Should the U.S. build and deploy a midphase National Missile Defense system within the next five years?

**Policy of the United States to build and deploy a midphase National Missile Defense system**

**The U.S. should build and deploy a midphase National Missile Defense system to protect itself from the growing threat of rogue nations' missiles.**

**The U.S. should not build and deploy a midphase National Missile Defense system.**

**Summary:**

- **Pro:**
  - Protect the country.
  - The primary goal of the U.S. government is to prevent a missile attack from foreign enemies or interest groups.
  - The U.S. missile defense system is designed to protect against limited numbers of missiles.
  - A midphase system is necessary to protect against midrange missiles.
  - The program is not effective against long-range missiles.

- **Con:**
  - Ineffective and costly.
  - The technology is not yet ready.
  - The system is not reliable and has not been tested.
  - The program is too expensive and would not be effective.

**Debate:**

- The U.S. is currently debating whether to build and deploy a midphase National Missile Defense system.
- Opponents argue that the system is ineffective and too costly.
- Proponents believe it is necessary to protect against midrange missiles.

**Conclusion:**

- The debate continues, with no clear consensus on the future of the National Missile Defense system.
