui, Cesar Vallejo, Jose Maria Arguedas, Mario Vargas Llosa, Raul Salmon, Aurelio Arturo.

3-5 units, Aut (Briceno, X)

ILAC 271. Brazilian Presence: Landscape, Life and Literature
This course explores Brazil's literature and its representation of the diverse regions and bio-regions. The course offers an in-depth discussion of Brazilian society, presenting fundamental texts that portray Brazilian landscape with its diverse eco-regions, people and culture. The program includes major authors such as Euclides da Cunha and his description of the Amazon in the early 1900s; the travels of anthropologist Claude Levi-Strauss and his contact with Caduveo, Nhambiquara, Bororo and Tupi indigenous tribes; Mario de Andrade's novel, Macunaima and its ironical representation of Brazilian identity and miscegenation; Guimarães Rosa's short stories that show the imagery of the sertao and its people (the sertanejo culture); Milton Hatoum's novel, The Brothers, and its impressive portrayal of Manaus city in the 20th Century Spain as an unstable world seen through the lens of Lebanese immigrants. These central books will be discussed with critical essays about some GER:EC-GlobalCom

3-5 units, Spr (Librandi Rocha, M)

ILAC 272B. Frontiers of Iberian and Latin American History and Literature
(Same as HISTORY 372B, HISTORY 372B, ILAC 372B) Analyzes the construction and deconstruction of communities and their internal and external frontiers in Iberia and Ibero-America from the early modern period to the early twentieth century by observing both historical and cultural artifacts (historical documents, novels, bibliography, etc.). Topics: the coming of nations, the making of state (or national) territory, the role assigned or taken on by immigrants, minorities and, in the American case, natives, and the persistence of areas now called borderlands or of groups now assigned to such (indeterminate) locations. GER:DB-SocSci

3-5 units, Aut (Sarvillo, L; Herzog, T)
ILAC 272E. Clarice Lispector: the Style of Ecstasy
An exploration of the presence, both in the mystic and in the erotic sense, of the feeling of ecstasy in Clarice Lispector’s texts (novels, short stories, chronicles). Ecstasy favors a non-conceptual approach to writing and reading and an effect of delight that can be only communicated by words that mimicizes music and visual arts. Theoreticians of ecstasy, eroticism and epiphany: G. Bataille, H. Cixous, Jean-Luc Nancy; Gumbrecht, Lyotard. Course taught English with readings in English and Portuguese.
3-5 units, not given this year

ILAC 278. Senior Seminar: Early 20th Century Iberian Poets
Major works of Antonio Machado, Juan Ramón Jiménez, and Federico García Lorca will be examined, with special emphasis on the historical context of the first three decades of the 20th century and their contributions to the development of 20th century Spanish lyric poetry. GER:DB-Hum
3-5 units, not given this year

(Same as ILAC 158, ILAC 258) The short story is one of the most popular literary forms and in Latin America it enjoyed the double tradition of its vernacular origins and the influence of European models. Focus will be in the modern short story from the Sixties to the present with attention on works by Borges, Garro, Cortazar, Poniatowska, Fuentes, Onetti, Somers, Benedetti, Arreola, along with a parallel examination of short films, some of them adaptations of short stories. ILAC 278B approved in place of ILAC 278 or 278A.
3-5 units, Aut (Ruffinelli, J)

ILAC 278C. PORTUGAL, EMPIRE, AND ISLAM
(Same as ILAC 215) Focus is on literature related to Portugal’s early modern empire in Muslim Africa and Asia. Readings in Portuguese. Authors include Luis de Camões, Gomes Eanes de Zurara, Miguel de Castanhoso, Frenao Mendes Pinto, and Joao de Barros. ILAC 278C approved in place of ILAC 278 or 278A.
3-5 units, Win (Barletta, Y)

ILAC 280. Latin® Literature
(Same as CHICANST 200, CSRE 200, ILAC 382) Texts by U.S. Latin@s of Mexican, Puerto Rican, Cuban, and Dominican descent. Examines how these writers’ shared history of Spanish colonization and U.S. imperialism has resulted in differing representations of home and homeland, nation, diaspora, history, and memory. Explores how racialization informs the production of gendered identities as well as sexualities. Analysis of the formal conventions of fiction, poetry, drama, memoir, and film.
3-5 units, Win (Yarbo-Bejarano, Y)

ILAC 287. QUEER RAZA
(Same as FEMST 120) Examination of cultural representations by U.S. Latin@s that explore the following questions: How is the mutual constitution of race/sex/class/gender theorized and represented? How is desire racialized? How is racial difference produced through sex acts and what is the function of sex in racial (self)formation? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and other structures of power? How do these texts reinforce or contest stereotypes and the ideal bodies of national identity? How do these texts produce queerness as a web of social relations?
3-5 units, Win (Yarbo-Bejarano, Y)

ILAC 332. Race and Slavery in Nineteenth Century Spanish Empire
An analysis of the literature written in Spain during the nineteenth and twentieth centuries dealing with the empire post 1808. Authors discussed include Blanco White, Baroja, Avellaneda, and Rusiñol, among others.
3-5 units, not given this year

GRADUATE COURSES IN IBERIAN AND LATIN AMERICAN STUDIES
Primarily for graduate students; undergraduates may enroll with consent of instructor.

ILAC 212. Cuban Cinema since the Revolution
Since 1959, Cuba has developed a unique style of social, political and Cultural Revolution that has lasted 50 years, which calls for an analysis and discussion of Cuban cinema as an expression, and a mirror of society, as well as a tool for social transformation. Films: Now! Lucia, Memories of Underdevelopment, Portrait of Teresa, and The Days of Water, Strawberry and Chocolate, among others. In the documentary genre the focus will be in films made about Ernesto Che Guevara. Taught in Spanish.
3-5 units, Win (Ruffinelli, J)

ILAC 218. Anticolonialism in the Iberian Novel of XIX
The rapid social and cultural changes in which 19th-century novelists wrote; the anti-clerical stance as marker of society’s attempts to modernize. Why were monks and priests reviled by many Spanish novelists? How and why did they re-write Spanish history around these figures? What was the role of the church and religious men in modern society? Questions of individualism, property, and labor in novels by major Iberian prose realists. In Spanish.
3-5 units, not given this year

ILAC 222. The Problem of Two Spains: Literature and Society in 19th-Century Spain
Representative literary figures including Larra, Espronceda, Zorrilla, Rosalía de Castro, Bécquer, and Galdós. Modern lyric poetry and the modern realist novel against the background of Napoleonic invasions, the loss of overseas colonies, two Carlist civil wars, and frustrated attempts to establish the First Spanish Republic.
3-5 units, not given this year

ILAC 224. Literature and the Spanish Civil War
This course will deal with the significance of the Spanish Civil War in Iberian, European, and world history, through the literary works (poetry, theater, and novel) of major Spanish and Latin American writers. The war is anticipated in the poetry of Antonio Machado and in the theater of García Lorca, dealt with directly in the poetry of Alberti and Hernandez, and of Neruda (Chile), Vallejo (Peru), and N. Guillon (Cuba), and treated in the aftermath during the Franco dictatorship in the novels of Cela and Sender.
3-5 units, Win (Predmore, M)

ILAC 225E. Theater, Society, and Politics in 20th-Century Spain
Ramón del Valle-Inclán and Federico García Lorca. The avant garde nature of their major plays and their engagement with social and political issues of the times including feudalism, the emerging liberal state, women’s protest, class struggle, and civil war. Symbolism, expressionism, and realism.
3-5 units, not given this year

ILAC 239. BORGES AND TRANSLATION
Borges’s creative process and practice as seen through the lens of translation. How do Borges’s texts articulate the relationships between reading, writing, and translation? Topics include authorship, fidelity, irreverence, and innovation. Readings will draw on Borges’s short stories, translations, and essays. Prerequisite: 100-level course in Spanish or permission of instructor.
3-5 units, Win (Santana, C)

ILAC 255. A Reader of Early Modern Spain
(Same as ILAC 155) Cervantes was an ardent reader of the literature, culture, and politics of his age. This class is both a study of sixteenth and early seventeenth-century Iberia seen through Cervantes the reader and an introduction to early modern reading practices, methods of manuscript and book production, and histories of textual reception and circulation. Although readings include selections from Cervantes’s works, the course examines lyric poetry, popular prose, political treatises, literary criticism, and drama from other early modern authors as well.
3-5 units, Spr (Kimmel, S)

(Same as ILAC 158, ILAC 278B) The short story is one of the most popular literary forms and in Latin America it enjoyed the double tradition of its vernacular origins and the influence of European models. Focus will be in the modern short story from the Sixties to the present with attention on works by Borges, Garro, Cortazar, Poniatowska, Fuentes, Onetti, Somers, Benedetti, Arreola, along with a parallel examination of short films, some of them adaptations of short stories. ILAC 278B approved in place of
ILAC 300. Josep Pla: From Journalism to Literature
In the 1920s and 30s journalism gave the tone to a normalized Catalan culture, whose distinctive traits were a cosmopolitan outlook and a high degree of professionalism. It is in this context that the works of journalist Josep Pla grow from an underbrush of quality journalism that, long neglected, throws light on the social and political situation of the time and constitutes an unsurpassed civilizational referent for today's culture wars. Some of the works of journalist Josep Pla grow from an underbrush of Catalan culture, whose distinctive traits were a cosmopolitan outlook and a high degree of professionalism. It is in this context that the works of journalist Josep Pla grow from an underbrush of quality journalism that, long neglected, throws light on the social and political situation of the time and constitutes an unsurpassed civilizational referent for today's culture wars.

3-5 units, Win (Barletta, V)
ILAC 370E. Machado de Assis: Mimesis, Memory and Money
Machado de Assis's paradoxes: the greatest author of the 19th Century and his oblique and peripheral perspective. The ruins and rebuilds of memory: Memórias Póstumas de Brás Cubas and Memorial de Aires; Jealously view and its mimesis in Dom Casmurro; his short stories and Rio de Janeiro's 19th century's sociability. The economy in his chronicles. Recent critical readings and editions. Course taught English with readings in English and Portuguese.
3-5 units, not given this year

ILAC 372B. Frontiers of Iberian and Latin American Culture and History
(Same as HISTORY 272B, HISTORY 372B, ILAC 272B) Analyzes the construction and deconstruction of communities and their internal and external frontiers in Iberia and Ibero-America from the early modern period to the early twentieth century by observing both historical and cultural artifacts (historical documents, novels, bibliography, etc.). Topics: the coming of nations, the making of state (or national) territory, the role assigned or taken on by immigrants, minorities and, in the American case, natives, and the persistence of areas now called borderlands or of groups now assigned to such (indeterminate) locations.
3-5 units, Aut (Survillo, L; Herzog, T)

ILAC 380E. Critical Concepts in Chicana/o Literature
(Same as CHICANST 201C, CSRE 201C) Interrogation of the critical discourses that have configured and reconfigured the canon of Chicana/o literature over the last thirty years. Close textual readings of primary texts, mainly narrative, within the development of Chicana/o literary and cultural criticism. Construction of narrative genealogies and foundational texts. Impact of the publication of late-nineteenth or pre-movement novels and Chicana feminist/lesbian critiques. Consideration of alternative paradigms such as positioning Chicana/o literature within a U.S. Latina/o literary imaginary, and the shift of critical discourse in the field of visual art from a paradigm of resistance and affirmation to one of post Chicano.
3-5 units, not given this year

ILAC 382. Latin@ Literature
(Same as CHICANST 200, CSRE 200, ILAC 280) Texts by U.S. Latin@s of Mexican, Puerto Rican, Cuban, and Dominican descent. Examines how these writers' shared history of Spanish colonization and U.S. imperialism has resulted in differing representations of home and homeland, nation, diaspora, history, and memory. Explores how racialization informs the production of gendered identities as well as sexualities. Analysis of the formal conventions of fiction, poetry, drama, memoir, and film.
3-5 units, Win (Yarbro-Bejarano, Y)

ILAC 389E. Race / Sex / Gender in Cultural Representations
Critical theory and cultural representations in a variety of media that address issues surrounding the representation of race, gender, sexuality and politics. How is desire racialized? How is racial difference produced through sex as a material practice and what is the function of sex in racial (self)formation? How do we reconcile questions of pleasure and desire and the structures of power? How do these texts reinforce or contest stereotypes and the ideal bodies of national identity? Is it desirable to envision a bridging of queer communities of color, or a transnational, transfronterizo or global network?
3-5 units, Spr (Yarbro-Bejarano, Y)

ILAC 399. Individual Work
For Spanish and Portuguese department graduate students only. Prerequisite: consent of instructor.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ILAC 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

Undergraduate Courses in Iberian Languages
Primarily for undergraduates; graduate students may enroll with consent of adviser.

IBERLANG 7. First-Year Basque Language and Culture, First Quarter
Speaking, reading, writing, and listening. Authentic and classroom materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which Basque is spoken.
5 units, Aut (Lopez de Luzuriaga Martinez, J)

IBERLANG 8. First-Year Basque Language and Culture, Second Quarter
Continuation of 7. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which Basque is spoken. Prerequisite: 7 or equivalent.
5 units, Win (Lopez de Luzuriaga Martinez, J)

IBERLANG 9. First-Year Basque Language and Culture, Third Quarter
Continuation of 8. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which Basque is spoken. Prerequisite: 8 or equivalent. Completion of 9 fulfills the University language requirement.
5 units, Spr (Lopez de Luzuriaga Martinez, J)

Graduate Courses in Iberian Languages
Primarily for graduate students; undergraduates may enroll with consent of instructor.

IBERLANG 395. Graduate Studies in Iberian Languages
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

Immunology (IMMUNOL)

Undergraduate Courses in Immunology
Primarily for undergraduates; graduate students may enroll with consent of adviser.

IMMUNOL 185. Brain and the Immune System
(Same as IMMUNOL 285) For advanced undergraduates, coterminous students, and graduate students. Molecular and cellular interactions between the nervous and immune systems. Focus is on the role of immune molecules in neural development, the bi-directional mechanisms by which the brain and immune system communicate with each other, and the role of the immune system in the diseased and infected brain. Topics include: molecular basis of fever, stress and inflammation, gender differences in autoimmune diseases, inflammation in neurodegenerative diseases, central nervous system infections, and the immune system in psychiatric disorders. Expert guest lectures, weekly discussion sections, and student presentations. Prerequisite: Biological Sciences or Human Biology core.
3 units, not given this year

IMMUNOL 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
GRADUATE COURSES IN IMMUNOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

IMMUNOL 201. Advanced Immunology I
(Same as MI 211) For graduate students, medical students and advanced undergraduates. Topics include the innate and adaptive immune systems; genetics, structure, and function of immune molecules; lymphocyte activation and regulation of immune responses. Prerequisites: undergraduate course in Immunology and familiarity with experimental approaches in biochemistry, molecular biology, and cell biology.
3 units, Win (Chien, Y)

IMMUNOL 202. Advanced Immunology II
(Same as MCP 202) Readings of immunological literature. Classic problems and emerging areas based on primary literature. Student and faculty presentations. Prerequisite: IMMUNOL 201/MI 211.
3 units, Spr (Staff)

IMMUNOL 203. Advanced Immunology III
Key experiments and papers in immunology. Student presentations and interviews with faculty regarding their experimental process and scientific papers. Prerequisite: IMMUNOL 201/MI 211 or IMMUNOL 202/MCP 202.
3 units, Spr (Utz, P)

IMMUNOL 204. Innate Immunology
(Same as MI 104, MI 204) Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.
3 units, Spr (Staff)

IMMUNOL 205. Immunology in Health and Disease
Concepts and application of adaptive and innate immunology and the role of the immune system in human diseases. Case presentations of diseases including autoimmune diseases, infectious disease and vaccination, hematopoietic and solid organ transplantion, genetic and acquired immunodeficiencies, hypersensitivity reactions, and allergic diseases. Problem sets based on lectures and current clinical literature. Laboratory in acute and chronic inflammation.
2-4 units, Win (Lewis, D)

IMMUNOL 209. Translational Immunology
(Open to medical students in the Immunology concentration, graduate students, undergraduates by consent of instructor) Journal style format focusing on current basic immunology research and how it is translated into immunotherapies and clinical trials. Topics include: hematopoiesis, transplantation, tolerance, immune monitoring, vaccination, autoimmunity and antibodies, rheumatoid arthritis, chronic pulmonary disease, and asthma. May be repeated for credit.
1 unit, Aut (Miklos, D), Win (Miklos, D), Spr (Staff)

IMMUNOL 210. Immunology Research Seminars for Medical Students
Required for medical students selecting the Immunology Concentration. Attendance at a minimum of ten seminars related to immunology outside of required medical school classes. A one-page essay on each seminar, what was presented and how it relates to a clinical immunologic problem, is required.
2 units, Aut (Miklos, D), Win (Miklos, D), Spr (Staff)

IMMUNOL 211. Clinical Research Design and Development Using Immunomodulatory Agents
For advanced undergraduates, coterminal students, medical students, and graduate students. Immunomodulatory agents have improved outcomes in human disease such as autoimmune, cancer, allergies, asthma, and transplantation. The agents that immunomodulate have been developed from discovery of targets in basic immunology. Objectives: 1) how to design phase I (safety and proof of concept studies) based on animal models of new targets for immunomodulatory agents, including concepts such as endpoints, translational biomarker studies, immunological marker, power size calculations, and basic statistics applied to clinical trial design; 2) to understand regulatory (FDA) pathways and institutional policies to obtain approval of clinical studies; 3) to become familiar with patent law for applying for composition of matter and methods of use for discovery of targets for immunomodulatory agents. Prerequisite: Biology or Human Biology core for undergraduates.
3 units, not given this year

IMMUNOL 212. Granulocyte Biology in Human Disease
For advanced undergraduates, coterminal students, medical students, and graduate students. Objectives: 1) to learn the basic functions and activation pathways of major granulocytes in humans (neutrophils, eosinophils, basophils and mast cells); 2) to understand the pathology in humans diseases primarily associated with disorders in neutrophils, eosinophils, basophils, or mast cells; 3) to compare and contrast each granulocyte type and its response to therapies used in clinical medicine. Expert guest lectures, weekly discussion sections, and an emphasis on science communication and science writing. Prerequisite: Biology or Human Biology core for undergraduates.
2 units, not given this year

IMMUNOL 215. Principles of Biological Technologies
(Same as MI 215) The principles underlying novel as well as commonly utilized techniques to answer biological questions. Lectures and primary literature critiques on topics such as flow cytometry, microarrays, and high throughput screening, including applications such as HTS, PCR, and single-cell analysis; human and murine genetic analysis; FACS: protocols and analysis of noncoding RNAs. Class participation is emphasized. Prerequisite: biochemistry. Required of first-year graduate students in Microbiology and Immunology and the Immunology program.
3 units, Spr (Staff)

IMMUNOL 231. Medicine for Innovators and Entrepreneurs
(Same as PEDS 231) Interdisciplinary, project-based course in which bioscience, bioinformatics, biodesign, bioengineering students learn concepts and principles to understand human disease and work together to propose solutions to medical problems. Diabetes mellitus is used as a paradigm for understanding human disease. Guest medical school and outside faculty. Field trips to Stanford clinics and biotechnology companies. Prerequisite: college level biology.
3-4 units, not given this year

IMMUNOL 260. HIV: The Virus, the Disease, the Research
(Same as MED 260) Open to medical students, graduate students in biological sciences, undergraduates with strong biological background. Topics: immunopathogenesis immune deficits, opportunistic infections including TB, and malignancies; genomics viral genetic analyses that have traced the origin of HIV-1 and HIV-2, characterized the spread of infection in humans, and characterized the evolution of the virus within infected individuals; antiretroviral drug development identification of drug targets, structure-based drug design, overcoming drug resistance, pivotal clinical trials, and role of community activism; clinical management solutions in high- and low-income countries; vaccine development learning from past failures and the future of engineering the human immune response. 4 units includes a final project assigned in consultation with the instructor to fit the individual student's background and area of HIV interest.
3-4 units, Spr (Staff)

IMMUNOL 275. Tumor Immunology
(Same as CBIO 275) Focuses on the ability of innate and adaptive immune responses to recognize and control tumor growth. Topics include: tumor antigens, tumor immunosurveillance and immunoeediting, tumor immunotherapy, cancer vaccines and dendritic cell therapy. Tracks the historical developments of our understanding of modulating tumor immune response and discusses their relative significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core.
3 units, Aut (Rothbard, J, Enghleman, E)

IMMUNOL 280. Early Clinical Experience in Immunology
Clinical observation experience for medical students in the Immunology Scholarly Concentration. At the end of the observation period, which may span over one to two quarters, the student submits a case observation paper to his/her faculty sponsor. Prerequisite: IMMUNOL 205.
IMMUNOL 285. Brain and the Immune System  
(Same as IMMUNOL 185) For advanced undergraduates, coterminous students, and graduate students. Molecular and cellular interactions between the nervous and immune systems. Focus is on the role of immune molecules in neural development, the bidirectional mechanisms by which the brain and immune system communicate with each other, and the role of the immune system in the diseased and infected brain. Topics include: molecular basis of fever, stress and inflammation, gender differences in autoimmune diseases, inflammation in neurodegenerative diseases, central nervous system infections, and the immune system in psychiatric disorders. Expert guest lectures, weekly discussion sections, and student presentations. Prerequisite: Biological Sciences or Human Biology core.  
3 units, not given this year

IMMUNOL 290. Teaching in Immunology  
Practical experience in teaching by serving as a teaching assistant in an immunology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student. May be repeated for credit.  
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IMMUNOL 299. Directed Reading in Immunology  
Prerequisite: consent of instructor.  
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IMMUNOL 305. Immunology Journal Club  
Required of first- to fourth-year graduate students. Graduate students present and discuss recent papers in the literature. May be repeated for credit.  
1 unit, Aut (Steinman, L; Martinez, O), Win (Steinman, L; Martinez, O), Spr (Staff)

IMMUNOL 311. Seminar in Immunology  
Enrollment limited to Ph.D., M.D./Ph.D., and medical students whose scholarly concentrations are in Immunology. Current research topics.  
1 unit, Aut (Steinman, L; Fathman, C), Win (Steinman, L; Fathman, C), Spr (Staff)

IMMUNOL 311A. Discussions in Immunology  
Students discuss papers of speakers in 311, and meet with the speakers. Corequisite: 311.  
1 unit, Aut (Butte, M), Win (Butte, M)

IMMUNOL 399. Graduate Research  
For Ph.D., M.D./Ph.D. students, and medical students whose scholarly concentrations are in Immunology.  
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IMMUNOL 801. TGR Project  
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IMMUNOL 802. TGR Dissertation  
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

INSTITUTE FOR INTERNATIONAL STUDIES (FREEMAN SPOGLI)  
(IIS) COURSES

UNDERGRADUATE COURSES IN  
INSTITUTE FOR INTERNATIONAL STUDIES (FREEMAN SPOGLI)  

Primarily for undergraduates; graduate students may enroll with consent of adviser.  

IIS 199. Interschool Honors Program in International Security Studies  
Students from different schools meet in a year-long seminar to discuss, analyze, and conduct research on international security. Combines research methods, policy evaluation, oral presentation, and preparation of an honors thesis by each student. May be repeated for credit.  
1-5 units, Aut (Blacker, C; Crenshaw, M), Win (Crenshaw, M; Blacker, C), Spr (Blacker, C; Crenshaw, M)

INTERDISCIPLINARY STUDIES  
IN HUMANITIES (HUMNTIES)  
COURSES

UNDERGRADUATE COURSES IN  
INTERDISCIPLINARY STUDIES IN HUMANITIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.  

HUMNTIES 100. Text and Context in Humanities: Oedipus and His Vicissitudes  
(Same as ENGLISH 184B) Tales of Modernity from Sophocles, Freud, Chekhov, Babel, and Woolf. Introduction to cross-disciplinary approach in humanities through foundational texts in the modern tradition. The main focus is on Sigmund Freud's Totem and Taboo (1913), alongside his ancillary writings. Contemporary social thought and historical scholarship provide the context (Georgeimmel, Norbert Elias, Karl Schorske, John Murray Cuddihy) while works of imaginative literature (Sophocles, Anton Chekhov, Isaac Babel, and Virginia Woolf) illuminate the significance of the Oedipus myth for understanding the inter-generational conflict in antiquity and modernity. GER:DB-Hum 3 units, not given this year

INTERNATIONAL POLICY STUDIES (IPS) COURSES

GRADUATE COURSES IN  
INTERNATIONAL POLICY STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.  

IPS 201. Managing Global Complexity  
Is international relations theory valuable for policy makers? The first half of the course will provide students with a foundation in theory by introducing the dominant theoretical traditions and insights in international relations. The second half of the course focuses on several complex global problems that cut across policy specializations and impact multiple policy dimensions. Students will assess the value of major theories and concepts in international relations for analyzing and addressing such complex...
global policy issues.

3 units, Win (Gould, E)

IPS 202. Topics in International Macroeconomics
Topics: standard theories of open economy macroeconomics, exchange rate regimes, causes and consequences of current account imbalances, the economics of monetary unification and the European Monetary Union, recent financial and currency crises, the International Monetary Fund and the reform of the international financial architecture.

5 units, Aut (Aturupane, C)

IPS 203. Issues in International Economics
Topics in international trade and international trade policy: trade, growth and poverty, the World Trade Organization (WTO), regionalism versus multilateralism, the political economy of trade policy, trade and labor, trade and the environment, and trade policies for developing economies. Prerequisite: ECON 165, ECON 166.

5 units, Win (Aturupane, C)

IPS 204A. Microeconomics
(Same as PUBLPOL 301A) Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory: oligopoly; reputation and credibility. Prerequisites: ECON 50 and MATH 51 or equiv.

4 units, Aut (Bulow, J)

IPS 204B. Cost-Benefit Analysis and Evaluation
(Same as PUBLPOL 301B) Relationship between microeconomic analysis and public policy making. Economic rationales for policy interventions. Economic models of politics and application to policy making. Relationship of income distribution to policy choice. Welfare evaluation of public and private decisions. Education policy, social security, and health care. Prerequisites: PUBLPOL 301A (for graduate students) or ECON 50, and 102B (for undergraduates).

4-5 units, Spr (Ishii, J)

IPS 207. Governance, Corruption, and Development
The role of governance in the growth and development experience of countries with a focus on the economics of corruption. Topics covered: the concept and measurement of governance; theory and evidence on the impact of corruption on growth and development outcomes, including investment, financial flows, human capital accumulation, poverty and income inequality; the link between governance and financial crises with a focus on the recent global crisis; the cultural, economic, and political determinants of corruption; and policy implications for improving governance. Prerequisite: ECON 50.

3-5 units, Spr (Aturupane, C)

IPS 207A. Judgment and Decision Making
(Same as PUBLPOL 305A) (Same as LAW 333.) Theories and research on heuristics and biases in human inference, judgment, and decision making. Experimental and theoretical work in prospect theory emphasizing loss and risk aversion. Challenges that psychology offers to the rationalist expected utility model; and decision making. Experimental and theoretical work in research on heuristics and biases in human inference, judgment, and decision making. Experimental and theoretical work in research on heuristics and biases in human inference, judgment, and decision making.

4 units, Win (Brest, P)

IPS 208. Justice
(Same as ETHICSOC 171, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the politics of liberty and equality in it. Discussion of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality.

4-5 units, Aut (Dougherty, T)

IPS 209. Practicum
(Same as PUBLPOL 309) Applied policy exercises in various fields. Multidisciplinary student teams apply skills to a contemporary problem in a major policy exercise with a public sector client such as a government agency. Problem analysis, interaction with the client and experts, and presentations. Emphasis is on effective written and oral communication to lay audiences of recommendations based on policy analysis.

1-10 units, Aut (Nation, J), Win (Nation, J)

IPS 209A. IPS Master’s Thesis
For IPS M.A. students only (by petition). Regular meetings with thesis advisers required.

1-10 units, Aut (Staff), Win (Staff)

IPS 210. The Politics of International Humanitarian Action
The relationship between humanitarianism and politics in international responses to civil conflicts and forced displacement. Focus is on policy dilemmas and choices, and the consequences of action or inaction. Case studies include northern Iraq (Kurdistan), Bosnia, Rwanda, Kosovo, and Darfur.

3-5 units, Aut (Morris, E)

IPS 211. The Transition from War to Peace: Peacebuilding Strategies
How to find sustainable solutions to intractable internal conflicts that lead to peace settlements. How institutions such as the UN, regional organizations, and international financial agencies attempt to support a peace process. Case studies include Bosnia, East Timor, Kosovo, Burundi, Liberia, and Afghanistan.

3-5 units, Win (Morris, E)

IPS 213. International Mediation and Civil Wars
This graduate seminar will examine international mediation efforts to achieve negotiated settlements for civil wars over the last two decades. Contending approaches to explain the success or failure of international mediation efforts will be examined in a number of cases from Africa (Sudan, Sierra Leone, Burundi), the Balkans (Bosnia, Macedonia), and Asia (Cambodia, Indonesia/Aceh).

3-5 units, Win (Morris, E)

IPS 219. Intelligence and National Security
How intelligence supports U.S. national security and foreign policy. How it has been used by U.S. presidents to become what it is today; organizational strengths and weaknesses; how it is monitored and held accountable to the goals of a democratic society; and successes and failures. Current intelligence analyses and national intelligence estimates are produced in support of simulated policy deliberations.

3-4 units, Aut (Fingar, T)

IPS 221. International Political Economy and International Organizations: Theory and Practice
(Same as POLISCI 214G) What is the appropriate balance between government regulation and market freedom? Introduction to important theoretical and policy debates in international political economy. Topics include: political economy of trade; exchange rate policy; the liberalization of trade and finance; the global move to openness; development, debt and aid; and the role of international organizations. Discussion of application of academic insights to key policy debates, including whether governments should offset the welfare costs of globalization, whether the IMF and World Bank should be reformed to meet the needs of the 21st century, and how the international community should respond to financial crises. Students will research, write, and orally present policy briefs on specific policy questions.

3-5 units, Win (Gould, E)

IPS 221A. Globalization and Its Discontents: An Introduction to International Political Economy
What is globalization? Its impacts on different countries and population including those that multilateral organizations such as the World Bank, International Monetary Fund, and World Trade Organization have on the economic policies of member states and the functioning of the global economy. Topics include: political economy of trade; exchange rate policy; the liberalization of trade and finance; the global move to openness; development, debt and aid; and the role of international organizations.

3-5 units, not given this year

IPS 222. Economic Development
General theories of economic development with focus on development policies. Topics include: agriculture, industrialization, role of financial development, income distribution, human resource development, international relations,
and economic aid.
5 units, not given this year
IPH 230. Democracy, Development, and the Rule of Law
(Same as INTNLREL 114D, POLISCI 114D, POLISCI 314D)
Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts.
5 units, Aut (Diamond, L; Stoner-Weiss, K)
IPH 233. Public Policy and South Asian Development
Trends in socioeconomic conditions in South Asia from independence to present and the policies that influenced them. Topics: theoretical framework of the relationship between forms of governance and development; governance choices in South Asia, particularly democracy and federalism; and influence of political governance, national identity, and socioeconomic institutions on development. Review of case studies, including the Kerala development experience, India's IT industry, Bangladesh's microfinance initiative, and Sri Lanka's education system.
3-5 units, not given this year
(Same as POLISCI 114S) The major international and regional security problems in the modern world. Interdisciplinary faculty lecture on the political and technical issues involved in nuclear proliferation, terrorism and homeland security, civil wars and insurgencies, and future great power rivalries.
5 units, Win (Crenshaw, M)
IPH 244. U.S. Policy toward Northeast Asia
Case study approach to the study of contemporary U.S. policy towards Japan, Korea, and China. Historical evolution of U.S. foreign policy and the impact of issues such as democratization, human rights, trade, security relations, military modernization, and rising nationalism on U.S. policy. Case studies include U.S.-Japan trade tensions, anti-Americanism in Korea, and cross-strait relations between China and Taiwan.
5 units, Win (Armacost, M; Finger, T; Straub, W; Schneider, D)
IPH 246. China on the World Stage
China's reemergence as a global player is transforming both China and the international system. Other nations view China's rise with a mixture of admiration, anxiety, and opportunism. Some welcome China's rise as a potential counterweight to US preeminence; others fear the potential consequences of Sino-American rivalry and erosion of the US-led international system that has fostered unprecedented peace and prosperity. This course provides an overview of China's engagement with other countries in all regions and on a wide range of issues since it launched the policy of opening and reform in 1978. The goal is to provide a broad overview and systematic comparisons across regions and issues, and to examine how China's global engagement has changed over time.
3-5 units, Win (Finger, T)
IPH 250. International Conflict: Management and Resolution
(Same as PSYCH 383) (Same as LAW 656) Interdisciplinary. Theoretical foundations and practical experience in resolving intergroup and international conflicts. Sources include social psychology, political science, game theory, and international law. Personal, strategic, and structural barriers to solutions. How to develop a vision of a mutually bearable shared future, trust in the enemy, and acceptance of loss that a negotiated settlement may produce. Spoliators who seek to sabotage agreements. Advantages and disadvantages of unilateral versus reciprocal measures. Themes from the Stanford Center of International Conflict and Negotiation (SCICN). Prerequisite for undergraduates: consent of instructor.
3 units, Win (Weiner, A)
IPH 250A. International Conflict Resolution Colloquium
(Same as PSYCH 283) (Same as LAW 611.) Sponsored by the Stanford Center of International Conflict and Negotiation (SCICN). Conflict, negotiation, and dispute resolution with emphasis on conflicts and disputes with an international dimension, including conflicts involving states, peoples, and political factions such as the Middle East and Northern Ireland. Guest speakers. Issues including international law, psychology, and political science, economics, anthropology, and criminology.
1 unit, Win (Weiner, A)
IPH 262. Contemporary Issues in Nuclear Energy Policy
Current nuclear energy trends related to economic growth and carbon-free energy production to reduce global warming. Topics include: trends, promise, and perils; environment; proliferation; and international security. Policy considerations for nuclear safety and safeguards, environmentally responsible management from raw uranium to spent fuel, international security and nonproliferation, economic competition with other energy sources, domestic and foreign politics, and international law and treaties.
5 units, not given this year
IPH 263. Energy and Climate Cooperation in the Western Hemisphere
(Same as EARTHYS 132, EARTHYS 232, INTNLREL 146A) Current political dynamics in major western hemisphere fossil fuel producers in N. America, the Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biofuels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership.
4 units, not given this year
IPH 264. Behind the Headlines: An Introduction to Modern Afghanistan, Pakistan and India
Introduction to history and contemporary politics of South Asia. Analyzes history and current state of India, Afghanistan and Pakistan: historical forces that shaped the region (diverse religions and ethnicities, geography, and colonialism), the rise of the Taliban and Al Qaeda in Afghanistan; Pakistan's government, military, and mullahs; the economic and political rise of India; and the U.S. intervention in Afghanistan, US relationship with Pakistan, and its policy shift toward India.
3-5 units, Aut (Manuel, A)
IPH 270. The Geopolitics of Energy
This course examines how the interplay of political, economic, and technological forces may reshape future energy production and consumption. Building upon international political economy theory, we will address questions such as: What policies are energy importers pursuing to ensure reliable, plentiful and cheap energy supply? What are the socioeconomic and political challenges and strategic options energy exporters face? How can technological breakthroughs in alternative energy and carbon policies affect the distribution of power between traditional energy exporters and importers?
3-5 units, Win (Staff)
(Same as ETHICSOC 280) Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia; including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.
3-5 units, Spr (Cohen, D)
IPH 298. Practical Training
Students obtain internship in a relevant research or industrial activity to enhance their professional experience consistent with their degree program and area of concentration. Prior to enrolling students must get internship approved by associate director. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets
### COURSES OF INSTRUCTION

the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own internship. Limited to International Policy Studies students only. May be repeated for credit.

**1-3 units, Sum (Staff)**

**IPS 299. Directed Reading**

IPS students only. May be repeated for credit.

**1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)**

**IPS 300. Issues in International Policy Studies**

Presentations of techniques and applications of international policy analysis by students, faculty, and guests, including policy analysis practitioners.

**1 unit, Aut (Stoner-Weiss, K)**

**IPS 314S. Decision Making in U.S. Foreign Policy**

(Same as POLISCI 314S) Priority to IPS students. Formal and informal processes involved in U.S. foreign policy decision making. The formation, conduct, and implementation of policy, emphasizing the role of the President and executive branch agencies. Theoretical and analytical perspectives; case studies.

**5 units, Spr (Blacker, C)**

**IPS 388. Palestine and the Arab-Israeli Conflict**

(Same as HISTORY 288, HISTORY 388, JEWISHST 288, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin)

**4-5 units, not given this year**

**IPS 802. TGR Dissertation**

**0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)**

### INTERNATIONAL RELATIONS (INTNLREL) COURSES

**UNDERGRADUATE COURSES IN INTERNATIONAL RELATIONS**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**INTNLREL 1. Introduction to International Relations**

(Same as POLISCI 1) Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth. GER:DB-SocSci

**5 units, Spr (Fearon, J)**

**INTNLREL 10SI. The International Responsibility to Protect**

This Student-Initiated Course focuses on the main issues and themes surrounding international responses to mass atrocities and genocide. We will explore the events and international norms that led to the creation of The Responsibility to Protect Doctrine, the main thematic dilemmas surrounding international action, and a brief history of international responses to past genocides. The objective of this course is to give each student a better idea of what the realistic possibilities are for international action on grave human rights violations of this kind.

**1-2 units, Win (Stedman, S)**

**INTNLREL 61Q. Food and security**

(S,Sem) (Same as EARTHSYS 61Q, EESS 61Q) Sanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

**5 units, Aut (Naylor, R; Stedman, S)**

**INTNLREL 110C. America and the World Economy**

(Same as POLISCI 110C, POLISCI 110X) Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade policies and policies; the effects of the globalization of business on future US prosperity. GER:DB-SocSci

**5 units, Aut (Goldstein, J)**

**INTNLREL 110D. War and Peace in American Foreign Policy**

(Same as POLISCI 110D, POLISCI 110Y) (Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period. GER:DB-SocSci, DB-SocSci

**5 units, Win (Schultz, K)**

**INTNLREL 114D. Democracy, Development, and the Rule of Law**

(Same as IPS 230, POLISCI 114D, POLISCI 314D) Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts. GER:DB-SocSci

**5 units, Aut (Diamond, L; Stoner-Weiss, K)**

**INTNLREL 115. Development Issues in South Asia**

1) Study of socio-economic trends from independence up to the present time in South Asia. 2) The complex interactions between development, and political governance, national identity and socio-economic institutions. 3) Case studies of exemplary outcomes: the Kerala development experience experience, India’s IT industry, Bangladesh’s microfinance initiative and education in Sri Lanka. 4) Student assessment will be based on class presentation and paper.

**5 units, Spr (Dossani, R)**

**INTNLREL 122A. The Political Economy of the European Union**

EU institutions, the legislative process, policies, relations with the U.S., and enlargement and the future of the EU. History and theories of EU integration. Democratic accountability of the institutions, and the emerging party system. Principal policies in agriculture, regional development, the internal market, single currency, and competition. Emphasis is on policies that affect the relations with the U.S. including trade and security. Results of the EU’s constitutional convention.

**5 units, Win (Crombez, C)**

**INTNLREL 136R. Introduction to Global Justice**

(Same as ETHICSOC 136R, PHIL 76, POLISCI 136R, POLISCI 336) Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pettig, John Rawls.

**3 units, Spr (Satz, D)**

**INTNLREL 140A. International Law and International Relations**

What is the character of international legal rules? Do they matter in international politics, and if so, to what degree? The foundational theories, principles, and sources of public international law. Prominent theories of international relations and how they address the role of law in international politics. Practical problems such as human rights, humanitarian intervention, and enforcement of criminal law. International law as a dynamic set of rules, at times influenced by power, at other times constraining it, but always essential to studying international relations. WIM

**5 units, Aut (Lutomska, P)**

**INTNLREL 140C. The U.S., U.N. Peacekeeping, and Humanitarian War**

The involvement of U.S. and the UN in major wars and international interventions since the 1991 Gulf War. The UN Charter’s provisions on the use of force, the origins and evolution of peacekeeping, the reasons for the breakthrough to peacemaking and peace enforcement in the 90s, and the ongoing debates over the legality and wisdom of humanitarian intervention. Case studies
include Croatia and Bosnia, Somalia, Rwanda, Kosovo, East Timor, and Afghanistan.
5 units, Spr (Patenaude, B)

INTNLREL 141A. Camera as Witness: International Human Rights Documentaries
Rarely screened documentary films, focusing on global problems, human rights issues, and aesthetic challenges in making documentaries on international topics. Meetings with filmmakers. GER:DB-Hum
5 units, Aut (Bojic, J)

INTNLREL 146A. Energy and Climate Cooperation in the Western Hemisphere
(Same as EARTHSYS 132, EARTHSYS 232, IPS 263) Current political dynamics in major western hemisphere fossil fuel producers in N. America, the Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biofuels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership.
4 units, not given this year

INTNLREL 147. The Political Economy of the Southern Cone of South America
Argentina, Brazil, Paraguay, Uruguay, Bolivia, and Chile. Post-WW II political economy developments and political relations. Impacts of military rule from the 60s into the 80s. Regional and international political developments that led to MERCOSUR in 1991, and subsequent expansion.
5 units, Spr (Staff)

INTNLREL 148. Economic Integration of the Americas
Current attempts at economic integration throughout the Western Hemisphere, including the Andean Community, the Caribbean Common Market (CARICOM), the Latin American Integration Association (ALADI), MERCOSUR, the North American Free Trade Area (NAFTA), and the Central American Integration System (SICA). Emphasis is on practical applications of integration efforts and nuts-and-bolts issues of how integration efforts function.
5 units, Win (O’Keefe, T)

INTNLREL 149. The Economics and Political Economy of the Multilateral Trade System
The historical development of the multilateral trade system, the current agenda of the World Trade Organization, and prospects for trade liberalization. Emphasis is on the economic rationale for multilateral trade rules, the political problems facing countries in supporting further liberalization, and the challenges to the legitimacy of WTO procedures and practices. Issues include the greater participation of developing countries, the impact of new member states and the relationship between the WTO and other multilateral bodies. Guest speakers; student research paper presentations.
5 units, Win (Josling, T)

INTNLREL 165A. Globalization, governance and human rights
Globalization is associated with a downward spiral of human rights. Yet, paradoxically, more countries now subscribe to human rights treaties than ever before. The class discusses different aspects of globalization drawing on theories from sociology, political science, cultural anthropology and law. In examining the economic, political and cultural aspects of globalization, the class shows the tensions within globalization and their paradoxical effects on human rights. The course outlines different global governance mechanisms aimed at improving human rights. These include government human rights treaties, international NGOs advocacy work and corporate Codes of Conduct and their effects on human rights. The effects of the United Nations International Labour Organization on labor related human rights, such as child labor and discrimination, serve as examples. Integrating social sciences theories with empirical research, this course provides an overview of the debates surrounding the causes and elf
5 units, Spr (Abu Sharkh, M)

INTNLREL 170. ENERGY AND CLIMATE
The seminar provides an interdisciplinary introduction to the technology, economics, and international politics of energy and climate. We investigate specific energy technologies and discuss their impact on geopolitics, the environment and mitigating the effects of climate change. What is the role of energy in national security? What will climate change mean for our energy mix? How do developing countries view energy and climate change? What is the proper balance between regulation and free market operation in energy markets?
5 units, Win (Rosencranz, A)

INTNLREL 191. IR Journal
(Staff)
1 unit, Aut (Schultz, K), Win (Schultz, K), Spr (Schultz, K)

INTNLREL 197. Directed Reading in International Relations
Open only to declared International Relations majors. (Staff)
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

INTNLREL 198. Senior Thesis
Open only to declared International Relations majors with approved senior thesis proposals.
2-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

INTNLREL 200A. International Relations Honors Field Research
For juniors planning to write an honors thesis during senior year. Initial steps to prepare for independent research. Professional tools for conceptualizing a research agenda and developing a research strategy. Preparation for field research through skills such as data management and statistics, references and library searches, and fellowship and grant writing. Creating a work schedule for the summer break and first steps in writing. Prerequisite: acceptance to IR honors program.
3 units, Spr (Gould, E)

INTNLREL 200B. International Relations Honors Seminar
Second of two-part sequence. For seniors working on their honors theses. Professional tools, analysis of research findings, and initial steps in writing of thesis. How to write a literature review, formulate a chapter structure, and set a timeline and work schedule for the senior year. Skills such as data analysis and presentation, and writing strategies. Prerequisites: acceptance to IR honors program, and 199 or 200A.
3 units, Aut (Gould, E)

INTNLREL 206. Palestinian Nationalism, Past and Present
The Palestinian national movement and its role in the Arab-Israeli conflict. The roots of the movement in the Ottoman Empire, its growth through the British Mandate, the 1948 and 1967 wars, the Intifada, and the Israeli-Palestinian peace process. Emphasis is on components which contributed to or delayed the growth of a distinct Palestinian identity, including Zionism.
5 units, not given this year

INTNLREL 207. Tribe, State, and Society in the Modern Middle East
The staying power of tribal identities and values in the Middle East. Examples include the Iraqi Sunni tribal insurgency against the U.S. The role of tribes in the formation of Middle Eastern states and how tribal values continue to impact social, political, and economic issues today.
5 units, not given this year
struggles to reach his destination, with attention to how exile and alienation, the encounter with ancestors, the female voice, and divine guidance define the trajectories traced by the various epics in question. The diminished importance of the dead and the increased emphasis on the power of the living in various literary genres. How concepts of humanity and society are defined by the sense of rupture with the past, including a heightened importance given to innovation, the present, the living, and the everyday that contrasts with the formative power of the afterlife, tradition, and the dead. **IHUM 3. Epic Journeys, Modern Quests**

Second of a two quarter sequence. Through the metaphor of the journey, epic poems externalize the human quest for identity and self-definition: as the epic hero crosses the physical world and descends into the underworld, to visit the dead and seek counsel from them, he gradually comes closer to himself. The different goals of such journeys and the evolution of the epic hero as he struggles to reach his destination, with attention to how exile and alienation, the encounter with ancestors, the female voice, and divine guidance define the trajectories traced by the various epics in question. The diminished importance of the dead and the increased emphasis on the power of the living in various literary genres. How concepts of humanity and society are defined by the sense of rupture with the past, including a heightened importance given to innovation, the present, the living, and the everyday that contrasts with the formative power of the afterlife, tradition, and the dead. **IHUM 11A. Making of the Modern World: Europe and Latin America**

First in a two quarter sequence. How did the modern world come to be? The emergence of modernity from 1300 to the present. Demographic and religious transformations in Europe; the development of ideologies, social formations, and political institutions as they eventually crossed the Atlantic and were modified in the Americas; 20th-century social revolution and authoritarianism throughout Latin America. Students build an understanding of the modern world and engage with the creative/destructive tensions inherent in this long transformation. Readings include classics of imaginative literature, political thought, and historical criticism. Theorists who have confronted and analyzed the problem of the origins of capitalist modernity, such as Adam Smith, Karl Marx, Max Weber. Records of ordinary life, such as parish registers, wills and diaries illustrate changes in social and economic existence. Sources include materials drawn from literature, philosophy, economic and social theory, and primary sources. GER:IHUM-2

**IHUM 23A. The Fate of Reason**

Two quarter sequence. Every day, each one of us faces problems about what to believe and how to act. Socrates began the tradition of philosophy by insisting that answers to these problems ought to be guided by reason, that if we could only believe and act more rationally, our lives would be better for us overall. This course explores the fate of Socratic proposals. Some of our authors defend the power of reason to improve our lives. Others insist that purely rational principles demand too much of us, or else are insufficient to help us act well or reach important insights. Many writers focus on working out the proper relation between reason and the passions, or emotions. We will trace the fate of reason in several cultural traditions, thereby exploring the fundamental basis for our commitments about how to live, and for our most important beliefs about God, ourselves, the world, and our place within it. GER:IHUM-2

**IHUM 25A. Art and Ideas**

First in a two quarter sequence. Arts and Ideas will explore a broad sampling of cultural practices primarily dance and theater that use the human body as an art medium. From the critical perspectives of dance and drama history and theory, we will examine both established and emergent practices. We will be concerned with developing perceptual and interpretive skills for understanding how the performing arts have functioned historically and critically as key indexes to and challenging templates of cultural understanding. How can we come to read the body as an art medium? What kinds of knowledge can a highly disciplined moving body reveal? What does it mean to re-present life through performance historically? How does a live performance work to construct the spectator who views it? How do we come to know ourselves through both watching and participating in performance? From romantic ballet and realist drama to the present, including examples such as the Harlem Renaissance, the early-20th century social revolution and authoritarianism throughout Latin America. Students build an understanding of the modern world and engage with the creative/destructive tensions inherent in this long transformation. Readings include classics of imaginative literature, political thought, and historical criticism. Theorists who have confronted and analyzed the problem of the origins of capitalist modernity, such as Adam Smith, Karl Marx, Max Weber. Records of ordinary life, such as parish registers, wills and diaries illustrate changes in social and economic existence. **IHUM 28A. Poetic Justice: Order and Imagination in Russia**

Russia is where the most beautiful dreams and the ugliest nightmares of other places come true. There the doctrines of Christianity, Marxism, and now free-market capitalism, born elsewhere, have developed in fantastic ways, and borrowed artistic forms, from the novel to the ballet, have reached a new level. This
course traces Russian culture over a millennium, focusing on the tensions that developed there between beauty and power, self and other, past and future. We start the winter with Biblical stories, folktales about princes and peasants, medieval icons and saints’ lives, then turn to masterpieces of nineteenth-century literature. Alexander Pushkin transforms the bloody story of the Pugachev rebellion into a novella about disguise, power and love. Nikolai Gogol imagines an uneasy world where your own nose could leave your body to become your rival. Fedor Dostoevsky, in The Brothers Karamazov, questions why we trust the state, the church, the family, and language itself. Le GER:IHUM-2

IHUM 34A. A Life of Contemplation or Action? Debates in Western Literature and Philosophy

First in a two quarter sequence. Which is preferable: a life of thought or a life of action? Are the two necessarily in conflict, or is it possible to reconcile them? This course focuses on literary treatments of the ongoing debate over the active life versus the contemplative life, as it is carried out in texts from the classical to the modern eras. While the debate itself is perennial, it takes on different forms and implications as it moves across changing literary, historical and philosophical contexts. The winter quarter will consider the debate as it is defined by classical authors, early Christian thinkers, and medieval mystical and literary texts, and is redefined in the Renaissance by humanist and posthumanist treatments of it. The spring quarter will consider the role of contemplation in an increasingly market-driven and secular world.

IHUM 39A. Inventing Classics: Greek and Roman Literature in Its Mediterranean Context

First in a two quarter sequence. Are you concerned with fundamental questions about the human condition? Do you ask yourself whether your life is controlled more by your own free choices or by your genetic code? Do you wonder whether the universe is just or unjust? Do you worry whether a superpower can function without hubristic arrogance? If these sorts of issues seem central to your intellectual and personal explorations, this IHUM sequence will reveal to you that the ancient Mediterranean world was equally consumed with identical questions about the nature of human society and human existence. We will undertake our explorations by reading a wide and deep selection of important and influential literary texts from Greece and Rome, amplified by a smaller selection of texts from other cultures in the Mediterranean and the Near East. The sequence will be organized historically, with the winter quarter covering the period from c.2000BC to the fourth century BC, and the spring quarter covering from the fourth century BC to the end of the Roman Empire. The two quarters will consider the artistic representation of order whether divine or human. Goal is to heighten awareness of familiar narratives, mythologies, ideas, and images, and to convey a sense of a long-established national culture with its own dynamic vision.

IHUM 57. Humans and Machines

How is a living, thinking human being like, or not like, a machine? This might seem like a new question for the Information Age, yet it has been a preoccupation of our civilization for centuries. From the culmination of the Scientific Revolution in the seventeenth century, philosophers, physiologists, engineers, authors, political actors and artists of every kind have taken human’s measure by comparing humans with machines. Our course follows this thought together, we ask a number of questions about what it means to think of the human mind, body, and society as types of machines. How has the machine served as a metaphor for the
cosmos and culture? How do we interact with machines, and how have machines influenced literature, performance, and the arts? What separates us from our machines, and are we really as separate as we think we are? We explore the shifting boundary lines between the mechanical and the human by considering how humanity has created or imagined machines and on GER:IHUM-1

IHUM 58. Technological Visions of Utopia
Throughout history, philosophers have speculated about the nature of the good society, and how to achieve it. Although earlier writers had held their own views, Sir Thomas More gave a name to this ideal society that has now become part of common language: utopia. In the almost 500 years since More’s Utopia appeared, changes in society, including enormous advances in science and technology, have opened up new possibilities for the utopian society that More and his predecessors could not have envisioned. At the same time, science and technology also entail risks that suggest more dystopian scenarios; in their most extreme form, threats to humanity’s very survival. This course looks at several works that consider how literary visions of society have evolved with the progress of science and technology. The Readings begin with More and continue forward to the much more technologically determined visions of the late 20th century. The course also considers one cinematic treatment of technologically determined visions of the late 20th century. The course also considers one cinematic treatment of technology.

IHUM 65. Race and Reunion: American Memory and the Civil War
The place of slavery and the war in American cultural memory; its representation in literature, visual arts, music, high art, popular culture, and film. How the battle shifted from real to imagined locations. How stories told by writers and artists are shaped by memories and narratives of the past. Themes include competing ideas of race and nation, freedom and citizenship, personal and collective identity, and the purpose of literature and the arts.

IHUM 69A. Human History: A Global Approach
First of a two-quarter sequence. 75,000 years ago there were barely 20,000 people on earth and each of them consumed about 4,000 calories of energy each day, half of it for food and half for everything else combined. Today, by contrast, there are 6,000,000,000 people on earth and in the US we each, on average, burn through 230,000 calories per day, for everything from driving Hummers to eating much more than we need. We take for granted things that would have seemed like magic a hundred years ago; we have penetrated every niche on the planet and have even moved beyond planet. Yet at the same time, other species are going extinct at the rate of one every 20 minutes and we have poisoned the atmosphere and seas. Depending on how you look at it, people are the greatest success story or the most disaster of the last million years. We may be on the verge of an astonishing transformation, transcending biology and making death obsolete; or we may be on the verge of destroying ourselves (an RU:GEN-IHUM-2

IHUM 69B. Human History: A Global Approach

IHUM 70. Word and Image
Is a picture really worth a thousand words? This familiar phrase, which began to appear frequently in the U.S. press around 1920, is particularly worth pondering in our image-saturated era, when an image shown for a few seconds can sell a product, seal an election, result in death threats, or shift public opinion. What roles do pictures and words play in our perception and understanding of the world? How do readers, writers, and critics experience emotions? What is the relationship of an image or a word to that which it represents? These and similar questions are raised today in many different places: in journalism as much as in cognitive science, in science as much as in literature, on the internet and in the criminal justice system. How images argue, prove, convince - and how they argue, prove and convince differently from the written word - is a question asked in this course. It is a question that, with differing degrees of urgency, has concerned those that GER:IHUM-1

IHUM 72. The Poet Re-making the World
Can poetry change the world? In this course we will show how poetry has proved itself to be a resilient aesthetic form at the intersection of the personal and the political. We will follow the poets as it is written, written, re-written, re-written, re-told, re-told, re-told, re-told. From the trench of the First World War; a Japanese haiku master and inspired wanderer of the 17th century; an American Beat, Jack Kerouac; a poet from St Louis who went to England and changed the course of 20th century poetry; an English woman trapped in the conventions of her time: a contemporary US soldier in Iraq. Th GER:IHUM-1

IHUM 73A. Ultimate Meanings: Decoding Religious Stories from around the World
Is there more to life than survival, or does it have some higher purpose? Why is there suffering, death, and evil in the world, and is there some way to overcome them? Religious communities often answer such questions through the art of story-telling, through history, myth, biography and other forms of distilling human experience into narrative. These stories have shaped the world we live in, helping people to cope with difficult aspects of experience, influencing the way we love, suffer and die, inspiring the imagination, and helping to ignite conflict and violence. This course introduces you to some of the great stories of the world’s religions, the sacred narratives of Buddhism, Christianity and Islam. We will read these stories to learn something about the religious cultures that produced them, and how they have shaped human experience. In the winter quarter, students will be introduced to stories drawn primarily from the Buddhist tradition in the many forms which it develop GER:IHUM-2

IHUM 74A. The Problem of Europe
This course explores how a small peninsula regularly torn by civil, ethnic, and national discord became an unlikely center of global political power, economic wealth, and intellectual invention. It considers how Europeans, from the end of the Middle Ages to the present day, have understood and responded to the myriad challenges associated with modernity. Through engagement with key political and philosophical texts, as well as novels, poetry, and films, students will discuss the extent to which Europeans have tried to resolve, with mixed results, fundamental problems associated with religious pluralism, political revolution, the changing role of the state and nation, industrialization, imperialism, and globalization.

IHUM 74B. The Problem of Europe
This course explores how a small peninsula regularly torn by civil, ethnic, and national discord became an unlikely center of global political power, economic wealth, and intellectual invention. It considers how Europeans, from the end of the Middle Ages to the present day, have understood and responded to the myriad challenges associated with modernity. Through engagement with key political and philosophical texts, as well as novels, poetry, and films, students will discuss how Europeans have tried to resolve, with mixed results, fundamental problems associated with religious pluralism, political revolution, the changing role of the state and nation, industrialization, imperialism, and globalization.

IHUM 75. Can the People Rule?
This course will examine basic questions about the ideas of popular (or republican or democratic) government that developed in the century and a half after the Glorious Revolution, and do so primarily by focusing on the American founding era and its aftermath. Using two European authorities who operated under monarchical regimes to sympathize with projects for popular government—John Locke and Alexis de Tocqueville—we’ll discuss the possibilities and limits of the republican system that Americans began fashioning after 1776, using the three central segments of the course to focus on specific aspects of the American experiment, from the decision to establish republican governments in 1776, to the reconsideration of that experiment in 1787-1788, and the development of the special doctrine of judicial review under the aegis of the Constitution.

IHUM 76. Voyagers and Visionaries
In this course we will examine five moments of intellectual encounter among the far-flung civilizations of the Eastern Hemisphere in the premodern and early modern eras. The texts we will investigate are landmark works of cultural translation and ethnographic analysis, penned by scholar-travelers from across the Old World. In addition to reading works by two Western analysts of the East, you will be introduced to early Chinese and Persian appraisals of India, as well as a North African encounter with sub-Saharan Africa. Each of our chosen works shows a self-critical mind at work; each represents a lifetime of empirical research, and the development of the special doctrine of judicial review under the aegis of the Constitution.

IHUM 77. What is a Classic?
The goal of this sequence is to provide Stanford freshman with structured access to great works of literature. The core question is: Why (and how) should we read classics today? Part of this process involves engaging them in an interrogation of the very notion of classic literature. One standard understanding of classic involves the claim that a certain work surpasses its original context and speaks to later generations. Whether or not that definition suffices, the course will ask students to read literature of the past (whether distant or less distant) and to ask why and how we still read such works. A major topic of the sequence is therefore the durability of literary works and the explanations offered up to explain that durability. While some students in What is a Classic may choose to major in a literary field, our goal is not primarily recruitment but rather to provide all participating students, whatever their eventual major choice, with the concepts and skills to rem

INTRODUCTORY SEMINARS

AERONAUTICS AND ASTRONAUTICS

AERONAUTICS AND ASTRONAUTICS INTRODUCTORY COURSES

AA 113N. Structures: Why Things Don’t (and Sometimes Do) Fall Down
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. How structures created by nature or built by human beings keep things up and keep things in. Topics: nature's structures from microorganisms to large vertebrates; buildings from ancient dwellings to modern skyscrapers; spacecraft and airplanes; boats from ancient times to America's Cup sailboats, and how they win or break; sports equipment; and biomedical devices including bone replacements and cardiovascular stents. How composite materials are used to make a structure light and strong. GER:DB-EngrAppSci

AA 115N. Electric Automobiles and Aircraft
(S.Sem) (Same as EE 25Q) Stanford Introductory Seminar. Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues need to reconsider how we move, finding sustainable transportation solutions. This course will provide an introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two fun opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and physics AP or elementary mechanics. GER:DB-EngrAppSci

AFRICAN AND AFRICAN AMERICAN STUDIES

AFRICAN AND AFRICAN AMERICAN STUDIES INTRODUCTORY COURSES

AFRICAAAM 16N. African Americans and Social Movements
(F.Sem) (Same as CSRE 16N, SOC 16N) Stanford Introductory Seminar. Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's rights, LGBT rights, environmental movement, and contemporary political conservatism. GER:DB-SociSci

AFRICAAAM 48Q. South Africa: Contested Transitions
(S.Sem) (Same as HISTORY 48Q) Stanford Introductory Seminar. Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet. GER:DB-Hum, EC-GlobalCom

AFRICAAAM 56N. Mixed Race in the New Millennium: Crossings of Kin, Faith & Culture
AMERICAN STUDIES INTRODUCTORY COURSES

AMSTUD 25N. Understanding the Sixties
(F,Sem) (Same as SOC 25N) Stanford Introductory Seminar. Preference to freshmen. The tendency of critics to view the 60s through ideological lenses as either the best or worst of times has made a balanced perspective difficult to achieve. Goal is to provide a sociological explanation for the political and cultural turbulence that marked the era. The confluence of demographic, political, economic, and cultural trends that date back to at least the 30s. The activities of the decade, the people involved, the role of the media. Using the literature and film, 1940s to 1980s. 4 units, Win (Elam, M)

ANTHRO 27N. Ethnicity and Violence: Anthropological Perspectives
(F,Sem) Stanford Introductory Seminar. Ethnicity is one of the most compelling and most modern ways in which people - in the midst of considerable global and local uncertainty - all across the world imagine and narrate themselves. This seminar will take an anthropological look at both the modernity and the compulsions of ethnic violence, and the changing identities under these pressures. We will focus on both historical and contemporary cases of violence and explore the significance of the cultural context of violence. 3-5 units, Aut (Thiranagama, S)

APPLIED PHYSICS INTRODUCTORY COURSES

APPPHYS 78Q. Tools of Nanotechnology
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Topics include: current and future applications of nanotechnology, nanofabrication tools, nanoscale characterization and manipulation tools, scanning probe microscopy (SPM), Stanford nanotechnology research examples, hands-on activities, research lab tours. Prerequisite: high school physics. GER:DB-EngrAppSci 3 units, Aut (Beetz, T)

APPPHYS 79N. Energy Options for the 21st Century

ART HISTORY INTRODUCTORY COURSES

ARTHIST 260Q. Art, War and Politics in the Modern Period
(S,Sem) Stanford Introductory Seminar. Considers the pivotal relationship between war, politics and the visual arts from the beginnings of the French Revolution in 1789 to the end of the Vietnam War in 1975, exploring how iconic works of modernism have both shaped and reflected public discourse on war, whether in support of such campaigns or in opposition to them. Topics: the power of visual representation to capture the trauma of the battlefield; propaganda and the art of persuasion; how developments in modern art are implicated in the evolution of modern identity and vice-versa. 3 units, Win (Luhmann, T)

ARTIST 201N. The Anthropology of Globalization
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Anthropological approach to how cultural change, economic restructuring, and political mobilization are bound up together in the process of globalization. GER:DB-SocSci 4 units, Aut (Ebron, P)

ARTST 26N. Hauntings, Visions, and Prophecy
(F,Sem) Stanford Introductory Seminar. This course explores the complex nature of the order in which people have experiences that they identify as ¿supernatural¿: experiences of something that is not physically present. We will explore the cultural and psychological dimensions of this very real phenomenon. We will not, however, make ontological judgments about whether something which is experienced as externally present is in fact externally present: in other words, this is a class about culture and psychology, not about metaphysics. We will do experimental work, using our selves and fellow classmates, as subjects, to understand who, when and how people have experiences that they deem ¿super-natural. 3-5 units, Win (Luhmann, T)

ANTHRO 21N. The Anthropology of Globalization
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Anthropological approach to how cultural change, economic restructuring, and political mobilization are bound up together in the process of globalization. GER:DB-SocSci 4 units, Aut (Ebron, P)

ANTHRO 27N. Ethnicity and Violence: Anthropological Perspectives
(F,Sem) Stanford Introductory Seminar. Ethnicity is one of the most compelling and most modern ways in which people - in the midst of considerable global and local uncertainty - all across the world imagine and narrate themselves. This seminar will take an anthropological look at both the modernity and the compulsions of ethnic violence, and the changing identities under these pressures. We will focus on both historical and contemporary cases of violence and explore the significance of the cultural context of violence. 3-5 units, Aut (Thiranagama, S)
and the surprising history of Abstract Expressionism, the CIA and the cold war. Sophomore seminar; enrollment restricted and by application only. GER: DB-Hum
3 units, Win (Lee, P)

ARTHIST 232Q. Place: Making Space Now
(S,Sem) (Same as CEE 32Q) Stanford Introductory Seminar. This seminar argues that architects are ultimately placemakers, and questions what that means in the contemporary world. Part I investigates the meaning of the word place. Additional background for understanding contemporary place making will include a critique of the history of modern place-making through an examination of modern form. Part II examines two traditional notions of place by scale: from home to the city. What elements give these conceptions of space a sense of place? To answer this question, themes such as memory, mapping, and boundary, among others, will be investigated. Part III presents challenges to the traditional notions of place discussed in Part II. Topics addressed include: What does it mean to be out of place? What sense of place does a nomad have, and how is this represented? What are the non-places and how can architects design for these spaces? Part IV addresses the need to re-conceptualize contemporary s
3 units, Spr (Barton, J; Beischer, T)

BIOCHEMISTRY INTRODUCTORY COURSES

BIOC 118Q. Genomics and Medicine
3 units, Win (Brutlag, D)

BIOENGINEERING INTRODUCTORY COURSES

BIOE 70Q. Medical Device Innovation
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Survey of innovative technologies and medical devices used in multiple medical specialties. Guest lecturers include Stanford Medical School physicians, entrepreneurs, and venture capitalists. Focus on how to identify clinical needs and design device solutions to address those needs. Fundamentals of starting a company. Field trips to local medical device companies and design house. No previous engineering training required.
3 units, Spr (Mandato, J; Pierce, R)

BIOLOGY INTRODUCTORY COURSES

BIO 4N. Personalized Genomic Medicine
(F,Sem) Stanford Introductory Seminar. Exploration of the exciting new field of personalized genomic medicine. Personalized medicine is based on the idea that each person’s unique genome sequence can be used to predict risk of acquiring specific diseases, and to make more informed medical choices. Learn about the fascinating science behind these approaches; where they are heading in the future; and the ethical implications such technology presents. Lectures will be augmented with hands-on experience in exploring and analyzing a real person’s genome. GER: DB-NatSci
3 units, Aut (Fraser, H)

BIO 8N. Human Evolution
(F,Sem) Stanford Introductory Seminar. A survey of the anatomical and behavioral evidence for human evolution and of the increasingly important information from molecular genetics. Emphasis on the split between the human and chimpanzee lines 6-7 million years ago, the appearance of the Australopiths by 4.1 million years ago, the emergence of the genus Homo about 2.5 million years ago, the spread of Homo from Africa 1.7-1.6 million years ago, the subsequent divergence of Homo into different species on different continents, and the expansion of fully modern humans (Homo sapiens) from Africa about 30,000 years ago to replace the Neanderthals and other non-modern Eurasians. GER: DB-NatSci
3 units, Win (Klein, R)

BIO 12N. Sensory Ecology of Marine Animals
(F,Sem) Stanford Introductory Seminar. Animals living in the oceans experience a highly varied range of environmental stimuli. An aquatic lifestyle requires an equally rich range of sensory adaptations, including some that are totally foreign to us. In this course we will examine sensory system in marine animals from both an environmental and behavioral perspective and from the point of view of neuroscience and information systems engineering.
3 units, Spr (Thompson, S)

BIO 13N. Environmental Problems and Solutions
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Students do independent investigations of current environmental problems, analyzing differing views of them and discussing possible solutions. Each student gives seminar presentations and leads seminar discussions. Short, documented position papers are written for policy makers. GER: DB-NatSci
3 units, Spr (Ehrlich, P)

BIO 15N. Environmental Literacy
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Lack of public understanding of the details of most environmental problems is cited as a cause of environmental deterioration. Good citizenship requires literacy about the elements of the scientific and decision making processes that accompany most environmental issues: what can happen, what are the odds, how can the credibility of sources of expertise be assessed, which components of environmental debates deal with factual and theoretical issues, and which are political value judgments? GER: DB-NatSci
3 units, Aut (Root, T)

BIO 16N. Island Ecology
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. How ecologists think about the world. Focus is on the Hawaiian Islands: origin, geology, climate, evolution and ecology of flora and fauna, and ecosystems. The reasons for the concentration of threatened and endangered species in Hawaii, the scientific basis for their protection and recovery. How knowledge of island ecosystems can contribute to ecology and conservation biology on continents. GER: DB-NatSci
3 units, Spr (Vitousek, P)

BIO 22N. Infection, Immunity, and Global Health
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. The causes and prevention of infectious diseases, focusing on the interplay between pathogens and the immune system that determines the outcome of the disease. Introduction to microbiology, immunology, and epidemiology. Diseases of the past and present, including TB, malaria, AIDS, and Ebola. The roles of biological, environmental, and societal factors in disease emergence, spread, and prevention. Primary scientific literature, student-led discussions, and research projects. Prerequisite: biology background, preferably introductory college courses (e.g., 41, 42, or HUMBIO 2A, 3A. GER: DB-NatSci
3 units, Spr (Jones, P)

BIO 25Q. The Molecular Basis of Genetic Disease
(F,Dial) Stanford Introductory Dialogue. Preference to sophomores. Focus is on two genetic diseases resulting from the production of protein molecules that are unable to fold into their native conformations, called conformational diseases: cystic fibrosis and amyotrophic lateral sclerosis or Lou Gehrig’s disease. Hypotheses and controversies surrounding the molecular basis of these disorders, and implications for novel therapeutics. Readings from research literature. GER: DB-NatSci
3 units, Spr (Kopito, R)

BIO 26N. Maintenance of the Genome
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The precious blueprint for life is entrusted to the genomic DNA molecules in all living cells. Multiple strategies have evolved to prevent the deleterious consequences from endogenous DNA alterations and damage from radiation or genotoxic chemicals in the environment. In this seminar you will learn about the remarkable systems that scan cellular DNA for alterations and make repairs to ensure genomic stability. Deficiencies in DNA
repair have been implicated in many hereditary diseases involving developmental deficits, premature aging, and/or predisposition to cancer. An understanding of DNA repair mechanisms is important for advances in the fields of cancer biology, neurobiology, and gerontology. Background readings, introductory lectures, student presentations, short term paper. GER: DB-NatSci
3 units, Aut (Hanawalt, P)

BIO 27N. Nature and Nurture in Brain Development
(F.Sem) Stanford Introductory Seminar. Preference to sophomores. Examination of the roles of genes and the environment in shaping brain wiring and behavior, using readings of papers from the primary scientific literature as examples of how the developing nervous system integrates information from both the genetic blueprint and external experience in forming neural connections. GER: DB-NatSci
3 units, Win (McConnell, S)

BIO 30N. Extinctions in Near Time: Biodiversity loss since the Pleistocene
(F.Sem) Stanford Introductory Seminar. The transition 11,700 years ago from the Pleistocene glacial period into the Holocene interglacial witnessed the expansion of humans around the world, climatic warming and the demise of many large vertebrate species. Since that time extinctions have continued on land and in the sea, coinciding with the biodiversity crisis we are experiencing today. We will explore these prehistoric extinctions: Who? When? Where? and Why? in order to learn more about our planet’s future. GER: DB-NatSci
3 units, Aut (Hadly, E)

BIO 33N. Conservation Science and Practice
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Interdisciplinary. The science and art of conservation today. The forces that are driving change in Earth’s atmosphere, lands, waters, and variety of life forms. Which broad dimensions of the biosphere, and which elements of ecosystems, most merit protection? The prospects for, and challenges in, making conservation economically attractive and commonplace. Field trip; project. GER: DB-NatSci
3 units, Spr (Daily, G)

BIO 34N. Hunger
(F.Sem) Stanford Introductory Seminar. The biology of hunger and satiety, diseasestatey that disrupt normal responses to hunger and satiety, starvation responses and adaptations to starvation in a variety of organisms, food production and distribution mechanisms, historic famines and their causes, the challenges of providing adequate food and energy for the Earth’s growing population, local and global efforts to alleviate hunger, and hunger in fiction. GER: DB-NatSci
3 units, Aut (Barton, K)

BIO 38N. Photosynthesis: From Basic Mechanisms to Biofuels
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Photosynthetic processes in terrestrial and aquatic environments. Biological and chemical ways that have been developed to capture the energy of sunlight; how this light energy can be converted to usable forms of energy, including biofuels; and potential impacts of anthropogenic energy generation on the health of the planet. GER: DB-NatSci
3 units, Win (Grossman, A)

BIO 39N. Networks in Biology
(F.Sem) Stanford Introductory Seminar. Networks are everywhere, including friendship links on Facebook, airline routes, power grids, and the Internet. Biology is no exception. Examples include food chains, protein interaction maps, and metabolic pathways. Despite their ubiquitousness, the study of networks in the real world only started about a decade ago. Exploration of the types of networks in biology and the approaches people use in studying them. Discussions and presentations of original research papers. GER: DB-NatSci
3 units, Spr (Rhee, S), alternate years, not given next year

CHEMICAL ENGINEERING INTRODUCTORY COURSES
CHEMENG 35N. Renewable Energy for a Sustainable World
3 units, Aut (Andersen, H)

CHEMENG 60Q. Environmental Regulation and Policy
(S.Sem) Stanford Introductory Seminar. Preference to sophomores. How environmental policy is formulated in the U.S. How and what type of scientific research is incorporated into decisions. How to determine acceptable risk, the public’s right to know of chemical hazards, waste disposal and clean manufacturing, brownfield redevelopment, and new source review regulations. The proper use of science and engineering including media presentation and misrepresentation, public scientific and technical literacy, and emotional reactions. Alternative models to formulation of environmental policy. Political and economic forces, and stakeholder discussions. GER:DB-EngrAppSci
3 units, Aut (Robertson, C; Libicki, S)

CHEMENG 70Q. Masters of Disaster
(S.Sem) Stanford Introductory Seminar. Preference to sophomores. For students interested in science, engineering, politics, and the law. Learn from past disasters to avoid future ones. How disasters can be tracked to failures in the design process. The roles of engineers, artisans, politicians, lawyers, and scientists in the design of disasters. Failure as rooted in oversight in adhering to the design process. Student teams analyze real disasters and design new products presumably free from the potential for disastrous outcomes. GER:DB-EngrAppSci
3 units, Aut (Robertson, C; Moalli, J)

CHEMENG 80Q. Art, Chemistry, and Madness: The Science of Art Materials
(S.Sem) Stanford Introductory Seminar. Preference to sophomores. Chemistry of natural and synthetic pigments in five historical palettes: earthen (paleolithic), classical (Egyptian, Greco-Roman), medieval European (Middle Ages), Renaissance (old masters), and synthetic (contemporary). Composite nature of paints using scanning electron microscopy images; analytical techniques used in art conservation, restoration, and determination of provenance; and inherent health hazards. Paintings as mechanical structures. Hands-on laboratory includes stretching canvas, applying gesso grounds, grinding pigments, preparing egg tempera paint, bamboo and quill pens, gilding and illumination, and papermaking. GER:DB-EngrAppSci
3 units, Spr (Frank, C; Loesch-Frank, S)

CHEMISTRY INTRODUCTORY COURSES
CHEM 24N. Nutrition and History
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Intended to broaden the introductory chemistry experience. The biochemical basis of historically important nutritional deficiencies (vitamins, minerals, starvation, metabolic variants that predispose to disease) and environmental toxins is related to physiological action and the sociological, political, and economic consequences of its effect on human populations. Prerequisite: high school chemistry. Recommended: 31A,B, or 31X, or 33.
3 units, Spr (Hues, T)

CHEM 25N. Science in the News
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Possible topics include: diseases such as avian flu, HIV, and malaria; environmental issues such as climate change, atmospheric pollution, and human population; energy sources in the future; evolution; stem cell research; nanotechnology; and drug development. Focus is on the scientific basis for these topics as a basis for intelligent discussion of societal and political implications. Sources include the popular media and scientific media for the nonspecialist, especially those available on the web.
3 units, Aut (Andersen, H)

CHEM 25Q. Science-in-Theatre: A New Genre?
(S.Sem) (Same as DRAMA 25N) Stanford Introductory Seminar.
COURSES

CHEM 26N, The What, Why, How and wow's of Nanotechnology
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Introduction to nanotechnology with discussion of basic science at the nanoscale, its difference from molecular and macroscopic scales, and implications and applications. Developments in nanotechnology in the past two decades, from imaging and moving single atoms on surfaces to killing cancer cells with nanoscale tools and gadgets. GER: DB-NatSci
3 units, Win (Djerassi, C)

CHEM 34XN, General Chemistry Laboratory
(F,Sem) Stanford Introductory Seminar. Introduction to chemical laboratory practice. Topics include preparation of compounds and characterization of their properties by modern spectroscopic techniques. Corequisite: Chemistry 31X or the equivalent. Limited to 12 students; enrollment by consent of the instructor.
1 unit, Aut (Cox, C; Fayer, M)

CHICANA/O STUDIES INTRODUCTORY COURSES

CHICANST 14N, Growing Up Bilingual
(F,Sem) (Same as CSRE 14N, EDUC 114N) Stanford Introductory Seminar. This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.
3 units, Win (Valdes, G)

CHICANST 160N, Latino/Latina Performance in the United States
(F,Sem) (Same as CSRE 160N, DRAMA 17N) Stanford Introductory Seminar. Preference to freshmen. This course will introduce works by U.S. Latino and Latina performance artists providing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course’s conclusion, each student will create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul
3 units, Win (Moraga, C)

CHINESE GENERAL INTRODUCTORY COURSES

CHINGEN 70N, Marvelous Creatures: Animals and Humans in Chinese Literature
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Read novels and short stories as well as view films that feature an array of marvelous creatures from late imperial times to the contemporary era. What animal imageries and metaphors can reveal about the Chinese and how they relate to the natural, supernatural, and human worlds across the centuries. GER:DB-Hum, EC-GlobalCom
3-4 units, Spr (Lee, H)

CIVIL AND ENVIRONMENTAL ENGINEERING INTRODUCTORY COURSES

CEE 31Q, Accessing Architecture Through Drawing
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Drawing architecture provides a deeper understanding of the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment. GER: DB-EngrAppSci
4 units, Aut (Barton, J), Win (Barton, J)

CEE 32Q, Place: Making Space Now
(S,Sem) (Same as ARTHIST 232Q) Stanford Introductory Seminar. This seminar argues that architects are ultimately placemakers, and questions what that means in the contemporary world. Part I examines two traditional notions of place by scale: from home to the city. What elements give these conceptions of space a sense of place? To answer this question, themes such as memory, mapping, and boundary, among others, will be investigated. Part II presents challenges to the traditional notions of place discussed in Part I. Topics addressed include: What does it mean to be out of place? What sense of place does a nomad have, and how is this represented? What are the non-places and how can architects design for these spaces? Part IV addresses the need to re-conceptualize contemporary space.
3 units, Spr (Barton, J; Beischer, T)

CEE 50N, From the Foothills to the Bay
(F,Sem) Stanford Introductory Seminar. Stanford University sits on the shores of one of the world's great estuaries, the San Francisco Bay/Delta, the connection of the inland river systems of the Central Valley to the Pacific Ocean. This course is intended to provide an introduction to the San Francisco Bay/Delta including its history, current scientific understanding of its physical and ecological functioning, descriptions and underpinnings of engineering manipulations of the system, and the intersection of science and engineering with policies designed to manage its resources. Because of the important effects that water resources development, most notably upstream diversions, have had on the system, Bay-Delta science, engineering, and policy are completely intertwined with the management of the water supply of California. Thus, we will also examine relevant issues in California water that touch on the Bay Delta including an overall description of California hydrology, the State and Federal wa
3 units, Spr (Monismith, S)

CPE 319Q, The Art of Structural Engineering
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The history of modern bridges, buildings, and other large-scale structures. Students learn about modern structures, the social context in which they are built and their symbolic value. Principles of structural engineering and calculating efficiency and safety taught through case studies. Field trip to Bay Area landmark and hands-on exercises including building and testing a model bridge. Stressed from all backgrounds welcome. GER:DB-EngrAppSci
4 units, Win (Billington, S)

CLASSICS ART/ARCHAEOLOGY INTRODUCTORY COURSES

CLASSART 21Q, Eight Great Archaeological Sites in Europe
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archaeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study: geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including
plains, photographs, video, and publications, is the basis for exploring. GER:DB-Hum
3-5 units, Aut (Shanks, M), Spr (Shanks, M)

**CLASSICS GENERAL INTRODUCTORY COURSES**

**CLASSGEN 6N. Antigone: From Ancient Democracy to Contemporary Dissent**
(F.Sem) (Same as DRAMA 12N) Stanford Introductory Seminar. Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of Antigone by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Gluckowki, Gurney, and von Trott. GER:DB-Hum, EC-Gender
4 units, Aut (Rehm, R; Miller, D)

**CLASSGEN 24N. Sappho: Erotic Poetess of Lesbos**
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music. GER:DB-Hum, EC-Gender
4-5 units, Spr (Peponi, A)

**CLASSGEN 37N. Socrates: Philosopher and Trickster**
(F.Sem) Stanford Introductory Seminar. Socrates claimed that he was not wise but always seeking for wisdom. Socrates aimed to achieve ethical knowledge. What kind of knowledge is this? We examine Greek myth, religion, and society in order to locate Socrates' philosophy in its cultural context. We investigate the trial and death of Socrates, his philosophic method, and his cunning philosophic strategies. We read Plato's dialogues, Greek tragedies and comedies to understand this cagy and complex philosopher.
GER:DB-Hum, EC-EthicReas
3-5 units, Win (Nightingale, A)

**CLASSICS HISTORY INTRODUCTORY COURSES**

**CLASSISH 23N. Slavery and Rebellion in Ancient Rome: Spartacus in Legend and History**
(F.Sem) (Same as HISTORY 13N) Stanford Introductory Seminar. Preference to freshmen. Spartacus and his army of slaves resisted the power of the Roman legions for two years and became the stuff of legend. Introduction to Roman history. Slavery in ancient Rome in its psychological, social, and economic dimensions. Causes of Spartacus' rebellion; how the traumatic end of the rebellion gave rise to a legend popularized in Stanley Kubrick's 1960 film.
3 units, Aut (Saller, R)

**CLASSISH 26N. From Community to Empire: Understanding the Premodern State**
(F.Sem) Stanford Introductory Seminar. As Rousseau observed, man was born free, and everywhere he is in chains. How did this happen? Bringer together theoretical models from the social sciences and historical evidence from all over the world, this course explores the emergence, evolution and character of the state as a fundamental type of human organization that has shaped our existence for thousands of years. GER:IHUM-3
3-4 units, Spr (Scheidel, W)

**COMMUNICATION INTRODUCTORY COURSES**

**COMM 130N. The idea of a free press**
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. An examination of the meaning of freedom of the press, tied to but not bound by various Supreme Court rulings on the scope and purpose of the First Amendment's speech and press clauses. Discussions will include a look at the recent and rapid computerization of communication and what it portends for the future of a free press.
3-4 units, Spr (Glasser, T)

**COMPARATIVE LITERATURE INTRODUCTORY COURSES**

**COMPLIT 10N. Shakespeare and Performance in a Global Context**
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. The problem of performance including the performance of gender through the plays of Shakespeare. In-class performances by students of scenes from plays. The history of theatrical performance. Sources include filmed versions of plays, and readings on the history of gender, gender performance, and transvestite theatre. GER:DB-Hum, EC-Gender
3 units, Spr (Palumbo-Liu, D)

**COMPLIT 11Q. Shakespeare, Playing, Gender**
(S.Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on several of the best and lesser known plays of Shakespeare, on theatrical and other kinds of playing, and on ambiguities of both gender and playing gender. GER:DB-Hum, EC-Gender
3 units, Win (Palumbo-Liu, D)

**COMPLIT 51N. Comparative Fictions of Ethnicity**
(S.Sem) (Same as AMSTUD 51N, CSRE 51N) Stanford Introductory Seminar. We may know who we are, but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of the Self? After all, don't we tell stories in response to the question, who are you? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question--Does this universal issue (who am I) become skewed differently when we add a qualifier before it, like ethnic? GER:DB-Hum
3 units, Win (Palumbo-Liu, D)

**COMPLIT 110N. Du Fu: The Case for Chinese Poetry**
(F.Sem) Stanford Introductory Seminar. When one asks: what is a classic? one expects the title of a big novel as the response. This course argues the case for the classical Chinese poetry of the author who has the rightful claim of the greatest poet in Chinese history, Du Fu (712-770). We will look at how poetry focuses on the chemistry of language - the ways words can be put together just so to create specific catalytic conversations of meaning; the engineering of language - the ways specific structures build on and create certain distributions of energy and mass. We will learn to appreciate Du Fu's wit, compassion, learnedness and critical powers and to appreciate as well how poetry can illustrate the evocative and expressive power of language. GER:IHUM-3
4 units, Spr (Palumbo-Liu, D)

**COMPARATIVE MEDICINE INTRODUCTORY COURSES**

**COMPMED 81N. Comparative Anatomy and Physiology of Mammals**
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Emphasis is on a comparative approach to anatomy and physiology of a wide range of mammals, the unique adaptations of each species in terms of its anatomical, and behavioral characteristics, and how these species interact with human beings and other animals. Dissection required. Class size is limited to 16. GER: DB-NatSci
3 units, Win (Bouley, D)

**COMPMED 84Q. Globally Emerging Zoonotic Diseases**
3 units, Win (Bouley, D)

**COMPMED 87Q. Introduction to the Mouse in Biomedical Research**
(S.Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on the laboratory mouse, one of the most widely used
models for biomedical research. Topics include the natural history and origin of the laboratory mouse: characteristics of commonly used strains; mouse anatomy, physiology, and husbandry; common mouse diseases and their effects on research; coat color genetics; and genetically engineered mouse technology. Demonstrations and hands-on experience with necropsy, mouse handling, and research techniques.

