

Needs for RSPs/CSAs:

- 1. What's the goal?**
- 2. Urbanization as a scenario element**

Brian O'Neill

National Center for Atmospheric Research (NCAR)

Energy Modeling Forum, Snowmass, Colorado

Framing a Set of Scenarios

What are you trying to do?

SRES: Span the emissions scenario literature

Overall aim of
scenario set

What is the strategy for getting it done?

SRES: global/regional, economy/environment
orientations

Logic or organizing
principle
of scenario set

How do you operationalize
your strategy?

SRES: A1, A2, B1, B2, etc.

Individual scenario elements:
narratives, quantitative/qualitative
socio-economic assumptions

Span the literature
Bounding analysis
Address specific question(s)
Large array of exploratory futures
Meaningful to participants

Is urbanization an important CSA element?

Relevance as driver of emissions and determinant of mitigation

Relevance as determinant of impacts, adaptation, and vulnerability

Relevance to wider development issues

Relatively independent of climate policy

Relatively difficult to generate by individual research groups

What's already (or becoming) available

UN urbanization projections

All countries, single scenario, 2000-2050

Lacks alternative scenarios, outcomes beyond 2050, migration, rural/urban age structure

IIASA extensions of UN

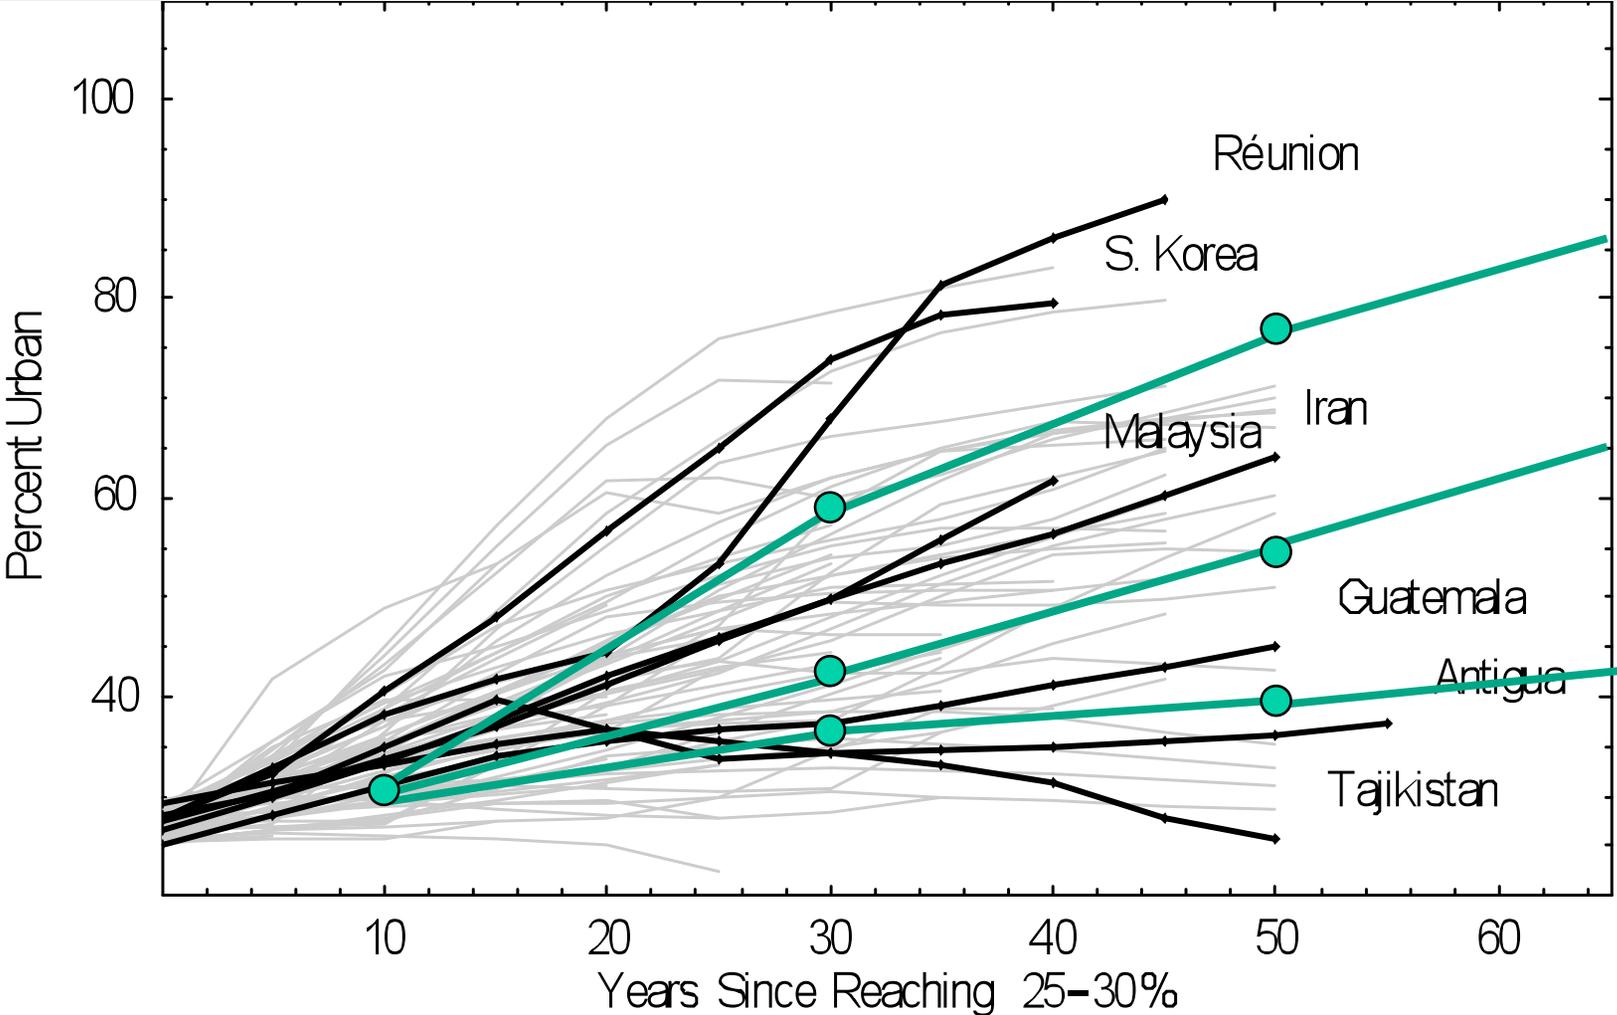

All countries, A2/B1/B2 scenarios, 2000-2100

Lacks differences in outcomes over first few decades, migration, rural/urban age structure

