Auto forwarded by a Rule

Alex,

John and I are seeing Bart at 4:30 to discuss our next steps. Given your views on the likelihood of spinco, I think we need to move hard down the path of Plan B. Coming out of the Bart meeting, I would envision a series of work streams to refine Plan B, including the one you addressed. I will connect with you afterwards.

T

I do not have this data, but if I know what you are getting at, it may be a little more complicated. I suspect that the data is kept by function, and most functions are blends of necessary support, optional support, control and "other stuff."

Tim and I have talked about what I think is a similar analysis, namely identifying how much we can cut out of the back without affecting revenues and unrelated to front office cuts. If that is what you are

after, let's combine work streams and ask Tim's team to do the work.

What is the 2007 comp for corporate (away from support and control).
The model I see only shows support and control).