3 units, Aut (Nagamine, C)

COMPARATIVE STUDIES IN RACE AND ETHNICITY INTRODUCTORY COURSES

CSRE 14N. Growing Up Bilingual (F,Sem) (Same as CHICANST 14N, EDUC 114N) Stanford Introductory Seminar. This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

3 units, Win (Valdés, G)

CSRE 16N. African Americans and Social Movements (F,Sem) (Same as AFRICAAM 16N, SOC 16N) Stanford Introductory Seminar. Theory and research on African Americans’ roles in post-Civil Rights, US social movements. Topics include women’s rights, LGBT rights, environmental movement, and contemporary political conservatism. GER:DB-SocSci

3 units, Aut (Fields, C)

CSRE 28N. The Cultural Shaping of Mental Health and Illness (F,Sem) (Same as PSYCH 28N) Stanford Introductory Seminar. This seminar examines how our cultural ideas and practices shape our conceptions, perceptions, and treatment of mental health. We will read and discuss empirical research and case studies from psychology, anthropology, sociology, and medicine. Course requirements include weekly reading and thought papers, weekly discussion, and a final research project and presentation.

3 units, Win (Tsai, J)

5 units, Aut (Snipp, C)

CSRE 51N. Comparative Fictions of Ethnicity (S,Sem) (Same as AMSTUD 51N, COMPLIT 51N) Stanford Introductory Seminar. We may know who we are, but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for interactions around us? How does literature provide a particular medium for our conceptions, perceptions, experiences, and treatment of mental health? We will read and discuss empirical research and case studies from psychology, anthropology, sociology, and medicine. Course requirements include weekly reading and thought papers, weekly discussion, and a final research project and presentation.

3 units, Win (Tsai, J)

CSRE 56N. Mixed Race in the New Millennium: Crossings of Kin, Faith & Culture (F,Sem) (Same as AFRICAAM 56N, ENGLISH 56N) Stanford Introductory Seminar. Preference to freshmen. How does literature provide a particular medium for interactions around us? How does literature provide a particular medium for our conceptions, perceptions, experiences, and treatment of mental health? We will read and discuss empirical research and case studies from psychology, anthropology, sociology, and medicine. Course requirements include weekly reading and thought papers, weekly discussion, and a final research project and presentation.

3 units, Win (Elam, M)

CSRE 160N. Latino/Latina Performance in the United States (F,Sem) (Same as CHICANST 160N, DRAMA 17N) Stanford Introductory Seminar. Preference to freshmen. This course will introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course’s conclusion, each student will create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul

3 units, Win (Moraga, C)

COMPUTER SCIENCE INTRODUCTORY COURSES

CS 21N. Can Machines Know? Can Machines Feel? (F,Sem) Stanford Introductory Seminar. Preference to freshmen. Can mental attributes attributed to people and sometimes to animals, including knowledge, belief, desire, and intention, also be ascribed to machines? Can light sensors have a belief? Can a pool cleaning robot or tax-preparation software have an intention? If not, why not? If yes, what are the rules of such ascription, and do they vary between human beings and machines? Sources include philosophy, neuroscience, computer science, and artificial intelligence. Topics: logic, probability theory, and elements of computation. Students present a paper. GER:DB-EngrAppSci

3 units, Aut (Shoham, Y)

CS 26N. Motion Planning for Robots, Digital Actors, and Other Moving Objects (F,Sem) Stanford Introductory Seminar. Preference to freshmen. Motion planning theory and computational approaches: how to represent, simulate, and plan motions in a computer. Intriguing algorithms, representations, and applications: terminology and concepts for reading motion planning research literature. Problems include: how a robot arm manipulates parts without colliding with its environment; how many maneuvers are required to park a car in a tight spot; how characters in computer games avoid running into obstacles; how molecules change shapes to perform biological functions; how to assemble a product from individual parts; how a multi-limbed robot can navigate on rough terrain; how robots can perform surgical procedures. Prerequisite: some computer programming experience in any language. GER:DB-EngrAppSci, DB-EngrAppSci, INTRODUCTORY SEMINAR

3 units, Win (Latombe, J)

CS 45N. Computers and Photography: From Capture to Sharing (F,Sem) Stanford Introductory Seminar. Preference to freshmen with experience in photography and use of computers. Elements of photography, such as lighting, focus, depth of field, aperture, and composition. How a photographer makes photos available for consumption viewing, reliably stores them, organizes them, tags them, searches them, and distributes them online. No programming experience required. Digital SLRs and editing software will be provided to those students who do not wish to use their own.

3-4 units, Aut (Garcia-Molina, H)

CS 47N. Computers and the Open Society (F,Sem) Stanford Introductory Seminar. How online technologies change our lives and the social structure that we live in. Course emphasizes critical analyses of current trends i.e. blogging, social networks, and instant mobile communication. Readings include case studies and analyses of basic principles i.e. privacy, equity and sustainability. Guest speakers who have participated in development of computers and the net will share their experiences and enter into debates on current issues. Students work individually and in small groups to research issues, develop the capacity for critical thinking about them, and use the results as the basis for writing and discussions both in class and on-line.

3 units, Aut (Winograd, T)

CS 73N. The Business of the Internet (F,Sem) Stanford Introductory Seminar. Preference to freshmen. Issues in Internet history, technology, and public policy are discussed as well as the Internet’s impact on commerce, education, government, and health care. Writing for the web. Participants develop a substantial website. GER:DB-EngrAppSci

3 units, Spr (Wiederhold, G; Barr, A; Tessler, S)
COURSES OF INSTRUCTION

CS 74N. Digital Dilemmas (F,Sem) Stanford Introductory Seminar. Preference to freshmen. Issues where policy decision making requires understanding computer and communications technology. Technology basics taught in non-technology terms. Topics include consumer privacy, government surveillance, file sharing and intellectual property, and electronic voting. GER:DB-EngrAppSci 3 units, Win (Rehm, R) 3 units, Spr (Djerassi, C)

CS 75N. Cell Phones, Sensors, and You (F,Sem) Stanford Introductory Seminar. Focuses on the role of cell phones as the first prevalent wearable sensors that gather information about you that can be both useful and potentially harmful. Topics include the state of technology, sociological and privacy implications, potential governmental regulation, etc. Addresses omniscient big brother technology including radar guns and the recording devices that led to the Watergate scandal. Students will gather and compile information on topics and come to class ready to discuss and debate with formulated opinions. GER:DB-EngrAppSci 3 units, Spr (Fedkiw, R)

DRAMA INTRODUCTORY COURSES

DRAMA 10N. Arts and Ideas: 20th Century Art in Conflict (F,Sem) Stanford Introductory Seminar. The second quarter of Art & Ideas builds on the examples of Modernism students in Arts and ideas studied in the first quarter. The 20th-Century Art in Conflict, will focus on drama and film that experiments with new possibilities of form, shaping the direction of later artistic practice. We will trace how the political and aesthetic concerns of the 20th century reflect and exploit new technologies, both in theater and film. Tension between artistic and commercial forces in modern theater; the conflicted state of the art form. Sources include major and emerging contemporary figures in commercial, fringe, and nonprofit theater in the U.S. and UK. Visits with writers, directors, and dramaturges. GER:Hum-3 4 units, Win (Freed, A)

DRAMA 11N. Dramatic Tensions: Theater and the Marketplace (F,Sem) Stanford Introductory Seminar. Preference to freshmen. Tension between artistic and commercial forces in modern theater; the conflicted state of the art form. Sources include major and emerging contemporary figures in commercial, fringe, and nonprofit theater in the U.S. and UK. Visits with writers, directors, and dramaturges. GER:Hum-3 4 units, Win (Freed, A)

DRAMA 12N. Antigone: From Ancient Democracy to Contemporary Dissent (F,Sem) (Same as CLASSGEN 6N) Stanford Introductory Seminar. Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of Antigone by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trott. GER:Hum, EC-Gender 4 units, Aut (Rehm, R; Miller, D)

DRAMA 13N. Law and Drama (F,Sem) Stanford Introductory Seminar. Preference to Freshmen. Beyond the obvious traits that make a good (court room) drama, theater and jurisprudence have much more in common. Just as drama is engaged not only in entertainment but also in examination of social conventions and mechanisms, so law is not only concerned with dispensing justice but with shaping and maintaining a viable human community. In this class we will read and discuss a series of plays in which court proceedings are at the center of dramatic action and concluding with an investigation of the new genre of documentary drama. 4 units, Aut (Jakovljevic, B)

DRAMA 17N. Latino/ Latina Performance in the United States (F,Sem) (Same as CHICANST 160N, CSRE 160N) Stanford Introductory Seminar. Preference to freshmen. This course will introduce works by U.S. Latino and Latina performance artists produced from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course's conclusion, each student will create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul 3 units, Win (Moraga, C)

DRAMA 25N. Science-in-Theatre: A New Genre (S,Sem) (Same as CHEM 25Q) Stanford Introductory Seminar. Preference to sophomores. How scientists acquire their rules, mores, and idiosyncracies through a form of intellectual osmosis in a mentor-disciple relationship. Scientists represented as Frankenstein's or nerds, rather than normal. Why more intellectually challenging plays have appeared on the Anglo-American theatre scene where scientific behavior and even science are presented accurately. Students engage in a playwriting experiment. 3 units, Win (Djerassi, C)

DRAMA 180Q. Noam Chomsky: The Drama of Resistance (S,Sem) Stanford Introductory Seminar. Preference to sophomores. Chomsky's ideas and work which challenge the political and economic paradigms governing the U.S. Topics include his model for linguistics; cold war U.S. involvements in S.E. Asia, the Middle East, Central and S. America, the Caribbean, and Indonesia and E. Timor; the media, ideology, and culture: student and popular movements; and the role of resistance. GER:Hum 4 units, Aut (Rehm, R; Miller, D)

EARTH SYSTEMS INTRODUCTORY COURSES

EARTHSYS 41N. The Global Warming Paradox (F,Sem) (Same as EESS 41N) Stanford Introductory Seminar. Preference to freshmen. Focus is on the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Topics include: Earth's energy balance; detection and attribution of climate change; the climate response to enhanced greenhouse forcing; impacts of climate change on natural and human systems; and proposed methods for curbing further climate change. Sources include peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks. 3 units, Aut (Difffenbaugh, N)

EARTHSYS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay (F,Sem) (Same as EESS 49N) Stanford Introductory Seminar. This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended. 3 units, Spr (Francis, C)

EARTHSYS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays (S,Sem) (Same as EESS 56Q) Stanford Introductory Seminar. Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature integrates principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC, Optional field trip to MBARI and Monterey Bay. GER:DB-NatSci 3 units, Spr (Dunbar, R)

EARTHSYS 57Q. Climate Change from the Past to the Future (S,Sem) (Same as EESS 57Q) Stanford Introductory Seminar. Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios
of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

3 units, Win (Chamberlain, P)

EARTH SYS 61Q. Food and security
(S,Sem) (Same as EESS 61Q, INTNLREL 61Q) Stanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

5 units, Aut (Naylor, R; Siedman, S)

ECON 11N. Understanding the Welfare System
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Welfare reform legislation and the devolution revolution. The transfer of responsibility for antipoverty programs to the states. How recent changes in the welfare system and who is likely to be affected. Food stamps, AFDC, TANF, SSI, and Medicaid. Income transfer programs such as earned income tax credit and income taxes, and labor market regulations such as minimum wages and overtime rules. Economic principles to understand the effectiveness of these programs and their consequences on the behavior of families. Pre- or corequisite: ECON 1. Recommended: basic understanding of labor markets, taxes, and transfers.

2 units, Aut (MacCurdy, T)

ECON 17N. Energy, the Environment, and the Economy
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The relationship between environmental quality and production and consumption of energy. Can environmentally-friendly energy production and consumption compete with conventional sources? How to estimate and compare environmental impact costs of nonrenewable sources such as fossil fuels and nuclear power. Implicit subsidies in conventional energy sources and the environmental costs of these subsidies. Regulatory and legal barriers to more environmentally friendly energy sources.

2 units, Spr (Wolak, F)

EDUC 114N. Growing Up Bilingual
(F,Sem) Same as CHICANST 114N, CSRE 14N) Stanford Introductory Seminar. This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

3 units, Win (Valdes, G)

EDUC 131Q. Is Nationalism Dying?
(F,Dial) Stanford Introductory Dialogue. The 19th century has been depicted as the age of nationalism. The nation-state as a blueprint and mass schooling as a nation-state project emerged and diffused. The transformation of transnational masses into national citizens is a core dynamic of this seminar, with special attention to how schools functioned as laboratories for nationalism. Readings will include Benedict Anderson's Imagined Communities, and selected chapters from Eugene Weber's Peasants to Frenchmen and from Michael Schudson's The Good Citizen. In recent decades, questions have been raised about nationalism and the role of schools in promoting nationalism. Some of these questions emphasize a cosmopolitan narrative that valorizes humanity, while others have stressed multiculturalism and the valorization of diversity. These questions are anchored in a human rights discourse that leads to the second core dynamic of this seminar: the rise of a human rights regime, in particular its education.

3 units, Win (Ramirez, F)

ELECTRICAL ENGINEERING INTRODUCTORY COURSES

EE 17N. Engineering the Micro and Nano Worlds: From Chips to Genes
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The first part is hands-on micro- and nano-fabrication including the Stanford Nanofabrication Facility (SNF) and the Stanford Nanocharacterization Laboratory (SNL) and field trips to local companies and other research centers to illustrate the many applications; these include semiconductor integrated circuits (‘chips’), DNA microarrays, microfluidic bio-sensors and microelectromechanical systems (MEMS). The second part is to create, design, propose and execute a project. Most of the grade will be based on the project. By the end of the course you will, of course, be able to read critically a New York Times article on nanotechnology. More importantly you will have experienced the challenge (and fun) of designing, carrying out and presenting your own experimental project. As a result you will be better equipped to choose your major. This course can complement (and differs from) the seminars offered by Profs Philip Wong and Hari Manohar GER:DB-EngrAppSci

3 units, Spr (Pease, R)

EE 19N. The Internet: how it works and the services it offers
(F,Sem) Stanford Introductory Seminar. The Internet is a universal communication system that spans the entire globe and enables a wide range of services. It is very loosely managed, yet it works very well. The goal of this seminar is to provide an introduction to the issue, covering the parts of the Internet infrastructure works (its underlying functions and protocols) and (ii) to explore the many services that it offers (web browsing, social networking, VoIP, IPTV, etc.) Students will work in groups of two on projects related to Internet functions and services. GER:DB-EngrAppSci

3 units, Win (Tobagi, F)

EE 21N. What is Nanotechnology?
(F,Sem) Stanford Introductory Seminar. Nanotechnology is an often used word and it means many things to different people. Scientists and Engineers have some notion of what nanotechnology is, societal perception may be entirely different. In this course, we start with the classic paper by Richard Feynman (There’s Plenty of Room at the Bottom), which laid down the challenge to the nanotechnologists. Then we discuss two classic books that offer a glimpse of what nanotechnology is: Engines of Creation: The Coming Era of Nanotechnology by Eric Drexler, and Prey by Michael Crichton. Drexler’s thesis sparked the imagination of what nano machinery might do, whereas Crichton’s popular novel channeled the public’s attention to this subject by portraying a disastrous scenario of a technology gone astray. We will use the scientific knowledge to analyze the assumptions and predictions of these classic works. We will draw upon the latest research advances to illustrate the possibilities and impossibilitie GER:DB-EngrAppSci

3 units, Win (Wong, P)

EE 22N. Medical Imaging Systems
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The technology of major imaging modalities used for disease diagnosis: x-ray, ultrasound, and magnetic resonance; their history, societal impact, and clinical applications. Field trips to a medical center and an imaging research lab. Term paper and presentation. Prerequisites: high school physics and calculus. GER:DB-EngrAppSci

3 units, Win (Nishimura, D)

EE 25Q. Electric Automobiles and Aircraft
(S,Sem) (Same as AA 116N) Stanford Introductory Seminar. Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues will need to reconsider how we move, finding sustainable transportation solutions. This course will provide an introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel
proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two fun opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics. GER:DB-EngrAppSci

3 units, Win (Cox, D; Engle, P)

EE 26N. Green Electronics
(F.Sem) Stanford Introductory Seminar. Many green technologies including hybrid cars, photovoltaic energy systems, efficient power supplies, and energy-conserving control systems have at their heart intelligent, high-power electronics. This freshman seminar examines the technology at the heart of the green-tech revolution and uses green-tech examples to teach the engineering principles of sensing data manipulation and analysis. Offered every year, winter quarter. The structure of a Japanese company will include a hands-on lab, readings, and discussion. Preference given to Freshman. GER:DB-EngrAppSci

3 units, Win (Daddy, W)

EE 27N. Electronics Rocks
(F.Sem) Stanford Introductory Seminar. Electronics pervades our lives, yet we often feel obliged to let a device function as it was intended. This course is about not being intimidated by voiding a warranty and modding some commercial gadget and about being confident enough to build something cool from scratch. To get there, we will study the basics of how things work and learn how to hack/mod and scratch build. Students will be mentored and encouraged to work, in teams, to play with interesting electronics and ultimately to develop a creative final project. GER:DB-EngrAppSci

3 units, Win (Kovacs, G)

EE 28N. What Is Information?
(F.Sem) Stanford Introductory Seminar. Information is everywhere in our lives, from speaking and writing to web pages and social networking, but what is it actually? How do we define it? Is it physical? Can we measure it? Does it obey scientific laws? How do we send it, store it, access it and manipulate it? Are there limits to it? Will information technology save the planet or destroy it? This freshman seminar will examine the history, science, technology and future of information.

3 units, Spr (Miller, D)

EE 60N. Man versus Nature: Coping with Disasters Using Space Technology
(F.Sem) (Same as GEOPHYS 60N) Stanford Introductory Seminar. Preference to freshmen. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. Offered every year, winter quarter. GER:DB-EngrAppSci

4 units, Win (Zebker, H)

ENGINEERING INTRODUCTORY COURSES

ENGR 159Q. Japanese Companies and Japanese Society
(S.Sem) (Same as MATSCI 159Q) Stanford Introductory Seminar. Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SocSci

3 units, Spr (Sinclair, R)

ENGLISH INTRODUCTORY COURSES

ENGLISH 36N. Lord Byron: Mad, Bad, and Dangerous to Know
(F.Sem) Stanford Introductory Seminar. The poetry, literary legacy, and significance of Lord Byron, a towering figure of European Romanticism. Emphasis on formal, aesthetic, and stylistic elements of the poetry, with additional topics to include modern celebrity, literary marketplace, scandal, and romantic heroism. GER:DB-Hum

3 units, Aut (Rovey, C)

ENGLISH 56N. Mixed Race in the New Millennium: Crossings of Kin, Faith & Culture
(F.Sem) (Same as AFRICAAM 56N, CSRE 56N) Stanford Introductory Seminar. Preference to freshmen. How literature, theater, graphic art and popular culture shape understandings of contemporary mixed race identity and other complex experiences of cultural hybridity. Course explores implications for racial identity, art, and politics for the new millennium. GER:DB-Hum

3 units, Win (Elam, M)

ENGLISH 62N. Eros in Modern American Poetry
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Anne Carson, treating love from Sappho to Socrates, shows how the Greeks derived their philosophy from the erotic poetic tradition. Readings include: Carson’s poetry which locates erotic desire in the larger context of the desire for knowledge; classic Japanese haiku masters such as Basho; and William Carlos Williams, Louise Bogan, and C.K. Williams. GER:DB-Hum

3 units, Win (Fields, K)

ENGLISH 64N. Growing Up in America
(F.Sem) (Same as PSYCH 29N) Stanford Introductory Seminar. Preference to freshmen. To what extent is it possible to describe an American experience? How are different people included in or excluded from the imagined community that is America? How do a person’s race, class, gender and sexuality affect his or her experience of belonging to this country? These are just some of the questions we will consider as we familiarize ourselves with the great diversity of childhood and young adult experiences of people who have grown up in America. We will read and discuss narratives written by men and women, by urban, suburban, and rural Americans, and by Asian Americans, African Americans, Syrian Americans, Native Americans, Latin@/os, and European Americans. Throughout the course, we will explore how these writers write the self in literature. GER:DB-Hum, EC-AmerCul

3 units, Spr (Markus, H; Moya, P)

ENGLISH 65N. Contemporary Women Fiction Writers
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Novels and story collections addressing childhood, coming of age, and maturity; love, sexuality, orientation: the experience of violence and the politics, domestic and global, of women’s lives. Texts include Gordimer, Eisenberg, Latiolais, Munro, O’Brien, and others. GER:DB-Hum

3 units, Aut (Tallent, E)

ENGLISH 68N. Mark Twain and American Culture
(F.Sem) (Same as AMSTUD 68N) Stanford Introductory Seminar. Preference to freshmen. Mark Twain has been called our Rabelais, our Cervantes, our Homer, our Tolstoy, our Shakespeare. Ernest Hemingway maintained that all modern American literature comes from one book by Mark Twain called The Adventures of Huckleberry Finn. President Franklin D. Roosevelt got the phrase New Deal from A Connecticut Yankee in King Arthur's Court. Class discussions will focus on how Twain’s work illuminates and complicates his society’s responses to such issues as race, technology, heredity versus environment, religion, education, and what it means to be American. GER:DB-Hum

4 units, Aut (Fishkin, S)

ENGLISH 77N. Living in the Past: Italy in the Anglo-American Imagination
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. A survey of the way in which British and American authors from Milton to Hellenga have portrayed Italian character and culture. Recommended as an ideal orientation course for students planning to attend the Bing Overseas Study Program in Florence. GER:DB-Hum

3 units, Aut (Evans, M)

ENGLISH 80Q. All the World’s a Stage: Dramatic Realism on the Threshold of the Modern World
(S.Sem) Stanford Introductory Seminar. Witness the relationship between heightened dramatic realism —or empiricism—and unprecedented historical, scientific, religious and cultural changes occurring in the Early Modern world, a defining moment in
explorations of uncharted realms of the self, the world, the universe, and artistic form. Readings include Shakespeare's Othello and As You Like It; John Donne's dramatic poetry; Marlowe's Doctor Faustus; and Beckett's Waiting for Godot. We will examine these and other texts—point their readers and viewers toward the modern world through cognitive innovations in the art of perspective. Selected art, film adaptations, and modern literature to be included.

4-5 units, Win (Brooks, H)

ENGLISH 87N. The Graphic Novel: Word, Image, Sound, Silence
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Traces the history of graphic narrative from its beginnings to contemporary times. Students will read a number of graphic narratives, carry out research on some aspect of these narratives, and write an essay, which will then be reworked and remediated into an oral presentation with multimedia support. Fulfills the WRITE 2 requirement GER:DB-Hum

4-5 units, Aut (Lunsford, A)

ENVIRONMENTAL EARTH SYSTEM SCIENCE INTRODUCTORY COURSES

EESS 41N. The Global Warming Paradox
(F,Sem) (Same as EARTHSYS 41N) Stanford Introductory Seminar. Preference to freshman. Focus is on the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human welfare and the negative climate consequences of large-scale emissions of carbon dioxide. Topics include: Earth’s energy balance; detection and attribution of climate change; the climate response to enhanced greenhouse forcing; impacts of climate change on natural and human systems; and proposed methods for curbing further climate change. Sources include peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks.

3 units, Aut (Diffenbaugh, N)

EESS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay
(F,Sem) (Same as EARTHSYS 49N) Stanford Introductory Seminar. This course will be focused around San Francisco Bay, the largest estuary on the Pacific coast of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California’s remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, population management/restore issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended.

3 units, Spr (Francis, C)

EESS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays
(S,Sem) (Same as EARTHSYS 56Q) Stanford Introductory Seminar. Preference to sophomores. Recent changes in the California Current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay. GER: DB-NatSci

3 units, Spr (Dunbar, R)

EESS 57Q. Climate Change from the Past to the Future
(S,Sem) (Same as EARTHSYS 57Q) Stanford Introductory Seminar. Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth’s history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

3 units, Win (Chamberlain, P)

EESS 61Q. Food and security
(S,Sem) (Same as EARTHSYS 61Q, INTNLREL 61Q) Stanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

5 units, Aut (Naylor, R; Stedman, S)

FEMINIST STUDIES INTRODUCTORY COURSES

FEMST 188N. Imagining Women: Writers in Print and in Person
(S,Sem) Stanford Introductory Seminar. Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Weekly meetings designated for book discussion and meeting with authors. Interest in writing and a curiosity about diverse women's lives would be helpful to students. Students will use such tools as close reading, research, analysis and imagination. Seminar requires strong voice of all participants. Oral presentations, discussion papers, final projects. GER:DB-Hum, EC-Gender

4-5 units, Win (Miner, V)

FEMST 191Q. Writing Women’s Lives
(F,Dial) Stanford Introductory Dialogue. Creative writing through dialogue focusing on prose about the lives of women in different cultures and generations. Novels, short stories, and micro-narrative including fiction and memoir. Students produce work using research, memory, imagination, and metaphor.

2 units, Aut (Miner, V)

FRENCH LITERATURE INTRODUCTORY COURSES

FRENLIT 38N. Coffee & Cigarettes: The Making of French Intellectual Culture
(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. This course will examine a quintessential French figure l'intellectuel from a long historical perspective. We will observe how this character has shaped over time by such other cultural types as the writer, the artist, the historian, the philosopher, and the moralist. Proceeding in counter-chronological order, from the late 20th to the 16th century, we will read a collection of classic French works. As this course is a gateway for French studies, special emphasis will be placed on oral proficiency. Prerequisite: students must have two years of college-level French or equivalent).

4 units, Spr (Edelstein, D)

FRENLIT 190Q. Parisian Cultures of the 19th and Early 20th Centuries

4 units, Spr (Bertrand, M)

GENETICS INTRODUCTORY COURSES

GENE 104Q. Law and the Biosciences
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on human genetics; also assisted reproduction and neuroscience. Topics include forensic use of DNA, genetic testing, genetic discrimination, eugenics, cloning, prescriptive genetic diagnosis, neuroscientific methods of lie detection, and genetic or neuroscience enhancement. Student presentations on research paper conclusions.

3 units, Win (Greely, H)
GEOLOGICAL AND ENVIRONMENTAL SCIENCES INTRODUCTORY COURSES
GES 39N. Forensic Geoscience: Stanford CSI
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Geological principles, materials, and techniques indispensable to modern criminal investigations. Basic earth materials, their origin and variability, and how they can be used as evidence in criminal cases and investigations such as artifact provenance and environmental pollution. Sources include case-based, simulated forensic exercises and the local environments of the Stanford campus and greater Bay Area. Local field trips; research presentation and paper. GER: DB-NatSci 3 units, Spr (Maier, K)

GES 43Q. Environmental Problems
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, and subsurface disposal of nuclear waste. GER: DB-NatSci 3 units, Win (Loague, K)

GES 55Q. The California Gold Rush: Geologic Background and Environmental Impact
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Topics include: geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California; and environmental impact of the Gold Rush due to population increase, milling operations, and high concentrations of arsenic and mercury in sediments from hard rock mining and milling operations. Recommended: introductory geology. GER: DB-NatSci 3 units, Win (Bird, D)

GEOPHYSICS INTRODUCTORY COURSES
GEOPHYS 50N. Planetary Habitability, World View, and Sustainability
(F,Sem) Stanford Introductory Seminar. Astrobiology and societal sustainability draw from most fields of physical and biological science. Class follows a historical format on the start of major scientific fields, and relates these sciences to the popular world view and the effect of world view on achieving sustainability. Simple experiments to see key results in a hands-on manner; how to improve experiments. How luck in insight in addition to the lack of equipment and computational methods limited the progress of science. Discussion of current astrophysics and sustainability topics in the popular press. Students pair lead discussions on topics. Offered occasionally. 3 units, Spr (Staff)

GEOPHYS 60N. Man versus Nature: Coping with Disasters Using Space Technology
(F,Sem) (Same as EE 60N) Stanford Introductory Seminar. Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. Offered every year, winter quarter. GER:DB-EngrAppSci 4 units, Win (Zebker, H)

GERMAN GENERAL INTRODUCTORY COURSES
GERGEN 104N. Resistance Writings in Nazi Germany
(F,Sem) Stanford Introductory Seminar. Freshman and Sophomore Preference. This course focuses on letters and diaries written by resisters to the Nazi regime, in particular, Dietrich Bonhoeffer, Hans and Sophie Scholl, and James von Moltke. The course includes one resistance novel Every man dies alone by Hans Fallada. GER:DB-Hum 3 units, Win (Bernhardt, E)

GERGEN 128N. Medicine, Modernism, and Mysticism in Thomas Mann's the Magic Mountain
(F,Sem) Stanford Introductory Seminar. Published in 1924, the Magic Mountain is a novel of education, tracing the intellectual growth of a budding engineer through a maze of intellectual encounters during a seven-year sojourn in a sanatorium set high in the Swiss Alps. It engages with the key themes of modernism: the relevance of time, the impact of psychoanalysis, the power of myth, and an extended dispute between an optimistic belief in progress and a pessimistic vision of human nature. Through its detailed discussion of disease (tuberculosis) this remarkable text connects the study of medicine to the humanities. GER:HEUM 3 units, Spr (Berman, R)

GERGEN 170Q. Prussia: Culture and Literature
(S,Sem) Stanford Introductory Seminar. This course traces the history and culture of a country that disappeared not too long ago, but about which most of us tent to know very little. On February 27, 1947, the Allied Control Council issues it’s decree no. 46, which dissolved Prussia in the interest of maintaining world peace and security and the restoration of political life in Germany on a democratic basis. Prussia, the Council continued, has since forever been a carrier of militarism and reaction in Germany. Many of the stereotypical images of Germany and German-ness, and certainly most negative images of Germany, from the spiked helmet to the iron cross, the Red Baron and the Blitzkrieg, are bound up with Prussia, its military and its ruling class. Prussia’s militaristic culture not only brought on a series of increasingly brutal wars, while also often being a beacon of Enlightenment and religious tolerance; it brought together Germany’s most traditional backwater with its most p

GERMAN LITERATURE INTRODUCTORY COURSES
GERLIT 123N. The Brothers Grimm and Their Fairy Tales
(F,Sem) Stanford Introductory Seminar. Historical, biographical, linguistic, and literary look at the Kinder- and Hausmarchen of Jacob and Wilhelm Grimm. Readings from the fairy tales, plus materials in other media such as film and the visual arts. Four short essays, one or two oral reports. In German. GER:DB-Hum 4 units, Aut (Robinson, O)

HEALTH RESEARCH AND POLICY INTRODUCTORY COURSES
HRP 89Q. Introduction to Cross Cultural Issues in Medicine
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Introduction to social factors that impact health care delivery, such as ethnicity, immigration, language barriers, and patient service expectations. Focus is on developing a framework to understand culturally unique and non-English speaking populations in the health care system. GER:EC-AmerCul 3 units, Win (Corso, I)

HISTORY INTRODUCTORY COURSES
HISTORY 4N. A World History of Genocide
(F,Sem) Stanford Introductory Seminar. Reviews the history of genocide from ancient times until the present. Defines genocide, both in legal and historical terms, and investigates its causes, consequences, and global dimensions. Issues of prevention, punishment, and interdiction. Main periods of concern are the ancient world, Spanish colonial conquest; early modern Asia; settler genocides in America, Australia, and Africa; the Armenian genocide and the Holocaust; genocide in communist societies; and late 20th century genocide. GER:DB-SocSci 3-5 units, Win (Naimark, N)

HISTORY 8N. How We Remember the Past: Historical, Legal and Artistic Interpretation
(F,Sem) Stanford Introductory Seminar. Examines the similarities and differences between three different methods to remember (and interpret) the past: historical research, legal proceedings, and culture (mainly literature, cinema and the plastic arts). Looking at
theoretical debates first, a historical specific example next (Spanish civil war and dictatorship, 1936-1975), we will ask under which circumstances is each method used to remember the past, and how do the results vary? Why do certain societies prefer one method to others? Does this preference depend on what is being recorded, on the availability of sources, on the conditions of those engaged in examining the past, their aim at doing so, etc.? The goal is not to learn about a specific event, time or place, but to think about the past in pluralistic ways. Students will each choose an example of their own to analyze and share with the class. Examples can refer to any moment in the past, or any region or human group as long as the student GER:DB-Hum
4-5 units, Aut (Herzog, T)

HISTORY 13N. Slavery and Rebellion in Ancient Rome: Spartacus in Legend and History (F,S,Sem) (Same as LASSHIS 23N) Stanford Introductory Seminar. Preference to freshmen. Spartacus and his army of slaves resisted the power of the Roman legions for two years and became the stuff of legend. Introduction to Roman history, Slavery in ancient Rome in its psychological, social, and economic dimensions. Causes of Spartacus' rebellion; how the traumatic end of the rebellion gave rise to a legend popularized in Stanley Kubrick's 1960 film. 3 units, Win (Samoff, J)

HISTORY 30Q. English Society Through Fiction (S,Sem) Stanford Introductory Seminar. Preference to sophomores. England from the eighteenth century to the twentieth century through the reading of seven novels ranging from Henry Fielding's Joseph Andrews, to Evelyn Waugh's A Handful of Dust. Focus is on the novels themselves and the historical context of the novels to acquire a knowledge of British history over two hundred years. GER:DB-Hum
4 units, Spr (Slayter, P)

4 units, Spr (Robinson, P)

HISTORY 41Q. Mad Women: Women and Mental Illness in U.S. History (S,Sem) Stanford Introductory Seminar. Explores how gender and historical context have shaped the experience and treatment of mental illness in U.S. history. Why have women been the witches and hysteries of the past, and why have there historically been more women than men among the mentally ill? Topics include the relationship between historical ideas of femininity and insanity, the ways that notions of gender influence the definition and treatment of mental disorder, and the understanding of the historically embedded nature of medical ideas, diagnoses, and treatments. GER:DB-SocSci
3 units, Aut (Horn, M)

HISTORY 44Q. The History of Women and Gender in Science, Medicine, and Engineering (S,Sem) Stanford Introductory Seminar. Preference to freshmen. Section 1 focuses on the history of women in science, medicine, and engineering. Section 2 looks at transforming research institutions so that both men and women can flourish. Section 3 explores how sex and gender analysis can enhance creativity. We discuss concrete examples of how taking gender into account has yielded new research results. Stanford University currently has a multiple year collaboration with the European Commission for Gendered Innovations, and this class will be part of that project. This crop fulfills the second level Writing and Rhetoric Requirement (WRITE 2) and will emphasize oral and multimedia presentation. GER:DB-Hum, EC-Gender
4-5 units, Win (Schiebinger, L)

HISTORY 48Q. South Africa: Contested Transitions (S,Sem) (Same as AFRICAAM 48Q) Stanford Introductory Seminar. Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet. GER:DB-Hum, EC-GlobalCom
3 units, Win (Samoff, J)

HISTORY 56N. Celluloid America: Explorations in Film and History (F,Sem) Stanford Introductory Seminar. Explores the history and culture of the United States through film, examining both the history of this quintessentially American medium and the ways in which American history has been represented in movies. Topics include: Pan-Islam, the Muslim Brothers, Khomeinism, Hezbollah, the Taliban, and the geopolitics of social movements. GER:DB-Hum
3 units, Win (Crews, R)

HISTORY 84N. The American Empire in the Middle East since the Cold War: Afghanistan, Iraq, and Israel/Palestine (F,Sem) Stanford Introductory Seminar. What were the traditional objectives of U.S. policy in the Middle East since the end of WW II? What forces shaped U.S. policy towards the Middle East? Did those interests and the means employed to pursue them change substantially after the demise of the Soviet Union? What has been the impact of U.S. policy on the region itself? The three principal cases to be examined are Afghanistan, Iraq, and Israel/Palestine. GER:DB-SocSci, EC-GlobalCom
4-5 units, Spr (Mullaney, T)

3-5 units, Spr (Mullaney, T)

HUMAN BIOLOGY INTRODUCTORY COURSES

HUMBIO 82Q. The Omnivore's Dilemma - Or Is It? (S,Sem) Stanford Introductory Seminar. The omnivore's dilemma-making the right food choices from the vast number possible. The health implications of our food choices. Why we make these choices- the positive and negative influences of the food industry, research in nutritional science, and public health policies and the resulting confusion about what we should eat. Discussion-based class with readings including In Defense of Food by M. Pollan and primary research materials. Introduction to the scientific literature in human nutrition. GER:DB-Hum, EC-GlobalCom
3 units, Aut (Endemann, G)

HUMBIO 87Q. Women and Aging (S,Sem) (Same as MED 87Q) Stanford Introductory Seminar. Preference to sophomores. Biology, clinical issues, social and health policies of aging; relationships, lifestyles, and sexuality; wise women and grandmothers. Sources include scientific articles, essays, poetry, art, and film. Service-learning experience with older women. Service Learning Course (certified by Haas Center).
COURSES OF INSTRUCTION

**GER:EC-Gender**
3 units, Spr (Winograd, C)

**HUMBIO 90Q. Contemporary Issues in Human Experimentation**
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. The guiding principles currently used to protect human subjects in terms of informed consent and protection of privacy; ethical issues relating to compensatory mechanisms for inherent risks; historical perspective and the development of the current mechanisms to safeguard the privacy and integrity of the individual; examples of use/abuse of human experimentation during medieval, Nazi, and modern times. Guest speakers currently performing human experiments or involved in approving such experimentation.
3 units, Aut (Constantinou, C)

**HUMBIO 91Q. Neuroethology: The Neural Control of Behavior**
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Animal behavior offers insights about evolutionary adaptations. The origins of the study of animal behavior and its development to the present. Discussion of original research papers. The use and misuse of parallels between animal and human behavior. Possible field trip to observe animals in their natural habitat. GER: DB-NatSci
3 units, Aut (Fernald, R)

**HUMBIO 96Q. Injustice, Advocacy and Courage: The Path of Everyday Heroes**
(S,Sem) Stanford Introductory Seminar. This course will study the paradigms of people of courage, action and energy who have fought against injustice by advocating for causes against great odds and at personal risk. The focus will be on everyday people who have taken action, often at great personal risk, not for ambition, but because of their convictions and steadfast commitment to their beliefs.
3 units, Win (Abrams, W)

**HUMBIO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine**
(S,Sem) (Same as ORTHO 97Q) Stanford Introductory Seminar. Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the natural history of the sport, and the athlete themselves. The use and abuse of human experimentation during medieval, Nazi, and modern times. Guest speakers currently performing human experiments or involved in approving such experimentation.
3 units, Win (Abrams, W)

**HUMBIO 99Q. Becoming a Doctor: Readings from Medical School, Medical Training, Medical Practice**
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. For students considering medicine as a career. Goal is to acquaint students with medical school, training in medicine and surgery, and the practice of medicine and surgery. Topics include: how to pick a medical school and a residency; how medicine affects family life, especially children; the differences between surgical and medical specialties; the advantages and disadvantages among academic/teaching, pure research, group practice, HMO, hospital staff, or private practice; malpractice concerns; and financial considerations.
3 units, Aut (Zaroff, L)

**IBERIAN AND LATIN AMERICAN STUDIES INTRODUCTORY COURSES**

**ILAC 101N. THE POWER OF IMAGE**
(F,Sem) Stanford Introductory Seminar. Provides critical language and tools for analyzing visual culture, specifically art by American Deadwestern and deconstructive artists. Emphasis on the three central aspects of visual studies: the image, the viewer, and the social relations governing the production, distribution and consumption of images. Focus on the power of image to shape who we are and how we think, and the capacity of viewers to interpret images in ways inflected by their social positioning.
3-5 units, Spr (Yarbro-Bejarano, Y)

**ILAC 106N. Contemporary Latin American Literature in Translation**
(F,Sem) Stanford Introductory Seminar. What is contemporary in Latin American literature? Which books are translated into English, and why? What to make of the gap between their publication in Spanish and their reception in the United States? The course invites students to think and write about these issues in light of translation and globalization theories. Works include a representative selection of recent fiction by Aíra, Bellati, Bolano, and Vallejo, as well as works by Schroeder and Osipova. Readings in English; Spanish originals available.
3-5 units, Win (Heyos, H)

**ILAC 114N. Lyric Poetry**
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. For students with at least two years of language preparation. Focus is on principal elements and expressive devices of lyric poetry: multi-dimensional use of language, denotation/connotation, image, metaphor, symbol, paradox, irony, meaning, idea, rhythm, and meter. Readings include the best of major poets of Spain and Latin America: Becquer, Rosalía de Castro, Ruben Dari-o, Unamuno, Antonio Machado, García Lorca, Neruda, and Gabriela Mistral Bilingual in English and Spanish with an emphasis on Spanish.
3-5 units, Aut (Predmore, M)

**ILAC 118N. Slavery and Freedom, Madness and Reason in Brazil: the Fiction of Machado de Assis**
(F,Sem) Stanford Introductory Seminar. Praised by Woody Allen and Salman Rushdie as the greatest Brazilian novelist of the 19th Century, Machado de Assis (1839-1908) became a recent pop star of world literature. To Harold Bloom he is a kind of miracle, as the grandson of freed slaves in Brazil, who deserved to be included in Bloom’s book Genius: A Mosaic of One Hundred Exemplary Creative Minds. In his texts, a paradoxical combination of guilt and innocence, jealous and love challenges the reader to make risk choices wisely. This course presents Machado de Assis masterpieces: the novels, The Posthumous Memoirs of Bras Cubas (1881), and Dom Casmurro (1900), the short novel The Alienist (1882) and a selection of his short stories. Key critical concepts and an overview of his reception in Brazil and in the US will support our discussions. GER: HUM-3
3-5 units, Spr (Librandi Rocha, M)

**ILAC 193Q. Spaces and Voices of Brazil through Film**
(S,Sem) (Same as PORTLANG 193Q) Stanford Introductory Seminar. The manners in which a country is perceived and defines itself is a result of many complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed throughout times, but has conserved some clear pervasive defining traits. This course is an introduction to the history, culture, politics and artistic production of Brazil as seen through feature films, documentaries and some complementary readings. Movies include, among others, Banana is my Business (1988), and Dom Casmurro (1900), the short novel The Alienist (1882) and a selection of his short stories. Key critical concepts and an overview of his reception in Brazil and in the US will support our discussions. GER: HUM-3
3-4 units, Aut (Wiedemann, L)

**INTERNATIONAL RELATIONS INTRODUCTORY COURSES**

**INTNLREL 61Q. Food and security**
(S,Sem) (Same as EARTHSYS 61Q, EESS 61Q) Stanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.
3 units, Aut (Naylor, R; Stedman, S)
**ITALIAN GENERAL INTRODUCTORY COURSES**

ITALGEN 52N. Life is a Play: Identity, Persona, and Improvisation in Luigi Pirandello
(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. For Pirandello (1867-1936; Nobel Prize, 1934), to suddenly realize your entire life has been a performance is a moment of utmost horror, comedy, and opportunity for self-awareness. In a quintessentially modern fashion, he claims that the performance cannot be stopped, that authenticity is a mirage, and that learning to laugh at oneself is the only liberation. Materials include Pirandello’s existencial theater within the theater, his novels, and their film adaptations, which we will study in their cultural context. GER:DB-Hum-3

3-5 units, Spr (Wittman, L)

**ITALIAN LITERATURE INTRODUCTORY COURSES**

ITALLIT 4SN. Italianità: Photography / Literature / Film
(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. Introduction to the question of italianità, or Italian-ness, through the intersection of photography with modern Italian literature and cinema. Includes an exploration of alternative identities and visual culture in Italy. Excerpts from seminal pieces of Italian literature, women writers, hybrid works such as phototexts, and Italian films. A gateway course to a major or minor in Italian studies and forum for improving written and oral proficiency. Lecture, discussions and readings in Italian. Prerequisite: students must have two years of college-level Italian (or equivalent).

4 units, Aut (Carey, S)

**JAPANESE GENERAL INTRODUCTORY COURSES**

JAPANGEN 82N. Joys and Pains of Growing Up and Older: Secret Lives of Old People in Japan
(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. Lives of older individuals, their responses to changing social and physical realities and self-image, particularly through verbal communication. Special focus on Japan, which is the world’s fastest growing elderly population, as a point of comparison in terms of culture, including issues of gender. Introduction to recent multidisciplinary studies on aging and concepts such as frame analysis as a tool to interpret verbal interactions. Through qualitative cross-cultural examinations of lives and verbal representations of old people, students will gain a deeper understanding of the complex human quality of older people and of the relevance of elders’ lives to their own. GER:DB-Hum-3

3 units, Win (Matsumoto, Y)

**JEWISH STUDIES INTRODUCTORY COURSES**

JEWISHST 15N. Travels through the Afterlife
(F,Sem) (Same as RELIGST 15N) Stanford Introductory Seminar. Since the beginning of civilization, humans have refused to believe that physical death is the end of life and have sought in various ways to travel into the afterlife. We cannot know what lies beyond death, but there are other kinds of insights to be learned from these otherworldly journeys. The first part of the course will explore the origins and history of the afterlife, going back in time to ancient Egypt, Mesopotamia, Israel, Greece, and medieval Europe to survey these cultures’ view of death and what lies beyond it. The second part of the course will investigate what has happened to belief in the afterlife in modern American culture. Our ultimate goal is to confront one of the most difficult aspects of life–our fear of death and oblivion–and also to explore the power of thought and imagination to move beyond the confines of mortality. GER:DB-Hum-3

4 units, Win (Weitzman, S)

**LAW, NONPROFESSIONAL INTRODUCTORY COURSES**

LAWGEN 103Q. Depth Psychology
(S,Sem) Stanford Introductory Seminar. Powerful unconscious forces impact human and social life. Depth psychology, founded by Sigmund Freud, Carl Jung, Wilhelm Reich, and others, studies these forces and how they shape inner life, personal relationships, religion, politics, art, and many other domains. The course draws from the founders, particularly Jung, and then goes on to include materials from modern theorists, primarily neo-Jungian. The starting point is how the unconscious and conscious mind interact in the individual person’s life. We consider the implications of this interaction for psychotherapy and pathology as well as for ordinary life. On the social side, several sessions focus on religion and, to a lesser extent, mythology from a depth psychology perspective. The inquiry is open-ended throughout, encouraging personal reflection and engagement.

3 units, Aut (Stenn, J)

LAWGEN 113Q. Law and the Changing American Family
(S,Sem) Stanford Introductory Seminar. This course will examine the many unprecedented changes in American family patterns during the past half century. Particular attention will be given to the role of law as it reflects and facilitates these developments. Topics to be covered include: same-sex marriage, no fault divorce, reproductive technologies, adoption, interracial relationships and mixed race families, the decline in marriage, and the changing economic positions of men and women.

3 units, Win (Banks, R)

**LINGUISTICS INTRODUCTORY COURSES**

LINGUIST 62N. The Language of Food
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The relationship between food and language around the globe. The vocabulary of food and prepared dishes, and crosslinguistic similarities and differences, historical origins, forms and meanings, and relationship to cultural and social variables. The structure of cuisines viewed as meta-languages with their own vocabularies and grammatical structure. The language of menus; their historical development and crosslinguistic differences.

3 units, Win (Jurafsky, D)

LINGUIST 83N. Translation
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. What is a translation? The increased need for translations in the modern world due to factors such as tourism and terrorism, localization and globalization, diplomacy and treaties, law and religion, and literature and science. How to meet this need; different kinds of translation for different purposes; what makes one translation better than another; why some texts are more difficult to translate than others. Can some of this work be done by machines? Are there things that cannot be said in some languages?

GER:DB-SocSci

4 units, Aut (Kay, M)

**MANAGEMENT SCIENCE AND ENGINEERING INTRODUCTORY COURSES**

MS&E 22Q. The Flaw of Averages
(S,Sem) Stanford Introductory Seminar. Uncertain assumptions in business and public policy are often replaced with single “best guess” or average numbers. This leads to a fallacy as fundamental as the belief that the earth is flat, which I call the Flaw of Averages. It states, in effect, that: plans based on average assumptions are wrong on average. This class will discuss mitigations of the flaw of averages using simulation and other methods from probability management.

3 units, Aut (Savage, S)

MS&E 92Q. International Environmental Policy
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Science, economics, and politics of international environmental policy. Current negotiations on global climate change, including actors and potential solutions. Sources include briefing materials used in international negotiations and the U.S. Congress.
COURSES OF INSTRUCTION

M&S&E 93Q. Nuclear Weapons, Energy, Proliferation, and Terrorism
3 units, Win (Bowman, C)

ME 26N. Think Like a Designer
(F,Sem) Stanford Introductory Seminar. Introduces students to techniques designers use to create highly innovative solutions across domains. The project-based class will emphasize approaches to problem identification and problem solving. Topics include need-finding, structured brainstorming, synthesis, rapid prototyping, and visual communication; field trips to a local design firm, a robotics lab, and a machining lab. A secondary goal of the seminar is to introduce students to the pleasures of creative design and hands-on development of tangible solutions.
3 units, Aut (Banerjee, S)

MEDICINE INTRODUCTORY COURSES

MED 70Q. Cancer and the Immune System
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Myths and facts surrounding the idea that the immune system is capable of recognizing malignant cells. The biological basis and function of effector arms of the immune system; how these mechanisms may be used to investigate the biological basis and potential therapy of cancer. How the immune system functions.
3 units, Win (Negrin, R)

MED 86Q. Seeing the Heart
(F,Dial) Stanford Introductory Dialogue. Introduction to biomedical technology, science, clinical medicine, and public policy through cardiovascular imaging. Invasive and noninvasive techniques to detect early stage heart disease and to see inside the heart and blood vessels. Topics include: common forms of heart disease, how they develop, and why they affect so many people; imaging technologies such as ultrasound, CT, MRI, PET, and optical; a cost-effective public screening program. Field trips to Stanford Medical Center imaging centers.
2 units, Win (McConnell, M)

MED 87Q. Women and Aging
(S,Sem) (Same as HUMBIO 87Q) Stanford Introductory Seminar. Preference to sophomores. Biology, clinical issues, social and health policies of aging; relationships, lifestyles, and sexuality; wise women and grandmothers. Sources include scientific articles, essays, poetry, art, and film. Service-learning experience with older women. Service Learning Course (certified by Haas Center). GER-EC-Gender
3 units, Spr (Winograd, C)

MED 88Q. Dilemmas in Current Medical Practice
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Social, political, scientific, and economic forces influencing medical practice. Spiraling costs, impaired access to health care, and disillusionment toward the health care system. Attempts by government and medical insurers to control costs through managed care and health maintenance organizations. Medical education and how it has affected the practice of medicine. Alternative health care, preventive medicine, and the doctor-patient relationship. The paradox of health in America: why do so many people who are healthy feel unhealthy? Mandatory observation of instructors in their medical practices.
3 units, Aut (Croke, J; Jones, E)

MED 108Q. Human Rights and Health
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. History of human-rights law. International conventions and treaties on human rights as background for social and political changes that could improve the health of groups and individuals. Topics such as: regional conflict and health, the health status of refugees and internally displaced persons; child labor; traffic icing in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Possible optional opportunities to observe at community sites where human rights
and health are issues. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva. PowerPoint presentation on topic of choice required.

3 units, Spr (Laws, A)

MICROBIOLOGY AND IMMUNOLOGY INTRODUCTORY COURSES

MI 70Q. Photographing Nature
(S,Sem) Stanford Introductory Seminar. Utilizes the idiom of photography to learn about nature, enhance observation, and explore scientific concepts. Builds upon the pioneering photographic work of Edward J. Muybridge on human and animal locomotion. A secondary goal is to learn the grammar, syntax, composition, and style of nature photography to enhance the use of this medium as a form of scientific communication and also to explore the themes of change across time and space. Scientific themes to be explored include: taxonomy, habitat preservation, climate change; species diversity; survival and reproductive strategies; ecological niches and coevolution, carrying capacity and sustainability, population densities, predation, and predator-prey relationships, open-space management, the physics of photography. Extensive use of field trips and class critique.

3 units, Aut (Siegel, R)

MUSIC INTRODUCTORY COURSES

MUSIC 11N. A View from the Podium: The Art of Conducting
(F,Sem) Stanford Introductory Seminar. How a conductor interprets music, realizes a personal vision through the rehearsal process, and communicates with orchestra and audience. Conducting as based on human communication skills. How to apply these lessons to other fields of endeavor. GER:DB-Hum

3 units, Aut (Cai, J)

MUSIC 13N. Performing America: The Broadway Musical
(S,Sem) Stanford Introductory Seminar. Introduction to regional and popular musical styles of India and Pakistan, including Marathi kirtan, Punjabi bhanga, Manganiyar music of Rajasthan, Bhojpuri wedding songs, Tamil drum ensembles, Baul music of Bengal, Sufi qawwali, and Hindi film music, and explores how these musics are woven into the fabric of social life in South Asia and its diaspora. How people perform music to: articulate political change; bring families together; celebrate rites of passage; and, cope with rapid socio-economic changes. GER:DB-Hum

3 units, Aut (Sieg, B)

MUSIC 13Q. Classical Music and Politics: Western Music in Modern China
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Social history, cultural studies, China studies, international relations, and music. From the Italian Jesuit, Matteo Ricci who presented a clavichord to the Chinese emperor to the emergence of the first N. American taiko groups coincided with increased Japanese American activism, and to some it is symbolic of Japanese American identity. N. American taiko is a modern generation of Chinese musicians. Presented a clavichord to the Chinese emperor to the emergence of musical styles of India and Pakistan, including Marathi kirtan, Punjabi bhanga, Manganiyar music of Rajasthan, Bhojpuri wedding songs, Tamil drum ensembles, Baul music of Bengal, Sufi qawwali, and Hindi film music, and explores how these musics are woven into the fabric of social life in South Asia and its diaspora. How people perform music to: articulate political change; bring families together; celebrate rites of passage; and, cope with rapid socio-economic changes. GER:DB-Hum

3 units, Aut (Sieg, B)

MUSIC 15N. The Aesthetics of Data
(F,Sem) Stanford Introductory Seminar. Focus on visual and auditory display of data, specifically, the importance of aesthetic principles in effective data display, and the creative potential of scientific, biological, environmental and other data as inspiration for artistic expression. GER:DB-Hum

3 units, Win (Bergers, J)

MUSIC 17Q. Perspectives in North American Taiko

3 units, Aut (Matheson, G), Win (Matheson, G), Spr (Matheson, G)

MUSIC 34N. Performing America: The Broadway Musical from Little Johnny Jones to American Idiot
(F,Sem) Stanford Introductory Seminar. 20th C. musical comedy in dialogue with American culture at large. How themes, characters, stories, and songs of the Broadway musical reflect, and construct, ideas of American identity over the last hundred years. Intersections with jazz, movies, rock, and popular song. Social themes of race, class, gender roles, and sexual identity. Works of Gershwin, Cole Porter, Irving Berlin, Rodgers and Hammerstein, and Lerner and Lowe. Includes opportunities to perform, arrange, direct scenes, as well as to attend one or more local productions. GER:DB-Hum

3-4 units, Spr (Staff)

MUSIC 36N. Humor in Music
(F,Sem) Stanford Introductory Seminar. Through theoretical readings the course will touch on psychological and neurocultural bases of humor, explore contingent, tactical, modal, and ontological difficulties in the apprehension of humor, and address ethical issues surrounding humor in music. In addition to in-class listening and screening sessions, analytic discussions will be led by students who will find and present examples of humor in music. Students will also be invited to compose original humorous song lyrics and to create collaborative works of musical humor. GER:DB-Hum

3 units, Aut (Applebaum, M)

NEUROLOGY AND NEUROLOGICAL SCIENCES INTRODUCTORY COURSES

NENS 67N. Intracellular Trafficking and Neurodegeneration
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Cell structures and functions, the intracellular trafficking system that maintains exchanges of materials and information inside cells, and clinical features and pathologies of neurodegenerative diseases. Techniques for examining cellular and subcellular structures, especially cytoskeletons; functional insights generated from structural explorations. Prerequisite: high school biology.

3 units, Spr (Yang, Y)

NEUROSURGERY INTRODUCTORY COURSES

ORTHO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine
(S,Sem) (Same as HUMBIO 97Q) Stanford Introductory Seminar. Preference to sophomores. How stroke is studied in the laboratory; advances in stroke research over the last two decades; and future directions. Topics include: cellular and molecular mechanisms of neuronal death and survival in the brain after stroke, including necrosis, apoptosis, inflammation, and cell signaling pathways; experimental tools for stroke treatment, such as gene therapy, cell therapy, hypothermia, preconditioning, postconditioning, and other pharmacological treatments; the gap and barrier between laboratory research and clinical translation.

2 units, Spr (Zhao, H)

ORTHOPEDIC SURGERY INTRODUCTORY COURSES
PATHOLOGY INTRODUCTORY COURSES

**PATH 103Q, Lymphocyte Migration**
(F.Dial) Stanford Introductory Dialogue. Preference to sophomores. Lymphocytes migrate from blood vessels into tissues to participate in immune surveillance and the development of inflammation. The lymphocyte and blood vessel endothelia molecules that control lymphocyte migration, and are implicated in the development of human diseases such as asthma, type 1 diabetes, and multiple sclerosis are discussed.

<tr>
<td><strong>PHIL 7N, What is Truth</strong></td>
</tr>
</tbody>
</table>
(F.Sem) Stanford Introductory Seminar. This question can be answered precisely in some important cases. We begin with the language of propositional logic where truth is defined by simple tables. This is already sufficient for description of many important problems and leads to a famous ($1 000 000) problem P=NP. We use Sudoku puzzles for illustration. Close connection between propositional truth and proof is established by the resolution method forming a basis of most automated theorem provers. The language of predicate logic covers much more and illustrates the notion of completeness. Register machines provide connection with computations and lead to a fundamental classification of problems of truth with respect to decidability. The language of arithmetic exhibits a new phenomenon of incompleteness that changed significant part of philosophy in 20-th century. GER:DB-Hum

3 units, Spr (Mints, G)

| **PHIL 11N, Skepticism** |

3 units, Win (De Pierris, G)

| **PHIL 15N, Freedom, Community, and Morality** |
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Does the freedom of the individual conflict with the demands of human community and morality? Or, as some philosophers have maintained, does the freedom of the individual find its highest expression in a moral community of other human beings? Readings include Camus, Mill, Rousseau, and Kant. GER:DB-Hum, EC-EthRelas

3 units, Aut (Friedman, M)

| **PHYSICS INTRODUCTORY COURSES** |
| **PHYSICS 18N, Revolution in Concepts of the Cosmos** |
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. The evolution of concepts of the cosmos and its origin, from the Copernican heliocentric model to the current view based on Hubble's discovery of expansion of the Universe. Recent cosmological observations and the relevance of laboratory experiments in particle physics. One night of observations at the Stanford Observatory. GER:DB-NatSci

3 units, Win (Roodman, A)

| **PHYSICS 43N, Understanding Electromagnetic Phenomena** |
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Expands on the material presented in 43; applications of concepts in electricity and magnetism to everyday phenomena and to topics in current physics research. Corequisite: 43 or advanced placement.

1 unit, Spr (Cabrera, B)

| **PHYSICS 80N, The Technical Aspects of Photography** |

3 units, Spr (Goldhaber-Gordon, D)

| **POLITICAL SCIENCE INTRODUCTORY COURSES** |
| **POLISCI 15N, Explaining Ethnic Violence** |
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Over the last twenty years, more than one third of all countries had a violent civil conflict ongoing in which at least 1,000 people had died. More than half of these conflicts killed tens of thousands and produced massive refugee flows, and some caused mass starvation. Analysts describe the violence in many of these conflicts as ethnic and the parties to the violence as ethnic groups. In ordinary language, however, the term ethnic violence can be used to refer to
an extraordinary range of phenomena, from certain barroom brawls to the Nazi genocide. This course begins with an examination of the meaning of ethnic violence and related terms like ethnic group. We will consider case histories of three large-scale civil conflicts commonly described as ethnic. These case materials will then be used to work through a range of possible explanations, from the individual psychology of ethnic violence to various political, military, GER:DB-SocSci
5 units, Win (Fearon, J)

POLisci 24N. The Politics of Communication
(F,Sem) Stanford Introductory Seminar. This course will explore how elected officials present and explain their work to constituents and how this communication shapes American politics. Elected officials use press releases, newsletters, press conferences, and public events to connect with their constituents. While almost none of this communication is formally required, it can have significant consequences on what elected officials do in office and how constituents perceive their representatives. Activities. We will explore the strategies elected officials use when communicating with constituents and identify the consequences of these strategies on the process of representation. GER:DB-SocSci
3 units, Win (Grimmer, J)

POLisci 24Q. Law and Order
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. The role of law in promoting social order. What is the rule of law? How does it differ from the rule of men? What institutions best support the rule of law? Is a state needed to ensure that laws are enforced? Should victims be allowed to avenge wrongs? What is the relationship between justice and mercy? GER:DB-SocSci
3 units, Aut (Rutten, A)

POLisci 25N. The US Congress in Historical and Comparative Perspective
(F,Sem) Stanford Introductory Seminar. This course traces the development of legislatures from their medieval European origins to the present, with primary emphasis on the case of the U.S. Congress. Students will learn about the early role played by assemblies in placing limits on royal power, especially via the power of the purse. About half the course will then turn to a more detailed consideration of the U.S. Congress's contemporary performance, analyzing how that performance is affected by procedural legacies from the past that affect most democratic legislatures worldwide. GER:DB-SocSci
3 units, Spr (Cox, G)

POLisci 26N. American Transportation Politics
(S,Sem) Stanford Introductory Seminar. Politics has been defined as who gets what, when, and how. In the process of resolving this question, the political process also ends up deciding who goes where, and how. This course will draw upon American debates over transportation policy to guide an exploration of major research themes in American politics. We'll examine how American transportation controversies from debates over 19th century canal financing to the 21st-century fight over high-speed rail have cast into relief the major problems that shape decision making in a representative democracy. GER:DB-SocSci
3 units, Aut (Nall, C)

POLisci 43N. Oil, Regime Change, and Conflict
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Relationships among dependence on oil export, democratization and authoritarian rule, and rising conflict. Case studies including Venezuela, Nigeria, Iran, Iraq, Chad, and Indonesia. The resource curse: the impact of oil on a country's political and economic development. The relationship between such economic dependence and regime type. Why oil exporting countries are more prone to conflict and civil war than other countries. Research paper. GER:DB-SocSci

Portuguese language introductory courses

PortLAND 193Q. Spaces and Voices of Brazil through Film
(S,Sem) (Same as ILAC 193Q) Stanford Introductory Seminar. The manners in which a country is perceived and defined itself is a result of many complex forces, and involves the reproduction of social relations and complex social constructions both on the part of the people who live there and those who see it from a distance. The

Psychiatry introductory courses

PSYCH 76Q. Temperament and Creativity in Mood Disorders
4 units, Win (Ketter, T)

PSYCH 77Q. Deviants in Literature
(S,Sem) Stanford Introductory Seminar. Many literary works are enhanced by, in fact demand, a psychological perspective to achieve a fully informed reading. In The Devils Dostoevsky uses the issues and process of anarchy as a platform on which to develop some of the most unforgettable characters in literary history. Death in Venice contains among its many themes the darker dynamic of paraphilia. Guilt searches for a validating crime in Kafka's The Penal Colony. Capote uses a journalistic style to manage horrible fact during In Cold Blood. Conrad shows that telling a story of the journey outward is more nearly an analysis of the journey inward in Heart of Darkness. Albee's Zoo Story asks whether the man on the street is prepared to confront his own worst nightmare. Close reading of works such as these presents opportunities to learn about character pathology and to expand traditional approaches to literary criticism by applying a psychological perspective.
3 units, Aut (Van Natta, J)

PSYCH 78Q. Mental Health in Collegiate Athletes
(S,Sem) Sanford Introductory Seminar. Developmental, psychological, social, and performance issues in collegiate sports. Topics include transition to Stanford, time management, optimizing mental fitness, coping with injuries.
3 units, Win (Steiner, H)

PSYCH 81Q. Fate of Orphans and Vulnerable Children in Sub-Saharan Africa: The HIV/AIDS Pandemic
(S,Sem) Sanford Introductory Seminar. The complicated forces, shaped by geopolitical history and current events, that frame all social programs, the care of orphans in the context of the AIDS pandemic in particular; history of the care of orphans; developmental effects of deprivation of care and nurturing. Guest speakers.
2 units, Win (Solvasson, H; Reichert, D)

PSYCH 111Q. Madness and the Womb: Medical and Artistic Approaches to Mental Illness in Women Through the Ages
(S,Sem) Sanford Introductory Seminar. Historical and current concepts of mental illness in women. Premenstrual dysphoric disorder (PMS), postpartum depression, menopausal mood disorders, and eating disorders. Historical biopsychosocial approach. Readings include women's diaries and advice books, physicians' casebooks, and 19th- and 20th-century medical texts. Guest speakers from art and literature departments. Literary and artistic images, and the social and cultural contexts of these disorders during the last 300 years.
3 units, Win (Williams, K)

Psychology introductory courses

PSYCH 7Q. Language Understanding by Children and Adults
(S,Sem) Sanford Introductory Seminar. How do we first learn to find meaning in strings of speech sounds? Understanding spoken
language requires the rapid integration of acoustic information with linguistic knowledge and with conceptual knowledge based on experience with how things happen in the world. Topics include research on early development of language understanding and laboratory methods of how young children make sense of speech. Observations of preschool children and visits to Stanford laboratories. Might be repeatable for credit.

3 units, Aut (Fernald, A)

**PSYCH 11N. Origin of Mental Life**

(F, Sem) Stanford Introductory Seminar. Preference to freshmen. Mental life in infancy; how thinking originates. How do babies construe the objects, events, people, and language that surround them? Recent advances in psychological theory, hypotheses, and evidence about how the infant human mind develops. GER: DB-SocSci

3 units, Spr (Markman, E)

**PSYCH 12N. Self Theories**

(F, Sem) Stanford Introductory Seminar. Preference to freshmen. The impact of people's belief in a growing versus fixed self on their motivation and performance in school, business, sports, and relationships. How such theories develop and can be changed. GER: DB-SocSci

3 units, Aut (Dweck, C)

**PSYCH 26N. Language Acquisition: Exploring the Minds of Children**

(F, Sem) Stanford Introductory Seminar. Language is an extraordinary competence distinguishing humans from other species, yet there is debate about the role of biology in guiding language acquisition. Does language development follow an innate ¿bioprogram¿ or does it build on more general cognitive abilities, influenced by early experience? Topics include biological and experiential influences on the emergence of linguistic ability as children learn a first language. Discussions of theory and research, visits to Stanford laboratories and observations of very young language learners.

3 units, Win (Fernald, A)

**PSYCH 28N. The Cultural Shaping of Mental Health and Illness**

(F, Sem) (Same as CSRE 28N) Stanford Introductory Seminar. This seminar examines how our cultural ideas and practices shape our conceptions, perceptions, experiences, and treatment of emotional wellness and distress. We will read and discuss empirical research and case studies from psychology, anthropology, sociology, and medicine. Course requirements include weekly reading and thought papers, weekly discussion, and a final research project and presentation.

3 units, Win (Tsai, J)

**PSYCH 29N. Growing Up in America**

(F, Sem) (Same as ENGLISH 64N) Stanford Introductory Seminar. Preference to freshmen. To what extent is it possible to describe an American experience? How are different people included in or excluded from the imagined community that is America? How do a person's race, class, gender and sexuality affect his or her experience of belonging to this country? These are just some of the questions we will consider as we familiarize ourselves with the great diversity of childhood and young adult experiences of people who have grown up in America. We will read and discuss narratives written by men and women, by urban, suburban, and rural Americans, and by Asian Americans, African Americans, Syrian Americans, Native Americans, Latinas/os, and European Americans. Throughout the course, we will explore how these writers write the self in literature. GER: DB-Hum, EC-AmerCul

3 units, Spr (Markus, H; Moya, P)

**RELIGST 11N. The Meaning of Life: Philosophical, Aesthetic, and Religious Perspectives**

(F, Sem) Stanford Introductory Seminar. Raise ultimate questions about life. Yes, the unexamined life is not worth living, but also the un-lived life is not worth examining. Students and professor examine their own lives in the light of questions that the readings and lectures bring up: 1. The big picture: Is there such a thing as the meaning of life? 2. What is entailed in making personal-existential sense of one's own life? 3. What constitutes the good life, lived in society? 4. How can a university education bear upon the search for a meaningful life? 5. What methods for or approaches to life can one learn from studies in the humanities? After introductory lectures, the seminar studies a series of artworks, poems, diverse texts, and a film, all of which bear on the questions mentioned above -- works such: 1. Plato's Allegory of the Cave, from The Republic 2. Manet's A bar at the Folies Bergere 3. A comparison/contrast of Monet's early (1862) Still Life and van Gogh's late (1882) Still Life and van Gogh's late (18)

3 units, Win (Sheehan, T)

**RELIGST 12N. Perspectives on the Good Life**

(F, Sem) Stanford Introductory Seminar. The question is how to approach and evaluate different perspectives on the good life, especially when those perspectives are beautiful, and elusively, presented to us as texts. We will consider both classic and modern writers, from the West and from China; some are explicitly religious, some explicitly secular; some literary, some philosophical. Most of the class will revolve around our talk with each other, interpreting and questioning relatively short texts. The works we will read - by Dante, Dickens, Zhuangzi, Shklar, and others - are not intended to be representative of traditions, of eras, or of disciplines. They do, however, present a range of viewpoint and of style that will help frame and re-frame our views on the good life. They will illustrate and question the role that great texts can play in a modern 'art of living.' Perhaps most important, they will develop and reward the skills of careful reading, attentive listening, and thoughtful disc GER:DB-Hum

3-4 units, Aut (Yearley, L)

**RELIGST 15N. Travels through the Afterlife**

(F, Sem) (Same as JEWISHST 15N) Stanford Introductory Seminar. Since the beginning of civilization, humans have refused to believe that physical death is the end of life and have sought in various ways to travel into the afterlife. We cannot know what lies beyond death, but there are other kinds of insights to be learned from these otherworldly journeys. The first part of the course will explore the origins and history of the afterlife, going back in time to ancient Egypt, Mesopotamia, Israel, Greece, and medieval Europe to survey these cultures' view of death and what lies beyond it. The second part of the course will investigate what has happened to belief in the afterlife in modern American culture. Our ultimate goal is to confront one of the most difficult aspects of life--our fear of death and oblivion--and also to explore the power of thought and imagination to move beyond the confines of mortality.

GER: DB-Hum

4 units, Win (Weitzman, S)

**SCIENCE, TECHNOLOGY, AND SOCIETY INTRODUCTORY COURSES**

**STS 101Q. Technology in Contemporary Society**

(S, Sem) Stanford Introductory Seminar. Preference to sophomores. Introduction to the STS field. The nature of science and technology and their relationship, what is most distinctive about these forces today, and how they have transformed and been affected by contemporary society. Social, cultural, and ethical issues raised by recent scientific and technological developments. Case studies from areas such as information technology and biotechnology, with emphasis on the contemporary U.S. Unexpected influences of science and technology on contemporary society and how social forces shape scientific and technological enterprises and their products. Enrollment limited to 12. GER: DB-SocSci

4 units, Aut (McGinn, R)

**SLAVIC GENERAL INTRODUCTORY COURSES**

**SLAVGEN 77Q. Russia's Weird Classic: Nikolai Gogol**

(S, Sem) Stanford Introductory Seminar. Preference to sophomores. The work and life of Nikolai Gogol, the eccentric founder of Fantastic Realism. The relationship between romanticism and realism in Russian literature, and between popular Ukrainian culture and high Russian and Western European traditions in Gogol's oeuvre. The impact of his work on 20th-century modernist literature, music, and art, including Nabokov, literature of the
SLAVGEN 78N. Poetry to Prose: The Birth of the Great Russian Novel in Alexander Pushkin's Eugene Onegin
(F,Sem) Stanford Introductory Seminar. This course will be devoted to a close reading and detailed discussion of Alexander Pushkin's masterpiece, Eugene Onegin, in the context of nineteenth-century Russian and continental literary history. We will discuss major theoretical and literary-historical questions: What is realism in literature? How does it differ from other literary epochs, movements and styles? What is the novel and how does it relate to other genres? In what way does the novel in verse differ from the novel in prose? We will also explore the relationships between the narrator and the author and between the narrator and the characters in the text. Through examination of the constituent elements of verse language, we will see Pushkin's inventive contributions to world literature. GER:JHUM:3 4 units, Spr (Fleishman, L)

SOCIOLOGY INTRODUCTORY COURSES
SOC 15N. The Transformation of Socialist Societies
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The impact of societal organization on the lives of ordinary people in socialist societies and in the new societies arising through the processes of political, economic, and social transformation. Do the concepts of democratization and marketization suffice to characterize ongoing changes? Enrollment limited to 16. GER:DB-SocSci, EC-GlobalCom 3 units, Win (Tuma, N)

SOC 16N. African Americans and Social Movements
(F,Sem) (Same as AFRICAAM 16N, CSRE 16N) Stanford Introductory Seminar. Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's, LGBTQ rights, environmental movement, and contemporary political conservatism. GER:DB-SocSci 3 units, Aut (Fields, C)

SOC 25N. Understanding the Sixties
(F,Sem) (Same as AMSTUD 25N) Stanford Introductory Seminar. Preference to freshmen. The tendency of critics to view the 60s through ideological lenses as either the best or worst of times has made a balanced perspective difficult to achieve. Goal is to provide a sociological explanation for the political and cultural turbulence that marked the era. The confluence of demographic, political, economic, and cultural trends that date back to at least the 30s. The ambiguous legacy of the 60s. Using the 60s to shed light on the 80s and 90s. Enrollment limited to 16. GER:DB-SocSci 3 units, Win (Staff)

SOC 45Q. Understanding Race and Ethnicity in American Society
(S,Sem) (Same as CSRE 45Q) Stanford Introductory Seminar. Preference to sophomores. Historical overview of race in America, race and violence, race and socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16. GER:DB-SocSci 5 units, Aut (Snipp, C)

SPECIAL LANGUAGE PROGRAM INTRODUCTORY COURSES
SPECLANG 198Q. Modern Greece in Film and Literature
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Cultural and literary highlights. Filmmakers include Kakoyannis, Dassen, Boumelis, Angelopoulos, and Scorsese; readings from Eugenides, Gage, Kavafis, Kazantzakis, Samarakis, Seferis, and Elytis. GER:DB-Hum, DB-Hum, EC-GlobalCom 3-5 units, Aut (Prionas, E)

STATISTICS INTRODUCTORY COURSES
STATS 47N. Breaking the Code?
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Cryptography and its counterpart, cryptanalysis or code breaking. How the earliest cryptanalysts used statistical tools to decrypt messages by uncovering recurring patterns. How such frequency-analysis tools have been used to analyze biblical texts to produce a Bible code, and to detect genes in the human genome. Overview of codes and ciphers. Statistical tools useful for code breaking. Students use simple computer programs to apply these tools to break codes and explore applications to various kinds of data. GER:DB-Math 3 units, Aut (Holmes, S)

STEM CELL BIOLOGY AND REGENERATIVE MEDICINE INTRODUCTORY COURSES
STEMREM 83Q. The Stem Cell: Biological, Social, and Practical Aspects of Stem Cell Research
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Ethical, legal, social, and economic dimensions of stem cell research such as the discovery of human embryonic stem cells and the international landscape of public policy. How stem cells work, their role in the upkeep of the human body, and current and future uses in medicine. Issues at the intersection of science and society such as human-animal hybrids, notions of justice in intellectual property law, distribution of health care, and the moral and ethical frameworks defining the debate. Prerequisite: AP Biology 3 units, Spr (Scott, C)

SURGERY INTRODUCTORY COURSES
SURG 68Q. Current Concepts in Transplantation
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Biological aspects of cell and organ transplantation, including issues that arise in the media. Diseases for which transplantation is a treatment, the state of the art in human transplantation, transplantation of animal tissue into humans (xenotransplantation), development of new tissue and organs in the laboratory (tissue engineering and cloning), and development of drugs and biological strategies to promote long-term survival of the tissue or organ (tolerance). How to write a scientific abstract, critique scientific literature, and research and present topics in contemporary transplantation. 3 units, Spr (Martinez, O; Krams, S)

SURG 70Q. Surgical Anatomy of the Hand: From Rodin to Reconstruction
(F,Dial) Stanford Introductory Dialogue. The surgical anatomy of the hand is extremely complex in terms of structure and function. Exploration of the anatomy of the hand in different contexts: its representation in art forms, the historical development of the study of hand anatomy, current operative techniques for reconstruction, advances in tissue engineering, and the future of hand transplantation. 2 units, Win (Chang, J)

ITALIAN GENERAL (ITALGEN) COURSES

UNDERGRADUATE COURSES IN ITALIAN GENERAL

ITALGEN 41N. Imagining Italy
Preference to freshmen. Literary responses to Italy by writers in English during the past hundred years and how they continue to construct myths of Italy. How these myths have been transformed into commodities in consumer culture, making Italy a profitable fiction. Authors include Hawthorne, Howells, James, Wharton, Forster, Unsworth, Hellenga, and Mayes. GER:DB-Hum 3-4 units, not given this year
opportunity for self-awareness. In a quintessentially modern fashion, he claims that the performance cannot be stopped, that authenticity is a mirage, and that learning to laugh at oneself is the only liberation. Materials include Pirandello's existential theater within the theater, his novels, and their film adaptations, which we will study in their cultural context. GER:IHUM-3
3-5 units, Spr (Wittman, L)

ITALGEN 149. New Frontiers in Italian Cinema
A new generation of Italian filmmakers who examine the contradictory encounters between Italians and the migrant others in contemporary Italy. Critical texts from film studies, gender studies, ethnic and cultural studies, psychoanalysis, and history. I English; films, in Italian with English subtitles, by Amelio, Ozpetek, Munzi, Garrone, Melliti, Tornatore, and Giordana. GER:DB
3-5 units, not given this year

ITALGEN 153. Dante in the Modern Imagination
Dante's Divine Comedy and its grip on the 20th-century imagination. How is Dante co-opted by modern literary tradition? To what extent is Dante a poet of modernity? Emphasis is first on Dante's texts, then on modern literary reinterpretations of them. Authors include Dante, Cavalcanti, Levi, Pound, Eliot, Beckett, Birk and Sanders. Course in English with optional discussion section in Italian.
4 units, Spr (Coggeshall, E)

ITALGEN 172. Dream Visions: The Roman de la Rose
(Same as FRENGEN 172, FRENGEN 272, ITALGEN 272) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.
3-5 units, not given this year

ITALGEN 181. Philosophy and Literature
(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, FRENGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum
4-5 units, Win (Staff)

GRADUATE COURSES IN ITALIAN GENERAL
Primarily for graduate students; undergraduates may enroll with consent of instructor.