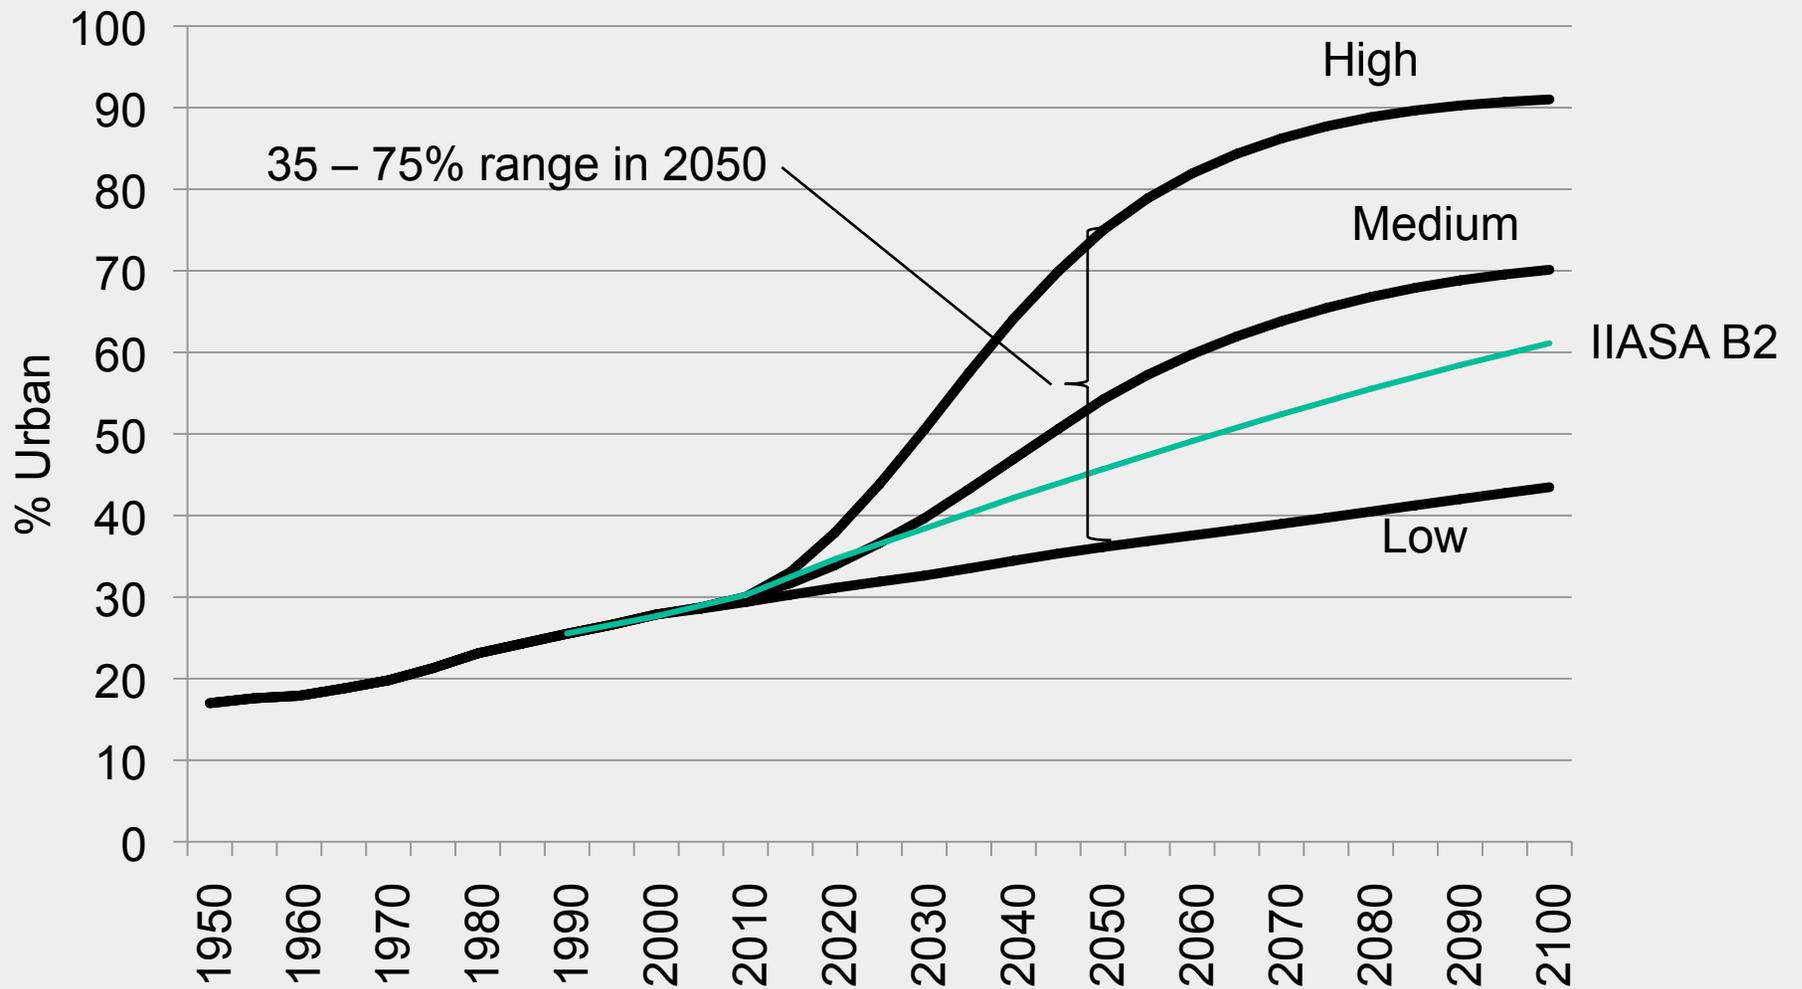

NCAR urbanization projections

Key countries and UN sub-regions, multiple scenarios, 2000-2100

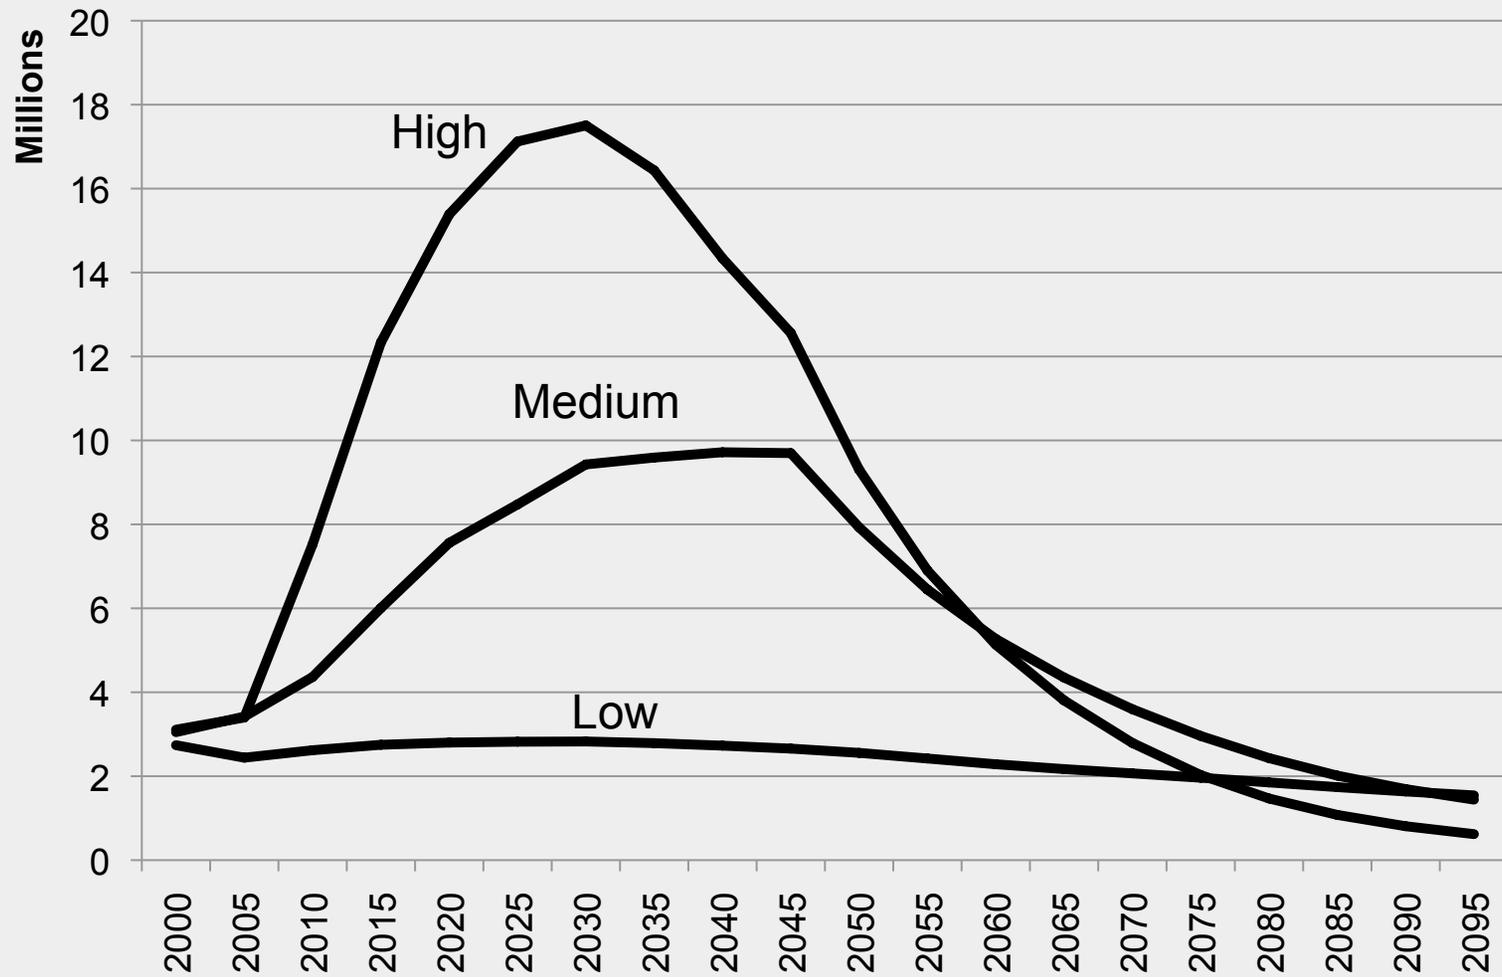

