Also concerning "Mystical Experience."

"The outer personality is undoubtedly conditioned by genes and by upbringing, but it is only a "persona" or mask worn by the real inner self, which "portals" of the nature of ultimate reality, and in a truly integrated individual the outer personality is also conditioned by the workings of the inner self."
Stravinsky. A critical survey

Priced at three US dollars on catalog No. 651 of Bernard Quaritch Ltd, 11 Grafton St., New Bond St., London W.1, recd mid Dec. 1947
COMPARATIVE PATHOLOGY OF NATIVE CHINESE AND AMERICANS: SOME OBSERVATIONS

Periodical (Series, Volume, Number and Page) or name and location of publisher

TO BE CITED IN NEXT EDITION OF

Name of grouping and volume if bound

PBL Bibliogr. Card, Red
There are differences in racial immunity as regards susceptibility to various diseases, differences in customs and habits of living, dietary differences, and hereditary differences.
old idea of differences, brain size &c.

changed as "Behaviorism" feminism held back for absolute equality of the sexes. Standards of menstruation, menopause, parturition were considered largely psychological, intelligence levels identical, so-called feminine instincts as socially conditioned and women unequal to do men's work as almost everything told. The author's purpose is to change this view - proved by showing that many basic & fundamental differences actually exist. These are backed with considerable documentation...."

PBL BIBLIOGR. Card, Salmon
Regarding the integrative processes of living organisms as highly evolved instances of a type of concrescence which everywhere pervades nature, and considering special acts of human creation as having their foundation in factors common to all instances of natural integration, the conclusion is reached that the sharp separation is not possible to a comprehensive theoretical biology. In biological synthesis physical action takes on special forms which in many cases imply a psychic background and direction. For the solution of the fundamental problems of biology it seems necessary that the physiological and psychological study of living organisms should proceed hand in hand.