ITALGEN 242. Women Mystics from the Middle Ages to the Present
(Same as FRENGEN 242) The predominantly female mystical experience or direct-embodied encounter with a spiritual reality that is difficult, perhaps impossible, to reduce to words, or to explain rationally. Sources include European texts from the Middle Ages to the present by women and men who attempt to convey the experience metaphorically, to interpret it theologically and philosophically, and to transmit it actively to others.
3-5 units, not given this year

ITALGEN 245. Contemporary Italian Cinema: Politics & Spectacle
Introduction to Italian films from the past twenty years. Emphasis on the sexual, political and cultural politics of late-twentieth and twenty-first century Italy. Analysis of variations in cinematic style and in thematic content in works by Marco Belloccchio, Marco Tullio Giordana, Daniele Luchetti, Matteo Garrone, and Paolo Sorrentino. Critical texts from film and cultural studies. English; films in Italian with English subtitles; readings in English. Mandatory even singles film screenings.
3-5 units, Spr (Carey, S)

ITALGEN 259. Tasso and the Italian Baroque
An in-depth reading of Torquato Tasso's Jerusalemme liberata in the cultural and political context of the Counter-Reformation. Conducted in English; requires advanced reading knowledge of Italian.
3-5 units, Spr (Springer, C)

ITALGEN 264E. Petrarch and Petrarchism
(Same as COMPLIT 216) The works of Petrarch (1304-1374), acknowledged as the founder of Renaissance humanism, and a bibliophile, collector of manuscripts, and devotee of erudition. How he dedicated his life to harmonizing the Christian faith with classical learning. Sources include his Latin moral works, epistles, epics, and treatises on illustrious men, and the Triumphs and Canzoniere.
5 units, not given this year

ITALGEN 266. Fascism and Culture
In this seminar we will examine several aspects of cultural life under Italian fascism, both in terms of primary materials (literary, cinematic, and architectural), and with respect to the rich historiography and analysis of these materials. Our questions will range from ‘what defined Italian fascism?’ to ‘how did artistic and cultural production function under Mussolini, and what do we need to know in order to decipher it in context?’, and beyond that, to ‘how has fascist-era cultural production been appropriated, disavowed, and otherwise (mis)understood in the decades since the end of fascism?’. Materials will include works (in Italian) by Silone, Gramsci, Moravia, Carlo Levi, Rosetta Loy, and Antonio Pennacchi, as well as secondary sources (in Italian and English) by Emilio Gentile, R.J.B. Bosworth, Schnapp, Stone, Ben-Ghial, Foug, and Falasca-Zamponi.
3-5 units, Aut (Fuller, M)

ITALGEN 272. Dream Visions: The Roman de la Rose
(Same as FRENGEN 172, FRENGEN 272, ITALGEN 172) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.
3-5 units, not given this year

ITALGEN 278. European Nihilism
(Same as FRENGEN 278) This course will probe the thought of nothingness in various European writers and thinkers. The main authors include Giacomo Leopardi, Nietzsche, Michelstader, Heidegger, Beckett, and Emile Cioran.
3-5 units, Win (Harrison, R)

ITALGEN 288. Decadence and Modernism from Mallarmé to Marinetti
(Same as FRENGEN 288) How the notion of decadence, initially a term of derision, shapes and underlies the positive terms of symbolism and modernism. Readings include theories of decadence and examples of symbolist and modernist texts that attempt to exercise decadent demons, such as lust, mysticism, and the retreat into artificality. Authors include Huysmans, Poe, Mallarmé, Nietzsche, Nordau, d'Annunzio, Valry, Ungaretti, Marinetti, and Breton.
3-5 units, Aut (Wittman, L)

ITALGEN 289. French and Italian Women Writers
(Same as FRENGEN 289) How does women's writing evolve from the very early 20th century, when women's liberation movements first began and WW I brought major social changes, to the flowering of feminine writing in the 70s and beyond? What is the relationship between women writers and filmmakers, and feminism? Is it legitimate to consider women writers in a separate category? To what extent does a reevaluation of women writers mean reconsidering modern literary history? Authors and filmmakers include Alarico, Yvencenar, de Beauvoir, Banti, Duras, Cavani.
ITALIAN LANGUAGE (ITALLANG) COURSES

UNDERGRADUATE COURSES IN ITALIAN LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of advisor.

ITALLANG 1. First-Year Italian, First Quarter
All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. May be repeated for credit.
3 units, Aut (Aquilanti, A), Win (Tempesta, G), Spr (McCarty, A)

ITALLANG 1A. Accelerated First-Year Italian, Part 1
Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: advanced-level proficiency in another Romance language. Prerequisite placement test or consent of instructor.
5 units, Aut (Aquilanti, A), Win (Cellinese, A), Spr (McCarty, A)

ITALLANG 2. First-Year Italian, Second Quarter
Continuation of 1. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: placement test, 2 or consent of instructor.
5 units, Aut (Baldocchi, M), Win (Cellinese, A), Spr (McCarty, A)

ITALLANG 2A. Accelerated First-Year Italian, Part 2
Continuation of 1A. Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: placement test, 1A or consent of instructor. Fulfills the University language requirement.
5 units, Win (Baldocchi, M), Spr (Ferrando, S)

ITALLANG 3. First-Year Italian, Third Quarter
Continuation of 2. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: placement test 2 or consent of instructor. Fulfills the University language requirement.
5 units, Aut (Tempesta, G), Win (Alberti, G), Spr (Staff)

ITALLANG 5A. Intensive First-Year Italian, Part A
Same as ITALLANG 1. Accelerated. Covers 1 quarter of Italian. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.
5 units, Sum (Staff)

ITALLANG 5B. Intensive First-Year Italian, Part B
Same as ITALLANG 2. Continuation of 5A. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.
Prerequisite 1 or 5A.
5 units, Sum (Staff)

ITALLANG 5C. Intensive First-Year Italian, Part C
Same as ITALLANG 3. Continuation of 5B. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.
Prerequisite 2 or 5B. Fulfills the University language requirement.
5 units, Sum (Staff)

ITALLANG 155. Intermediate Italian Oral Conversation
May be repeated once for credit.
3 units, not given this year

ITALLANG 20. Intermediate Oral Communication: Italy Today
Second-year conversational and presentational skills developed through exposure to based on movie clips, slide shows, and other authentic multimedia materials. Guest lectures on Italian culture including opera, pop music, wine, and food culture. Preview of the Florentine experience with Florence returnees sharing their experiences in Italy. Prerequisite: 2A, 3 or consent of instructor.
3 units, Aut (Cellinese, A), Win (Tempesta, G), Spr (Tempesta, G)

ITALLANG 21. Second Year Italian, First Quarter
Second-Year Italian, First Quarter - Sequence integrating culture and language in the development of socioculturally appropriate discourse. Authentic materials include news and film clips, video and audio files, and short stories. Reading, writing, listening, and speaking competence based on cross-cultural understanding. Prerequisite: placement test, 3 or consent of instructor.
4-5 units, Aut (Cellinese, A), Win (McCarty, A), Spr (McCarty, A)

ITALLANG 22. Second-Year Italian, Second Quarter
Sequence integrating culture and language in the development of socioculturally appropriate discourse. Authentic materials include news and film clips, video and audio files, and short stories. Reading, writing, listening, and speaking competence based on cross-cultural understanding. Prerequisite: placement test, 21 or equivalent consent of instructor.
4-5 units, Win (Cellinese, A)

ITALLANG 301E. New Methods and Sources in French and Italian Studies
(Same as FRENGEN 301E) Based on student interest. Changes in research methods: the use of digitized texts, resources, and databases available through Stanford Libraries; gateways. Emphasis is on strategies for exploration of broad and specialized topics through new and traditional methods. Using a flexible schedule based on enrollment and the level of students' knowledge, may be offered in forms including a shortened version on the basics, independent study, or a syllabus split over two quarters. Unit levels adjusted accordingly.
1-4 units, Spr (Sussman, S)

ITALLANG 369. Introduction to Graduate Studies: Criticism as Profession
(Same as COMPLIT 369, FRENGEN 369, GERLIT 369) Based on a survey of (and a conversation about) the history of academic Literary Criticism, and on presentation (and discussion) of contemporary theoretical positions, this seminar will try to enhance a reflection on the conditions, difficulties, and rewards of Literary Criticism as a profession and as an intellectual life form. Attention will be paid to the most relevant (and most pressing) institutional frame-conditions, but this attention will not prevent us from trying to explore a (seldom used) potential of eccentricity and freedom that has always been inherent to (although sometimes dormant in) Literary Criticism.
5 units, Aut (Gumbrecht, H)

ITALLANG 395. Philosophical Reading Group
(Same as COMPLIT 359A, FRENGEN 395) Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit.
1 unit, Aut (Gumbrecht, H), Win (Gumbrecht, H)
COURSES OF INSTRUCTION

ITALLANG 23. Second-Year Italian, Third Quarter
Continuation of 22. Sequence integrating culture and language in the development of socioculturally appropriate discourse. Authentic materials include news and film clips, video and audio files, and short stories. Reading, writing, listening, and speaking competence based on cross cultural understanding. Prerequisite: placement test, 22 or equivalent. Satisfies the foreign language requirement for International Relations majors.
3-4 units, Spr (Baldocchi, M)

ITALLANG 99. Language Specials
Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ITALLANG 101. Advanced Oral Communication: Italian Opera
For Florence returnees or those who have completed second-year Italian. Use of opera excerpts by Leoncavallo, Puccini, Rossini, and Verdi to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisites: second-year Italian or equivalent.
3 units, Aut (Cellinese, A)

ITALLANG 102. Advanced Oral Communication: Modern Cinema
For Florence returnees or those who have completed second-year Italian. Use of movie sequences by Italian film directors such as Benigni, Moretti, Salvatores, Soldini, and Tornatore to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisite: placement test, 101 or consent of instructor.
3 units, not given this year

ITALLANG 103. Advanced Oral Communication: Italian Classic Cinema
For Florence returnees or those who have completed second-year Italian. Use of classical movie sequences by Italian film directors such as Antonioni, De Sica, Fellini, Rossellini, and Visconti to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisites: second-year Italian or consent of instructor.
3 units, Aut (Cellinese, A)

ITALLANG 113. Italian Cultural Studies
Literary texts, news reports, comic books, film reviews, music lyrics, and sociological surveys used to examine Italy's language, culture, and society today. Advanced grammatical analysis and reading comprehension. Prerequisite: second-year Italian or equivalent.
3-4 units, not given this year

ITALLANG 114. Advanced Stylistics and Composition
Goal is advanced proficiency in written Italian. Textual and grammatical analysis of literary and non-literary texts, oral reports, translations, and writing assignments. Prerequisite: second-year Italian or equivalent.
3-4 units, Win (Baldocchi, M)

ITALLANG 115. Academic and Creative Writing
Continuation of 114. Academic prose: formal structures and academic terminology. Creative prose: short stories, expressive language, and when and how to break the rules for effect. Prerequisite: second-year Italian or equivalent.
3-4 units, Spr (Baldocchi, M)

ITALLANG 126. Italy and Italians Today
May be repeated for credit.
2 units, Aut (Aquilanti, A), Win (Aquilanti, A), Spr (Aquilanti, A)

ITALLANG 205A. Intensive First-Year Italian for Stanford Grads, Part A
Same as ITALLANG 5A. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C or 2 of the courses for a total of 9 units.
3-5 units, Sum (Staff)

ITALLANG 205B. Intensive First-Year Italian for Stanford Grads, Part B
Same as ITALLANG 5B. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C or 2 of the courses for a total of 9 units. Prerequisite 205A or equivalent.
3-5 units, Sum (Staff)

ITALLANG 205C. Intensive First-Year Italian for Stanford Grads, Part C
Same as ITALLANG 5C. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C or 2 of the courses for a total of 9 units. Prerequisite 205B or equivalent.
3-5 units, Sum (Staff)

ITALLANG 250. Reading Italian
For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year of Italian or reading proficiency in another Romance language.
3 units, Spr (Staff)

ITALLANG 394. Graduate Studies in Italian Conversation
Prerequisite: consent of instructor. (Staff)
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

ITALLANG 395. Graduate Studies in Italian
Prerequisite: consent of instructor. (Staff)
2-3 units, Aut (Staff), Win (Staff), Spr (Staff)

ITALIAN LITERATURE (ITALLIT) COURSES

UNDERGRADUATE COURSES IN ITALIAN LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ITALLIT 45N. Italianità: Photography / Literature / Film
(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. Introduction to the question of Italianità, or Italian-ness, through the intersection of photography with modern Italian literature and cinema. Includes an exploration of alternative identities and visual culture in Italy. Excerpts from seminal pieces of Italian literature, women writers, hybrid works such as phototexts, and Italian films. A gateway course to a major or minor in Italian studies and forum for improving written and oral proficiency. Lecture, discussions and readings in Italian. Prerequisite: students must have two years of college-level Italian (or equivalent).
4 units, Aut (Carey, S)

ITALLIT 127. Inventing Italian Literature: Dante, Boccaccio, Petrarca
The origins of Italian literature. Poetry such as 13th-century love lyrics, Dante's Vita Nuova, and Petrarca's Canzoniere; prose such as stories from Boccaccio's Decameron. Prerequisite: ITALLIT 22A or equivalent. GER:DB-Hum, WIM
4 units, Aut (Springer, C)

ITALLIT 128. The Italian Renaissance and the Path to Modernity
The literature, art, and history of the Renaissance and beyond. Readings from the 15th through 18th centuries include Modera-
Fonte, Machiavelli, Ariosto, Tasso, Galileo, and Goldoni. Prerequisite: ITALLANG 22A or equivalent. GER:DB-Hum, WIM
4 units, Win (Springer, C)

ITALLIT 129. Modern Italian History and Literature
The history of the Italian nation and national literary identity in the 19th and 20th centuries. The relationship between literary texts and their historical context from the Risorgimento to the Resistance. Focus is on the romantic lyric, futurism, fascism, and the changing status of women. Authors include Pascoli, Leopardi, D’Annunzio, Aleramo, Marinetti, Pirandello, Ungaretti, and Montale. Prerequisite: ITALLANG 22A or equivalent. GER:DB-Hum, WIM
4 units, Spr (Staff)

ITALLIT 189A. Honors Research
Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.
5 units, Win (Staff)

ITALLIT 189B. Honors Research
Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising their honors thesis. Prerequisites for seniors: 189A, DLCL 189.
2 units, Spr (Staff)

ITALLIT 199. Individual Work
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN ITALIAN LITERATURE
Primarily for graduate students; undergraduates may enroll with consent of instructor.

ITALLIT 260. «Noi credevamo»: Images of the Italian Risorgimento
Senso by Boito and Visconti, Nievò’s Confessioni, the new interpretations of the historian Alberto Maria Banti, Mario Martone’s Noi credevamo, Umberto Eco’s Il cimitero di Praga.
3-5 units, Win (Ceserani, R)

ITALLIT 285. Identity in Modern Italian Fiction
The quest for a modern identity in the 20th-century Italian novel. The construction of subjectivity as it relates to changes brought about by modernity in Italy, such as mass culture, nationalism, industrialization, feminism, war, secularization, migration, and ethnic diversity. Fiction by Svevo, Pirandello, Calvino, Banti, and Tabucchi. In Italian.
3-5 units, Win (Wittman, L)

ITALLIT 299. Individual Work
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ITALLIT 399. Individual Work
For graduate students working on a special project or pre/dissertation research. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ITALLIT 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANESE GENERAL (JAPANGEN) COURSES

UNDERGRADUATE COURSES IN JAPANESE GENERAL
Primarily for undergraduates; graduate students may enroll with consent of adviser.

JAPANGEN 51. Japanese Business Culture
(Same as JAPANGEN 251) Japanese group dynamics in industrial and corporate structures, negotiating styles, decision making, and crisis management. Strategies for managing intercultural differences.
3-5 units, Win (Dasher, R)

JAPANGEN 60, Asian Art and Culture
(Same as ARTHIST 2) The religious and philosophical ideas and social attitudes of India, China, and Japan and how they are expressed in architecture, painting, woodblock prints, sculpture, and in such forms as garden design and urban planning. GER:DB-Hum, EC-GlobalCom
5 units, Win (Vinograd, R)

JAPANGEN 75N. Around the World in Seventeen Syllables: Haiku in Japan, the U.S., and the Digital World
Preference to freshmen. Origins of the haiku form in Japan, its place in the discourse of Orientalism during the 19th and early 20th centuries in the West, its appropriation by U.S. devotees of Zen and the beat poets after WW II, and its current transformation into a global form through the Internet. GER:DB-Hum
3-4 units, not given this year

(Same as JAPANGEN 179) The complex meanings of ghosts in Japanese culture. Representations of the supernatural in images, drama, oral narratives, prose, film, comics and animation at different moments in Japanese history. GER:DB-Hum, EC-GlobalCom
4 units, not given this year

JAPANGEN 82N. Joys and Pains of Growing Up and Older: Secret Lives of Old People in Japan
(F,Sem) Stanford Introductory Seminar. Lives of older individuals, their responses to changing social and physical realities and self image, particularly through verbal communication. Special focus on Japan, which is the world’s fastest growing elderly population, as a point of comparison in terms of culture, including issues of gender. Introduction to recent multidisciplinary studies on aging and concepts such as frame analysis as a tool to interpret verbal interactions. Through qualitative and quantitative cross-generational and cross-cultural examinations of lives and verbal representations of old people, students will gain a deeper understanding of the complex human quality of older people and of the relevance of elders’ lives to their own. GER:DB-Hum
3 units, Win (Matsumoto, Y)

JAPANGEN 84. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting
Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch. GER:DB-Hum
4 units, not given this year

JAPANGEN 92. Traditional East Asian Culture: Japan
Required for Chinese and Japanese majors. Introduction to Japanese culture in historical context. Previous topics include shifting paradigms of gender relations and performance, ancient mythology, court poetry and romance, medieval war tales, and the theaters of Noh, Bunraku, and Kabuki. GER:DB-Hum, EC-GlobalCom
5 units, Win (Takeuchi, M)

JAPANGEN 121. Translating Japan, Translating the West
(Same as JAPANGEN 221) Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan’s self-image in the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary. GER:DB-Hum
3-4 units, Aut (Levy, J)

JAPANGEN 124. Manga as Literature
Analysis of representative manga as narratives that combine verbal and visual elements, with attention to historical and cultural background. Representative manga by Tezuka Osamu, Tatsuni Yoshihiro, Koike Kazuo, Taniguchi Jiro, Natsume Ono, Kono Fumiyo, and others. All readings in English. GER:DB-Hum
3-5 units, Spr (Carter, S)

JAPANGEN 137. Classical Japanese Literature in Translation
(Same as JAPANGEN 237) Prose, poetry, and drama from the 10th-19th centuries. Historical, intellectual, and cultural context.
COURSES OF INSTRUCTION

(Same as JAPANGEN 238) Required for Japanese majors. Japanese literature since 1868. Authors include Futabatei Shimei, Higuchi Ichiyô, Natsume Soseki, and Yoshimoto Banana. GER:DB-Hum, EC-GlobalCom
3-4 units, Spr (Reichert, J)

JAPANGEN 141. Japanese Performance Traditions
(Same as JAPANGEN 241) Major paradigms of gender in Japanese performance traditions from ancient to modern times, covering Noh, Kabuki, Bunraku, and Takarazuka. GER:DB-Hum
3-4 units, Spr (Levy, I)

JAPANGEN 148. Modern Japanese Narratives: Literature and Film
(Same as JAPANGEN 248) Central issues in modern Japanese visual and written narrative. Focus is on competing views of modernity, war, and crises of individual and collective identity and responsibility. Directors and authors include Kurosawa, Mizoguchi, Ozu, Ogai, Akutagawa, Tanizaki, Abe, and Oe. GER:DB-Hum
3-5 units, not given this year

JAPANGEN 149. Screening Japan: Issues in Crosscultural Interpretation
(Same as JAPANGEN 249) Is the cinematic language of moving images universal? How have cultural differences, political interests, and genre expectations affected the ways in which Japanese cinema makes meaning across national borders? Sources include the works of major Japanese directors and seminal works of Japanese film criticism, theory, and scholarship in English. No Japanese language skills required. GER:DB-Hum
3-4 units, not given this year

JAPANGEN 160. Early Modern Japan: The Floating World of Chikamatsu
(Same as JAPANGEN 260) Early modern Japan as dramatized in the puppet theater of Chikamatsu Monzaemon (1653-1725), Japan’s leading dramatist, who depicted militarization, commercialization, and urbanization in the Tokugawa period (1603-1868). Emperors, shoguns, daimyo, samurai, merchants, monks, geisha, and masterless ronin in his bunraku plays as denizens of a floating world. Themes of loyalty, love, heroism, suicide, and renunciation in the early modern world. In English.
4 units, not given this year

(Same as JAPANGEN 79) The complex meanings of ghosts in Japanese culture. Representations of the supernatural in images, drama, oral narratives, prose, film, comics and animation at different moments in Japanese history. GER:DB-Hum, EC-GlobalCom
4 units, not given this year

JAPANGEN 185. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868
(Same as ARTHIST 187, ARTHIST 387) Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan. GER:DB-Hum, EC-GlobalCom
4 units, not given this year

JAPANGEN 186. Theme and Style in Japanese Art
(Same as ARTHIST 186, ARTHIST 386, JAPANGEN 286) Monuments in traditional Japanese architecture, sculpture, garden design, painting, prints, and pots, through the 19th century. Chronological framework emphasizes the role of these objects plays in visualizing the ideals of the society they represent. GER:DB-Hum
4 units, Aut (Takeuchi, M)

JAPANGEN 187. Romance, Desire, and Sexuality in Modern Japanese Literature
(Same as JAPANGEN 287) Constructions of romance, desire, and sexuality such as sexual connoisseurship, love suicide, and nanshoku in Edo Japan. How these paradigms are reconfigured by modern writers. Readings: Saikaku, Chikamatsu, Ichiyô, Soseki, Tanizaki, and Mishima. GER:DB-Hum, EC-Gender
3-4 units, Aut (Reichert, J)

JAPANGEN 198. Senior Colloquium in Japanese Studies
(Same as KOREN 198) Research, write, and present capstone essay or honors thesis.
1 unit, Win (Matsumoto, Y)

GRADUATE COURSES IN JAPANESE GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

JAPANGEN 200. Directed Reading in Asian Languages
For Japanese literature. Prerequisite: consent of instructor. (Staff)
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANGEN 201. Teaching Japanese Humanities
Prepares graduate students to teach humanities at the undergraduate level. Topics include syllabus development and course design, techniques for generating discussion, effective grading practices, and issues particular to the subject matter.
1 unit, not given this year

JAPANGEN 220. The Situation of the Artist in Traditional Japan
(Same as ARTHIST 485) Topics may include: workshop production such as that of the Kano and Tosa families; the meaning of the signature on objects including ceramics and tea wares; the folk arts movement; craft guilds; ghost painters in China; individualism versus product standardization; and the role of lineage. How works of art were commissioned; institutions supporting artists; how makers purveyed their goods; how artists were recognized by society; the relationship between patrons, desires and artists; modes of production.
3 units, not given this year

JAPANGEN 221. Translating Japan, Translating the West
(Same as JAPANGEN 121) Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan’s self-image in the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary.
3-4 units, Aut (Levy, I)

JAPANGEN 237. Classical Japanese Literature in Translation
(Same as JAPANGEN 137) Prose, poetry, and drama from the 10th-19th centuries. Historical, intellectual, and cultural context. Works vary each year. May be repeated for credit with consent of instructor.
4 units, not given this year

JAPANGEN 238. Survey of Modern Japanese Literature in Translation
(Same as JAPANGEN 138) Required for Japanese majors. Japanese literature since 1868. Authors include Futabatei Shimei, Higuchi Ichiyô, Natsume Soseki, and Yoshimoto Banana.
3-4 units, Spr (Reichert, J)

JAPANGEN 241. Japanese Performance Traditions
(Same as JAPANGEN 141) Major paradigms of gender in Japanese performance traditions from ancient to modern times, covering Noh, Kabuki, Bunraku, and Takarazuka.
3-4 units, Spr (Levy, I)

JAPANGEN 248. Modern Japanese Narratives: Literature and Film
(Same as JAPANGEN 148) Central issues in modern Japanese visual and written narrative. Focus is on competing views of modernity, war, and crises of individual and collective identity and responsibility. Directors and authors include Kurosawa, Mizoguchi, Ozu, Ogai, Akutagawa, Tanizaki, Abe, and Oe.
3-5 units, not given this year
JAPANGEN 249. Screening Japan: Issues in Crosscultural Interpretation
(Formerly JAPANGEN 149) Is the cinematic language of moving images universal? How have cultural differences, political interests, and genre expectations affected the ways in which Japanese cinema makes meaning across national borders? Sources include the works of major Japanese directors and seminal works of Japanese film criticism, theory, and scholarship in English. No Japanese language skills required.
3-4 units, not given this year

JAPANGEN 251. Japanese Business Culture
(Formerly JAPANGEN 51) Japanese group dynamics in industrial and corporate structures, negotiating styles, decision making, and crisis management. Strategies for managing intercultural differences. 3-5 units, Win (Dasher, R)

JAPANGEN 260. Early Modern Japan: The Floating World of Chikamatsu
(Formerly JAPANGEN 160) Early modern Japan as dramatized in the puppet theater of Chikamatsu Monzaemon (1653-1725), Japan’s leading dramatist, who depicted militarization, commercialization, and urbanization in the Tokugawa period (1603-1868). Emperors, shogun, daimyo, samurai, merchants, monks, geisha, and masterless ronin in bunraku plays as denizens of a floating world. Themes of loyalty, love, heroism, suicide, and renunciation in the early modern world. In English. 4 units, not given this year

JAPANGEN 286. Theme and Style in Japanese Art
(Same as ARTHIST 186, ARTHIST 386, JAPANGEN 186) Monuments in traditional Japanese architecture, sculpture, garden design, painting, prints, and pots, through the 19th century. Chronological framework emphasizes the role of these objects play in visualizing the ideals of the society they represent. 4 units, Aut (Takeuchi, M)

JAPANGEN 287. Romance, Desire, and Sexuality in Modern Japanese Literature
(Formerly JAPANGEN 187) Constructions of romance, desire, and sexuality such as sexual connoisseurship, love suicide, and nanoshoku in Edo Japan. How these paradigms are reconfigured by modern writers. Readings: Saikaku, Chikamatsu, Ichiyo, Soseki, Tanizaki, and Mishima. 3-4 units, Aut (Reichert, J)

JAPANGEN 287A. The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime
(Formerly as ARTHIST 287A) The tea ceremony, a premodern multimedia phenomenon, integrates architecture, garden design, ceramics, painting, calligraphy, and treasured objects into a choreographed ritual wherein host, objects, and guests perform roles on a tiny stage. Aesthetic, philosophical, and political dimensions. The evolution of tea taste including its inception in the 8th century, its adaptation to Zen monasteries, use for social control during the 16th century, the development of a class of tea connoisseurs, and 20th-century manipulation by the emerging industrialist class. 5 units, Spr (Takeuchi, M)

JAPANESE LANGUAGE (JAPANLNG) COURSES

UNDERGRADUATE COURSES IN JAPANESE LANGUAGE
Primarily for undergraduates; graduate students may enroll with consent of adviser.

JAPANLNG 4A. First-Year Japanese Language Essentials, First Quarter
(Formerly JAPANLNG 7A.) For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji exercises. Prerequisite: 3 units, Aut (Yasumoto Magnani, E)
3 units, Aut (Yasumoto Magnani, E)

JAPANLNG 4B. First-Year Japanese Language Essentials, Second Quarter
(Formerly JAPANLNG 8A.) Continuation of 4A. For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji exercises. Prerequisite: JAPANLNG 4A or consent of instructor. See http://japanese.stanford.edu/?page_id=73.
3 units, Win (Yasumoto Magnani, E)

JAPANLNG 4C. First-Year Japanese Language Essentials, Third Quarter
(Formerly JAPANLNG 9A.) Continuation of 4B. For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji exercises. Prerequisite JAPANLNG 4B or consent of instructor. See http://japanese.stanford.edu/?page_id=73.
3 units, Spr (Yasumoto Magnani, E)

12-15 units, Sum (Staff)

JAPANLNG 7. First-Year Japanese Language, Culture, and Communication, First Quarter
(Formerly JAPANLNG 7B.) First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. 300 kanji characters. See http://japanese.stanford.edu/?page_id=5.
3 units, Aut (Lipton, H; Yasumoto Magnani, E)

JAPANLNG 8. First-Year Japanese Language, Culture, and Communication, Second Quarter
(Formerly JAPANLNG 8B.) Continuation of 7. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Prerequisite: placement test, 7 or consent of instructor. 300 kanji characters. http://japanese.stanford.edu/?page_id=5.
3 units, Win (Lipton, H)

JAPANLNG 9. First-Year Japanese Language, Culture, and Communication, Third Quarter
(Formerly JAPANLNG 9B.) Continuation of 8. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Fulfills University Foreign Language Requirement. Prerequisite: placement test, 8 or consent of instructor. 300 kanji characters. http://japanese.stanford.edu/?page_id=5.
3 units, Spr (Lipton, H)

JAPANLNG 11A. Intermediate Japanese Conversation, First Quarter
(Formerly JAPANLNG 27.) Develops oral proficiency through simple sentence patterns, audio materials, and oral presentations. For the practical use of Japanese. Prerequisite: 3, 9, or consent of instructor.
2 units, Aut (Busbin, K)

JAPANLNG 11B. Intermediate Japanese Conversation, Second Quarter
(Formerly JAPANLNG 28.) Continuation of 11A. Develops oral proficiency through simple sentence patterns, audio materials, and oral presentations. For the practical use of Japanese. Prerequisite: 11A or consent of the instructor.
2 units, Win (Busbin, K)

JAPANLNG 11C. Intermediate Japanese Conversation, Third Quarter
(Formerly JAPANLNG 29.) Continuation of 11B. Develops oral proficiency through simple sentence patterns, audio materials, and oral presentations. For the practical use of Japanese. Prerequisite: 11B or consent of instructor.
2 units, Spr (Busbin, K)

JAPANLNG 14A. Second-Year Japanese Language Essentials, First Quarter
(Formerly JAPANLNG 17A.) Continuation of 4C. For students who want to build communication skills in limited time. Prerequisite: 4C or consent of instructor.
3 units, Aut (Fu, M)

JAPANLNG 14B. Second-Year Japanese Language Essentials,
COURSES OF INSTRUCTION

Second Quarter
(Formerly JAPANLNG 18A.) Continuation of 14A. For students who want to build communication skills in limited time. Prerequisite: 14A or consent of instructor. http://japanese.stanford.edu/?page_id=89
3 units, Win (Yasumoto Magnani, E)

JAPANLNG 14C. Second-Year Japanese Language Essentials, Third Quarter
(Formerly JAPANLNG 19A.) Continuation of 14B. For students who want to build communication skills in limited time. Prerequisite: 14B or consent of instructor. http://japanese.stanford.edu/?page_id=89.
3 units, Spr (Fu, M)

JAPANLNG 15A. Accelerated Japanese, Part 1
Recommended for students with previous knowledge of Japanese who place into 15A on the placement test. The completion of 15A and 15B (offered in the subsequent quarter) fulfills the University foreign language requirement. Prerequisite: Japanese placement test. See http://japanese.stanford.edu/g/?page_id=259.
5 units, Win (Staff)

JAPANLNG 15B. Accelerated Japanese, Part 2
Continuation of 15A. Second half of the two-quarter sequence. Recommended for students with previous knowledge of Japanese who place into 15B on the placement test or who have completed 15A. Completion of 15B fulfills the University foreign language requirement. Prerequisite: 15A or Japanese placement test. See http://japanese.stanford.edu/g/?page_id=259.
5 units, Spr (Staff)

JAPANLNG 17. Second-Year Japanese Language, Culture, and Communication, First Quarter
(Formerly JAPANLNG 17B.) Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: 9 or consent of instructor. See http://japanese.stanford.edu/?page_id=23.
5 units, Aut (Lowdermilk, M; Yamamoto, C)

Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: 17 or consent of instructor. See http://japanese.stanford.edu/?page_id=23.
5 units, Win (Lowdermilk, M)

JAPANLNG 19. Second-Year Japanese Language, Culture, and Communication, Third Quarter
Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. (Formerly JAPANLNG 18B.) Prerequisite: 18 or consent of instructor. http://japanese.stanford.edu/?page_id=23.
5 units, Spr (Lowdermilk, M)

JAPANLNG 20. Intensive Second-Year Japanese
JAPANLNG 20: Intensive Second-Year Japanese Equivalent to 17,18,19 combined. Prerequisite: 9 or consent of instructor. Same as 320. See http://japanese.stanford.edu/page_id=323. 12-15 units, Sum (Staff)

JAPANLNG 31A. Intermediate to Advanced Conversation, First Quarter
Oral proficiency through role play, oral presentations, and discussion. Recommended for those who have participated in Kyoto SCTI program May be taken concurrently with 17, 18, and 19. Prerequisite: 9K, or consent of instructor. http://japanese.stanford.edu/?page_id=421.
2 units, Aut (Tomiyama, Y)

JAPANLNG 31B. Intermediate to Advanced Conversation, Second Quarter
Continuation of 31A. (Oral proficiency through role play, oral presentations, and discussion. Recommended for those who have participated in Kyoto SCTI program May be taken concurrently with 17, 18, and 19. Prerequisite: 31A or consent of instructor. http://japanese.stanford.edu/?page_id=421.
2 units, Win (Tomiyama, Y)

JAPANLNG 31C. Intermediate to Advanced Conversation, Third Quarter
(Continuation of 31B. Oral proficiency through role play, oral presentations, and discussion. Recommended for those who have participated in Kyoto SCTI program May be taken concurrently with 17, 18, and 19. Prerequisite: 32B or consent of instructor. http://japanese.stanford.edu/?page_id=421
2 units, Spr (Tomiyama, Y)

JAPANLNG 99. Language Specials
Prerequisite: consent of instructor. (Staff)
3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANLNG 104A. Japanese for Professionals, First Quarter
Recommended for students who have the basic grammatical foundation (equivalent to completion of 14C or 9), and are ready to develop further communication skills in a limited time not only in their field of interest but also in a professional environment. Prerequisite: 14C, 9 or consent of instructor. See http://japanese.stanford.edu/?page_id=223.
15 units, Aut (Knickerbocker, N)

JAPANLNG 104B. Japanese for Professionals, Second Quarter
Continuation of 104A. Recommended for students who have the basic grammatical foundation, and are ready to develop further communication skills in a limited time not only in their field of interest but also in a professional environment. Prerequisite: 104A or consent of instructor. See http://japanese.stanford.edu/?page_id=223.
2 units, Win (Staff)

JAPANLNG 111. Business Japanese, First Quarter
Topics include cultural attitudes and approaches, work ethic, the stock market, import-export trade. Business letters, job interviews, and resume writing. May be repeated for credit. In Japanese. Prerequisite: 23, 29, or 19, or consent of instructor.
3 units, not given this year

JAPANLNG 111A. Advanced Japanese Conversation, First Quarter
(Formerly JAPANLNG 121.) Focus is on improving speaking skills to narrate and describe things in detail. Audiovisual materials and oral presentations. Prerequisite: 19K, 31C, or consent of instructor. http://japanese.stanford.edu/?page_id=417.
2 units, Aut (Lipton, H)

JAPANLNG 111B. Advanced Japanese Conversation, Second Quarter
(Formerly JAPANLNG 122.) Continuation of 111A. Focus is on improving speaking skills to narrate and describe things in detail. Audiovisual materials and oral presentations. Prerequisite: 19K, 31C, or consent of instructor. Prerequisite: 111A or consent of instructor. http://japanese.stanford.edu/page_id=417.
2 units, Win (Yasumoto Magnani, E)

JAPANLNG 111C. Advanced Japanese Conversation, Third Quarter
(Formerly JAPANLNG 123.) Continuation of 111B. Focus is on improving speaking skills to narrate and describe things in detail. Audiovisual materials and oral presentations. Prerequisite: 111B, or consent of instructor. http://japanese.stanford.edu/?page_id=417.
2 units, Spr (Lowdermilk, M)
JAPANLNG 112. Business Japanese, Second Quarter
Continuation of 111. Topics include cultural attitudes and approaches, work ethic, the stock market, import-export trade. Business letters, job interviews, and resume writing. May be repeated for credit. In Japanese. Prerequisite: 111 or consent of instructor.
3 units, not given this year

JAPANLNG 113. Business Japanese, Third Quarter
Continuation of 112. Topics include cultural attitudes and approaches, work ethic, the stock market, import-export trade. Business letters, job interviews, and resume writing. May be repeated for credit. In Japanese. Prerequisite: 112, or consent of instructor.
3 units, not given this year

JAPANLNG 114F. Japanese Through Film, Part 1
Contemporary Japanese culture through Japanese films, documentaries, news, and TV dramas. Structured for students with a strong desire to advance their Japanese communication skills quickly and who have limited class preparation time. In-depth discussion and exploration of current issues, cultural icons, idiomatic expressions and nonverbal social cues. Prerequisite: 19 or consent of instructor. See http://japanese.stanford.edu/?page_id=255.
4 units, Win (Nakamura, K)

JAPANLNG 117. Third-Year Japanese Language, Culture, and Communication, First Quarter
(Formerly JAPANLNG 127B.) Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: 19, or consent of instructor. See http://japanese.stanford.edu/?page_id=39.
5 units, Aut (Nakamura, K; Tomiyama, Y)

JAPANLNG 118. Third-Year Japanese Language, Culture, and Communication, Second Quarter
(Formerly JAPANLNG 128B.) Continuation of 117. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: 117 or consent of instructor. See http://japanese.stanford.edu/?page_id=39.
5 units, Win (Tomiyama, Y)

JAPANLNG 119. Third-Year Japanese Language, Culture, and Communication, Third Quarter
(Formerly JAPANLNG 129B.) Continuation of 118. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: 118 or consent of instructor. See http://japanese.stanford.edu/?page_id=39.
5 units, Spr (Nakamura, K)

JAPANLNG 200. Directed Reading
Prerequisite: 213 and consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

JAPANLNG 211. Advanced Japanese, First Quarter
Structure of Japanese, writings in different genres and styles, using such knowledge in writing, and expressing opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: 119 or consent of instructor. See http://japanese.stanford.edu/?page_id=263.
3-5 units, Aut (Nakamura, K)

JAPANLNG 212. Advanced Japanese, Second Quarter
Continuation of 211. Structure of Japanese, writings in different genres and styles, using such knowledge in writing, and expressing opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: 211 or consent of instructor. See http://japanese.stanford.edu/?page_id=263.
3-5 units, Win (Nakamura, K)

JAPANLNG 213. Advanced Japanese, Third Quarter
Continuation of 212. Structure of Japanese, writings in different genres and styles, using such knowledge in writing, and expressing opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: 212 or consent of instructor. See http://japanese.stanford.edu/?page_id=263.
3-5 units, Spr (Nakamura, K)

JAPANLNG 305. Intensive First-Year Japanese for Stanford Graduate Students
Equivalent to 3 quarters of JAPANLNG 395 combined. Same as JAPANLNG 35. Stanford Grads only. http://japanese.stanford.edu/?page_id=323. Sum 6-15 units, Sum (Staff)

JAPANLNG 320. Intensive Second-Year Japanese for Stanford Graduate Students
Equivalent to 3 quarters of JAPANLNG 395 combined. Same as 212. Stanford Grads only. See http://japanese.stanford.edu/?page_id=323.
6-15 units, Sum (Staff)

JAPANLNG 394. Graduate Studies in Japanese Conversation
Prerequisite: consent of instructor. (Staff)
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

JAPANLNG 395. Graduate Studies in Japanese
Prerequisite: consent of instructor. (Staff)
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

JAPANESE LITERATURE (JAPANLIT) COURSES

UNDERGRADUATE COURSES IN JAPANESE LITERATURE
Primarily for undergraduates; graduate students may enroll with consent of adviser.
JAPANLIT 146. Introduction to Premodern Japanese
(Same as JAPANLIT 246) Readings from Heian, Kamakura, Muromachi, and early Edo periods with focus on grammar and reading comprehension. Prerequisite: JAPANLNG 129B or 103, or equivalent.
3-5 units, not given this year

JAPANLIT 157. Points in Japanese Grammar
(Same as JAPANLIT 257) Meaning and grammatical differences of similar expressions, and distinctions that may not be salient in English. Prerequisite: JAPANLNG 18B or 22, or equivalent.
GER:DB-SocSci
3-4 units, not given this year

(Same as JAPANLIT 270) Approaches to the tale including 12th-
COURSES OF INSTRUCTION

CENTRAL ACADEMY

GRADUATE COURSES IN JAPANESE LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

JAPANLIT 200. Directed Reading in Japanese
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANLIT 201. Proseminar: Introduction to Graduate Study in Japanese
Bibliographical and research methods; major trends in literary and cultural theory and critical practice. May be repeated once for credit. Prerequisite: JAPANLNG 103 or 129B, or consent of instructor.
2-3 units, Win (Levy, I)

The use of library and online resources for the study of Japanese literature, language, and culture. Prerequisite: JAPANLNG 103 or 129B, or consent of instructor.
1-3 units, not given this year

JAPANLIT 235. Academic Readings in Japanese I
Strategies for reading academic writings in Japanese. Readings of scholarly papers and advanced materials in Japanese in students' research areas in the humanities and social sciences. Prerequisites: JAPANLNG 103 or 129B, or equivalent; and consent of instructor.
2-4 units, not given this year

JAPANLIT 236. Academic Readings in Japanese II
Strategies for reading academic writings in Japanese. Readings of scholarly papers and advanced materials in Japanese in students' research areas in the humanities and social sciences. May be taken independently of 264. May be repeated for credit. Prerequisites: JAPANLNG 103 or 129B, or equivalent; and consent of instructor.
2-4 units, not given this year

JAPANLIT 246. Introduction to Premodern Japanese
(Same as JAPANLIT 146) Readings from Heian, Kamakura, Muromachi, and early Edo periods with focus on grammar and reading comprehension. Prerequisite: JAPANLNG 129B or 103, or equivalent.
3-5 units, not given this year

JAPANLIT 247. Readings in Premodern Japanese
Edo and Meiji periods with focus on grammar and reading comprehension. May be repeated for credit. Prerequisite: 246 or equivalent.
2-5 units, Aut (Reichert, J)

JAPANLIT 257. Points in Japanese Grammar
(Same as JAPANLIT 157) Meaning and grammatical differences of similar expressions, and distinctions that may not be salient in English. Prerequisite: JAPANLNG 18B or 22, or equivalent.
3-4 units, not given this year

JAPANLIT 260. Japanese Poetry and Poetics
Heian through Meiji periods with emphasis on relationships between the social and aesthetic. Works vary each year. This year's genre is the diary. Prerequisite: 246, 247, or equivalent.
2-4 units, Win (Carter, S)

JAPANLIT 266. Introduction to Sino-Japanese
Readings in Sino-Japanese (kambun) texts of the Heian, Kamakura, and Muromachi periods, with focus on grammar and reading comprehension. Prerequisite: 246 or equivalent.
3-5 units, Aut (Carter, S)

JAPANLIT 267. Readings in Sino-Japanese
Readings in Sino-Japanese (kambun) texts of the Edo and Meiji periods, with focus on grammar and reading comprehension. Prerequisite: 246 or equivalent.
2-4 units, not given this year

JAPANLIT 270. The Tale of Genji and Its Historical Reception
(Same as JAPANLIT 170) Approaches to the tale including 12th-century allegorical and modern feminist readings. Influence upon other works including poetry, Noh plays, short stories, modern novels, and comic book (manga) retellings. Prerequisite for graduate students: JAPANLNG 129B or 103, or equivalent.
4 units, not given this year

JAPANLIT 276. Modern Japanese Short Stories
This course explores the postwar Japanese short story. We will read representative works by major authors, such as Ishikawa Jun, Hayashi Fumiko, Abe Kobe and Murakami Haruki. Attention will be devoted to both accurate reading of the Japanese prose and more general discussion of the literary features of the texts.
2-4 units, not given this year

JAPANLIT 279. Research in Japanese Linguistics
Introduction to graduate research in Japanese linguistics. Fields of research, methods and bibliographical background. Conduct a pilot research project in a chosen area. May be repeated for credit. Prerequisite: JAPANLNG 119 or consent of instructor.
2-4 units, Spr (Staff)

JAPANLIT 281. Japanese Pragmatics
Sociocultural and discourse factors reflected in the choice of linguistic forms, and their theoretical implications. Prerequisites: one year of Japanese and a course in linguistics, or two years of Japanese, or consent of instructor.
2-4 units, Spr (Matsumoto, Y)

JAPANLIT 287. Pictures of the Floating World: Images from Japanese Popular Culture
(Same as ARTHIST 287) Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censornship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles. Prerequisites: 2, 186, 187, 188.
5 units, not given this year

JAPANLIT 292. Acquisition of Japanese as a Second Language
(Same as EDUC 292A) Provides students with a broad overview of second language acquisition (SLA) research and introduces recent SLA studies on Japanese as a second language.
2-4 units, Aut (Ishida, M)

JAPANLIT 298. The Theory and Practice of Japanese Literary Translation
Theory and cultural status of translation in modern Japanese and English. Comparative analysis of practical translation strategies. Final project is a literary translation of publishable quality. Prerequisite: fourth-year Japanese or consent of instructor.
2-3 units, not given this year

JAPANLIT 299. Master's Thesis or Translation
A total of 5 units, taken in one or more quarters. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANLIT 350. Japanese Historical Fiction
Authors include Mori Ogai, Akutagawa Ryunosuke, Tanizaki Jun'ichiro, Enchi Fumiko, Shiba Ryotaro, Fujisawa Shuhei, and Hiraika Yamie. Genre theory, and historical and cultural context. Works vary each year. May be repeated for credit.
3-5 units, not given this year

JAPANLIT 377. Seminar: Structure of Japanese
Linguistic constructions in Japanese. Topics vary annually. In 2009-10, focus is on noun-modifying constructions in Japanese from multiple perspectives including syntax, semantics,
pragmatics, and acquisition. Contrasts with similar constructions in other languages. Typological implications. Prerequisites: courses in Japanese linguistics, consent of instructor.

2-4 units, not given this year

JAPANLIT 381. Topics in Pragmatics and Discourse Analysis
Naturally occurring discourse (conversationalex, narrative, or written) and theoretical implications. Discourse of different age groups, expressions of identity and persona, and individual styles. May be repeated for credit.

2-4 units, not given this year

JAPANLIT 395. Early Modern Japanese Literature
May be repeated for credit. Prerequisite: 247.

2-4 units, not given this year

JAPANLIT 396. Love and Revolution in a Translated Modernity
Works and topics vary each year. May be repeated for credit. Prerequisite: fourth-year Japanese or consent of instructor.

2-5 units, Spr (Levy, J)

JAPANLIT 396. Modern Japanese Literature
May be repeated for credit. Prerequisite: JAPANLNG 213.

2-5 units, Win (Reichert, J)

JAPANLIT 399. Dissertation Research
For doctoral students in Japanese working on dissertations.

1-12 units, Win (Staff), Spr (Staff), Summer (Staff)

JAPANLIT 400. Advanced Language Training
For students at the Yokohama Center. For more information, see the Inter-University Center for Japanese Studies in Yokohama at http://stanford.edu/dept/IUC.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

JAPANLIT 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Summer (Staff)

JAPANLIT 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Summer (Staff)

JEWISH STUDIES (JEWISHST) COURSES

UNDERGRADUATE COURSES IN JEWISH STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

JEWISHST 15A. The Bible and Archaeology
(Same as CLASSGEN 15, RELIGST 15A) An introduction to how archaeology has been used to illumine the Bible and biblical history. Did Abraham exist? Was there an Exodus? Did Joshua really conquer Canaan? What does archaeology reveal about ancient Israel beyond what is recorded in the Bible? This course will address such questions as it seeks to introduce biblical archaeology to students with no prior introduction to either the Bible or to archaeology.

4 units, Spr (Lederman, Z)

JEWISHST 15N. Travels through the Afterlife
(F.Sem) (Same as RELIGST 15N) Stanford Introductory Seminar. Since the beginning of civilization, humans have refused to believe that physical death is the end of life and have sought in various ways to travel into the afterlife. We cannot know what lies beyond death, but there are other kinds of insights to be learned from these otherworldly journeys. The first part of the course will explore the origins and history of the afterlife, going back in time to ancient Egypt, Mesopotamia, Israel, Greece, and medieval Europe to survey these cultures' view of death and what lies beyond it. The second part of the course will investigate what has happened to belief in the afterlife in modern American culture. Our ultimate goal is to confront one of the most difficult aspects of life—our fear of death and oblivion—and also to explore the power of thought and imagination to move beyond the confines of mortality.

GER:DB-Hum

4 units, Win (Weitzman, S)

JEWISHST 16SI. Religion and Spirituality: LGBTQ Perspectives,
(Same as RELIGST 16SI) Many lesbian, gay, bisexual, transgender, and queer (LGBTQ) people today are finding that mainstream religious institutions do not meet their unique spiritual needs, and they are looking elsewhere to create meaningful spiritual lives. Examine various ways that LGBTQ people are creating and practicing religion and spirituality in the United States. Explore the diversity of American LGBTQ religious and spiritual traditions, both within and beyond the boundaries of traditional religions. Religious and spiritual practices created by and for LGBTQ people and communities, rather than the responses of religious institutions towards the reality of LGBTQ people in their midst. Students will be required to attend an LGBTQ worship service in a tradition of their choice. By the end of the course, students will have a better understanding of, and appreciation for, the diversity of religious and spiritual traditions within LGBTQ communities.

1-2 units, not given this year

JEWISHST 50A. Reading Hebrew, First Quarter
(Same as AMELANG 50A) Introduction to Hebrew literature through short stories and poetry by notable Israeli writers. In Hebrew. Prerequisite: one year of Hebrew or equivalent.

2-4 units, not given this year

JEWISHST 95. How to Read the Bible
(Same as RELIGST 95) What does the Bible mean? Seeks to help students answer this question for themselves by introducing some of the many ways in which the Bible has been read over the ages. The focus will be the book of Genesis, but the real subject is the history of biblical interpretation, how Genesis has been understood by theologians, writers, artists, scholars and others; and the ultimate goal is not merely to engage the Bible itself but to gain a better appreciation of the act of reading, why people read differently and the consequences of that difference for religious history.

GER:DB-Hum

4 units, not given this year

JEWISHST 101A. Beginning Hebrew, First Quarter
(Same as AMELANG 128A)

5 units, Aut (Porat, G; Greif, E)

JEWISHST 101B. Beginning Hebrew, Second Quarter
(Same as AMELANG 128B)

5 units, Win (Greif, E; Keydar, R)

JEWISHST 101C. Beginning Hebrew, Third Quarter
(Same as AMELANG 128C)

5 units, Spr (Porat, G; Greif, E)

JEWISHST 102. Land and Literature
(Same as AMELANG 127) Israel has captured the imagination of writers throughout the generations. It has been portrayed as promised land, holy land, homeland, empty land, occupied land, and land of dreams. Ideological views and political events have shaped writers’ conception of Israel. Readings include poems, prose, and theoretical texts about place and literature. No knowledge of Hebrew required. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

JEWISHST 102A. Intermediate Hebrew, First Quarter
(Same as AMELANG 129A)

4 units, Aut (Shemtov, V)

JEWISHST 102B. Intermediate Hebrew, Second Quarter
(Same as AMELANG 129B)

4 units, Win (Shemtov, V)

JEWISHST 102C. Intermediate Hebrew, Third Quarter
(Same as AMELANG 129C)

4 units, Spr (Porat, G)

JEWISHST 103A. Advanced Hebrew, First Quarter
(Same as AMELANG 130A)

1-4 units, not given this year

JEWISHST 104. Hebrew Forum
(Same as AMELANG 131) Intermediate and advanced level. Bi-weekly Hebrew discussion on contemporary issues with Israeli guest speakers. Vocabulary enhancement. Focus on exposure to academic Hebrew.

2-4 units, Aut (Shemtov, V)
JEWISHST 104A. Beginning Yiddish, First Quarter  
(Same as AMELANG 140A) Reading, writing, and speaking.  
4 units, Aut (Levitow, J)  

JEWISHST 104B. Beginning Yiddish, Second Quarter  
(Same as AMELANG 140B) Reading, writing, and speaking.  
4 units, Win (Levitow, J)  

JEWISHST 104C. Beginning Yiddish, Third Quarter  
(Same as AMELANG 140C) Reading, writing, and speaking.  
4 units, Spr (Levitow, J)  

JEWISHST 107A. Biblical Hebrew, First Quarter  
(Same as AMELANG 170A, RELIGST 170A) Establish a basic familiarity with the grammar and vocabulary of Biblical Hebrew and will begin developing a facility with the language. This course requires no prior knowledge of Hebrew and will begin with learning the alphabet. By the end of the quarter, students will be able to translate basic biblical texts, will be familiar with common lexica and reference grammars, and will have sufficient foundational knowledge to enable them to continue expanding their knowledge either in a subsequent course or on their own.  
2-4 units, Aut (Weitman, S; DeBold, R)  

JEWISHST 107B. Biblical Hebrew, Second Quarter  
(Same as AMELANG 170B) Continuation of 170A  
2-4 units, Spr (Porat, G)  

JEWISHST 107C. Biblical Hebrew, Third Quarter  
(Same as AMELANG 170C) Continuation of 170B.  
2-4 units, Spr (Staff)  

JEWISHST 120. Genesis and Gender: Male and Female in Judaism, Christianity, and Islam  
(Same as RELIGST 130) What does it mean to be a man or a woman? And what role have classical and religious traditions played in shaping understandings of gender differences? Investigation of the construction of gender identities, roles, and differences in Greek and Roman sources and three monotheistic faiths. Interpretation and retellings of the story of Adam and Eve in the Bible and the Qur'an, commentaries, lives and practices of religious communities, religious iconography down to the present.  
GER:DB-Hum, EC-Gender  
4 units, not given this year  

JEWISHST 122B. Early Christianity, Early Judaism, and Gender  
(Same as CLASSGEN 134, RELIGST 132B) An exploration of gender in Early Christianity and Early Judaism. Possible topics include: an examination of Pre-Christian writings which are indicative of the foundational social contexts in which early Christian and Jewish writers operated; how women’s preaching was portrayed in Paul’s letters and the implications for what was actually going on in the community in Corinth; later interpretations of Paul’s attitudes towards women and marriage, which diverge between a pro-marriage and further restrictive understanding of women’s involvement in the Church in the pastoral letters (1 and 2 Timothy and Titus) and a pro-asetic, cross-dressing, understanding of greater women’s freedom in the Acts of Paul and Thecla; female Christian martyrs who had visions of themselves as men entering battle and male Rabbis who understood themselves as female virgins and who hid in whorehouses to avoid martyrdom; and a survey of early Rabbinic laws pertaining to men and women and what they reveal about early Jewish life.  
GER:DB-Hum  
4 units, Win (Copeland, K)  

JEWISHST 132D. Sociology of Judaism and Jewish Identity  
(Same as RELIGST 112D, SOC 112D) Examines the place of the Jewish people in society throughout various locales and historical periods, and how interactions among Jews and with other groups have shaped Jewish identities. Topics include modernism, the Holocaust, Israel/nationhood, race/ethnicity, intermarriage, and assimilation. Uses theoretical, empirical, and historical material from multiple social scientific fields of study and explores the study of Judaism from several major sociological lenses.  
5 units, Sum (Staff)  

JEWISHST 139. Rereading Judaism in Light of Feminism  
(Same as FEMST 139) During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish law, history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better understand contemporary Jewish life as influenced by feminism.  
GER:EC-Gender  
4-5 units, NEXTYEAR  

JEWISHST 148. Writing Between Languages: The Case of Eastern European Jewish Literature  
(Same as JEWISHST 248, SLAVLIT 198, SLAVLIT 298) Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well.  
GER:DB-Hum  
3-5 units, Spr (Safran, G)  

JEWISHST 153C. Feminism and American Literature  
(Same as AMSTUD 183C, ENGLISH 183C) Exploration of the ways in which an eclectic group of American writers from the 19th century to the 20th have endeavored to enlarge the canvas on which women can paint their lives. Readings include stories, novels, journalism, poetry and drama that engage the social cultural, and political forces that can shape the kinds of futures students can imagine for themselves--forces that are further inflected by issues of race, ethnicity and class.  
GER:DB-Hum, EC-Gender  
5 units, Win (Fishkin, S)  

JEWISHST 182A. In Search of David and Solomon  
(Same as CLASSGEN 182, CLASSGEN 282, JEWISHST 382A, RELIGST 182A, RELIGST 382A) In recent years, the existence of King David and Solomon has become a hotly contested subject, with some scholars questioning whether they were real-life historical figures and others claiming to have found evidence that corroborates their existence. Drawing on the most recent archaeological research, this course will involve students in the quest for the historical David and Solomon as a way to introduce them to the challenges of using the Bible as an historical source.  
4 units, Spr (Lederman, Z)  

JEWISHST 183. The Holocaust  
(Same as HISTORY 237, HISTORY 337, JEWISHST 383) The emergence of modern racism and radical anti-Semitism, the Nazi rise to power and the Jews, Anti-Semitism legislation in the 30s, WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.  
GER:DB-Hum  
4-5 units, Aut (Zipperstein, S)  

JEWISHST 185B. Jews in the Modern World  
(Same as HISTORY 185B, HISTORY 385C) (Same as HISTORY 85B) History majors and others taking 5 units, register for 185B.) Topics include the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in W. Europe; the transformation of Jewish life in E. Europe under the authoritarian Russian regime; colonialism in the Sephardic world; new ideologies (Reform Judaism and Jewish nationalism); the persistence and renewal of antisemitism; the destruction of European Jewry under the Nazis; new Jewish centers in the U.S.; and the State of Israel.  
GER:DB-Hum, EC-GlobalCom  
5 units, Aut (Zipperstein, S)  

JEWISHST 187D. Zionism and Its Critics  
(Same as HISTORY 187D) Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.  
4-5 units, not given this year  

JEWISHST 199B. Directed Reading in Yiddish, Second Quarter  
For intermediate or advanced students. May be repeated for credit.  
1-5 units, Win (Staff)
JEWISHST 221C. Aramaic Jewish texts
(Same as JEWISHST 321C, RELIGST 221C, RELIGST 321C)
Reading of Aramaic Jewish texts with special focus on grammar and syntax. Foundations of classical Aramaic, the two major dialects of rabbinic Aramaic, the Palestinian (Galilean) and the Babylonian. Readings from Midrash, Targum, Talmud and Geonic materials and attempt to follow the development of the language though time. The course is intended for students with substantial knowledge of Hebrew. GER:DB-Hum
2-5 units, not given this year

JEWISHST 225. Research Methods and Resources in Jewish Studies
(Same as JEWISHST 325, RELIGST 265, RELIGST 365)
Enhance students’ research skills in the interdisciplinary field of Jewish Studies, emphasizing electronic reference sources, but also archival and print publications. Coverage includes: Basic reference sources in Jewish Studies, History and bibliography of the Hebrew book, Hebrew Bible, Talmud, Religious studies (post-Talmudic), Jewish philosophy, Jewish history (by period; by region), Jewish languages, Hebrew literature, Yiddish literature, Zionism and Israel, Sephardic Jewry, women, Holocaust, miscellaneous topics (art, music, folklore and ethnography, sociology, genealogy, geography, pseudonyms, honorifics, abbreviations). Class sessions will also include special workshops on Hebrew / Yiddish / Ladino romanization (transliteration/transcription).
1-3 units, not given this year

JEWISHST 226B. Judaism and Christianity in the Mediterranean World: Contact, Competition, and Conflict
(Same as CLASSGEN 126, CLASSGEN 226, JEWISHST 326B, RELIGST 226B, RELIGST 326B)
Jewish beginnings of Christianity in the first century C.E.; process of differentiation between various Jewish and Christian groups; effect of Roman-Jewish wars on Jewish and Christian identity formation; Jewish Christians, Christian Jews, and other heretics; rise of the discourse of orthodoxy and heresy; the emergence of the Adversus Judaeos tradition; theology as a realm of mutual attraction and conflict. Readings include selections of Paulus, Paulus et Paulus, Rabbis, Rabbis, Rabbis. Literature: authors from Justin through Augustine, excerpts from Rabbinic Texts (Mishnah, Midrash and Talmud), along with current literature on religion, ethnicity, and identity in the Roman world.
GER:DB-Hum
5 units, not given this year

JEWISHST 226C. Mystics and Merrymakers: Innovations in Modern Judaism
(Same as JEWISHST 326C, RELIGST 226C, RELIGST 326C)
How does a tradition many thousands of years old make a space for itself in the dynamic landscape of contemporary America? Judaism has continually adapted to its surroundings, and in the twenty-first century new movements have reconstructed, revised, and renewed Jewish practice. A space within has been claimed by some of the most innovative of these changes from Jewish feminism to the Chabad Hasidic revival. Examining some of the most fascinating changes from Jewish feminism to the Chabad Hasidic revival.
GER:DB-Hum
3-4 units, not given this year

JEWISHST 226D. Jewish-Christian Relations in Antiquity
(Same as CLASSGEN 126B, RELIGST 226D) Constructions of identity, community, ethnicity; these considerations frame the investigation anew. Christian rhetoric and theology contra Iudaeos. This historical project will set within the larger intellectual and cultural context of a) learned Graeco-Roman traditions of ethnic stereotyping; b) forensic rhetoric; and c) philosophical paideia; and these traditions will be considered within their larger social context of the Mediterranean city (I-III). Specifically, various Christian, and especially Latin traditions concerning Jews, and the Paradox of Christology will be studied.
1-2 units, not given this year

JEWISHST 228. King Solomon and the Search for Wisdom
(Same as JEWISHST 328, RELIGST 282, RELIGST 382) What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon’s role in Jewish, Christian and Islamic tradition.
4 units, not given this year

JEWISHST 278D. Tel Aviv; Site, Symbol, City
(Same as HISTORY 287D, HISTORY 387D, JEWISHST 387D) Tel Aviv, the first Israeli/Hebrew city, from a cultural history perspective combining high and low cultural artifacts, examining the symbolic constructions of the city as a site of Hebrew modernism and postmodernism. Topics include: the utopian origins behind the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv’s coffee houses; as the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; the effects of contemporary globalization and the reconstruction of Tel Aviv as the symbolic site of Israeli post-nationalism. Sources include art, cinema, and literature, pop music and archival materials from Green Library’s Eliasaf Robinson Collection. Hebrew reading knowledge, although helpful, is not required.
GER:DB-Hum
4-5 units, Spr (Dubnov, A)

JEWISHST 278E. Jewish Intellectuals and the Crisis of Modernity
(Same as HISTORY 287E, HISTORY 387E, JEWISHST 387E) Intellectual responses of Jewish political thinkers, historians and authors to the age of extremes. Readings include Theodor Adorno, Hannah Arendt, Leo Strauss, Karl Popper, Isaiah Berlin, Tony Judt, and George Steiner.
4-5 units, not given this year

JEWISHST 288. Palestine and the Arab-Israeli Conflict
(Same as HISTORY 288, HISTORY 388, IPS 388, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin) GER:DB-Hum
4-5 units, not given this year

JEWISHST 289. Poles and Jews
(Same as HISTORY 229, HISTORY 329, JEWISHST 389) Focus is on the period since WW I. The place of the Jews in interwar Poland, WW II, surviving Jews after the war, Polish memorialization of the Holocaust, the reality and mythology of Jews in the communist apparatus, the manipulation of anti-Semitism by the communist government, and post-communist movement toward reconciliation. Memory and national mythology emphasizing Polish wartime behavior and the relationship of Jews to communism. The sources and uses of stereotypes, and the state of Polish-Jewish relations today.
GER:DB-Hum, DB-Hum, EC-GlobalCom
4-5 units, Win (Jolluck, K)

GRADUATE COURSES IN JEWISH STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

JEWISHST 241. Memory, History, and the Contemporary Novel
(Same as COMPLIT 221, GERLIT 246) How the watershed events of the 20th century, the philosophic linguistic turn, and the debate regarding the end of history left their mark on the novel. How does the contemporary novel engage with the past? How does its interest in memory and history relate to late- or postmodern culture of time or to political and ethical concerns? Novels by Toni Morrison, W. G. Sebald, J. M. Coetzee, Kazuo Ishiguro, and A. B. Yehoshua; theoretical works by Nietzsche, Freud, Heidegger, Hannah Arendt, Walter Benjamin, Fredric Jameson, Paul Ricoeur, Awiwshi Margalit, and Walter Benn Michaels.
3-5 units, Spr (Eshel, A)
JEWISHST 248. Writing Between Languages: The Case of Eastern European Jewish Literature
(Same as JEWISHST 148, SLAVLIT 198, SLAVLIT 298) Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilingualism and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well.
3-5 units, Spr (Safran, G)

JEWISHST 299A. Directed Reading in Yiddish, First Quarter
Directed Reading in Yiddish, First Quarter
1-5 units, Aut (Staff)

JEWISHST 321C. Aramaic Jewish Texts
(Same as JEWISHST 221C, RELIGST 221C, RELIGST 321C) Reading of Aramaic Jewish texts with special focus on grammar and syntax. Foundations of classical Aramaic, the two major dialects of rabbinic Aramaic, the Palestinian (Galilean) and the Babylonian. Readings from Midrash, Piyut, Talmud and Geonic materials and attempt to follow the development of the language through time. The course is intended for students with substantial knowledge of Hebrew.
2-5 units, not given this year

JEWISHST 325. Research Methods and Resources in Jewish Studies
(Same as JEWISHST 225, RELIGST 265, RELIGST 365) Enhance students' research skills in the interdisciplinary field of Jewish Studies, emphasizing electronic reference sources, but also archival resources and print publications. Coverage includes: Basic reference sources in Jewish Studies, History and bibliography of the Hebrew book, Hebrew Bible, Talmud, Religious studies (post-Talmudic), Jewish philosophy, Jewish history (by period; by region), Jewish languages, Hebrew literature, Yiddish literature, Zionism and Israel, Sephardic Jewry, women, Holocaust, miscellaneous topics (art, music, folklore and ethnography, sociology, genealogy, geography, pseudonyms, honorifics, abbreviations). Class sessions will also include special workshops on Hebrew / Yiddish / Ladino romanization (transliteration/transcription).
1-3 units, not given this year

JEWISHST 326B. Judaism and Christianity in the Mediterranean World: Contact, Competition, and Conflict
(Same as CLASSGEN 126, CLASSGEN 226, JEWISHST 226B, RELIGST 226B, RELIGST 326B) Jewish beginnings of Christianity in the first century C.E.; process of differentiation between various Jewish and Christian groups; effect of Roman-Jewish wars on Jewish and Christian identity formation; Jewish Christians, Christian Jews, and other heretics; rise of the discourse of orthodoxy and heresy; the emergence of the Adversus Judaicos tradition; theology as a realm of mutual attraction and conflict. Readings include Epistles of Paul in the New Testament, Christian authors from Justin through Augustine, excerpts from Rabbinc Torah (Midrashim, Midrash and Talmud), along with current literature on religion, ethnicity, and identity in the Roman world.
5 units, not given this year

JEWISHST 326C. Mystics and Merrymakers: Innovations in Modern Judaism
(Same as JEWISHST 226C, RELIGST 226C, RELIGST 326C) How does a tradition many thousands of years old make a space for itself in the dynamic landscape of contemporary America? Judaism has continually adapted to its surroundings, and in the twentieth century new movements have reconstructed, revised, and renewed Jewish practice. A space within has been claimed by a series of previously disenfranchised Jews including women, queer Jews, and Jews of color. Examine some of the most innovative of these changes from Jewish feminism to the Chabad Hasidic revival.
3-4 units, not given this year

JEWISHST 328. King Solomon and the Search for Wisdom
(Same as JEWISHST 228, RELIGST 282, RELIGST 382) What is wisdom according to the Bible? The course addresses this question by surveysing various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition.
4 units, not given this year

JEWISHST 382A. In Search of David and Solomon
(Same as CLASSGEN 182, CLASSGEN 282, JEWISHST 182A, RELIGST 182A, RELIGST 382A) In recent years, the existence of King David and Solomon has become a hotly contested subject, with some scholars questioning whether they were real-life historical figures and others claiming to have found evidence that corroborates their existence. Drawing on the most recent archaeological research, this course will involve students in the quest for the historical David and Solomon as a way to introduce them to the challenges of using the Bible as an historical source.
4 units, Spr (Lederman, Z)

JEWISHST 388. The Holocaust
(Same as HISTORY 237, HISTORY 337, JEWISHST 183) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.
4-5 units, Aut (Zipperstein, S)

JEWISHST 389. Poles and Jews
(Same as JEWISHST 148, SLAVLIT 198, SLAVLIT 298) Eastern Europe---lower and middle classes, intellectuals, politics, nationalism, Eastern European Jews in the diaspora. Memory and national mythology of the Holocaust, the reality and mythology of Polish wartime behavior and the relationship of Jews to communism. The sources and uses of stereotypes, and the state
of Polish-Jewish relations today.

4-5 units, Win (Jolluck, K)

JEWISHST 481. Research Seminar in Middle East History
(Same as HISTORY 287S, HISTORY 481, JEWISHST 287S)
Student-selected research topics.

4-5 units, not given this year

JEWISHST 486A. Graduate Research Seminar in Jewish History
(Same as HISTORY 486A)
4-5 units, Win (Zollerstein, S)

JEWISHST 486B. Graduate Research Seminar in Jewish History
(Same as HISTORY 486B) Prerequisite: HISTORY 486A.

KOREAN GENERAL (KORGEN) COURSES

UNDERGRADUATE COURSES IN KOREAN GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

KORGEN 170. Art and Archaeology of Korea
(Same as ARCHLGY 201, KORGEN 270) Introduction to art and archaeology of Korean peninsula and adjacent continental northeast Asia from Bronze Age to early twentieth century. Topics include archaeology of the proto-Three Kingdoms period, state formation and Sinicization, introduction of Buddhism and its development to the Unified Silla period, the sophisticated tastes of the Koryo aristocrats, and the literati culture of Choson.
3-5 units, Win (Kim, M)

KORGEN 198. Senior Colloquium in Japanese Studies
(Same as JAPANGEN 198) Research, write, and present capstone essay or honors thesis.
1 unit, Win (Matsumoto, Y)

GRADUATE COURSES IN KOREAN GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

KORGEN 270. Art and Archaeology of Korea
(Same as ARCHLGY 201, KORGEN 170) Introduction to art and archaeology of Korean peninsula and adjacent continental northeast Asia from Bronze Age to early twentieth century. Topics include archaeology of the proto-Three Kingdoms period, state formation and Sinicization, introduction of Buddhism and its development to the Unified Silla period, the sophisticated tastes of the Koryo aristocrats, and the literati culture of Choson.
3-5 units, Win (Kim, M)

KOREAN LANGUAGE (KORLANG) COURSES

UNDERGRADUATE COURSES IN KOREAN LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

KORLANG 1. First-Year Korean, First Quarter
Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language.
5 units, Aut (Kim, H)

KORLANG 1H. Beginning Korean for Heritage Learners, First Quarter
For students with previous knowledge of Korean or a strong background in listening and speaking. Focus is on reading, writing, and spelling rather than speaking and listening. Sources include textbook, workbook, and digitized listening materials. Prerequisite: consent of instructor.
3 units, Aut (Kim, H)

KORLANG 2. First-Year Korean, Second Quarter
Continuation of 1. Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language. Prerequisite: placement test, 1 or consent of instructor.
5 units, Win (Kim, H)

KORLANG 2H. Beginning Korean for Heritage Learners, Second Quarter
Continuation of 1H. For students with previous knowledge of Korean or a strong background in listening and speaking. Focus is on reading, writing, and spelling rather than speaking and listening. Sources include textbook, workbook, and digitized listening materials. Prerequisite: 1H or consent of instructor.
3 units, Win (Kim, H)

KORLANG 3. First-Year Korean, Third Quarter
Continuation of 2. Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language. Prerequisite: placement test, 2 or consent of instructor. Fulfills the University language requirement.
5 units, Spr (Kim, H)

KORLANG 101. Third-Year Korean, First Quarter
Materials about Korean culture and society. Proficiency in interpersonal, interpretive, and presentational communication. Vocabulary, reading, and aural/oral skills. Prerequisite: placement test, 23 or consent of instructor.
3-4 units, Aut (Staff)

KORLANG 102. Third-Year Korean, Second Quarter
Continuation of 101. Materials about Korean culture and society. Proficiency in interpersonal, interpretive, and presentational communication. Vocabulary, reading, and aural/oral skills. Prerequisite: placement test, 101 or consent of instructor.
3-4 units, Win (Staff)

KORLANG 103. Third-Year Korean, Third Quarter
Continuation of 102. Materials about Korean culture and society. Proficiency in interpersonal, interpretive, and presentational communication. Vocabulary, reading, and aural/oral skills. Prerequisite: placement test, 102 or consent of instructor.
3-4 units, Spr (Kim, S)
COURSES OF INSTRUCTION

LATIN AMERICAN STUDIES (LATINAM) COURSES

UNDERGRADUATE COURSES IN LATIN AMERICAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

LATINAM 197. Directed Individual Research
For students engaged in interdisciplinary work that cannot be arranged by department. May be repeated for credit. Prerequisite: consent of department.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

LATINAM 198. Honors Thesis
Restricted to those writing an honors thesis in Latin American Studies.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

LATINAM 200. Seminar on Contemporary Issues in Latin American Studies
Guest scholars present analyses of major Latin American themes.
1 unit, Aut (Dirzo, R), Win (Dirzo, R), Spr (Dirzo, R)

GRADUATE COURSES IN LATIN AMERICAN STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

LATINAM 398. Master's Thesis
Restricted to students writing a master's thesis in Latin American Studies. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

LATINAM 801. TGR Project
0 units

LAW, NONPROFESSIONAL (LAWGEN) COURSES

UNDERGRADUATE COURSES IN LAW, NONPROFESSIONAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

LAWGEN 102Q. Pre-field Course for Alternative Spring Break
Pre-field course for undergraduates participating in the Alternative Spring Break program.
1 unit

LAWGEN 103Q. Depth Psychology
(S,Sem) Stanford Introductory Seminar. Powerful unconscious forces impact human and social life. Depth psychology, founded by Sigmund Freud, Carl Jung, Wilhelm Reich, and others, studies these forces and how they shape inner life, personal relationships, religion, politics, art, and many other domains. The course draws from the founders, particularly Jung, and then goes on to include materials from modern theorists, primarily neo-Jungian. The starting point is how the unconscious and conscious mind interact in the individual person's life. We consider the implications of this interaction for psychotherapy and pathology as well as for ordinary life. On the social side, several sessions focus on religion and, to a lesser extent, mythology from a depth psychology perspective. The inquiry is open-ended throughout, encouraging personal reflection and engagement.
3 units, Aut (Strnad, J)

LAWGEN 110Q. Criminal Justice and the Criminal Courts
Preference to sophomores. This course is an introduction to the American criminal justice system, through the lens of the criminal courts. The course focuses on the structures and theories at play in the criminal court system, emphasizing court procedures, structures, constitutional guarantees, and the trial process. It examines the roles of individual agents - the police, prosecutors, defense attorneys, judges, probation officers, and corrections officials.
3 units, not given this year

LAWGEN 111Q. Introduction to International Human Rights
This course will study the main international human rights declarations, treaties, covenants, committees, courts and tribunals. It will look at the effect of nation states, regional bodies, and key economic and military organizations upon human rights. Categories of rights -- civil, political, social, economic and cultural -- will be analyzed, with a particular focus on the rights of women and children, and the right to culture.
3 units
LAWGEN 113Q. Law and the Changing American Family  
(S,Sem) Stanford Introductory Seminar. This course will examine the many unprecedented changes in American family patterns during the past half century. Particular attention will be given to the role of law as it reflects and facilitates these developments. Topics to be covered include: same-sex marriage, no fault divorce, reproductive technologies, adoption, interracial relationships and mixed race families, the decline in marriage, and the changing economic positions of men and women.  
3 units, Win (Banks, R)  

GRADUATE COURSES IN LAW, NONPROFESSIONAL  

Primarily for graduate students; undergraduates may enroll with consent of instructor.  

LAWGEN 206Q. Thinking Like a Lawyer  
(Same as GSBGEN 382). Open to all non-law graduate students at the University, this course provides students an analytical framework for understanding the core concepts of the law and familiarizes students with how lawyers analyze and structure their work. The course is taught by Dean Larry Kramer, Vice Dean Mark Kelman and Law School faculty in their areas of expertise, with one to two classes devoted to each topic. It introduces students to some of the foundational principles of law and reviews topics such as contracts, litigation, intellectual property, securities and employment law.  
3-4 units, Win (Staff)  

LAWGEN 209Q. Community Police Academy  
The Stanford Department of Public Safety (SUDPS) has a long history of providing a wide variety of services to the Stanford community. The Community Police Academy is a combination of classroom instruction and hands-on activities that provides participants the opportunity to experience life as a police officer. This class is designed to expand the participant's knowledge of the duties, responsibilities, decisions and constraints that face law enforcement officers today. The goal of the Community Police Academy is to demystify public safety, build trust and develop partnerships between the Department of Public Safety and the Stanford community. While this course is open to all students throughout the University, the units will not accrue to Law Degree Candidates for credit toward a degree in Law (JD, JSM, JSD, or LLM). Prerequisites: minimum 18 years of age; valid driver's license; pass basic background check.  
1 unit, Win (Wilson, L; Hernandez, J)  

LINGUISTICS (LINGUIST) COURSES  

UNDERGRADUATE COURSES IN LINGUISTICS  

Primarily for undergraduates; graduate students may enroll with consent of adviser.  

LINGUIST 1. Introduction to Linguistics  
The cognitive organization of linguistic structure and the social nature of language use. Why language learning is difficult. Why computers have trouble understanding human languages. How languages differ from one another. How and why speakers of the same language speak differently. How language is used strategically. GER:DB-SocSci  
4 units, Aut (Eckert, P; Sag, I; Gafiter, R; Spencer, J), Spr (Pereltsvaig, A)  

LINGUIST 5N. What's Your Accent? Investigations in Acoustic Phonetics  
Preference to freshmen. Phonetic variation across accents of English; experimental design; practical experience examining accents of seminar participants; acoustic analysis of speech using Praat. GER:DB-SocSci  
3 units, not given this year  

LINGUIST 36. The Arabic Language and Culture  
(Same as AMELANG 36, LINGUIST 270) Arabic language from historical, social, strategic, and linguistic perspectives. History of the Arabic language and the stability of classical Arabic over the last 15 centuries. Why the functionality of classical Arabic has not changed as Latin, Old English, and Middle English have. Social aspects of the Arabic language. Ferguson's notion of diglossia. The main varieties of Arabic, differences among them, and when and where they are spoken. Role of Arabic and culture in current world politics, culture, and economy. Linguistic properties of Arabic such as root-based morphology, lexical ambiguity, and syntactic structure relating it to current linguistic theories.  
3 units, not given this year  

LINGUIST 62N. The Language of Food  
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The relationship between food and language around the globe. The vocabulary of food and prepared dishes, and crosslinguistic similarities and differences, historical origins, forms and meanings, and relationship to cultural and social variables. The structure of cuisines viewed as meta-languages with their own vocabularies and grammatical structure. The language of menus; their historical development and crosslinguistic differences.  
3 units, Win (Jurafsky, D)  

LINGUIST 65. African American Vernacular English  
(Same as AFRICAAM 21, LINGUIST 265) The English vernacular spoken by African Americans in big city settings, and its relation to Creole English dialects spoken on the S. Carolina Sea Islands (Gullah), in the Caribbean, and in W. Africa. The history of expressive uses of African American English (in soundin’ and rappin’), and its educational implications. Service Learning Course (certified by Haas Center). GER:DB-SocSci, EC-AmerCol  
3-5 units, Win (Rickford, J)  

LINGUIST 66. Vernacular English and Reading  
(Same as LINGUIST 266) Discusses some of the literature on the relation between use of vernacular English varieties (e.g. African American Vernacular English, Chicano English) and the development of literacy (especially in Standard English). But our primary focus is on improving the reading skills of African American and Latino students in local schools through the Reading Road program developed at the University of Pennsylvania. Students must commit to tutoring one or more elementary students weekly, using the program. L65 AAVE recommended, but not required.  
4-5 units, Spr (Rickford, J)  

LINGUIST 83N. Translation  
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. What is a translation? The increased need for translations in the modern world due to factors such as tourism and terrorism, localization and globalization, diplomacy and treaties, law and religion, and literature and science. How to meet this need; different kinds of translation for different purposes; what makes one translation better than another; why some texts are more difficult to translate than others. Can some of this work be done by machines? Are there things that cannot be said in some languages? GER:DB-SocSci  
3 units, Aut (Kay, M)  

LINGUIST 90. Teaching Spoken English  
Practical approach to teaching English to non-native speakers. Teaching principles and the features of English which present difficulties. Preparation of lessons, practice teaching in class, and tutoring of non-native speaker.  
3-4 units, Spr (Romero, K)  

LINGUIST 105. Phonetics  
(Same as LINGUIST 205A) The study of speech sounds: how to produce them, how to perceive them, and their acoustic properties. The influence of production and perception systems on sound change and phonological patterns. Acoustic analysis and experimental techniques. Lab exercises. Prerequisite: 110 or equivalent, or consent of instructor. GER:DB-SocSci  
4 units, Spr (Podesva, R)  

LINGUIST 106. Introduction to Speech Perception  
Basics of acoustic phonetics and audition. What do listeners perceive when they perceive speech. Examine current research including: the categorical perception of speech, cross-language speech perception, infant speech perception. Theoretical questions
of interest to speech perception researchers and experimental methods used in the field.