India urbanization scenarios

Urbanization Scenarios for India

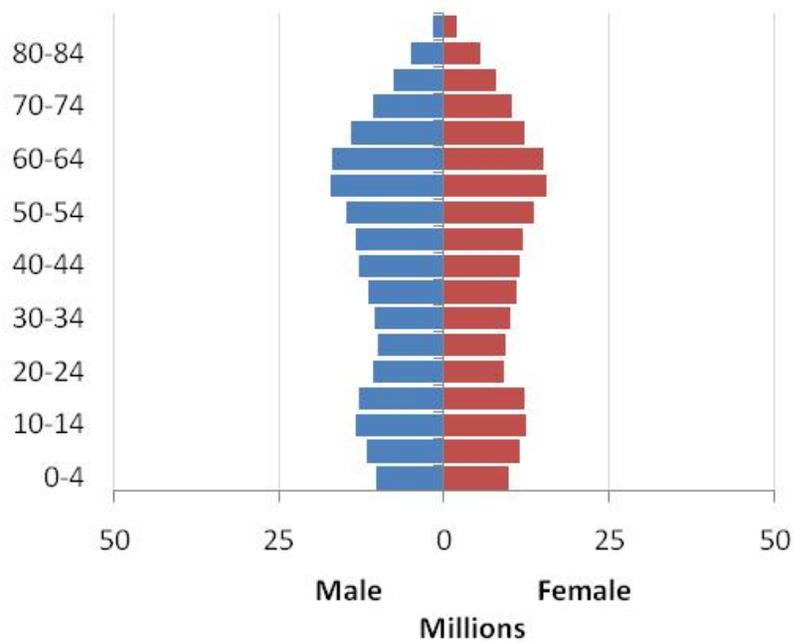

Rural-urban net migration under different urbanization scenarios, India

