

CONTENTS

Preface	1
A preliminary experimental investigation of local isotropy in high-Reynolds-number turbulence. S. V. VEERAVALLI and S. G. SADDOUGH	3
Local isotropy in buoyancy-generated turbulence. J. R. CHASNOV	21
Non-linear interactions in homogeneous turbulence with and without background rotation. F. WALEFFE	31
On small scale vortices in turbulent flows. J. JIMÉNEZ	45
Scaling analysis of energy transfer in the inertial range. Y. ZHOU	57
Lagrangian velocity correlation and spectrum in homogeneous isotropic turbulence. T. GOTOH, R. S. ROGALLO and J. R. HERRING	67
Turbulence and vortex structures. E. DRESSELHAUS	85
Vorticity matching in superfluid helium. D. C. SAMUELS	93
The role of pressure-dilatation correlation in rapidly compressed turbulence and in boundary layers. O. ZEMAN	105
Analyses and modeling of evolving turbulent flow. P. A. DURBIN	119
Near-wall turbulence modeling for boundary layers with separation S. H. KO	137
Modeling turbulent boundary layers in adverse pressure gradients. S. BELCHER	147
Single point modeling of initially isotropic turbulence under uniform rotation. N. N. MANSOUR, C. CAMBON and C. G. SPEZIALE	159
Derivation of the $\mathcal{K} - \mathcal{E}$ model equations using the renormalization group methods. L. M. SMITH	169
On dynamic models for large eddy simulation. T. S. LUND	177
Large eddy simulations of passive and buoyant scalars with dynamic subgrid-scale models. W. CABOT	191
Dynamic subgrid-scale modeling of compressible turbulence. K. SQUIRES	207
Probability density function approach and related closures for turbulent scalar fields. F. GAO	225
Monte-Carlo implementation of mapping closures: application to chemical reacting flows. L. VALIÑO	237
Flame ignition in a premixed turbulent flow. T. J. POINSOT	251

Simulation of flame-turbulence interactions in premixed combustion. A. TROUVÉ	273
Linear stability analysis of hypersonic boundary layers. E. GUIL- YARDI, J. J. W. VAN DER VEGT and J. H. FERZIGER	287
Methods for direct simulation of transition in hypersonic boundary layers II. J. J. W. VAN DER VEGT	299
Effect of walls on the supersonic reacting mixing layer. D. S. SHIN and J. H. FERZIGER	309
Direct numerical simulation of instability and noise generation of hot jets. M. C. JACOB	331
Mixing measurements of straight and curved shear layers. P. S. KARASSO and M. G. MUNGAL	343
Progress toward identification of streamwise vorticity meander in a plane mixing layer. R. L. LEBOEUF	349
Streaks in turbulent boundary layers. J. M. HAMILTON	355
Some feedback procedures for control of flows. R. TEMAM	363
An exact turbulent closure for the hydromagnetic dynamo. H. H. SHEN	375
Appendix: Center for Turbulence Research 1991 Roster	399