4 units, not given this year

LINGUIST 110. Introduction to Phonetics and Phonology
Differences in the sounds of the world’s languages and how these sounds are made by the human vocal tract. Theories that account for cross-linguistic similarities in the face of differences. GER:DB-SocSci
4 units, Win (Anttila, A)

LINGUIST 112. Seminar in Phonology
Topics vary each year. Previous topics include variation in the phonology of words according to their contexts within larger expressions and the place of these phenomena in a theory of grammar. May be repeated for credit.
2-4 units, not given this year

LINGUIST 116. Morphology
A survey of words including their structures, pronunciations, meanings, and syntactic possibilities in a wide sampling of languages to provide a laboratory for investigating the nature of morphology.
4 units, not given this year

LINGUIST 120. Introduction to Syntax
Grammatical constructions, primarily English, and their consequences for a general theory of language. Practical experience in forming and testing linguistic hypotheses, reading, and constructing rules. GER:DB-SocSci
4 units, Aut (Wasow, T)

LINGUIST 121. Crosslinguistic Syntax
A data-driven introduction to the methods of syntactic analysis, and their results. Emphasis is on understanding how languages are systematically alike and different in their basic sentence structure. Focuses on building up syntactic argumentation skills via the collective development of a partial formal theory of sentence structure, which attempts to model native speaker knowledge. Draws on data from a diverse array of the world’s languages, including but not limited to English.
3-4 units, Spr (Gribanov, V)

LINGUIST 124. Introduction to Lexical Function Grammar
Presentation of a formal model of grammar designed to allow precise, computationally tractable descriptions of cross-linguistic variation in syntactic structure. Concentration on the formal properties of the model, its flexibility in teasing out language specific and possibly universal characteristics of natural languages and the place of syntax as a component within a larger linguistic architecture. Prerequisite: 120 or consent of instructor
2-4 units, not given this year

LINGUIST 125. Seminar in Syntax: Choosing a Variant
Cases where two or more expressions serving as alternatives seem to be in free variation, differing at most in stylistic value. The semantic, discourse function, syntactic, prosodic, and processing factors that favor the choice of one variant over the other. May be repeated for credit.
2-4 units, not given this year

LINGUIST 130A. Introduction to Semantics and Pragmatics
Linguistic meaning and its role in communication. Topics include ambiguity, vagueness, presupposition, intonational meaning, and Grice’s theory of conversational implicature. Applications to issues in politics, the law, philosophy, advertising, and natural language processing. Those who have not taken logic, such as PHIL 150 or 151, should also enroll in 130C. Pre- or corequisite: 120, consent of instructor, or graduate standing in Linguistics. GER:DB-SocSci
4 units, Win (Potts, C)

LINGUIST 130B. Introduction to Lexical Semantics
Issues in the study of word meaning. Focus is on the core semantic properties and internal organization of the four major word categories in natural languages: nouns, verbs, adjectives, and prepositions. GER:DB-SocSci
4 units, not given this year

LINGUIST 130C. Logic Laboratory
Typically taken in conjunction with 130A/230A.
1 unit, Win (Staff)

LINGUIST 140. Language Acquisition I
Processes of language acquisition in early childhood; stages in development; theoretical issues and research questions. Practical experience in data collection. GER:DB-SocSci
4 units, Aut (Clark, E)

LINGUIST 141. Language and Gesture
History of work on gesture, gestural systems associated with particular languages/cultures, and with specific activities - music, sports, traffic management, stock exchanges, etc. Examine gesture developmentally and how gesture is represented in painting and animation.
3 units, Spr (Clark, E)

LINGUIST 142. Heritage Languages
The linguistic and cultural properties of Heritage languages, which are partially acquired and supplanted by a dominant language in childhood. Topics: Syntactic, phonological and morphological properties of heritage languages, implications from experimental HL research for language universals, cultural vs. linguistic knowledge, the role of schooling in HL competence, influence of the dominant language on the HL, and pedagogical issues for HL learners in the classroom. GER:DB-SocSci
3-4 units, not given this year

LINGUIST 143. Sign Languages
The linguistic structure of sign languages. How sign languages from around the world differ, and what properties they share. Accents and dialects in sign languages. How sign languages are similar to and different from spoken languages. How and why sign languages have emerged.
4 units, not given this year

LINGUIST 144. Introduction to Cognitive and Information Sciences
The history, foundations, and accomplishments of the cognitive sciences, including presentations by leading Stanford researchers in artificial intelligence, linguistics, philosophy, and psychology. Overview of the issues addressed in the Symbolic Systems major. GER:DB-SocSci
4 units, Spr (Goodman, N)

LINGUIST 150. Language in Society
How language and society affect each other. Class, age, ethnic, and gender differences in speech. Prestige and stigma associated with different ways of speaking and the politics of language. The strategic use of language. Stylistic practice; how speakers use language to construct styles and adapt their language to different audiences and social contexts. GER:DB-SocSci, WIM
4 units, Win (Eckert, P)

LINGUIST 152. Sociolinguistics andPidgin Creole Studies
Introduction to pidgins and creoles, organized around the main stages in the pidgin-creole life cycle: pidginization, creolization, and decreolization. Focus is on transformations in the English language as it was transported from Britain to Africa, Asia, the Caribbean, and the Pacific. Resultant pidginized and creolized varieties such as Nigerian Pidgin English, Chinese Pidgin English, New Guinea Tok Pisin, Suriname Sranan, and the creole continua of Guyana, Jamaica, and Hawaii. Also French, Dutch, Portuguese, Chinsuk, Mutu, and Sango.
2-4 units, not given this year

LINGUIST 153. Language, Power & Politics
The integral role language plays in politics; how power operates in linguistic practices and political interaction. Critical examination of how language is used to articulate, maintain and subvert relations of power in society, emphasizing language in the media, the political rhetoric associated with war, and the construction of ‘truth’ in politics. The role of ethnographic analysis in aiding sociolinguistic understandings of how social actors use and (re)interpret political language.
3-4 units, not given this year

LINGUIST 154. Sociolinguistics of Language Contact
The role of contact between speakers of different languages in processes of language borrowing, convergence, and shift. Attending both to linguistic aspects and social contexts, examine second-language acquisition, bilingualism, code-switching, lexical and grammatical borrowing,
first language attrition, language death, and the creation of new contact varieties such as jargons, mixed languages, pidgins, and creoles. Prerequisite: background in linguistics, at least one course in linguistics.

2-4 units, not given this year

LINGUIST 155. Hip Hop, Youth Identities, and the Politics of Language
(Same as AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, CSRE 121X, EDUC 121X) Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

3-4 units, Spr (Alim, H)

LINGUIST 156. Language and Gender
The role of language in the construction of gender, the maintenance of the gender order, and social change. Field projects explore hypotheses about the interaction of language and gender. No knowledge of linguistics required. GER:DB-SocSci, EC-Gender

4 units, Spr (Eckert, P; Gafter, R)

LINGUIST 157. Sociophonetics
(Same as LINGUIST 257) The study of phonetic aspects of sociolinguistic variation and the social significance of phonetic variation. Acoustic analysis of vowels, consonants, prosody, and voice quality. Hands-on work on collaborative research project. Prerequisite: 110 or equivalent, or consent of instructor.

4 units, Spr (Podesva, R)

LINGUIST 160. Introduction to Language Change
Principles of historical linguistics; the nature of language change. Kinds and causes of change, variation and diffusion of changes through populations. Differentiation of dialects and languages, determination and classification of historical relationships among languages, rates of change, the reconstruction of ancestral languages and intermediate changes, parallels with cultural and genetic evolutionary theory, and implications of variation and change for the description and explanation of language in general. Prerequisite: introductory course in linguistics or evolutionary theory. GER:DB-SocSci

4 units, Spr (Kiparsky, P)

LINGUIST 163. History of the English Language
(Same as ENGLISH 171) This course traces the history of the English language from its roots through its earliest written records into the present. It will trace the fundamental changes that English has undergone in terms of morphology, phonology, syntax, semantics, and cultural and historical forces that affect language. The course emphasizes the pre-modern history of English. GER:DB-Hum

5 units, Spr (Karnes, M)

LINGUIST 167. Languages of the World
The diversity of human languages, their sound systems, vocabularies, and grammars. Tracing historical relationships between languages and language families. Parallels with genetic evolutionary theory. Language policy, endangered languages and heritage languages. Classification of sign languages. GER:DB-SocSci

3-4 units, Aut (Pereltsvaig, A)

LINGUIST 173. The Structure of Russian
(Same as LINGUIST 273) A synchronic overview of contemporary standard Russian, including its sound system, word formation and grammatical structure. Emphasis is on problems presented by Russian for current linguistic theory. The acquisition of Russian as a first language.

2-4 units, not given this year

LINGUIST 174. Linguistic Field Methods
(Same as ANTHRO 30, LINGUIST 274A) Practical training in the collection and analysis of linguistic data from native speakers of a language largely unknown to the investigator. Documentation of endangered languages. Research goals, field trip preparation, ethics (including human subjects, cooperation with local investigators, and governmental permits), working in the community, technical equipment, and analytical strategies. Emphasis is on the use of recording devices and computers in collection and analysis. Prerequisite: introductory course in linguistics.

3-5 units, not given this year

LINGUIST 174. Linguistic Field Methods
(Same as ANTHRO 71, LINGUIST 274) Workshop applying methods for gathering and analyzing linguistic data in the field, i.e., from consultants who are native speakers of a language essentially unknown to the investigator. Principles of language documentation. Students will do local field projects and work on these both in and out of class. Format involves lectures, discussion, working with native speakers, and student presentations. Topics include: choosing a language; planning the project; computerized collection, storage, and analysis of linguistic data; field recording equipment; interviews; elicitation; diagnosis of language families and grammatical schedules; field study of everyday communication and discourse; area surveys and the ethnography of communication; ethics, reflexivity, and bias; working with human subjects and governments. Prerequisite: a course in linguistics or in anthropological field methods.

5 units, Spr (Fox, J)

LINGUIST 180. From Languages to Information
(Same as CS 124, LINGUIST 280) Automated processing of less structured information: human language text and speech, web pages, social networks, genome sequences, with goal of automatically extracting meaning and structure. Methods include: string algorithms, automata and transducers, hidden Markov models, graph algorithms, XML processing. Applications such as information retrieval, text classification, social network models, machine translation, genomic sequence alignment, word meaning extraction, and speech recognition. Prerequisite: CS103, CS107, CS109.

3-4 units, Win (Jurafsky, D)

LINGUIST 181. Grammar Engineering
(Same as LINGUIST 281) Hands-on techniques for implementation of linguistic grammars, drawing on grammatical theory and engineering skills. The implementation of constraints in morphology, syntax, and semantics, working within a unification-based lexicalist framework. Focus is on developing small grammars for English and at least one other language. Prerequisite: basic syntactic theory or 120. No programming skills required.

1-4 units, not given this year

LINGUIST 182. Computational Theories of Syntax
(Same as LINGUIST 282) Salient features of modern syntactic theories, including HPSG, LFG, and TAG, motivated by computational concerns. Impact of research on the design of algorithms in computational linguistics, and its influence in both linguistics and computer science. Topics include: notions of unification; unification algorithms and their relation to linguistic theory; agenda-driven chart processing for analysis and synthesis; the interface with morphology, the lexicon, and semantics; and applications, notably machine translation.

3-4 units, not given this year

LINGUIST 185. Writing Systems in a Digital World
(Same as LINGUIST 284A) Writing systems and their behaviors. Classification of scripts as alphabetic, syllabic, and ideographic; what features typically belong to each group. What can be considered an ideal script. Topics include: why Japanese writing is considered an ideal script; the influence of Indian writing on other syllabic scripts; how writing systems extend their reach to new languages; linguistic insights by studying this process; the Unicode standard; and font technology. Recommended: basic phonetics.

2-3 units, not given this year

LINGUIST 188. Natural Language Understanding
(Same as CS 224U, LINGUIST 288) Machine understanding of human language. Computational semantics (determination of word sense and synonymy, event structure and thematic roles, tense, aspect, causation, compositional semantics, scopal operators), and computational pragmatics and discourse (coherence, coreference resolution, information packaging, dialogue structure). Theoretical issues, online resources, and relevance to applications including question answering and summarization. Prerequisites: one of

</tr>
</tbody>
</table>
(Same as LINGUIST 291) Methodology and techniques for teaching languages, using concepts from linguistics and second language acquisition theory and research. Focus is on teaching English, but most principles and techniques applicable to any language. Optional 1-unit seminar in computer-assisted language learning. GER:DB-SocSci  
4-5 units, Win (Hubbard, P; Ryalance, C) |
| LINGUIST 192. Language Testing |  
(Same as LINGUIST 292) Measurement of production and reception of spoken and written language. Cross-disciplinary comparison of assessments in educational, clinical, and engineering contexts.  
2-4 units, Spr (Staff) |
| LINGUIST 197. Undergraduate Research Seminar | Research goals and methods in linguistics and related disciplines. Students work on a small project to define a focus for their linguistic studies and prepare for honors research. Presentations; final paper.  
2 units, Win (Gribanov, V) |
| LINGUIST 198. Honors Research |  
1-15 units, Win (Staff), Spr (Staff) |
| LINGUIST 199. Independent Study |  
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff) |
| **GRADUATE COURSES IN LINGUISTICS** |  
Primarily for graduate students; undergraduates may enroll with consent of instructor. |
| LINGUIST 200. Foundations of Linguistic Theory | Theories that have shaped contemporary linguistics; recurrent themes and descriptive practice.  
4 units, not given this year |
| LINGUIST 205A. Phonetics |  
(Same as LINGUIST 105) The study of speech sounds: how to produce them, how to perceive them, and their acoustic properties. The influence of production and perception systems on sound change and phonological patterns. Acoustic analysis and experimental techniques. Lab exercises. Prerequisite: 110 or equivalent, or consent of instructor.  
4 units, Spr (Podesva, R) |
| LINGUIST 205B. Advanced Phonetics | Prerequisite: LINGUIST 205A.  
2-4 units, not given this year |
| LINGUIST 207. Seminar in Phonetics | Topics vary. Current topic is phonetic variation in speech perception. Previous topics include ow variation is accommodated in current models of speech perception, and how perceptual models need to be altered to accommodate phonetic variation encountered by listeners. May be repeated for credit.  
2-4 units, not given this year |
| LINGUIST 210A. Phonology | Introduction to phonological theory and analysis based on cross-linguistic evidence. Topics: phonological representations including features, syllables, metrical structure; phonological processes including assimilation and dissimilation; and phonological typology and universals; optimality theory.  
4 units, Aut (Anttila, A) |
| LINGUIST 210B. Advanced Phonology | A comparison of Stratal OT, Transderivational OT, and rule-based approaches, primarily on the empirical basis of stress, syllable structure, and prosodic organization.  
4 units, Win (Kiparsky, P) |
1-4 units, Aut (Kiparsky, P) |
| LINGUIST 212. Seminar in Phonology | Topics vary each year. Current topic is stress. Previous topics include variation in the phonology of words according to their contexts within larger expressions and the place of these phenomena in a theory of grammar. May be repeated for credit.  
2-4 units, Spr (Anttila, A) |
| LINGUIST 212A. Seminar in Phonology | (Same as LINGUIST 112) Topics vary each year. Previous topics include variation in the phonology of words according to their contexts within larger expressions and the place of these phenomena in a theory of grammar. May be repeated for credit.  
2-4 units, not given this year |
| LINGUIST 212B. Seminar in Phonology | May be repeated for credit.  
1-4 units, not given this year |
| LINGUIST 213. Corpus Phonology | An introduction to constructing and using phonologically annotated corpora to test phonological hypotheses. Hands-on experience in corpus manipulation and phonological modeling.  
2-4 units, not given this year |
| LINGUIST 214. Phonology Workshop | May be repeated for credit.  
1-2 units, not given this year |
| LINGUIST 216. Morphology | How morphology fits into the lexicon and how the lexicon fits into grammar. Inflection and word-formation: blocking, productivity, analogy. Morphological categories. The interaction of morphology with phonology within the lexicon: level-ordering, prosodic morphology. Review of English morphology and analysis of representative material from languages with richer morphologies.  
2-4 units, Spr (Kiparsky, P) |
| LINGUIST 217. Morphosyntax | The role of morphology in grammar: how word structure serves syntax in the expression of meaning. Lexical semantics, Theta-roles, argument structure, and grammatical relations. Licensing: case, agreement, word order, and their interaction.  
2-4 units, not given this year |
| LINGUIST 218. Seminar on Morphological Theories | Word formation and the lexicon: empirical generalizations and theoretical approaches. Lexicalist and Distributed Morphology. How words are built and interpreted: constituency and headness, morpheme order and scope, the mirror principle, bracketing paradoxes, the hierarchy of functional categories. Paradigms, blocking, gaps, periphrasis, syncretism. Locality, head movement vs. selection, constraints on allomorphy, incorporation, polysynthesis, cliticization and prosodic re-ordering phenomena.  
2-4 units, not given this year |
| LINGUIST 219. Frequency and the Grammar of Alternations | Variationist, and psycholinguistic studies of how syntactic alternations (for example, the English dative, genitive, and passive) develop in time and space.  
1-4 units, not given this year |
| LINGUIST 221A. Foundations of English Grammar | A systematic introduction to the formal analysis of English grammar using the framework of head-driven phrase structure grammar (HPSG). Topics: feature structure modeling, lexical and phrasal organization in terms of type hierarchies and constraint inheritance, clausal types, patterns of complementation, the auxiliary system, extraction dependencies, wh-constructions, and the syntax-semantics interface.  
1-4 units, not given this year |
| LINGUIST 221B. Studies in Universal Grammar | Focus is on grammatical analysis of individual languages. Builds directly on the theoretical foundations presented in 221A. Topics vary each year.  
1-4 units, not given this year |
| LINGUIST 222A. Foundations of Syntactic Theory I | The roles of the verb and the lexicon in the determination of sentence syntax and their treatment in modern grammatical theories. Empirical underpinnings of core phenomena, including |
the argument/adjunct distinction, argument structure and argument realization, control and raising, operations on argument structure and grammatical function changing rules. Motivations for a lexicalist approach rooted in principles of lexical expression and subcategorization satisfaction. Prerequisite: 120 or permission of instructor.

LINGUIST 222B. Foundations of Syntactic Theory II
The nature of unbounded dependency constructions and their treatment in modern grammatical theories. Filler-gap dependencies, island constraints, and the relation between grammar and processing. Prerequisite: 222A.
2-4 units, Win (Sag, I)

LINGUIST 223. Introduction to Minimalist Syntax
Introduces the basics of Minimalist architecture and structure-building operations, with attention to the communication of syntax with the phonological and semantic interfaces. Topics include phrase structure, locality and phases, phrasal and head movement, functional categories, and features. A previous graduate-level syntax course, or permission of the instructor required.
2-4 units, not given this year

LINGUIST 224. Introduction to Lexical Function Grammar
(Integration of syntax and semantics using LFG (Lexical Functional Grammar), and CCG (Combinatory Categorial Grammar) as syntactic frameworks and Natural Logic as the semantic approach. Most of natural language semantics aims to specify the meaning of linguistic expressions in model-theoretic terms but formulas of first- or higher-order logics do not come with any effective procedures for reasoning that is required for drawing inferences or answering questions given some natural language input. Natural Logic is a cover term for a family of formal approaches to semantics and textual inferencing as currently practiced by computational linguists. They have in common a proof theoretical rather than a model-theoretic focus and an overriding concern with feasibility. Prerequisite: one syntax or one semantics course.
2-4 units, Spr (Staff)

LINGUIST 224B. Advanced Topics in Lexical Functional Grammar
May be repeated for credit.
1-4 units, not given this year

LINGUIST 225. Seminar in Syntax: Choosing a Variant
(Cases where two or more expressions serving as alternatives seem to be in free variation, differing at most in stylistic value. The semantic, discourse function, syntactic, prosodic, and processing factors that favor the choice of one variant over the other. May be repeated for credit.
2-4 units, not given this year

LINGUIST 225A. Seminar in Syntax: Ellipsis
Diverse kinds of elliptical utterances. The fundamental problems in grammatical analysis of ellipsis (primary focus: English). The clarification of key data relating to current theoretical controversies. May be repeated for credit.
2-4 units, Spr (Sag, I)

LINGUIST 225B. SEMINAR IN SYNTAX: Phonology/Syntax Interface
How syntax conditions phonology and how phonology conditions syntax. The role of the prosodic hierarchy and cyclic structure-building in mediating syntax-phonology interactions. Topics include: linearization, sentential stress, ellipsis, focus, word order, second-place effects. May be repeated for credit.
2-4 units, Win (Gribanov, V)

LINGUIST 226. Construction Grammar
An introduction to Sign-based Construction Grammar (SBCG), an alternative to derivational (movement-based) theories of grammar that synthesizes ideas developed in Berkeley Construction Grammar and Head-Driven Phrase Structure Grammar. How SBCG can provide a comprehensive and precise account of complex data sets without appeal to the complex structures commonly assumed to be projected from empty elements, and without extravagant assumptions about the biological endowment for language. The relation between grammar design and both language processing and language learning. Prerequisite: Some background in syntax.
2-4 units, Aut (Sag, I)

LINGUIST 227C. Projects in Syntax
Group research projects using quantitative syntactic data from texts, recordings, experiments, or historical records. Skills in extracting, graphically exploring, and analyzing naturalistic syntactic data, and in presenting results. May be repeated for credit. Prerequisite: 229A, B, or D, or equivalent.
2-4 units, not given this year

LINGUIST 229A. Laboratory Syntax I
Critiques of the empirical foundations of syntax. The roles of introspective, usage-based, experimental, and typological evidence. Modern methods of data collection and analysis used in syntax. Hands-on, practical work with data sets. May be repeated for credit.
1-4 units, not given this year

LINGUIST 229B. Laboratory Syntax II
Hands-on use of methods for handling syntactic data, including corpus work on ecologically natural data and controlled experimental paradigms. Explanatory models of syntactic processing and their relation to theories of grammar. May be repeated for credit.
1-4 units, not given this year

LINGUIST 229C. Laboratory Syntax III
Hands-on use of methods for handling syntactic data, including corpus work on ecologically natural data and controlled experimental paradigms. Explanatory models of syntactic processing and their relation to theories of grammar. May be repeated for credit.
1-4 units, not given this year

LINGUIST 229D. Empirical Syntax Research Seminar
Recent work in syntax that employs data-rich methods like corpora and laboratory studies, emphasizing research by seminar participants. May be repeated for credit.
1-2 units, not given this year

LINGUIST 230A. Introduction to Semantics and Pragmatics
(Linguistic meaning and its role in communication. Topics include ambiguity, vagueness, presupposition, intonational meaning, and Grice's notion of conversational implicature. Applications to issues in politics, the law, philosophy, advertising, and natural language processing. Those who have not taken logic, such as PHIL 150 or 151, should also enroll in 130C. Pre or corequisite: 120, consent of instructor, or graduate standing in Linguistics.
4 units, Win (Potts, C)

LINGUIST 230B. Advanced Semantics and Pragmatics
Expands on 130A/230A. Detailed study of selected topics in formal semantics and pragmatics. Prerequisites: LINGUIST 130A/230A or permission from instructor.
2-4 units, Spr (Potts, C)

LINGUIST 232A. Lexical Semantics
Introduction to issues in word meaning, focused primarily around verbs. Overview of the core semantic properties of verbs and the organization of the verb lexicon. Approaches to lexical semantic representation, including semantic role lists, proto-roles, and causal and aspectual theories of event conceptualization.
2-4 units, Aut (Levin, B)

LINGUIST 232B. Seminar in Lexical Semantics: Aspect
Current topic: survey of research on various topics in aspect. May be repeated for credit.
1-4 units, Win (Levin, B)

LINGUIST 234. Discourse Analysis
The organization of language above the sentence level, and the manifestation of language in context. Practical experience in
COURSES OF INSTRUCTION

working with discourse data.
4 units, not given this year

LINGUIST 235. Semantic Fieldwork
Techniques for evidence from less well-studied languages within formal semantic theory. Semantic phenomena, and techniques for investigating them, including scope, quantifiers, pronouns, focus, tense, aspect, mood, evidentiality, and information structure. Practical work on a language.
2-4 units, not given this year

LINGUIST 236. Seminar in Semantics: Context Dependence in Language and Communication
Exploring the role of context in language learning and language understanding using methods and results from cognitive psychology, language acquisition, and linguistics. Topics include discourse coherence and anaphora, conversational implicature, word learning, on-line sentence comprehension, and the influence of sociolinguistic variables. May be repeated for credit.
3 units, Spr (Potts, C; Frank, M)

LINGUIST 237. Seminar in Semantics: Semantics of Questions and Commands
Semantics of interrogatives and imperatives; propositional semantics of declaratives. Research emphasizing the meaning of questions. May be repeated for credit.
1-4 units, not given this year

LINGUIST 239. Semantics Research Seminar
Presentation of ongoing research in semantics. May be repeated for credit.
1-2 units, not given this year

LINGUIST 240. Language Acquisition I
(Same as LINGUIST 140) Processes of language acquisition in early childhood; stages in development; theoretical issues and research questions. Practical experience in data collection.
4 units, Aut (Clark, E)

LINGUIST 241. Language Acquisition II
Pragmatics and acquisition. May be repeated for credit.
1-4 units, Win (Clark, E)

LINGUIST 242. Heritage Languages
(Same as LINGUIST 142) The linguistic and cultural properties of Heritage languages, which are partially acquired and supplanted by a dominant language in childhood. Topics: Syntactic, phonological and morphological properties of heritage languages, implications from experimental HL research for language universals, cultural vs. linguistic knowledge, the role of schooling in HL competence, influence of the dominant language on the HL, and pedagogical issues for HL learners in the classroom.
3-4 units, not given this year

LINGUIST 245. Experimental Design for Linguistics
Hypothesis formation, confound avoidance, power, general methods, and analysis of results. Students complete a pilot experiment; write-up; peer review; presentation.
4 units, not given this year

LINGUIST 249. Language Processing
Understanding spoken or written language requires the rapid, incremental processing of novel compositional structures, as well as the integration of the incoming language stream with multiple sources of information, such as the prior discourse, physical context, social information, etc. How are humans able to efficiently accomplish this task? To address this question, this course will consider principles of sentence and discourse processing that guide language understanding and features of sentence & discourse structure that facilitate comprehension. Specific topics are likely to include reference processing, memory & forgetting, individual differences in comprehension ability, the role of context, and computational models of language comprehension.
2-4 units, Aut (Hofmeister, P)

LINGUIST 250. Sociolinguistic Theory and Analysis
Methods of modeling the patterned variation of language in society. Emphasis is on variation, its relation to social structure and practice, and its role in linguistic change. Intersection between quantitative and qualitative analysis, combining insights of sociology and linguistic anthropology with quantitative linguistic data. Prerequisite: graduate standing in Linguistics or consent of instructor.
2-4 units, Aut (Rickford, J)

LINGUIST 251. Sociolinguistic Field Methods
Strengths and weaknesses of the principal methods of data collection in sociolinguistics.
4 units, not given this year

LINGUIST 252. Sociolinguistics and Pidgin Creole Studies
(Same as LINGUIST 152) Introduction to pidgins and creoles, organized around the main stages in the pidgin-creole life cycle: pidginization, creolization, and decrrealization. Focus is on transformations in the English language as it was transported from Britain to Africa, Asia, the Caribbean, and the Pacific. Resultant pidginized and creolized varieties such as Nigerian Pidgin English, Chinese Pidgin English, New Guinea Tok Pisin, Suriname Sranan, and the creole continua of Guyana, Jamaica, and Hawaii. Also French, Dutch, Portuguese, Chinook, Motu, and Sango.
2-4 units, not given this year

LINGUIST 253. Race, Ethnicity, and Language
(Same as ANTHRO 320A, EDUC 389X) This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations participate in similar, yet different, ways of doing race through language, interaction and culture. Readings draw heavily from perspectives in (linguistic) anthropology and sociolinguistics.
3-4 units, Win (Alim, H)

LINGUIST 253A. Workshop on Race, Ethnicity, and Language in Schools
(Same as EDUC 301X) The Workshop on Race, Ethnicity, and Language in Schools is a new School of Education initiative that examines the profound and enduring relationships between race, ethnicity, and language in education in the U.S. and elsewhere. The seminar brings together an interdisciplinary group of leading scholars and graduate students in language and education to address the role of race and ethnicity in a host of complex and controversial language educational issues that cut across the areas of practice, policy, and pedagogy.
1-4 units, Spr (Alim, H)

LINGUIST 254. Sociolinguistics of Language Contact
(Same as LINGUIST 154) The role of contact between speakers of different languages in processes of language borrowing, convergence, and shift. Attending both to linguistic aspects and social contexts, examine: second-language acquisition, bilingualism, code-switching, lexical and grammatical borrowing, first language attrition, language death, and the creation of new varieties of language. Prerequisite: background in linguistics, at least one course in linguistics.
2-4 units, not given this year

LINGUIST 255. Seminar in Sociolinguistics: California Dialectology
Topics vary by quarter. Current topic is based on sociolinguistic interviews gathered in the first two field seasons of the Voices of California project. May be repeated for credit.
2-5 units, Aut (Eckert, P)

LINGUIST 257. Sociophonetics
(Same as LINGUIST 157) The study of phonetic aspects of sociolinguistic variation and the social significance of phonetic variation. Acoustic analysis of vowels, consonants, prosody, and voice quality. Hands-on work on collaborative research project. Prerequisite: 110 or equivalent, or consent of instructor.
4 units, Spr (Podesva, R)

LINGUIST 258. Analysis of Variation
The quantitative study of linguistic variability in time, space, and society emphasizing social constraints in variation. Hands-on work with variable data. Prerequisites: 105/205 and 250, or consent of instructor.
1-4 units, Win (Podesva, R)

LINGUIST 259. Topics in Sociolinguistics
Topics vary by quarter. Current topic is language attitudes. Repeatable for credit.
2-4 units, Spr (Rickford, J)
LINGUIST 260A. Historical Morphology and Phonology
Sound change and analogical change in the perspective of linguistic theory. Internal and comparative reconstruction.
4 units, not given this year

LINGUIST 260B. Historical Morphosyntax
Morphological and syntactic variation and change. Reanalysis, grammaticalization. The use of corpora and quantitative evidence.
2-4 units, not given this year

LINGUIST 262. Constructionalization
Discussion of recent proposals about how to enhance work on grammaticalization and lexicalization by adopting a construction grammar perspective.
2-4 units, not given this year

LINGUIST 265. African American Vernacular English
(Same as AFRICAAM 21, LINGUIST 65) The English vernacular spoken by African Americans in big city settings, and its relation to Creole English dialects spoken on the S. Carolina Sea Islands (Gullah), in the Caribbean, and in W. Africa. The history of expressive uses of African American English (in soundin’ and rappin’), and its educational implications. Service Learning Course (certified by Haas Center).
3-5 units, Win (Rickford, J)

LINGUIST 266. Vernacular English and Reading
(Same as LINGUIST 66) Discusses some of the literature on the relation between use of vernacular English varieties (e.g. African American Vernacular English, Chicano English) and the development of literacy (especially in Standard English). But our primary focus will be on improving the reading skills of African American and Latino students in local schools through the Reading Road program developed at the University of Pennsylvania. Students must commit to tutoring one or more elementary students weekly, using the program. LoS AAVE recommended, but not required.
4-5 units, Spr (Rickford, J)

LINGUIST 270. The Arabic Language and Culture
(Same as AMELANG 36, LINGUIST 36) Arabic language from historical, social, strategic, and linguistic perspectives. History of the Arabic language and the stability of classical Arabic over the last 15 centuries. Why the functionality of classical Arabic has not changed as Latin, Old English, and Middle English have. Social aspects of the Arabic language, Ferguson’s notion of diglossia. The main varieties of Arabic, differences among them, and where they are spoken. Role of Arabic and culture in current world politics, culture, and economy. Linguistic properties of Arabic such as root-based morphology, lexical ambiguity, and syntactic structure relating it to current linguistic theories.
3 units, not given this year

LINGUIST 271. Structure of Basque
Introduction to key topics in Basque morphology, syntax, semantics and how they bear on current theoretical debates. Topics covered may include basic clause structure and word order, case-marking and ergativity, the expression of motion and location.
2-4 units, Spr (Levin, B)

LINGUIST 272. Structure of Finnish
Central topics in Finnish phonology/morphology and syntax/semantics and how they bear on current theoretical debates. Topics: stress; vowel harmony; clause structure; case; aspect; word order.
2-4 units, not given this year

LINGUIST 273. The Structure of Russian
(Same as LINGUIST 173) A synchronic overview of contemporary standard Russian, including its sound system, word formation and grammatical structure. Emphasis is on problems presented by Russian for current linguistic theory. The acquisition of Russian as a first language.
2-4 units, not given this year

LINGUIST 274. Linguistic Field Methods
(Same as ANTHRO 71, LINGUIST 174) Workshop applying methods for gathering and analyzing linguistic data in the field, i.e., from consultants who are native speakers of a language essentially unknown to the investigator. Principles of language documentation. Students will do local field projects and work on these both in and out of class. Format involves lectures, discussion, working with native speakers, and student presentations. Topics include: choosing a language; planning the project; computerized collection, storage, and analysis of linguistic data; field recording equipment; interviews and elicitation; diagnostic vocabulary lists and grammatical schedules; field study of everyday communication and discourse; area surveys and the ethnography of communication; ethics, reflexivity, and bias; working with human subjects and governments. Prerequisite: a course in linguistics or in anthropological field methods.
5 units, Spr (Fox, J)

LINGUIST 274A. Linguistic Field Methods
(Same as ANTHRO 30, LINGUIST 174) Practical training in the collection and analysis of linguistic data from native speakers of a language largely unknown to the investigator. Documentation of endangered languages. Research goals, field trip preparation, ethics (including human subjects, cooperation with local investigators, and governmental permits), working in the community, technical equipment, and analytical strategies. Emphasis is on the use of recording devices and computers in collection and analysis. Prerequisite: introductory course in linguistics.
2-4 units, not given this year

LINGUIST 274B. Field Methods II
Continuation of 274A, with a focus on phonetic topics in a targeted language. Prerequisite: 274A or consent of instructor.
2-4 units, not given this year

LINGUIST 275. Research Projects Practicum
Forum for students with ongoing linguistic research projects, intended to provide participants with feedback on issues of study design, data collection and analysis. Some sessions will provide brief introductions to specific topics in research methodology, chosen based on student interest.
1-2 units, Win (Bresnan, J)

LINGUIST 276. Corpus Methods in Syntax/Phonology
Exploring theoretical questions in phonology, syntax, and their interaction, using annotated corpora. Hands-on experience in corpus work and linguistic modeling.
2-4 units, Win (Staff)

LINGUIST 277. Laboratory Methods in Psycholinguistics
Issues that commonly arise in the design and implementation of linguistic experiments and in the statistical analysis of empirical results. Topics in experimental design include selection of stimuli, blocking, and power analysis and sample size calculation. How to fit and interpret statistical models using the multilevel regression and Bayesian inference, as implemented in software packages R and Bugs. Topics include interpretation of model coefficients for fixed and random effects, collinearity, model criticism, as well as comparison and reporting of models. Theoretical issues worked out at lab sessions using examples from experiments and corpus studies, including those provided by students.
2-4 units, not given this year

LINGUIST 278. Programming for Linguists
Computer programming techniques for collecting and analyzing data in linguistic research. Introduction to the UNIX, regular expressions, and Python scripting. Hands-on experience gathering, formatting, and manipulating corpus, field, and experimental data, combining data from multiple sources, and working with existing tools. Knowledge of computer programming not required.
1-4 units, not given this year

LINGUIST 280. From Languages to Information
(Same as CS 124, LINGUIST 180) Automated processing of less structured information: human language text and speech, web pages, social networks, genome sequences, with goal of automatically extracting meaning and structure. Methods include: string algorithms, automata and transducers, hidden Markov models, graph algorithms, XML processing. Applications such as information retrieval, text classification, social network models, machine translation, genomic sequence alignment, word meaning extraction, and speech recognition. Prerequisite: CS103, CS107, CS109.
3-4 units, Win (Jurafsky, D)

LINGUIST 281. Grammar Engineering
(Same as LINGUIST 181) Hands-on techniques for implementation of linguistic grammars, drawing on grammatical
theory and engineering skills. The implementation of constraints in morphology, syntax, and semantics, working within a unification-based lexicalist framework. Focus is on developing small grammars for English and at least one other language. Prerequisite: basic syntactic theory or 120. No programming skills required.

1-4 units, not given this year

LINGUIST 282. Computational Theories of Syntax
(Same as LINGUIST 182) Salient features of modern syntactic theories, including HPSG, LFG, and TAG, motivated by computational concerns. Impact of work within these frameworks on the design of algorithms in computational linguistics, and its influence in both linguistics and computer science. Topics include: notions of unification; unification algorithms and their relation to linguistic theory; agenda-driven chart processing for analysis and synthesis; the interface with morphology, the lexicon, and semantics; and applications, notably machine translation.

3-4 units, not given this year

LINGUIST 283. Basic Algorithms for Computational Linguistics
Foundational algorithms of non-statistical computational linguistics, including string searching, suffix trees and suffix arrays, finite-state technology for phonology, morphology and dictionary access, classical back-tracking programs for sentence analysis, the use of charts in parsing, generation and translation. Students complete a programming project in one of these areas.

2-4 units, Win (Kay, M)

LINGUIST 284. Natural Language Processing
(Same as CS 224N) Methods for processing human language information and the underlying computational properties of natural languages. Syntactic and semantic processing from linguistic and algorithmic perspectives. Focus is on modern quantitative techniques in NLP: using large corpora, statistical models for acquisition, translation and interpretation; and representative systems. Prerequisites: CS124 or CS121/221.

3-4 units, Aut (Manning, C)

LINGUIST 284A. Writing Systems in a Digital World
(Same as LINGUIST 185) Writing systems and their behaviors. Classification of scripts as alphabetic, syllabic, and ideographic; what features typically belong to each group. What can be considered an ideal script. Topics include: why Japanese writing is considered a complex system; the influence of Indian writing on other syllabic scripts; how writing systems extend their reach to new languages; linguistic insights by studying this process; the Unicode standard; and font technology. Recommended: basic phonetics.

2-3 units, not given this year

LINGUIST 285. Speech Recognition and Synthesis
(Same as CS 224S) Automatic speech recognition, speech synthesis, and dialogue systems. Focus is on key algorithms including noisy channel model, hidden Markov models (HMMs), Viterbi decoding, N-gram language modeling, unit selection synthesis, and roles of linguistic knowledge. Prerequisite: programming experience. Recommended: CS 221 or 229.

2-4 units, not given this year

LINGUIST 286. Information Retrieval and Web Search
(Same as CS 276) Text information retrieval systems; efficient text indexing; Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems. Text clustering and classification: classification algorithms, latent semantic indexing, taxonomy induction; Web search engines including crawling and indexing, link-based algorithms, and web metadata. Prerequisites: CS 107, CS 109, CS 161.

3 units, Spr (Nayak, P; Manning, C)

LINGUIST 287. Extracting Social Meaning and Sentiment
(Same as CS 424P) Methods for extracting social meaning (speaker perspectives, emotions and attitudes) from text and speech. Topics include sentiment analysis and summarization, detection of deception, sarcasm, emotion, and personality. Analysis of meaning-bearing characteristics of the speaker and topic, including text, discourse, prosodic and other cues. Prerequisite: CS 124 or 221 or 229 or permission of instructors.

3 units, not given this year

LINGUIST 288. Natural Language Understanding
(Same as CS 224U, LINGUIST 188) Machine understanding of human language. Computational semantics (determination of word sense and synonymy, event structure and thematic roles, time, aspect, causation, compositional semantics, scopal operators), and computational pragmatics and discourse (coherence, coreference resolution, information packaging, dialogue structure). Theoretical issues, online resources, and relevance to applications including question answering and summarization. Prerequisites: one of LINGUIST 150 / CS 124 / CS 224N.S, and logic such as LINGUIST 130A or B, CS 157, or PHIL150.

3-4 units, Win (MacCartney, W; Potts, C)

LINGUIST 289. Topics in Computational Linguistics: History of Computational Linguistics
Intellectual history of computational linguistics and natural language processing, together with related aspects of dialogue and speech processing, using primary sources. Reading of seminal early papers, interviews with historical figures, with the goal of understanding the origins and intellectual development of the field. Prerequisites: at least one of LING 180, 281, 283, 284, 286, or 288.

3-4 units, not given this year

LINGUIST 291. Linguistics and the Teaching of English as a Second/Foreign Language
(Same as LINGUIST 191) Methodology and techniques for teaching languages, using concepts from linguistics and second language acquisition theory and research. Focus is on teaching English, but most principles and techniques applicable to any language. Optional 1-unit seminar in computer-assisted language learning.

4-5 units, Win (Hubbard, P; Rylance, C)

LINGUIST 292. Language Testing
(Same as LINGUIST 192) Measurement of production and reception of spoken and written language. Cross-disciplinary comparison of assessments in educational, clinical, and engineering contexts.

2-4 units, Spr (Staff)

LINGUIST 293. Research Seminar in Applied Linguistics
(Same as EDUC 435X) For graduate students in the schools of Education and Humanities and Sciences who are engaged in research pertaining to applied linguistic topics in original research. Topics: language policies and planning, language and gender, writing and critical thinking, foreign language education, and social applications of linguistic science. (SSPEP)

1-4 units, not given this year

LINGUIST 294. Linguistic Research Discussion Group
Restricted to first-year Linguistics Ph.D. students.

1 unit, Aut (Levin, B)

LINGUIST 390. M.A. Project

1-3 units, not given this year

LINGUIST 391. Research Seminar in Language and Society

1 unit, Spr (Levin, B; Sag, I)

LINGUIST 395. Research Workshop
Restricted to students in the doctoral program. Student presentations of research toward qualifying papers.

1-2 units, Spr (Levin, B; Sag, I)

LINGUIST 395C. Research Workshop III
Restricted to students in the doctoral program. Student presentations of research toward qualifying papers.

1-2 units, Sum (Staff)

LINGUIST 396. Research Projects in Linguistics
Mentored research project for first-year graduate students in linguistics.

2-3 units, Aut (Staff), Win (Staff)

LINGUIST 397. Directed Reading

1-15 units, not given this year

LINGUIST 398. Directed Research

1-15 units, not given this year

LINGUIST 399. Dissertation Research

1-15 units, not given this year
## UNDERGRADUATE COURSES IN MANAGEMENT SCIENCE AND ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

### MS&E 22Q. The Flaw of Averages
(Sem) Stanford Introductory Seminar. Uncertain assumptions in business and public policy are often replaced with single "best guess" or average numbers. This leads to a fallacy as fundamental as the belief that the earth is flat, which I call the Flaw of Averages. It states, in effect, that: plans based on average assumptions are wrong on average. This class will discuss mitigations of the flaw of averages using simulation and other methods from probability management.

3 units, Aut (Savage, S)

### MS&E 41. Financial Literacy
Practical knowledge about personal finance and money management including budgeting, pay checks, credit cards, banking, insurance, taxes, and saving. Class especially appropriate for those soon to be self-supporting. Limited enrollment.

1 unit, Win (Morrison, M), Spr (Morrison, M)

### MS&E 52. Introduction to Decision Making
Experienced management consultants share lessons and war stories. Case studies, disguised examples from real engagements, and movie clips illustrate theories and concepts of decision analysis. Student teams critique decisions made in actual organizations. Topics include what makes a good decision, how decisions can be made better, framing and structuring techniques, modeling and analysis tools, biases and probability assessment, evaluation and appraisal methods, decision psychology, creativity and organizational leadership, and effective presentation styles. Not intended for MS&E majors.

3 units, Sum (Staff)

### MS&E 92Q. International Environmental Policy
(Sem) Stanford Introductory Seminar. Preference to sophomores. Science, economics, and politics of international environmental policy. Current negotiations on global climate change, including actors and potential solutions. Sources include briefing materials used in international negotiations and the U.S. Congress.

3 units, Win (Weyant, J)

### MS&E 93Q. Nuclear Weapons, Energy, Proliferation, and Terrorism

3 units, Spr (Hecker, S)

### MS&E 94Q. The Public Use and Misuse of Mathematics: How to Interpret Numbers as Used by Media and Politicians
(Sem) Stanford Introductory Seminar. Preference to sophomores. How to unearth and interpret relevant math to illuminate underlying political and economic issues. How to interpret public budgets, whether jury pool selection is biased, estimate pollution risks, and when to believe poll results and statistical relationships; how to deal with rare but high-consequence eventualities such as terrorism, a nuclear meltdown, or a possible pandemic. How to determine how much to pay to reduce carbon emissions, when a medicine should be withdrawn, and what is a useful forecast.

3 units, Spr (May, M)

### MS&E 101. Undergraduate Directed Study
Subject of mutual interest to student and faculty member. Prerequisite: faculty sponsor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### MS&E 107. Interactive Management Science
(Same as MS&E 207) Analytical techniques such as linear and integer programming, Monte Carlo simulation, forecasting, decision analysis, and Markov chains in the environment of the spreadsheet. Probability management. Materials include spreadsheet add-ins for implementing these and other techniques. Emphasis is on building intuition through interactive modeling, and extending the applicability of this type of analysis through integration with existing business data structures.

GER:DB-EngrAppSci

3 units, Aut (Savage, S)

### MS&E 108. Senior Project
Restricted to MS&E majors in their senior year. Students carry out a major project in groups of four, applying techniques and concepts learned in the major. Project work includes problem identification and definition, data collection and synthesis, modeling, development of feasible solutions, and presentation of results. Service Learning Course (certified by Haas Center).

3 units, Win (Brandeau, M; Carlson, R; Easley, C; Kattila, R; Shachter, R)

### MS&E 111. Introduction to Optimization
(Same as ENGR 62) Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Applications to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: MATH 51.

GER:DB-EngrAppSci

4 units, Aut (Van Roy, B), Spr (Goel, A)

### MS&E 112. Mathematical Programming and Combinatorial Optimization
(Same as MS&E 212) Combinatorial and mathematical programming (integer and non-linear) techniques for optimization. Topics: linear program duality and LP solvers; integer programming; combinatorial optimization problems on networks including minimum spanning trees, shortest paths, and network flows; matching and assignment problems; dynamic programming; linear approximations to convex programs; NP-completeness. Hands-on exercises. Prerequisites: CS 106A or X; ENGR 62 or MATH 103.

GER:DB-EngrAppSci

3 units, Win (Saberi, A)

### MS&E 120. Probabilistic Analysis
Concepts and tools for the analysis of problems under uncertainty, focusing on model building and communication: structuring, processing, and presentation of probabilistic information. Examples from legal, social, medical, and physical problems. Spreadsheets illustrate and solve problems as a complement to analytical closed-form solutions. Topics: axioms of probability, probability trees, random variables, distributions, conditioning, expectation, change of variables, and limit theorems. Prerequisite: MATH 51. Recommended: knowledge of spreadsheets. GER:DB-EngrAppSci

5 units, Aut (Shachter, R)

### MS&E 121. Introduction to Stochastic Modeling

GER:DB-EngrAppSci

4 units, Win (Chang, D)

### MS&E 130. Information Networks and Services

GER:DB-EngrAppSci

3 units, Spr (Bambos, N)
MS&E 134. Organization Change and Information Systems
(Same as MS&E 234) Leading organizational change and Information Systems. Case method discussions and lectures. Themes include: real-time enterprise; reengineering; organization transformation, cross-functional teams, IT development, and leading IT. Course includes a group project that is defined and approved during the first two weeks of class. Limited enrollment. Prerequisites: CS 106A, 180, or equivalents.
3 units, Win (Tabrizi, B)

MS&E 140. Accounting for Managers and Entrepreneurs
(Same as MS&E 240) Non-majors and minors who have taken or are taking elementary accounting should not enroll. Introduction to accounting concepts and the operating characteristics of accounting systems. The principles of financial and cost accounting, design of accounting systems, techniques of analysis, and interpretations. How to use accounting information for decision making. Designed for the user of accounting information and not as an introduction to a professional accounting career.
3-4 units, Aut (Stanton, F), Win (Stanton, F), Sum (Staff)

MS&E 146. Corporate Financial Management
Key functions of finance in both large and small companies, and the core concepts and key analytic tools that provide their foundation. Making financing decisions, evaluating investments, and managing cashflow, profitability and risk. Designing performance metrics to effectively measure and align the activities of functional groups and individuals within the firm. Structuring relationships with key customers, partners and suppliers. Prerequisite: 142 or 245G or equivalent.
3 units, Win (Johnson, B)

MS&E 152. Introduction to Decision Analysis
(Same as MS&E 152W) How to make good decisions in a complex, dynamic, and uncertain world. People often make decisions that on close examination they regard as wrong. Decision analysis uses a structured conversation based on actional thought to obtain clarity of action in a wide variety of domains. Topics: distinctions, possibilities and probabilities, relevance, value of information and experimentation, relevance and decision diagrams, risk attitude. Students seeking to fulfill the Writing in the Major requirement should register for MS&E 152W. GER:DB-EngrAppSci
3-4 units, Spr (Shachter, R)

MS&E 152W. Introduction to Decision Analysis
(Same as MS&E 152) How to make good decisions in a complex, dynamic, and uncertain world. People often make decisions that on close examination they regard as wrong. Decision analysis uses a structured conversation based on actional thought to obtain clarity of action in a wide variety of domains. Topics: distinctions, possibilities and probabilities, relevance, value of information and experimentation, relevance and decision diagrams, risk attitude. Students seeking to fulfill the Writing in the Major requirement should register for MS&E 152W. GER:DB-EngrAppSci, WIM
3-4 units, Spr (Shachter, R)

MS&E 175. Innovation, Creativity, and Change
Problem solving in organizations; creativity and innovation skills; thinking tools; creative organizations, teams, individuals, and communities. Limited enrollment. (Katila)
3-4 units, Win (Katila, R)

MS&E 178. The Spirit of Entrepreneurship
Is there more to entrepreneurship than inventing the better mouse trap? This course uses the speakers from the Entrepreneurial Thought Leader seminar (MS&E472) to drive research and discussion about what makes an entrepreneur successful. Topics include venture financing, business models, and interpersonal dynamics in the startup environment. Students meet before and after MS&E 472 to prepare for and debrief after the sessions. Enrollment limited to 50 students.
3 units, Aut (Roizen, H), Win (Roizen, H), Spr (Staff)

MS&E 180. Organizations: Theory and Management
For undergraduates only; preference to MS&E majors. Classical and contemporary organization theory; the behavior of individuals, groups, and organizations. Limited enrollment. Students must attend first session.
4 units, Aut (Eisenhardt, K), Spr (Staff)

MS&E 181. Issues in Technology and Work for a Postindustrial Economy
How changes in technology and organization are altering work and lives. Approaches to studying and designing work. How understanding work and work practices can assist engineers in designing better technologies and organizations. Topics include job design, distributed and virtual organizations, the blurring of boundaries between work and family life, computer supported cooperative work, trends in skill requirements and occupational structures, monitoring and surveillance in the workplace, downsizing and its effects on work systems, project work and project-based lifestyles, the growth of contingent employment, telecommuting, electronic commerce, and the changing nature of labor relations. Enrollment limited to 50 students. Preference to MS&E, STS, and CEE seniors, followed by MS&E, STS, and CEE juniors.
3 units, Spr (Barley, S)

MS&E 185. Global Work
Issues, challenges, and opportunities facing workers, teams, and organizations working across national boundaries. Topics include geographic distance, time zones, language and cultural differences, technologies to support distant collaboration, team dynamics, and corporate strategy. Limited enrollment.
4 units, Aut (Siino, R), Spr (Siino, R)

MS&E 189. Social Networks - Theory, Methods, and Applications
Introduces students to the theoretical, substantive, and methodological foundations of social networks. The social network paradigm seeks to explain how social relations facilitate and constrain an actor’s opportunities, behaviors, and cognitions. Topics include: network concepts and principles; network data collection, measurement, and analysis; and applications in management, engineering, and related disciplines.
3 units, Aut (Lifschitz, A)

MS&E 190. Methods and Models for Policy and Strategy Analysis
Guest lectures by departmental practitioners. Emphasis is on links among theory, application, and observation. Environmental, national security, and health policy; marketing, new technology, and new business strategy analyses. Comparisons between domains and methods.
3 units, not given this year

MS&E 193. Technology and National Security
(Same as MS&E 193W, MS&E 293) The interaction of technology and national security policy from the perspective of history to implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy. Students seeking to fulfill the WIM requirement should register for 193W.
3 units, Aut (Hecker, S, Perry, W)

MS&E 193W. Technology and National Security
(Same as MS&E 193, MS&E 293) The interaction of technology and national security policy from the perspective of history to
implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy. Students seeking to fulfill the WIM requirement should register for 193W. WIM
3 units, Aut (Flecker, S; Perry, W)

**MS&E 197. Ethics and Public Policy**

(Same as PUBLPOL 103B, STS 110) Ethical issues in science- and technology-related public policy conflicts. Focus is on complex, value-laden policy disputes. Topics: the nature of ethics and morality; rationales for liberty, justice, and human rights; and the use and abuse of these concepts in policy disputes. Case studies from biomedicine, environmental affairs, technical professions, communications, and international relations. GER:DB-Hum, EC-EthicReas, WIM
5 units, Win (McGinn, R)

**MS&E 198. Applied Modeling of Energy and Environmental Markets**

Economic principles in models of energy and environmental markets. Spreadsheet examples for developing insights and communicating with decision makers. Market-clearing conditions, controlling emissions, through fees, diffusion of new technologies, resource depletion, cartel behavior, and model evaluation. Prerequisites: ECON 50 and spreadsheets, or consent of instructor.
1 unit, not given this year

**GRADUATE COURSES IN MANAGEMENT SCIENCE AND ENGINEERING**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**MS&E 201. Dynamic Systems**

Goal is to think dynamically in decision making, and recognize and analyze dynamic phenomena in diverse situations. Concepts: formulation and analysis; state-space formulation; solutions of linear and nonlinear systems; equilibria, dynamics, dynamic diagrams; eigenvalues and eigenvectors of linear systems, the concept of feedback; nonlinear dynamics, phase plane analysis, linearized analysis, Liapunov functions, catastrophe theory. Examples: grabber-holder dynamics, technology innovation dynamics, creation of new game dynamics in business competition, ecosystem dynamics, social dynamics, and stochastic exchange dynamics. Prerequisite: MATH 51 or equivalent.
3-4 units, Spr (Tse, E)

**MS&E 205. Product and Systems Development**

(Same as AA 253) Modern approaches to aerospace design development for life cycle value. Concepts of air and space systems development in a systems context. Stakeholder value issues and requirements through manufacturing and delivery. Processes and practices for functional analysis, concept and architecture development, trades, domain criteria, interfaces, and functional verification and validation. Reliability, risk, and safety. Software and hardware/subject integration aimed at information systems. Tools involve quality function deployment, design structure matrices, and decision mechanisms.
3 units, Spr (Weiss, S)

**MS&E 206. Art of Mathematical Modeling**

Practice. Students build mathematical models of real-life, ill- framed problems. Emphasis is on framing the issues, articulating modeling components logically (drawing from student’s mathematical background), and analyzing the resulting model. Hands-on modeling. Project work in small groups. Prerequisites: basic analysis, calculus and algebra, and probability theory. Recommended: decision analysis, optimization and dynamic systems.
3-4 units, Spr (Kieffel, H)

**MS&E 207. Interactive Management Science**

(Same as MS&E 107) Analytical techniques such as linear and integer programming. Monte Carlo simulation, forecasting, decision analysis, and Markov chains in the environment of the spreadsheet. Probability management. Materials include spreadsheet add-ins for implementing these and other techniques. Emphasis is on building intuition through interactive modeling, and extending the applicability of this type of analysis through integration with existing business data structures.

**3 units, Aut (Savage, S)**

**MS&E 208A. Practical Training**

MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Master’s students are limited to one quarter of practical training. B.S. and Ph.D. students may take each of A, B, and C once.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**MS&E 208B. Practical Training**

MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Master’s students are limited to one quarter of practical training. B.S. and Ph.D. students may take each of A, B, and C once.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**MS&E 208C. Practical Training**

MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Master’s students are limited to one quarter of practical training. B.S. and Ph.D. students may take each of A, B, and C once.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**MS&E 211. Linear and Nonlinear Optimization**

3-4 units, Aut (Ye, Y)

**MS&E 212. Mathematical Programming and Combinatorial Optimization**

(Same as MS&E 112) Combinatorial and mathematical programming (integer and non-linear) techniques for optimization. Topics: linear program duality and LP solvers; integer programming; combinatorial optimization problems on networks including minimum spanning trees, shortest paths, and network flows; matching and assignment problems; dynamic programming; linear approximations to convex programs; NP-completeness. Hands-on exercises. Prerequisites: CS 106A or X; ENGR 62 or MATH 103.
3 units, Win (Saberi, A)

**MS&E 220. Probabilistic Analysis**

Concepts and tools for the analysis of problems under uncertainty, focusing on model building and communication: the structuring, processing, and presentation of probabilistic information. Examples from legal, social, medical, and physical problems. Spreadsheets illustrate and solve problems as a complement to analytical closed-form solutions. Topics: axioms of probability, probability trees, random variables, distributions, conditioning, expectation, change of variables, and limit theorems. Prerequisite: MATH 51. Recommended: knowledge of spreadsheets.
3-4 units, Aut (Chiu, S)

**MS&E 221. Stochastic Modeling**

Focus is on time-dependent random phenomena. Topics: discrete and continuous time Markov chains, renewal processes, queuing
<table>
<thead>
<tr>
<th>COURSE</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>MS&amp;E 223. Simulation</td>
<td>Discrete-event systems, generation of uniform and non-uniform random numbers, Monte Carlo methods, programming techniques for simulation, statistical analysis of simulation output, efficiency-improvement techniques, decision making using simulation, applications to systems in computer science, engineering, finance, and operations research. Prerequisites: working knowledge of a programming language such as C, C++, Java, or FORTRAN; probability; and statistical methods. 3 units, Spr (Haas, P)</td>
</tr>
<tr>
<td>MS&amp;E 233. Networked Markets</td>
<td>An introduction to economic analysis for modern online services and systems. Topics include: Examples of networked markets, Online advertising, Recommendation and reputation systems, Pricing digital media, Network effects and network externalities, Social learning and herd behavior. Markets and information. Prerequisites: Math 51 and probability at the level of MS&amp;E 220 or equivalent. No prior economics background will be assumed; requisite concepts will be introduced as needed. 3 units, Spr (Johari, R)</td>
</tr>
<tr>
<td>MS&amp;E 236. Game Theory with Engineering Applications</td>
<td>Strategic interactions among multiple decision makers emphasizing applications to engineering systems. Topics: efficiency and fairness; collective decision making and cooperative games; static and dynamic noncooperative games; and complete and incomplete information models. Competition: Bertrand, Cournot, and Stackelberg models. Mechanism design auctions, contracts. Examples (details from engineering problems). Prerequisites: MATH 51; probability at the level of 220, STATS 116, or equivalent. Recommended: concurrent enrollment in 241 or ECON 202. 3 units, Win (Tabrizi, B)</td>
</tr>
<tr>
<td>MS&amp;E 236H. Game Theory with Engineering Applications</td>
<td>Advanced and mathematically more rigorous version of MS&amp;E 236. Strategic interactions among multiple decision makers emphasizing applications to engineering systems. Topics: efficiency and fairness; collective decision making and cooperative games; static and dynamic noncooperative games; and complete and incomplete information models. Competition: efficient markets; Bertrand, Cournot, and Stackelberg models. Mechanism design: auctions, contracts. Examples from engineering problems. Prerequisites: mathematical maturity; MATH 51; probability at the level of 220, STATS 116, or equivalent. Recommended: concurrent enrollment in 241 or ECON 202. 3 units, alternate years, not given this year</td>
</tr>
<tr>
<td>MS&amp;E 237. The Social Data Revolution: Data Mining and Electronic Business</td>
<td>Hands-on exploration of current and emergent data sources and their impact on individuals, business and society; recommendation engines, reputation systems, social network analysis, and engagement metrics. Guest speakers, homework assignments and group projects (e.g., Twitter and Facebook apps) combine data strategy, machine learning, modern and traditional marketing, behavioral economics, and incentive design. Cases include Amazon.com, BestBuy, MySpace, Lufthansa, and startups. Prerequisites: intellectual curiosity, entrepreneurial spirit, some programming experience (details at weigend.com/teaching), and willingness to implement in the real world. 3 units, not given this year</td>
</tr>
<tr>
<td>MS&amp;E 238. Leading Trends in Information Technology</td>
<td>Focuses on new trends and disruptive technologies in IT. Emphasis on the way technologies create a competitive edge and generate business value. Broad range of views presented by guest speakers, including top level executives of technology companies, and IT executives (e.g., CIOs) of Fortune 1000 companies. Special emphasis in technologies such as Virtualization, Cloud Computing, Security, Mobility and Unified Communications. 3 units, Sum (Staff)</td>
</tr>
<tr>
<td>MS&amp;E 240. Accounting for Managers and Entrepreneurs</td>
<td>Same as MS&amp;E 140) Non-majors and minors who have taken or are taking elementary accounting should not enroll. Introduction to accounting concepts and the operating characteristics of accounting systems. The principles of financial and cost accounting, design of accounting systems, techniques of analysis, and cost control. Interpretation and use of accounting information for decision making. Designed for the user of accounting information and not as an introduction to a professional accounting career. 3-4 units, Aut (Broder, A; Josifovski, V)</td>
</tr>
<tr>
<td>MS&amp;E 241. Economic Analysis</td>
<td>Principal methods of economic analysis of the production activities of firms, including production technologies, cost and profit, and perfect and imperfect competition; individual choice, including preferences and demand; and the market-based system, including price formation, efficiency, and welfare. Practical applications of the methods presented. See 341 for continuation of 241. Recommended: 211, ECON 50. 3-4 units, Win (Sweeney, J)</td>
</tr>
<tr>
<td>MS&amp;E 242. Investment Science</td>
<td>Theory and application of modern quantitative investment analysis from an engineering perspective. How investment concepts are used to evaluate and manage opportunities, portfolios, and investment products including stocks, bonds, mortgages, and annuities. Topics: deterministic cash flows (term structure of interest rates, bond portfolio immunization, project optimization); mean-variance portfolio theory (Markowitz model, capital asset pricing); and arbitrage pricing theory. Group project. Prerequisites: 120, MATH 51, or equivalents. Recommended: 111, 140, knowledge of spreadsheets. Limited enrollment. 3 units, Aut (Infanger, G; Luenberger, D)</td>
</tr>
<tr>
<td>MS&amp;E 242H. Investment Science Honors</td>
<td>Concepts of modern quantitative finance and investments. Basic concepts under uncertainty including arbitrage, term structure of interest rates, and bond portfolio immunization. A situation of uncertainty in one period. Topics: arbitrage; theorems of asset pricing; pricing measures; derivative securities; applications and estimating of financial risk measures; mean-variance portfolio analysis; and equilibrium and the capital asset pricing model. Group projects involving financial market data. Enrollment limited. Prerequisites: basic probability, statistics, and economics such as MS&amp;E 120, 121, MATH 51, or equivalents. No prior knowledge of finance required. 3 units, Aut (Giesecke, K)</td>
</tr>
<tr>
<td>MS&amp;E 242S. Investment Science</td>
<td>Emphasis is on a cash flow approach. Topics include deterministic cash flow analysis (time value of money, present value, internal rate of return, taxes, inflation), fixed income securities, duration and bond portfolio immunization, term structure of interest rates (spot rates, discount factors, forward rates), Fisher-Weil duration and immunization, capital budgeting, dynamic optimization problems, investments under uncertainty, mean-variance portfolio theory, capital asset pricing, and basic options theory. Goal is to create a link between engineering analysis and business decision making. 3 units, Sum (Staff)</td>
</tr>
</tbody>
</table>
MS&E 243. Energy and Environmental Policy Analysis
Concepts, methods, and applications. Energy/environmental policy issues such as automobile fuel economy regulation, global climate change, research and development policy, and environmental benefit assessment. Group project. Prerequisite: MS&E 241 or ECON 50, 51.
3 units, Spr (Sweeney, J)

MS&E 245G. Finance for Non-MBAs
(Same as ECON 135) For graduate students and advanced undergraduates. The foundations of finance: applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on process valuation. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Core financial instruments, including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 51, or ENGR 60, or equivalent; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.
3-5 units, Aut (Perez-Gonzalez, F), Win (Admati, A)

MS&E 247G. International Financial Management
With a daily volume of more than $1.8 trillion, the foreign exchange market is by far the largest financial market in the world. It is also one of the most important ones as it is impossible to avoid exchange rate risk in the global economy. We will examine various aspects of the foreign exchange market. First, we will examine the role of governments and central banks. We will then focus on the markets for spot exchange, currency forwards, options, swaps, international bonds, and international equities. For each of these markets, the valuation of instruments traded in these markets and, through cases, the application of these instruments to managing exposure to exchange rates, financing in international capital markets, and international capital budgeting. It is strongly recommended that students take Finance for Non-MBAs (FINANCE 221/MS&E 245G/ECON 135) as a pre- or co-requisite to this course. MS&E 242/242S/242H or MATH 238/STATS 250 are also acceptable.
4 units, not given this year

MS&E 247S. International Investments
International financial markets, their comparative behavior and interrelations. Focus is on assets traded in liquid markets: currencies, equities, bonds, swaps, and derivatives. Topics: institutional arrangements, taxation and regulation, international arbitrage and parity conditions, valuation of target firms for cross-border acquisitions, direct foreign investment, international diversification and portfolio management, derivative instruments and dynamic investment strategies, international performance analysis, international capital flows and financial crises, and topics of current relevance and importance.
3 units, Sum (Staff)

MS&E 248. Economics of Natural Resources
Intertemporal economic analysis of natural resource use, particularly energy, and including air, water, and other depletable mineral and biological resources. Emphasis is on an integrating theory for depletable and renewable resources. Stock-flow relationships; optimal choices over time; short- and long-run equilibrium conditions; depletion/extinction conditions; market failure mechanisms (common-property, public goods, discount rate distortions, rule-of-capture); policy options. Prerequisite: 241 or ECON 51.
3-4 units, Aut (Giraudet, I)

MS&E 249. Economic Growth and Development
What generates economic growth. Emphasis is on theory accompanied by intuition, illustrated with country cases. Topics: the equation of motion of an economy; optimal growth theory; calculus of variations and optimal control approaches; deriving the Euler and Pontryagin equations from economic reasoning. Applications: former planned economies in Russia and E. Europe; the present global crisis: causes and consequences; a comparative study of India and China. The links between economic growth and civilization; the causes of the rise and decline of civilizations; lessons for the future. Intended for graduate students. Prerequisite: multivariable calculus.
3 units, Sum (Staff)

MS&E 250A. Engineering Risk Analysis
(Same as PUBLPOL 355) The techniques of analysis of engineering systems for risk management decisions involving trade-offs (technical, human, environmental aspects). Elements of decision analysis; probabilistic risk analysis (fault trees, event trees, systems dynamics); economic analysis of failure consequences (human safety and long-term economic discounting); and case studies such as space systems, nuclear power plants, and medical systems. Public and private sectors. Prerequisites: probability, decision analysis, stochastic processes, and convex optimization.
3 units, NEXT YEAR

MS&E 250B. Project Course in Engineering Risk Analysis
Students, individually or in groups, choose, define, formulate, and resolve a real risk management problem, preferably from a local firm or institution. Oral presentation and report required. Scope of the project is adapted to the number of students involved. Three phases: risk assessment, communication, and management. Emphasis is on the use of probability for the treatment of uncertainties and sensitivity to problem boundaries. Limited enrollment. Prerequisites: MS&E 250A and consent of instructor.
3 units, NEXT YEAR

MS&E 251. Stochastic Decision Models
Efficient formulation and computational solution of sequential decision problems under uncertainty. Markov decision chains and stochastic programming. Maximum expected present value and rate of return. Optimality of simple policies: myopic, linear, index, acceptance limit, and (s,S). Optimal stationary and periodic infinite-horizon policies. Applications to investment, options, overbooking, inventory, production, purchasing, selling, quality, reputation, queues, capacity, transportation. MATLAB is used. Prerequisites: probability, linear programming.
3 units, Spr (Van Roy, B)

MS&E 252. Decision Analysis I: Foundations of Decision Analysis
Coherent approach to decision making, using the metaphor of developing a structured conversation having desirable properties, and producing actionable thought that leads to clarity of action. Socratic instruction; computational problem sessions. Emphasis is on creation of distinctions, representation of uncertainty by probability, development of alternatives, specification of preference, and the role of these elements in creating a normative approach to decisions. Information gathering opportunities in terms of a value measure. Relevance and decision diagrams to represent inference and decision. Principles are applied to decisions in business, technology, law, and medicine. See 352 for continuation.
3-4 units, Aut (Howard, R)

MS&E 254. The Ethical Analyst
The ethical responsibility for consequences of professional analysts who use technical knowledge in support of any individual, organization, or government. The means to form ethical judgments; questioning the desirability of physical coercion and deception as a means to reach any end. Human action and relations in society in the light of previous thought, and research on the desired form of social interactions. Attitudes toward ethical dilemmas through an explicit personal code.
3-1-3 units, Spr (Staff)

MS&E 255. Decision Systems I
(Formerly MS&E 451.) Professional tools and techniques for designing decision systems that help when facing decisions such as buying a car, bidding on the Internet, hiring NFL players, making charitable donations, or choosing a medical treatment. Demonstrations; small project. Topics: automatic decision diagram formulation, decision-class analysis, and dynamic sensitivity analysis. No programming required. Recommended: 252 or equivalent.
3-3 units, not given this year

MS&E 256. Technology Assessment and Regulation of Medical Devices
Formerly MS&E 457.) Regulatory approval and reimbursement for new medical technologies as a key component of product commercialization. The regulatory and payer environment in the
U.S. and abroad, and common methods of health technology assessment. Framework to identify factors relevant to adoption of new medical devices, and the management of those factors in the design and development phases. Case studies; guest speakers from government (FDA) and industry.

1-3 units, Spr (Pietzsch, J)

MS&E 260. Introduction to Operations Management
Operations management focuses on the effective planning, scheduling, and control of manufacturing and service entities. This course introduces students to a broad range of key issues in operations management. Topics include determination of optimal facility location, production planning, optimal timing and sizing of capacity expansion, and inventory control. Prerequisites: basic probability and optimization.
3-4 units, Aut (Erhun Oguz, F), Sum (Staff)

MS&E 261. Inventory Control and Production Systems
Topics in the planning and control of manufacturing systems. The functions of inventory, determination of order quantities and safety stocks, alternative inventory replenishment systems, item forecasting, production-inventory systems, materials requirements planning (MRP), just-in-time systems, master and operations scheduling, supply chain management, and service operations. Limited enrollment. Prerequisite: 260 or 261, or equivalent.
3 units, Win (Hauserman, W)

MS&E 262. Supply Chain Management
Definition of a supply chain; coordination difficulties; pitfalls and opportunities in supply chain management; inventory/service tradeoffs; performance measurement and incentives. Global supply chain management; mass customization; supplier management. Design and redesign of products and processes for supply chain management; tools for analysis; industrial applications; current industry initiatives. Enrollment limited to 50. Prerequisite: 260 or 261.
3 units, Spr (Hauserman, W)

MS&E 264. Sustainable Product Development and Manufacturing
Strategies and techniques for development of sustainable products and manufacturing processes. Topics: strategic decisions in new product development when environmental and resource externalities are accounted for; effect of regulatory requirements on ability of a firm to achieve its business objectives; contributions of sustainable products/processes to the firm’s competitive advantage and operational efficiency and to enabling entrepreneurial opportunities; industrial ecology and life cycle analysis techniques in integrating traditional product development requirements with those of the environment and society. Maybe repeatable for credit once.
3-4 units, Aut (Rafinejad, D)

MS&E 265. Supply Chain Logistics
Student teams redesign the manufacturing and distribution system of a medium-sized manufacturer. Focus is on the transportation system, inventory policies for a regional warehouse, design of a national distribution system, improvements of work flow, and layout of the manufacturing plant. The redesign is at a detailed operational level consistent with a strategy of integrating the functions of manufacturing and distribution. Analytical and game software is used. Knowledge of inventory theory, linear/integer programming, economic analysis, and applied probability is required. Emphasis is on group learning. Limited enrollment. Prerequisites: senior or graduate standing, 111, 260, ECON 50, or consent of instructor.
4 units, alternate years, not given this year

MS&E 266. Management of New Product Development
Techniques of managing or leading the process of new product development that have been found effective. Emphasis is placed on how much control is desirable and how that control can be exercised in a setting where creativity has traditionally played a larger role than discipline. Topics: design for manufacturability, assessing the market, imposing discipline on the new product development process, selecting the appropriate portfolio of new product development projects, disruptive technology, product development at internet speed, uncertainty in product development, role of experimentation in new product development, creating an effective development organization, and developing products to hit cost targets.
3 units, Win (Rafinejad, D)

MS&E 268. Operations Strategy
The development and implementation of the operations functional strategy. The integration of operations strategy with business and corporate strategies of a manufacturing-based firm. Topics: types and characteristics of manufacturing technologies, quality management, capacity planning and facilities choice, organization and control of operations, and operations’ role in corporate strategy. Prerequisites: 260 or 261, or equivalent experience.
3 units, Spr (Staff)

MS&E 270. Strategy in Technology-Based Companies
For graduate students only. Introduction to the basic concepts of strategy, with emphasis on high technology firms. Topics: competitive positioning, resource-based perspectives, co-opetition and standards setting, and complexity/evolutionary perspectives. Limited enrollment.
3-4 units, Aut (Eisenhardt, K)

MS&E 271. Global Entrepreneurial Marketing
Skills needed to market new technology-based products to customers around the world. Case method discussions. Cases include startups and global high tech firms. Course themes: marketing toolkit, targeting markets and customers, product marketing and management, partners and distribution, sales and negotiation, and outbound marketing. Team-based take-home final exam. Limited enrollment.
3-4 units, Win (Kosnik, T; Novitsky, D; Ramfelt, L; Smith, L), Spr (Kosnik, T; Novitsky, D; Ramfelt, L; Smith, L)

MS&E 273. Technology Venture Formation
Open to graduate students interested in high-technology entrepreneurship. Examines key components of starting a venture-scale high-tech business: Opportunity Assessment, Market Sizing, Go to Market and Distribution Strategy, R&D and Ops Plans, Venture Capital, Legal considerations and Team building. Teaching team includes serial entrepreneurs and venture capitalists. Student teams write and present a business plan to top tier venture capitalists. In addition to class attendance, teams must interact with mentors and teaching team at least once per week for 60 minutes. Enrollment limited. Recommended: 270, 271, or equivalent.
3-4 units, Aut (Lyons, M; MacLean, A)

MS&E 274. Dynamic Entrepreneurial Strategy
Primarily for graduate students. How entrepreneurial strategy focuses on creating structural change or responding to change induced externally. Grabber-holder dynamics as an analytical framework for developing entrepreneurial strategy to increase success in creating and shaping the diffusion of new technology or product technology innovation and utilization. Topics: First mover versus follower advantage in an emerging market; latecomer advantage and strategy in a mature market; strategy to break through stagnation; and strategy to turn danger into opportunity. Modeling, case studies, and term project.
3 units, Win (Tse, E)

MS&E 276. Entrepreneurial Management and Finance
For graduate students only with a preference for engineering and science majors. Emphasis on managing high-growth ventures, especially those based on technology products and services. Students develop a set of skills and approaches to becoming effective entrepreneurial managers. Topics include turning opportunities into reality, raising capital and financial management, venture operations and organizational administration, handling growth and adversity. Limited enrollment. Prerequisites: 240 and 242, or equivalents.
3 units, Spr (Byers, T)

MS&E 277. Creativity and Innovation
Factors that promote and inhibit creativity of individuals, teams, and organizations. Creativity tools, assessment metrics, and exercises; workshops, field trips, and case studies. Each student completes an individual creativity portfolio and participates in a long-term team project. Enrollment limited to 32. See http://creativity.stanford.edu.
4 units, Spr (Seelig, T)
MS&E 280. Organizational Behavior: Evidence in Action
Organization theory; concepts and functions of management; behavior of the individual, work group, and organization. Emphasis is on cases and related discussion. Enrollment limited; priority to MS&E students.
3-4 units, Win (Sutton, R)

MS&E 283. Scaling up Excellence in Organizations
A problem for every manager is to make 'good' behaviors spread quickly and to shrink 'undesirable' behaviors quickly. This course provides you practical frameworks to accomplish these managerial goals. We will examine issues such as scaling Idea generation, scaling knowledge sharing, scaling the adoption of ideas across firms, scaling change in global firms. We will be using a newly written series of cases for this course and also draw on guest speakers.
4 units, Win (Rao, H; Sutton, R)

MS&E 289. Designing for Sustainable Abundance
Hands-on, team-based, multidisciplinary class, uses radically human-centered approach to tackle sustainability challenges in areas like food and transportation. Teams develop solutions that improve environmental and economic sustainability as well as physical and emotional well-being. Students benefit from close interaction with the teaching team, support from project sponsors, and the varied perspectives of numerous guest speakers. Application required. Limited enrollment. Design Institute class; see http://dschool.stanford.edu.
3-4 units, Win (Dunn, D; Waishberg, N)

MS&E 292. Health Policy Modeling
Primarily for master's students; also open to undergraduates and doctoral students. The application of mathematical, statistical, economic, and systems models to problems in health policy. Areas include: disease screening, prevention, and treatment; assessment of new technologies; bioterrorism response; and drug control policies. Application required. Limited enrollment. Design Institute class; see http://dschool.stanford.edu.
3 units, Win (Brandenburg, M)

MS&E 293. Technology and National Security
(Same as MS&E 193, MS&E 193W) The interaction of technology and national security policy from the perspective of history to implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy. Students seeking to fulfill the WIM requirement should register for 193W.
3 units, Aut (Hecker, S; Perry, W)

MS&E 294. Climate Policy Analysis
Design and application of formal analytical methods in climate policy development. Issues include instrument design, technology development, resource management, multiparty negotiation, and dealing with complexity and uncertainty. Links among art, theory, and practice. Emphasis is on integrated use of modeling tools from diverse methodologies and requirements for policy making application. Recommended: background in economics, optimization, and decision analysis.
3 units, Win (Weyant, J)

MS&E 295. Energy Policy Analysis
Design and application of formal analytical methods for policy and technology assessments of energy efficiency and renewable energy options. Emphasis is on integrated use of modeling tools from diverse methodologies and requirements for policy and corporate strategy development. Recommended: background in economics, optimization, and decision analysis.
3 units, alternate years, not given this year

MS&E 299. Voluntary Social Systems
Ethical theory, feasibility, and desirability of a social order in which coercion by individuals and government is minimized and people pursue ends on a voluntary basis. Topics: efficacy and ethics; use rights for property; contracts and torts; spontaneous order and free markets; crime and punishment based on restitution; guardian-ward theory for dealing with incompetents; the effects of state action-hypothesis of reverse results; applications to help the needy, armed intervention, victimless crimes, and environmental protection; transition strategies to a voluntary society.
3 units, alternate years, not given this year

MS&E 300. Ph.D. Qualifying Tutorial or Paper
Restricted to Ph.D. students assigned tutorials as part of the MS&E Ph.D. qualifying process. Enrollment optional.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MS&E 301. Dissertation Research
Prerequisite: doctoral candidacy.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MS&E 310. Linear Programming
Formulation of standard linear programming models. Theory of polyhedral convex sets, linear inequalities, alternative theorems, and duality. Variants of the simplex method and the state of art interior-point algorithms. Sensitivity analyses, economic interpretations, and primal-dual methods. Relaxations of harder optimization problems and recent convex conic linear programs. Applications include game equilibrium facility location. Prerequisite: MATH 113 or consent of instructor.
3 units, Aut (Ye, Y)

MS&E 311. Optimization
Applications, theories, and algorithms for finite-dimensional linear and nonlinear optimization problems with continuous variables. Elements of convex analysis, first- and second-order optimality conditions, sensitivity and duality. Algorithms for unconstrained optimization, and linearly and nonlinearly constrained problems. Modern applications in communication, game theory, auction, and economics. Prerequisites: MATH 113, 115, or equivalent.
3 units, Win (Ye, Y)

MS&E 312. Advanced Methods in Numerical Optimization
(Same as CME 334) Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.
3 units, Aut (Murray, W)

MS&E 313. Vector Space Optimization
Optimization theory from the unified framework of vector space theory; treating together problems of mathematical programming, calculus of variations, optimal control, estimation, and other optimization problems. Emphasis is on geometric interpretation. Duality theory. Topics: vector spaces including function spaces; Hilbert space and the projection theorem; dual spaces and the separating hyperplane theorem; linear operators and adjoints; optimization of functionals including theory of necessary conditions in general spaces, and convex optimization theory; constrained optimization including Fenchel duality theory. Prerequisite: MATH 115.
3 units, alternate years, not given this year

MS&E 314. Linear and Conic Optimization with Applications
(Same as CME 336) Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent.
3 units, alternate years, not given this year

MS&E 315. Numerical Optimization
(Same as CME 304) Solution of nonlinear equations; unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.
3 units, Win (Murray, W)

MS&E 316. Discrete Mathematics and Algorithms
(Same as CME 305) Topics: enumeration such as Cayley's theorem and Prufer codes, SDR, flows and cuts (deterministic and randomized algorithms), probabilistic methods and random graphs, asymptotics (NP-hardness and approximation algorithms). Topics
MS&E 317. Algorithms for Modern Data Models  
(Same as CS 263) We traditionally think of algorithms as running on data available in a single location, typically main memory. In many modern applications including web analytics, search and data mining, computational biology, finance, and scientific computing, the data is often too large to reside in a single location, is arriving incrementally over time, is noisy/uncertain, or all of the above. Paradigms such as map-reduce, streaming, sketching, Distributed Hash Tables, Bulk Synchronous Processing, and random walks have proved useful for these applications. This course will provide an introduction to the design and analysis of algorithms for these modern data models. Prerequisite: Algorithms at the level of CS 261.  
3 units, Aut (Goel, A)

MS&E 318. Large-Scale Numerical Optimization  
(Same as CME 338) The main algorithms and software for constrained optimization emphasize the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. The simplex method. Basic factorization and updates. Interior methods. The reduced-gradient method, augmented Lagrangian methods, and SQP methods. Prerequisites: Basic numerical linear algebra, including LU, QR, and SVD factorizations, and an interest in MATLAB, sparse-matrix methods, and gradient-based algorithms for constrained optimization. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108, 200, 302, 304, 334, or 335.  
3 units, Spr (Saunders, M)

MS&E 319. Approximation Algorithms  
Combinatorial and computational programming techniques to derive approximation algorithms for NP-hard optimization problems. Possible topics include: greedy algorithms for vertex/cover problem; rounding LP relaxations of integer programs; primal-dual algorithms; semidefinite relaxations. May be repeated for credit. Prerequisites: 112 or CS 161.  
3 units, alternate years, not given this year

MS&E 321. Stochastic Systems  
Topics in stochastic processes, emphasizing applications. Markov chains in discrete and continuous time; Markov processes in general state space; Lyapunov functions; regenerative process theory; renewal theory; martingales, Brownian motion, and diffusion processes. Application to queueing theory, storage theory, reliability, and finance. Prerequisites: 221 or STATS 217; MATH 113, 115. (Glynn)  
3 units, Win (Glynn, P)

MS&E 322. Stochastic Calculus and Control  
Ito integral, existence and uniqueness of solutions of stochastic differential equations (SDEs), diffusion approximations, numerical solutions of SDEs, controlled diffusions and the Hamilton-Jacobi-Bellman equation, and statistical inference of SDEs. Applications to finance and queueing theory. Prerequisites: 221 or STATS 217: MATH 113, 115; Win (Glynn, P)

MS&E 323. Stochastic Simulation  
3 units, not given this year

MS&E 325. Topics in Stochastic Optimization  
Algorithms for optimization problems with inputs from a known probability distribution or a known class of probability distributions. Topics: Stochastic decision processes; optimization with sparse priors; multi-armed bandit problems and the Gittins' index; regret bounds for multi-armed bandit problems; stochastic knapsack and the adaptivity gap; budgeted learning; adversarial queueing theory; stochastic scheduling and routing; stochastic inventory problems; multi-stage and multi-objective stochastic optimization. Prerequisites: MS&E 221 or equivalent; and MS&E 212 or CS 261 or equivalent.  
3 units, alternate years, not given this year

MS&E 332. Security and Risk in Computer Networks  
3 units, not given this year

MS&E 333. Computation of Equilibria  
Topics: Sperner's lemma, fixed point theorems, and existence of Nash and Market equilibria. Alternate convex and linear complementarity program formulations. Combinatorial algorithms. Complexity classes related to fixed points theorems and reductions to, equilibrium problems. Similar solutions in cooperative game theory and fair division.  
3 units, not given this year

MS&E 335. Queueing and Scheduling in Processing Networks  
Advanced stochastic modeling and control of systems involving queueing and scheduling operations. Stability analysis of queueing systems. Key results on single queues and queueing networks. Controlled queueing systems. Dynamic routing and scheduling in processing networks. Applications to modeling, analysis and performance engineering of computing systems, communication networks, flexible manufacturing, and service systems. Prerequisite: 221 or equivalent.  
3 units, Aut (Bambos, N)

