

Flamingo - 1992

Tallahassee Therapeutic Equipment.....

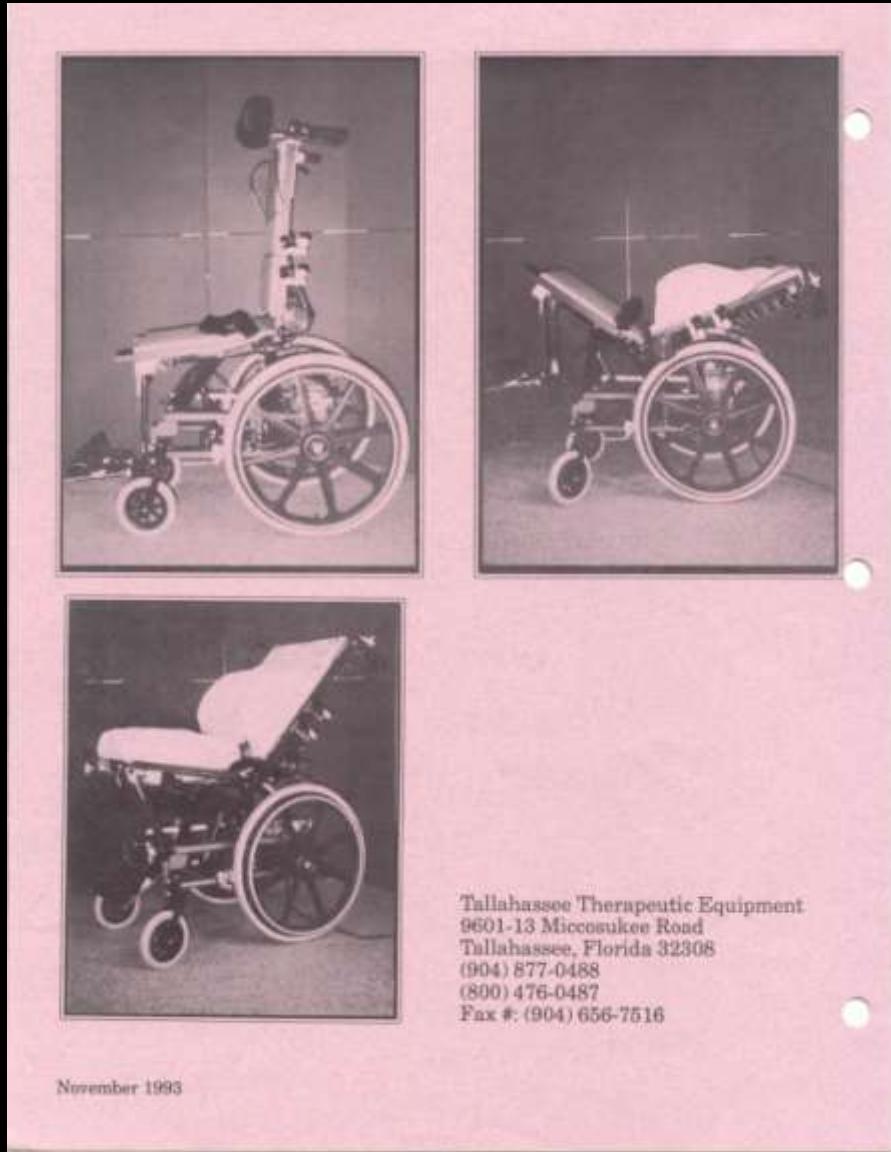

..... introduces the *Flamingo*.

The *Flamingo* is a clinical tool for seating evaluation and functional positioning. The *Flamingo* allows quick and easy seating simulation for children and adults. The *flamingo* is light and can be transported in a car, yet is durably made. The *Flamingo* allows you to document your clinical conclusions with accurate, quantifiable specifications. Photographs or videos taken in the *Flamingo* can be strong arguments for funding. Problem solving strategies can be tried immediately, revised, dropped and/or returned to with a minimum of effort, and very few tools. Contour and planar approaches are available and interchangeable on *Flamingo*. This equipment is flexible and can support your clinic as current technologies are integrated into your clinical model.
