

CONTENTS

Preface	1
Parametric representation and surrogate modeling of drag for a realistic automotive geometry. M. BENJAMIN, E. SAETTA, C. IVEY, S. BOSE, F. HAM and G. IACCARINO	3
Toward predicting turbulence structure in street canyons using deep learning. T. M. JAROSLAWSKI, A. PATIL and B. J. MCKEON	15
Neural flow-augmented global reaction for the reduction of complex chemical kinetics. C. LAURENT	23
Towards data-driven resolvent analysis of nonlinear flows. C. GONZÁLEZ-HERNÁNDEZ, K. CAO, B. HERRMANN, S. L. BRUNTON and B. J. MCKEON	33
A semi-global chemistry mechanism for low-pressure oxygen-methane combustion. D. BROUZET and D. PASSIATORE	43
Progress on multifidelity simulations of a laser-ignited rocket combustor. T. ZAHTILA, D. PASSIATORE and G. IACCARINO	57
Turbulent, premixed, spherical NH_3/H_2 combustion; Simulation optimization and existence of ‘white holes’. R. J. M. BASTIAANS and X. LIU	69
Discussion on benchmark data for simulations of compressible multiphase flows. M. KHANWALE, S. MIRJALILI, A. MANI, P. DESJARDIN and S. LELE	83
Accurate wave generation using unstructured two-phase solver with a phase-field approach. H. HWANG and C. GORLÉ	105
Stationary states of forced two-phase turbulence. S. S. JAIN and A. ELNAHHAS	119
Modeling soluble surfactants in two-phase flows. S. S. JAIN	135

Similarity of dissociation-recombination phenomena in laminar hypersonic boundary layers. D. PASSIATORE and M. DI RENZO	147
Inverse-velocity transformation wall model for reacting turbulent hypersonic boundary layers. M. COGO, C. T. WILLIAMS, K. P. GRIFFIN, F. PICANO and P. MOIN	159
Direct simulation of turbulence-chemistry interaction in a strongly reacting turbulent hypersonic boundary layer. C. T. WILLIAMS, M. DI RENZO and P. MOIN	173
Subgrid-scale modeling of turbulence-chemistry interaction for hypersonic boundary layers in chemical nonequilibrium. C. T. WILLIAMS	185
Dynamics of pore flow between shark dermal denticles. W. WU and B. SAVINO	195
How space-filling are eddies? An analysis of energy- and flux-carrying coherent structures in turbulent channel flow. A. ELNAHHAS	207
Gravity wave interactions in the stratocumulus-topped boundary layer. A. BALAKRISHNA, H. FU and M. E. O'NEILL	217
Reynolds number sensitivities in wall-modeled large-eddy simulation of a high-lift aircraft. R. AGRAWAL, M. P. WHITMORE, K. A. GOC, S. T. BOSE and P. MOIN	227
Wall-modeled LES of the Gaussian bump using the POD-mode-augmented wall model. C. HANSEN, X. I. A. YANG, M. AKBAR and P. MOIN	243
Reynolds number scaling of grid-point requirements of wall-modeled large eddy simulation of separated flows. R. AGRAWAL, S. T. BOSE and P. MOIN	257
Grid-point and time-step estimates for wall-modeled large eddy simulation of nonequilibrium flows. R. AGRAWAL, S. T. BOSE and P. MOIN	273
Evaluation of an optimal slip wall model for large-eddy simulation. M. P. WHITMORE, S. T. BOSE and P. MOIN	281

A velocity transformation for rough-wall-bounded turbulent flows. B. BORNHOFT, S. S. JAIN and P. MOIN	293
Simulating an H-type transitional boundary layer in a coupled NLPSE and WMLES framework with a Falkner-Skan wall model. C. A. GONZALEZ, S. R. HARRIS and P. MOIN	307
Roster	321
