

CONTENTS

Preface	1
Near-wall model for compressible turbulent boundary layers based on an inverse velocity transformation. K. P. GRIFFIN, L. FU and P. MOIN	3
Studies in large-eddy simulations of the NASA transonic Common Research Model. K. GOC, R. AGRAWAL, S. T. BOSE and P. MOIN	13
Wall-modeled large-eddy simulation of the Sandia Axisymmetric Transonic Bump. A. ELNAHHAS, R. AGRAWAL and P. MOIN	31
Wall-modeled LES of the Boeing speed bump using a non-Boussinesq modeling framework. R. AGRAWAL, S. T. BOSE and P. MOIN	43
Progress on slip wall modeled LES for predicting smooth body separation. M. P. WHITMORE, S. T. BOSE and P. MOIN	59
Wall-modeled LES of laser-scanned rime, glaze, and horn ice shapes. B. BORNHOFT, S. S. JAIN, K. GOC, S. T. BOSE and P. MOIN	71
Estimating the performance of a small-scale non-isolated propeller in hover using WMLES. J. SVORCAN, K. WANG, C. IVEY and A. KOVAČEVIĆ	87
Task-based framework for physics-based ensemble simulation and in situ data processing. K. MAEDA and T. TEIXEIRA	97
Online training of neural networks in a CFD solver for sensor placement and flow inference. C. LAURENT and K. MAEDA	111
Challenges in the use of neural networks for large-eddy simulations. M. BENJAMIN, S. DOMINO and G. IACCARINO	123
A phase-field method for simulations of two-phase flows on unstructured grids. H. HWANG and S. S. JAIN	137

Assessment of WENO and TENO schemes for the four equation-compressible two-phase flow model with regularization terms. H. COLLIS, S. MIRJALILI, S. S. JAIN and A. MANI	151
Consistent modeling of scalar transport in multiphase flows using conservative phase field methods. S. MIRJALILI, M. KHANWALE and A. MANI	167
Modeling interface-confined scalars and insoluble surfactants in two-phase flows. S. S. JAIN and A. MANI	179
A generalized Navier boundary condition for modeling contact lines using second-order conservative phase-field methods. R. BROWN, S. MIRJALILI, M. KHANWALE, B. GANAPATHYSUBRAMANIAN and A. MANI	193
Computational framework for direct numerical simulation of shock-turbulence interaction in thermochemical nonequilibrium. C. T. WILLIAMS, M. DI RENZO and P. MOIN	203
Low-order modeling of non-premixed flames subjected to a transverse acoustic mode. D. BROUZET and M. IHME	217
The linear acoustic equations solved as a finite domain boundary value problem by eigenfunction expansion. T. FLINT	231
Roster	243