MS&E 336. Topics in Game Theory with Engineering Applications  
Seminar. Recent research applying economic methods to engineering problems. Recent topics include: incentives in networked systems; mechanism design in engineered systems; and dynamics and learning in games. Prerequisites: mathematics at the level of MATH 115; game theory at the level of 246 or ECON 203; probability at the level of 220; optimization at the level of 211. May be repeated for credit.  
3 units, Spr (Johari, R)

MS&E 337. Information Networks  
3 units, Spr (Saberi, A)

MS&E 338. Advanced Topics in Information Science and Technology  
Advanced material in this area is sometimes taught for the first time as a topics course. Prerequisite: consent of instructor.  
3 units, Win (Van Roy, B)

MS&E 339. Approximate Dynamic Programming  
Approximation algorithms for large-scale dynamic programming. Real-time dynamic programming and reinforcement learning algorithms. Generalizations of value iteration, policy iteration, and linear programming approaches. Recent research topics. Prerequisite: 251, 351, CS 221, CS 228, or CS 229.  
3 units, not given this year

MS&E 342. Advanced Investment Science  
Topics: forwards and futures contracts, continuous and discrete time models of stock price behavior, geometric Brownian motion, Ito's lemma, basic options theory, Black-Scholes equation, advanced options techniques, models and applications of stochastic interest rate processes, and optimal portfolio growth. Computational issues and general theory. Teams work on
MS&E 347. Credit Risk: Modeling and Management
Credit risk modeling, valuation, and hedging emphasizing underlying economic, probabilistic, and statistical concepts. Point processes and their compensators. Structural, incomplete information and reduced form approaches. Single name products: corporate bonds, equity, equity options, credit and equity default swaps, forwards and swaptions. Multiname modeling: index and tranche swaps and options, collateralized debt obligations. Implementation, calibration and testing of models. Industry and market practice. Data and implementation driven group projects that focus on problems in the financial industry. Prerequisites: stochastic processes at the level of MSE 321, 322 or equivalent, and financial engineering at the level of MSE 342, MATH 180, MATH 240, FINANCE 622 or equivalent
3 units, Spr (Giesecke, K)

MS&E 348. Optimization of Uncertainty and Applications in Finance
How to make optimal decisions in the presence of uncertainty, solution techniques for large-scale systems resulting from decision problems under uncertainty, and applications in finance. Decision trees, utility, two-stage and multi-stage decision problems, approaches to stochastic programming, model formulation: large-scale systems, Benders and Dantzig-Wolfe decomposition, Monte Carlo sampling and variance reduction techniques, risk management, portfolio optimization, asset-liability management, mortgage finance. Projects involving the practical application of optimization under uncertainty to financial planning.
3 units, Win (Infanger, G)

MS&E 349. Capital Deployment
Methods for efficiently allocating capital among alternatives, constructing business plans, determining the value of risky projects, and creating alternatives that enhance value.
Prerequisites: 242, 342.
3 units, not given this year

MS&E 351. Dynamic Programming and Stochastic Control
Markov population decision chains in discrete and continuous time. Risk posture. Present value and Cesaro taking optimality. Optimal stopping. Successive approximation, policy improvement, and linear programming methods. Team decisions and stochastic programs; quadratic costs and certainty equivalents. Maximum principle. Controlled diffusions. Examples from inventory, overbooking, options, investment, queues, reliability, quality, capacity, transportation. MATLAB. Prerequisites: MATH 113, 115; Markov chains; linear programming.
3 units, NEXTYEAR

MS&E 352. Decision Analysis II: Professional Decision Analysis
How to organize the decision conversation, the role of the decision analysis cycle and the model sequence, assessing the quality of decisions, framing decisions, the decision hierarchy, strategy tables for alternative development, creating spare and effective decision diagrams, biases in assessment, knowledge maps, uncertainty about probability. Sensitivity analysis, approximations, value of revelation, joint information, options, flexibility, bidding, assessing and using corporate risk attitude, risk sharing and scaling, and decisions involving health and safety. See 353 for continuation.
Prerequisite: 252.
3-4 units, Win (Howard, R)

MS&E 353. Decision Analysis III: Frontiers of Decision Analysis
The concept of decision composite; probabilistic insurance and other challenges to the normative approach; the relationship of decision analysis to classical inference and data analysis procedures; the likelihood and exchangeability principles; inference, decision, and experimentation using conjugate distributions; developing a risk attitude based on general properties; alternative decision aiding practices such as analytic hierarchy and fuzzy approaches. Student presentations on current research. Goal is to prepare doctoral students for research.
Prerequisite: 352.
3 units, Spr (Staff)

MS&E 355. Influence Diagrams and Probabilistics Networks
3 units, Win (Shachter, R), alternate years, not given next year

MS&E 362. Advanced Models in Production and Operations
The design and operation of production-inventory systems. Topics include production scheduling, capacity planning, sequencing, assembly-line balancing, dynamic scheduling, and multigoal optimizations. Readings primarily from journal articles. Prerequisite: 260.
3 units, alternate years, not given this year

MS&E 364. Multi-echelon Inventory Models
Theoretical treatment of control problems arising in inventory management, production, and distribution systems. Inventory control for single and multi-location systems. Emphasis is on operating characteristics, performance measures, and optimal operating and control policies. Dynamic programming and applications in inventory control. Prerequisite: STATS 217 or equivalent, linear programming.
3 units, alternate years, not given this year

MS&E 365. Advanced Models in Operations Management
Primarily for doctoral students. Content varies. Topics based on recent literature and working papers. May be repeated for credit.
Prerequisite: MS&E 246.
3 units, Spr (Erhun Oguz, F)

MS&E 371. Innovation and Strategic Change
Doctoral research seminar, limited to Ph.D. students. Current research on innovation strategy. Topics: scientific discovery, innovation search, organizational learning, evolutionary approaches, and incremental and radical change. Topics change yearly. Recommended: course in statistics or research methods.
2-3 units, Win (Katila, R)

MS&E 372. Entrepreneurship Doctoral Research Seminar
Classic and current research on entrepreneurship. Limited enrollment, restricted to PhD students. Prerequisites: SOC 363 or equivalent, and permission of instructor.
1-3 units, alternate years, not given this year

MS&E 374. Dynamic Corporate Strategy
Restricted to Ph.D. students. Research on the creation and shaping of disruptive industry dynamics and how companies can formulate and implement strategies to excel in such changing environments. Dynamic system model approach; case studies. Prerequisites: 201 or equivalent, 274.
3 units, alternate years, not given this year

MS&E 375. Research on Entrepreneurship
Restricted to Ph.D. students. Organization theory, economics, and strategy perspectives. Limited enrollment. Prerequisites: SOC 360 or equivalent, and consent of instructor.
3 units, Aut (Eisenhardt, K)

MS&E 376. Strategy Doctoral Research Seminar
Classic and current research on business and corporate strategy. Limited enrollment, restricted to PhD students. Prerequisites: SOC 363 or equivalent, and permission of instructor.
3 units, not given this year

MS&E 380. Doctoral Research Seminar in Organizations
Limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.
3 units, Aut (Sutton, R)

MS&E 381. Doctoral Research Seminar in Work, Technology, and Organization
Enrollment limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.
2-3 units, Win (Barley, S)

MS&E 383. Doctoral Seminar on Ethnographic Research
For graduate students; upper-level undergraduates with consent of

MS&E 390. Doctoral Research Seminar in Technology Management
Limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.
3 units, Winter (Judson, D)

MS&E 391. Doctoral Research Seminar in Operations Management
Limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.
3 units, Winter (Judson, D)

MS&E 392. Doctoral Research Seminar in Marketing
Limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.
3 units, Winter (Judson, D)

MS&E 393. Doctoral Research Seminar in Finance
Limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.
3 units, Winter (Judson, D)

MS&E 394. Doctoral Research Seminar in Information Systems
Limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.
3 units, Winter (Judson, D)
instructor. Ethnosemantic interviewing and participant observation. Techniques for taking, managing, and analyzing field notes and other qualitative data. 15 hours per week outside class collecting and analyzing own data. Methods texts and ethnographies offer examples of how to analyze and communicate ethnographic data. Prerequisite: consent of instructor. (Barley)
3 units, not given this year

MS&E 384. Groups and Teams
Research on groups and teams in organizations from the perspective of organizational behavior and social psychology. Topics include group effectiveness, norms, group composition, diversity, conflict, group dynamics, temporal issues in groups, geographically distributed teams, and intergroup relations.
3 units, not given this year

MS&E 389. Seminar on Organizational Theory
SAME AS EDUC 375A, SOC 363A) The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.
5 units, Aut (Powell, W)

MS&E 390. Doctoral Research Seminar in Health Systems Modeling
Restricted to PhD students, or by consent of instructor. Doctoral research seminar covering current topics in health policy, health systems modeling, and health innovation. May be repeated for credit.
1-3 units, Aut (Brandeau, M), Win (Brandeau, M), Spr (Brandeau, M)

MS&E 408. Directed Reading and Research
Directed study and research on a subject of mutual interest to student and faculty member. Prerequisite: faculty sponsor. (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MS&E 444. Investment Practice
Theory of real options, soft derivatives, and related ideas. Problems from financial engineering and risk management. Examples from industry. Small group projects formulate and design solutions to actual industry problems. Enrollment limited to 30.
3-4 units, Spr (Giesecke, K)

MS&E 445. Projects in Wealth Management
Recent theory and standard practice in portfolio design for institutions, individuals, and funds. Student projects and case studies derived from the financial industry.
3-4 units, Spr (Woelirmann, P)

MS&E 446. Policy and Economics Research Roundtable (PERR)
Research in progress or contemplated in policy and economics areas. Emphasis depends on research interests of participants, and is likely to include energy, environment, transportation, or technology policy and analysis. May be repeated for credit.
1 unit, Aut (Sweeney, J), Win (Sweeney, J), Spr (Sweeney, J)

MS&E 450. Lessons in Decision Making
Entrepreneurs, senior management consultants, and executives from Fortune 500 companies share real-world stories and insights from their experience in decision making.
1 unit, Spr (Staff)

MS&E 452. Decision Analysis Projects: Helping Real Leaders Make Real Decisions
A virtual consulting firm directed by professional decision analysts who offer advice and guidance as student teams help local organizations make a current business strategy or public policy decision. Projects for businesses, governments, or other institutions typically include start-up venture funding, R&D portfolio planning, new product or market entry, acquisition or partnering, cost reduction, program design, or regulatory policy decisions. Emphasis is on developing clarity of action and delivering insights to clients. Satisfies MS&E project course requirement. Prerequisite: 252. Recommended: 352.
3 units, Spr (Robinson, B)

MS&E 453. Decision Analysis Applications: Business Strategy and Public Policy
How decision analysis is used to make decisions in organizations. Who applies these methods to what decisions, and when, where, and why. Case studies: entrepreneurial ventures, consulting projects, litigation, chip manufacturing, consumer electronics, Corvette design, blockbuster movies, R&D priorities, real estate portfolios, HIV/HCV drug trial design, cancer diagnostics, Mars contamination, oil E&P, economics and energy pricing, nuclear waste, climate change, marine resources, bioterrorism preparedness, nuclear weapons control, effective interactions, and ethics. Corequisite: MS&E 252 recommended.
2-3 units, Aut (Robinson, B)

MS&E 454. Decision Analysis Seminar
Current research and related topics presented by doctoral students and invited speakers. May be repeated for credit. Prerequisite: 252.
1 unit, Aut (Howard, R), Win (Howard, R), Spr (Shachter, R)

MS&E 464. Global Project Coordination
Students engage in projects that are global in nature, and related to the planning, design, and operations of supply chains, marketing, manufacturing, and product development. Project teams from Stanford and an overseas university work on common projects using telephones, faxes, email, Internet, video conferences, and face-to-face meetings. As part of the project, students travel to Hong Kong. Applications due in November. See http://www.stanford.edu/class/msande464/.
3-4 units, not given this year

MS&E 472. Entrepreneurial Thought Leaders' Seminar
Entrepreneurial leaders share lessons from real-world experiences across entrepreneurial settings. ETL speakers include entrepreneurs, leaders from global technology companies, venture capitalists, and best-selling authors. Half-hour talks followed by half hour of class interaction. Required web discussion. May be repeated for credit.
1 unit, Aut (Seelig, T; Kosnik, T), Win (Byers, T; Seelig, T; Kosnik, T), Spr (Byers, T; Seelig, T; Kosnik, T)

MS&E 485A. Introduction to Crosscultural Design
Preparation for 485B. Workshop and initial project work in teams.
1-2 units, not given this year

MS&E 485B. Crosscultural Design
The design of products and services for a global world. How to design products or services to be used across cultures; how to design for a culture other than one's own; and how the process of design is approached in different cultures. Prerequisite: 485A.
3-4 units, not given this year

MS&E 491. Clean Energy Development
'Clean energy' refers to low-depleting and low-polluting energy, such as solar, wind and biomass. Project course for advanced undergraduate and graduate students with an interest in clean energy and entrepreneurship, and with a commitment to strong analytic and communication skills. Student teams conceive, prepare and present a business plan for a real or realistic clean energy development - an individual project or an entire company - of their choice. Class sessions devoted primarily to information and guidance necessary for student team projects. Mix of presentations, discussions and guest lectures. Grades based on student team performance in developing and presenting a business concept and plan.
3 units, Spr (Borison, A; Hamm, G)

MS&E 802. TGR Dissertation
0 units. Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MASTER OF LIBERAL ARTS (MLA) COURSES

GRADUATE COURSES IN MASTER OF LIBERAL ARTS

MLA 9. European Thought and Culture in the 19th Century
Major European thinkers and writers and their intellectual significance from the Enlightenment to modernism. Works by Voltaire, Austen, Wordsworth, Marx, Nietzsche, and Freud.
4 units, not given this year
MATERIALS SCIENCE AND ENGINEERING (MATSCI) COURSES

UNDERGRADUATE COURSES IN MATERIALS SCIENCE AND ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MATSCI 10SC. Diamonds from Peanut Butter: Material Technologies and Human History
Technological importance of materials in history is captured in names: the Stone Age, Bronze Age, Iron Age, and now the Information Age or the Silicon Age. How materials have played, and continue to play, pivotal roles in the development of new technologies.
2 units, not given this year

MATSCI 11SC. Energy Technologies for a Sustainable Future
Wondering what the buzz is about sustainability, renewable energy, and clean fuels? Meeting the world's growing energy needs in a sustainable fashion is one of the most pressing problems of our time. This class will introduce the scope of the energy problem and define some of the options for sustainable energy. We will look into the scientific basis of sustainable energy technologies, such as solar cells, which convert the energy of the sun directly into electricity, and fuel cells, which convert chemical energy directly into electricity. Other topics will include biofuels, i.e., fuel derived from plant matter, and clean fuels such as hydrogen. The course will emphasize the fundamental science behind the devices and highlight some of the cutting-edge technological issues that are currently being explored. Assigned reading will include books on global energy issues as well as technical reading on the science and engineering of sustainable energy technologies. We will visit several local
2 units, not given this year

MATSCI 81N. Bioengineering Materials to Heal the Body
Preference to freshmen. How scientists and engineers are designing new materials for surgeons to use in replacing body parts such as heart tissue or the spinal cord. How cells, in the body and transplanted stem cells, communicate with implanted materials. Real-world examples of materials developed for tissue engineering and regenerative medicine therapies. Students identify a clinical problem, and debate possible engineering solutions. GER:DB-EngrAppSci
3 units, not given this year

MATSCI 100. Undergraduate Independent Study
Independent study in materials science under supervision of a faculty member.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 150. Undergraduate Research
Participation in a research project.
3-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 151. Microstructure and Mechanical Properties
(Same as MATSCI 251) Primarily for students without a materials background. Mechanical properties and their dependence on microstructure in a range of engineering materials. Elementary
deformation and fracture concepts, strengthening and toughening strategies in metals and ceramics. Topics: dislocation theory, mechanisms of hardening and toughening, fracture, fatigue, and high-temperature creep. Prerequisite: ENGR 50 or equivalent. GER:DB-EngrAppSci
3-4 units, Aut (Dauskardt, R)

MATSCI 152. Electronic Materials Engineering
Materials science and engineering for electronic device applications. Kinetic molecular theory and thermally activated processes; band structure and electrical conductivity of metals and semiconductors; intrinsic and extrinsic semiconductors; diffusion; elementary p-n junction theory; operating principles of metal-oxide-semiconductor field effect transistors. Semiconductor processing including crystal growth, oxidation kinetics, ion implantation, thin film deposition, etching, and photolithography. Prerequisite: ENGR 50 or equivalent. GER:DB-EngrAppSci
4 units, Win (Dionne, J)

MATSCI 153. Nanostructure and Characterization
The structure of materials at the nanoscale is in most cases the same crystalline form as the natural phase. Structures of materials such as semiconductors, ceramics, metals, and nanotubes; classification of these materials according to the principles of crystallography. Primary methods of structural characterization, X-ray diffraction, and electron microscopy; their applications to study such nanostructures. GER:DB-EngrAppSci
4 units, Win (Earhart, C)

MATSCI 154. Solid State Thermodynamics
The principles of thermodynamics and relationships between thermodynamic variables. Equilibrium in thermodynamic systems. Thermodynamics of multicomponent systems. GER:DB-EngrAppSci
4 units, Aut (Barnett, D)

MATSCI 155. Nanomaterials Synthesis
The science of synthesis of nanometer scale materials. Examples including solution phase synthesis of nanoparticles, the vapor-liquid-solid approach to growing nanowires, formation of mesoporous materials from block-copolymer solutions, and formation of photonic crystals. Relationship of the synthesis phenomena to the materials science driving forces and kinetic mechanisms. Materials science concepts including capillarity, Gibbs free energy, phase diagrams, and driving forces. GER:DB-EngrAppSci
4 units, Spr (Clemens, B)

MATSCI 156. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
(Same as MATSCI 256) Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for power solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. GER:DB-EngrAppSci
3-4 units, Aut (Clemens, B)

MATSCI 157. Quantum Mechanics of Nanoscale Materials
Introduction to quantum mechanics and its application to the properties of materials. The Schrödinger equation, uncertainty principle, bound states and periodic potentials, angular momentum, quantum statistics, and perturbation theory. Applications to electronic band structure in semiconductors, metals, and nanostructures; vibrational properties of solids; light/matter interaction and lasers; bonding; magnetic materials; nanotechnology. Prerequisite: working knowledge of calculus and high school physics. GER:DB-EngrAppSci
4 units, Win (Lindenberg, A)

MATSCI 159Q. Japanese Companies and Japanese Society
(S,Sem) (Same as ENGR 159Q) Stanford Introductory Seminar. Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprises. The Japanese research ethic. The home campus equivalent of a Kyoto SCI course. GER:DB-SocSci
3 units, Spr (Sinclair, R)

MATSCI 160. Nanomaterials Laboratory
Preference to sophomores and juniors. Hands-on approach to synthesis and characterization of nanoscale materials. How to make, pattern, and analyze the latest nanotech materials, including nanoparticles, nanowires, and self-assembled monolayers. Techniques such as soft lithography, self-assembly, and surface functionalization. The VLS mechanism of nanowire growth, nanoparticle size control, self-assembly mechanisms, and surface energy considerations. Laboratory projects. Enrollment limited to 24. GER:DB-EngrAppSci
4 units, Spr (Melosh, N)

MATSCI 161. Nanocharacterization Laboratory
(Same as MATSCI 171) Nanocharacterization techniques, such as: optical and electron microscopy, x-ray photoelectron spectroscopy and atomic force microscopy, will be explained in class and used in lab to determine structure of materials and understand why they have certain properties. This WIM class includes instruction on writing, statistics, generating effective plots with curve fits, using databases to find information and giving oral scientific presentations. Prerequisite: ENGR 50 or equivalent. (75 min. lecture + 3 hr. lab most weeks.) GER:DB-EngrAppSci, WIM
3-4 units, Win (Vailionis, A)

MATSCI 162. X-Ray Diffraction Laboratory
(Same as MATSCI 161) Experimental x-ray diffraction techniques for microstructural analysis of materials, emphasizing powder and single-crystal techniques. Diffraction from epiphenal and polycrystalline thin films, multilayers, and amorphous materials using medium and high resolution configurations. Determination of phase purity, crystallinity, relaxation, stress, and texture in the materials. Advanced experimental x-ray diffraction techniques: reciprocal lattice mapping, reflectivity, and grazing incidence diffraction. Enrollment limited to 20. GER:DB-EngrAppSci
3-4 units, Win (Vailionis, A)

MATSCI 163. Mechanical Behavior Laboratory
(Same as MATSCI 173) Experimental techniques for the study of the mechanical behavior of engineering materials in bulk and thin film form, including tension testing, nanoindentation, and wafer curvature stress analysis. Metallic and polymeric systems. Prerequisite: ENGR 50. GER:DB-EngrAppSci
3-4 units, Aut (Earhart, C)

MATSCI 164. Electronic and Photonic Materials and Devices Laboratory
Lab course. Current electronic and photonic materials and devices. Device physics and micro-fabrication techniques. Students design, fabricate, and perform physical characterization on the devices they have fabricated. Established techniques and materials such as photolithography, metal evaporation, and Si technology; and novel ones such as soft lithography and organic semiconductors. Prerequisite: 152 or 199 or consent of instructor. GER:DB-EngrAppSci, WIM
4 units, Aut (Salleo, A)

MATSCI 190. Organic and Biological Materials
(Same as MATSCI 210) Unique physical and chemical properties of organic materials and their uses. The relationship between structure and physical properties, and techniques to determine chemical structure and molecular ordering. Examples include liquid crystals, dendrimers, carbon nanotubes, hydrogels, and biopolymers such as lipids, protein, and DNA. Prerequisite: Thermodynamics and ENGR 50 or equivalent. GER:DB-EngrAppSci
3-4 units, Spr (Heilshorn, S)

MATSCI 192. Materials Chemistry
(Same as MATSCI 202) Chemical principles of materials: atomic and molecular bonding; acid and base chemistry; redox and electrochemistry; colloid and surface structure; materials synthesis; and nanoscale chemistry. GER:DB-EngrAppSci
3-4 units, Aut (Dionne, J)

MATSCI 193. Atomic Arrangements in Solids
(Same as MATSCI 203) Atomic arrangements in perfect and imperfect solids, especially important metals, ceramics, and semiconductors. Elements of formal crystallography, including development of point groups and space groups. GER:DB-EngrAppSci
3-4 units, Aut (Reed, E)
MATSCI 194. Thermodynamics and Phase Equilibria
(Same as MATSCI 204) The principles of heterogeneous equilibria and their application to phase diagrams. Thermodynamics of solutions; chemical reactions; non-stoichiometry in compounds; first order phase transitions and metastability; thermodynamics of surfaces, elastic solids, dielectrics, and magnetic solids. GER:DB-EngrAppSci
3-4 units, Win (McGehee, M)

MATSCI 195. Waves and Diffraction in Solids
(Same as MATSCI 205) The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell’s equations. Diffraction intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: 193/203 or consent of instructor. GER:DB-EngrAppSci
3-4 units, Win (Salleo, A)

MATSCI 196. Imperfections in Solids
(Same as MATSCI 206) Atomic and molecular scale defects and their importance to the physical and mechanical properties of bulk and nanoscale materials. Point defects and dislocations in crystals. Imperfections in amorphous solids. Structure and properties of interfaces. Prerequisite: 193/203. GER:DB-EngrAppSci
3-4 units, Win (Staff)

MATSCI 197. Rate Processes in Materials
3-4 units, Spr (McIntyre, P)

MATSCI 198. Mechanical Properties of Materials
(Same as MATSCI 208) Introduction to the mechanical behavior of solids, emphasizing the relationships between microstructure and mechanical properties. Elastic, anelastic, and plastic properties of materials. The relations between stress, strain, strain rate, and temperature for plastically deformable solids. Application of dislocation theory to strengthening mechanisms in crystalline solids. The phenomena of creep, fracture, and fatigue and their control in engineering mechanisms. Prerequisites: 193/203. GER:DB-EngrAppSci
3-4 units, Spr (Dauskardt, R)

MATSCI 199. Electronic and Optical Properties of Solids
(Same as MATSCI 209) The concepts of electronic energy bands and transports applied to metals, semiconductors, and insulators. The behavior of electronic and optical devices including p-n junctions, MOS-capacitors, MOSFETs, optical waveguides, quantum-well lasers, light amplifiers, and metallic-dielectric light guides. Emphasis is on relationships between structure and physical properties. Elementary quantum and statistical mechanics concepts are used. Prerequisite: 195/205 or equivalent. GER:DB-EngrAppSci
3-4 units, Spr (Brouwersma, M)

GRADUATE COURSES IN MATERIALS SCIENCE AND ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MATSCI 171. Nanocharacterization Laboratory
(Same as MATSCI 161) Nanocharacterization techniques, such as: optical and electron microscopy; x-ray phase analysis; and atomic force microscopy, will be explained in class and used in lab to determine structure of materials and understand why they have certain properties. This WIM class includes instruction on writing, statistics, generating effective plots with curve fits, using databases to find information and giving oral scientific presentations. Prerequisite: ENGR 50 or equivalent. (75 min. lecture + 3 hr. lab most weeks.)
3-4 units, Spr (McGehee, M)

MATSCI 172. X-Ray Diffraction Laboratory
(Same as MATSCI 162) Experimental x-ray diffraction techniques for microstructural analysis of materials, emphasizing powder and single-crystal techniques. Diffraction from epitaxial and polycrystalline thin films, multilayers, and amorphous materials using medium and high resolution configurations. Determination of phase purity, crystallinity, relaxation, stress, and texture in the materials. Advanced experimental x-ray diffraction techniques: reciprocal lattice mapping, reflectivity, and grazing incidence diffraction. Enrollment limited to 20.
3-4 units, Win (Vaillions, A)

MATSCI 173. Mechanical Behavior Laboratory
(Same as MATSCI 163) Experimental techniques for the study of the mechanical behavior of engineering materials in bulk and thin film form, including tension testing, nanoindentation, and wafer curvature stress analysis. Metallic and polymeric systems. Prerequisite: ENGR 50.
3-4 units, Aut (Earhart, C)

MATSCI 200. Master’s Research
Participation in a research project.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 202. Materials Chemistry
(Same as MATSCI 192) Chemical principles of materials: atomic and molecular bonding; acid and base chemistry; redox and electrochemistry; colloidal and surface chemistry; materials synthesis; and nanoscale chemistry.
3-4 units, Aut (Dionne, J)

MATSCI 203. Atomic Arrangements in Solids
(Same as MATSCI 193) Atomic arrangements in perfect and imperfect solids, especially important metals, ceramics, and semiconductors. Elements of formal crystallography, including development of point groups and space groups.
3-4 units, Aut (Reed, E)

MATSCI 204. Thermodynamics and Phase Equilibria
(Same as MATSCI 194) The principles of heterogeneous equilibria and their application to phase diagrams. Thermodynamics of solutions; chemical reactions; non-stoichiometry in compounds; first order phase transitions and metastability; thermodynamics of surfaces, elastic solids, dielectrics, and magnetic solids.
3-4 units, Win (Salleo, A)

MATSCI 205. Waves and Diffraction in Solids
(Same as MATSCI 195) The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell’s equations. Diffraction intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: 193/203 or consent of instructor.
3-4 units, Win (Clemens, B)

MATSCI 206. Imperfections in Solids
(Same as MATSCI 196) Atomic and molecular scale defects and their importance to the physical and mechanical properties of bulk and nanoscale materials. Point defects and dislocations in crystals. Imperfections in amorphous solids. Structure and properties of interfaces. Prerequisite: 193/203. GER:DB-EngrAppSci
3-4 units, Spr (McIntyre, P)

MATSCI 207. Rate Processes in Materials
3-4 units, Spr (McIntyre, P)
MATSCI 208. Mechanical Properties of Materials  
(Same as MATSCI 198) Introduction to the mechanical behavior of solids, emphasizing the relationships between microstructure and mechanical properties. Elastic, anelastic, and plastic properties of materials. The relations between stress, strain, strain rate, and temperature for plastically deformable solids. Application of dislocation theory to strengthening mechanisms in crystalline solids. The phenomena of creep, fracture, and fatigue and their controlling mechanisms. Prerequisites: 193/203.  
3-4 units, Spr (Dauskardt, R)

MATSCI 209. Electronic and Optical Properties of Solids  
(Same as MATSCI 199) The concepts of electronic energy bands and transports applied to metals, semiconductors, and insulators. The behavior of electronic and optical devices including p-n junctions, MOS-capacitors, MOSFETs, optical waveguides, quantum-well lasers, light amplifiers, and metallo-dielectric light guides. Emphasis is on relationships between structure and physical properties. Elementary quantum and statistical mechanics concepts are used. Prerequisite: 195/205 or equivalent.  
3-4 units, Spr (Brongersma, M)

MATSCI 210. Organic and Biological Materials  
(Same as MATSCI 190) Unique physical and chemical properties of organic materials and their uses. The relationship between structure and physical properties and techniques to determine chemical structure and molecular ordering. Examples include liquid crystals, dendrimers, carbon nanotubes, hydrogels, and biopolymers such as lipids, protein, and DNA. Prerequisite: Thermodynamics and ENGR 50 or equivalent.  
3-4 units, Spr (Heilshorn, S)

MATSCI 230. Materials Science Colloquium  
May be repeated for credit.  
1 unit, Aut (Salleo, A; Brongersma, M), Win (Dionne, J; Melosh, N), Spr (Lindenberg, A; Reed, E)

MATSCI 251. Microstructure and Mechanical Properties  
(Same as MATSCI 151) Primarily for students without a materials background. Mechanical properties and their dependence on microstructure in a range of engineering materials. Elementary deformation and fracture concepts, strengthening and toughening strategies in metals and ceramics. Topics: dislocation theory, mechanisms of hardening and toughening, fracture, fatigue, and high-temperature creep. Prerequisite: ENGR 50 or equivalent.  
3-4 units, Aut (Dauskardt, R)

MATSCI 256. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution  
(Same as MATSCI 156) Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions.  
3-4 units, Aut (Clemens, B)

MATSCI 299. Practical Training  
Educational opportunities in high-technology research and development labs in industry. Qualified graduate students engage in internship work and integrate that work into their academic program. Following the internship, students complete a research report outlining their work activity, problems investigated, key results, and any follow-on projects they expect to perform. Students are responsible for arranging own employment. See department student services manager before enrolling.  
3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 300. Ph.D. Research  
Participation in a research project.  
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 302. Solar Cells  
Theory of conventional p-n junction and excitonic solar cells. Design, fabrication, and characterization of crystalline silicon, amorphous silicon, CdTe, CIGS, and tandem and organic solar cells. Emerging solar cell concepts such as intermediate band gap and biocpired solar cells. Emphasis is on the materials science aspects of solar cells research. Module design and economic hurdles that must be overcome for solar cell technology to generate a significant fraction of the world's electricity. Group project to explore one solar cell approach in depth. SCPD offering.  
3 units, Aut (McGehee, M)

MATSCI 303. Principles, Materials and Devices of Batteries  
Thermodynamics and electrochemistry for batteries. Emphasis on lithium ion batteries, but also different types including lead acid, nickel metal hydride, metal air, sulfur and redox flow. Battery electrode materials, electrolytes, separators, additives and electrode-electrolyte interface. Electrochemical techniques; advanced battery materials with nanotechnology; battery device structure. Prerequisites: undergraduate chemistry.  
3 units, Aut (Cui, Y)

MATSCI 311. Lasers in Materials Processing  
3 units, not given this year

MATSCI 312. New Methods in Thin Film Synthesis  
Materials base for engineering new classes of coatings and devices. Techniques to grow thin films at atomic scale and to fabricate multilayers/superlattices at nanoscale. Vacuum growth techniques including evaporation, molecular beam epitaxy (MBE), sputtering, ion beam assisted deposition, laser ablation, chemical vapor deposition (CVD), and electroplating. Future direction of material synthesis such as nanocluster deposition and nanoparticles self-assembly. Relationships between deposition parameters and film properties. Applications of thin film synthesis in microelectronics, nanotechnology, and biology. SCPD offering.  
3 units, not given this year

MATSCI 316. Nanoscale Science, Engineering, and Technology  
Sample application areas: renewable energy including nanoscaled photovoltaic cells, hydrogen storage, fuel cells, and nanoelectronics. Nanofabrication techniques including: self-assembly of amphiphatic molecules, block copolymers, organic-inorganic mesostructures, colloidal crystals, organic monolayers, proteins, DNA and abalone shells; biologically inspired growth of materials; photolithography, electron beam lithography, and scanning probe lithography; and synthesis of carbon nanotubes, nanowire, and nanocrystals. Other nanotechnology topics may be explored through a group project. SCPD offering.  
3 units, Spr (Cui, Y)

MATSCI 320. Nanocharacterization of Materials  
Current methods of directly examining the microstructure of materials. Topics include evaporation, molecular beam epitaxy (MBE), scanning electron microscopy, transmission electron microscopy, scanning probe microscopy, and microanalytical surface science methods. Emphasis is on the electron-optical techniques. Recommended: 193/203.  
3 units, Win (Sinclair, R), alternate years, not given next year

MATSCI 321. Transmission Electron Microscopy  
Image formation and interpretation. The contrast phenomena associated with perfect and imperfect crystals from a physical point of view and from a formal treatment of electron diffraction theory. The importance of electron diffraction to systematic analysis and recent imaging developments. Recommended: 193/203, 195/205, or equivalent.  
3 units, alternate years, not given this year

MATSCI 322. Transmission Electron Microscopy Laboratory  
Experimental application of electron microscopy to typical materials science studies. Topics include microscope operation and alignment, diffraction modes and analysis, bright-field/dark-field analysis of defects, high resolution imaging, and analytical techniques for compositional analysis (EDAX). Enrollment limited to 12. Prerequisites: 321, consent of instructor.  
3 units, Spr (Marshall, A)

MATSCI 323. Thin Film and Interface Microanalysis  
The science and technology of microanalytical techniques, including Auger electron spectroscopy (AES), Rutherford backscattering spectroscopy (RBS), secondary ion mass spectroscopy.
spectroscopy (SIMS), ion scattering spectroscopy (ISS), and x-ray photoelectron spectroscopy (XPS or ESCA). Generic processes such as sputtering and high-vacuum generation. Prerequisite: some prior exposure to atomic and electronic structure of solids. SCPD offering.

3 units, not given this year

MATSCI 325. X-Ray Diffraction
Diffraction theory and its relationship to structural determination in solids. Focus is on applications of x-rays: concepts can be applied to neutron and electron diffraction. Topics: Fourier analysis, kinematic theory, Patterson functions, diffraction from layered and amorphous materials, single crystal diffraction, dynamic theory, defect determination, surface diffraction, techniques for data analysis, and determination of particle size and strain. Prerequisites: 193/203, 195/205.

3 units, not given this year

MATSCI 326. X-Ray Science and Techniques
X-ray interaction with matter; diffraction from ordered and disordered materials; x-ray absorption, photoemission, and coherent scattering; x-ray microsopy. Sources including synchrotrons, high harmonic generation, x-ray lasers. Time-resolved techniques and detector technology.

3 units, Aut (Lindenberg, A)

MATSCI 331. Atom-based computational methods for materials

3 units, Win (Reed, E)

MATSCI 334. Organic Semiconductors for Electronics and Photonics
The science of organic semiconductors and their use in electronic and photonic devices. Topics: methods for fabricating thin films and devices; relationship between chemical structure and molecular packaging on properties such as band gap, charge carrier mobility and luminescence efficiency; doping; field-effect transistors; light-emitting diodes; lasers; biosensors; photodetectors and photovoltaic cells. SCPD offering.

3 units, Spr (Salleo, A)

MATSCI 346. Nanophotonics

3 units, Aut (Brongersma, M; Fan, S)

MATSCI 347. Introduction to Magnetism and Magnetic Nanostructures
Atomic origins of magnetic moments, magnetic exchange and ferromagnetism, types of magnetic order, magnetic anisotropy, domains, domain walls, hysteresis loops, hard and soft magnetic materials, demagnetization factors, and applications of magnetic materials, especially magnetic nanostructures and nanotechnology. Tools include finite-element and micromagnetic modeling. Design topics include electromagnet and permanent magnet, electronic article surveillance, magnetic inductors, bio-magnetic sensors, and magnetic drug delivery. Design projects, team work, and computer-aided design. Prerequisites: PHYSICS 29 and 43, or college-level electricity and magnetism.

3 units, Spr (Wang, S; White, R)

MATSCI 351. Failure Analysis for Emerging Technologies
Introduction to root cause failure analysis investigation of emerging technologies such as high tech electronic and medical devices. Real case studies illustration of design errors, manufacturing defects, misuse and environmental degradation that resulted in fracture, fatigue, cracking or corrosion. Understanding material degradation modes and mechanisms. Examples on analysis characterization techniques such as scanning electron microscopy (SEM), X-ray photoelectron spectroscopy (XPS), Fourier transform infrared spectroscopy (FTIR), time of flight secondary ion mass spectroscopy (TOF-SIMS), mechanical testing, finite element analysis (FEA) and electrochemical testing.

3 units, not given this year

MATSCI 353. Mechanical Properties of Thin Films
The mechanical properties of thin films on substrates. The mechanics of thin films and of the atomic processes which cause stresses to develop during thin film growth. Experimental techniques for studying stresses in and mechanical properties of thin films. Elastic, plastic, and diffusional deformation of thin films on substrates as a function of temperature and microstructure. Effects of deformation and fracture on the processing of thin film materials. Prerequisite: 198/208.

3 units, not given this year

MATSCI 358. Fracture and Fatigue of Materials and Thin Film Structures
Linear-elastic and elastic-plastic fracture mechanics from a materials science perspective, emphasizing microstructure and the micromechanisms of fracture. Plane strain fracture toughness and resistance curve behavior. Mechanisms of failure associated with cohesion and adhesion in bulk materials, composites, and thin film structures. Fracture mechanics approaches to toughening and subcritical crack-growth processes, with examples and applications involving cyclic fatigue and environmentally assisted subcritical crack growth. Prerequisite: 151/251, 198/208, or equivalent. SCPD offering.

3 units, Win (Daukashard, R)

MATSCI 359. Crystalline Anisotropy
(Same as ME 336) Matrix and tensor analysis with applications to the effects of crystal symmetry on elastic deformation, thermal expansion, diffusion, piezoelectricity, magnetism, thermodynamics, and optical properties of solids, on the level of J. F. Nye's Physical Properties of Crystals. Homework sets use Mathematica.

3 units, not given this year

MATSCI 380. Nano-Biotechnology

3 units, Win (Melosh, N)

MATSCI 381. Biomaterials in Regenerative Medicine
(Same as BIOE 361) Materials design and engineering for regenerative medicine. How materials interact with cells through their micro- and nanostructure, mechanical properties, degradation characteristics, surface chemistry, and biochemistry. Examples include novel materials for drug and gene delivery, materials for stem cell proliferation and differentiation, and tissue engineering scaffolds. Prerequisites: undergraduate chemistry, and cell/molecular biology or biochemistry.

3 units, not given this year

MATSCI 382. Bio-chips, Imaging and Nanomedicine
(Same as EE 225) The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.

3 units, Win (Wang, S; de la Zerda, A; Akin, D)

MATSCI 399. Graduate Independent Study
Under supervision of a faculty member.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 400. Participation in Materials Science Teaching
May be repeated for credit.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MATSCI 801. TGR Project for MS Students
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 802. TGR Dissertation for Ph.D Students
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
MATH 42A. Calculus ACE
- Students attend MATH 41 lectures with different recitation sessions, four hours instead of two, emphasizing engineering applications.
- Prerequisite: application; see http://soe.stanford.edu/edp/programs/ace.html. GER:DB-Math
- 6 units, Aut (Zvonkine, D; Jerison, D), Win (Lucianovic, M)

MATH 50V. Multivariable Differential Calculus
- Differential calculus for functions of two or more variables. Topics: vectors and vector-valued functions in 2-space and 3-space, tangent and normal vectors, curvature, functions of two or more variables, partial derivatives and differentiability, directional derivatives and gradients, maxima and minima, and optimization using Lagrange multipliers. Prerequisites: two quarters of single variable calculus, or consent of instructor. GER:DB-Math
- 4 units, Sum (Staff)

MATH 51. Linear Algebra and Differential Calculus of Several Variables
- Geometry and algebra of vectors, systems of linear equations, matrices and linear transformations, diagonalization and eigenvectors, vector valued functions and functions of several variables, parametric curves, partial derivatives and gradients, the derivative as a matrix, chain rule in several variables, constrained and unconstrained optimization. Prerequisite: 21, or 42, or a score of 4 on the BC Advanced Placement exam or 5 on the AB Advanced Placement exam, or consent of instructor. GER:DB-Math
- 5 units, Aut (Rubinstein, Y), Win (Staff), Spr (Lucianovic, M), Sum (Staff)

MATH 51A. Linear Algebra and Differential Calculus of Several Variables, ACE
- Students attend MATH 51 lectures with different recitation sessions: four hours per week instead of two, emphasizing engineering applications. Prerequisite: application; see http://soe.stanford.edu/edp/programs/ace.html. GER:DB-Math
- 6 units, Aut (Muzzeo, R; Goodman, E), Win (Staff), Spr (Lucianovic, M)

MATH 51H. Honors Multivariable Mathematics
- For prospective Mathematics majors in the honors program and students from other areas of science or engineering who have a strong mathematics background. Three quarter sequence covers the material of 51, 52, 53, and additional advanced calculus and ordinary and partial differential equations. Unified treatment of multivariable calculus, linear algebra, and differential equations with a different order of topics and emphasis from standard courses. Students should know one-variable calculus and have an interest in a theoretical approach to the subject. Prerequisite: score of 5 on BC Advanced Placement exam, or consent of instructor. GER:DB-Math
- 5 units, Aut (Simon, L; Malkiewich, C)

MATH 51M. Introduction to MATLAB for Multivariable Mathematics
- Corequisite: MATH 51.
- 1 unit, Aut (Fouladgar, K)

MATH 52. Integral Calculus of Several Variables
- Iterated integrals, line and surface integrals, vector analysis with applications to vector potentials and conservative vector fields, physical interpretations. Divergence theorem and the theorems of Green, Gauss, and Stokes. Prerequisite: 51 and 42 or equivalents. GER:DB-Math
- 5 units, Aut (Wieczorek, W), Win (Wieczorek, W), Spr (Wise, J)

MATH 52H. Honors Multivariable Mathematics
- Continuation of 51H. Prerequisite: 51H. GER:DB-Math
- 5 units, Win (Eliasberg, Y; Petrow, I)

MATH 52V. Multivariable Integral Calculus
- Integral calculus for functions of two or more variables. Topics: double and triple integrals, change of variables and the Jacobian, vector fields, line integrals, independence of path and the fundamental theorem of line integrals, Green's theorem, divergence theorem, Stokes's theorem. Prerequisites: one quarter of multivariable differential calculus (comparable to 50V or 51), or consent of instructor. GER:DB-Math
- 5 units, Sum (Staff)

MATH 53. Ordinary Differential Equations with Linear
Algebra
Ordinary differential equations and initial value problems, systems of linear differential equations with constant coefficients, applications of second-order equations to oscillations, matrix exponentials, Laplace transforms, stability of non-linear systems and phase plane analysis, numerical methods. Prerequisite: 51 and 42 or equivalents. GER:DB-Math

MATH 53H. Honors Multivariable Mathematics
Continuation of 52H. Prerequisite: 52H. GER:DB-Math
5 units, Spr (Eliasberg, Y; Hough, R)

MATH 70SL. The Game of Go: Strategy, Theory, and History
Strategy and mathematical theories of the game of Go, with guest appearance by a professional Go player.
1 unit, Spr (Bump, D)

MATH 78SL. Speedcubing: History, Theory, and Practice
History of the Rubik’s cube; the current cubing community; basic mathematical theory; concepts to improve speed solving skill. Prior ability to solve cube not required.
3 units, not given this year

MATH 80Q. Capillary Surfaces: Explored and Unexplored Territory
Preference to sophomores. Capillary surfaces: the interfaces between fluids that are adjacent to each other and do not mix. Recently discovered phenomena, predicted mathematically and subsequently confirmed by experiments, some done in space shuttles. Interesting students may participate in ongoing investigations with affinity between mathematics and physics.
3 units, not given this year

MATH 87Q. Mathematics of Knots, Braids, Links, and Tangles
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Types of knots and how knots can be distinguished from one another by means of numerical or polynomial invariants. The geometry and algebra of braids, including their relationships to knots. Topology of surfaces. Brief summary of applications to biology, chemistry, and physics.
3 units, Win (Wieczorek, W)

MATH 88Q. The Mathematics of the Rubik’s Cube
Preference to sophomores. Group theory through topics that can be illustrated with the Rubik’s cube: subgroups, homomorphisms and quotient groups, the symmetric and alternating groups, conjugation, commutators, and Sylow subgroups.
3 units, not given this year

MATH 100. Mathematics for Elementary School Teachers
Mathematics and pedagogical strategies. Core mathematical content includes grades K-6, classroom presentation, how to handle student errors, and mathematical issues that come up during instruction.
4 units, not given this year

MATH 102. Mathematics and magic tricks
Performance magic tricks based on combinatorics, number theory, and topology; open mathematical problems related to magic tricks; history of magic and methods of inventing new tricks (and new mathematics.) Students are expected to learn performable skills.
3 units, Spr (Diaconis, P)

MATH 104. Applied Matrix Theory
Linear algebra for applications in science and engineering: orthogonality, projections, the four fundamental subspaces of a matrix, spectral theory for symmetric matrices, the singular value decomposition, the QR decomposition, least-squares, the condition number of a matrix, algorithms for solving linear systems. Prerequisites: MATH 51 and MATH 52 or 53. GER:DB-Math
3 units, Aut (Mukamel, R), Win (Candes, E), Sum (Staff)

MATH 106. Functions of a Complex Variable
Complex numbers, analytic functions, Cauchy-Riemann equations, complex integration, Cauchy integral formula, residues, elementary conformal mappings. Prerequisite: 52. GER:DB-Math
3 units, Win (Luu, M), Sum (Staff)

MATH 108. Introduction to Combinatorics and Its Applications
Topics: graphs, trees (Cayley’s Theorem, application to phylogeny), eigenvalues, basic enumeration (permutations, Stirling and Bell numbers), recurrences, generating functions, basic asymptotics. Prerequisites: 51 or 103 or equivalent. GER:DB-Math
3 units, Spr (Bump, D)

MATH 109. Applied Group Theory
Applications of the theory of groups. Topics: elements of group theory, groups of symmetries, matrix groups, group actions, and applications to combinatorics and computing. Applications: rotational symmetry groups, the study of the Platonic solids, crystallographic groups and their applications in chemistry and physics. WIM. GER:DB-Math, WIM
3 units, Win (Venkatesh, A)

MATH 110. Applied Number Theory and Field Theory
Number theory and its applications to modern cryptography. Topics: congruences, finite fields, primality testing and factorization, public key cryptography, error correcting codes, and elliptic curves, emphasizing algorithms. WIM. GER:DB-Math, WIM
3 units, Spr (McNamara, P)

MATH 111. Computational Commutative Algebra
Introduction to the theory of commutative rings, ideals, and modules. Systems of polynomial equations in several variables from the algorithmic viewpoint. Groebner bases, Buchberger’s algorithm, elimination theory. Applications to algebraic geometry and to geometric problems. GER:DB-Math
3 units, not given this year

MATH 113. Linear Algebra and Matrix Theory
Algebraic properties of matrices and their interpretation in geometric terms. The relationship between the algebraic and geometric points of view and matters fundamental to the study and solution of linear equations. Topics: linear equations, vector spaces, linear dependence, bases and coordinate systems; linear transformations and matrices; similarity; eigenvectors and eigenvalues; diagonalization. GER:DB-Math
3 units, Win (Ilonel, E), Spr (Li, J)

MATH 113V. Linear Algebra
Topics: matrices, linear equations, vector spaces, linear dependence, bases and coordinates, linear transformations, similarity, eigenvectors and eigenvalues, and diagonalization. Prerequisites: two quarters of single variable calculus, or consent of instructor. GER:DB-Math
3 units, Sum (Staff)

MATH 115. Functions of a Real Variable
The development of real analysis in Euclidean space: sequences and series, limits, continuous functions, derivatives, integrals. Basic point set topology. Honors math majors and students who intend to do graduate work in mathematics should take 171. Prerequisite: 51. GER:DB-Math
3 units, Aut (Camilier, I), Spr (Abrantes Andrade, R), Sum (Staff)

MATH 116. Complex Analysis
Analytic functions, Cauchy integral formula, power series and Laurent series, calculus of residues and applications, conformal mapping, analytic continuation, introduction to Riemann surfaces, Fourier series and integrals. Prerequisites: 52, and 115 or 171. GER:DB-Math
3 units, Spr (Li, J)

MATH 120. Modern Algebra
Groups acting on sets, examples of 
finite groups, Sylow theorems, solvable and simple groups. Fields, rings, and ideals; polynomial rings over a field; PID and non-PID. Unique factorization domains. WIM. GER:DB-Math, WIM
3 units, Aut (Gallai, T), Spr (McNamara, P)

MATH 121. Modern Algebra II
Continuation of 120. Field of fractions, quotient fields, and Galois theory. Modules over a PID, quotient modules, non-free modules. Canonical forms, generalized eigenspaces, quotients and duality for vector spaces. Prerequisite: Math 120. GER:DB-Math
3 units, Win (Liu, M)

MATH 122. GROUP REPRESENTATIONS
Group representations and group rings, tensor algebra, character theory, bilinear and quadratic forms, semisimplicity. Induced representations. Classification of representations, applications.
COURSES OF INSTRUCTION

MATH 131P. Partial Differential Equations I
An introduction to PDE; particularly suitable for non-Math majors. Topics include physical examples of PDE's, method of characteristics, D'Alembert's formula, maximum principles, heat kernel, Duhamel's principle, separation of variables, Fourier series, Harmonic functions, Bessel functions, spherical harmonics. Students who have taken MATH 171 should consider taking MATH 132 rather than 131p. Prerequisite: 53. GER:DB-Math
3 units, Spring

MATH 132. Partial Differential Equations II
3 units, Aut

MATH 136. Stochastic Processes
3 units, Autumn

MATH 137. Mathematical Methods of Classical Mechanics
3 units, Spring

MATH 138. Celestial Mechanics
Mathematically rigorous introduction to the classical N-body problem: the motion of N particles evolving according to Newton's law. Topics include: the Kepler problem and its symmetries; other central force problems; conservation theorems; variational methods; Hamilton-Jacobi theory; the role of equilibrium points and stability; and symplectic methods. Prerequisites: 53, and 115 or 171. GER:DB-Math
3 units, Spring

MATH 143. Differential Geometry
Geometry of curves and surfaces in three-space and higher dimensional manifolds. Parallel transport, curvature, and geodesics. Surfaces with constant curvature. Minimal surfaces. GER:DB-Math
3 units, Winter

MATH 145. Algebraic Geometry
Hilbert's nullstellensatz, complex affine and projective curves, Bezout's theorem, the degree-genus formula, blow-up, Riemann-Roch theorem. Prerequisites: 120, and 121 or knowledge of fraction fields. Recommended: familiarity with surfaces equivalent to 143, 146, 147, or 148. GER:DB-Math
3 units, Winter

MATH 146. Analysis on Manifolds
Differentiable manifolds, tangent space, submanifolds, implicit function theorem, differential forms, vector and tensor fields. Frobenius' theorem, DeRham theory. Prerequisite: 52 or 52H. GER:DB-Math
3 units, alternate years, not given this year

MATH 147. Differential Topology
Smooth manifolds, transversality, Sards' theorem, embeddings, degree of a map, Borsuk-Ulam theorem, Hopf degree theorem, Jordan curve theorem. Prerequisite: 115 or 171. GER:DB-Math
3 units, Spring

MATH 148. Algebraic Topology
Fundamental group, covering spaces, Euler characteristic, homology, classification of surfaces, knots. Prerequisite: 109 or 120. GER:DB-Math
3 units, alternate years, not given this year

MATH 151. Introduction to Probability Theory
Counting; axioms of probability; conditioning and independence; expectation and variance; discrete and continuous random variables and distributions; joint distributions and dependence; central limit theorem and laws of large numbers. Prerequisite: 52 or consent of instructor. GER:DB-Math
3 units, Winter

MATH 152. Elementary Theory of Numbers
Euclid's algorithm. Fundamental theorems on divisibility; prime numbers; congruence of numbers; theorems of Fermat, Euler, Wilson; congruences of first and higher degrees; quadratic residues; introduction to the theory of binary quadratic forms; quadratic reciprocity; partitions. GER:DB-Math
3 units, Autumn

MATH 154. Algebraic Number Theory
Properties of number fields and Dedekind domains, quadratic and cyclotomic fields, applications to some classical Diophantine equations; introduction to elliptic curves. Prerequisites: 120 and 121, especially modules over principal ideal domains and Galois theory of finite fields. GER:DB-Math
3 units, alternate years, not given this year

MATH 155. Analytic Number Theory
Topics in analytic number theory such as the distribution of prime numbers, the prime number theorem, twin primes and Goldbach's conjecture, the theory of quadratic forms, Dirichlet's class number formula, Dirichlet's theorem on primes in arithmetic progressions, and the fifteen theorem. Prerequisite: 152, or familiarity with the Euclidean algorithm, congruences, residue classes and reduced residue classes, primitive roots, and quadratic reciprocity. GER:DB-Math
3 units, Spring (Soundararajan, K), alternate years, not given next year

MATH 159. Discrete Probabilistic Methods
Modern discrete probabilistic methods suitable for analyzing discrete structures of the type arising in number theory, graph theory, combinatorics, computer science, information theory and molecular sequence analysis. Prerequisite: STATS 116/ MATH 151 or equivalent.
3 units, not given this year

MATH 161. Set Theory
Informal and axiomatic set theory: sets, relations, functions, and set-theoretical operations. The Zermelo-Fraenkel axiom system and the special role of the axiom of choice and its various equivalents. Well-orderings and ordinal numbers; transfinite induction and transfinite recursion. Equinumerosity and cardinal numbers; Cantor's Alephs and cardinal arithmetic. Open problems in set theory. Prerequisite: students should be comfortable doing proofs. GER:DB-Math
4 units, Spring

MATH 162. Philosophy of Mathematics
(Same as PHIL 162, PHIL 262) (Graduate students register for PHIL 262.) 20th-century approaches to the foundations and philosophy of mathematics. The background in mathematics, set theory, and logic. Schools and programs of logicism, predicativism, platonism, formalism, and constructivism. Readings from leading thinkers. Prerequisite: PHIL151 or consent of instructor. GER:DB-Math
3 units, Autumn (Sommer, R)

MATH 171. Fundamental Concepts of Analysis
Recommended for Mathematics majors and Math majors. Similar to 115 but altered content and more theoretical orientation. Properties of Riemann integrals, continuous functions and convergence in metric spaces; compact metric spaces; basic point set topology. Prerequisites: 51 and 52, or 51H and 52H. WIM GER:DB-Math, WIM
3 units, Autumn (Simon, L), Spring (Vasy, A)

MATH 172. Lebesgue Integration and Fourier Analysis
Similar to 205A, but for undergraduate Math majors and graduate students in other disciplines. Topics include Lebesgue measure on Euclidean space, Lebesgue integration, Lp spaces, the Fourier transform, the Hardy-Littlewood maximal function and Lebesgue
MATH 198. Category Theory and Functional Programming
An introduction to category theory and its applications in computer science: in particular to Haskell, a programming language with many language elements inspired by category theory. Students should have some familiarity with linear algebra, discrete mathematics and functional programming. Recommended corequisite: CS 242.
1 unit, not given this year

MATH 199. Independent Work
Undergraduates pursue a reading program; topics limited to those not in regular department course offerings. Credit can fulfill the elective requirement for math majors. Approval of Undergraduate Affairs Committee is required to use credit for honors majors area requirement.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN MATHEMATICS
Primarily for graduate students; undergraduates may enroll with consent of instructor.

MATH 205A. Real Analysis
Basic measure theory and the theory of Lebesgue integration. Prerequisite: 171 or equivalent.
3 units, Aut (Ryzhik, L)

MATH 205B. Real Analysis
Point set topology, basic functional analysis, Fourier series, and Fourier transform. Prerequisites: 171 and 205A or equivalent.
3 units, Win (Mazzeo, R)

MATH 210A. Modern Algebra
Basic commutative ring and module theory, tensor algebra, homological constructions, linear and multilinear algebra, introduction to representation theory. Prerequisite: 121 or equivalent.
3 units, Aut (Brumfiel, G)

MATH 210B. Modern Algebra
Continuation of 210A. Topics in group theory, Galois theory, commutative algebra, introductions to algebraic number theory and algebraic geometry.
3 units, Win (Conrad, B)

MATH 210C. Modern Algebra
Continuation of 210B. Semisimple rings and modules, representation theory, Lie algebras, Lie groups and their representations.
3 units, Spr (Bump, D)

MATH 215A. Complex Analysis, Geometry, and Topology
Analytic functions, complex integration, Cauchy's theorem, residue theorem, argument principle, conformal mappings, Riemann mapping theorem, Picard's theorem, elliptic functions, analytic continuation and Riemann surfaces.
3 units, Aut (Soundararajan, K)

MATH 215B. Complex Analysis, Geometry, and Topology
Topics: fundamental group and covering spaces, homology, cohomology, products, basic homotopy theory, and applications. Prerequisites: 113, 120, and 171, or equivalent; 215A is not a prerequisite for 215B.
3 units, Win (Cantarero Lopez, J)

MATH 215C. Complex Analysis, Geometry, and Topology
Continuation of 215B. Semisimple rings and modules, representation theory, Lie algebras, Lie groups and their representations.
3 units, Spr (Bump, D)

MATH 216A. Introduction to Algebraic Geometry
Algebraic curves, algebraic varieties, sheaves, cohomology, Riemann-Roch theorem. Classification of algebraic surfaces, moduli spaces, deformation theory and obstruction theory, the notion of schemes. May be repeated for credit. Prerequisites: 210ABC or equivalent.
3 units, Aut (Vakil, R)

MATH 216B. Introduction to Algebraic Geometry
Continuation of 216A. May be repeated for credit.
3 units, Win (Vakil, R)

MATH 216C. Introduction to Algebraic Geometry
Continuation of 216B. May be repeated for credit.
MATH 217A. Differential Geometry
Smooth manifolds and submanifolds, tensors and forms, Lie and exterior derivative, DeRham cohomology, distributions and the Frobenius theorem, vector bundles, connection theory, parallel transport and curvature, affine connections, geodesics and the exponential map, connections on the principal frame bundle. Prerequisite: 215C or equivalent.
3 units, Spr (Vakil, R)

MATH 217B. Differential Geometry
Riemannian manifolds, curvature, geodesics, connections, flows, and applications. Prerequisites: 217A and 222. Not offered this year.
3 units, not given this year

MATH 219. Topics in Geometry: Geometric Flows
Introduction to geometric flows, focusing on mean curvature and Ricci flow. Prerequisites: Exposure to Riemannian geometry and basic PDE. Not offered this year.
3 units, not given this year

MATH 220. Partial Differential Equations of Applied Mathematics
(Same as CME 303) First-order partial differential equations; method of characteristics; weak solutions; elliptic, parabolic, and hyperbolic equations; Fourier transform; Fourier series; and eigenvalue problems. Prerequisite: Foundation in multivariable calculus and ordinary differential equations.
3 units, Aut (Ryzhik, L)

MATH 220A. Theory of Probability
Review of basic probability; Monte Carlo methods; state space models and time series; parameter estimation, prediction, and filtering; Markov chains and processes; stochastic control; and stochastic differential equations. Examples from various engineering disciplines. Prerequisites: Exposure to probability; background in real variables and analysis.
3 units, Spr (Papanicolaou, G)

MATH 220B. Theory of Probability
(Same as STATS 310B) Conditional expectations, discrete time martingales, stopping times, uniform integrability, applications to 0-1 laws, Radon-Nikodym Theorem, ruin problems, etc. Other topics as time allows selected from (i) local limit theorems, (ii) renewal theory, (iii) discrete time Markov chains, (iv) random walk theory, (v) ergodic theory. Prerequisite: 310A or MATH 230A.
2-3 units, Win (Siegmund, D)

MATH 224. Topics in Mathematical Biology
Mathematical models for biological processes based on ordinary and partial differential equations. Topics: population and infectious diseases dynamics, biological oscillators, reaction diffusion models, biological waves, and pattern formation. Prerequisites: 53 and 131, or equivalents.
3 units, not given this year

MATH 226. Numerical Solution of Partial Differential Equations
(Same as CME 306) Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burger's equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: MATH 220A or CME 302.
3 units, Spr (Garapon, P)

MATH 227. Partial Differential Equations and Diffusion Processes
Parabolic and elliptic partial differential equations and their relation to diffusion processes. First order equations and optimal control. Emphasis is on applications to mathematical finance. Prerequisites: MATH 131 and MATH 136/STATS 219, or equivalents.
3 units, Win (Ryzhik, L)

MATH 228. Stochastic Methods in Engineering
(Same as CME 308) Review of basic probability; Monte Carlo simulation; state space models and time series; parameter estimation, prediction, and filtering; Markov chains and processes; stochastic control; and stochastic differential equations. Examples from various engineering disciplines. Prerequisites: Exposure to probability; background in real variables and analysis.
3 units, Spr (Papanicolaou, G)

MATH 230A. Theory of Probability
(Same as STATS 310A) Mathematical tools: sigma algebras, measure theory, connections between coin tossing and Lebesgue measure, basic convergence theorems. Probability: independence, Borel-Cantelli lemmas, almost sure and Lp convergence, weak and strong laws of large numbers. Large deviations. Weak convergence; central limit theorems; Poisson convergence; Stein's method. Prerequisites: 116, MATH 171.
3 units, Aut (Diaconis, P)

MATH 230B. Theory of Probability
(Same as STATS 310B) Conditional expectations, discrete time martingales, stopping times, uniform integrability, applications to 0-1 laws, Radon-Nikodym Theorem, ruin problems, etc. Other topics as time allows selected from (i) local limit theorems, (ii) renewal theory, (iii) discrete time Markov chains, (iv) random walk theory, (v) ergodic theory. Prerequisite: 310A or MATH 230A.
2-3 units, Win (Siegmund, D)

MATH 230C. Theory of Probability
(Same as STATS 310C) Continuous time stochastic processes: martingales, Brownian motion, stationary independent increments, Markov jump processes and Gaussian processes. Invariance principle, random walks, LLN and functional CLT. Markov and strong Markov property. Infinite divisible laws. Some ergodic theory. Prerequisite: 310B or MATH 230B.
2-4 units, Spr (Dembko, A)

MATH 231A. An Introduction to Random Matrix Theory
(Same as STATS 351A) Patterns in the eigenvalue distribution of typical large matrices, which also show up in physics (energy distribution in scattering experiments), combinatorics (length of longest increasing subsequence), first passage percolation and number theory (zeros of the zeta function). Classical compact ensembles (random orthogonal matrices). The tools of determinantal point processes. Prerequisites: STATS 310A or MATH 205A.
3 units, not given this year

MATH 231B. The Spectrum of Large Random Matrices
Asymptotics of eigenvalues of large random matrices, focusing on Wigner matrices and the Gaussian unitary ensemble: the combinatorics of non-crossing partitions and word graphs, concentration inequalities, Cauchy-Stein's transform, Hermite polynomials, Fredholm determinants, Laplace asymptotic method, special functions (Airy, Painlevé), and stochastic calculus. Prerequisites: STATS 310A or MATH 205A.
3 units, Spr (Dembko, A)

MATH 231C. Free Probability
Background from operator theory, addition and multiplication theorems for operators, spectral properties of infinite-dimensional operators, the free additive and multiplicative convolutions of probability measures and their classical counterparts, asymptotic freeness of large random matrices, and free entropy and free dimension. Prerequisite: STATS 310B or equivalent.
3 units, not given this year

MATH 232. Topics in Probability: Malliavin Calculus, Fractional Brownian Motion and Applications
Malliavin calculus: derivative and divergence operators, Gaussian processes, entropy. Fractional Brownian motion: relevance for financial mathematics, Lévy and Tanaka formula, driving force for the heat equation. Iso formula for irregular Gaussian processes and other applications of Malliavin calculus. May be repeated for credit. Prerequisites: MATH 236, STATS 310C or equivalent.
3 units, not given this year

MATH 233. Probabilistic Methods in Analysis
Proofs and constructions in analysis obtained from basic results in Probability Theory and a 'probabilistic way of thinking.' Topics: Rademacher functions, Gaussian processes, entropy.
3 units, not given this year

MATH 234. Large Deviations
(Same as STATS 374) Combinatorial estimates and the method of types. Large deviation probabilities for partial sums and for empirical distributions, Cramer's and Sanov's theorems and their Markov extensions. Applications in statistics, information theory, and statistical mechanics. Prerequisite: MATH 230A or STATS 310.
3 units, not given this year
MATH 236. Introduction to Stochastic Differential Equations
3 units, Win (Papanicolaou, G)

MATH 237. Default and Systemic Risk
Introduction to mathematical models of complex static and dynamic stochastic systems that undergo sudden regime change in response to small changes in parameters. Examples from materials science (phase transitions), power grid models, financial and banking systems. Special emphasis on mean field models and their large deviations, including computational issues of uncertainty quantification.
3 units, Win (Papanicolaou, G)

MATH 238. Mathematical Finance
3 units, Win (Papanicolaou, G)

MATH 239. Computation and Simulation in Finance
Monte Carlo, finite difference, tree, and transform methods for the numerical solution of partial differential equations in finance. Emphasis is on derivative security pricing. Prerequisite: 238 or equivalent.
3 units, Spr (Camilier, I)

MATH 240. Topics in Financial Mathematics: Fixed Income Models
3 units, Spr (Camilier, I)

MATH 243. Functions of Several Complex Variables
3 units, not given this year

MATH 244. Riemann Surfaces
Compact Riemann surfaces and algebraic curves; cohomology of sheaves; Serre duality; Riemann-Roch theorem and application; Jacobians; Abel's theorem. May be repeated for credit.
3 units, not given this year

MATH 245A. Topics in Algebraic Geometry: Moduli Theory
Topics in the study of moduli spaces: Grothendieck's Quot scheme, Hilbert scheme, boundedness, semistable reduction, fine and coarse moduli space, geometric invariant theory, deformation theory, and universal families. Examples of moduli spaces including moduli of curves, moduli of vector bundles and moduli of maps. May be repeated for credit.
3 units, not given this year

MATH 245B. Topics in Algebraic Geometry: Intersection Theory
Topics such as intersection theory on surfaces, toric varieties, and homogeneous spaces; numerical criteria for positivity; Chow groups and rings. May be repeated for credit.
3 units, not given this year

MATH 245C. Topics in Algebraic Geometry: Alterations
3 units, not given this year

MATH 247. Topics in Group Theory
Topics include the Burnside basis theorem, classification of p-groups, regular and powerful groups, Sylow theorems, the Frattini argument, nilpotent groups, soluble groups, theorems of P. Hall, group cohomology, and the Schur-Zassenhaus theorem. The classical groups and introduction to the classification of finite simple groups and its applications. May be repeated for credit.
3 units, not given this year

MATH 248. Ergodic Theory and Szemeredi's Theorem
An introduction to ergodic theory leading to (and proving) Szemeredi's theorem and its multidimensional extension.

MATH 249A. Algebraic Number Theory
Structure theory and Galois theory of local and global fields, finiteness theorems for class numbers and units, adelic techniques. Prerequisites: MATH 210A,B.
3 units, not given this year

MATH 249B. Topics in Number Theory
3 units, Win (Venkatesh, A)

MATH 249C. Topics in Number Theory
3 units, Spr (Soundararajan, K)

MATH 250. Elliptic Curves in Cryptography
(Same as CS 259C) Discusses the mathematics of elliptic curves and their applications in cryptography. Studies crypto-systems based on elliptic curves and discuss their security. Studies algorithmic aspects of elliptic curves related to crypto-system construction and security. Topics include: elliptic curves over finite fields, attacks on elliptic curve crypto-systems, point counting, pairing-based cryptography. Suggested background: Math 120 or 152, or CS255.
3 units, Aut (Freeman, D)

MATH 252. Algebraic Groups
Smooth affine groups over general fields, quotients, tori, soluble groups, reductive groups, root systems, Existence and Isomorphism theorem, structure theory. If time permits, classification theory over interesting fields. Prerequisites: 210A, 210B, and familiarity with algebraic varieties over general fields.
3 units, not given this year

Topics may include: structural stability and perturbation theory of dynamical systems; hyperbolic theory; first order PDE; normal forms, bifurcation theory; Hamiltonian systems, their geometry and applications. May be repeated for credit.
3 units, not given this year

MATH 256A. Partial Differential Equations
The theory of linear and nonlinear partial differential equations, beginning with linear theory involving use of Fourier transform and Sobolev spaces. Topics: Schauder and L2 estimates for elliptic and parabolic equations; De Giorgi-Nash-Moser theory for elliptic equations; nonlinear equations such as the minimal surface equation, geometric flow problems, and nonlinear hyperbolic equations.
3 units, not given this year

MATH 256B. Partial Differential Equations
Continuation of 256A.
3 units, Win (Vasy, A)

MATH 257A. Symplectic Geometry and Topology
Linear symplectic geometry and linear Hamiltonian systems. Symplectic manifolds and their Lagrangian submanifolds, local properties. Symplectic geometry and mechanics. Contact geometry and contact manifolds. Relations between symplectic and contact manifolds. Hamiltonian systems with symmetries. Momentum map and its properties. May be repeated for credit.
3 units, not given this year

MATH 257B. Symplectic Geometry and Topology
Continuation of 257A. May be repeated for credit.
3 units, not given this year

MATH 258. Topics in Geometric Analysis
May be repeated for credit.
3 units, Spr (White, B)

MATH 259. mirror symmetry
3 units, Aut (Subotic, A)

MATH 261A. Functional Analysis
3 units, not given this year
MATH 263A. Lie Groups and Lie Algebras
3 units, not given this year

MATH 263B. Lie Groups and Lie Algebras
Continuation of 263A. May be repeated for credit.
3 units, Win (Bump, D)

MATH 264. Infinite Dimensional Lie Algebra
3 units, not given this year

MATH 266. Computational Signal Processing and Wavelets
Theoretical and computational aspects of signal processing. Topics: time-frequency transforms; wavelet bases and wavelet packets; linear and nonlinear multiresolution approximations; estimation and restoration of signals; signal compression. May be repeated for credit.
3 units, not given this year

MATH 269. Topics in symplectic geometry
May be repeated for credit.
3 units, not given this year

MATH 270. Geometry and Topology of Complex Manifolds
Complex manifolds, Kahler manifolds, curvature, Hodge theory, Lefschetz theorem, Kahler-Einstein equation, Hermitian-Einstein equations, deformation of complex structures. May be repeated for credit.
3 units, not given this year

MATH 271. The H-Principle
3 units, Win (Eliashberg, Y)

MATH 272. Topics in Partial Differential Equations
3 units, not given this year

MATH 280. Evolution Equations in Differential Geometry
3 units, Aut (Brendle, S)

MATH 282A. Low Dimensional Topology
The theory of surfaces and 3-manifolds. Curves on surfaces, the classification of diffeomorphisms of surfaces, and Teichmuller space. The mapping class group and the braid group. Knot theory, including knot invariants. Decomposition of 3-manifolds: triangulations, Heegaard splittings, Dehn surgery. Loop theorem, sphere theorem, incompressible surfaces. Geometric structures, particularly hyperbolic structures on surfaces and 3-manifolds.
3 units, Aut (Kerckhoff, S)

MATH 282B. Homotopy Theory
Homotopy groups, fibrations, spectral sequences, simplicial methods, Dold-Thom theorem, models for loop spaces, homotopy limits and colimits, stable homotopy theory.
3 units, Win (Carlsson, G)

MATH 282C. Fiber Bundles and Cobordism
3 units, Spr (Abrantes Andrade, R)

MATH 283. Topics in Algebraic and Geometric Topology
May be repeated for credit.
3 units, Aut (Cohen, R), Win (Cantarero Lopez, J), Spr (Carlsson, G)

MATH 283A. Topics in Topology
3 units, not given this year

MATH 284. Topics in Geometric Topology: Heegaard splittings and three-manifolds
Incompressible surfaces, irreducible manifolds, prime decomposition. Morse theory, Heegaard diagrams, Heegaard splittings, the Thurston norm, sutured manifold theory, Heegaard Floer homology, sutured Floer homology.
3 units, not given this year

MATH 284A. Geometry and Topology in Dimension 3
The Poincare conjecture and the uniformization of 3-manifolds.
3 units, not given this year

MATH 284B. Geometry and Topology in Dimension 3
The Poincare conjecture and the uniformization of 3-manifolds. May be repeated for credit.
3 units, not given this year

MATH 286. Topics in Differential Geometry
3 units, not given this year

MATH 287. Algebraic Topology
May be repeated for credit.
3 units, Win (Schoen, R)

MATH 290B. Model Theory B
(Same as PHIL 350B) Decidable theories. Model-theoretic background. Arithmetic of addition, real closed and algebraically closed fields, weak second order arithmetic, theories of terms, theories of arrays, temporal logic. Combining decision procedures. May be repeated for credit. Prerequisite: 151,152 or equivalents.
1-3 units, not given this year

MATH 292A. Set Theory
(Same as PHIL 352A) The basics of axiomatic set theory; the systems of Zermelo-Fraenkel and Bernays-Gödel. Topics: cardinal and ordinal numbers, the cumulative hierarchy and the role of the axiom of choice. Models of set theory, including the constructible sets and models constructed by the method of forcing. Consistency and independence results for the axiom of choice, the continuum hypothesis, and other unsettled mathematical and set-theoretical problems. Prerequisites: PHIL151 and MATH 161, or equivalents.
3 units, not given this year

MATH 293A. Proof Theory
(Same as PHIL 353A) Gentzen’s natural deduction and sequential calculi for first-order propositional and predicate logics. Normalization and cut-elimination procedures. Relationships with computational lambda calculi and automated deduction. Prerequisites: 151, 152, and 161, or equivalents.
3 units, Aut (Mints, G)

MATH 295. Computation and Algorithms in Mathematics
Use of computer and algorithmic techniques in various areas of mathematics. Computational experiments. Topics may include polynomial manipulation, Groebner bases, computational geometry, and randomness. May be repeated for credit.
3 units, not given this year

MATH 301. Advanced Topics in Convex Optimization
Modern developments in convex optimization: semidefinite programming; novel and efficient first-order algorithms for smooth and nonsmooth convex optimization. Emphasis on numerical methods suitable for large scale problems arising in science and engineering. Prerequisites: convex optimization (EE 364), linear algebra (Math 104), numerical linear algebra (CME 302); background in probability, statistics, real analysis and numerical optimization.
3 units, not given this year

MATH 355. Graduate Teaching Seminar
Required of and limited to first-year Mathematics graduate students.
1 unit, Spr (Simon, L; Lucianovic, M)

MATH 360. Advanced Reading and Research
(Staff)
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATH 361. Research Seminar Participation
Participation in a faculty-led seminar which has no specific course number. (Staff)
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATH 381. Seminar in Analysis
3 units, not given this year

MATH 386. Topics in Differential Geometry
3 units, not given this year
MATH 384. Seminar in Geometry  
1 unit, by arrangement
MATH 385. Seminar in Topology  
1-3 units, by arrangement
MATH 388. Seminar in Probability and Stochastic Processes  
1-3 units, by arrangement
MATH 389. Seminar in Mathematical Biology  
1-3 units, by arrangement
MATH 391. Research Seminar in Logic and the Foundations of Mathematics  
(Same as PHIL 391) Contemporary work. May be repeated a total of three times for credit.  
1-3 units, Aut (Mints, G; Feferman, S), Win (Mints, G; Feferman, S), Spr (Mints, G; Feferman, S)
MATH 394. Classics in analysis  
Original papers in analysis.  
3 units, Win (Vasy, A)
MATH 395. Classics in Geometry and Topology  
Original papers in geometry and in algebraic and geometric topology. May be repeated for credit.  
3 units, Spr (Mirzakhani, M)
MATH 396. Graduate Progress  
Results and current research of graduate and postdoctoral students. May be repeated for credit.  
1 unit, not given this year
MATH 802. TGR Dissertation  
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MECHANICAL ENGINEERING (ME) COURSES

UNDERGRADUATE COURSES IN MECHANICAL ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ME 10N. Form and Function of Animal Skeletons  
(Same as BIOE 10N) Preference to freshmen. The biomechanics and mechanobiology of the musculoskeletal system in human beings and other vertebrates on the level of the whole organism, organ systems, tissues, and cell biology. Field trips to labs. GER:DB-EngrAppSci  
3 units, not given this year

ME 11SC. The Art and Science of Measuring Fluid Flows  
The roles of fluid flows in natural systems such as swimming protozoa and planet-forming nebulae, and technologies such as biomolecular assay devices and jet engines. Visualization and measurement techniques to obtain full-field flow pattern information. The physics behind these technologies. Field trips; lab work. (Eaton)  
2 units, not given this year

ME 12N. The Jet Engine  
Preference to freshmen. How a jet engine works: the technologies and analytical techniques required to understand them. Dynamics, thermodynamics, turbomachinery, combustion, advanced materials, cooling technologies, and control systems. Visits to research laboratories, examination of a partially disassembled engine, and probable operation of a small jet engine. Prerequisites: high school physics. GER:DB-EngrAppSci  
3 units, not given this year

ME 12SC. Hands-on Jet Engines  
How jet engines transformed the world through intercontinental travel causing internationalization in daily life. Competition driving improvements in fuel economy, engine lifetime, noise, and emissions.  
2 units, not given this year

ME 14N. How Stuff Is Made  
(F.Sem) Stanford Introductory Seminar. The design and engineering of products and processes, such as machining, fabric, food, and electrical goods. Tradeoffs in choice of materials, features, and process selection. Final project: students research and redesign the engineering and manufacturing aspects of a product and its processes with an eye toward sustainability. Includes several field trips to manufacturing facilities. GER:DB-EngrAppSci  
3 units, Aut (Pruitt, B)

ME 15. Growing creativity: Education Reform in New York City  
Preparation for Alternative Spring Break program. Current issues in education with a focus on the New York City area. Emphasis will be placed on design thinking and the creative process. Enrollment limited to Growing Creativity ASB 2011 participants.  
1 unit, not given this year

ME 16N. The Science of Flames  
Preference to freshmen. The roles that chemistry and fluid dynamics play in governing the behaviors of flames. Emphasis is on factors that affect flame microstructure, external appearance, and on the fundamental physical and chemical processes that cause flames and fires to propagate. Topics: history, thermodynamics, and pollutant formation in flames. Trips to labs where flames are studied. Prerequisites: high school physics. GER:DB-EngrAppSci  
3 units, not given this year

ME 17N. Robotics Imitating Nature  
Preference to freshmen. The dream of constructing robots that duplicate the functional abilities of humans and/or other animals has been promulgated primarily by science fiction writers. But biological systems provide models for the designers of robots. Building electromechanical devices that perform locomotory and sensing functions similar to those of an animal as a way of learning about how biological systems function. Walking and running machines, and the problem of giving a robot the capability to respond to its environment.  
3 units, not given this year

ME 18Q. Teamology: Creative Teams and Individual Development  
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Roles on a problem solving team that best suit individual creative characteristics. Two teams are formed for teaching experimentally how to develop less conscious abilities from teammates creative in those roles. Reinforcement teams have members with similar personalities; problem solving teams are composed of people with maximally different personalities.  
3 units, Aut (Wilde, D)

ME 19. Pre-field Course for Alternative Spring Break: Design for Social Change  
Focus is on applying design, technology and innovation to catalyze social change. Topics include identifying social needs, learning different brainstorming methods, developing an applicable service model or product, prototyping, implementation, and reiteration. Reading and service components, followed by week-long Alternative Spring Break trip. See http://d4sc.blogspot.com. Enrollment limited to 12. May be repeated for credit.  
1 unit, not given this year

ME 21N. Renaissance Machine Design  
Preference to freshmen. Technological innovations of the 1400s that accompanied the proliferation of monumental art and architecture by Brunelleschi, da Vinci, and others who designed machines and invented novel construction, fresco, and bronze-casting techniques. The social and political climate, from the perspective of a machine designer, that made possible and demanded engineering expertise from prominent artists. Hands-on projects to provide a physical understanding of Renaissance-era engineering challenges and introduce the pleasure of creative engineering design. Technical background not required. GER:DB-EngrAppSci  
3 units, not given this year

ME 24N. Designing the Car of the Future  
Preference to freshmen. Automotive design drawing from all areas of mechanical engineering. The state of the art in automotive design and the engineering principles to understand vehicle
performance. Future technologies for vehicles. Topics include vehicle emissions and fuel consumption, possibilities of hydrogen, drive-by-wire systems, active safety and collision avoidance, and human-machine interface issues. GER:DB-EngrAppSci

3 units, not given this year

ME 25N. Global Warming and Climate Change: Fact or Fiction (F,Sem) Stanford Introductory Seminar. Preference to freshmen. Scientific arguments concerning debates between the view that anthropogenic activities are not causing global warming versus the view that these activities are responsible for a global warming that results in significant climate change. Consequences of increased demand for energy. Prerequisites: high school physics, chemistry, and biology.

3 units, Win (Bowman, C)

ME 26N. Think Like a Designer (F,Sem) Stanford Introductory Seminar. Introduces students to techniques designers use to create highly innovative solutions across domains. The project-based class will emphasize approaches to problem identification and problem solving. Topics include need-finding, structured brainstorming, synthesis, rapid prototyping, and visual communication; field trips to a local design firm, a robotics lab, and a machining lab. A secondary goal of the seminar is to introduce students to the pleasures of creative design and hands-on development of tangible solutions.

3 units, Aut (Banerjee, S)

ME 27SI. Needfinding for Underserved Populations The heart of any design process resides in empathy with users and their needs. Working in the realm of public service may engage a population to which the designer might not have been exposed. How different needfinding techniques can help designers to understand users from underserved populations and inspire them to create products and services that serve user needs.

2 units, not given this year

ME 28SI. Professional Design Practices Lab. Professional skills are developed through web-based portfolio and resume building. Additionally, visits to local design consulting firms and in house design groups will help solidify students understanding of the designer in the professional workplace.

1 unit, not given this year

ME 29SI. Cars: A Crash Course Focus is on the basic mechanics and significance of cars. Topics include basic, real-world understanding of automobile workings, histories, industries, cultural impact, and related media. Field trips to Tesla Motors and Go-Kart Racer will be organized, and there will be guest appearances by local automotive historians and enthusiasts. Students will get hands on experience with maintaining real cars, see high performance engines run, and have the opportunity to learn how to drive a manual transmission.

