

CONTENTS

Preface	1
Modeling of compressible turbulence. O. ZEMAN	3
Turbulence modeling: near-wall turbulence and effects of rotation on turbulence. T. -H. SHIH	13
An experimental study of scalar mixing in curved shear layers. P. S. KARASSO and M. G. MUNGAL	27
An experimental investigation of a low Reynolds number turbulent boundary layer subject to an adverse pressure gradient. J. H. WATMUFF	37
An experimental study of the effects of rapid rotation on turbulence. S. V. VEERAVALLI	51
An experimental study of secondary vortex structure in mixing layers. J. H. BELL	59
Development of renormalization group analysis of turbulence. L. M. SMITH	81
Short-time Lyapunov exponent analysis. J. A. VASTANO	97
Organized motions underlying turbulent shear flows. F. WALEFFE	107
Turbulence dynamics in the wavelet representation. C. MENEVEAU	117
Direct simulation of turbulent combustion. T. J. POINSOT	131
Transition to turbulence in hypersonic flow. J. J. W. VAN DER VEGT	157
Direct simulations of wall-bounded compressible turbulence. J. C. BUELL	169
Turbulent transport in the solar nebula. K. W. THOMPSON	175
A numerical method for prediction of compressible turbulent flows with closure models. G. P. HUANG	185
Incompressible spatially-developing free-shear flows. J. C. BUELL	195
A numerical method for direct simulation of turbulence in complex geometries. P. ORLANDI	215
The large-scale structures in turbulent plane Couette flow. M. J. LEE	231

Turbulent thermal convection in a differentially rotating channel. W. CABOT	247
Patterns in simulated turbulent channel flow. D. STRETCH	261
Appendix Center for Turbulence Research 1989 Roster	281
