

## Virus Name: CTFV Colorado Tick Fever Virus

This time we will definitely beat Influenza.

I promise you! My people will stop spreading Colorado Tick Fever!!

All we have to do now is blame H5N1 for creating birds of mass destruction.

Taxonomy Family: Reoviridae Genus: Coltivirus

Power: Weakens, but does not kill

Offenses:

Attacks: infiltrates the erythropoietic cells to replicate, but does not destroy them . Very sneaky.

Outcome: Causes fever and myalgia is inevitable. Encephalitis and hemorrhagic fevers.

Speed: 3 to 6 days after tick bite. Goes away after two weeks on average.

Defenses

Vaccines: No vaccine is needed because it is not deadly.

Behavioral: use insect repellants, long pants, long-sleeve shirts, body covered and sprayed.

Treatment: You can only treat the symptoms, so take a Tylenol and go to sleep.

Game Action (be creative): It drains your mana by one point each turn, but it will not kill you.

One Liner: I'll make sure to leave no child behind.