1 unit, not given this year

4 units, Win (Cappelli, M), Spr (Tang, S)

ME 80. Mechanics of Materials Mechanics of materials and deformation of structural members. Topics include stress and deformation analysis under axial loading, torsion and bending, column buckling and pressure vessels. Introduction to stress transformation and multiaxial loading. Prerequisite: ENGR 14. GER:DB-EngrAppSci

4 units, Aut (Cai, W), Spr (Mitiguy, P)

ME 101. Visual Thinking Lecture/lab. Visual thinking and language skills are developed and exercised in the context of solving design problems. Exercises for the mind's eye. Rapid visualization and prototyping with emphasis on fluent and flexible idea production. The relationship between visual thinking and the creative process. Enrollment limited to 60. GER:DB-EngrAppSci

4 units, Aut (Kessin, J; Luomanen, C; Feng, A), Win (Gleason, P; Silver, J), Spr (Northway, D; Pauwels, D)

ME 103D. Engineering Drawing and Design Designed to accompany 203. The fundamentals of engineering drawing including orthographic projection, dimensioning, sectioning, exploded and auxiliary views, and assembly drawings. Homework drawings are of parts fabricated by the student in the lab. Assignments in 203 supported by material in 103D and sequenced on the assumption that the student is enrolled in both courses simultaneously.

1 unit, Aut (Milroy, J; Dreissigacker, M), Win (Milroy, J; Dreissigacker, M), Spr (Milroy, J; Dreissigacker, M)

ME 104. The Designer's Voice Course helps students develop a point of view about their design career that will enable them to articulate their design vision, inspire a design studio, or infect a business with a culture of design-thinking. Focus on the integration of work and worldview, professional values, design language, and the development of the designer's voice. Includes seminar-style discussions, role-playing, short writing assignments, guest speakers, and individual mentoring and coaching. Participants will be required to keep a journal.

1 unit, Aut (Evans, D; Burnett, W)

ME 104B. Designing Your Life The course employs a design thinking approach to help students develop a point of view about their career. The course focuses on an introduction to design thinking, the integration of work and worldview, and practices that support vocation formation. The course will include seminar-style discussions, role-playing, short writing assignments, guest speakers, and individual mentoring and coaching. Enrollment limited to; Jrs. and Srs., all majors. Admission confirmed by email to Axess registered students prior to first class session. See www.designingyourlife.org

2 units, Aut (Burnett, W; Evans, D), Win (Burnett, W; Evans, D), Spr (Evans, D; Burnett, W)

ME 110. Design Sketching Freehand sketching, rendering, and design development. Students develop a design sketch portfolio for review by program faculty. May be repeated for credit.

1 unit, Aut (Li, W; Scott, W), Win (Li, W; Scott, W), Spr (Li, W; Scott, W)

4 units, Win (Gerdes, C)

ME 113. Mechanical Engineering Design Capstone course. Mechanical engineering design is experienced by students as they work on team projects obtained from industry or other organizations. Prerequisites: 80,101,112, 203. Enrollment priority to ME majors. GER:DB-EngrAppSci

4 units, Spr (Nelson, D)

ME 115A. Introduction to Human Values in Design Lecture/lab. Introduces the central philosophy of the product design program, emphasizing the relation between technical and human values, the innovation process, and design methodology. Lab exercises include development of simple product concepts visualized in rapidly executed three-dimensional mockups. Prerequisite: 101.

3 units, Aut (Kelley, D; Fields, B)

ME 115B. Product Design Methods Problem-finding, problem-solving, intermediate creativity methods and effective techniques for researching and presenting product concepts. Individual- and team-based design projects emphasizing advanced visual thinking and prototyping skills. Prerequisite: ME115A GER:DB-EngrAppSci

3 units, Win (Edson, J)
ME 115C. Design and Business Factors
Design and Business Factors: Introduces business concepts critical to determining the success of new products and services. Students will learn to estimate the cost of R&D for new product development. Using financial analysis, ROI, and tollgates to reduce development risk will be explored using case studies and simulations. Students will develop a bill of materials and a profit and loss statement for a sample product concept, prototype a design consultancy, and create a business proposal for a proposed new product company.
3 units, Spr (Burnett, W; Siddiqui, O)

ME 116. Advanced Product Design: Formgiving
Small- and medium-scale design projects are carried to a high degree of aesthetic refinement. Emphasis is on form development, design process, and model making. Prerequisites: ME 115B, ARTSTUDI 160. GER:DB-EngrAppSci
4 units, Aut (Burnett; W; Staff, J)

ME 120. History and Philosophy of Design
Major schools of 19th- and 20th-century design (Arts and Crafts movement, Bauhaus, Industrial Design, and postmodernism) are analyzed in terms of their continuing cultural relevance. The relation of design to art, technology, and politics; readings from principal theorists, practitioners, and critics; recent controversies in industrial and graphic design, architecture, and urbanism. Enrollment limited to 65.
3 units, Spr (Katz, B)

ME 131A. Heat Transfer
The principles of heat transfer by conduction, convection, and radiation with examples from the engineering of practical devices and systems. Topics include transient and steady conduction, conduction by extended surfaces, boundary layer theory for forced and natural convection, boiling, heat exchangers, and graybody radiative exchange. Prerequisites: 70, ENGR 30. Recommended: intermediate calculus, ordinary differential equations. GER:DB-EngrAppSci
3-4 units, Aut (Asheghi, M)

ME 131B. Fluid Mechanics: Compressible Flow and Turbomachinery
4 units, Win (Eaton, J)

ME 140. Advanced Thermal Systems
Capstone course. Thermal analysis and engineering emphasizing integrating heat transfer, fluid mechanics, and thermodynamics into a unified approach to treating complex systems. Mixtures, humidity, chemical and phase equilibrium, and availability. Labs apply principles through hands-on experience with a turbojet engine, PEM fuel cell, and hybrid solid/oxygen rocket motor. Use of MATLAB as a computational tool. Prerequisites: ENGR 30, ME 70, and 131A.B. GER:DB-EngrAppSci
5 units, Spr (Mitchell, R)

ME 161. Dynamic Systems, Vibrations and Control
(Same as ME 261.) (Graduate students only enroll in 261.) Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of ordinary differential equations governing the behavior of simple and multiple degree of freedom systems. Stability, resonance, amplification and attenuation, and control system design. Prerequisites: Calculus (differentiation and integration), ordinary differential equations, and basic linear algebra (determinants and solving linear equations). Should be familiar with dynamics (F=m*a) and simple electronics (V=IR). GER:DB-EngrAppSci
3-4 units, Aut (Mitiguy, P)

ME 185. Electric Vehicle Design
This project based course focuses on the design and prototyping of electric vehicles. Students learn the fundamentals of vehicle design in class and apply the knowledge as they form teams and work on projects involving concept, specifications, structure, systems, integration, assembly, testing, etc. The class meets once a week to learn about the fundamentals, exchange their experiences, and coordinate between projects. The teams of 3-5 will work on their projects independently.
3 units, Spr (Gerdes, C; Beiker, S)

ME 190. Ethical Issues in Mechanical Engineering
Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; whistle blowing; engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations, and engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies and field research. Enrollment limited to 25 Mechanical Engineering majors.
4 units, not given this year

ME 191. Engineering Problems and Experimental Investigation
Directed study and research for undergraduates on a subject of mutual interest to student and staff member. Student must find faculty sponsor and have approval of adviser.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 191H. Honors Research
Student must find faculty honors adviser and apply for admission to the honors program. (Staff)
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 196. Design and Manufacturing Forum
(Same as ME 396) Invited speakers address issues of interest to design and manufacturing engineering and business students. Sponsored by the Product Realization Network at Stanford.
1 unit, Spr (Reis, R)

ME 214. Good Products, Bad Products
(Same as ME 314) The characteristics of industrial products that cause them to be successes or failures: the straightforward (performance, economy, reliability), the complicated (human and cultural fit, compatibility with the environment, craftsmanship, positive emotional response of the user), the esoteric (elegance, sophistication, symbolism). Engineers and business people must better understand these factors to produce more successful products. Projects, papers, guest speakers, field trips. GER:DB-EngrAppSci
4 units, Win (Beach, D)

GRADUATE COURSES IN MECHANICAL ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ME 201. Dim Sum of Mechanical Engineering
Introduction to research in mechanical engineering for M.S. students and upper-division undergraduates. Weekly presentations by current ME Ph.D. and second-year fellowship students to show research opportunities across the department. Strategies for getting involved in a research project. (Sheppard)
1 unit, Aut (Gardella, I)

ME 203. Design and Manufacturing
4 units, Aut (Beach, D), Win (Beach, D), Spr (Milroy, J)

ME 203X. Prototyping and Process Capture
Concepts and methods for low resolution prototyping as an integral activity in engineering design process. Class meetings include presentations by faculty and design oriented exercises by students.
Assignments will be Blog Posts. ME203X is designed to work in phase with ME203 and offers greater depth in prototyping strategy, technique, and resultant insights. Concurrent enrollment in ME203 is required. Enrollment is optional and capped at 6 students.

1 unit, not given this year

ME 204. Bicycle Design and Frame-Building
Lecture/lab. The engineering and artistic execution of designing and building a bicycle frame. Fundamentals of bicycle dynamics, handling, and sizing. Manufacturing processes, Films, guest lecturers, field trips. Each student designs and fabricates a custom bicycle frame. Limited enrollment. Prerequisite: 203 or equivalent.
3 units, Spr (Staff)

ME 206A. Entrepreneurial Design for Extreme Affordability
Project course jointly offered by School of Engineering and Graduate School of Business. Students apply engineering and business skills to design product prototypes, distribution systems, and business plans for entrepreneurial ventures in developing countries for a specified challenge faced by the world’s poor. Topics include user empathy, appropriate technology design, rapid prototype engineering and testing, social technology entrepreneurship, business modeling, and project management. Weekly design reviews; final course presentation. Industry and adviser interaction. Limited enrollment via application; see http://www.stanford.edu/class/me206.
4 units, Win (Patell, J; Beach, D)

ME 206B. Entrepreneurial Design for Extreme Affordability
Part two of two-quarter project course jointly offered by School of Engineering and Graduate School of Business. Second quarter emphasizes prototyping and implementation of specific projects identified in first quarter. Students work in cross-disciplinary project teams. Industry and adviser interaction, weekly design reviews; final course presentation. Prerequisite: 206A. (Jointly offered as GSB 1033SB) Design Institute class; see http://dschool.stanford.edu
4 units, Spr (Patell, J; Beach, D)

ME 208. Patent Law and Strategy for Innovators and Entrepreneurs
How to build a patent portfolio and avoid patent infringement. How to conduct a patent search. How to file a provisional patent application.
2-3 units, Aut (Schox, J)

ME 210. Introduction to Mechatronics
Technologies involved in mechatronics (intelligent electromechanical systems), and techniques to apply this technology to mechatronic system design. Topics include: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. Large, open-ended team project. Limited enrollment. Prerequisites: ENGR 40, CS 106, or equivalents.
4 units, Win (Ohline, R; Kenny, T)

ME 212. Calibrating the Instrument
For first-year graduate students in the Joint Program in Design. Means for calibrating the designer’s mind/body instrument through tools including improvisation, brainstorming, creative imaging, educational kinesiology, and Brain Gym. Current design issues; guest speakers; shared stories; and goal setting.
1 unit, Aut (Edmark, J)

ME 216A. Advanced Product Design: Needfinding
Human needs that lead to the conceptualization of future products, environments, systems, and services. Field work in public and private settings; appraisal of personal values; readings on social ethnographic issues; and needfinding for a corporate client. Emphasis is on developing the flexible thinking skills that enable the designer to navigate the future. Prerequisites for undergraduates: 116 and 203, or consent of the instructor.
3-4 units, Win (Patnaik, D; O'Meara, I)

ME 216B. Advanced Product Design: Implementation
Summary project using knowledge, methodology, and skills obtained in Product Design major. Students implement an original design concept and present it to a professional jury. Prerequisite: 216A.
3-4 units, Spr (Burnett, W)

ME 218A. Smart Product Design Fundamentals
Lecture/lab. Team design project series on programmable electromechanical systems design. Topics: transistors as switches, digital and analog circuits, operational amplifiers, comparators, software design, programming in C. Lab fee. Limited enrollment.
4-5 units, Aut (Carryer, J)

ME 218B. Smart Product Design Applications
Lecture/lab. Second in team design project series on programmable electromechanical systems design. Topics: user I/O, timer systems, interrupts, signal conditioning, software design for embedded systems, sensors, actuators, noise, and power supplies. Lab fee. Limited enrollment. Prerequisite: 218A or passing the smart product design fundamentals proficiency examination.
4-5 units, Win (Carryer, J)

ME 218C. Smart Product Design Practice
Lecture/lab. Advanced level in series on programmable electromechanical systems design. Topics: inter-processor communication, system design with multiple microprocessors, architecture and assembly language programming for the PIC microcontroller, controlling the embedded software tool chain, A/D and D/A techniques, electronic manufacturing technology. Team project. Lab fee. Limited enrollment. Prerequisite: 218B.
4-5 units, Spr (Carryer, J)

ME 218D. Smart Product Design: Projects
Lecture/lab. Industrially sponsored project is the culmination of the Smart Product Design sequence. Students take on an industrial project requiring application and extension of knowledge gained in the prior three quarters, including prototyping of a final solution with hardware, software, and professional documentation and presentation. Lectures extend the students’ knowledge of electronic and software design, and electronic manufacturing technology. Topics: chip level design of microprocessor systems, real time operating systems, alternate microprocessor architectures, and PCB layout and fabrication. Prerequisite: 218C.
3-4 units, Aut (Carryer, J)

ME 219. The Magic of Materials and Manufacturing
Lecture/lab. Methods for market-quantity manufacturing of parts and products from a product designer’s point of view. Materials including metals, plastics, ceramics, fibers, and foams, and processes that manipulate, exploit, transform, and modify these materials. Visual descriptions of processes, product examples, relevant material details, cost information, and manufacturability rules-of-thumb. Imagining and creating new products. Manufacturing site visits; laboratory projects. Enrollment limited to 20.
3 units, Aut (Beach, D; Johnson, K), Spr (Beach, D; Johnson, K)

ME 220. Introduction to Sensors
Sensors are widely used in scientific research and as an integral part of commercial products and automated systems. The basic principles for sensing displacement, force, pressure, acceleration, temperature, optical radiation, nuclear radiation, and other physical parameters. Performance, cost, and operating requirements of available sensors. Elementary electronic circuits which are typically used with sensors. Lecture demonstration of a representative sensor from each category elucidates operating principles and typical performance. Lab experiments with off-the-shelf devices.
3-4 units, Spr (Kenny, T)

ME 221. Green Design Strategies and Metrics
Foundation in sustainable product design principles, reinforced by conceptual design projects. Discuss what aspects of sustainability matter most for different products. Application of dozens of strategies to improve product sustainability. Frameworks, measurements, and decision-making tools to navigate the complexities of designing greener products. Life-cycle analysis, materials, energy use, biomimicry, product-service systems, persuasive design, design for end-of-life, and systems thinking.
2 units, not given this year

ME 222. Design for Sustainability
Lecture/lab. Role of design in building a sustainable world. How to include sustainability in the design process considering environmental, cultural, and social impacts. Focus is on a proactive design approach, and the tools and techniques needed to translate theory into artifact.
ME 257. Turbine and Internal Combustion Engines  
(Same as ME 357) Principles of design analysis for aircraft gas turbines and automotive piston engines. Analysis for aircraft engines performed for Airbus A380 type aircraft. Design parameters determined considering aircraft aerodynamics, gas turbine thermodynamics, compressible flow physics, and material limitations. Additional topics include characteristics of main engine components, off-design analysis, and component matching. Performance of automotive piston engines including novel engine concepts in terms of engine thermodynamics, intake and exhaust flows, and in-cylinder flow. 
3 units, not given this year

ME 260. Fuel Cell Science and Technology  
Emphasis on proton exchange membrane (PEM) and solid oxide fuel cells (SOFC), and principles of electrochemical energy conversion. Topics in materials science, thermodynamics, and fluid mechanics. Prerequisites: MATH 43, PHYSICS 55, and ENGR 30 or ME 140, or equivalents. 
3 units, Spr (Ch, S)

ME 261. Dynamic Systems, Vibrations and Control  
(Same as ME 161) (Graduate students only enroll in 261.) Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of differential equations governing the behavior of single and multiple degree of freedom systems. Stability, resonance, amplification and attenuation, and control system design. Prerequisites: Calculus (differentiation and integration), ordinary differential equations, and basic linear algebra (determinants and solving linear equations). Should be familiar with dynamics (F=m*a) and simple electronics (V=IR). 
3-4 units, Aut (Mitiguy, P)

ME 265. Technology Licencing and Commercialization  
How to profit from technology; processes and strategies to commercialize functional or artistic inventions and creations (not limited to mechanical engineering). Business and legal aspects of determining what can be owned and licensed, how to determine commercial value, and what agreements are necessary. Contract and intellectual property law; focus is on provisions of license agreements and their negotiation. 
3 units, Spr (Hustein, J)

ME 266. Introduction to Physiology and Biomechanics of Hearing  
Hearing is fundamental to our ability to communicate, yet in the US alone over 30 million people suffer some form of hearing impairment. As engineers and scientists, it is important for us to understand the underlying principles of the auditory system if we are to devise better ways of helping those with hearing loss. The goal of this course is to introduce undergraduate and graduate students to the anatomy, physiology, and biomechanics of hearing. Principles from acoustics, mechanics, and hydrodynamics will be used to build a foundational understanding of one of the most complex, interdisciplinary, and fascinating areas of biology. Topics include the evolution of hearing, computational modeling approaches, fluid-structure interactions, ion-channel transduction, psychoacoustics, diagnostic tools, and micrometer to millimeter scale imaging methods. We will also study current technologies for mitigating hearing loss via passive and active prostheses, as well as future regenerative therap 
3 units, Spr (Puria, S)

(Same as BIOE 280, BIOE 280) The mechanobiology of skeletal growth, adaptation, regeneration, and aging is considered from developmental and evolutionary perspectives. Emphasis is on the interactions between mechanical and chemical factors in the
COURSES OF INSTRUCTION

regulation of connective tissue biology. Prerequisites: BIO 42, and ME 80 or BIOE 42.
3 units, not given this year
ME 281. Biomechanics of Movement
(Same as BIOE 281) Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of biomechanics in sports, orthopedics, and rehabilitation.
3 units, Win (Delp, S)
ME 283. Introduction to Biomechanics
Introduction to the application of mechanical engineering analysis to understand human physiology and disease. Topics include basics of musculoskeletal force analysis, cell mechanics, blood flow, and mechanical behaviors of tissues. Undergraduates should have taken ME70 and ME80 or equivalents.
3 units, Aut (Levenston, M)
ME 284B. Cardiovascular Bioengineering
3 units, not given this year
ME 287. Mechanics of Biological Tissues
Introduction to the mechanical behaviors of biological tissues in health and disease. Overview of experimental approaches to evaluating tissue properties and mathematical constitutive models. Elastic behaviors of hard tissues, nonlinear elastic and viscoelastic models for soft tissues.
3 units, Spr (Levenston, M)
ME 294. Medical Device Design
In collaboration with the School of Medicine. Introduction to medical device design for undergraduate and graduate engineering students. Design and prototyping. Labs; medical device environments may include hands-on device testing; and field trips to operating rooms and local device companies. Limited enrollment. Prerequisite: 203.
1 unit, Aut (Milroy, J; Srivastava, S)
ME 294L. Medical Device Design Lab
In collaboration with the School of Medicine. This is the lab portion of ME294, which must be taken concurrently. Introduction to medical device design for undergraduate and graduate engineering students. Design, prototyping and labs. Medical device environments may include hands-on device testing; and field trips to operating rooms and local device companies. Prerequisite: 203.
3 units, Aut (Srivastava, S; Milroy, J)
ME 297. Forecasting for Innovators:Technology, Tools & Social Change
Technologies from the steam engine to the microprocessor have been mixed gifts, at once benefiting humankind and creating many of the problems facing humanity today. This class will explore how innovators can use forecasting methods to identify new challenges, develop responsive innovations and anticipate unintended consequences. Students will produce a long-range forecast project, applying a variety of methodologies including research, expert interviews and graphical exploration.
3 units, Win (Safjo, P; Benjamin, C)
ME 298. Silversmithing and Design
Skills involved in working with precious metals at a small scale. Investment casting and fabrication techniques such as reticulation, granulations, filigree, and mokume gane.
3-4 units, Win (Shaughnessy, S; Knox Sather, A)
ME 299A. Practical Training
For master’s students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor’s section number. All paperwork must be completed by student and faculty sponsor, as the Student Services Office does not sponsor CPT. Students are allowed only one quarter of CPT per degree program.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Summer (Staff)
ME 299B. Practical Training
For Ph.D. students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor’s section number. All paperwork must be completed by student and faculty sponsor, as the student services office does not sponsor CPT. Students are allowed only one quarter of CPT per degree program.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Summer (Staff)
ME 300A. Linear Algebra with Application to Engineering Computations
(Same as CME 200) Computer based solution of systems of algebraic equations obtained from engineering problems and eigen-system analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH105, 130, or equivalent.
3 units, Aut (Gerretsen, M)
ME 300B. Partial Differential Equations in Engineering
(Same as CME 204) Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor.
3 units, Win (Lele, S)
ME 300C. Introduction to Numerical Methods for Engineering
3 units, Spr (Iaccarino, G)
ME 301. Design and Launch your Product or Service
Apply principles of design thinking to the real-life challenge of imagining, prototyping, testing and iterating, building, marketing, and selling your product or service. Work will be in teams (you apply as an intact team) or alone. You must submit a proposal and team for approval. Proposal can be a physical good or service of any kind. Projects are treated as real start-ups, so the work will be intense. Proposal submitted by Feb 15, 2010 acceptance by March 1. Design Institute class; see http://dschool.stanford.edu.
4 units, Spr (Klebahn, P; Dearing, M)
ME 302. The Future of the Automobile
Guest speakers from academia and industry present their research results, share their visions, explain challenges, and offer solutions
regarding individual transportation. Students are requested to draft brief write-ups on selected topics that will be discussed in class to develop an understanding of the interactions of technology, business, and society with a specific automotive focus. No specific technical background is required as it is encouraged that everyone brings in specific expertise regarding the automobile as a student, researcher, and/or consumer.

1 unit, Win (Evans, D; Burnett, W)

ME 308. Spatial Motion

The geometry of motion in Euclidean space. Fundamentals of theory of screws with applications to robotic mechanisms, constraint analysis, and vehicle dynamics. Methods for representing spatial motions of rigid bodies with their inter-relationships; the formulation of Newton-Euler kinetics applied to serial chain systems such as industrial robotics.

3 units, alternate years, not given this year

ME 309. Finite Element Analysis in Mechanical Design

Basic concepts of finite elements, with applications to problems confronted by mechanical designers. Linear static, modal, and thermal formulations; nonlinear and dynamic formulations. Application of a commercial finite element code in analyzing design problems. Issues: solution methods, modeling techniques, features of various commercial codes, basic problem definition. Individual projects focus on the interplay of analysis and testing in product design/development. Prerequisite: MATH 103, or equivalent. Recommended: 80, or equivalent in structural and/or solid mechanics; some exposure to principles of heat transfer.

3 units, Spr (Sheppard, S)

ME 310A. Project-Based Engineering Design, Innovation, and Development

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America. Students research product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

4 units, Aut (Cutkosky, M)

ME 310B. Project-Based Engineering Design, Innovation, and Development

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America. Students research product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

4 units, Win (Cutkosky, M)

ME 310C. Project-Based Engineering Design, Innovation, and Development

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America. Students research product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

4 units, Win (Cutkosky, M)

ME 310X. New Product Management

Restricted to graduate students. Focus is on the role of the product manager in industry. Topics include product management skills, leadership and team management, getting a product management job, corporate and project finance for engineers, sales and marketing for engineers and business strategy. Seminar with in-class exercises and guest speakers from industry. Limited to 50. Prerequisite: ME 310a and ME 310b.

1 unit, Aut (Schar, M), Win (Leifer, L), Spr (Leifer, L)

ME 311. Design Strategy & Leadership

The class covers the topics of the business of design, design as strategy and design research. In addition, students will learn to lead brainstorming, needfinding, and design strategy workshops with peers and industry leaders. Prerequisite: ME 313, ME 312

3 units, Spr (Burnett, W)

ME 312. Advanced Product Design: Formgiving

Lecture/lab. Small- and medium-scale design projects carried to a high degree of aesthetic refinement. Emphasis is on form development, design process, and model making. Prerequisites: 203, 313. Corequisite: ARTSTUDI 160.

4 units, Win (Burnett, W)

ME 313. Human Values and Innovation in Design

Introduction to the philosophy, spirit, and tradition of the product design program. Hands-on design projects used as vehicles for design thinking, visualization, and methodology. The relationships among technical, human, aesthetic, and business concerns. Drawing, prototyping, and design skills. Focus is on tenets of design philosophy: point of view, user-centered design, design methodology, and iterative design.

3 units, Aut (Banerjee, S; Newman, M)

ME 314. Good Products, Bad Products

(Same as ME 214) The characteristics of industrial products that cause them to be successes or failures: the straightforward (performance, economy, reliability), the complicated (human and cultural fit, compatibility with the environment, craftsmanship, positive emotional response of the user), the esoteric (elegance, sophistication, symbolism). Engineers and business people must better understand these factors to produce more successful products. Projects, papers, guest speakers, field trips.

4 units, Win (Beach, D)

ME 315. The Designer in Society

For graduate students. Career objectives and psychological orientation compared with existing social values and conditions. Emphasis is on assisting individuals in assessing their roles in society. Readings on political, social, and humanistic thought are related to technology and design. Experiential, in-class exercises, and term project. Enrollment limited to 24.

3 units, Aut (Roth, B; Klebahn, P)

ME 316A. Product Design Master's Project

For graduate Product Design or Design (Art) majors only. Student teams, under the supervision of the design faculty, spend the quarter researching master's project topics. Students are expected to demonstrate mastery of design thinking methods including: needfinding, brainstorming, field research and synthesis during this investigation. Masters projects are selected that involve the synthesis of aesthetics and technological concerns in the service of human need. Prerequisites: ME 216B, ME 313, ME 311, ARTSTUDIO 360.

2-6 units, Aut (Burnett, W; Kelley, D; Klebahn, P)

ME 316B. Product Design Master's Project

Design Garage is a Winter/Spring class (a two quarter commitment is required). The class is a deep dive into thinking that uses student-lead projects to teach design process and methods. The projects come from investigations conducted during the Fall quarter where the preliminary needs finding, customer research, and product or service ideas have been developed to provide the seed projects for the student design teams. Students will learn the methodologies of design thinking by bringing a product, service, or experience to market. Students apply to Design Garage in the Fall.
and teams are formed after interviews and applications are reviewed. Prerequisite: graduate student standing.

2–6 units, Win (Burnett, W; Kelley, D; Klebahn, P)

ME 316C. Product Design Master's Project
This is the second half of the two quarter Design Garage sequence. Students will complete projects begun in ME316B the prior quarter. Prerequisite: ME316C and graduate student standing. Design Institute class; see http://dso школ stanford.edu.

2–6 units, Spr (Burnett, W; Kelley, D)

ME 317A. Design Methods: Product Definition
Systenatic methodologies to define, develop, and produce world-class products. Students team projects to identify opportunities for improvement and develop a comprehensive product definition. Topics include value engineering, quality function deployment, design for assembly and producibility, design for variety and supply chain, design for life-cycle quality, and concurrent engineering. Students must take 317B to complete the project and obtain a letter grade. On-campus enrollment limited to 20; SCPD class size limited to 50, and each site must have at least 3 students to form a project team.

4 units, Win (Beiter, K)

ME 317B. Design Methods: Quality By Design
Building on 317A, focus is on the implementation of competitive product design. Student groups apply structured methods to optimize the design of an improved product, and plan for its manufacture, marketing, and service. The project deliverable is a comprehensive product and process specification. Topics: concept generation and selection (Pugh's Method), FMEA applied to the manufacturing process, design for robustness, Taguchi Method, SPC and six sigma process, tolerance analysis, flexible manufacturing, product testing, rapid prototyping. Enrollment limited to 40, not including SCPD students. Minimum enrollment of two per SCPD viewing site; single student site by prior consent of instructor. On-campus class limited to 20. For SCPD students, limit is 50 and each site must have a minimum of three students to form a project team and define a project on their own. Prerequisite: 317A.

4 units, Spr (Beiter, K)

ME 318. Computer-Aided Product Creation
Design course focusing on an integrated use of computer tools: rapid prototyping, solid modeling, computer-aided machining, and computer numerical control manufacturing. Students choose, design, and manufacture individual products, emphasizing individual design process and computer design tools. Field trips demonstrate Stanford Product Realization Lab's relationship to the outside world. Structured lab experiences build a basic CAD/CAM/CNC proficiency. Limited enrollment. Prerequisite: consent of instructor.

4 units, Aut (Milroy, J), Win (Milroy, J), Spr (Milroy, J)

ME 320. Introduction to Robotics
(Same as CS 223A) Robotics foundations in modeling, design, planning, and control. Class covers relevant results from geometry, kinematics, statics, dynamics, motion planning, and control, providing the basic methodologies and tools in robotics research and applications. Concepts and models are illustrated through physical robot platforms, interactive robot simulations, and video segments relevant to historical research developments or to emerging application areas in the field. Recommended: matrix algebra.

3 units, Win (Khatib, O)

ME 321. Optofluids: Interplay of Light and Fluids at the Micro and Nanoscale
Many optical systems in biology have sophisticated designs with functions that conventional optics cannot achieve: no synthetic materials, for example, can provide the camouflage capability exhibited by some animals. This course covers recent reviews--some inspired by examples in biology--in using fluids, soft materials and nanostructures to create new functions in optics. Topics include electrowetting lenses, electronic inks, colloidal photonic crystals, bioinspired optical nanostructures, nanophotonic biosensors, lens-less optofluidic microscopes. The use of optics to control fluids is also discussed: optoelectronic tweezers, particle trapping and transport, micro rheology, optofluidic micromachines, fabrication and self-assembly of novel micro and nanostructures.

3 units, Aut (Tang, S)

ME 322. Kinematic Synthesis of Mechanisms
The rational design of linkages. Techniques to determine linkage proportions to fulfill design requirements using analytical, graphical, and computer based methods.

3 units, not given this year

ME 323. Modeling and Identification of Mechanical Systems for Control
Lecture/Lab. The art and science behind developing mathematical models for control system design. Theoretical and practical system modeling and parameter identification. Frequency domain identification, parametric modeling, and black-box identification. Analytical work and laboratory experience with identification, controller implementation, and the implications of unmodeled dynamics and non-linearities. Prerequisites: linear algebra and system simulation with MATLAB/SIMULINK; ENGR 105.

3 units, not given this year

ME 324. Precision Engineering
Advances in engineering are often enabled by more accurate control of manufacturing and measuring tolerances. Concepts and technology enable precision such that the ratio of overall dimensions to uncertainty of measurement is large relative to normal engineering practice. Typical application areas: non-spherical optics, computer information storage devices, and manufacturing metrology systems. Application experience through design and manufacture of a precision engineering project. Emphasizing the principles of precision engineering. Structured labs; field trips. Prerequisite: consent of instructors.

4 units, Spr (Beach, D; DeBra, D)

ME 325. Introduction to High Performance Computing
An introduction to the use of advanced computing resources for real-world examples of large-scale, multidisciplinary, simulation-based science as related to academic and applied research.

1 unit, Sum (Staff)

ME 326. Telerobotics and Human-Robot Interactions
Focus is on dynamics and controls. Evaluation and implementation of required control systems. Topics include master-slave systems, kinematic and dynamic similarity; control architecture, force feedback, haptics, sensory substrations; stability, passivity, sensor resolution, servo rates; time delays, prediction, wave variables. Hardware-based projects encouraged, which may complement ongoing research or inspire new developments. Limited enrollment. Prerequisites: ENGR 205, 320 or CS 223A, or consent of instructor. (Niemeeyer)

3 units, not given this year

ME 330. Advanced Kinematics
Kinematics from a mathematical viewpoint. Introduction to algebraic geometry of point, line, and plane elements. Emphasis is on basic theories which have potential application to mechanical linkages, computational geometry, and robotics.

3 units, Aut (Roth, B)

ME 331A. Advanced Dynamics & Computation
Newton, Euler, momentum, and road-map methods and computational tools for 3-D force and motion analysis of multibody systems. Power, work, and energy. Numerical solutions (e.g., MATLAB, etc.) of nonlinear algebraic and differential equations governing the static and dynamic behavior of multiple degree of freedom systems.

3 units, Win (Mitiguy, P)

ME 331B. Advanced Dynamics & Simulation

3 units, Spr (Mitiguy, P)

ME 333. Mechanics
Goal is a common basis for advanced mechanics courses. Formulation of the governing equations from a Lagrangian perspective. Examples include systems of particles and linear elastic solids. Waves in discrete and continuous media. Linear

</tbody>
</table>
thermodynamics, probability theory, information entropy, statistical ensembles, phase transition and phase equilibrium. Recommended: PHYSICS 110 or equivalent.

3 units, Win (Cai, W)

ME 346B. Introduction to Molecular Simulations

3 units, Spr (Cai, W)

ME 346C. Advanced Techniques for Molecular Simulations
Advanced methods for computer simulation of proteins. Symplectic time integrators, multiple-time stepping, energy conservation. Long-range force calculation, particle mesh Ewald, fast multipole method, multigrid. Free energy methods, umbrella sampling, acceptance ratio, thermodynamic integration, non-equilibrium methods, adaptive biasing force. Prerequisites: ME 346A,B or equivalent, Matlab, and C++. 3 units, alternate years, not given this year

ME 347. Mathematical Theory of Dislocations
The mathematical theory of straight and curvilinear dislocations in linear elastic solids. Stress fields, energies, and Peach-Koehler forces associated with these line imperfections. Anisotropic effects, Green's function methods, and the geometrical techniques of Brown and Indenborn-Orlov for computing dislocation fields and for studying dislocation interactions. Continuously distributed dislocations and cracks and inclusions.

3 units, not given this year

ME 348. Experimental Stress Analysis
Theory and applications of photoelasticity, strain gages, and holographic interferometry. Comparison of test results with theoretical predictions of stress and strain. Discussion of other methods of stress and strain determination (optical fiber strain sensors, acoustoelasticity, thermoelasticity, brittle coating, Moire interferometry, residual stress determination). Six labs plus mini-project. Limited enrollment. Lab fee.

3 units, Spr (Nelson, D)

ME 349. Variational Methods in Elasticity and Plate Theory
An introduction to variational calculus methods and their applications to the theories of elasticity and plates.

3 units, not given this year

ME 351A. Fluid Mechanics
Exact and approximate analysis of fluid flow covering kinematics, global and differential equations of mass, momentum, and energy conservation. Forces and stresses in fluids. Euler's equations and the Bernoulli theorem applied to inviscid flows. Vorticity dynamics. Topics in irrotational flow: stream function and velocity potential for exact and approximate solutions; superposition of solutions; complex potential function; circulation and lift. Some boundary layer concepts.

3 units, Aut (Su, L)

ME 351B. Fluid Mechanics
Laminar viscous fluid flow. Governing equations, boundary conditions, and constitutive laws. Exact solutions for parallel flows. Creeping flow limit, lubrication theory, and boundary layer theory including free-shear layers and approximate methods of solution; boundary layer separation. Introduction to stability theory and transition to turbulence, and turbulent boundary layers. Prerequisite: 351A.

3 units, Win (Eaton, J)

ME 352A. Radiative Heat Transfer
The fundamentals of thermal radiation heat transfer; blackbody radiation laws; radiative properties of non-black surfaces; analysis of radiative exchange between surfaces and in enclosures; combined radiation, conduction, and convection; radiative transfer in absorbing, emitting, and scattering media. Advanced material for students with interests in heat transfer, as applied in high-temperature energy conversion systems. Take 352B,C for depth in heat transfer. Prerequisites: graduate standing and undergraduate course in heat transfer. Recommended: computer skills.

3 units, not given this year

ME 352B. Fundamentals of Heat Conduction
Physical description of heat conduction in solids, liquids, and gases. The heat diffusion equation and its solution using analytical and numerical techniques. Data and microscopic models for the thermal conductivity of solids, liquids, and gases, and for the thermal resistance at solid-solid and solid-liquid boundaries. Introduction to the kinetic theory of heat transport, focusing on applications for composite materials, semiconductor devices, micromachined sensors and actuators, and rarefied gases. Prerequisite: consent of instructor.

3 units, Win (Goodson, K)

ME 352C. Convective Heat Transfer

3 units, Spr (Eaton, J)

ME 354. Experimental Methods in Fluid Mechanics
Experimental methods associated with the interfacing of laboratory instruments, experimental control, sampling strategies, data analysis, and introductory image processing. Instrumentation including point-wise anemometers and particle image tracking systems. Lab. Prerequisites: previous experience with computer programming and consent of instructor. Limited enrollment.

4 units, Aut (Santiago, J)

ME 355. Compressible Flow
Topics include quasi-one-dimensional isentropic flow in variable area ducts, normal shock waves, oblique shock and expansion waves, flow in ducts with friction and heat transfer, unsteady one-dimensional flow, and steady two-dimensional supersonic flow.

3 units, not given this year

ME 357. Turbine and Internal Combustion Engines
(Same as ME 257) Principles of design analysis for aircraft gas turbines and automobile piston engines. Analysis for aircraft engines performed for Airbus A380 type aircraft. Design parameters determined considering aircraft aerodynamics, gas turbine thermodynamics, compressible flow physics, and material limitations. Additional topics include characteristics of main engine components, off-design analysis, and component matching. Performance of automotive piston engines including novel engine concepts in terms of engine thermodynamics, intake and exhaust flows, and in-cylinder flows.

3 units, not given this year

ME 358. Heat Transfer in Microdevices
Application-driven introduction to the thermal design of electronic circuits, sensors, and actuators that have dimensions comparable to or smaller than one micrometer. The impact of thin-layer boundaries on thermal conduction and radiation. Convection in microchannels and microscopic heat pipes. Thermal property measurements for microdevices. Emphasis is on Si and GaAs semiconductor devices and layers of unusual, technologically-promising materials such as chemical-vapor-deposited (CVD) diamond. Final project based on student research interests. Prerequisite: consent of instructor.

3 units, Spr (Asheghi, M)

ME 359A. Advanced Design and Engineering of Space Systems I
The application of advanced theory and concepts to the development of spacecraft and missile subsystems; taught by experts in their fields. Practical aspects of design and integration. Mission analysis, systems design and verification, radiation and space environments, orbital mechanics, space propulsion, electrical power and avionics subsystems, payload communications, and attitude control. Subsystem-oriented design problems focused around a mission to be completed in groups, Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related engineering field or consent of instructor.

4 units, not given this year

ME 359B. Advanced Design and Engineering of Space Systems
II
Continuation of 359A. Topics include aerospace materials, mechanical environments, structural analysis and design, finite element analysis, mechanisms, thermal control, probability and statistics. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related field, or consent of instructor. 4 units; not given this year

ME 361. Turbulence
The nature of turbulent flows, statistical and spectral description of turbulence, coherent structures, spatial and temporal scales of turbulent flows. Averaging, two-point correlations and governing equations. Reynolds averaged equations and stresses. Free shear flows, turbulent jet, turbulent kinetic energy and kinetic energy dissipation, and kinetic energy budget. Kolmogorov's hypothesis and energy spectrum. Wall bounded flows, viscous scales, and law of the wall. Turbulence closure modeling for Reynolds averaged Navier Stokes equations. Direct and large eddy simulation of turbulent flows. Subgrid scale modeling. 3 units, Spr (Moin, P)

ME 362A. Physical Gas Dynamics
Concepts and techniques for description of high-temperature and chemically reacting gases from a molecular point of view. Introduction to kinetic theory, chemical thermodynamics, and statistical mechanics as applied to properties of gases and gas mixtures. Transport and thermodynamic properties, law of mass action, and equilibrium chemical composition. Maxwellian and Boltzmann distributions of velocity and molecular energy. Examples and applications from areas of current interest such as combustion and materials processing. 3 units, Win (Hanson, R)

ME 363. Partially Ionized Plasmas and Gas Discharges
Introduction to partially ionized gases and the nature of gas discharges. Topics: the fundamentals of plasma physics emphasizing collisional and radiative processes, electron and ion transport, ohmic dissipation, oscillations and waves, interaction of electromagnetic waves with plasmas. Applications: plasma diagnostics, plasma propulsion and materials processing. Prerequisite: 362A or consent of instructor. 3 units, Win (Hanson, R)

ME 364. Optical Diagnostics and Spectroscopy
The spectroscopy of gases and laser-based diagnostic techniques for measurements of species concentrations, temperature, density, and other flow field properties. Topics: electronic, vibrational, and rotational transitions; spectral lineshapes and broadening mechanisms; absorption, fluorescence, Rayleigh and Raman scattering methods; collisional quenching. Prerequisite: 362A or equivalent. 3 units, Win (Hanson, R)

ME 365. The Structure of Design Research
Restricted to second-year Joint Program in Design graduate students. Prerequisite for ME 316A,B, C. How to shape individual research plans, identify tools for design research, and develop a vocabulary for research through design. Students present proposals for master's theses. Case studies. 1-3 units, not given this year

ME 366. Creative Gym: A Design Thinking Skills Studio
Build your creative confidence and sharpen your design thinking skills. Train your intuition and expand the design context from which you operate every day. This experimental studio will introduce the d.school to fast-paced experimental exercises that lay the mental and physical foundation for a potent bias toward action, and a deeper knowledge of the personal skills that expert design thinkers utilize in all phases of their process. Exercises will be offered by a number of the d.school's most creatively confident design thinkers. Apply the first day of class. 1 unit, Win (Barnes-Auburn, C; Hawthorne, G)

ME 367. Optical Diagnostics and Spectroscopy Laboratory
Principles, procedures, and instrumentation associated with optical measurements in gases and plasmas. Absorption, fluorescence and emission, and light-scattering methods. Measurements of temperature, species concentration, and molecular properties. Lab. Enrollment limited to 16. Prerequisite: 362A or 364. 4 units, Spr (Hanson, R)

ME 368A. Biodesign Innovation: Needs Finding and Concept Creation
(Same as BIOE 374A, MED 272A) (Same as OIT 384) Two quarter sequence. Inventing new medical devices and instrumentation, including: methods of validating medical needs; techniques for analyzing intellectual property; basics of regulatory (FDA) and reimbursement planning; brainstorming and early prototyping. Guest lecturers and practical demonstrations. 4 units, Win (Yock, P; Zenios, S; Milroy, J; Brinton, T)

ME 368B. Biodesign Innovation: Concept Development and Implementation
(Same as BIOE 374B, MED 272B) (Same as OIT 385) Two quarter sequence. How to take a medical device invention forward from early concept to technology translation and development. Topics include prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation route (licensing versus start-up); ethical issues including conflict of interest; fundraising approaches and cash requirements; essentials of writing a business or research plan; strategies for assembling a development team. Prerequisite: MED 272A, ME368A, OIT 384 or BIOE 374A. 4 units, Spr (Yock, P; Zenios, S; Milroy, J; Brinton, T)

ME 370A. Energy Systems I: Thermodynamics
Thermodynamic analysis of energy systems emphasizing systematic methodology for and application of basic principles to generate quantitative understanding. Availability, mixtures, reacting systems, phase equilibrium, chemical availability, and modern computational methods for analysis. Prerequisites: undergraduate engineering thermodynamics and computer skills such as Matlab. 3 units, Aut (Mitchell, R)

ME 370B. Energy Systems II: Modeling and Advanced Concepts
Development of quantitative device models for complex energy systems, including fuel cells, reformers, combustion engines, and electrolyzers, using thermodynamic and transport analysis. Student groups work on energy systems to develop conceptual understanding, and high-level, quantitative and refined models. Advanced topics in thermodynamics and special topics associated with devices under study. Prerequisite: 370A. 4 units, Win (Edwards, C)

ME 370C. Energy Systems III: Projects
Refinement and calibration of energy system models generated in ME 370B carrying the models to maturity and completion. Integration of device models into a larger model of energy systems. Prerequisites: 370A,B, consent of instructor. 3-5 units, Spr (Edwards, C)

ME 371. Combustion Fundamentals
Heat of reaction, adiabatic flame temperature, and chemical composition of products of combustion; kinetics of combustion and pollutant formation reactions; conservation equations for multi-component reacting flows; propagation of laminar premixed flames and detonations. Prerequisite: 362A or 370A, or consent of instructor. 3 units, Win (Zheng, X)

ME 372. Combustion Applications
The role of chemical and physical processes in combustion; ignition, flammability, and quenching of combustible gas mixtures; premixed turbulent flames; laminar and turbulent diffusion flames; combustion of fuel droplets and sprays. Prerequisite: 371. 3 units, Spr (Bowman, C)

ME 377. Design Thinking Bootcamp: Experiences in Innovation and Design
Bootcamp is a fast-paced immersive experience in design thinking. You'll progress through four full cycles of the process, working with a diverse team to solve real world challenges. Field work and
deep collaboration with teammates are required of all students. Tenets of design thinking including being human-centered, prototype-driven, and mindful of process. Topics include design processes, innovation methodologies, need finding, human factors, visualization, rapid prototyping, team dynamics, storytelling, and project leadership. Limited enrollment. APPLICATION REQUIRED by 9/21/11. See http://bit.ly/dbookcamp.

3-4 units, Aut (Kembel, G; Staff, 1)

ME 378. Tell, Make, Engage: Action Stories for Entrepreneuring
Guest discussion leaders with entrepreneurship experience give the course an evolving framework of evaluative methods, formed and reformed by collaborative development within the class. Stories attached to an idea or a discovery, are considered through practice exercises, artifacts, design challenges, short papers, and presentations.

1-3 units, Win (Karanian, B), Spr (Karanian, B)

ME 380. Collaborating with the Future: Launching Large Scale Sustainable Transformations
(Same as ENVRES 380) This project-based d.school class combines Design Thinking Processes, Behavioral Sciences, and elements of Diffusion Theory. Tools and theories introduced in class will be used to structure large-scale transformations that simultaneously create value on environmental, societal, and economic fronts. We encourage students to use this class as a launching pad for real initiatives. Primarily meant for Graduate Students. (Especially qualified/motivated Seniors will be considered). Admission to the class is through an application process which ends on March 3. Please find instructions and applications at https://dschool.stanford.edu/groups/largetransformations/.

3-4 units, Spr (Banerjee, S; Staff, 1)

ME 381. Orthopaedic Bioengineering
(Same as BIOE 381) Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices.

3 units, Spr (Levenston, M)

ME 382A. Biomedical Engineering in Research and Development
Project based class studying real world biomedical problems ranging from translational biomedical research to medical device design. Topics include preventative strategies and biomedical challenges of an aging population. Identifying underlying scientific principles (computational and/or experimental) for solving biomedical problems is a key element. Students will form project teams and develop interdisciplinary communication skills; form testable hypotheses with biological, anatomical and physiological considerations; test standards for medical devices and learn about regulatory issues and intellectual property.

4 units, Win (Andriacchi, T)

ME 385. Tissue Engineering Lab
Hands-on experience in the fabrication of living engineered tissues. Techniques include sterile technique, culture of mammalian cells, creation of cell-seeded scaffolds, and the effects of mechanical loading on the metabolism of living engineered tissues. Theory, background, and practical demonstration for each technique. Lab.

1-2 units, not given this year

ME 386. Neuromuscular Biomechanics
(Same as BIOE 386) The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with movement disorders.

3 units, not given this year

ME 387. Soft Tissue Mechanics
Structure/function relationships and mechanical properties of soft tissues, including nonlinear elasticity, viscoelasticity, and poroelasticity.

3 units, not given this year

ME 388. Transport Modeling for Biological Systems
Introduction to electric fields, fluid flows, transport phenomena and their application to biological systems. Maxwell's equations, electrophoresis, electro-chemical-mechanical driving forces in physiological systems. Ionic diffusion in electrolytes and membrane transport. Fluid and solid continua theory for porous, hydrated biological tissues. Applications include ionic and molecular transport in tissues and cells, electrophoresis, electromechanical and physicochemical interactions in cells and the extracellular matrix of connective tissue.

3 units, not given this year

ME 389. Biomechanical Research Symposium
Guest speakers present contemporary research on experimental and theoretical aspects of biomechanical engineering and bioengineering. May be repeated for credit.

1 unit, Aut (Mitchell, R), Win (Staff), Spr (Cappelli, M)

ME 391. Engineering Problems
Directed study for graduate engineering students on subjects of mutual interest to student and staff member. May be used to prepare for experimental research during a later quarter under 392. Faculty sponsor required.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 392. Experimental Investigation of Engineering Problems
Graduate engineering students undertake experimental investigation under guidance of staff member. Previous work under 391 may be required to provide background for experimental program. Faculty sponsor required.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 393. Topics in Biologically Inspired or Human Interactive Robotics
Application of observations from human and animal physiology to robotic systems. Force control of motion including manipulation, haptics, and locomotion. Weekly literature review forum led by student. May be repeated for credit. (Cutkosky, Waldron, Niemeyer)

1 unit, not given this year

ME 395. Seminar in Solid Mechanics
Required of Ph.D. candidates in solid mechanics. Guest speakers present research topics related to mechanics theory, computational methods, and applications in science and engineering. May be repeated for credit. See http://mc.stanford.edu.

1 unit, Aut (Pinsky, P), Win (Pinsky, P), Spr (Pinsky, P)

ME 396. Design and Manufacturing Forum
(Same as ME 196) Invited speakers address issues of interest to design and manufacturing engineering and business students. Sponsored by the Product Realization Network at Stanford.

1 unit, Spr (Reis, R)

ME 397. Design Theory and Methodology Seminar
What do designers do when they do design? How can their performance be improved? Topics change each quarter. May be repeated for credit.

1-3 units, Aut (Steinert, R), Win (Steinert, R), Spr (Steinert, R)

ME 399. Fuel Cell Seminar
Interdisciplinary research in engineering, chemistry, and physics. Talks on fundamentals of fuel cells by speakers from Stanford, other academic and research institutions, and industry. The
potential to provide high efficiency and zero emissions energy conversion for transportation and electrical power generation.

1 unit, not given this year

ME 400. Thesis (Engineer Degree)
Investigation of some engineering problems. Required of Engineer degree candidates
2-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 405. Asymptotic Methods and Applications
Asymptotic versus convergent expansions, approximation of integrals, method of matched asymptotics, WKB method and turning points, method of multiple scales. Applications: viscous and potential flow, wave propagation, combustion, and electrostatics. Prerequisites: ME 300B, graduate-level fluid mechanics.
3 units, not given this year

ME 406. Turbulence Physics and Modeling Using Numerical Simulation Data
Prerequisite: consent of instructor.
2 units, Sum (Staff)

ME 408. Spectral Methods in Computational Physics
Data analysis, spectra and correlations, sampling theorem, nonperiodic data, and windowing; spectral methods for numerical solution of partial differential equations; accuracy and computational cost; fast Fourier transform, Galerkin, collocation, and Tau methods; spectral and pseudospectral methods based on Fourier series and eigenfunctions of singular Sturm-Liouville problems; Chebyshev, Legendre, and Laguerre representations; convergence of eigenfunction expansions; discontinuities and Gibbs phenomenon; aliasing errors and control; efficient implementation of spectral methods; spectral methods for complicated domains; time differencing and numerical stability.
3 units, not given this year

ME 410A. Foresight and Innovation
Learn what makes technical innovations succeed long-term. This course provides an intensive and hands-on overview to multiple foresight methods and anticipatory design techniques that teach you how to find and plan for future opportunities. Students build a portfolio of innovation ideas and prototypes. Prerequisite: consent of instructor.
3-5 units, Aut (Cockayne, W)

ME 410B. Foresight and Innovation
The art, science, and practice of design innovation. Tools such as critical foresight and anticipatory research that assist organizations in improving their ability and effectiveness to research and design innovation programs. The path from idea to market. How to communicate a developing idea through scenarios, business pitches, and product prototypes.
1-5 units, Win (Cockayne, W)

ME 410C. Foresight and Innovation
The art, science, and practice of design innovation. Tools such as critical foresight and anticipatory research that assist organizations in improving the quality and speed of research and design innovation programs. The path from idea to market. How to communicate a developing idea through scenarios, business pitches, and product prototypes.
1-5 units, Spr (Cockayne, W)

ME 411. Advanced Topics in Computational Solid Mechanics
Discussion of the use of computational simulation methods for analyzing and optimizing production processes and for developing new products, based on real industrial applications in the metal forming industry. Brief review of linear and nonlinear continuum mechanics and the use of finite element methods to model solid mechanics problems, constitutive relations for metals, coupled thermo-elasto-plastic (viscoplastic) problems, modeling metal productions processes: bulk metal forming processes using rigid/viscoplastic material models, application examples: hot rolling of plates and the Mannesmann piercing processes and modeling the service behavior of steel pipes. Prerequisites: ME 338A, ME 335A,B,C, or consent of instructor.
3 units, not given this year

ME 412. Engineering Functional Analysis and Finite Elements
3 units, not given this year

ME 413. Quantum Confinement Structures: Physics and Fabrication
Quantum mechanics principles and the thermodynamics of confinement structures. Focus is on potential applications such as solar cells and catalysis. Student presentations. Lab demonstrations, Prerequisite: background in quantum mechanics and statistical thermodynamics.
2 units, not given this year

ME 414. Solid State Physics Issues for Mechanical Engineering Experiments
A basic understanding of concepts and issues in the area of Solid State Physics which underlie standard mechanical properties. This course will review some basic Quantum Mechanics and Statistical Thermodynamics, and then cover the first 50% of a standard overview of Solid State Physics. The goal is to provide some fundamental understanding of the principles involved in these mechanical phenomena, and the background necessary to participate in interdisciplinary research.
3 units, Sum (Staff)

ME 417. Total Product Integration Engineering
For students aspiring to be product development executives and leaders in research and education. Advanced methods and tools beyond the material covered in 217: quality design across global supply chain, robust product architecture for market variety and technology advances, product development risk management. Small teams or individuals conduct a practical project that produces a case study or enhancement to produce development methods and tools. Enrollment limited to 12. Prerequisites: 317A,B.
4 units, Aut (Beiter, K)

ME 420. Applied Electrochemistry at Micro- and Nanoscale
The class is an introduction to applied electrochemistry with focus on micro- and nanoscale applications. Basic concepts of physical chemistry are presented, of which the fundamentals of electrochemistry are built. Theory of electrochemical methods for material analyses and material modifications are discussed with emphasis on the scaling behaviors. This year electrochemical energy generation/storage devices with focus on batteries will be discussed in class. Journals articles are reviewed within the framework of the course with focus on current problems and needs in and energy conversion and storage.
3 units, Sum (Staff)

ME 421. Thought Leaders Seminar for European Entrepreneurship and Innovation
Lessons from real-world experiences and challenges in European startups, corporations, universities, non-profit research institutes and venture finance organizations. Speakers include entrepreneurs, leaders from global technology companies, university researchers, venture capitalists, legal experts, senior policy makers and other guests from selected European countries and regions. Geographic scope encompasses Ireland to Russia, and Scandinavia to the Mediterranean region. Enrollment open to undergraduates and graduates in any school or department at Stanford.
1 unit, Win (Leifer, I; Lee, B)

ME 423. D.HEALTH: Design Thinking for Health
In the U.S., 75% of medical expenditures are for illnesses that are lifestyle related such as diabetes and heart disease. If patients could change their lifestyles, medical problems could be avoided and a healthier and happier life achieved. Class employs design thinking in teams. Individual projects and small and large team projects with multiple milestones. Students work in the field, and present in class. Design Institute class; see http://dschool.stanford.edu.
3 units, Win (Klebahn, P; Boyle, D; Kelley, D)

ME 429. COMMERCIAL MEMS DESIGN
This course, taught by Dr. Gary O’Brien of the Bosch RTC, will provide insight into the issues and challenges in designing MEMS
device for commercial and automotive applications. Topics to be covered in the class will include device simulation and design, design of experiments, compensation for cross-wafer and wafer-to-wafer fabrication variations, design for extreme environments, analysis and management of reliability issues including package stress, shock, drift, cost analysis of manufacturing processes, and some discussion of the unique challenges for consumer and automotive customers and markets. Student teams will develop a device design, fabrication process, and manufacturing analysis in response to a specification.

3 units, not given this year

ME 453A. Finite Element-Based Modeling and Simulation of Linear Fluid/Structure Interaction Problems

3 units, not given this year

ME 453B. Computational Fluid Dynamics Based Modeling of Nonlinear Fluid/Structure Interaction Problems

3 units, not given this year

ME 455. Complex Fluids and Non-Newtonian Flows
(Same as CHEMENG 462) Definition of a complex liquid and description of microstructures. Linear response to a specification. Electrokinetic theory and electrokinetic separation assays. Capillary zone electrophoresis, field amplified sample stacking, isoelectric focusing, and zone electrophoresis. Microparticle fluid flow phenomena, mass, momentum and heat transfer, characteristic time and length scales, non-dimensional groups; collection of dispersed-phase elements: instantaneous and averaged descriptions for multiphase flow, Eulerian-Eulerian and Lagrangian-Eulerian statistical representations, mixture theories; models for drag, heat and mass transfer; dilute to dense two-phase flow, granular flows; computer simulation approaches for multiphase flows, emerging research topics. Prerequisites: graduate level fluid mechanics and engineering mathematics, and undergraduate engineering mechanics and thermodynamics.

3 units, Win (Staff)

ME 457. Fluid Flow in Microdevices
Physico-chemical hydrodynamics. Creeping flow, electric double layers, and electrochemical transport such as Nernst-Planck equation; hydrodynamics of solutions of charged and uncharged particles. Device applications include microsystems that perform capillary electrophoresis, drug dispersion, and hybridization assays. Emphasis is on biochemical applications where electrophoresis, electrophoresis, and diffusion are important. Prerequisite: consent of instructor.

3 units, Spr (Santiago, J)

ME 458. Advanced Topics in Electrokinetostics
Electrokinetic theory and electrokinetic separation assays. Electroneutrality approximation and weak electrolyte electrophoresis theory. Capillary zone electrophoresis, field amplified sample stacking, isoelectric focusing, and isotachophoresis. Introduction to general electrohydrodynamics (EHD) theory including the leaky dielectric concept, the Ohmic model formulation, and electrokinetic flow instabilities. Prerequisite: ME 457.

3-5 units, not given this year

ME 461. Advanced Topics in Turbulence
Turbulence phenomenology; statistical description and the equations governing the mean flow; fluctuations and their energetics; turbulence closure problem, two-equation turbulence models, and second moment closures; non-local effect of pressure; rapid distortion analysis and effect of shear and compression on turbulence; effect of body forces on turbulent flows; buoyancy-generated turbulence; suppression of turbulence by stratification;
turbulent flows of variable density; effect of rotation on homogeneous turbulence; turbulent flows with strong vortices. Prerequisites: 351B and 361A, or consent of instructor.

3 units, Aut (Lele, S)

ME 463. Advanced Topics in Plasma Science and Engineering
Research areas such as plasma diagnostics, plasma transport, waves and instabilities, and engineering applications.

3 units, not given this year

ME 468. Experimental Research in Advanced User Interfaces
(Same as COMM 168, COMM 268, COMM 368) Project-based course involves small (3-4) person teams going through all parts of the experimental process: question generation, experiment design, running, and data analysis. Each team creates an original, publishable project that represents a contribution to the research and practicum literatures. All experiments involve interaction between people and technology, including cars, mobile phones, websites, etc. Prerequisite: consent of instructor.

1-3 units, not given this year

ME 469. Computational Methods in Fluid Mechanics
The last two decades have seen the widespread use of Computational Fluid Dynamics (CFD) for analysis and design of thermal-fluids systems in a wide variety of engineering fields. Numerical methods used in CFD have reached a high degree of sophistication and accuracy. The objective of this course is to introduce classical approaches and algorithms used for the numerical simulation of incompressible flows. In addition, some of the more recent developments are described, in particular as they pertain to unstructured meshes and parallel computers. An in-depth analysis of the procedures required to certify numerical codes and results will conclude the course.

3 units, Aut (Iaccarino, G)

ME 469B. Computational Methods in Fluid Mechanics

3 units, not given this year

ME 470. Uncertainty Quantification
Uncertainty analysis in computational science. Probabilistic data representation, propagation techniques and validation under uncertainty. Mathematical and statistical foundations of random variables and processes for uncertainty modeling. Focus is on state-of-the-art propagation schemes, sampling techniques, and stochastic Galerkin methods. The concept of model validation under uncertainty and the determination of confidence bounds estimates. Prerequisite: basic probability and statistics at the level of CME 106 or equivalent.

3 units, not given this year

ME 471. Turbulent Combustion
Basis of turbulent combustion models. Assumption of scale separation between turbulence and combustion, resulting in Reynolds number independence of combustion models. Level-set approach for premixed combustion. Different regimes of premixed turbulent combustion with either kinematic or diffusive flow/chemistry interaction leading to different scaling laws and unified expression for turbulent velocity in both regimes. Models for non-premixed turbulent combustion based on mixture fraction concept. Analytical predictions for flame length of turbulent jets and NOx formation. Partially premixed combustion. Analytical scaling for lift-off heights of lifted diffusion.

3 units, Spr (Urzay Lobo, J)

ME 484. Computational Methods in Cardiovascular Bioengineering
(Same as BIOE 484) Lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiologic quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning.

3 units, not given this year

ME 485. Modeling and Simulation of Human Movement
(Same as BIOE 485) Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic models of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331AB, or equivalent.

3 units, Spr (Delp, S)

ME 491. Ph.D. Teaching Experience
Required of Ph.D. students. May be repeated for credit.

3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 492. Mechanical Engineering Teaching Assistance

ME 495. Mechanical Engineering Lecture Series

ME 500. Thesis (Ph.D.)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

M EDICINE (MED) COURSES

UNDERGRADUATE COURSES IN MEDICINE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MED 1A. Leadership in Multicultural Health
First of a three-quarter sequence designed for undergraduates serving as staff for the Stanford Medical Youth Science Summer Residential Program (SRP). Structured opportunities for SRP staff to learn, observe, participate in, and evaluate leadership development, multicultural health theories and practices, and social advocacy. Students explore approaches for tracking multicultural health and equity issues, foster relationships with campus and community partners, and learn fundamental skills necessary to implement activities for the biomedical Summer Residential Program.

2 units, Spr (Staff)

MED 1B. Leadership In Multicultural Health
Second of a three quarter sequence for undergraduates serving as staff for the Stanford Medical Youth Science Program Summer Residential Program (SRP). Provides experiences in conducting Community Based Participatory Research (CBPR). Utilizes service learning as a pedagogical approach to developing an understanding of the intersections between power and privilege and health disparities, fostering the knowledge and skills to become social advocates to address forms of inequities. Hands-on learning through CBPR; opportunities to conduct community assessments, collect and analyze data, and develop evaluation tools. Prerequisite: MED 1A.

3 units, Aut (Ned; J, Winkleby, M)

MED 1C. Leadership in Multicultural Health
Last of a three quarter sequence for students who served as staff for the Stanford Medical Youth Science Program Summer Residential Program (SRP). An individual study service learning course designed to develop understanding of the intersection between power and privilege, and health disparities. Students
submit a written reflective term paper based on their experience as staff for the Summer Residential Program as it relates to service learning and Community Based Participatory Research (CBPR). Prerequisite: MED 1A.B.
1 unit, Win (Ned, J; Winkleby, M)

MED 248I. Alternative Spring Break: A Veteran’s Affair - Issues and Policies Affecting American Veterans
As we celebrate Veterans Day with storewide sales, our veteran population commemorates years of armed service with mental illness, homelessness, and substance abuse. One of every three homeless persons has served our country in uniform; half of all veterans are mentally ill. Through a combination of academic and service learning, this course addresses the public health and socioeconomic status of our veterans and evaluates how current government actions are shaping veterans’ rights. Weekly forums with clinicians, policy makers, and economists complement direct discussions with veterans and current Iraqi service men and women. Optional field trips to homeless shelters in the San Francisco area. Prerequisite: Acceptance into the Alternative Spring Break Program.
1 unit, Win (Staff)

MED 275I. Alternative Spring Break: Healthcare of Underserved Communities in Central California
Pre-field group directed reading for Alternative Spring Break: Healthcare of Underserved Communities in Central California.
1 unit, Win (Garcia, G)

MED 301I. Alternative Spring Break: Step Up From the Streets - Helping the Homeless
The paradox of homelessness in our moderately wealthy society. Explores factors that contribute to homelessness, what the current homeless situation is like in the US, what is being done about homelessness through nonprofit and government work. Promotes a better understanding of the homeless community through connecting with the Night Outreach Program and the Palo Alto Opportunities Center. Student-directed reading prepares students for ASB trip to Washington D.C. Prerequisite: acceptance into SUFTS ASB 2011.
1 unit, Win (Staff)

MED 70Q. Cancer and the Immune System
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Myths and facts surrounding the idea that the immune system is capable of recognizing malignant cells. The biological basis and function of effector arms of the immune system; how these mechanisms may be used to investigate the biological basis and potential therapy of cancer. How the immune system functions.
3 units, Win (Negrin, R)

MED 86Q. Seeing the Heart
(F,Dial) Stanford Introductory Dialogue. Introduction to biomedical technology, science, clinical medicine, and public policy through cardiovascular imaging. Invasive and noninvasive techniques to detect early stage heart disease and to see inside the heart and blood vessels. Topics include: common forms of heart disease, how they develop, and why they affect so many people: imaging technologies such as ultrasound, CT, MRI, PET, and optical, a cost-effective public screening program. Field trips to Stanford Medical Center imaging centers.
2 units, Win (McConnell, M)

MED 87Q. Women and Aging
(S,Sem) (Same as HUMBIO 87Q) Stanford Introductory Seminar. Preference to sophomores. Biology, clinical issues, social and health policies of aging; relationships, lifestyles, and sexuality; wise women and grandmothers. Sources include scientific articles, essays, poetry, art, and film. Service-learning experience with older women. Service Learning Course (certified by Haas Center). GER:EC-Gender
5 units, Spr (Winograd, C)

MED 88Q. Dilemmas in Current Medical Practice
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Social, political, scientific, and economic forces influencing medical practice. Spiraling costs, impaired access to health care, and disillusionment toward the health care system. Attempts by government and medical insurers to control costs through managed care and health maintenance organizations. Medical education and how it has affected the practice of medicine. Alternative health care, preventive medicine, and the doctor-patient relationship. The paradox of health in America: why do so many people who are healthy feel unhealthy? Mandatory observation of instructors in their medical practices.
3 units, Aut (Croke, J; Jones, E)

MED 93Q. The AIDS Epidemic: Biology, Behavior, and Global Responses
Preference to sophomores. How the discovery of the causative agent and the modes of transmission of HIV fueled a quest for preventive, therapeutic, and diagnostic vaccines. Discoveries in biology, biotechnology, epidemiology, and medicine during the last 20 years. Hypotheses about the origins of HIV as a human disease; the spread of AIDS and HIV; social, political, and economic consequences of the epidemic; and national and global responses.
3 units, not given this year

MED 94Q. Hormones, Health, and Disease
Preference to sophomores. The role of hormones in maintaining health; how abnormalities in hormones cause disease. Topics include: the pituitary, the master gland; thyroid hormones and metabolism; insulin and diabetes; adrenal steroids and hypertension; vitamin D, parathyroid hormone, and osteoporosis; sex hormones, birth control, pregnancy, and menopause; androgens, erectile dysfunction, and athletic performance; cholesterol, obesity, and cardiovascular risk. Recommended: background in human biology and physiology.
3 units, alternate years, not given this year

MED 108Q. Human Rights and Health
(S, Sem) Stanford Introductory Seminar. Preference to sophomores. History of human-rights law. International conventions and treaties on human rights as background for social and political changes that could improve the health of groups and individuals. Topics such as: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS: torture, poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Possible optional opportunities to observe at community sites where human rights and health are issues. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva. PowerPoint presentation on topic of choice required.
3 units, Spr (Laws, A)

MED 120Q. Pathophysiology and Clinical Aspects of Diseases of the Heart and Blood Vessels
Preference to sophomores. Anatomy, physiology, pathology, and clinical aspects that comprise the discipline of cardiovascular medicine. Anatomical and physiological of the heart and blood vessels as an introduction to pathological states such as heart attack, stroke, congestive heart failure, rhythm disturbances of the heart, and sudden cardiac death. Underlying principles of diagnosis and treatment of the disease.
3 units, not given this year

MED 130. YES+Empowerment Course
Adapted for Residential Education from the national YES+ workshop program, an innovative, dynamic, and fun life skills program which empowers students with tools to eliminate stress, increase energy, handle negative emotions, increase mental focus, heighten awareness, and develop strong social and leadership skills. Students learn a set of powerful breath-based meditation techniques which clear the mind and enhance success in school, work, and interpersonal relationships. See http://us.yesplus.org/ for further insight into the program, Enrollment limited; priority to residents of Castano Hall; others selected by application.
1 unit, Aut (Sengupta, D; Moffino, M; Kao, P), Win (Sengupta, D; Kao, P; Moffino, M), Spr (Staff)

MED 143A. Patient Health Education in Community Clinics
(Same as MED 243A) Open to undergraduate, graduate, and medical students. Principles of health education, theories of behavior change, methods for risk reduction. Presentations of health education modules, focusing on topics prevalent among underserved populations. Students apply theoretical frameworks to health education activities in the Cardinal Free Clinics. Pre- corequisite: MED 157. Application required. Contact evelynh@stanford.edu
MED 143B. Patient Health Education in Community Clinics - Practicum
(Same as MED 243B) Open to undergraduate, graduate, and medical students. For students who have completed MED 143A/243A and currently volunteer in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Prerequisite: successful completion of MED 143A/243A.
2 units, Win (Martin, M; Osterberg, L)

MED 143C. Patient Health Education in Community Clinics - Practicum
(Same as MED 243C) Open to undergraduate, graduate, and medical students. For students currently volunteering in one of the course-affiliated clinic sites. Students apply health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Pre-requisites: MED 143A/243A, Med 143B/243B.
2 units, Spr (Staff)

MED 147. Methods in Community Assessment, Evaluation, and Research
(Same as MED 247) Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.
3 units, Spr (Staff)

MED 149. Medical Interpreting: Skills and Etiquette
(Same as MED 249) Open to medical students, graduate students, and undergraduates. The skills and etiquette of medical interpreting from a crosscultural perspective. All students are required to volunteer at the Pacific or Arbor Free Clinic. Completion qualifies students to become volunteer interpreters at the Pacific or Arbor Free Clinic. Service Learning Course (certified by Haas Center). Prerequisite: fluency in a language other than English.
1 unit, Aut (Pompei, P; Osterberg, L; Londono Tobon, A), Spr (Staff)

MED 157. Foundations for Community Health Engagement
Open to undergraduate, graduate, and MD students. Examination and exploration of community health principles and their application at the local level. Designed to prepare students to make substantive contributions in a variety of community health settings (e.g., clinics, government agencies, non-profit organization, advocacy groups). Topics include community health assessment; health disparities; health promotion and disease prevention; strategies for working with diverse, low-income, and underserved populations; and principles of ethical and effective community engagement.
3 units, Aut (Garcia, G; Hoaney, C)

MED 160. Physician Shadowing: Stanford Immersion in Medicine Series (SIMS)
Undergraduates are paired with a physician mentor at Stanford Hospital and Clinics, Lucile Packard Children's Hospital, or the Veteran's Administration Hospital. May be repeated for credit. Prerequisite: Application and acceptance to the SIMS program.
1 unit, Aut (Gesundheit, N; Lewis, P; Williams, R), Win (Gesundheit, N; Lewis, P; Williams, R), Spr (Staff)

MED 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN MEDICINE
Primarily for graduate students; undergraduates may enroll with consent of instructor.

MED 201. Internal Medicine: Body as Text
Body as Text refers to the idea that every patient's body tells a story. The narrative includes the past and present of a person's social and medical condition; it is a demonstration of the phenotype. The art of reading the body as text was at its peak in the first half of the 20th century, but as technology has become ascendant, bedside skills and the ability to read the text have faded. Beyond scientific knowledge and medical facts, it is this often forgotten craft which is at the heart of the excitement of being an internist. This course introduces students to the art of the clinical exam, to developing a clinical eye, and learning to see the body in a completely different way.
1 unit, Aut (Verghese, A; Shah, A; Kita, R)

MED 202. Alternative Spring Break: Rural and American Indian Health Disparities
Open to MD, graduate, and undergraduate students. Classroom preparation followed by a one week spring break service learning experience on a reservation in South Dakota. Introduces students to the challenges and promise of Native American and rural health care, and the role of communities as leaders and problem solvers. Includes lectures, discussion and readings pertaining to Native American culture, current research in Native American health, and the methods and practice of community based participatory research. Culminates in formulation of a plan for communicating with and engaging community partners in South Dakota: Indian Health Services, Habitats for Humanity, Porcupine Clinic, Teach for America, and Sinte Gleska University.
3 units, Win (Garcia, G; Morrison, S)

MED 203. Stanford - Papua New Guinea Medical Project
Discussion group focused on ethnography and global health education opportunities in rural settings of Papua New Guinea. Students who have or are interested in working in Papua New Guinea to expand health education are invited to participate. Topics include empowerment of clients to stay healthy through intelligent nutrition and exercise, and through safe sexual practices.
1 unit, Spr (Staff)

MED 204. Access and Delivery of Essential Medicines to Poor and Underserved Communities
Student initiated lecture series. Guest speakers. Topics include: neglected diseases, underserved and impoverished markets, disease profiles of lower and middle income countries, pricing and distribution of biomedical end products, intellectual property in medicine and its effect on delivery of healthcare.
1 unit, Aut (Vogel, L; Barry, M)

MED 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis
(Same as HRP 206, STATS 211) Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.
3 units, Win (Olkin, I; Ioannidis, J)

MED 207. History of Medicine
Weekly lectures that trace the development of Western medical tradition from Babylonian, Egyptian, and Greek ancient cultures to the present.
1 unit, Win (Camargo, C)

MED 217. Technological Frontiers in Digestive Diseases
Focused on introducing engineering, bioengineering, and physical sciences students to technologies used in the clinical setting. Topics include: endoscopes to detect and remove cancer; minimally invasive surgery to treat obesity; measurements of propulsion through the intestine; and technologies to detect and stop internal bleeding. Observations in the clinical setting; visits to laboratories engaged in the development of new technologies.
1 unit, Spr (Friedland, S)

MED 223. Cardiovascular and Pulmonary Sciences Seminar
Weekly modified journal club primarily for CVP Scholarly
COURSES OF INSTRUCTION

Application students, Cardiovascular Institute graduate students, clinical and research fellows, and faculty. Open to other graduate students and medical students (Advanced undergraduate students with permission of instructor). Each meeting begins with an overview of a particular area by a faculty member, followed by presentation of a seminar paper in that area by a postdoctoral fellow or a graduate student. Discussion follows the presentation, after which the faculty moderator meets separately with the medical students for further questions and discussion.

2 units, Aut (Cooke, J; Rabinovitch, M; Rockson, S; Tsao, P), Win (Cooke, J; Rabinovitch, M; Rockson, S; Tsao, P), Spr (Staff) MED 227. Bedside Ultrasound

For pre-clinical or clinical medical students, and others with permission. Introduces students to diagnostic ultrasound at the bedside. The anatomy of the heart, abdomen, and pelvis pertinent to ultrasound is taught. Some pathology involving these areas is also introduced. As the students’ proficiency increases, those electing to can visit the Pacific Free Clinic to be introduced to scanning patients. 1 unit for class attendance only; 2 units for class attendance and participation in the Pacific Free Clinic.

1-2 units, Aut (Kao, P; Thompson, N; Tran, P), Win (Kao, P; Thompson, N; Tran, P), Spr (Staff) MED 228. Physicians and Social Responsibility

Social and political context of the roles of physicians and health professionals in social change; policy, advocacy, and shaping public attitudes. How physicians have influenced governmental policy on nuclear arms proliferation; environmental health concerns; physicians in government; activism through research; the power on health; homelessness; and gun violence. Guest speakers from national and international NGOs.

1 unit, Aut (Laws, A; Vilendrer, S) MED 230. Rethinking Global Health

(Same as HRP 240) Challenges for those seeking to improve global health include contending with: a dynamic balance between infectious and chronic non-communicable disease that differs across and within countries; issues relating to the proximate and more removed causes of disease and illness, including nutrition, infrastructure, governance, economic development, and environmental changes; diverse proposed responses with arguments for particular courses of action appealing to cost-effectiveness, egalitarian, and rights-based principles. The course goal is to begin to make sense of these challenging issues, requiring data and evidence derived via multiple methodologies, careful thinking, and sound reasoning. Prerequisite: a course dealing with global health, such as HUMBIO 129S, or consent of instructor.

3 units, Spr (Staff) MED 231. Measuring Global Health

(Same as HRP 241) Open to MD, graduate, and undergraduate students. Assessing the global burden of disease, its distribution among and within countries, its causes, and appropriate interventions requires rigorous quantitative approaches. This course develops skills in these areas by critically examining questions like: How do we know who is sick and where? How are risk factors incorporated into our projections of future disease trends? How do we combine mortality and morbidity in a meaningful way? What works for improving health efficiently? What policies build familiarity with relevant data and their analysis. Prerequisite: Course in statistics, biostatistics, econometrics, or equivalent.

4 units, Spr (Bendavid, E; Goldhaber-Fiebert, J) MED 240. Sex Differences in Human Physiology and Disease

(Same as OBGYN 240, HUMBIO 140) Chromosomal and hormonal influences on cells, tissues, and organs that underlie the development of reproductive organs and sexual dimorphism of the nervous system. Effects of endogenous sex hormones and environmental factors that differ between men and women on the musculoskeletal, neurological, cardiovascular, and immunological systems over the lifespan, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women and with aging in men). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor.

2-3 units, Win (Stefanick, M) MED 241. Context and Practice of Health Care in Free Clinics

Preparation for working in free clinics, awareness of health care context and health disparities among underserved patients, and introduction to key skills for patient care. Topics include: patient history, screening tests, health insurance, cultural sensitivity, role of interpreters, and tuberculosis testing. Meets at either Arbor or Pacific free clinic to increase familiarity with free clinic operations and environment. Integrates with concurrent Practice of Medicine course.

1 unit, not given this year MED 242. Physicians and Human Rights

Weekly lectures on how human rights violations affect health. Topics include: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva.

1 unit, Win (Laws, A; Anand, P) MED 243A. Patient Health Education in Community Clinics

(Same as MED 143A) Open to undergraduate, graduate, and medical students. Principles of health education, theories of behavior change, methods for risk reduction. Presentations of health education modules, focusing on topics prevalent among underserved populations. Students apply theoretical frameworks to health education activities in the Cardinal Free Clinics. Pre- or corequisite: MED 157. Application required. Contact evelynh@stanford.edu

2 units, Aut (Martin, M; Osterberg, L) MED 243B. Patient Health Education in Community Clinics - Practicum

(Same as MED 143B) Open to undergraduate, graduate, and medical students. For students who have completed MED 143A/243A and currently volunteer in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Prerequisite: successful completion of MED 143A/243A.

2 units, Win (Martin, M; Osterberg, L) MED 243C. Patient Health Education in Community Clinics - Practicum

(Same as MED 143C) Open to undergraduate, graduate, and medical students. For students currently volunteering in one of the course-affiliated clinic sites. Students apply health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Pre-requisites: MED 143A/243A, Med 143B/243B.

2 units, Spr (Staff) MED 246. The Medical Interview for Spanish Speakers

Student led forum for practicing and learning medical Spanish related specifically to the medical interview. Prepares clinical students to interact more effectively with Spanish speaking patients in clinics. Classes are topical; each class includes a demonstration, medical vocabulary practice, and conversational practice on the topic of the day.

1 unit, Aut (Garcia, G; Londono Tobon, A), Win (Garcia, G; Londono Tobon, A), Spr (Staff) MED 247. Methods in Community Assessment, Evaluation, and Research

(Same as MED 147) Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.

3 units, Spr (Staff)
MED 248. Student Rounds
Teams of preclinical students meet weekly with a clinical student to hear the history and physical of a recent case the clinical student encountered on the wards. Following the presentation, the preclinical students work together under the guidance of the clinical student to develop a problem list and plan, which are then compared with the problem list, plan, and orders made by the actual admitting team. In the course of presenting the cases, the clinical student describes personal experiences and practical components of ward work and daily clinical routine.

1 unit, Aut (Kenny, K), Win (Kenny, K), Spr (Kenny, K), Sum (Kenny, K)

MED 249. Medical Interpreting: Skills and Etiquette
(Same as MED 149) Open to medical students, graduate students, and undergraduates. The skills and etiquette of medical interpreting from a crosscultural perspective. All students are required to volunteer at the Pacific or Arbor Free Clinic. Completion qualifies students to become volunteer interpreters at the Pacific or Arbor Free Clinic. Service Learning Course (certified by Haas Center). Prerequisite: fluency in a language other than English.

1 unit, Aut (Pompeo, P, Osterberg, L, Londono Tobon, A), Spr (Staff)

MED 253. The Impact of Multinationals Upon Global Health
(Same as GSGBEN 553) Open to medical, graduate, and undergraduate students. The role of global industries and multinational organizations in shaping the health of individuals around the globe. Explores the salient debates on the impact of industries such as food, tobacco, and aluminum; the role of global health initiatives and foreign aid industries they spawned; how the changing landscape of human health and disease is affected by these industries; historical legacies and future prospects. Illustrative cases and lectures with a distinguished roster of guest speakers including: Sir Richard Feachem, former director of the Global Fund to Fight AIDS, Tuberculosis and Malaria, on the link between the aid industry and health; FDA commissioner David Kessler, on industry evasion and its impact on health; Mark Cullen, Stanford Professor of Medicine, on Alcoa and an aluminum multinational taking on a health mission; Derek Yach, Director of Global Health at Pepsico on how Pepsi and the other industries¿ historical legacies and future prospects.

2 units, not given this year

MED 255. The Responsible Conduct of Research
Forum. How to identify and approach ethical dilemmas that commonly arise in biomedical research. Issues in the practice of research, such as in publication and interpretation of data, and issues raised by academic/industry ties. Contemporary debates at the interface of biomedical science and society regarding research on stem cells, bioweapons, genetic testing, human subjects, and vertebrate animals. Completion fulfills NIH/ADAMHA requirement for instruction in the ethical conduct of research. Prerequisite: research experience recommended.

1 unit, Aut (Karkazis, K), Win (Karkazis, K), Spr (Staff)

MED 255C. The Responsible Conduct of Research for Clinical Researchers
Engages clinical researchers in discussions about ethical issues commonly encountered during their clinical research careers and addresses contemporary debates at the interface of biomedical science and society. Graduate students required to take RCR who are or will be conducting clinical research are encouraged to enroll in this version of the course. Prerequisite: research experience recommended.

