

Virus Name: RSV Respiratory Syncytial Virus subtype B

Here is some mucus filled with RSV. I am a menace to society.

Here he goes again trying to infect others. If he only knew that he was the one in danger.

Taxonomy Family: paramyxoviridae subfamily: Pneumonovirinae, genus: Pneumovirus

Power: Causes death in young and elderly.

Offenses:

Attacks: if adult then mild: upper tract infection, but if infant: lower respiratory tract infection. Spread by aerosol and hand contact.

Outcome: Tracheitis, Bronchitis, Bronchiolitis, Bronchopneumonia. Decreases MHC I gene transcription

Speed: highly contagious and causes sharp outbreaks. Incubation period of 5 days.

Defenses

Vaccines: Live-attenuated results in protection, but if use formalin-inactivated then get a worse secondary infection, which is atypical and severe characterized by increased infiltration of eosinophils into the lungs.

Behavioral: Good hygienic practices such as handwashing, covering of mouth when coughing and sneezing, and proper disposal paper handkerchiefs.

Treatment: Ribavirin (Virazole) using it as an aerosol in treatment of infants.

Game Action: If in proximity to other players you infect them and everyone within their proximity causing them to move slower.

One Liner regarding virus: I am stronger than type A as I able to make you stay longer in bed.