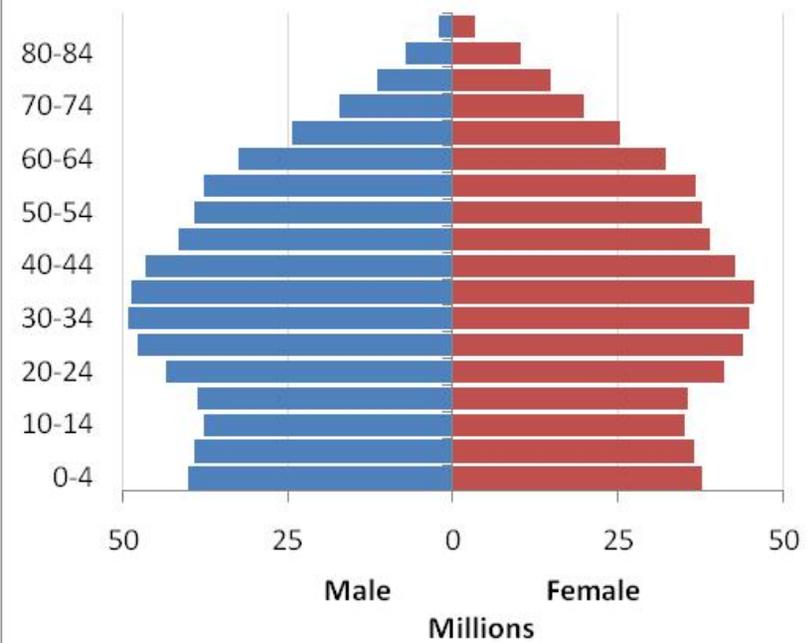

Projected Rural/Urban Age Structure, India

Indian rural , 2050, high urbanization

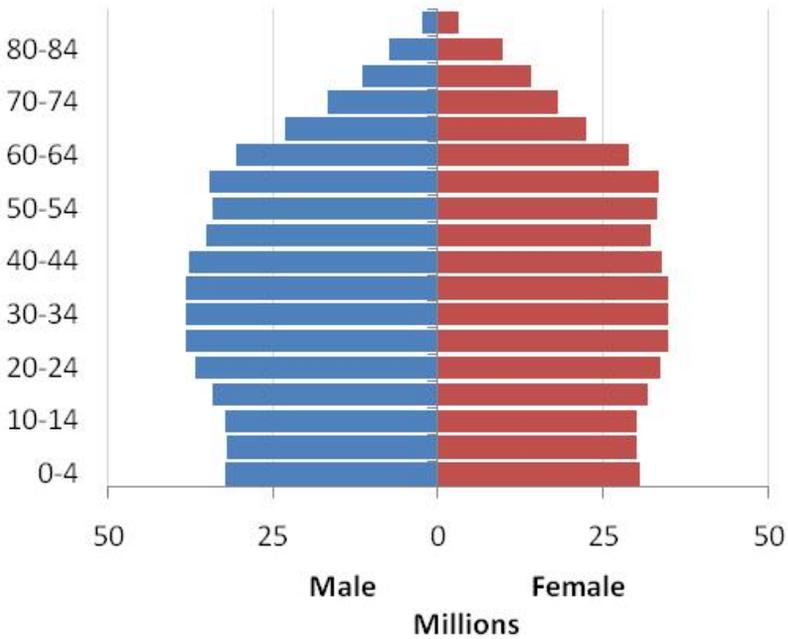

Indian urban , 2050, high urbanization

Projected Rural/Urban Age Structure, India

Indian rural , 2050, low urbanization

Indian urban , 2050, low urbanization
