

Moving forward with model-
based impacts assessment

Before we start...

- Kate has lost her voice. So, Karen will be helping chair the session.
- Kate is very sorry.

General Idea

- The presentations in this session are focused on existing studies that use models (IAM, CGE, or other) to quantify impacts.
- We have two types of studies:
 - Those focusing on an individual sector
 - Those addressing multiple sectors
- Just like the previous session, we'll have panel discussions after each set of ~3 presentations, and an open discussion at the end.

Science questions

- We've asked speakers to focus on three science questions:
 - How do we translate information across communities?
 - What is the right scale for impacts assessment? And, how do we link across scales?
 - How do we address catastrophic impacts and extreme events?
- Additionally, we've asked speakers to discuss challenges faced in their projects and future directions for research

Agenda Change

- We have made a small change to the agenda this afternoon. After John Antle's presentation, Tomoko will discuss work on food security.
- We'll continue with the original agenda from 2:30 onwards.