1 unit, Aut (Karkazis, K), Spr (Staff)

MED 256. Global HIV/AIDS
(Same as HUMBIO 156) Public health, policy, and research issues. Identify resources at Stanford, and from government, NGOs, and pharmaceutical, advocacy, and international organizations. Sources include biomedical, social, and behavioral sciences. Emphasis on student projects which feature methodologies in the development and design of Operational Research and Implementation Science in AIDS/TB and Malaria in response to PEPFAR and Global Fund programs. Guest lectures. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, Aut (Katzenstein, D)

MED 257A. Community Health Advocacy
A three quarter service-learning practicum designed to provide students with concrete skills for working in community-based clinics and to broaden and deepen their understanding of the context of this work and the populations being served. The social role of physicians is a central theme. Students must make a commitment to weekly shifts in one of the course-affiliated clinic sites throughout the academic year and must take responsibility for integrating clinic and classroom experiences. Full participation in the classroom is required; students must come to class prepared to reflect on clinic shifts and to practice skills through role-playing and other exercises. Pre-or co-requisite: MED 157; application required prior to start of autumn quarter. Contact cburks@stanford.edu. Service Learning Course (certified by Haas Center).

2 units, Aut (Garcia, G; Banchoff, A)

MED 257B. Community Health Advocacy
Second quarter of a three quarter service-learning practicum designed to provide students with concrete skills for working in community-based clinics and to broaden and deepen their understanding of the context of this work and the populations being served. The social role of physicians is a central theme. Students must make a commitment to weekly shifts in one of the course-affiliated clinic sites throughout the academic year and must take responsibility for integrating clinic and classroom experiences. Full participation in the classroom is required; students must come to class prepared to reflect on clinic shifts and to practice skills through role-playing and other exercises. Pre-or co-requisite: MED 257A; application required prior to start of winter quarter. Service Learning Course (certified by Haas Center).

3-4 units, Win (Garcia, G)

MED 257C. Community Health Advocacy
Third quarter of a three quarter service-learning practicum designed to provide students with concrete skills for working in community-based clinics and to broaden and deepen their understanding of the context of this work and the populations being served. The social role of physicians is a central theme. Students must make a commitment to weekly shifts in one of the course-affiliated clinic sites throughout the academic year and must take responsibility for integrating clinic and classroom experiences. Full participation in the classroom is required; students must come to class prepared to reflect on clinic shifts and to practice skills through role-playing and other exercises. Students who complete a clinic-identified service project are required to enroll for 4 units. Prerequisites: MED 257A,B and instructor approval. Service Learning Course (certified by Haas Center).

3-4 units, Spr (Staff)

MED 258A. Advanced Community Health Advocacy
A three quarter course for students who have completed at least one year in the Community Health Advocacy Program (MED 257A,B,C); designed to augment the individual- and systems-level advocacy skills developed in the MED 257 series, with a focus on policy and media advocacy. The course also provides a forum for leadership development and continued growth in the clinic-based community advocate role. Students are expected to assist in the training and mentoring of MED 257 students at partner sites, and to act as a liaison between the clinic partner and the course directors. Equal dedication to both advocacy skills development and program leadership role fulfillment is expected. Class time includes guest speakers, discussions on current events related to community health, case studies of clinical experiences, and coordinator check-ins. Service Learning Course (certified by Haas Center). Unit value based on extent of clinic participation. Prerequisite: MED 257A,B,C.

2-3 units, Aut (Garcia, G; Banchoff, A)

MED 258B. Advanced Community Health Advocacy
Second quarter of a three quarter course for students who have completed at least one full year in the Community Health Advocacy Program (MED 257A,B,C); designed to augment the individual- and systems-level advocacy skills developed in the MED 257 series, with a focus on policy and media advocacy. The course also provides a forum for leadership development and continued growth in the clinic-based community advocate role. Students are expected to assist in the training and mentoring of
MED 257 students at partner sites, and to act as a liaison between the clinic partner and the course directors. Equal dedication to both advocacy skills development and program leadership role fulfillment is expected. Class time includes guest speakers, discussions on current events related to community health, case studies of clinical experiences, and coordinator check-ins. Service Learning Course (certified by Haas Center). Unit value based on extent of clinic participation. Prerequisite: MED 257A,B,C; 2-3 units, Win (Garcia, G)

MED 258C. Advanced Community Health Advocacy
Third quarter of a three quarter course for students who have completed at least one full year in the Community Health Advocacy Program (MED 257A,B,C); designed to augment the individual- and systems-level advocacy skills developed in the MED 257 series, with a focus on policy and media advocacy. The course also provides a forum for leadership development and continued growth in the clinic-based community advocate role. Students are expected to assist in the training and mentoring of MED 257 students at partner sites, and to act as a liaison between the clinic partner and the course directors. Equal dedication to both advocacy skills development and program leadership role fulfillment is expected. Class time includes guest speakers, discussions on current events related to community health, case studies of clinical experiences, and coordinator check-ins. Service Learning Course (certified by Haas Center). Unit value based on extent of clinic participation. Prerequisite: MED 257A,B,C; 2-3 units, Spr (Staff)

MED 259. Oaxacan Health on Both Sides of the Border
Required for students participating in the Community Health in Oaxaca immersion program. Introduction to the health life-style and health-seeking behaviors of Oaxacan and other Mexican migrants; the health challenges these groups face. Through discussion and reflection, students prepare for clinical work and community engagement in Oaxaca, while also gaining knowledge and insight to make connections between their experiences in Mexico and their health-related work with Mexican immigrants in the Bay Area. Service Learning Course (certified by Haas Center). Prerequisite: application and acceptance into the Community Health in Oaxaca Summer Program (http://och.stanford.edu/oaxaca.html).
2 units, Spr (Staff)

MED 260. HIV: The Virus, the Disease, the Research
(Same as IMMUNOL 260) Open to medical students, graduate students in biological sciences, undergraduates with strong biological background. Topics: immunopathogenesis immune dysfunction, opportunistic infections including TB, and emerging genomics viral genetic analyses that have traced the origin of HIV-1 and HIV-2 to primates, dated the spread of infection in humans, and characterized the evolution of the virus within infected individuals; antiretroviral drug development identification of drug targets, structure-based drug design, overcoming drug resistance, phase I-II clinical trials, and role of community activism; clinical management solutions in high- and low-income countries; vaccine development learning from past failures and the future of engineering the human immune response. 4 units includes a final project assigned in consultation with the instructor to fit the individual student's background and area of HIV interest.
3-4 units, Spr (Staff)

MED 262. Economics of Health Improvement in Developing Countries
(Same as ECON 127) Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and 102B.
5 units, Win (Miller, N)

MED 263. Advanced Decision Science Methods and Modeling in Health
(Same as HRP 263) Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.
3 units, Spr (Staff)

MED 271. Global Biodiversity: Medical Technology in an International Context
(Same as BIOE 371) (Same as OIT 587) Seminar examines the development and commercialization of medical technologies in the global setting focusing primarily on Europe, India and China. Faculty and guest speakers from industry and government discuss the trends of the industry, as well as opportunities in and challenges to medical technology innovation unique to each geography. Topics related to development of technologies for bottom of the pyramid markets are also addressed. Students enrolling for 2 units are required to write and deliver a final paper. Application may be required due to high demand.
1-2 units, Spr (Doshi, R; Shen, C; Yock, P; Pietzsch, J)

MED 272A. Biodiversity Innovation: Needs Finding and Concept Creation
(Same as BIOE 374A, ME 368A) (Same as OIT 384) Two quarter sequence. Inventing new medical devices and instrumentation, including: methods of validating medical needs; techniques for analyzing intellectual property; basics of regulatory (FDA) and reimbursement planning; brainstorming and early prototyping. Guest lecturers and practical demonstrations.
4 units, Win (Yock, P; Zenios, S; Milroy, J; Brinton, T)

MED 272B. Biodiversity Innovation: Concept Development and Implementation
(Same as BIOE 374B, ME 368B) (Same as OIT 385) Two quarter sequence. How to take a medical device invention forward from early concept to technology translation and development. Topics include prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation route (licensing versus start-up); ethical issues including conflict of interest; fundraising approaches and cash requirements; essentials of writing a business or research plan; strategies for assembling a development team. Prerequisite: MED 272A, ME368A, OIT 384 or BIOE 374A.
4 units, Spr (Yock, P; Zenios, S; Milroy, J; Brinton, T)

MED 274. Design for Service Innovation
(Same as HRP 274) (Same as OIT 344) Open to graduate students from all schools and departments. An experiential course in which students work in multidisciplinary teams to design new services (including, but not limited to, web services) to address the needs of an underserved population of users. Students learn to identify the key needs of the target population and to design services to address these needs. Projects in 2012 will focus on services for young adult survivors of severe disabilities such as cystic fibrosis, rheumatoid arthritis, major cardiac repairs, organ transplants, genetic metabolic disorders, and cancer. The first wave of survivors is reaching young adulthood (ages 18-25). Many aspects of the young adult world are not yet user-friendly for them: applying to and entering college, adherence to required medication and diet, prospects for marriage and parenthood, participation in sports, driving, drinking, drugs, and more. The aspiration is to develop services to improve these young.
4 units, Spr (Staff)

MED 275. Introduction to Biopharmaceutical Innovation
Open to all students. Biotechnology and the pharmaceutical industry. Topics include the biopharmaceutical industry, historical trends and experiences; research and development; intellectual property, drug approval: regulatory issues and agencies; business development; marketing; manufacturing; capital structure and financing; careers in biopharmaceutical industry. 2-unit option, lectures and weekly assignments, MED or S/NC grading only. 3-unit option, including a group project and final presentation, may be taken for a letter grade. May be repeated for credit.
2-3 units, Win (Gardner, P)

MED 276. Careers in Medical Technology
Career tracks in biomedical technology for medical, life science, engineering, business and law students or professionals. Industry professionals describe career tracks, current roles, and industry perspectives. 2-unit option, lectures and weekly assignments, MED or S/NC grading only. 3-unit option, including a group project and final presentation, may be taken for a letter grade. May be repeated
MED 282. Early Clinical Experience at the Cardinal Free Clinics
Students provide health care in a student-run clinic for the homeless and uninsured. Student volunteers are guided in the practice of medical interviews, history-taking and physical examinations as appropriate. Clinical students and attending physicians provide support and guidance as the team arrives at a diagnosis and management plan. One unit for students who volunteer a minimum of twice a month. Two units of credit for Steering Committee members or students whose volunteer commitment is greater than twice a month.
1-2 units, Aut (Osterberg, L), Win (Martin, M; Osterberg, L), Spr (Martin, M; Osterberg, L), Sum (Martin, M; Osterberg, L)

MED 289. Introduction to Bioengineering Research
(Same as BIOE 390) Preference to medical and bioengineering graduate students with first preference given to Bioengineering Scholarly Concentration medical students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Students and faculty will make presentations during the course. Students will be expected to make presentations, complete a short paper, read selected articles, and take quizzes on the material.
1-2 units, Aut (Gold, G; Wang, P)

MED 295. Advanced Cardiac Life Support
(For clinical MD students only) Prepares students to manage the victim of a cardiac arrest. Knowledge and skills necessary for resuscitation of critically-ill patients. Clinical scenarios and small group - discussions - address cardiovascular pharmacology, arrhythmia recognition and therapy, acute coronary syndrome including myocardial infarction, ventricular dysrythmias and defibrillation, and acute ischemic stroke. Requires pre-course preparation and an intensive two-day session on a Friday and Saturday. Students should get the approval of their Clerkship Coordinator before registering for the course. Recommended prerequisites: Medicine 300A, Pediatrics 300A, or Surgery 300A.
2 units, Aut (Giacomini, J), Win (Giacomini, J), Spr (Giacomini, J)

MED 299. Directed Reading in Medicine
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MED 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MED 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MEDICINE INTERDISCIPLINARY (INDE) COURSES

GRADUATE COURSES IN MEDICINE INTERDISCIPLINARY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

INDE 200. The Future of Academic Medicine
Required for first-year MSTP students; limited to MSTP. Presentations of research directions and opportunities by chairs of basic science, clinical departments, and PhD programs. Prerequisite: instructor consent.
1 unit, Aut (Kim, S; Utz, P), Win (Kim, S; Utz, P)

INDE 201. Practice of Medicine I
Six quarter series extending throughout the first two years of the MD program, interweaving core skills training in medical interviewing and the physical examination with other major threads addressing the context of medical practice: information literacy, nutrition principles, clinical epidemiology and biostatistics, evidence-based practice, psychiatry, biomedical ethics, health policy, population health. Core clinical skills are acquired through hands-on practice, and evaluated through an extensive program of simulated medical encounters. Students interview, examine, and manage patients in a mock clinic. The information literacy thread introduces students to informatics and knowledge management, biomedical informatics, and evidence-based medicine searching. Nutrition principles are acquired through interactive, web-based instruction, and reinforced through problem-based learning cases, which run in parallel to the basic science components over the first year. In epidemiology.
11 units, Aut (Basaviah, P)

INDE 202. Practice of Medicine II
Medical interview and physical examination skills, information literacy, nutrition principles, evidence-based practice, health policy, and population health are covered. Students begin clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students begin transition from comprehensive to problem-focused patient encounters. Students also gain exposure to geriatrics, pediatrics, and interprofessional healthcare teams, and practice essential health interview skills. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series.
8 units, Win (Basaviah, P)

INDE 203. Practice of Medicine III
Medical interview and physical examination skills, biomedical literature retrieval and appraisal, nutrition principles, evidence-based practice, biomedical ethics, and population health are covered. Students begin clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students begin transition from comprehensive to problem-focused patient encounters. Students also gain exposure to geriatrics, pediatrics, and interprofessional healthcare teams, and practice essential health interview skills. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series.
8 units, Spr (Staff)

INDE 204. Practice of Medicine IV
In second-year POM, there are two major educational categories: clinical reasoning and clinical exam skills. These two components are taught within five curricular components that include Clinical Reasoning teaching rounds and small group, Clinical Practicum, Clinical Procedures / Introduction to the Management of the Ill Patient simulation (IMIP), Advanced Clinical Skills, and Psychiatry. Within Clinical Reasoning sessions, students analyze case vignettes that integrate course themes described above with clinical medicine scenarios. Within Practicum, students spend alternate one-half day(s) per week in a clinical setting with a supervising faculty member, practicing medical interview and physical examination skills. Advanced Clinical Skills sessions provide hands-on practice working with faculty and patients on particular clinical themes that correlate with the basic science curriculum as well as the clinical curriculum. Specialists often co-teach these sessions, providing a focused 10 units, Aut (Basaviah, P)

INDE 205. Practice of Medicine V
In second-year POM, there are two major educational categories: clinical reasoning and clinical exam skills. COURSES OF INSTRUCTION

INDE 206. Practice of Medicine VI
Prep for the Clerkships is a month-long curriculum focused on preparing students with skills, knowledge, and approaches directly applicable to their upcoming clinical rotations. The experience provides hands-on workshops, simulated sessions, patient encounters, small group sessions, and a few large group sessions comprising a capstone for the two-year longitudinal curriculum in POM. In general, the individual sessions are tied to clinically relevant themes, including: procedural skills (cadaver lab, EMEDE); clinical skills (Master Clinician session, bedside rounds, advanced presentations, patient safety, abuse and reporting responsibilities with survivor panel); clinical specialty sessions (dermatology, palliative medicine, ophthalmology); clinical essentials (EKG, interventional radiology, fluid and electrolytes, electronic medical records); and professionalism (Everyday Professionalism session, ethics sessions).
9 units, Spr (Staff)

INDE 207A. Medical Mandarin I: Beginning
Develops essential medical vocabularies and conversational communication skills. Teaches the pinyin pronunciation system, which provides an accessible method of learning basic phrases. The foundations of taking a comprehensive patient history in Mandarin and doing medical interviews at individual hospital divisions, including making introductions, soliciting symptoms, explaining health concepts (e.g. diseases and prescriptions). Main goals are to improve rapport with Chinese patients through Mandarin fluency in the medical setting and to promote understanding of Chinese culture in the context of health care. Students registering for 3 units participate in clinic visits and field activities.
2-3 units, Aut (Wang, X; So, S)

INDE 207B. Medical Mandarin II: Intermediate
For students who already have a basic command of spoken Chinese. Conversational communication skills practiced in a more advanced setting, including more sophisticated assessment of patient history and cultural components that influence diseases found in Chinese-speaking patients. Builds working vocabulary for organ system disease processes to conduct a full physical exam, and to describe treatment modalities for Chinese-speaking patients (diagnostic and therapeutic). Students registering for 3 units participate in clinic visits and field activities. Prerequisite: one quarter of college-level Chinese or instructor assessment of fluency.
2-3 units, Aut (Wang, X; So, S)

INDE 207C. Medical Mandarin III: Advanced
Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units includes clinic visits and field activities. Prerequisite: completion of Medical Mandarin II, or advanced Chinese proficiency.
2-3 units, Aut (Wang, X; So, S)

INDE 207D. Mandarin for Medical Professionals I
Designed for students who have completed Advanced Medical Mandarin and want to seek further professional development with respect to medical Mandarin. Coursework includes selected research and projects, clinic visits and field activities, via Mandarin. Students choose to enroll for 2 units or 3 units depending upon an agreed upon workload approved by the instructor. Prerequisite: completion of Advanced Medical Mandarin, INDE 209C.
2-3 units, Aut (Wang, X; So, S)

INDE 208A. Medical Mandarin I: Beginning
Continuation of 207A. See description for 207A. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.
2-3 units, Win (Wang, C; So, S)

INDE 208B. Medical Mandarin II: Intermediate
Continuation of 207B. See description for 207B. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.
2-3 units, Win (Wang, C; So, S)

INDE 208C. Medical Mandarin III: Advanced
Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units includes clinic visits and field activities. Prerequisite: completion of 207C, or advanced Chinese proficiency.
2-3 units, Win (Wang, C; So, S)

INDE 208D. Mandarin for Medical Professionals II
Continuation of INDE 207D. Designed for students who have completed Advanced Medical Mandarin and want to seek further professional development with respect to medical Mandarin. Coursework includes selected research and projects, clinic visits and field activities, via Mandarin. Students choose to enroll for 2 units or 3 units depending upon an agreed upon workload approved by the instructor. Prerequisite: INDE 207D.
2-3 units, Win (Wang, C; So, S)

INDE 209A. Medical Mandarin III: Beginning
Continuation of 207A/208A. See description for 207A. Students participating only in classroom and online instruction register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.
2-3 units, Spr (Staff)

INDE 209B. Medical Mandarin III: Intermediate
Continuation of 207B/208B. See description for 207B. Students participating only in classroom and online instruction register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.
2-3 units, Spr (Staff)

INDE 209C. Medical Mandarin III: Advanced
Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units includes clinic visits and field activities. Prerequisite: completion of 208C or advanced Chinese proficiency.
2-3 units, Spr (Staff)

INDE 209D. Mandarin for Medical Professionals III
Continuation of INDE 208D. Designed for students who have completed Advanced Medical Mandarin and want to seek further professional development with respect to medical Mandarin. Coursework includes selected research and projects, clinic visits and field activities, via Mandarin. Students choose to enroll for 2 units or 3 units depending upon an agreed upon workload approved by the instructor. Prerequisite: INDE 208D.
2-3 units, Spr (Staff)

INDE 211. Creative Writing
For medical students - all levels of writing skill. Examines uses of creative writing, including understanding the experience of medical training. May be repeated for credit.
1 unit, Win (Shafer, A)

INDE 212. The Human Condition: Medicine, Arts, and Humanities
The interdisciplinary field of medical humanities: the use of the arts and humanities to examine medicine in personal, social, and cultural contexts. Topics include the doctor/patient relationship, the patient perspective, the meaning of doctoring, and the meaning of illness. Sources include visual and performing arts, film, and literary genres such as poetry, fiction, and scholarly writing. Designed for medical students in the Biomedical Ethics and Medical Humanities Scholarly Concentration, but all students are welcome.
2 units, Spr (Staff)

INDE 214. Stanford Medical Student Journal
Provides an opportunity for editors of all levels to cultivate their skills and assist in preparing pieces submitted by colleagues for publication in the Stanford Medical Student Journal. Students
enrolled in the course work closely with student authors as well as other editors. Editors examine multiple categories of writing, including opinion pieces, poetry, memoirs, book reviews, case reports and investigative reports. The Journal is published two to three times per year and highlights the diverse talents of Stanford medical students in both scientific writing and the humanities.

1 unit, Aut (Connolly, A; Shafer, A), Win (Shafer, A; Connolly, A), Spr (Staff)

INDE 215. Queer Health and Medicine
Explores specific, pertinent, and timely issues impacting the health of the lesbian, gay, bisexual, and transgender community; examines the role of the primary care physician in addressing the health care needs of this community. Guest lecturers provide a gender-sensitive approach to the medical care of the LGBT patient, breaking down homophobic barriers and reaffirming patient diversity. May be repeated for credit.

1 unit, Spr (Staff)

INDE 216. Cells to Tissues
Focuses on the cell biology and structural organization of human tissues as self-renewing systems. Topics include identification and differentiation of stem cells, regulation of the cell cycle and apoptosis in normal and cancerous cells, cell adhesion and polarity in epithelial tissues, intracellular transport, and cell migration. Histology laboratory sessions examine normal and abnormal samples of blood, epithelia, connective tissue, muscle, bone and cartilage. Patient presentations and small group discussions of current medical literature illustrate how cell biology influences medical practice.

3 units, Aut (Connolly, A; Theriot, J)

INDE 220. Human Health and Disease I
Establishes the foundation for the Human Health and Disease block which spans Q3 (Spring Quarter Year One) through Q5 (Winter Quarter Year Two). The Human Health and Disease block presents organ system-based histology, pathology, physiology, pharmacology, and infectious disease in a sequence of interdisciplinary courses. Each organ-specific integrated course includes a review of the anatomy and related histology, normal function of that organ system, how the organ system is affected by and responds to disease including infection, and how diseases of that organ system are treated (therapeutics).

3 units, Win (Siegel, R; Whitlock, J; Regula, D)

INDE 221. Human Health and Disease II
Structure, function, disease, and therapeutics of the respiratory system and the cardiovascular system. See INDE 220 for a description of the Human Health and Disease block.

12 units, Spr (Staff)

INDE 222. Human Health and Disease III
Structure, function, disease, and therapeutics of the renal/genitourinary system, the gastrointestinal system, the endocrine system, male and female reproductive systems, and women's health. See INDE 220 for a description of the Human Health and Disease block.

15 units, Aut (Bhalla, V; Connolly, A; Gesundheit, N; Hillard, P; Love, A; Fao, A; Regula, D; Siegel, R)

INDE 223. Human Health and Disease IV
Structure, function, disease, and therapeutics of the central nervous system, hematologic system and multi-systemic diseases. See INDE 220 for a description of the Human Health and Disease block.

11 units, Win (Connolly, A; DeBattista, C; Glader, B; Regula, D; Schwartz, N; Siegel, R)

Designed for medical students and other health care professionals. Lectures review the epidemiological and clinical research related to eating patterns and misconceptions of the public, the mechanisms of pharmacological effects of food, and related topics common to patient nutritional concerns. Topics include fad diets, the impact of dietary addiction, longevity associated with calorie restriction, toxins in foods and the action of phytoneutrients. Epidemiological, clinical, and biochemical studies are reviewed in the discussion of these and other topics.

1 unit, not given this year

INDE 226. History of Medicine Online
Via Internet. Topics include: ancient medicine, Egypt and Babylonia, ancient Greece and Rome, Europe in the Middle Ages and the Renaissance, 18th-century schools of thought, and technological medicine. Sources include Kleinman's core clinical functions, and text, pictures, hypertext links, and sound clips. For assistance accessing the course, email: cwpsupport@lists.stanford.edu. Enroll in Axess, then ask cwpsupport to be added to the course site as a student.

1 unit, Aut (Shafer, A), Win (Shafer, A), Spr (Shafer, A)

INDE 227. Careers in Medicine: Pathways in the Medical Sciences
Open to medical students, graduate and undergraduate students. Interactive, seminar-style sessions expose students to diverse career opportunities and the challenges of developing work-life balance in medicine. Recognized experts in clinical medicine and biomedical research who have been innovators in their careers discuss their work, decision-points in their career pathways, and lifestyle aspects of their choices.

1 unit, Spr (Staff)

INDE 228. Career Transition Planning: Taking Action Today for a Successful Tomorrow
Open to School of Medicine MD and graduate students; post-docs and clinical fellows may audit by consent of instructor. How to prioritize career goals and develop an effective career planning campaign. Topics: translating scientific and clinical training into a variety of workplace environments, professional network development, professional interest assessment, recruiters' perspectives, credentials development, and creating a marketing plan. Guest speakers from myriad career fields. May be repeated for credit.

1 unit, Spr (Staff)

INDE 229. Managing Difficult Conversations
(Same as GSBGEN 568) Dealing effectively with difficult interpersonal situations in medical contexts. Focus is on improving students' judgment as to how to prepare for and confront difficult discussions in medical situations. Relevant principles of professionalism, leadership, and psychology underlie the course pedagogy. Case-based; student-to-student and student-to-instructor role-playing in actual medical situations. Patient and physician-expert participation as class guests. Enrollment limited to 20 medical students (2nd year and beyond) and 15 2nd year MBA students.

1 unit, Aut (Grousbeck, I; Prober, C)

INDE 230. Scientific Management Series
Designed for postdocs and advanced graduate students. Reviews management skills necessary for successfully assuming leadership roles in scientific research. Addresses some of the most difficult aspects of developing, directing, and managing people and projects and running a research group, especially issues that new faculty have traditionally learned by trial and error over a number of years. Topics include: the faculty job search process and strategies, key elements in starting a lab, basic principles regarding legal dimensions of scientific activity (intellectual property, royalties, links with industry), leading a team, communication and negotiation skills, and writing and securing grants.

1 unit, Win (Sanford, R; Pringle, J)

INDE 231. Future Faculty Seminar
(Same as CTL 231) For graduate students from all disciplines who are considering faculty careers. Postdoctoral fellows, TGR students, and research/clinical trainees may audit by consent of instructor. Explores the broad spectrum of duties and opportunities presented through faculty positions beyond the research-related aspects. Develops awareness of resources and skills that lead to faculty success; answers field-specific and related faculty job questions through discussions with representatives of a variety of academic institutions and fellow course participants. Topics include: finding and obtaining faculty positions, negotiating and navigating the first year, and working toward tenure. May be repeated for credit.

1 unit, Aut (Eberle, S; Puglisi, J; Wright-Dunbar, R)

INDE 232. Introduction to Academic Medicine for Physician-Scientists
Open only to accepted MSTP students. Presentations by Stanford
faculty on professional development topics, including: choosing a dissertation advisor, giving oral presentations, writing a grant proposal, attending scientific meetings, developing a research career. Substantial writing component.

3 units, not given this year

INDE 233. Medical Education Seminar Series
For pre-clinical and clinical medical students. A series of sessions rotating among the following formats: Medical Education journal club; education works-in-progress; topics in medical education design, implementation, and evaluation; teaching M&M; hot topics and controversies in medical education. May be repeated for credit.
1 unit, Aut (Braddock, C; Irvine, C; Violanti, M), Win (Braddock, C; Violanti, M; Irvine, C), Spr (Staff)

INDE 234. Introduction to Writing Research Proposals
Practical instruction in proposal writing. Suitable for advanced graduate students. Substantial writing component. Enrollment by instructor approval only.
3 units, not given this year

INDE 235. Wilderness Leadership and Mentorship Skills for Medical Students
For MD/Master of Medicine wilderness pre-orientation trip (SWEAT) leaders. Training to engage with and prepare incoming first-year medical students for the rigors of medical school. Topics include: fundamentals of wilderness survival, wilderness equipment use, wilderness first aid, camping, outdoor leadership, mentorship, team building, improvisation, risk management, cultural competency, professional role as a physician, reflection and resiliency, first-year curriculum, stress management and coping. Guest lectures from Stanford faculty, emergency medicine physicians, National Outdoor Leadership School wilderness instructors, learning strategy specialists, and mentorship development specialists.
1 unit, Spr (Staff)

INDE 236. Introduction to Teaching and Mentoring
Enrollment limited to medical students. An introduction to medical education teaching principles and skills. Topics include assessment of current teaching skills, reviews of performance, giving appropriate learner feedback, and best practices for interactive teaching. Also introduces the literature around the value of peer mentoring in the medical setting and how to apply this information. Recommended for medical students interested in or currently serving as teaching assistants or interested in future academic positions.
1 unit, Aut (Selig, S; Braddock, C)

INDE 255A. Health Policy, Finance and Economics I
Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research. Team taught by world-renowned experts in their respective fields. Prerequisite: instructor consent.
1 unit, not given this year

INDE 255B. Health Policy, Finance and Economics II
Continuation of INDE 255A. Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research. Team taught by world-renowned experts in their respective fields. For medical students 255A is not prerequisite to 255B. Prerequisite: instructor consent.
1 unit, not given this year

INDE 297. Reflections, Research, and Advances in Patient Care
For clinical MD students. Two-year curriculum designed to provide structured time for students to step back from clerkships, in order to promote reflection on and reinforcement for their learning in the clinical environment. Goals are: to discuss and reflect upon critical experiences in clerkships; to provide continuity of instruction in translational science topics across the curriculum; to reinforce and extend the study of behavioral, cultural, ethical, social and socioeconomic topics introduced in the Practice of Medicine course sequence; to expose students to recent advances in medical discoveries, emphasizing their application to clinical practice (translational medicine); and to develop research and critical thinking skills, acquiring new information in areas related to the Scholarly Concentrations. Components of this curriculum include Doctoring with CARE small groups, the Translating Discoveries lecture/semiminar series, and Scholarly Concentration breakout groups. Prerequisite:
4 units, Aut (Shafer, A; Prober, C), Win (Staff), Spr (Staff), Sum (Staff)

INDE 298. Women’s Health Independent Project
Required for Women’s Health Scholarly Concentration. Students pursue individual projects under the supervision of a faculty member. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MICROBIOLOGY AND IMMUNOLOGY (MI) COURSES

UNDERGRADUATE COURSES IN MICROBIOLOGY AND IMMUNOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MI 175C. Smallpox: Lethal Legacy, Forbidding Future
Case studies related to the evolutionary origins of smallpox, monkeypox, and other emerging pox infections. Topics include public health policy, socio-cultural factors related to pox eradication, research funding, and the use of pox viruses in bioterrorism and as vectors for gene therapy. Fieldtrips and guest speakers focus on the development of novel drugs, personal accounts of the eradication efforts, current clinical trials for pox vaccines, and current laboratory studies of pox.
2 units, not given this year

MI 70Q. Photographing Nature
(Sem) Stanford Introductory Seminar. Utilizes the idiom of photography to learn about nature, enhance observation, and explore scientific concepts. Builds upon the pioneering photographic work of Edward J. Muybridge on human and animal locomotion. A secondary goal is to learn the grammar, syntax, composition, and style of nature photography to enhance the use of this medium as a form of scientific communication and also to explore the themes of change across time and space. Scientific themes to be explored include: taxonomy, habitat preservation, climate change; species diversity; survival and reproductive strategies; animal locomotion, carrying capacity and sustainability, population densities, predation, and predator-prey relationships, open-space management, the physics of photography. Extensive use of field trips and class critique.
3 units, Aut (Siegel, R)

MI 104. Innate Immunology
(Same as IMMUNOL 204, MI 204) Innate immune mechanisms as the primary defenses used by the epithelial and multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.
3 units, Spr (Staff)

MI 115B. The Vaccine Revolution
(Same as HUMBIO 155B) Advanced seminar. Human aspects of viral disease, focusing on recent discoveries in vaccine development and emerging infections. Journal club format: students choose articles from primary scientific literature, write formal summaries, and synthesize them into a literature review. Emphasis is on analysis, experimental design, and interpretation of data. Oral presentations. Enrollment limited to 10. Prerequisites: HUMBIO 155H, MI 155V.
Eukaryotic Parasites: Part I
For graduate students and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. Emphasis is on mechanisms to establish infection in the host and responses of the host to infection. Current literature. Prerequisite: background in biochemistry and molecular biology.

4 units, not given this year

MI 210. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites
For graduate and medical students, and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. The molecular mechanisms by which microorganisms invade animal and human hosts, express their genomes, interact with macromolecular pathways in the infected host, and induce disease. Current literature.

4 units, Win (Monack, D)

MI 211. Advanced Immunology I
(Same as IMMUNOL 215) For graduate students, medical students and advanced undergraduates. Topics include the innate and adaptive immune systems; genetics, structure, and function of immune molecules; lymphocyte activation and regulation of immune responses. Prerequisites: graduate course in Immunology and familiarity with experimental approaches in biochemistry, molecular biology, and cell biology.

3 units, Win (Chien, Y)

MI 215. Principles of Biological Technologies
(Same as IMMUNOL 201) For advanced undergraduates, graduate students in Microbiology and Immunology, and medical students. Topics include student presentations. (The topic last year was: Gene phylogeny, molecular regulation, and bioenergetics. The remainder of the course covers interactive discussion of a topic of current interest in molecular biology, chosen by student participation, and includes student presentations. (The topic last year was: Gene therapy.) Satisfies Central Menu Area 3 for BIO majors.

3 units, Win (Matin, A)

MI 198. Directed Reading in Microbiology and Immunology
Fields of study are decided in consultation with sponsoring professor. Prerequisite: consent of instructor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MI 199. Undergraduate Research
Investigations sponsored by individual faculty members. Possible fields: microbial molecular biology and physiology, microbial pathogenicity, immunity, virology, and molecular parasitology. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN MICROBIOLOGY AND IMMUNOLOGY
Primarily for graduate students; undergraduates may enroll with consent of instructor.

MI 204. Innate Immunology
(Same as IMMUNOL 204, MI 104) Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.

3 units, Spr (Staff)

MI 209. Advanced Pathogenesis of Bacteria, Viruses, and...
biologists to grapple with the manipulation and analysis of large datasets and to address quantitative questions on a systems scale. The goal of this course is to provide biologists with basic computational tools and knowledge to confront large datasets in a quantitative manner. Students will learn basic programming skills in Matlab and Perl. Covered material will include: image analysis, bioinformatics algorithms, reaction-diffusion modeling, Monte Carlo algorithms, and population dynamics. Students will apply computational skills to a miniature research project studying the human microbiome or biofuel-related photosynthetic microbial communities. Spr 2012. (Huang, K., Sonnenburg, J., and Vora, T.) 4 units, Spr (Huang, K; Sonnenburg, J; Vora, T)

MI 250. Frontiers in Microbiology and Immunology
Required of first- and second-year students in Microbiology and Immunology. How to evaluate biological research. Held in conjunction with the Microbiology and Immunology Friday noon seminar series. Before the seminar, students and faculty discuss one or more papers from the speaker's primary research literature on a related topic. After the seminar, students meet informally with the speaker to discuss their research.
1 unit, Aut (Schneider, D), Win (Schneider, D), Spr (Schneider, D)

MI 285. Topics in Microbiology
(Same as MI 185) For advanced undergraduates and graduate students. 1/3rd of the course consists of lectures by the instructor/colleagues. These cover, at an advanced level, with emphasis on bacteria, topics not covered elsewhere, e.g., phylogeny, molecular regulation, and bioenergetics. The remainder of the course involves interactive discussion of a topic of current interest in microbiology, chosen with student participation, and includes student presentations. (The topic last year was: Gene therapy.) Satisfies Central Menu Area 3 for BIO majors. Prerequisites: CHEM 31X, Biology core. 3 units, Win (Matin, A)

MI 299. Directed Reading in Microbiology and Immunology
Prerequisite: consent of instructor. 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MI 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MI 399. Graduate Research
Students who have completed the necessary foundation courses undertake investigations in general bacteriology, bacterial physiology and ecology, bacterial genetics, microbial pathogenicity, immunology, parasitology, or virology sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MI 801. TGR Master's Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MI 802. TGR PhD Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MODERN THOUGHT AND LITERATURE (MTL) COURSES

UNDERGRADUATE COURSES IN MODERN THOUGHT AND LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MTL 130. Introduction to Environmental Humanities:
Cultures of Nature in the American West
(Same as AMSTUD 130) What do we mean when we use the terms nature and culture? This course examines these two complex ideas in the context of the nineteenth, twentieth, and twenty-first century American West. Topics include Los Angeles as a lived space and its place in the national spatial imaginary, urban environmental movements, mining cultures, toxics legacies, geographies of social difference, animal studies, and biodiversity and Native American DNA databases. The approach is interdisciplinary, and includes environmental history, cultural geography, critical race studies, literature, and documentary film methodologies and texts. GER:DB-Hum
3-5 units, not given this year

GRADUATE COURSES IN MODERN THOUGHT AND LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MTL 210. Critical Theory and The Environment
(Same as AMSTUD 210, ANTHRO 210B) Critical theoretical approaches (such as cultural studies, Marxism, postcolonial theory, cultural geography, feminism, and science studies) have generally been underutilized as methodologies for grappling with environmental situations, yet they hold much promise for addressing their complexity. This course asks: How does critical theory about the environment construe the current situation? What kinds of political or technological solutions do these theories call for or imply? The first half of the seminar introduces critical approaches and methodologies in relation to the environment. In the second section, we will use a variety of theoretical approaches to address Native American environmental politics, water, agriculture, toxics, and animals.
3-5 units, Spr (Koelle, A)

MTL 299. Edgework: New Directions in the Study of Culture
Workshop. Required of first-year students in the doctoral program. Modernism, modernity, and discipline (of thought, of method, approaches and methodologies in relation to the environment. In their connection with the individual projects of students in Modern Thought and Literature. May be repeated for credit.
1-3 units, Spr (Moya, P)

MTL 334A. Concepts of Modernity 1: Philosophical Foundations
Modernism, modernity, the obsessive question (asked since the age of the Renaissance) ‘what is now?’ (the human sciences have approached the perspective of historically changing ‘chronotopes’ (i.e. ‘social constructions of time’). The different ways in which different cultures shape the horizons of past, present, and future determine changing modalities of experience and perception, action and behavior, and they thus offer a complex access to and understanding of cultural institutions and discourses. Works by (among others) Kant, Nietzsche, Baudelaire, Marx, Nietzsche, Apollinaire, Heidegger, Beauvoir, Arendt, Lutond.
3 units, Aut (Gumbrecht, H)

MTL 334B. Concepts of Modernity 2: The Study of Culture in the Age of Globalization
(Same as ENGLISH 334B) A survey of 20th-century theory with focus on the concept of culture and methods of studying it from diverse disciplines including sociology, anthropology, history, literary and cultural studies. Discussions will emphasize modernization, postmodernization and globalization processes in the relations to culture broadly understood, cultures in their regional, national, and diasporic manifestations, and cultures as internally differentiated (high and low culture, subcultures, media cultures).
3 units, Win (Moya, P)

MTL 390. Qualifying Paper
Preparation and writing of the qualifying paper for the Ph.D. in Modern Thought and Literature. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MTL 398. Graduate Independent Study
Students pursue a special subject of investigation under supervision of a member of the committee or another faculty member. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MTL 399. Reading for Orals
Reading in preparation for the University Oral Examination. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MTL 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
MOLECULAR AND CELLULAR PHYSIOLOGY (MCP) COURSES

UNDERGRADUATE COURSES IN MOLECULAR AND CELLULAR PHYSIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MCP 126. Neurons and Disease
Diseases of the nervous system. First lecture of each week focuses on the clinical, epidemiological and behavioral aspects of a selected disease or syndrome. Second lecture exposes the cell biological, electrophysiological, biochemical and/or molecular biological processes that underlie each disease presented. Instructors maintain some flexibility in the diseases chosen for elucidation, but students can expect those covered to range from the relatively straightforward, for example Multiple Sclerosis (MS) or Amyotrophic Lateral Sclerosis (ALS), to the more complex, for example, Schizophrenia or Obsessive Compulsive Disorder (OCD). 3 units for lecture and discussion only; 4 units includes a paper. Prerequisite: Biology or Human Biology core.

3-4 units, not given this year

MCP 156. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology
(Same as MCP 256) Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations.

4 units, alternate years, not given this year

MCP 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN MOLECULAR AND CELLULAR PHYSIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MCP 200. Cardiovascular Physiology
Offered jointly with the Department of Medicine. Lectures, small group instruction, clinical presentations, and lab demonstrations of normal and disordered human cardiovascular physiology. Prerequisite: understanding of general biochemistry.

5 units, Spr (Staff)

MCP 202. Advanced Immunology II
(Same as IMMUNOL 202) Readings of immunological literature. Classic problems and emerging areas based on primary literature. Student and faculty presentations. Prerequisite: IMMUNOL 201/MI 211.

3 units, Spr (Staff)

MCP 216. Genetic Analysis of Behavior
(Same as NBIO 216) Advanced seminar. Findings and implications of behavioral genetics as applied to invertebrate and vertebrate model systems. Topics include biological clocks, and sensation and central pattern generators. Relevant genetic techniques and historical perspective. Student presentation.

4 units, alternate years, not given this year

MCP 221. Advanced Cell Biology
(Same as BIO 214, BIOC 224) For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, differentiation, and multicellularity. Current papers from the primary literature. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor.

2-5 units, Win (Kopito, R; Nachury, M; Straight, A; Pfeffer, S; Theriot, J)

MCP 222. Imaging: Biological Light Microscopy
(Same as BIO 152) Survey of instruments which use light and other radiation for analysis of cells in biological and medical research. Topics: basic light microscopy through confocal fluorescence and video/digital image processing. Lectures on physical principles; involves partial assembly and extensive use of lab instruments. Lab. Prerequisites: some college physics, Biology core.

3 units, Spr (Lewis, R; Smith, S)

MCP 232. Advanced Imaging Lab in Biophysics
(Same as APPPHYS 232, BIO 132, BIO 232, BIOPHYS 232) Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate experimental apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

4 units, Spr (Block, S; Smith, S; Stearns, T; Schnitzer, M)

MCP 256. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology
(Same as MCP 156) Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations.

4 units, alternate years, not given this year

MCP 299. Directed Reading in Molecular and Cellular Physiology
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MCP 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MCP 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Research fields include endocrinology, neuroendocrinology, and topics in molecular and cellular physiology. Prerequisite: consent of instructor. (Staff)

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MCP 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MCP 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC (MUSIC) COURSES

UNDERGRADUATE COURSES IN MUSIC

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MUSIC 1A. Music, Mind, and Human Behavior
An introductory exploration of the question of why music is a pervasive and fundamental aspect of human existence. The class will introduce aspects of music perception and cognition as well as anthropological and cultural considerations. GER:DB-Hum

3 units, not given this year

MUSIC 2C. An Introduction to Opera
The lasting appeal of opera as a lavishly hybrid genre from the 1600s to the present. How and why does opera set its stories to
MUSIC 7B. Musical Cultures of the World
An overview of selected musical cultures from Africa, Asia, Europe, and the Americas. Course objectives: cultivate an appreciation for the diversity of human musical expression; discover how music is used to shape social interactions and systems of meaning; develop active listening skills that can be used when encountering any music; gain a preliminary understanding of ethnomusicological concepts and vocabulary. No musical experience is necessary. Class format: Lecture, discussion, listening, guest performances, musical participation, and a concert analysis. GER:DB-Hum, EC-GlobalCom
3 units, Win (Schultz, A)

MUSIC 8A. Rock, Sex, and Rebellion
Development of critical listening skills and musical parameters through genres in the history of rock music. Focus is on competing aesthetic tendencies and subcultural forces that shaped the music. Rock's significance in American culture, and the minority communities that have enriched rock's legacy as an expressively diverse form. Lectures, readings, listening, and video screenings. GER:DB-Hum, EC-AmerCul
3 units, Win (Staff), alternate years, not given next year

MUSIC 10AX. Sound Art
The course will explore the use of sound as a medium for artistic expression, from recording and manipulating environmental sounds to sound-created and processed sounds and musical instrument recordings. We will study the physics of sound, how sound is perceived, how to record and manipulate sound, and how to combine all of this knowledge into the creation of sound art. Instruction will include using portable sound recorders, using the recording studio, and how to think about sound as a medium of expression. A final project will combine these elements in the creation of a presentation of the works we produce in the class.
2 units, Aut (Kadis, J; Leitman, S)

MUSIC 11N. A View from the Podium: The Art of Conducting
(F,Sem) Stanford Introductory Seminar. How a conductor interprets music, realizes a personal vision through the rehearsal process, and communicates with orchestra and audience. Conducting as based on human communication skills. How to apply these lessons to other fields of endeavor. GER:DB-Hum
3 units, Aut (Cai, J)

MUSIC 12A. Introductory Piano Class
(A=level 1; B=level 2; C=level 3) 1 unit, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T), Sum (Staff)

MUSIC 12B. Introductory Piano Class
(A=level 1; B=level 2; C=level 3) 1 unit, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T), Sum (Staff)

MUSIC 12C. Introductory Piano Class
(A=level 1; B=level 2; C=level 3) 1 unit, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T), Sum (Staff)

MUSIC 12SC. Musical Collisions and Radical Creativity
The margins of musical culture; nonconformist, maverick, and eccentric creative impulses that expand the definition of art. Laboratory atmosphere and daily rehearsals in which students create collaborative works with a final public concert involving collaborations with local musicians and presentations of student-composed works created during the course.
2 units, not given this year

MUSIC 13N. South Asian Regional and Popular Music on the Move
(F,Sem) Stanford Introductory Seminar. Introduction to regional and popular musical styles of India and Pakistan, including Marathi kirtan, Punjabi bhangra, Manganiyar music of Rajasthan, Bhojpuri wedding songs, Tamil drum ensembles, Baul music of Bengal, Sufi qawwals, and Hindi film music, and explores how these musics are woven into the fabric of social life in South Asia and its diaspora. How people perform music to: articulate relationship to the divine; make social commentary; effect political change; bring families together; celebrate rites of passage; and, cope with rapid socio-economic changes. GER:DB-Hum
3 units, Aut (Berger, T)

MUSIC 13Q. Classical Music and Politics: Western Music in Modern China
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Social history, cultural studies, China studies, international relations, and music. From the Italian Jesuit, Matteo Ricci who presented a clavichord to the Chinese emperor to the emergence of a modern generation of Chinese musicians. GER:DB-Hum, EC-GlobalCom
3 units, Spr (Cai, J)

MUSIC 15N. The Aesthetics of Data
(F,Sem) Stanford Introductory Seminar. Focus on visual and auditory display of data, specifically, the importance of aesthetic principles in effective data display, and the creative potential of scientific, biological, environmental and other data as inspiration for artistic expression. GER:DB-Hum
3 units, Win (Berger, J)

MUSIC 16N. Music, Myth, and Modernity: Wagner's Ring Cycle and Tolkien's Lord of the Rings
(Same as GERLIT 16N) Preference to freshmen. Roots of Wagner's operatic cycle and Tolkien's epic trilogy in a common core of Norse, Germanic, and Anglo-Saxon mythology. The role of musical motive and characterization in Wagner's music dramas and the film version of Tolkien's trilogy. Music as a key element in the psychological, political, and cultural revision of ancient myth in modern opera and film. GER:DB-Hum, EC-GlobalCom
3 units, not given this year

MUSIC 17Q. Perspectives in North American Taiko
4 units, Win (Sano, S; Uyechi, L)

MUSIC 18A. Jazz History: Ragtime to Bebop, 1900-1940
From the beginning of jazz to the war years. GER:DB-Hum, EC-AmerCul
3 units, Win (Berry, F)

MUSIC 18B. Jazz History: Bebop to Present, 1940-Present
Modern jazz styles from Bebop to the current scene. Emphasis is on the significant artists of each style. GER:DB-Hum, EC-AmerCul
3 units, Spr (Berry, F)

MUSIC 19A. Introduction to Music Theory I
For non-music majors and Music majors or minors unable to pass the proficiency test for entry to MUSIC 21. The fundamentals of music theory and notation, basic sight reading, sight singing, ear training, keyboard harmony, melodic, rhythmic, and harmonic dictation. Skill oriented, using piano and voice as basic tools to develop listening and reading skills. GER:DB-Hum
3 units, Aut (Berger, T)

MUSIC 19B. Intermediate Music Theory
This course is an introduction to music theory geared toward
students who have basic literacy skills (i.e. fundamental notation, identifying major and minor scales, keys, etc). Using musical materials from repertoire selected from campus and area concerts, and incorporating the opportunity to attend these concerts, the course will introduce elements of harmony, melody, form, orchestration and arrangement. The course is an appropriate successor to Music 19A. Students who successfully complete Music 19B can go on directly to Music 21.

3 units, Spr (Berger, T)

MUSIC 20A. Jazz Theory
Introduces the language and sounds of jazz through listening, analysis, and compositional exercises. Students apply the fundamentals of music theory to the study of jazz. Prerequisite: 19 or consent of instructor. GER:DB-Hum

3 units, Aut (Nadel, J)

MUSIC 20B. Advanced Jazz Theory
Approaches to improvisation through listening and transcribing, and developing familiarity with important contributors to this music. Topics: scale theory, altered dominants, and substitute harmony. Prerequisite: 20A or consent of instructor. GER:DB-Hum

3 units, alternate years, not given this year

MUSIC 20C. Jazz Arranging and Composition
Jazz arranging and composition for small ensembles. Foundation for writing for big band. Prerequisite: 20A or consent of instructor. GER:DB-Hum

3 units, Win (Nadel, J)

MUSIC 21. Elements of Music I
Preference to majors. Introduction to tonal theory. Practice and analysis. Diatonic harmony focusing on melodic and harmonic organization, functional relationships, voice-leading, and tonal structures. Ear-training and keyboard-harmony skills; analytical methods and listening strategies. Enrollment limited to 40. Prerequisites: (1) Piano Proficiency Exam (must be passed within the first two weeks of the term) or MUSIC 12A (may be taken concurrently); (2) Passing grade on a basic musical skills proficiency examination on the first day of class or MUSIC 19. GER:DB-Hum

4 units, Aut (Aquilanti, G), Win (Berger, T)

MUSIC 22. Elements of Music II
Preference to majors. Introduction to chromatic harmony focusing on secondary functions, modulations, harmonic sequences, mode mixture, and the Neapolitan, and augmented sixth chords. Analysis of musical forms and harmonizations complemented by harmonic and melodic dictation, sight singing, and other practical skills. Prerequisites: (1) MUSIC 21; (2) Piano Proficiency Exam or MUSIC 12B (may be taken concurrently). GER:DB-Hum

4 units, Win (Aquilanti, G), Spr (Berger, T)

MUSIC 23. Elements of Music III
Preference to majors. Continuation of chromatic harmony, complex forms, and introduction to early 20th-century techniques. Satisfactory passage of ear-training proficiency exam, part of the course’s final, is a requirement for course completion and for continuation in the major sequence. Prerequisites: (1) MUSIC 22; (2) Piano Proficiency Exam or MUSIC 12C (may be taken concurrently). GER:DB-Hum

4 units, Aut (Berger, T), Spr (Ulman, E)

MUSIC 34N. Performing America: The Broadway Musical from Little Johnny Jones to American Idiot
(F.Sem) Stanford Introductory Seminar. 20th C.musical comedy in dialogue with American culture at large. How themes, characters, stories, and songs of the Broadway musical reflect, and construct, ideas of American identity over the last hundred years. Intersections with jazz, movies, rock, and popular song. Social themes of race, class, gender roles, and sexual identity. Works of Gershwin, Cole Porter, Irving Berlin, Rodgers and Hammerstein, and Lerner and Lowe. Includes opportunities to perform, arrange, direct scenes, as well as to attend one or more local productions. GER:DB-Hum

3-4 units, Spr (Staff)

MUSIC 36N. Humor in Music
(F.Sem) Stanford Introductory Seminar. Through theoretical readings the course will touch on psychological and neurological bases of humor, explore contingent, tactical, modal, and ontological difficulties in the apprehension of humor, and address ethical issues surrounding humor in music. In addition to in-class listening and screening sessions, analytic discussions will be led by students who will find and present examples of humor in music. Students will also be invited to compose original humorous song lyrics and to create collaborative works of musical humor. GER:DB-Hum

3 units, Aut (Applebaum, M)

MUSIC 38N. Singing Early Music
Preference to freshmen. 15th- and 16th-century musical repertories and their contexts: performance practice. GER:DB-Hum

3 units, not given this year

MUSIC 39N. The Beatles
Preference to freshmen. The music of the Beatles and their contributions as musical innovators and experimentalists. Their artistic antecedents, subsequent musical influence, and cultural impact; the emergence of the supergroup identity and development of new modes of musical production and collaborative songwriting; notions of commoditization, uniqueness and originality, and the perceived boundary of art and pop; speculations on the exportation and appropriation of an African American cultural legacy. GER:DB-Hum

3 units, not given this year

MUSIC 40. Music History to 1600
Pre- or corequisite: 21. GER:DB-Hum

4 units, Aut (Sargent, J)

MUSIC 41. Music History 1600-1830
Pre- or corequisite: 22. GER:DB-Hum

4 units, Win (Hadlock, H)

MUSIC 42. Music History Since 1830
Pre- or corequisite: 23. GER:DB-Hum

4 units, Spr (Kronengold, C)

MUSIC 65A. Voice Class I
Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). May be repeated for credit.

1 unit, Aut (Giovannetti, C), Win (Giovannetti, C), Spr (Giovannetti, C), Sum (Staff)

MUSIC 65B. Voice Class II
Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). May be repeated for credit.

1 unit, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T), Sum (Staff)

MUSIC 72A. Intermediate Piano Class
For intermediate students. May be repeated for credit a total of 14 times. Prerequisites: 12C or equivalent, audition.

1 unit, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T), Sum (Staff)

MUSIC 72C. Harpsichord Class
For beginning harpsichord students who have keyboard skills. May be repeated for credit a total of 14 times.

1 unit, Aut (Thornburgh, E), Win (Thornburgh, E), Spr (Thornburgh, E)

MUSIC 72D. Jazz Piano Class
By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times.

1 unit, Aut (Low, M), Win (Low, M), Spr (Low, M)

MUSIC 73. Intermediate Voice Class
For intermediate students. Admission by audition. May be repeated for credit a total of 14 times.

1 unit, Aut (Giovannetti, C), Win (Giovannetti, C), Spr (Giovannetti, C)

MUSIC 74C. Classical Guitar Class
May be repeated for credit a total of 14 times.

1 unit, Aut (Ferguson, C), Win (Ferguson, C), Spr (Ferguson, C)

MUSIC 74D. Harp Class
May be repeated for credit a total of 14 times.

1 unit, Aut (Chauvel, M), Win (Chauvel, M), Spr (Chauvel, M)

MUSIC 75B. Renaissance Wind Instruments Class
May be repeated for credit.

1 unit, Aut (Myers, H), Win (Myers, H), Spr (Myers, H)
MUSIC 76. Brass Instruments Class
May be repeated for credit a total of 14 times.
1 unit, Aut (Kenley, M), Win (Kenley, M), Spr (Kenley, M)

MUSIC 77. Percussion Class
May be repeated for credit a total of 14 times.
1 unit, Aut (Veregge, M), Win (Veregge, M), Spr (Veregge, M)

MUSIC 120. Sonification Seminar
A project-based seminar on the use of sound, and in particular, musical sound, to represent scientific, medical, atmospheric, and other types of data, including time-critical data such as physical motion, and sonification of still and moving images.
1-3 units, Win (Berger, J)

MUSIC 121. Analysis of Tonal Music
Complete movements, or entire shorter works of the 18th and 19th centuries, are analyzed in a variety of theoretical approaches. Prerequisites: 23 or consent of instructor; and pass the ear-training and piano-proficiency examinations. GER:DB-Hum
4 units, Win (Ulman, E)

MUSIC 122A. Renaissance and Baroque Counterpoint
Analysis and composition of contrapuntal styles from the Renaissance and Baroque periods. Use of keyboard, ear training, and sight singing underlies all written work. Prerequisites: 23 and successful completion of the ear-training and piano-proficiency examinations. GER:DB-Hum
4 units, not given this year

MUSIC 122B. Harmonic Materials of 19th Century
Analysis of 19th-century music, with compositional exercises based on 19th-century models. Prerequisites: 23 or consent of instructor; and pass the ear-training and piano-proficiency examinations. GER:DB-Hum
4 units, Spr (Ulman, E)

MUSIC 122C. Introduction to 20th-Century Composition
Contemporary works, with emphasis on music since 1945. Projects in free composition based on 20th-century models. Prerequisites: 23 or consent of instructor; and pass the ear-training and piano-proficiency examinations. GER:DB-Hum
4 units, Spr (Ulman, E)

MUSIC 123. Undergraduate Seminar in Composition
Current trends in composition. May be repeated for credit a total of 7 times. Prerequisites: Music major; 23 or consent of instructor. GER:DB-Hum
3 units, Aut (Kapuscinski, J), Win (Ulman, E)

MUSIC 125. Individual Undergraduate Projects in Composition
May be repeated for credit a total of 14 times. Prerequisites: music major, and one quarter of 123.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 126. Introduction to Thoroughbass
The development of continuo techniques and skills for figured-bass realization. Performance and analysis of selected repertoire, using thoroughbass principles and exercises based on historical theoretical treatises. Prerequisite: 21.
1-3 units, Win (Berger, T)

MUSIC 127. Instrumentation and Orchestration
Individual instruments, instrumental groups within the orchestra, and combinations of groups. Arrangements from piano to orchestral music. Score analysis with respect to orchestration. Practical exercises using chamber ensembles and school orchestra. Prerequisite: 23. GER:DB-Hum
3 units, Aut (Aquilanti, G), alternate years, not given next year

MUSIC 128. Stanford Laptop Orchestra: Composition, Coding, and Performance
(Same as CS 170) Classroom instantiation of the Stanford Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit.
1-5 units, Spr (Wang, G)

MUSIC 130A. Introduction to Conducting
Baton techniques and rehearsal procedures. The development of coordination of the members of the body involved in conducting; fluency in beat patterns and meters; dynamics, tempi, cueing, and use of the left hand in conducting. Prerequisites: 121 and diagnostic musicianship exam given first day of class; preference to students who have completed 122B.
3 units, alternate years, not given this year

MUSIC 130B. Elementary Orchestral Conducting
Prerequisites: 127 or previous orchestral performance experience, 130A.
3 units, alternate years, not given this year

MUSIC 130C. Elementary Choral Conducting
Techniques specific to the conducting of choral ensembles: warm-ups, breathing, balance, blend, choral tone, isolation principles, recitative conducting, preparation, and conducting of choral/orchestral works. Prerequisite: 130A.
3 units, alternate years, not given this year

MUSIC 140. Studies in Medieval Music
(Same as MUSIC 240) Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4 unit level only.) GER:DB-Hum
3-4 units, Aut (Mahr, W)

MUSIC 141. Studies in Renaissance Music
(Same as MUSIC 241) Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4 unit level only.) GER:DB-Hum
2-4 units, alternate years, not given this year

MUSIC 142. Studies in Baroque Music
(Same as MUSIC 242) Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4 unit level only.) GER:DB-Hum
3-4 units, alternate years, not given this year

MUSIC 143. Studies in Classic Music
(Same as MUSIC 243) Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4 unit level only.) GER:DB-Hum
3-4 units, alternate years, not given this year

MUSIC 144. Studies in Romantic Music
(Same as MUSIC 244) Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4 unit level only.) GER:DB-Hum
3-4 units, Win (Grey, T)

MUSIC 145. Studies in Modern Music
(Same as MUSIC 245) Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4 unit level only.) GER:DB-Hum
3-4 units, not given this year

MUSIC 146. Music and Urban Film
(Same as MUSIC 246) How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, real-time cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.) GER:DB-Hum, EC-GlobalCom
3-4 units, Spr (Kronengold, C)

MUSIC 147. The Soul Tradition in African American Music
(Same as MUSIC 247) The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.) GER:DB-Hum, EC-AmerCul
3-4 units, not given this year

MUSIC 147A. Music Ethnography of the Bay Area
(Same as MUSIC 247A) An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing
and oral history, writing fieldnotes, recording, transcription, analysis, and ethnographic writing. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4- or 5-unit level only.) GER:DB-Hum
3-5 units, Spr (Schultz, A)

MUSIC 148. Musical Shakespeare: Theater, Song, Opera, and Film
(See also MUSIC 248) The role of music in productions, adaptations, and interpretations of Shakespeare's plays as theater, opera, and film from the Elizabethan era through the present. Emphasis is on the role of songs, stage music, and music in operatic and film adaptations. Incidential music, orchestral tone poems, and art-song settings of lyrics from the plays. Plays include Romeo and Juliet, Othello, Macbeth, Hamlet, The Tempest, Midsummer Night's Dream, and Twelfth Night. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4- or 5-unit level only.) GER:DB-Hum
3-5 units, not given this year

MUSIC 149. Reactions to the Record: Early Recordings, Lost Styles, and Music's Future
(See also MUSIC 249) Seminar. The transformation of musical style, audience expectations, the composer-performer relationship, and the musical score from the late 1800s to the present. Sources include: recordings from Stanford's Archive of Recorded Sound; recordings of (Brahms, Debussy, Rachmaninoff, Saint-Saëns, Prokofiev, Bartók; concert programs; interviews; and reviews. Readings include Hamilton's After the Golden Age and Philip's Performing Music in the Age of Recording. Emphasis is on voice, strings, piano, chamber music, and orchestra. Guest residencies in conjunction with April 2012 symposium. See http://music.stanford.edu/Events/StanfordMusicSymposium/. May be repeated for credit. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.) GER:DB-Hum
3-4 units, Aut (Barth, G; Arul, K)

MUSIC 150. Musical Acoustics
3 units, Win (Rossing, T)

MUSIC 150G. Wagnerian Echos: A Cultural History from Modernism to Popular Culture
(See also MUSIC 340G) The afterlives of mythological themes from the operas and music dramas of Richard Wagner (The Flying Dutchman, Tannhäuser, Lohengrin, Ring Cycle, Parsifal) in literature, modernist aesthetics, fascist politics, film, philosophy, and contemporary media. GER:DB-Hum
3-5 units, not given this year

MUSIC 154. Composition and Performance of Instrumental Music with Electronics
Aesthetic and analytical issues from the pioneers of Musique Concrète to the electro of the 2000's. Electroacoustic scholarship over the past 60 years discussing problems and development of the genre. Emphasis on listening, writing, tools development, space, serendipity, concert ritual, interdisciplinarity, relationship with other styles of music, gesture, and sound/image. Considered composers include: Schaeffer, Henry, Varese, Xenakis, Stockhausen, Messiaen, Boulez, Ferrari, Risset, Berto, Chowning. Parmegiani, Bayle, Chion, Dumont. Focus on one or a few works leading to a public performance at the end of the quarter. Prerequisite: experience in analysis of contemporary music and in electronic music. May be repeated for credit once.
1-5 units, not given this year

MUSIC 155. INTERMEDIA WORKSHOP
(See also ARTSTUDY 239, MUSIC 255) Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDY 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. 3-4 units, Win (DeMarinis, P; Kapuscinski, J)

MUSIC 156. sic: Improvisation Collective
Small ensemble devoted to learning trans-idiomatic improvisation techniques and composing indeterminate pieces in a workshop setting. One major concert. Prerequisite: access to an instrument and successful small group audition during the prior quarter. Improvisational experience and conventional instrumental virtuosity not required. May be repeated for credit for a total of 3 times.
1 unit, Win (Applebaum, M)

MUSIC 157. Introduction to Mariachi Ensemble
Introduction to the practice of mariachi music, tradition, and history. Focus is on learning traditional sones, rancheras, huapangos, and boleros. Requirements: ability to play and access to instruments (violin, trumpet, guitar, vihuela, and guitarron). May be repeated for credit.
1 unit, Aut (Clark, J), Win (Clark, J), Spr (Clark, J)

MUSIC 158. Soundwire Ensemble
Stanford's Internet2-based Soundwire Ensemble rehearses with the East Coast Tintinnabulate Ensemble directed by Pauline Oliveros, Rensselaer Polytechnic Institute. Concerts, composition, and improvisation projects using resources available when connecting with remote musicians. State-of-the-art audio and video technology developed by ensemble participants. May be repeated for credit.
2-3 units, not given this year

MUSIC 159. Early Music Singers
Small choir specializing in Medieval, Renaissance, and early Baroque vocal music. One major concert per quarter. May be repeated for credit for a total of 14 times.
1 unit, Aut (Mahrt, W), Win (Mahrt, W), Spr (Mahrt, W)

MUSIC 160. Stanford Symphony Orchestra
70- to 100-member ensemble performing major orchestral works; minimum one concert per quarter. May be repeated for credit a total of 14 times.
1 unit, Aut (Cai, J), Win (Cai, J), Spr (Cai, J)

MUSIC 160A. Stanford Philharmonia Orchestra
Prerequisite: audition, one year of 160, or consent of instructor. May be repeated for credit.
1 unit, Aut (Cai, J), Win (Cai, J), Spr (Cai, J)

MUSIC 160B. Stanford New Ensemble
Performing compositions of the 20th century, recent works of this century, and new works by Stanford faculty and student composers. Musicians collaborate with composers and artists visiting and performing at Stanford. One concert per quarter. May be repeated for credit.
1 unit, Aut (Cai, J), Win (Cai, J), Spr (Cai, J)

MUSIC 160S. Summer Orchestra
1 unit, Sem (Staff)

MUSIC 161A. Stanford Wind Ensemble
40- to 50-member ensemble performing transcriptions of symphonic music, brass band music, and repertoire composed specifically for symphonic band. One concert per quarter. May be repeated for credit a total of 14 times.
1 unit, Aut (Aquilanti, G), Win (Aquilanti, G), Spr (Aquilanti, G)

MUSIC 161B. Jazz Orchestra
Big band format. Repertoire drawn primarily from the contemporary jazz-ensemble literature. One formal concert per quarter. May be repeated for credit a total of 14 times.
1 unit, Aut (Berry, F), Win (Berry, F), Spr (Berry, F)
COURSES OF INSTRUCTION

MUSIC 161C. Red Vest Band
A small ensemble of the Leland Stanford Junior University Marching Band open to members of the LSJUMB by audition and consent of instructor. Members perform at all men’s and women’s home basketball games and travel to some away and post-season games. Twice-weekly rehearsals focus on introduction of new student arrangements and the LSJUMB’s repertoire of rock, funk, and traditional styles. May be repeated for credit a total of 7 times.
1 unit, Win (Aquilanti, G), Spr (Aquilanti, G)

MUSIC 161D. Stanford Brass Ensemble
Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor.
1 unit, Aut (Kenley, M), Win (Kenley, M), Spr (Kenley, M)

MUSIC 162. Symphonic Chorus
180- to 200-voice choral ensemble, performing major choral masterworks with orchestra. One concert per quarter. May be repeated for credit a total of 14 times.
1 unit, Aut (Sano, S), Win (Sano, S), Spr (Sano, S)

MUSIC 163. Memorial Church Choir
Official choir of Memorial Church, furnishing music for Sunday services and special occasions in the church calendar. May be repeated for credit a total of 14 times.
1 unit, Aut (Morgan, R), Win (Morgan, R), Spr (Morgan, R)

MUSIC 165. Chamber Chorale
Select 24-voice choral ensemble, specializing in virtuoso choral repertoire from all periods of Western art music. Annual touring commitment required. May be repeated for credit a total of 14 times.
1 unit, Aut (Sano, S), Win (Sano, S), Spr (Sano, S)

MUSIC 167. University Singers
Select, 50-voice choral ensemble, performing choral repertoire from all periods of Western art music. May be repeated for credit a total of 14 times.
1 unit, Aut (Morgan, R), Win (Morgan, R), Spr (Morgan, R)

MUSIC 168. Summer Chorus
80- to 100-voice non-auditioned ensemble, performing major choral masterworks and choral repertoire from all periods of Western art music.
1 unit, Sum (Staff)

MUSIC 169. Stanford Taiko
Select 15- to 18-member North American taiko ensemble, performing all-original repertoire for Japanese drums. Multiple performances in Winter and Spring quarters, also touring; instrument construction and maintenance. Admission by audition in Autumn Quarter only. May be repeated for credit a total of 14 times.
1 unit, Aut (Sano, S; Uyechi, L), Win (Sano, S; Uyechi, L), Spr (Sano, S; Uyechi, L)

MUSIC 170. Collaborative Piano
Performance class in a workshop setting. Techniques of collaboration with vocalists and instrumentalists in repertoire ranging from songs and arias to sonatas and concertos. Prerequisite: private-lesson proficiency level in piano, or consent of instructor.
1 unit, Aut (Dahl, L)

MUSIC 171. Chamber Music
Audition required. Weekly one-hour coachings from Music department faculty. Classical string quartets and piano/string groups are supervised by the St. Lawrence String Quartet and require attendance at a weekly Wednesday 4:15 p.m. master class. May be repeated for credit.
1 unit, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 172A. Piano
Private lessons and group master class weekly. May be repeated for credit a total of 14 times.
1-3 units, Aut (Barth, G), Win (Barth, G), Spr (Barth, G)

MUSIC 172B. Organ
May be repeated for credit a total of 14 times.
1-3 units, Aut (Morgan, R), Win (Morgan, R), Spr (Morgan, R)

MUSIC 172C. Harpsichord
May be repeated for credit a total of 14 times.
1-3 units, Aut (Thornburgh, E), Win (Thornburgh, E), Spr (Thornburgh, E)

MUSIC 172D. Jazz Piano
By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times.
1-3 units, Aut (Low, M), Win (Low, M), Spr (Low, M)

MUSIC 172E. Fortepiano
May be repeated for credit a total of 14 times.
1-3 units, Aut (Barth, G), Win (Barth, G), Spr (Barth, G)

MUSIC 172F. Carillon
May be repeated for credit a total of 14 times.
1-3 units, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T)

MUSIC 173. Voice
May be repeated for credit a total of 14 times.
1-3 units, Aut (Giovannetti, C), Win (Giovannetti, C), Spr (Giovannetti, C)

MUSIC 174A. Violin
May be repeated for credit a total of 14 times.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 174B. Viola
May be repeated for credit a total of 14 times.
1-3 units, Aut (Robertson, L), Win (Robertson, L), Spr (Robertson, L)

MUSIC 174C. Violoncello
May be repeated for credit a total of 14 times.
1-3 units, Aut (Harrison, S), Win (Harrison, S), Spr (Harrison, S)

MUSIC 174D. Contrabass
May be repeated for credit a total of 14 times.
1-3 units, Aut (Moyer, B), Win (Moyer, B), Spr (Moyer, B)

MUSIC 174E. Viola Da Gamba
May be repeated for credit a total of 14 times.
1-3 units, Aut (Dornenburg, J), Win (Dornenburg, J), Spr (Dornenburg, J)

MUSIC 174F. Classical Guitar
May be repeated for credit a total of 14 times.
1-3 units, Aut (Ferguson, C), Win (Ferguson, C), Spr (Ferguson, C)

MUSIC 174G. Harp
May be repeated for credit a total of 14 times.
1-3 units, Aut (Chauvel, M), Win (Chauvel, M), Spr (Chauvel, M)

MUSIC 174H. Baroque Violin
May be repeated for credit a total of 14 times.
1-3 units, Aut (Martin, A), Win (Martin, A), Spr (Martin, A)

MUSIC 174I. Jazz Bass
1-3 units, Aut (McCain, J), Win (McCain, J), Spr (McCain, J)

MUSIC 174J. Jazz Guitar
Individual lessons in jazz guitar.
1-3 units, Aut (Vandivier, R), Win (Vandivier, R), Spr (Vandivier, R)

MUSIC 175. Flute
May be repeated for credit a total of 14 times.
1-3 units, Aut (Hawley, A), Win (Hawley, A), Spr (Hawley, A)

MUSIC 175B. Oboe
May be repeated for credit a total of 14 times.
1-3 units, Aut (Mitchell, P), Win (Matheson, J), Spr (Matheson, J)

MUSIC 175C. Clarinet
May be repeated for credit a total of 14 times.
1-3 units, Aut (Brandenburg, M), Win (Brandenburg, M), Spr (Brandenburg, M)

MUSIC 175D. Bassoon
May be repeated for credit a total of 14 times.
1-3 units, Aut (Oliver, R), Win (Oliver, R), Spr (Oliver, R)

MUSIC 175E. Recorder/Renaissance Wind Instruments
May be repeated for credit a total of 14 times.
1-3 units, Aut (Myers, H), Win (Myers, H), Spr (Myers, H)
MUSIC 175F. Saxophone
May be repeated for credit a total of 14 times.
I-3 units, Aut (McCarthy, C), Win (McCarthy, C), Spr (McCarthy, C)

MUSIC 175G. Baroque Flute
May be repeated for credit a total of 14 times.
I-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 176A. French Horn
May be repeated for credit a total of 14 times.
I-3 units, Aut (Ragent, L), Win (Ragent, L), Spr (Ragent, L)

MUSIC 176B. Trumpet
May be repeated for credit a total of 14 times.
I-3 units, Aut (Johnson-Hamilton, J), Win (Johnson-Hamilton, J), Spr (Johnson-Hamilton, J)

MUSIC 176C. Trombone
May be repeated for credit a total of 14 times.
I-3 units, Aut (Kenley, M), Win (Kenley, M), Spr (Kenley, M)

MUSIC 176D. Tuba
May be repeated for credit a total of 14 times.
I-3 units, Aut (Clements, A), Win (Clements, A), Spr (Clements, A)

MUSIC 177. Percussion
May be repeated for credit a total of 14 times.
I-3 units, Aut (Veregge, M), Win (Veregge, M), Spr (Veregge, M)

MUSIC 182. Diction for Singers
The international phonetic alphabet and its application to German, French, and Italian vocal literature. Open also to pianists interested in vocal coaching and choral conducting.
I unit, Win (Dahl, L)

MUSIC 183A. German Art Song Interpretation
By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Beethoven, Schubert, Wolf and Strauss. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum).
Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).
I unit, Win (Spr, Dahl, L)

MUSIC 183B. French Art Song Interpretation
By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Fauré, Debussy, Ravel and Poulenc. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum).
Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).
I unit, alternate years, not given this year

MUSIC 184. Vocal Repertory Workshop
This course is a practical workshop in vocal repertoire. Each quarter's offering emphasizes a specific genre or period, therefore the course can be repeated with permission of the instructor. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; historically informed performance practice; editorial practice through comparison or preparation; rehearsal for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists.
I-3 units, Aut (Catsalis, M), Win (Catsalis, M), Spr (Catsalis, M)

MUSIC 192A. Foundations of Sound-Recording Technology
For upper division undergraduates and graduate students; preference given to Music majors with MST specialization. Topics: elementary electronics; the physics of sound transduction and microphone operation, selection, and placement; mixing consoles; connectors and device interconnection; grounding and shielding; principles of analog magnetic recording; operation and maintenance of recording equipment; and principles of recording engineering. Enrollment limited. Prerequisites: MUSIC 150, algebra, physics basics, and consent of instructor. GER:DB-EngrAppSci
3 units, Aut (Kadis, J)

MUSIC 192B. Advanced Sound Recording Technology
Topics: noise reduction techniques; dynamics and time-delay audio effects; the principles of digital audio; disk- and tape-based digital recorders; digital audio workstations and editing; advanced multitrack techniques; SMPTE and MIDI time code and device synchronization; MIDI sequencing and synchronization. See http://ccrma.stanford.edu/courses/. Prerequisite: 192A. GER:DB-EngrAppSci. DB-Hum
3 units, Win (Kadis, J)

MUSIC 192C. Session Recording
Independent engineering of recording sessions. May be repeated for credit a total of 14 times. Prerequisites: 192A.B.
1-2 units, Aut (Kadis, J), Win (Kadis, J), Spr (Kadis, J)

MUSIC 197. Undergraduate Teaching Apprenticeship
Work in an apprentice-like relationship with faculty teaching a student-initiated course. Prerequisite: consent of instructor. (Staff)
1-2 units, Aut (Staff), Win (Sano, S), Spr (Sano, S)

MUSIC 198. Concentrations Project
For concentration program participants only. Must be taken in senior year. Multiple concentrators may enroll in one section of 198 per concentration.
4 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 199. Independent Study
For advanced undergraduates and graduate students who wish to do work outside the regular curriculum. Before registering, student must present specific project and enlist a faculty sponsor. May be repeated for credit a total of 14 times.
I-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 201. CCRMA Colloquium
Weekly review of work being done in the field, research taking place at CCRMA, and tools to make the most of the CCRMA technical facilities.
1 unit, Aut (Leonard, S; Winters, C)

MUSIC 222. Sound in Space
Historical background, techniques and theory on the use of space in music composition and diffusion. Listening and analysis of relevant pieces. Experimental work in spatialization techniques leading to short studies to be diffused in concert at the end of the quarter.
I-4 units, not given this year

MUSIC 251. Psychophysics and Music Cognition
Lecture, lab and experiment-based course in perception, psychoacoustics, cognition, and neuroscience of music. (WIM at 4 or 5 units only.) GER:DB-Hum
1-3 units, Spr (Staff)

MUSIC 252. Music Notation Software: An Introduction
Learn to use music notation programs Finale®, Sibelius® and open-source alternatives.
I-2 units, alternate years, not given this year

GRADUATE COURSES IN MUSIC
Primarily for graduate students; undergraduates may enroll with consent of instructor.

MUSIC 200. Graduate Proseminar
Required of first-year graduate students in music. Introduction to research in music, bibliographical materials, major issues in the field, philosophy, and methods in music history. Guest lecturers and individual research topics.
3-4 units, Aut (Hadlock, H; McBride, J)

MUSIC 220A. Fundamentals of Computer-Generated Sound Techniques for digital sound synthesis, effects, and reverberation. Topics: summary of digital synthesis techniques (subtractive, additive, nonlinear, wavetable, spectral-modeling, and physical-modeling); digital effects algorithms (phasering, flanging, chorus, pitch-shifting, and vocoding); and techniques for digital reverberation. Majors (undergraduate or graduate) must take for 4 units. See http://ccrma.stanford.edu/.
2-4 units, Aut (Chafe, C)

MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Computational Music
The use of high-level programming language as a compositional aid in creating musical structures. Advanced study of sound...
synthesis techniques. Simulation of a reverberant space and control of the position of sound within the space. See http://ccrma.stanford.edu/. Prerequisite: 220A.

2-4 units, Win (Wang, G)

MUSIC 220C. Research Seminar in Computer-Generated Music
Individual projects in composition, psychoacoustics, or signal processing. See http://ccrma.stanford.edu/. May be repeated for credit. Prerequisite: 220B, 220C.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 221. Topics in the History of Theory
The intersection of music theory and compositional practice in different eras of Western music history. Primary sources in music theory and issues such as notation, rhythm, mode, dissonance treatment, counterpoint, tonality, form, rhetoric, affect and imitation, expression, linear analysis, 12-tone and set theory, in light of relevant repertoire and modern scholarship. May be repeated for credit a total of 5 times.

3-5 units, Win (Kronengold, C), not given next year

MUSIC 223. Composition for Electronic Musicians
Composition for any combination of acoustic and electroacoustic instrumentation, computer-generated sound, invented instruments, sound-sculptures, and multi-disciplinary elements including theater and visual media. Project-based laboratory to advance original student works, supported by lectures on the fundamentals of composition. Concert performance of final works. Taught at CCRMA with a focus on engendering deliberate conversation on the enrichment of a cultural context for new media. Open to undergraduates and graduates.

1-4 units, Spr (Appelbaum, M)

MUSIC 230. Advanced Orchestral Conducting
May be repeated for credit a total of 8 times. Prerequisite: 130B.

2-4 units, Aut (Cai, J), Win (Cai, J), Spr (Cai, J)

MUSIC 231. Advanced Choral Conducting
Individual instruction continuing trajectory of Music 130C. Focus on gestural technique and analysis of works by genre and historical period. May be repeated for credit a total of 8 times. Prerequisite: 130C.

2-4 units, Aut (Sano, S), Win (Sano, S), Spr (Sano, S)

MUSIC 240. Studies in Medieval Music
(Same as MUSIC 142) Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.)

3-4 units, Aut (Mahrt, W)

MUSIC 241. Studies in Renaissance Music
(Same as MUSIC 141) Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.)

2-4 units, alternate years, not given this year

MUSIC 242. Studies in Baroque Music
Same as MUSIC 142 Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.)

3-4 units, alternate years, not given this year

MUSIC 243. Studies in Classic Music
(Same as MUSIC 143) Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.)

3-4 units, alternate years, not given this year

MUSIC 244. Studies in Romantic Music
(Same as MUSIC 144) Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.)

3-4 units, Win (Grey, T)

MUSIC 245. Studies in Modern Music
(Same as MUSIC 145) Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4-unit level only.)

3-4 units, not given this year

MUSIC 246. Music and Urban Film
(Same as MUSIC 146) How music and sound work in urban cinema. What happens when music’s capacity to transform everyday reality combines with the realism of urban films?

Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre-or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.)

3-4 units, Spr (Kronengold, C)

MUSIC 247. The Soul Tradition in African American Music
(Same as MUSIC 147) The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today’s r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul’s cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)

3-4 units, not given this year

MUSIC 247A. Music Ethnography of the Bay Area
(Same as MUSIC 147A) An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing and oral history, writing fieldnotes, recording, transcription, analysis, and ethnographic writing. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4- or 5-unit level only.)

3-5 units, Spr (Schultze, A)

MUSIC 248. Musical Shakespeare: Theater, Song, Opera, and Film
(Same as MUSIC 148) The role of music in productions, adaptations, and interpretations of Shakespeare’s plays as theater, opera, and film from the Elizabethan era through the present. Emphasis is on the role of songs, stage music, and music in operatic and film adaptations. Incidental music, orchestral tone poems, and art-song settings of lyrics from the plays. Plays include Romeo and Juliet, Othello, Macbeth, Hamlet, The Tempest, Midsummer Night's Dream, and Twelfth Night. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4- or 5-unit level only.)

3-5 units, not given this year

MUSIC 249. Reactions to the Record: Early Recordings, Lost Styles, and Music's Future
(Same as MUSIC 149) Seminar. The transformation of musical style, audience expectations, the composer-performer relationship, and the musical score from the late 1800s to the present. Sources include: recordings from Stanford’s Archive of Recorded Sound; recordings of (Brahms, Debussy, Rachmaninoff, Saint-Saëns, Prokofiev, Bartók; concert programs; interviews; and reviews. Readings include Hamilton’s After the Golden Age and Philip's (for music majors): MUSIC 22. (WIM at 4- or 5-unit level only.)

3-4 units, not given next year

MUSIC 220A. HCI Theory and Practice
HCI issues as they relate to music applications in composition and performance. Project-oriented, examining issues from the technical and theoretical perspectives of computer science, haptics, and music theory. See http://ccrma.stanford.edu/.

3-4 units, Aut (Ju, W; Berdahl, E)

MUSIC 250B. HCI Performance Systems
Continuation of 250A, concentrating on interactive computer-music performance systems. See http://ccrma.stanford.edu/courses/250b.html. Prerequisite: 250A.

1-4 units, alternate years, not given this year

MUSIC 253. Music Notation and Representation Software
Focus on symbolic data for music applications including advanced notation systems, optical music recognition, musical data conversion, and internal structure of MIDI files.

