Abstract

Roads, rail, and other public transport in a city are “place-based,” in that they are built in specific neighborhoods. Do such investments benefit the poor? If people are mobile within a city, then any such place-based investment can lead to neighborhood changes, such as rent increases, which change who can afford to live near these investments and hence who benefits from them. Using original panel data (tracked on two dimensions: (i) following households if they move, and (ii) surveying all new residents of buildings) we collected in Dar es Salaam, we study the distributional effects of Dar es Salaam’s nascent BRT system.

Keywords: Transport, Urbanization, Gentrification, Tanzania, House Prices

JEL Classification:

*We thank Jessica Mahoney, Juliana Aguilar, Justus Mugango, Rachel Steinacher, and Rachel Jones at IPA Tanzania for coordinating our data collection efforts in Tanzania. We also thank EDI for assistance with initial fieldwork. We thank Yonas Mchomvu at the World Bank and Ronald Lwakatare at the Dar es Salaam Rapid Transit Agency for institutional support. Funding is gratefully acknowledged from the World Bank, IGC, 3ie, and Stanford. Devika Lakhote and Caylee O’Connor provided excellent research assistance. Any errors are our own.
