

I am including a list of places to purchase your wood and guidelines for how much wood you may need. Remember to check on the hours of the stores before heading over there. Some are only open during the week or only on Saturday during the weekend.

**Rough** means un-surfaced and **4/4** means a full 1" thick board, **8/4** means a full 2" thick board. This material should be of **FAS** (Firsts and Seconds, best quality) or **S&B** (select and better, lesser but adequate quality) grade. It should be **Kiln Dried**.

These are the general finish dimensions for the bench. Remember when you purchase wood add a minimum 3-5 inches to the length, 1/2-1 inch to the width and a minimum 1/4-inch to the thickness.

Should you decide on a bench that is longer than 36 inches, you will need to calculate how long your aprons should be.

For example 42 (top) minus 2 inches (2 x 1-inch overhang) minus 4 inches (2 x leg thickness ) = 36 inch long aprons.

\*Remember that multiple pieces can be glued together to achieved desired thickness for the legs.

Please feel free to contact me if you have any questions.