2-4 units, alternate years, not given this year
MUSIC 254. Symbolic Music Analysis and Retrieval
Leveraging off three synchronized sets of symbolic data resources for notation and analysis, the lab portion introduces students to the open-source Humdrum Toolkit for music representation and analysis. Issues of data content and quality as well as methods of information retrieval, visualization, and summarization are considered in class. Grading based primarily on student projects.
Prerequisite: 253 or consent of instructor.
2-4 units, alternate years, not given this year

MUSIC 255. INTERMEDIA WORKSHOP
(Same as ARTSTUDI 239, MUSIC 155) Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent.
3-4 units, Win (DeMarinis, P; Kapuscinski, J)

MUSIC 256A. Music, Computing, and Design I: Software Paradigms for Computer Music
(Same as CS 476A) Software design and implementation for computer audio. Strategies, best practices, and tradeoffs in building audio software systems of various sizes (S, M, L, XL), with a focus on interactive (real-time) systems. Lectures examine high-level designs as well as dissect code in a hands-on manner. Course work includes small programming assignments and a final software project. This course is the prerequisite for MUSIC 256B.
Prerequisite: experience in C/C++ and/or Java.
1-4 units, Aut (Wang, G)

MUSIC 256B. Music, Computing, Design II: Mobil Music
(Same as CS 476B) Aesthetics, design, and implementation of mobile music, centered around the modern super smartphones such as the iPhone). Similarities and intrinsic differences between mobile and traditional computing and design for music. Topics include mobile software design, social and cloud computing, mobile interface design, and programming phones, in the service of music. Prerequisite: MUSIC 256A.
1-4 units, Win (Wang, G)

MUSIC 256. Music of South Asia
Focuses on the history, theory, and practice of South Asian music with particular emphasis on the classical traditions of North and South India. Also addresses regional folk, popular, and devotional musical styles of India, Pakistan, and Afghanistan. Topics include: raga, tala, vocal and instrumental genres, improvisation, aesthetics, music transmission, musical nationalism, social organization of musicians, music and ritual, music and gender, and technology. Lecture with discussion, some singing (no experience necessary), guest performances, reading, listening, and analysis.
3-4 units, not given this year

MUSIC 269. Research in Performance Practices
Directed reading and research. May be repeated for credit a total of 5 times.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 272A. Advanced Piano
Private lessons and group masterclass weekly. May be repeated for credit a total of 14 times.
1-3 units, Aut (Barth, G), Win (Barth, G), Spr (Barth, G)

MUSIC 272B. Advanced Organ
May be repeated for credit a total of 14 times.
1-3 units, Aut (Morgan, R), Win (Morgan, R), Spr (Morgan, R)

MUSIC 272C. Advanced Harpsichord
May be repeated for credit a total of 14 times.
1-3 units, Aut (Thornburgh, E), Win (Thornburgh, E), Spr (Thornburgh, E)

MUSIC 272D. Advanced Jazz Piano
By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times.
1-3 units, Aut (Low, M), Win (Low, M), Spr (Low, M)

MUSIC 272E. Advanced Fortepiano
May be repeated for credit a total of 14 times.
1-3 units, Aut (Barth, G), Win (Barth, G), Spr (Barth, G)

MUSIC 272F. Advanced Carillon
May be repeated for credit a total of 14 times.
1-3 units, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T)

MUSIC 273. Advanced Voice
May be repeated for credit.
1-3 units, Aut (Giovannetti, C), Win (Giovannetti, C), Spr (Giovannetti, C)

MUSIC 274A. Advanced Violin
May be repeated for credit a total of 14 times.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 274B. Advanced Viola
May be repeated for credit a total of 14 times.
1-3 units, Aut (Robertson, L), Win (Robertson, L), Spr (Robertson, L)

MUSIC 274C. Advanced Violoncello
May be repeated for credit a total of 14 times.
1-3 units, Aut (Harrison, S), Win (Harrison, S), Spr (Harrison, S)

MUSIC 274D. Advanced Contrabass
May be repeated for credit a total of 14 times.
1-3 units, Aut (Moyer, B), Win (Moyer, B), Spr (Moyer, B)

MUSIC 274E. Advanced Viola da Gamba
May be repeated for credit a total of 14 times.
1-3 units, Aut (Dornenburg, J), Win (Dornenburg, J), Spr (Dornenburg, J)

MUSIC 274F. Advanced Classical Guitar
May be repeated for credit a total of 14 times.
1-3 units, Aut (Ferguson, C), Win (Ferguson, C), Spr (Ferguson, C)

MUSIC 274G. Advanced Harp
May be repeated for credit a total of 14 times.
1-3 units, Aut (Chauvel, M), Win (Chauvel, M), Spr (Chauvel, M)

MUSIC 274H. Advanced Baroque Violin
May be repeated for credit a total of 14 times.
1-3 units, Aut (Martin, A), Win (Martin, A), Spr (Martin, A)

MUSIC 274I. Advanced Jazz Bass
1-3 units, Aut (McCain, J), Win (McCain, J), Spr (McCain, J)

MUSIC 274J. Advanced Jazz Guitar
Individual lessons in jazz guitar
1-3 units, Aut (Vandiver, R), Win (Vandiver, R), Spr (Vandiver, R)

MUSIC 275A. Advanced Flute
May be repeated for credit a total of 14 times.
1-3 units, Aut (Hawley, A), Win (Hawley, A), Spr (Hawley, A)

MUSIC 275B. Advanced Oboe
May be repeated for credit a total of 14 times.
1-3 units, Aut (Mitchell, P), Win (Matheson, J), Spr (Matheson, J)

MUSIC 275C. Advanced Clarinet
May be repeated for credit a total of 14 times.
1-3 units, Aut (Brandenburg, M), Win (Brandenburg, M), Spr (Brandenburg, M)

MUSIC 275D. Advanced Bassoon
May be repeated for credit a total of 14 times.
1-3 units, Aut (Oliver, R), Win (Oliver, R), Spr (Oliver, R)

MUSIC 275E. Advanced Recorder/Renaissance Wind Instruments
May be repeated for credit a total of 14 times.
1-3 units, Aut (Myers, H), Win (Myers, H), Spr (Myers, H)

MUSIC 275F. Advanced Saxophone
May be repeated for credit a total of 14 times.
1-3 units, Aut (McCarthy, C), Win (McCarthy, C), Spr (McCarthy, C)

MUSIC 275G. Advanced Baroque Flute
May be repeated for credit a total of 14 times.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)
MUSIC 276A. Advanced French Horn
May be repeated for credit a total of 14 times.
1-3 units, Aut (Ragant, L), Win (Ragant, L), Spr (Ragant, L)

MUSIC 276B. Advanced Trumpet
May be repeated for credit a total of 14 times.
1-3 units, Aut (Johnson-Hamilton, J), Win (Johnson-Hamilton, J), Spr (Johnson-Hamilton, J)

MUSIC 276C. Advanced Trombone
May be repeated for credit a total of 14 times.
1-3 units, Aut (Kenley, M), Win (Kenley, M), Spr (Kenley, M)

MUSIC 276D. Advanced Tuba
May be repeated for credit a total of 14 times.
1-3 units, Aut (Clements, A), Win (Clements, A), Spr (Clements, A)

MUSIC 277. Advanced Percussion
May be repeated for credit a total of 14 times.
1-3 units, Aut (Veregge, M), Win (Veregge, M), Spr (Veregge, M)

MUSIC 280. TA Training Course
Required for doctoral students serving as teaching assistants.
Orientation to resources at Stanford, guest presentations on the principles of common teaching activities, supervised teaching experience. Students who entered in the Autumn should take 280 in the Spring prior to the Autumn they begin teaching.
1 unit, Spr (Sloan, N; Saiki, J)

MUSIC 300A. Medieval Notation
Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.
4 units, Spr (Mahrt, W), alternate years, not given next year

MUSIC 300B. Renaissance Notation
Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.
4 units, alternate years, not given this year

MUSIC 301A. Analysis of Music: Modal
4 units, Win (Mahrt, W)

MUSIC 301B. Analysis of Music: Tonal
4 units, Aut (Barth, G)

MUSIC 301C. Analysis of Music: Post-Tonal
Current analytical trends, issues, and methods.
4 units, Spr (Ferneyhough, B)

MUSIC 302. Research in Musicology
Directed reading and research. May be repeated for credit a total of 14 times.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 310. Research Seminar in Musicology
For graduate students. Topics vary each quarter. May be repeated for credit a total of 8 times.
3-5 units, Aut (Schultz, A), Win (Hadlock, H), Spr (Hinton, S)

MUSIC 312A. Aesthetics and Criticism of Music, Ancients and Moderns: Plato to Nietzsche
For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.
4 units, alternate years, not given this year

MUSIC 312B. Aesthetics and Criticism of Music, Contemporaries: Heidegger to Today
For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.
4 units, alternate years, not given this year

MUSIC 318. Advanced Acoustics
Current topics. May be repeated for credit.
1-5 units, not given this year

MUSIC 319. Research Seminar on Computational Models of Sound Perception
All aspects of auditory perception, often with emphasis on computational models. Topics: music perception, signal processing, auditory models, pitch perception, speech, binaural hearing, auditory scene analysis, basic psychoacoustics, and neurophysiology. See http://ccrma.stanford.edu/courses/.
1-3 units, Aut (Stanley, M), Win (Stanley, M), Spr (Stanley, M)

MUSIC 320. Introduction to Digital Audio Signal Processing
3-4 units, Aut (Abel, J; Berners, D)

MUSIC 321. Readings in Music Theory
Directed reading and research. May be repeated for credit a total of 5 times.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 323. Doctoral Seminar in Composition
Illustrated discussions of compositional issues and techniques. Presentation of relevant topics, including students' own compositional practice. May be repeated for credit a total of 14 times.
3-4 units, Aut (Applebaum, M), Win (Ferneyhough, B), Spr (Berger, J)

MUSIC 325. Individual Graduate Projects in Composition
May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 331. Ph.D Dissertation
May be repeated for credit a total of 5 times.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 351. Seminar in Music Perception and Cognition
A seminar on topics in music perception and cognition. Students will study and discuss recent research as well as design and implement experiments.
1-3 units, Aut (Berger, J), Win (Berger, J), Spr (Berger, J)

MUSIC 390. Practicum Internship
On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 399. D.M.A. Final Project
May be repeated for credit a total of 5 times.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 420A. Signal Processing Models in Musical Acoustics
Computational methods in musical sound synthesis and digital audio effects based on acoustic physical models. Topics: acoustic simulation with delay lines, digital filters, and nonlinear elements; comb filters; allpass filters; artificial reverberation; delay-line interpolation and sampling-rate conversion; phasing, flanging, and chorus effects; efficient computational models of strings, woodwinds, brasses, and other musical instruments. See http://ccrma.stanford.edu/courses/420/.
Prerequisites: 320 or equivalent; PHYSICS 21 or equivalent course applying Newton's laws of motion; and CS 106B or equivalent programming in C and C++.
1-3 units, alternate years, not given this year

MUSIC 420B. Software for Sound Synthesis and Audio Effects
Preferred software embodiments for digital sound synthesis and audio effects. Topics: The Faust language for audio signal processing, effects programming, plugin generation for various platforms, software components for stringed and wind musical instruments, delay effects, variable filters, and nonlinear effects such as compression and distortion. The principal activity is a software project due at the end of the quarter. Prerequisite: Music 420A or equivalent experience with audio signal processing in C++.
1-10 units, alternate years, not given this year

MUSIC 421A. Audio Applications of the Fast Fourier

878 | STANFORD BULLETIN, 2011-12
Transform (FFT)
Spectrum analysis and signal processing using Fast Fourier Transforms (FFTs) with emphasis on audio applications. Topics: Fourier theorems; FFT windows; spectrum analysis; spectrograms; sinusoidal modeling; spectral modeling synthesis; FFT convolution; FIR filter design and system identification; overlap-add and filter-bank-summation methods for short-time Fourier analysis, modification, and resynthesis. See http://ccrma.stanford.edu/courses/421/. Prerequisite: Music 320 or equivalent background in spectrum analysis and linear systems.
3-4 units, Win (Smith, J)

MUSIC 421B. Projects in Spectral Audio Signal Processing
Frequency-domain methods for analysis and/or synthesis of sound. The principal activity is a software project. Continuing 421A, additional frequency-domain techniques for analysis, modification, and/or synthesis of audio signals will be discussed.
1-10 units, Spr (Smith, J), alternate years, not given next year

MUSIC 422. Perceptual Audio Coding
History and basic principles: development of psychoacoustics-based data-compression techniques; perceptual-audio-coder applications (radio, television, film, multimedia/internet audio, DVD, EMD). In-class demonstrations: state-of-the-art audio coder implementations (such as AC-3, MPEG) at varying data rates; programming simple coders. Topics: audio signals representation; quantization; time to frequency mapping; introduction to psychoacoustics; bit allocation and basic building blocks of an audio codec; perceptual audio codecs evaluation; overview of MPEG-1, 2, 4 audio coding and other coding standards (such as AC-3). Prerequisites: knowledge of digital audio principles, familiarity with C programming. Recommended: 320, EE 261. See http://ccrma.stanford.edu/422.
3 units, Win (Bosi-Goldberg, M)

MUSIC 423. Signal Processing Research
Graduate research seminar. Problems in music and/or audio signal processing. Presentation of research-in-progress by graduate students, visiting scholars, and CCRMA faculty. See http://ccrma.stanford.edu/courses/423/. May be repeated for credit a total of 11 times.
1-4 units, Aut (Abel, J; Berners, D)

MUSIC 424. Signal Processing Techniques for Digital Audio Effects
Techniques for dynamic range compression, reverberation, equalization and filtering, panning and spatialization, digital emulation of analog processors, and implementation of time-varying effects. Single-band and multiband compressors, limiters, noise gates, de-essers, convolutional reverberators, parametric and linear-phase equalizers, wah-wah and envelope-following filters, and the Leslie. Students develop effects algorithms of their own design in labs. Prerequisites: digital signal processing, sampling theorem, digital filtering, and the Fourier transform at the level of 320 or EE 261; Matlab and modest C programming experience. Recommended: 420 or EE 264; audio effects in mixing and mastering at the level of 192.
3-4 units, Spr (Berners, D; Abel, J)

NATIVE AMERICAN STUDIES (NATIVEAM) COURSES

UNDERGRADUATE COURSES IN NATIVE AMERICAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

(Same as ANTHRO 16) What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture. GER:DB-SocSci, EC-AmerCul
5 units, Win (Wilcox, M)

NATIVEAM 109B. Indian Country Economic Development
(Same as CSRE 109B) The history of competing tribal and Western economic models, and the legal, political, social, and cultural implications for tribal economic development. Case studies include mineral resource extraction, gaming, and cultural tourism. 21st-century strategies for sustainable economic development and protection of political and cultural sovereignty. 5 units, Spr (Biestman, K)

NATIVEAM 117S. History of California Indians
(Same as CSRE 117S, HISTORY 250A) Demographic, political, and economic history of California Indians, 1700s–1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system. GER:EC-AmerCul
5 units, not given this year

NATIVEAM 120. Native American Writers, 1880-1920
(Same as CSRE 120) The period of time 1880 to 1920 is a time when many important events in American Indian history occurred. Hoxie's historical work provides a framework for analyzing what effects these policies had on American Indian people. His work does not provide an American Indian perspective; he stated at the onset, that this was not an objective in this study. His main objective was to present a study that shows Indains' relations with whites as a clash of two complex cultures from a white point of view. (Hoxie xi). Three American Indians writing during this time period provide the needed Indian perspective lacking in Hoxie's work.
5 units, not given this year

NATIVEAM 124. Gender in Native American Societies
Seminar examines the impact of colonialism on gender roles & gender relations in American Indian communities beginning with the 17th century. Topics include demographic changes, social transformations associated with major subsistence and settlement changes, biological and spiritual assaults, economic transformations and the dynamism of native societies. Sources include history, ethnography, biography, autobiography and the novel.
5 units, Aut (Anderson, J)

NATIVEAM 138. American Indians in Comparative Historical Perspective
(Same as SOC 138, SOC 238) Graduate students register for 238.) Demographic, political, and economic processes and events that shaped relations between Euro-Americans and American Indians, 1600-1890. How the intersection of these processes affected the outcome of conflicts between these two groups, and how this conflict was decisive in determining the social position of American Indians in the late 19th century and the evolution of the doctrine of tribal sovereignty. GER:DB-SocSci, EC-AmerCul
5 units, Win (Staff)

NATIVEAM 139. American Indians in Contemporary Society
(Same as SOC 139, SOC 239) (Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history. GER:DB-SocSci, EC-AmerCul
5 units, not given this year

NATIVEAM 143A. American Indian Mythology, Legend, and Lore
(Same as ENGLISH 43A, ENGLISH 143A) (English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant, Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists...
including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, Black Elk Speaks. GER:DB-Hum
3-5 units, Aut (Fields, K)
NATIVEAM 240. Psychology and American Indian Mental Health
(Same as EDUC 340) Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.
3-5 units, not given this year

NEUROBIOLOGY (NBIO) COURSES

UNDERGRADUATE COURSES IN NEUROBIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

NBIO 101. Social and Ethical Issues in the Neurosciences
(Same as NBIO 201) Influences on public debate and policy of scientific advances in the study of the brain and behavior: theories of brain function; philosophical and scientific approaches; advances in the neurosciences, possible uses in medical therapy, and interventions involving genetic screening, genetic selection, enhancement of neurological functioning, and manipulation of behavior; questions related to medical therapy, social policy, and broader considerations of human nature such as consciousness, free will, personal identity, and moral responsibility. May be taken for 2 units without a research paper. Prerequisite: Neuroscience, Biology, or Symbolic Systems major; or Human Biology core; or consent of instructor.
2-4 units, Spr (Staff)

NBIO 206. The Nervous System
Structure and function of the nervous system, including neuroanatomy, neurophysiology, and systems neurobiology. Topics include the properties of neurons and the mechanisms and organization underlying higher functions. Framework for general work in neurology, neuropathology, clinical medicine, and for more advanced work in neurobiology. Lecture and lab components must be taken together.
7-8 units, Win (Moore, T)

NBIO 216. Genetic Analysis of Behavior
(Same as MCP 216) Advanced seminar. Findings and implications of behavioral genetics as applied to invertebrate and vertebrate model systems. Topics include biological clocks, and sensation and central pattern generators. Relevant genetic techniques and historical perspective. Student presentation.
4 units, alternate years, not given this year

NBIO 218. Neural Basis of Behavior
Advanced seminar. The principles of information processing in the nervous system and the relationship of functional properties of neural systems with perception, behavior, and learning. Original papers; student presentations. Prerequisite: NBIO 206 or consent of instructor.
5 units, alternate years, not given this year

NBIO 220. Central Mechanisms in Vision-based Cognition
Contemporary visual neuroscience, emphasizing the neural mechanisms underlying primate vision and visually guided behavior. Seven foundational topics in visual neuroscience; current papers concerning each topic. Student presentations. Computer-based demonstration exercises.
2-4 units, alternate years, not given this year

NBIO 221. Frontiers in Translational Medicine
Small group course for first year MSTP and Master's in Medicine students only. Focus is on pathways for combining science and medicine during graduate and postdoctoral training and in one's career, and practical aspects of translational medicine. Guest lecturers are physician-scientists who have advanced the frontiers of translational medicine. Previous lecturers have included Drs. Gilbert Chu, Jamie Topper, Irv Weissman, Beverly Mitchell, Geoff Duyk, William Molyb, Judy Shizuru, Carla Shatz, Linda Boxer and David Cox. Prerequisite: consent of instructor.
1 unit, Spr (Staff)

NBIO 227. Understanding Techniques in Neuroscience
Techniques commonly used in the field of neuroscience, including molecular/genetic, electrophysiological, and whole brain imaging. Presentations by senior graduate students and examples from the literature. Optional laboratory demonstrations.
2 units, Aut (Pradhan, S; Adelson, J; Squire, R; Newsome, W)

NBIO 228. Mathematical Tools for Neuroscience
Student-instructed. For students with no math background beyond basic calculus, or as a review for more advanced students. Techniques useful for analysis of neural data including linear algebra, Fourier transforms, probability and statistics, signal detection, Bayesian inference, and information theory.
1-3 units, not given this year

NBIO 254. Molecular and Cellular Neurobiology
(Same as BIO 254) For graduate students. Includes lectures for BIO 154. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases.
3 units, alternate years, not given this year

NBIO 258. Information and Signaling Mechanisms in Neurons and Circuits
How synapses, cells, and neural circuits process information relevant to a behaving organism. How phenomena of information processing emerge at several levels of complexity in the nervous system, including sensory transduction in molecular cascades,
information transmission through axons and synapses, plasticity and feedback in recurrent circuits, and encoding of sensory stimuli in neural circuits.

4 units, Aut (Baccus, S)

NBI 299. Directed Reading in Neurobiology
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NBI 300. Professional Development and Integrity in Neuroscience
Required of Neurosciences Ph.D. students every quarter. Develops professional skills in critical assessment and oral presentation of findings from current neuroscience literature in the visual presentation of quantitative data and writing research grants. The role of animals in lab research, fraud in science, the responsibility of authors and reviewers, science in a multicultural environment, and the relationship between student and mentor. Student and faculty presentations and discussions.
1-2 units, Aut (Baccus, S), Win (Baccus, S), Spr (Baccus, S)

NBI 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NBI 399. Graduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEUROLOGY AND NEUROLOGICAL SCIENCES (NENS) COURSES

UNDERGRADUATE COURSES IN NEUROLOGY AND NEUROLOGICAL SCIENCES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

NENS 25SI. Discoveries and Debates in Neuroscience Research
Contradictory results and models in the accelerating field of neuroscience research. Critical examination of controversial topics: the genetic determination of intelligence, the neurobiological correlates of consciousness, adult neural stem cell function and therapeutic potential, interpretation of cognitive tests in animals, the origin of brain tumors, the biology of addiction, and gender differences in brain function and disease. How to analyze scientific experiments and models with a critical eye.
1-2 units, Win (Staff)

NENS 67N. Intracellular Trafficking and Neurodegeneration
(F, Sem) Stanford Introductory Seminar. Preference to freshmen. Cell structures and functions, the intracellular trafficking system that maintains exchanges of materials and information inside cells, and clinical features and pathologies of neurodegenerative diseases. Techniques for examining cellular and subcellular structures, especially cytoskeletons; functional insights generated from structural explorations. Prerequisite: high school biology.
3 units, Spr (Yang, Y)

NENS 199. Undergraduate Research
Students undertake research sponsored by an individual faculty member. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN NEUROLOGY AND NEUROLOGICAL SCIENCES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

NENS 202. Longevity
(Same as HUMBIO 149L, PSYCH 102) Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists.
4 units, Win (Carstensen, L; Rando, T)

NENS 204. Stroke Seminar
Standing at the intersection of many fields of medicine, including neurology, internal medicine, cerebrovascular surgery, diagnostic and interventional radiology, and emergency medicine, as the third leading cause of death and the leading cause of disability, stroke is a critical topic for all practitioners of medicine. This seminar draws upon Stanford's leaders in stroke research to present and discuss the causes, presentation, treatment, and imaging characteristics of the disease.
1 unit, Win (Lansberg, M)

NENS 205. Neurobiology of Disease Seminar
Case demonstrations of selected disorders, discussion of the pathophysiological basis of the disorder, presentation of the basic principles underlying modern diagnostic and therapeutic management, and a discussion of recent research advances for each disease entity. Prerequisite: Neurobiology 206 or consent of instructor.
3 units, alternate years, not given this year

NENS 206. Introduction to Neurology Seminar
Exploration of aspects of neurology, including subspecialties. Current issues, clinical cases, and opportunities in the field.
1 unit, Aut (Reimer, R; Jafari, A)

NENS 220. Computational Neuroscience
Computational approaches to neuroscience applied at levels ranging from neurons to networks. Addresses two central questions of neural computation: How do neurons compute; and how do networks of neurons encode/decode and store information? Focus is on biophysical (Hodgkin-Huxley) models of neurons and circuits, with emphasis on application of commonly available modeling tools (NEURON, MATLAB) to issues of neuronal and network excitability. Issues relevant to neural encoding and decoding, information theory, plasticity, and learning. Fundamental concepts of neuronal computation; discussion focus is on relevant literature examples of proper application of these techniques. Final project. Recommended for Neuroscience Program graduate students; open to graduate, medical, and advanced undergraduate students with consent of instructor. Prerequisite: NBIO 206. Recommended: facility with linear algebra and calculus.
4 units, alternate years, not given this year

NENS 230. Analysis Techniques for Neuroscience Using MATLAB
Data analysis and visualization techniques commonly encountered in neuroscience research. Fundamentals of the MATLAB computing environment, programming and debugging, data import/export, data structures, plotting, simple image processing, introduction to statistical tools. Assumes no programming background. Examples and assignments draw from a range of topics in neuroscience, for example, event detection in patch-clamp recordings, spike-triggered averages, spike rasters and PSTH, cell counting in fluorescence images, regressions, and PCA. Assignments are practical in nature, demonstrating how to implement specific analyses that a neuroscience student is likely to encounter. The skills taught are broadly applicable and a neuroscience background is not necessary.
2 units, Aut (O'Shea, D; Stavisky, S; Huguenard, J)

NENS 267. Molecular Mechanisms of Neurodegenerative Disease
(Same as BIO 267) The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.
4 units, Win (Kopito, R; Wyss-Coray, A; Reimer, R), alternate years, not given next year

NENS 299. Directed Reading in Neurology and Neurological Science
Prerequisite: consent of instructor.
NEUROSCIENCES PROGRAM (NEPR) COURSES

GRADUATE COURSES IN NEUROSCIENCES PROGRAM

Primarily for graduate students; undergraduates may enroll with consent of instructor.

NEPR 299. Directed Reading in Neurosciences
Prerequisite: consent of instructor.
- 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEPR 399. Graduate Research
Sponsored by individual faculty members. Prerequisite: consent of instructor.
- 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEPR 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEPR 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEUROSCIENCES PROGRAM (NEPR) COURSES

UNDERGRADUATE COURSES IN NEUROSCIENCES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

NSUR 70Q. Experimental Stroke
(F.Dial) Stanford Introductory Dialogue. Preference to sophomores. How stroke is studied in the laboratory; advances in stroke research over the last two decades; and future directions. Topics include: cellular and molecular mechanisms of neuronal death and survival in the brain after stroke, including necrosis, apoptosis, inflammation, and cell signaling pathways; experimental tools for stroke treatment, such as gene therapy, cell therapy, hypothermia, preconditioning, postconditioning, and other pharmacological treatments; the gap and barrier between laboratory research and clinical translation.
- 2 units, Spr (Zhao, H)

NSUR 199. Graduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
- 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN NEUROSCIENCES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

NSUR 261. Principles and Practice of Stem Cell Engineering
(Same as BIOE 261) Quantitative models used to characterize incorporation of new cells into existing tissues emphasizing pluripotent cells such as embryonic and neural stem cells. Molecular methods to control stem cell decisions to self-renew, differentiate, die, or become quiescent. Practical, industrial, and ethical aspects of stem cell technology application. Final projects: team-reviewed grants and business proposals.
- 3 units, not given this year

NSUR 278A. From Science to Business: Innovation in Neurologic Disease Beyond Neurosurgery
For medical, business, and engineering students. The process of innovation and company building in the medical field, emphasizing the neurosciences. Overview of neurological diseases; business and regulatory aspects of device and biotech product development. Guest speakers on healthcare entrepreneurship. Venture capital and entrepreneurial mentors guide interdisciplinary student teams in evaluating a solution to an unmet clinical need or a project within a biotech company. May be taken for 2 units without the team project.
- 2-4 units, Win (Kallmeyer, V)

NSUR 278B. Independent Study on Healthcare Innovation and Entrepreneurship
Continuation of NSUR 278A for students wishing to work on actual strategy and implementation of their idea developed in 278A or, more generally, for students who wish to develop a strategic plan for a specific healthcare (drug or device) venture. May be taken concurrently with 278A.
- 2-4 units, Win (Kallmeyer, V), Spr (Staff)

NSUR 279. Concepts in Drug Delivery and Drug Device Combinations
Open to all graduate students. Issues relating to drug-device combination products, including review of recently approved products such as cardiac stent), and development, regulatory, and reimbursement issues. Emphasis is on market evaluation, product development, and regulatory strategies. Lecture only for 2 units; project for 4 units.
- 2-4 units, not given this year

NSUR 280. Early Clinical Experience in Neurosurgery
Provides an observational experience as formulated by the instructor and student. Prerequisite: consent of instructor.
- 1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NSUR 299. Directed Reading in Neurosurgery
Prerequisite: consent of instructor.
- 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NSUR 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
- 4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OBSTETRICS AND GYNECOLOGY (OBGYN) COURSES

UNDERGRADUATE COURSES IN OBSTETRICS AND GYNECOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

OBGYN 275L. Alternative Spring Break: For the Sake of Women- Disparities in Women's Health and Health Policy
Examines health disparities that uniquely affect women from the perspectives of health care providers, health educators, advocates, and policymakers. Current research in women's health, , ranging from traditional women's issues such as reproductive and maternal
health to nontraditional topics including cardiovascular and autoimmune diseases; accessibility and quality concerns; allocation of resources dedicated to the health of women.

1 unit, Win (Staff)

**OBGYN 199. Undergraduate Research in Reproductive Biology**
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GRADUATE COURSES IN OBSTETRICS AND GYNECOLOGY**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**OBGYN 202. Assisted Reproductive Technologies**
(Same as DBIO 202, HUMBIO 150A) Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation. Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors.
1-3 units, Win (Staff)

**OBGYN 216. Current Issues in Reproductive Health**
Reproductive Health is a broad subject encompassing many concepts and practices. Issues and services within the context of reproductive health include such diverse topics as fertility, pregnancy, contraception, abortion, sexuality, menopause and parenting. This course focuses on topics related to abortion services, fertility and contraception; current research and practices in family planning; legislation and issues of access. Sponsored by Medical Students for Choice.
1 unit, Win (Drucin, M)

**OBGYN 230. Women's Health Medical Forum**
Required for the Women's Health Scholarly Concentration. Ten seminars featuring a Women's Health research presentation (by faculty or student) followed by discussion. Emphasis is on topics related to the five Stanford Institutes of Medicine (cardiovascular; cancer; stem cell; neurosciences; and immunity), and the subspecialties of Obstetrics & Gynecology. Assigned readings and related papers.
1 unit, Aut (Westphal, L), Win (Westphal, L), Spr (Staff)

**OBGYN 240. Sex Differences in Human Physiology and Disease**
(Same as HUMBIO 140, MED 240) Chromosomal and hormonal influences on cells, tissues, and organs that underlie the development of reproductive organs and sexual dimorphism of the neuroendocrine system. Effects of endogenous and exogenous sex hormones and environmental factors that differ between men and women on the musculoskeletal, neurological, cardiovascular, and immunological systems over the life course, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women and with aging in men). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor.
2-3 units, Win (Stefanick, M)

**OBGYN 256. Current Controversies in Women's Health**
(Same as HUMBIO 125) Interdisciplinary. Focus is on the U.S. Topics include: health research; bioethical, legal, and policy issues; scientific and cultural perspectives; social influences; environmental and lifestyle effects on health; and issues related to special populations. Guest lecturers; student debates. Prerequisite: Human Biology core or equivalent, or consent of instructor.
2-3 units, Spr (Jacobson, M; Stefanick, M)

**OBGYN 280. Early Clinical Experience in Obstetrics and Gynecology**
Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.
1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**OBGYN 282. Pregnancy, Birth, and Infancy**
(Same as PEDS 282) Comprehensive clinical experience where pre-clinical medical students follow pregnant women receiving care at Stanford hospitals to attend prenatal visits, delivery, and postnatal visits. Continuity clinic format, combined with didactic lessons and discussion seminars. Students are exposed to clinical activities in a meaningful context, bolstering classroom studies in anatomy, physiology, embryology and human development, and emphasizing social, economic, and personal issues related to medicine. This program spans one quarter, covering topics related to pregnancy, labor and delivery and newborn care. In addition to clinical experiences, students are expected to spend 1-2 hours/week in lectures and to complete a reflection of their experiences in the course. Prerequisite: pre-clinical medical student.
3 units, Spr (Staff)

**OBGYN 299. Directed Reading in Obstetrics and Gynecology**
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**OBGYN 370. Medical Scholars Research**
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**OBGYN 399. Graduate Research in Reproductive Biology**
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**OPHTHALMOLOGY (OPHT) COURSES**

**UNDERGRADUATE COURSES IN OPHTHALMOLOGY**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**OPHT 199. Undergraduate Research**
Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GRADUATE COURSES IN OPHTHALMOLOGY**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**OPHT 201. Clinical Topics in Ophthalmology**
Introduction to the professional opportunities available to the ophthalmologist in the areas of clinical research, community health, biotech and pharmaceutical development, international blindness prevention, graduate and post-graduate education.
1 unit, Aut (Fredrick, D)

**OPHT 202. Clinical Topics in Ophthalmology**
Continuation of 201 Professional opportunities available to the ophthalmologist in the areas of clinical research, community health, biotech and pharmaceutical development, international blindness prevention, graduate and post-graduate education.
1 unit, not given this year

**OPHT 203. Introduction to Ophthalmology**
(Continuation of 202) Introduction to the practical skills used within the field of ophthalmology. Diagnostic tools and instruments; applications of these tools; practice using instruments under the guidance of faculty and residents; practice in microsurgical techniques with one-on-one guidance.
1 unit, Spr (Staff)

**OPHT 280. Early Clinical Experience in Ophthalmology**
Provides an observational experience as formulated by the instructor and student. Prerequisite: consent of instructor.
1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
OPHT 299. Directed Reading in Ophthalmology
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OPHT 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OPHT 399. Graduate Research
Students to undertake investigations sponsored by individual faculty members. Opportunity to enhance knowledge of anatomy as it pertains to the practice of Orthopaedic Surgery and to improve dissection skills. Follows the surgical anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.
2 units, Sum (Staff)

ORTHOPEDIC SURGERY
(ORTHO) COURSES

UNDERGRADUATE COURSES IN ORTHOPEDIC SURGERY
Primarily for undergraduates; graduate students may enroll with consent of adviser.

ORTHO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine
(S, Sem) (Same as HUMBIO 97Q) Stanford Introductory Seminar. Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.
3 units, Aut (Matheson, G), Win (Matheson, G), Spr (Matheson, G)

ORTHO 102. Orthopaedic Surgical Anatomy
(Same as ORTHO 202) Open to medical, graduate and undergraduate students. Opportunity to enhance knowledge of anatomy as it pertains to the practice of Orthopaedic Surgery and to improve dissection skills. Follows the surgical anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.
2 units, Sum (Staff)

ORTHO 110. Practical Sports Medicine and Orthopaedic Examination Skills
(Same as ORTHO 210) Designed for students considering a career in sports medicine, orthopaedics, physical medicine and rehabilitation, emergency medicine, internal medicine or family practice. Focused physical exam skills for common sports and musculoskeletal complaints: shoulder and upper arm; elbow and forearm; hand and wrist; pelvis, hip and thigh; knee; lower leg, foot, and ankle; cervical and thoracic spine; lumbar spine. Each session consists of a lecture and relevant case for that week's topic, including interactive review of anatomy and demonstration and practice of physical exam skills, culminating in an assessment and a plan for the case presented. 1 unit requires preparation for and participation in 5 sessions; 2 units requires preparation for and participation in 8 sessions.
1-2 units, Spr (Staff)

ORTHOPEDIC SURGERY (ORTHOPEDIC SURGERY)

GRADUATE COURSES IN ORTHOPEDIC SURGERY
Primarily for graduate students; undergraduates may enroll with consent of instructor.

ORTH 201. Musculoskeletal Exam Practicum
Student initiated course. Opportunity to enhance knowledge and skills for conducting musculoskeletal exams. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic introductions followed by hands-on practice of specific aspects of the musculoskeletal exam.
1 unit, Win (Staff)

ORTH 202. Orthopaedic Surgical Anatomy
(Same as ORTHO 202) Open to medical, graduate and undergraduate students. Opportunity to enhance knowledge of anatomy as it pertains to the practice of Orthopaedic Surgery and to improve dissection skills. Follows the surgical anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.
2 units, Sum (Staff)

ORTH 210. Practical Sports Medicine and Orthopaedic Examination Skills
(Same as ORTHO 210) Designed for students considering a career in sports medicine, orthopaedics, physical medicine and rehabilitation, emergency medicine, internal medicine or family practice. Focused physical exam skills for common sports and musculoskeletal complaints: shoulder and upper arm; elbow and forearm; hand and wrist; pelvis, hip and thigh; knee; lower leg, foot, and ankle; cervical and thoracic spine; lumbar spine. Each session consists of a lecture and relevant case for that week's topic, including interactive review of anatomy and demonstration and practice of physical exam skills, culminating in an assessment and a plan for the case presented. 1 unit requires preparation for and participation in 5 sessions; 2 units requires preparation for and participation in 8 sessions.
1-2 units, Spr (Staff)

ORTH 220. Introduction to Lifestyle Medicine
Lifestyle medicine is an exciting new movement to empower practicing clinicians and aspiring physicians to facilitate behavioral change and promote a culture of health and wellness in patients. Focus is on both concrete, evidence-based findings and tangible, practical tools to readily translate into everyday clinical practice. A series of leading experts and guest lectures guide students through interactive, patient-focused activities in topics including, but not limited to: nutrition, exercise, sleep, motivational interviewing, meditation, and acupuncture.
1 unit, Win (Fredericson, M; Chin, J)

ORTH 222. Anatomy of Movement
Musculoskeletal and neuromuscular anatomy and physiology form the foundation of this multi-disciplinary course. Examines normal motor function and functional deficit from disease or injury. Clinical and scientific perspectives include orthopaedic surgery, neurology, mechanical engineering, computer science, anthropology, and art. Bioengineering challenges that assist or emulate human movement, such as design of an artificial joint or simulation of orthopaedic surgery for cerebral palsy are discussed. Evolution of upright walking and hand anatomy, as it became an instrument of purpose are discussed along with the expression of human movement throughout history in art masterpieces, photography, and animation. Student team projects. Lecture only for 3 units; project for 4 units.
3-4 units, not given this year

ORTH 260. Tissue Engineering
(Same as BIOE 260) Principles of tissue engineering and design strategies for practical applications for tissue repair. Topics include tissue components and dynamics, morphogenesis, stem cells, cellular and tissue characterization, controlled drug and gene delivery, bioreactors, cell-materials interactions, and host integration. Present research proposal to solve a real life tissue engineering problem.
3 units, Spr (Staff)

ORTH 270. Orthopaedic Tissue Engineering
Biological principles underlying the use of engineering strategies and biocompatible materials for tissue repair and regeneration. Structure, physiology, and mechanics of articular cartilage, bone, and dense soft connective tissues. Current ideas, approaches, and applications being implemented as therapeutic regimens for
arthrit, spinal deformities, and limb salvage. Multidisciplinary constraints on the design and creation of tissue constructs. Prerequisite: familiarity with basic cell and molecular mechanisms underlying tissue differentiation.

3 units, Win (Staff)

ORTHO 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OTOLARYNGOLOGY (OTOHNS) COURSES

UNDERGRADUATE COURSES IN OTOLARYNGOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

OTOHNS 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN OTOLARYNGOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

OTOHNS 200. Introduction to Otolaryngology-Head and Neck Surgery
Seminar series designed to expose students to the field, including its subspecialties and commonly performed procedures. Goals: supplement anatomical knowledge with clinical correlates; understand basic diagnosis, pathophysiology, and management of ENT problems commonly seen in primary care practice; how to perform a thorough head and neck examination. Seminars, given by faculty experts, cover major topics relating to each of the subdivisions within ENT. May be repeated for credit.

1 unit, Spr (Staff)

OTOHNS 299. Directed Reading in Otolaryngology
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OTOHNS 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OTOHNS 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OVERSEAS STUDIES: AUSTRALIA (OSPAUSTL) COURSES

UNDERGRADUATE COURSES IN OVERSEAS STUDIES: AUSTRALIA

OSPAUSTL 10. Coral Reef Ecosystems—
Key organisms and processes, and the complexity of coral reef ecosystems. Students explore the Great Barrier Reef from the southern end which demonstrates the physical factors that limit coral reefs, to the northern reef systems which demonstrate human-related changes. Emphasis is on research experiences and development of analytical skills. Two units only counted for the Biology major.

GER-DB-EngrAppSci

3 units, Aut (Ward, S; Arrigo, K)

OSPAUSTL 20. Coastal Resource Management—
Problem solving, research, communication, teamwork, and social assessment skills in sustainable coastal zone management. Issues include: ecosystem functions and values at risk under the proposed development in case study; environmental outcomes most desirable for the local stakeholders and how those are defined; features of the human communities and their function as they relate to the management options; tools or mechanisms for a sustainable management outcome. Taught by multidisciplinary team that includes Australian and developing country experts. Two units only counted for the Biology major.

GER-DB-EngrAppSci

3 units, Aut (Johnstone, R)

OSPAUSTL 30. Coastal Forest Ecosystems—
Prehistory of Australian rainforest and how rainforest structure and biodiversity change with altitude, latitude, and geology. Tropical coastal marine wetlands, mangrove forests, and the relationship between land- and sea-based biota. Biology and ecology of marine plants, mangroves, and tropical salt marsh. Introduction to specialized fields of marine plant biology and ecology including biogeography and evolution, aquatic plant ecophysiology, water quality and bioindicator techniques, pollution and eutrophication, and environmental control of marine plant distribution and productivity. Two units only counted for the Biology major.

GER-DB-EngrAppSci

3 units, Aut (Baker, C; Lovelock, C)

OSPAUSTL 40. Australian Studies—
Introduction to Australian society, history, culture, politics, and identity. Social and cultural framework and working understanding of Australia in relationship to the focus on coastal environment in other program courses. Field trips.

GER-DB-SocSci, EC-GlobalCom

3 units, Aut (Lilley, I)

OSPAUSTL 50. Targeted Research Project—
Prior to arriving in Australia, students establish a link with University of Queensland faculty to develop project ideas that combine personal interests and career goals with opportunities presented by the Australian Coastal Studies program, such as how mangrove roots find sediment rich zones of the shore, or the dynamics of ecotourism in southern and northern coastal Queensland. Project report and presentation in Australia.

4 units, Aut (Staff)

OSPBARCL 101. Language and Culture in Catalonia—
Preparation for students to function in the academic and social environment of Barcelona. Basic listening, reading, and comprehension in Catalan; review of Spanish with focus on written academic papers and listening to lectures. Introduction to Barcelona with emphasis on contemporary history, culture, and politics. Bilingualism; multiculturalism; varieties of nationalism and globalization in context of Barcelona.

4 units, Aut (Staff)

OVERSEAS STUDIES: BARCELONA (CASB) (OSPBARCL) COURSES

UNDERGRADUATE COURSES IN OVERSEAS STUDIES: BARCELONA

OSPBARCL 112. History of Spanish Cinema—
Socio-political and cultural films as well as some major indigenous films. Meet with Catalan cinema professionals including a filmmaker, a director and a young veteran producer.

5 units, Aut (Staff)

OSPBARCL 121. Unequal Experiences: Women's Lives in Spanish History—
Analysis of Spanish women's life experiences in past 500 years. Relationship between gender, society, culture, politics and progress in the Spanish context; additionally current debates and perspectives. Use of individual biographies know as life
COURSES OF INSTRUCTION

course/circle of selected women.

OVERSEAS STUDIES: BEIJING (OSPBEIJ) COURSES

UNDERGRADUATE COURSES IN OVERSEAS STUDIES: BEIJING

OSPBEIJ 1C. First-Year Modern Chinese, First Quarter—
Conversation, grammar, reading, elementary composition.
5 units, Aut (Zhu, X)

OSPBEIJ 3C. First-Year Modern Chinese, Third Quarter—
5 units, Spr (Zhu, X)

OSPBEIJ 6C. Beginning Conversational Chinese, First Quarter—
Three quarter sequence. Basic language skills in Mandarin to function abroad.
2 units, Aut (Staff, L)

OSPBEIJ 9. Chinese Language Tutorial—
2 units, Aut (Wang, Y), Spr (Wang, Y)

OSPBEIJ 10. Beijing Past and Present—
Introduction to the history, culture, and people of Beijing via field trips to historical sites, old and new neighborhoods, art district and local museums, film and performance in and around Beijing.
1 unit, Aut (Sun, C)

OSPBEIJ 17. Chinese Film Studies—
Stages of Chinese cinema from the establishment of P.R. China in 1949 to the present. State policies, filmmaking trends, representative filmmakers and films, and the state of the industry in the different periods, with close readings of some important films. Historical perspective and broad knowledge of Chinese cinema; academic approaches to film studies. GER:DB-Hum
4 units, Aut (Qin, L)

How people communicate, what they achieve through their communications, and the social and cultural consequences of these communicative behaviors. Focus on the interactive relationship between communication, culture and society in China. How communication habits are influenced by the individual; culture and how communication acts help to change and transform the society in which we live. GER:DB-SocSci
4 units, Spr (Gong, W)

OSPBEIJ 21C. Second-Year Modern Chinese—
5 units, Aut (Qian, H)

OSPBEIJ 23C. Second-Year Modern Chinese—
5 units, Spr (Chen, L)

OSPBEIJ 28. Chinese Language, Culture, and Society—
Introduction to fundamental aspects of Chinese language and culture. Socio-linguistic issues covered include: legends of origin; sound system of modern Standard Chinese; the making of the national standard; dialects; word-formation strategies; the writing system; language contacts, and neologism. Develop awareness of diverse cultural underpinnings associated with various expressions of the language. Enhance ability to be a more effective learner of Chinese by learning to use the right language at the right time and avoid social awkwardness from saying the wrong thing at the wrong place/time. Prerequisite: CHINLANG 3. GER:DB-SocSci, EC-GlobalCom
5 units, Spr (Zhou, L)

OSPBEIJ 30. History of U.S.-China Relations—
United States-China relations from the early 19th century to the recent past. Understand the relationship in actual time and circumstance while identifying enduring patterns and relevance for interpreting contemporary problems. Emphasis on the American side of the relationship, with Chinese perspectives included; special attention to the interaction of the two countries. Social and cultural dimensions emphasized to understand the mental context of high-level decision-making and politics. Appreciation of the importance of the human dimension, not just political or military events, in understanding the dynamics between the two countries. GER:DB-Hum
3 units, Spr (Chang, G)

OSPBEIJ 32. Site, Memory, History: Beijing as Place—
Examine specific sites in and around Beijing taking advantage of historical sites that offer a unique experience in understanding history. Relationship between sites, current memory, and historical understanding. Textual research and personal interview. Sites include the Foreign Legation quarter, the Marco Polo Bridge, the grave site of Edgar Snow, Tian’anmen Gate, the old and new Summer Palaces. GER:DB-Hum
5 units, Spr (Chang, G)

OSPBEIJ 40. Research Projects in Chinese Language—
In-depth sociolinguistic projects on topics, ranging from language change to language loss. Topics may also include an aspect of language policy, language contact, the sound system of a Chinese dialect, or an ethnic language, in-depth study of a certain linguistic construction, its writing system, or any topic of interest that can be sufficiently studied within a time span of three months. Enrollment in OSPBEIJ 28 encouraged. Prerequisite: CHINLANG 23.
3 units, Aut (Staff)

OSPBEIJ 41. Chinese Society and Business Culture—
Key features of Chinese society and their applications to Chinese business culture from a sociological perspective. Structural differences between Chinese and U.S. societies and their social, economic, and cultural implications. Emerging patterns in areas such as retailing and consumer behaviors, work relations and management, and business negotiation and collaboration. GER:DB-SocSci, EC-GlobalCom
4 units, Spr (Li, B)

OSPBEIJ 42. Chinese Media Studies—
Fundamental changes in Chinese media. Issues such as: how Chinese media emerge and evolve against the background of modern Chinese history; how they interact with government, sponsors, receivers, and other social institutions; and implications for Chinese social development. GER:DB-SocSci, EC-GlobalCom
4 units, Aut (Li, K)

Classical Chinese literature from the beginning (ca. 1000 BC) to the 14th century. Primary texts in translation with attention to the poetic works that feature Chinese literary tradition. Understanding of past experience of Chinese people living in another cultural space through observation, analysis, and reconstruction. GER:DB-Hum
4 units, Spr (Zhang, P)

OSPBEIJ 55. Chinese Economy in Transition—
From planned regime to market economy: political economy and institutional aspects of China’s economic transition and open-door policy. How can China achieve economic success given disadvantages in natural resources, human capital stock, and institutional arrangements? Theoretical economic analysis, empirical data, and case studies. Emergence of China as an economic superpower; major challenges ahead. GER:DB-SocSci, EC-GlobalCom
5 units, Spr (Zhou, L)

OVERSEAS STUDIES: BEIJING (OSPBEIJ) COURSES

STANFORD BULLETIN, 2011-12 | 887
OSPBEIJ 66. Essentials of China's Criminal Justice System—
Criminal laws and cases. Topics include criminal legal thinking, liability, prosecution and defense in criminal litigation, death penalty debates, evidence and compulsory measures, and the Chinese prison system. Comparisons with other systems. Human rights protection. GER:DB-SocSci, EC-GlobalCom
3 units, Aut (Wang, S)

OSPBEIJ 67. China-Africa and Middle East Relations—
China's relations with the outside world, with a focus on Africa and the Middle East. Historically contextualized relations; evolution of relations within the international climate during different periods, especially in the present; impact of geopolitical and geoeconomic relations on the existing international order. GER:DB-SocSci, EC-GlobalCom
4 units, Aut (Wang, S; Li, A)

OSPBEIJ 101C. Third-Year Modern Chinese—
5 units, Aut (Zhu, X)

OSPBEIJ 103C. Third-Year Modern Chinese—
5 units, Spr (Zhu, X)

OSPBEIJ 199A. Directed Reading A—
1-4 units, Aut (Staff), Spr (Staff)

OSPBEIJ 199B. Directed Reading B—
1-4 units, Aut (Staff), Spr (Staff)

OSPBEIJ 211C. Advanced Modern Chinese—
5 units, Aut (Wang, Y)

OVERSEAS STUDIES: BERLIN (OSPBER) COURSES

UNDERGRADUATE COURSES IN OVERSEAS STUDIES: BERLIN

OSPBER 1Z. Accelerated German: First and Second Quarters—
A jump start to the German language, enabling students with no prior German to study at the Berlin Center. Covers GERLANG 1 and 2 in one quarter.
8 units, Aut (Wohlfeil, J), Win (Wohlfeil, J)

OSPBER 2Z. Accelerated German, Second and Third Quarters—
Qualifies students for participation in an internship following the study quarter. Emphasis is on communicative patterns in everyday life and in the German work environment, including preparation for interviews.
8 units, Spr (Wohlfeil, J)

OSPBER 12. The Politics of Memory—
Politics of memorializing WW II focusing on Berlin. How the memory of WW II and its representation became constitutive to the self-consciousness of democratic culture in Germany. What constitutes the nature of collective memory; who has the authority to represent the war; the function of the memorial in public consciousness; and limits of representation of terror or genocide. Theoretical literature on politics of memory. Field trips to memorials. GER:DB-SocSci, EC-GlobalCom
3 units, Aut (Fonrobert, C)

OSPBER 13. Jewish and Muslim Berlin—
History of Jewish life in Berlin leading up to WW II, focusing on moments of literary and cultural creativity; the Jewish Enlightenment in Berlin; forms of protest against bourgeois German-Jewish culture; and literary, artistic, and political productivity of the interwar period. Cultural relationship between Germans and Jews. These historical dynamics as background to current discussion about the place of Islam and Muslim culture in contemporary Germany and Berlin. Site visits in Berlin. GER:DB-SocSci, EC-GlobalCom
3 units, Aut (Fonrobert, C)

OSPBER 14. Clausewitz and Sunzi—
Comparison of the basic ideas about warfare and the art of command in the western world with those in China through Clausewitz's On War and Sunzi's Art of War. Questions include: how the two texts relate to the respective philosophical traditions from which they emerge; how the nature of both texts is influenced by their position within the long-term, historical development of writings about warfare in the West and the East; why the two texts take a very different approach to violence as an intellectual problem.
3-5 units, Spr (Lewis, M)

OSPBER 15. Shifting Alliances? The European Union and the U.S.—
The development of European integration, a model for global security and peace, and a possible replacement for the U.S. position as unilateral superpower. Competing arguments about the state of transatlantic relations. GER:DB-SocSci, EC-GlobalCom
4-5 units, Spr (Brueckner, U)

OSPBER 17. Split Images: A Century of Cinema—
20th-century German culture through film. The silent era, Weimar, and the instrumentalization of film in the Third Reich. The postwar era: ideological and aesthetic codes of DEFA, new German cinema, and post-Wende filmmaking including Run Lola Run and Goodbye Lenin. Aesthetic aspects of the films including image composition, camera and editing techniques, and relationship between sound and image. GER:DB-Hum, EC-GlobalCom
4 units, Aut (Kramer, K)

OSPBER 20. German Film and the Berlin Film Festival—
German cinema from the silent era to das neue Kino. Weekly screenings with readings on the history of cinema, specific directors, and the larger social and political backdrop. Topics include: Ruttman's modernist look at Berlin; socialist/Leftist perspectives of (early) Lang and Brecht; pro-Nazi documentaries of Riefenstahl; das neue Kino principals Shlöndorff, Herzog and Fassbinder. During the Berlin Film Festival, we will see over 20 films focusing on documentaries dealing with global issues (environment, human rights, economic inequality, and liberation movements).
3-5 units, Win (Rehm, R)

OSPBER 21B. Intermediate German—
Grammar review, vocabulary building, writing, and discussion of German culture, literature, and film. Corequisite: OSPBER 100B.
3 units, Aut (Biege, M), Win (Boebe, D), Spr (Boebe, D)

OSPBER 23. Opera in Berlin—
Introduction to opera in Berlin. Lectures and discussion preceding opera attendance (at the Deutscher Oper, Staatsoper, and Komische Oper) place the operas in their musical, historical, and cultural contexts, and post-opera discussions deal with specifics of the production, performance, and interpretation in question. No previous knowledge of opera is required, nor must students read music. GER:DB-Hum
3-5 units, Win (Rehm, R)

OSPBER 30. Berlin vor Ort: A Field Trip Module—
The cultures of Berlin as preserved in museums, monuments, and architecture. Berlin’s cityscape as a narrative of its history from baroque palaces to vestiges of E. German communism, from 19th-century industrialism to grim edifices of the Sachsenhausen concentration camp.
1 unit, Aut (Jander, M), Win (Pabsc, M), Spr (Jander, M)

OSPBER 40A. Introductory Electronics—
electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43.
GER:DB-EngrAppSci
3 units, Aut (Hower, R), Win (Hower, R), Spr (Wong, S)

OSPBER 50. Female Divinities in Europe & China—
Forms in which women figured in the spirit world in medieval and early modern Europe compared to the same period in China. The Virgin Mary and the bodhisattva Guanyin provide the primary point of comparison. Points of contrast include: motherhood as a divergent value; relations between the household and the broader social order; distinction between a bad death and martyrdom as a route to divinity; sex as a problem versus the concern with ritual pollution. GER:DB-Hum, EC-Gender
3-5 units, Spr (Lewis, M)
OSPPER 161X. The German Economy in the Age of Discussion with European students. Field trips; guest speakers. Weaknesses, strengths, and relations with partners and neighbors. The institutional architecture of the EU and its current agenda.

OSPBER 126X. A People’s Union? Money, GlobalCom faced by united Germany. GER:DB the GDR, and the free market economy of the FRG. The processes Weimar Republic, the Third Reich, the postwar real socialism of The history of the German economy in the Wilhelmine Empire, the vocabulary building, and in field trips. Essay writing, vocabulary building, and in through film, literature, music, live performance, news media, and for intermediate and advance OSPBER 101B. Advanced German with actors, directors, or other theater professionals. In German. Weekly theater visits, a tour of backstage facilities, and discussions of backstage presentations.

OSPBER 100B. Berlin Heute— Required for students enrolled in OSPBER 21B; open to students in other German language classes. Active use of German, including vocabulary from a variety of fields and disciplines, and discussion of current issues.

2 units, Aut (Tat, C), Win (Tat, C), Spr (Tat, C)

OSPBER 101A. Contemporary Theater— Texts of plays supplemented by theoretical texts or reviews. Weekly theater visits, a tour of backstage facilities, and discussions with actors, directors, or other theater professionals. In German. Prerequisite: completion of GERLANG 3 or equivalent. GER:DB-Hum

5 units, Spr (Kramer, K)

OSPBER 101B. Advanced German— For intermediate and advanced students. Focus is on Berlin through film, literature, music, live performance, news media, and field trips. Essay writing, vocabulary building, and in-class presentations. Reading literature and news stories, essay writing, vocabulary building, and in-class presentations.

5 units, Aut (Biege, M), Win (Biege, M), Spr (Biege, M)

OSPBER 115X. The German Economy: Past and Present— The history of the German economy in the Wilhelmine Empire, the Weimar Republic, the Third Reich, the postwar real socialism of the GDR, and the free market economy of the FRG. The processes of economic transition since reunification and current challenges faced by united Germany. GER:DB-SocSci, DB-SocSci, EC-GlobalCom

4-5 units, Aut (Klein, I)

OSPBER 126X. A People’s Union? Money, Markets, and Identity in the EU— The institutional architecture of the EU and its current agenda. Weaknesses, strengths, and relations with partners and neighbors. Discussions with European students. Field trips; guest speakers.

4-5 units, Aut (Brueckner, U)

OSPBER 161X. The German Economy in the Age of Globalization— Germany’s role in the world economy; trade, international financial markets, position within the European Union; economic relations with Eastern Europe, Russia, the Third World, and the U.S. International aspects of German economic and political policies. The globalization of the world’s economy and Germany’s competitiveness as a location for production, services, and R&D, focusing on the German car industry.

4-5 units, Win (Klein, I)

OSPBER 174. Sports, Culture, and Gender in Comparative Perspective— Theory and history of mass spectator sports and their role in modern societies. Comparisons with U.S., Britain, and France; the peculiarities of sports in German culture. Body and competition cultures, with emphasis on the entry of women into sports, the modification of body ideals, and the formation and negotiation of gender identities in and through sports. The relationship between sports and politics, including the 1936 Berlin Olympic Games.

GER:DB-SocSci, EC-Gender

5 units, Spr (Jungmanns, W)

OSPBER 177A. Culture and Politics in Modern Germany— Key paradigms of modern Germany: German romanticism, the belated state and national identity, National Socialism and the Holocaust, Germany divided and unified. Literary, analytical, and theoretical texts; newspaper articles; film and TV; oral history.

GER:DB-SocSci, EC-Gender

4-5 units, Win (Kramer, K)

OSPBER 180D. Humboldt Universität: Humanities 2— 1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 180F. Humboldt Universität: Social Sciences 2— 1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199D. Humboldt Universität: Humanities 2— 1-3 units, Win (Staff), Spr (Staff)

OSPBER 199F. Humboldt Universität: Social Sciences 2— 1-3 units, Win (Staff), Spr (Staff)

OSPBER 199G. Freie Universität: Social Sciences 1— 1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199L. Freie Universität: Humanities 2— 1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199M. Freie Universität: Natural Sciences— 1-3 units, Aut (Staff), Win (Staff), Spr (Staff)
OVERSEAS STUDIES: CAPE TOWN (OSPCPTWNL) COURSES

UNDERGRADUATE COURSES IN OVERSEAS STUDIES: CAPE TOWN

Focuses on economic and social relations in South Africa through an examination of research and policies to reduce inequality in contemporary South Africa. Examines an array of explanations and perspectives about various social, economic, and political outcomes as they reflect in the current status of communities, the economy, government, and schools in contemporary South Africa. GER:DB-SocSci
4 units, Win (Carter, P)

OSPCPTWN 11. Education & Schooling in Post-Apartheid South Africa—
Examines the evolution of South African education and schools since the advent of democracy in 1994. Focuses on key sociological paradigms and approaches to the study of education and its role in the modern world, applied to South African society. Identifies sources of educational change, the organizational context of schooling, the interplay between social stratification and schooling, and the factors attributable to differences in academic achievement outcomes among different social groups. Includes option of service-learning in a South African school. GER:DB-SocSci
4-5 units, Win (Carter, P)

OSPCPTWN 16. South Africa Sites of Memory—
Required Course. Relation between conventional histories and different kinds of individual and collective memory that are focused on places and spaces, testing the relation between grand narratives and more particularized pasts. Questions of cultural heritage, in particular its contestations among individual, familial, local, national, and international interests. 2 units, Win (Stanton, T)

OSPCPTWN 17. Western Cape Sites of Memory—
Required Course. Relation between conventional histories and different kinds of individual and collective memory that are focused on places and spaces, testing the relation between grand narratives and more particularized pasts. Questions of cultural heritage, in particular its contestations among individual, familial, local, national, and international interests. 1 unit, Spr (Stanton, T)

OSPCPTWN 18. Xhosa Language and Culture—
History of the Xhosa language; understanding Xhosa culture and way of life. Listening, speaking, reading and writing, combined with the social uses of the language in everyday conversations and interactions. Intercultural communication. Content drawn from the students' experiences in local communities through their service learning/volunteer activities to support the building of the relationships in these communities. How language shapes communication and interaction strategies. 2 units, Win (Tyam, N), Spr (Tyam, N)

OSPCPTWN 22. Preparation for Community-Based Research in Community Health and Development—
For students intending to engage in community-based research in South Africa in the summer following spring study quarter in Cape Town. Approaches and methods of collaborative, community-based research; qualitative data gathering and analysis methods in community-based research; effective collaboration with community partners and data sources; race and privilege in community-based research. Introduction to approaches, methods and critical issues of partnership-based, community-engaged research and to the community-based research partners. Qualitative data gathering and analysis methods in community-based research; effective collaboration with community partners and data sources; race and privilege in community-based research. Preparation of research proposals and plans for research carried out during spring quarter through OSPCPTWN 24B.
3 units, Win (Stanton, T)

OSPCPTWN 24B. Targeted Research Project in Community Health and Development—
Two-quarter sequence for students engaging in Cape Town-sponsored community-based research. Substantive community health or development investigations in collaboration with the Stanford Centre's community partners: Western Cape NGOs or government agencies, or community-based organizations or groups. Students' research supported through methods workshops, sharing of progress and problems, and data and findings presentations. Prerequisite: OSPCPTWN 24A.
3 units, Spr (Stanton, T)

OSPCPTWN 24. Understanding the African Experience: Service Learning in the Contemporary South African Context—
Executive learning and its role in community social action; development; service learning. Micro contexts of people's daily lives and experiences in the context of an emergent democracy; understanding possibilities of community action and mobilisation for social change. Service in a historically marginalised community near Cape Town to understand realities of everyday life in informal settlements, to engage with education in a developmental context, and to gain insight into sociopolitical factors that shape social action and learning. GER:DB-SocSci, EC-GlobalCom
3-5 units, Win (McMillan, J), Spr (McMillan, J)

OSPCPTWN 33. From Apartheid to Democracy: Namibia and South Africa—
Comparison of the transition from apartheid to democracy in Namibia and South Africa. Focus on peaceful process involving negotiated settlement in South Africa. Significance of democracy in Namibia post 1990 and in South Africa after 1994; South Africa's truth and reconciliation commission and post-1994 economic policy. GER:EC-GlobalCom
4 units, Win (Saunders, C)

OSPCPTWN 36. The Archaeology of Southern African Hunter Gatherers—
Archaeology, history and ethnography of the aboriginal hunter gatherers of southern Africa, the San people. Formative development of early modern humans and prehistory of hunters in southern Africa before the advent of herding societies; rock paintings and engravings of the subcontinent as situated in this history. Spread of pastoralism throughout Africa. Problems facing the descendants of recent hunter gatherers and herdsmen in southern Africa, the Khoisan people. GER:DB-SocSci, EC-GlobalCom
4 units, Spr (Parkington, J)

OSPCPTWN 38. Genocide: The African Experience—
Genocide as a major social and historical phenomenon, contextualized within African history. Time frame ranging from the extermination of indigenous Canary Islanders in the fourteenth and fifteenth centuries to more recent mass killings in Rwanda and Darfur. Emphasis on southern African case studies such Cape San communities and the Herero people in Namibia. Themes include: roles of racism, colonialism and nationalism in the making of African genocides. Relevance of other social phenomena such as modernity, Social Darwinism, ethnicity, warfare and revolution. Comparative perspective to elucidate global dimensions. GER:DB-SocSci, EC-GlobalCom
OVERSEAS STUDIES: FLORENCE (OSPFLOR) COURSES

UNDERGRADUATE COURSES IN OVERSEAS STUDIES: FLORENCE

OSPFLOR 21F. Accelerated Second-Year Italian, Part A—
Review of grammatical structures; grammar in its communicative context. Listening, speaking, reading, and writing skills practiced and developed through authentic material such as songs, newspaper articles, video clips, and literature. Insight into the Italian culture and cross-cultural understanding.
5 units, Aut (Quercioli, F), Win (Quercioli, F), Spr (Quercioli, F)

OSPFLOR 22F. Accelerated Second-Year Italian Part B,—
Grammatical structures, listening, reading, writing, speaking skills, and insight into the Italian culture through authentic materials. Intermediate to advanced grammar. Content-based course, using songs, video, and literature, to provide cultural background for academic courses.
5 units, Aut (Quercioli, F), Win (Quercioli, F), Spr (Quercioli, F)

OSPFLOR 31F. Advanced Oral Communication: Italian—
Refine language skills and develop insight into Italian culture using authentic materials. Group work and individual meetings with instructor. Minimum enrollment required. Prerequisite: ITALLANG 22A or placement.
3 units, Aut (Quercioli, F), Win (Quercioli, F), Spr (Quercioli, F)

OSPFLOR 34. The Woman in Florentine Art—
Influence and position of women in the history of Florence as revealed in its art. Sculptural, pictorial, and architectural sources from a social, historical, and art historical point of view. Themes: the virgin mother (middle ages); the goddess of beauty (Botticelli to mannerism); the grand duchess (late Renaissance, Baroque); the lady, the woman (19th-20th centuries). GER:DB-Hum, EC-Gender
4 units, Aut (Verdon, T)

OSPFLOR 35. European Economic and Monetary Integration—
Historical overview of economic and monetary integration process in Western Europe. European Union institutions: the Commission, the Parliament, the European Council, the Council of Ministers, and the Court of Justice. Microeconomic theory of inter-industry and intra-industry trade and the case of EU. Microeconomics of integration: the costs and benefits, also applicable to NAFTA. The Lisbon Strategy as a European response to the challenges of globalization. The euro, the dollar and the international monetary system. Monetary and fiscal policies in EMU: the European Central Bank and the Stability and Growth Pact. Prerequisites: ECON 51, 52 or equivalent. GER:DB-SocSci, EC-GlobalCom
5 units, Spr (Della Posta, P)

OSPFLOR 40. The Contemporary Art Scene in Tuscany: Theory and Practice—
The ever-changing and multifaceted scene of contemporary art through visual and sensorial stimulation. How art is thought of and produced in Italy today. Hands-on experience. Sketching and exercises on-site at museums and exhibits, plus workshops on techniques. Limited enrollment.
1-3 units, Aut (Rossi, F)

OSPFLOR 42. Academic Internship—
Mentored internships in banking, education, the fine arts, health, media, not-for-profit organizations, publishing, and retail. May be repeated for credit.
1-5 units, Aut (Campani, E), Win (Campani, E), Spr (Campani, E)

OSPFLOR 44. The Revolution in Science: Galileo and the Birth of Modern Scientific Thought—
Galileo's life and scientific progress starting from his student years at the University of Pisa. Departure from traditional natural philosophy leading to radical reformation of cosmology and physics, emphasizing the science of motion. His innovative use of observation and measurement instruments, emphasizing the telescope. Cultural and social context. GER:DB-Hum
5 units, Win (Galluzzi, P)

OSPFLOR 48. Sharing Beauty: Florence and the Western Museum Tradition—
The city's art and theories of how art should be presented. The history and typology of world-class collections. Social, economic, political, and aesthetic issues in museum planning and management. Collections include the Medici, English and American collectors of the Victorian era, and modern corporate and public patrons. GER:DB-Hum
4 units, Win (Rossi, F; Verdon, T)

Structural and ideological attributes of narrative cinema, and themes of visual and cinematic representation. How film directors and public patrons. GER:DB-Hum
4 units, Win (Rossi, F; Verdon, T)

OSPFLOR 50F. Introductory Science of Materials—
GER:DB-EngrAppSci
4 units, Aut (Staff, I)

OSPFLOR 50M. Introductory Science of Materials—
Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection
COURSES OF INSTRUCTION

for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

4 units, Win (Staff)

OSPFLOR 51. Italian Foreign Policy and the Global Players—
Reshaping of foreign policy and its governing principles with the new balance of power of the early 21st century. Strategies underlying a country’s long-term foreign policy, especially with respect to diplomatic models. Role of need for energy resources in foreign policy. Geographical and historical boundaries behind a foreign policy vision. Effect of foreign policy stance on the outcome of elections. Foreign policy shaping in Italy and its relationship between the Mediterranean and the rest of Europe. GER:DB-SocSci
5 units, Aut (Pistelli, L)

OSPFLOR 53. Law and the Use of Force: An Historical Appraisal—
Efforts by individuals, groups, and governments to control the use of force in human history through legal rules. Review of current laws, looking at both the right to engage in armed conflict and the manner in which armed conflict may be conducted. The UN Charter, relevant Geneva Conventions, and developments in humanitarian law related to non-combatants. Appraisal of whether and in what ways current legal rules and regimes have been effective. GER:DB-SocSci
3 units, Aut (Sofaer, A)

OSPFLOR 54. High Renaissance and Maniera—
The development of 15th- and early 16th-century art in Florence and Rome. Epochal changes in the art of Michelangelo and Raphael in the service of Pope Julius II. The impact of Roman High Renaissance art on masters such as Fra’ Bartolomeo and Andrea del Sarto. The tragic circumstances surrounding the early careers: Pontormo and Rosso Fiorentino and the transformation of early Manerismo into the elegant style of the Medican court. Contemporary developments in Venice. GER:DB-Hum
5 units, Spr (Verdon, T)

OSPFLOR 55. Academy of Fine Arts: Studio Art—
Courses through the Academia delle Belle Arti. Details upon arrival. Minimum Autumn and Winter Quarter enrollment required; 1-3 units in Autumn. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPFLOR 56. University of Florence Courses—
1-5 units, Aut (Campani, E), Win (Campani, E), Spr (Campani, E)

OSPFLOR 57. Global Change and Italian Ecosystems: Management and Conservation for Mitigation—
Introduction to state of the art of global climate change science, with a focus on the effects of global change on ecosystem functions and services, and on Europe as a regional case study. Conservation and management issues related to vulnerable Italian ecosystems through both lectures and field trips. Conservation practices and specific management issues focused on Tuscany, with ecosystems, ranging from the Thyrrenian shores, surrounded by the typical Mediterranean chaparral to the sub-alpine environments on the Apennine mountains. GER:DB-NatSci
4 units, Spr (Cannicci, S)

OSPFLOR 58. Space as History: Urban Change and Social Vision in Florence 1059 to the Present—
A thousand years of intentional change in Florence. Phases include four periods of urban development of ecclesiastical structures begun in the 11th century; aggressive expansion of religious and civic space in the 13th and 14th centuries; agrarianization of private and public buildings in the 15th century; transformation of Florence into a princely capital from the 16th through the 18th centuries; traumatic remaking of the city’s historic core in the 19th century; and development of new residential areas on the outskirts and in neighboring towns in the 20th and 21st centuries. GER:DB-Hum
4 units, Spr (Rossi, F; Verdon, T)

OSPFLOR 59. Comparative Analysis of Entrepreneurship and Innovation: Italy & Silicon Valley—
How entrepreneurship in Italy compares to Silicon Valley and other similar innovation clusters around the globe. Link to weekly seminar series with expert guest speaker series. Independent research and analysis of historical, current, and future potential for high-growth entrepreneurship in Italy and surrounding region.
2 units, Aut (Byers, T)

OSPFLOR 63. Technology Entrepreneurship—
How do you create a successful start-up? What is entrepreneurial leadership in a large firm? What are the differences between an idea and true opportunity? How does an entrepreneur form a team and gather the resources necessary to create a great enterprise? Formation and growth of high-impact start-ups in areas such as information, green/clean, medical and consumer technologies as well as social venture. Illustrations from early stages of Silicon Valley technology firms and similar firms in Europe. GER:DB-SocSci
4 units, Aut (Byers, T)

OSPFLOR 66. Da Vinci: Renaissance Understanding of Anatomy—
Da Vinci's work from the perspectives of modern anatomy. How knowledge of anatomy gained during the Renaissance period compares with modern concepts. Human anatomy depicted in da Vinci’s notebooks and art compared with advanced renderings and modern studies with advanced imaging methods. The human figure from both biological and artistic perspectives. Museum visits including Uffizi and il Museo della Specola.
3 units, Win (Gold, G)

OSPFLOR 67. Women in Italian Cinema: Maternity, Sexuality, and the Image—
Film in the social construction of gender through the representation of the feminine, the female, and women. Female subjects, gaze, and identity through a historical, technical, and narrative frame. Emphasis is on gender, identity, and sexuality with references to feminist film theory from the early 70s to current methodologies based on semiotics, psychoanalysis, and cultural studies. Advantages and limitations of methods for textual analysis and the theories which inform them. Primarily in Italian. GER:DB-Hum, EC-Gender
4 units, Spr (Campani, E)

OSPFLOR 69. The You No One Knows: Self Expression through Abstract Art—
Overview of the birth and evolution of abstract art with visual background necessary to produce works of art free of a realistic representation. Movements and trends in abstract art; experimentation with different media and techniques.
4 units, Win (Rossi, F)

OSPFLOR 70. Investigating In/exclusion: Study of Embodiment and Consumption in Italy—
How do social anthropologists study belonging and marginalization? An introduction to anthropological methods, this course explores means by which, in contemporary Italy, bodies and consumer consumption mediate participation in/exclusion from social life. For instance, over the quarter together, we may examine how in Florence people and industries manage social ties to (a) family through health-inducing goods, (b) friendship circles by way of sartorial adornment, (c) gender status via cigarette use, and (d) ethnicity through food and eating. GER:DB-SocSci
5 units, Spr (Kohrman, M)

OSPFLOR 71. Becoming an Artist in Florence: Contempory Art in Tuscany and New Tendencies in the Visual Future—
Recent trends in art, current Italian artistic production, differences and the dialogue among visual arts. Events, schools, and movements of the 20th century. Theoretical background and practical training in various media. Work at the Stanford Center and on site at museums, exhibits, and out in the city armed with a sketchbook and camera. Emphasis is on drawing as the key to the visual arts. Workshops to master the techniques introduced. Limited enrollment.
3-5 units, Spr (Rossi, F)

OSPFLOR 72. Independent Study Projects: Mini-ethnographies—
Fieldwork based extension of OSPFLOR 70. Investigating In/Exclusion. Mini-ethnographies on themes from seminar conducted first in host household, then neighborhoods near residence and beyond in an expanding radius. Focus on belonging/exclusion and its relationship to market modulated forms of corporeality.
5 units, Spr (Staff)
OVERSEAS STUDIES: KYOTO-KCJS
(OSPKYOCT) COURSES

UNDERGRADUATE COURSES IN OVERSEAS STUDIES: KYOTO-KCJS

OSPKYOCT 103A. Third-Year Japanese I—
Preparation for function beyond basic level in a Japanese-speaking environment by developing and enhancing communicative competence through: review of basic grammar; new grammar; reading short essays and articles with help of dictionary; short writing and speaking assignments using formal style to describe, explain, and discuss sociocultural topics; enhancing listening comprehension.
12 units, Aut (Staff)

OSPKYOCT 103B. Third-Year Japanese II—
Preparation for function beyond basic level in a Japanese-speaking environment by developing and enhancing communicative competence through: review of basic grammar; new grammar; reading short essays and articles with help of dictionary; short writing and speaking assignments using formal style to describe, explain, and discuss sociocultural topics; enhancing listening comprehension.
12 units, Win (Staff)

OSPKYOCT 104A. Fourth-Year Japanese I—
Emphasis on applications of correct grammar and strengthening academic communication skills through: reading longer essays, articles, and novels with some dictionary work; reading and writing assignments in paragraph format using formal style to describe, explain and discuss sociocultural topics; developing listening comprehension.
12 units, Aut (Staff)

Emphasis on applications of correct grammar and strengthening academic communication skills through: reading longer essays, articles, and novels with some dictionary work; reading and writing assignments in paragraph format using formal style to describe, explain and discuss sociocultural topics; developing listening comprehension.
12 units, Win (Staff)

OSPKYOCT 105A. Fifth-Year Japanese I—
For students with advanced proficiency. Goals include advanced command of grammar, composition, and stylistics. Emphasis is on academic Japanese preparing students to audit classes at a Japanese university.
12 units, Aut (Staff)

OSPKYOCT 105B. Fifth-Year Japanese II—
For students with advanced proficiency. Goals include advanced command of grammar, composition, and stylistics. Emphasis is on academic Japanese preparing students to audit classes at a Japanese university.
12 units, Win (Staff)

OSPKYOCT 107. Language Use in the Anime of Miyazaki Hayao—
Japanese language in action. How language usage can vary by situation such as relative social distance between participants, type of interaction or event, in/out group membership, and attitudinal stance on discussion topic. How linguistic behavior of a character contributes to overall portrayal and identity in a film. Film dubblings and subtitles. Multimedia projects.
6 units, Aut (Staff)

OSPKYOCT 108. Lost in Translation—
The art and practice of translating literary texts from a variety of periods and genres. Strategies for translation and essays on translation by literary translators and theorists. Notable translations of Japanese literature in connection with the original texts. Students develop individual translation projects.
6 units, Spr (Staff)

OSPKYOCT 109. Exploring Language and Food in Kyoto—
How local Kyoto food purveyors use language to market and present their wares and how they communicate with customers.
Readings on Japanese food culture from anthropology, history and literature as well as topics in linguistics. Students will also take notes on spoken language use by staff and customers and gather samples of written language from selected shops and restaurants.

6 units, Spr (Staff)

**OSPKYOC** 118. Politics and Political Economy of Japan
Post-War World II politics and political economy of Japan. Examine policymaking related to economic development, employment, and equal opportunity, as well as political institutions such as party politics and voting systems. Major theme is apparent disjuncture in policymaking performance before and after 1990.

6 units, Spr (Staff)

**OSPKYOC** 127. Outside the Mainstream: The Minority Experience in Japan
Historical analysis of how minority communities came into existence and struggled to maintain a distinctive lifestyle in Japan's homogeneous society. Japan's 1979 ratification of U.N. International Covenant on Civil and Political Rights.

6 units, Aut (Staff), Win (Staff)

**OSPKYOC** 128. Families and Work in Post-war Japan
Factors that promoted both change and continuity in the social division of labor between the interdependent spheres of work and family. How cultural strategies for organizing contemporary Japanese social life were conditioned 1) by rapid industrialization and growth and 2) by later economic stasis. Class, gender, and regional variations; role of social psychology in Japanese responses to work-family conflicts.

6 units, Aut (Staff), Win (Staff)

**OSPKYOC** 132. Japanese Growth and Business Development
History, structure, and operation of the Japanese economy and business. Emphasis is on structural and institutional factors in the maturity and decline of Japan's international competitiveness since the early 80s. Field trips and films complement lectures and student presentations.

6 units, Aut (Staff), Win (Staff)

**OSPKYOC** 154. History and Culture of Japan
Survey of cultural, political, and economic history of Japan. Fundamental values and aspirations of Japanese who lived in different historical periods; analysis of political, social, and economic systems developed to represent beliefs and ambitions of different eras. Impact on domestic events from inclusion in the East Asia cultural zone and from interactions with the West.

6 units, Aut (Staff), Win (Staff)

**OSPKYOC** 164. Kansai Area Arts
Kansai area, in particular the golden triangle formed by cities of Kyoto, Osaka, and Nara, as the center of Japanese art production from 4th century until the 17th century when patronage shifted to Tokyo. Focus is on painting and sculpture through readings, classroom discussion, and field trips.

6 units, Spr (Staff)

**OSPKYOC** 168. Japan in the Middle Ages
Topics central to Japan's medieval revolution: construction of new forms of political authority; emergence of fresh cultural norms; appearance of Zen and popular religious sects; intersection of innovative Zen arts with samurai government; new visibility of commoners and women in written and visual records; interactions with others in Asia.

6 units, Spr (Staff)

**OSPKYOC** 185. Noh and Kyogen
Noh drama as a mirror of Muromachi period culture. Broad literary heritage and Buddhist precepts reflected in plays. Performance traditions such as Shinto ritual, court dance, harvest festivals, exorcism rites, and narrative entertainment. Wider context of world drama and dramatic theories of the creators of Noh. Close reading of representative plays and first hand experience of performance.

6 units, Aut (Staff), Win (Staff)

**OSPKYOC** 197. Independent Studies
Focused research using the Japanese language and taking advantage of local Kyoto resources. Directed reading and research, weekly meetings with professor, and final research paper. For full-year students with language skills adequate for the proposed research.

6 units, Spr (Staff)

**OSPKYOC** 198. Women's Issues in Japan—
Women's issues as related to men's issues in Japan. The house system and the legalized prostitution system in modern Japan. Topics include marriage, gender division of labor, child bearing, contraception, and domestic violence. How the private sphere is influenced by the public sphere including politics, economy, and culture.

6 units, Spr (Staff)

**OVERSEAS STUDIES: KYOTO (OSPKYOTO) COURSES**

**UNDERGRADUATE COURSES IN OVERSEAS STUDIES: KYOTO**

**OSPKYOC** 9K. First-Year Japanese Language, Culture, and Communication B—

3 units, Spr (Tanaka, K; Asami, N)

**OSPKYOC** 10. Gamelan to Kabuki: Musical Traditions of Far East Asia—
Introduction to traditional musical cultures of the Far East with an emphasis on Japan. Listening, viewing and study of prominent musical examples. Survey of unique traditional instruments and ensembles in a range of performance contexts, from sacred rituals to secular dance and theater. Traditional genres and their impact on local and global musical culture of today. Development of critical listening skills. Live performances and encounters with local masters; early morning monastery chanting; visits to Bunraku and Kabuki theaters. GER:DB-Hum, EC-GlobalCom

4 units, Spr (Kapuscinski, J)

**OSPKYOC** 11. Experiencing Ma: Time & Space in Japanese Arts—
The study, expression, and experience of Ma, a key concept in Japanese art, through field trips, meetings with artists, empirical research, presentations, and creative projects. Exploration and comparative examination of landscape gardens, architecture, calligraphy, ikebana, tea ceremony, poetry, theater, classical music, media art, installation art, dance, and cuisine. Visits to gardens, temples, museums, concerts, and events in Kyoto and nearby cities as catalysts for discussion of Japanese cultural identity and its distinctiveness within the global community.

GER:DB-Hum

4 units, Spr (Kapuscinski, J)

**OSPKYOC** 17K. Second-Year Japanese Language, Culture, and Communication B—

3 units, Spr (Fujisawa, T; Ueda, H)

**OSPKYOC** 17R. Religion and Japanese Culture—
